Faculty recommend that students have taken some college-level math courses such as college algebra or calculus. Faculty also recommend that students have taken at least one college-level statistics course.

Full-Time Course Sequence

Year 1

Fall Term 10

MPHO 600	Introduction to Public Health Practice
MPHO 620	Health Management and Systems Thinking
MPHO 701	Introduction to Healthcare Analytics
MPHO 703	Programming Tools and Techniques in Data Management

Spring Term 9

MPHO 608	Environment and Public Health
MPHO 614	Principles of Epidemiology
MPHO 779	Intro to Research Methods

Summer Term 6

MPHO 605	Introduction to Biostatistics for Public Health
MPHO 704	Predictive Data Analysis

Year 2

Fall Term 9

MPHO 611	Social and Behavioral Sciences for Public Health
MPHO 705	Data Mining and Machine Learning
MPHO 706	Categorical Data Analysis

Spring Term 9

MPHO 627	Data Visualization
MPHO 669	Applied Practice Experience

Additional Requirements

Sequence of Course Offerings

A full-time student should be able to finish the program in five (5) academic terms. The study plan is designed to both accommodate typical student program time-to-completion needs and ensure a successful path through the coursework to program completion. Most courses are offered once per academic year in a specific semester for both online and on-campus students. Please review the course sequence carefully. Students interested in attending the program in a part-time capacity should contact their academic advisor for an individualized plan.

Graduation Requirements

Requirements for graduation include a minimum 43 graduate credit hours, with a minimum cumulative grade point average of 3.00 overall and in the concentration.

Financial Assistance

Financial aid is available to graduate students at Old Dominion University. In addition to the financial aid offered by the University, graduate students may be eligible for aid and student loans administered by other agencies. For information please contact the Office of Student Financial Aid.

For additional information on the MPH curriculum or admission requirements, or if you're interested in taking courses as a non-degree seeking student, please contact the Graduate Program Director (mph@odu.edu).

Master of Public Health Public Health with a Concentration in Behavioral Health and Health Promotion (MPH)

For information about the MPH Program:

mph@odu.edu (<https://www.odu.edu/academics/programs/masters/public-health/>)

Website: <https://www.odu.edu/academics/programs/masters/public-health>

Students can complete this program in a traditional (classroom) format or online.

The Master's of Public Health (MPH) is designed to prepare students for entry and/or advancement in public health careers. The program provides students with an understanding of the public health sciences and with knowledge and skills that can be utilized in healthcare management, population-based research, and the community practice of public health. The MPH is designed for students with a bachelor's degree from all academic disciplines within and outside of the health disciplines. The graduates of the program will be ready to serve as invaluable professionals and leaders in the realm of public health.

Graduates of the MPH with a concentration in Health Behavior and Health Promotion are prepared to be health behavior and health promotion leaders, directors, managers, health educators, community health planners, program managers, and program evaluators in public and private sectors including health departments, not-for-profit organizations, and foundations. Their work is aimed at preventing disease and injury and promoting healthy behaviors through education, communication, research, and publication.

Admission

The Master of Public Health program evaluates applicants using a holistic review process. All components of an application are reviewed prior to making an admission decision. Consideration may be given for appropriate work experience in a health-related field.

All applications are made through the Schools of Public Health Application Service (SOPHAS), the centralized application service for schools and programs of public health.

Application Checklist:

1. Completion of Bachelor's Degree from an accredited US institution or Foreign institution with a **GPA of 2.8 or higher**.
2. Two (2) letters of recommendation from academic sources or employment supervisor. Additional letters of recommendation are encouraged, if available.
3. Unofficial transcripts from all degree-granting programs listing the dates of program completion or attendance.
4. A personal essay of approximately 500 words explaining your public health career goals, reasons for interest in the Public Health program, specialty concentration selected with reasons for this selection, and any relevant work experience
5. TOEFL (minimum 79 IBT or 550 paper)/IELTS (minimum 7.0) is required for International Applicants.

There are no pre-requisite courses or specific undergraduate degrees required to be eligible to apply. Previous coursework in statistics and research methods is encouraged but not required. Applicants will be formally notified of admission decisions within two weeks of receipt of a completed application. Applicants need to confirm their spot in the program within 2 weeks of receiving a decision. Admitted students will be assigned a faculty advisor in their concentration area.

Curriculum Requirements

The Master of Public Health (MPH) is a 43-credit program. All courses include the standardized competencies required for accreditation of MPH programs by the Council on Education for Public Health (CePH).

Fall 1 (10 credit hours)

MPHO 600	Introduction to Public Health Practice	1
MPHO 605	Introduction to Biostatistics for Public Health	3
MPHO 611	Social and Behavioral Sciences for Public Health	3
MPHO 614	Principles of Epidemiology	3

Spring 1 (9 credit hours)

MPHO 608	Environment and Public Health	3
MPHO 616	Research Methods in Public Health	3
MPHO 620	Health Management and Systems Thinking	3

Summer 1 (6 credit hours)

MPHO 651	Health Promotion Theory and Practice	3
MPHO 661	Program Planning and Evaluation	3

Fall 2 (9 credit hours)

MPHO 630	Health Communication and Social Marketing for Public Health	3
MPHO 640	Health Disparities and Social Justice	3
Elective		3

Spring 2 (9 credit hours)

MPHO 669	Applied Practice Experience	3
Elective		3
Elective		3

* Electives are approved by student advisor.

Master of Public Health
Public Health with a Concentration
in Epidemiology (MPH)

For information about the MPH Program:
mph@odu.edu (<https://www.odu.edu/academics/programs/masters/public-health/>)
Website: <https://www.odu.edu/academics/programs/masters/public-health>

Students can complete this program in a traditional (classroom) format or online.

The Master's of Public Health (MPH) is designed to prepare students for entry and/or advancement in public health careers. The program provides students with an understanding of the public health sciences and with knowledge and skills that can be utilized in healthcare management, population-based research, and the community practice of public health. The MPH is designed for students with a bachelor's degree from all academic disciplines within and outside of the health disciplines. The graduates of the program will be ready to serve as invaluable professionals and leaders in the realm of public health.

Epidemiologists are public health professionals that focus on the causes, patterns and control of diseases and injury in populations. Epidemiology is a fundamental science of public health and is essential to the reduction of risk and the occurrence of negative health outcomes. The epidemiology curriculum provides rigorous training in the knowledge and skills for analyzing community health problems, with emphasis on how to measure and describe the health of populations.

Admission

The Master of Public Health program evaluates applicants using a holistic review process. All components of an application are reviewed prior to making an admission decision. Consideration may be given for appropriate work experience in a health-related field.

All applications are made through the Schools of Public Health Application Service (SOPHAS), the centralized application service for schools and programs of public health.

Application Checklist:

1. Completion of Bachelor's Degree from an accredited US institution or Foreign institution with a **GPA of 2.8 or higher**.

- Two (2) letters of recommendation from academic sources or employment supervisor. Additional letters of recommendation are encouraged, if available.
- Unofficial transcripts from all degree-granting programs listing the dates of program completion or attendance.
- A personal essay of approximately 500 words explaining your public health career goals, reasons for interest in the Public Health program, specialty concentration selected with reasons for this selection, and any relevant work experience
- TOEFL (minimum 79 IBT or 550 paper)/IELTS (minimum 7.0) is required for International Applicants.

There are no pre-requisite courses or specific undergraduate degrees required to be eligible to apply. Previous coursework in statistics and research methods is encouraged but not required. Applicants will be formally notified of admission decisions within two weeks of receipt of a completed application. Applicants need to confirm their spot in the program within 2 weeks of receiving a decision. Admitted students will be assigned a faculty advisor in their concentration area.

Curriculum Requirements

Recommended Prerequisites

Our faculty strongly recommend that students applying to the epidemiology track have a minimum of two college-level math courses at the level of algebra or above. A statistics course is acceptable for one of the math courses. It is also recommended that students have at least two college-level biology courses.

Master of Public Health Public Health with a Concentration in Health Management and Policy (MPH)

For information about the MPH Program:

mph@odu.edu (<https://www.odu.edu/academics/programs/masters/public-health/>)

Website: <https://www.odu.edu/academics/programs/masters/public-health>

Students can complete this program in a traditional (classroom) format or online.

The Master's of Public Health (MPH) is designed to prepare students for entry and/or advancement in public health careers. The program provides students with an understanding of the public health sciences and with knowledge and skills that can be utilized in healthcare management, population-based research, and the community practice of public health. The MPH is designed for students with a bachelor's degree from all academic disciplines within and outside of the health disciplines. The graduates of the program will be ready to serve as invaluable professionals and leaders in the realm of public health.

Students in the Health Management and Policy track work to address the complex issues presented by today's dynamic healthcare sector. Students prepare to face the cost, access and quality challenges of the healthcare system, incorporating concepts and competencies from areas such as management, policy analysis and finance.

Admission

The Master of Public Health program evaluates applicants using a holistic review process. All components of an application are reviewed prior to making an admission decision. Consideration may be given for appropriate work experience in a health-related field.

All applications are made through the Schools of Public Health Application Service (SOPHAS), the centralized application service for schools and programs of public health.

Application Checklist:

1. Completion of Bachelor's Degree from an accredited US institution or Foreign institution with a **GPA of 2.8 or higher**.
2. Two (2) letters of recommendation from academic sources or employment supervisor. Additional letters of recommendation are encouraged, if available.
3. Unofficial transcripts from all degree-granting programs listing the dates of program completion or attendance.
4. A personal essay of approximately 500 words explaining your public health career goals, reasons for interest in the Public Health program, specialty concentration selected with reasons for this selection, and any relevant work experience
5. TOEFL (minimum 79 IBT or 550 paper)/IELTS (minimum 7.0) is required for International Applicants.

There are no pre-requisite courses or specific undergraduate degrees required to be eligible to apply. Previous coursework in statistics and research methods is encouraged but not required. Applicants will be formally notified of admission decisions within two weeks of receipt of a completed application. Applicants need to confirm their spot in the program within 2 weeks of receiving a decision. Admitted students will be assigned a faculty advisor in their concentration area.

Curriculum Requirements

Recommended Prerequisites

There are no prerequisite courses for the Health Management and Policy Track. However, introductory courses in accounting and finance, macroeconomics and business finance may provide useful preparation for the courses included in the track.

Certificate

Core Public Health Certificate

The Graduate Core Public Health Certificate is an 18-credit hour program designed to give students a strong foundation of knowledge in the five core areas of public health:

- Biostatistics
- Epidemiology
- Environmental health
- Health services administration
- Social and behavioral sciences

The fundamental knowledge and skills learned in these core courses will equip students to analyze and respond to emerging public health issues at the institutional, community, and societal levels.

Curriculum Requirements

MPHO 605	Introduction to Biostatistics for Public Health	3
MPHO 608	Environment and Public Health	3
MPHO 611	Social and Behavioral Sciences for Public Health	3
MPHO 614	Principles of Epidemiology	3
MPHO 620	Health Management and Systems Thinking	3
MPHO 779	Intro to Research Methods	3

Certificate

Global Health Certificate

<https://www.odu.edu/hs/centers/globalhealth> (<https://www.odu.edu/hs/centers/globalhealth/>)

Michele Kekeh, PhD, Program Director
Email Address: mkekeh@odu.edu
3011 Health Sciences Bldg.

Global Health aims to show us the big picture. Mistakenly, people assume that the target of “Global Health” involves mainly tackling problems in the developing world. Diseases and health problems do not recognize borders. All countries can learn from the experiences of other countries. Neglecting to address health problems in a global scale may affect people’s health, well-being and national security around the world including in developed countries such as the United States.

This competency-based certificate program aims to provide comprehensive training on Global Health. Additionally, this certification program embraces a transdisciplinary focus. The Global Health Certificate is designed as an online program for professionals who are practicing or who plan to practice in a worldwide setting. Graduates of the Global Health Certificate can expect to find employment in a variety of fields including health-related governmental/non-governmental organizations, university research programs, international healthcare consultancies, and multinational corporations (Education Advisory Board, 2013). The certificate requires three core courses (3 credit hours each), two electives (2 credit hours each) and a cumulative experience (2 credit hours) for a total fifteen (15) credits. A maximum of 6 credit hours from graduate level courses may be transferred into the certificate program. Admission to the certificate program requires a bachelor’s degree (or the equivalent).

Curriculum Requirements

Required Core Courses		9
HLSC 746	Epidemiology	
HLSC 776	Global Health	
HLSC 702	Health Management	
Electives

NOTE: A maximum of 6 credit hours from graduate level courses may be transferred.		
Total Credit Hours		15

Department of Epidemiology, Biostatistics, & Environmental Health

Department website: <https://www.odu.edu/epidemiology-biostatistics-environmental-health> (<https://www.odu.edu/epidemiology-biostatistics-environmental-health/>)

Jim Blando, PhD
Associate Professor
Chair
Jblando@odu.edu (jblando@odu.edu)

The Department of Epidemiology, Biostatistics, and Environmental Health plays a central role in advancing public health. Our environmental health faculty apply physics and chemistry to measure and assess environmental risks and their potential impact on humans and ecosystems. The epidemiology faculty study disease patterns in populations, while our biostatistics faculty use advanced mathematical methods to analyze data and

draw insights critical to public health. Together, these disciplines address key global challenges such as climate change, pandemics, pollution, food insecurity, clean water, and sustainability.

Certificate Programs

- Applied Data Science Certificate (p. 343)
- Epidemiology Certificate (p. 343)
- Occupational Safety Certificate (p. 343)

Certificate
Applied Data Science Certificate

Advances in technology, the availability of large amounts of data and the rapid growth of electronic health data and analysis tools have led to an ever-increasing need for specific skills in data analytics. The Graduate Applied Data Science Certificate is a 15-credit hour program designed for working professionals looking to advance in the healthcare infomatics industry.

Curriculum Requirements

MPHO 605	Introduction to Biostatistics for Public Health	3
MPHO 627	Data Visualization	3
MPHO 701	Introduction to Healthcare Analytics	3
MPHO 703	Programming Tools and Techniques in Data Management	3
MPHO 704	Predictive Data Analysis	3
Total Credit Hours		15

Certificate
Epidemiology Certificate

Epidemiology is the study of the distribution and determinants of disease, illness and injury. The Graduate Epidemiology Certificate is a 15-credit hour program designed to provide the learner with an understanding of the concepts of epidemiology used in public health practice. The certificate is intended to provide the concepts, methods and tools needed for the assessment of health situations and trends of population groups.

Curriculum Requirements

MPHO 605	Introduction to Biostatistics for Public Health	3
MPHO 614	Principles of Epidemiology	3
MPHO 779	Intro to Research Methods	3

MPHO 737	Infectious and Chronic Disease Epidemiology	
MPHO 772	International Health Exchange Program	
Total Credit Hours		15

Certificate
Occupational Safety Certificate

Jeff Moody, MSPH, Coordinator

The certificate program in occupational safety is designed to prepare students to meet safety standards and guidelines in such areas as business, education and industry with the goal of managing operations to minimize financial losses resulting from accidents, health claims, legal actions, and property damage. It is especially attractive to students in majors such as engineering, occupational and technical studies, and business who may reasonably anticipate assignment of safety as an additional duty, or to

individuals already employed in the occupational health and safety field. Course taken for the Certificate may also be used to qualify for safety positions, enhance the qualifications of Certified Safety Professional (CSP) and Certified Industrial Hygienist (CIH) candidates, and provide maintenance points for professionals holding the CSP or CIH certifications.

Courses in the certificate program may be taken through degree or nondegree programs, and may be applied to degree requirements at the graduate level in environmental health. For completion of the graduate certificate program students must have a minimum cumulative grade point average of 3.00 in all courses taken toward the certificate. After successful completion of the program, a Certificate in Occupational Safety will be awarded. A total of 15-16 semester hours is required, comprised of three core courses and six to seven hours of electives. All courses, with the exception of the lab course, are provided online, either as televised or web-based courses. There are no prerequisites.

Curriculum Requirements

Core Courses		9
ENVH 506	Principles of Occupational Safety and Health	6 - 7
ENVH 525	Occupational Safety and Health Program Management	
ENVH 507	Occupational Safety Standards, Laws and Regulations	
Select two of the following:		
ENVH 501	Occupational Health	
ENVH 526	Physical Hazards and Their Control	15-16
ENVH 540	Principles of Ergonomics	
ENVH 541	Industrial Hygiene	
ENVH 542	Industrial Hygiene Sampling Methods	
ENVH 546	Physical Hazards Laboratory

Department of Health Behavior, Policy, and Management

Department website: <https://www.odu.edu/health-behavior-policy-management> (<https://www.odu.edu/health-behavior-policy-management/>)

Brian C. Martin, PhD, MBA
Professor
Interim Chair
Associate Dean for Academic Affairs
martinbc@odu.edu

Qi (Harry) Zhang, PhD, MA
Professor
PhD Health Services Research Program Director
qzhang@odu.edu

The Department of Health Behavior, Policy, and Management is dedicated to shaping future leaders in health behavior, policy, management, and research. We tackle critical population and organizational challenges through a blend of innovative education, cutting-edge research, and practical application. Our health behavior experts are committed to advancing public health by addressing the root causes of health issues. Meanwhile, our health policy and management specialists focus on creating evidence-based solutions to systemic challenges, preparing the next generation of healthcare administrators, policymakers, and researchers to ensure accessible, high-quality care for all.

The Department of Health Behavior, Policy, and Management houses the PhD in Health Services Research.

<http://www.odu.edu/academics/programs/doctoral/health-services-research>
(<http://www.odu.edu/academics/programs/doctoral/health-services-research/>)

Dr. Qi (Harry) Zhang, Graduate Program Director (qzhang@odu.edu)

The primary mission of the Ph.D. in health services research is to develop leaders and problem solvers whose professional services will improve the health of the population not only in Eastern Virginia but also statewide, nationally, and internationally. Health services researchers examine health care quality and effectiveness, primary and managed care, new technologies, and other critical health services and related public health research practice topics. Health services researchers pursue careers in many settings, including academia, industry, professional organizations, research centers, health policy groups, clinical settings, and in federal, state, local, and international agencies.

The goals of the program are to enable students to conduct and interpret health services research, to formulate and analyze public health policy, to lead programs and organizations that address the health care needs of populations and to work directly with community members to empower them to be a part of the policy formulation process. In accomplishing these goals students in the program will develop the critical skills necessary to integrate knowledge and competencies applicable to public health and health services questions and problems. Students will be able to design viable programs, manage resources, and measure the effectiveness of service delivery public health interventions to populations. Students will be awarded the Ph.D. in health services research after the completion of all university and program requirements for graduate degrees.

In addition to demonstrated ability in the health services research competencies, students are expected to select one of two tracks: Applied Health Research or Health Policy and Management Research.

Applied Health Research track will provide students with skills needed to address complex health questions across disciplinary boundaries, advance health-related research and programs, prevent disease and injury, and provide innovative approaches or solve practice-related problems in state and federal agencies, private/non-profit research and evaluation agencies, academia, and health systems.

Health Policy and Management Research track will provide students with the skills and systems thinking approaches to formulate and implement health policies, evaluate the effectiveness of policies within a health care organization, and improve the management of health delivery performance in state and federal agencies, private/non-profit research and evaluation agencies, academia, and health systems.

Requirements for Admission

Students are admitted to the Ph.D. program during the fall term only. Applications for admission are reviewed by the Ph.D. in Health Services Research Program admissions committee. To qualify for admission, an applicant must meet the general University admission requirements at the graduate level as well as specific program requirements, including:

1. A completed master's degree from a program that is accredited by a specialized accrediting agency; degrees such as M.D., J.D., and D.D.S. are also acceptable;
2. A minimum acceptable grade point average of 3.50 (on a 4.0 scale) overall for the master's degree;
3. Graduate Record Exam (GRE) not required but strongly recommended;

- For those whose native language is not English a TOEFL score of at least 550 (79 for internet-based test);
- Official transcripts from all institutions of higher education attended;
- A current curriculum vitae or resume;
- Three letters of reference from sources capable of commenting on the applicant's readiness and commitment for doctoral studies. At least two, and preferably all letters should be from academic sources; other letters must be from professional supervisors;
- A 1500 word essay discussing the applicant's academic and professional goals. This essay should discuss how the Ph.D. in Health Services Research program will contribute towards meeting these goals; and
- A personal interview to discuss applicant's research focus and fit with the program faculty's expertise.

Prerequisite courses are necessary for students who do not have graduate preparation in basic statistics, research design, and basic computer literacy. Prerequisite courses in health delivery systems and community health may be required for students without academic preparation or experience in these areas.

All applications are made through the Schools of Public Health Application Service (SOPHAS), the centralized application service for schools and programs of public health.

Curriculum Requirements

The coursework consists of 12 credits of health services core courses, 18 credits of research core courses, 12 credits of track-specific courses and 2-3 credits of electives. Track options include: Health Administration and Policy (HAP) or Applied Health Research (AHR). A 1-credit colloquium is required each semester along with coursework (4 course series). Additionally, students complete 12 dissertation credits. Up to 9 credit hours of coursework may be at the 600 level. Up to 12 hours of graduate credit may be transferred from another university and applied towards the Ph.D. degree. Transfer of credit is approved at the discretion of the advisory committee and the graduate program director.

Additional Requirements

Degree Requirements

- Satisfactory completion of at least 60 semester hours of graduate level coursework, including all required courses as listed below. (Students who receive two or more grades of C+ or one grade of F may not continue in the program).
- Two semesters of full-time residency. These do not have to be consecutive.
- A health services research supervised research experience.
- Acceptable performance on written and oral candidacy examinations in the major field of study at the end of the program coursework. Students may re-take the candidacy exams only once.
- Successful defense of a dissertation proposal.
- Completion of a traditional or three-article dissertation representing the candidate's ability to conduct scholarly, original research. The quality of the research must be suitable for publication in an academic, peer-reviewed journal.
- Successful oral defense of the dissertation.
- Submission of the approved final copy of the dissertation.

Time frames for completion of degree requirement are as follows:

- The entire process (from admission to dissertation defense) must be completed within eight years. Exceptions to this time limit require the approval of the graduate program director, college dean and the dean of the graduate school.
- Academic credit which is more than eight years old at the time of graduation must be re-validated by an examination before the work can be applied to a doctoral degree.
- The dissertation must be completed within five years after the candidacy exams are passed.
- Dissertations should be defended at least six weeks prior to the end of the semester in which the student expects to graduate.

Each student is required to have an identified research mentor who also serves as their advisory faculty member who will meet with the student upon entry into the program. The faculty member, with the graduate program director, approves the student's planned coursework (plan of study) and conducts the written and oral candidacy exams at the end of the coursework. Students must maintain a 3.0 grade point average.

Candidacy Exams (Written and Oral)

The candidacy examination is normally taken during the spring or fall semester of registration in the last formal graduate credits. Through the candidacy examination, the student's advisory and examination committee in conjunction with the candidacy exam subcommittee and the graduate program director shall ensure that the student has demonstrated a mastery of the subject matter in all fields of the program, has an adequate knowledge

of relevant literature, and has the ability to identify, utilize, and apply research skills and techniques. To be eligible to take the examination, the student must meet the program requirements, must have completed or be in the semester of completing all coursework and the internship, must be recommended by his/her advisory and examination committee, and must achieve at least a 3.0 GPA on all coursework taken within the program. Students need to apply to take the candidacy exam to the graduate program director by the specified deadline each semester. The application form must be submitted by February 10 to take the exam in the spring semester, April 10 to take the exam in the summer, and by September 10 to take the exam in the fall semester.

All parts of the examination are graded pass/fail. Students may retake the exam only once. Parts of the written exam that are not passed on the first attempt need to be re-taken when the exam is offered again. The oral exam can be re-taken in the same semester.

Dissertation (12 credits)

The candidate's program of study culminates in a dissertation representing an original research project which makes a real and significant contribution to health services knowledge and practice. The dissertation provides a demonstration of the student's ability to conduct independent scholarly research in health services research. The dissertation phase begins only after all other degree requirements (coursework, candidacy exams), have been completed. Towards this end, the candidate must form a dissertation committee, write and successfully defend a dissertation proposal, independently conduct the research necessary to complete the dissertation, write the dissertation, successfully defend the dissertation at an oral defense, make any necessary changes based on the committee's recommendation and submit a final approved copy to the dean's office. Additionally, all Ph.D. students are strongly encouraged to prepare as first author at least one journal article based upon their dissertation research prior to graduation.

Dissertation Committee

After the candidacy exams are successfully passed, the dissertation committee is formed by the student in conjunction with, and approval by, the student's faculty advisor and the graduate program director. A dissertation committee must have at least three members, one of whom is from outside the department of the major field of study. The members of the dissertation committee must all hold doctorates and be graduate certified unless an exception first has been approved by the graduate program director, college dean, and appropriate VP. The committee's purpose is to supervise the entire process from proposal writing and defense through the oral defense of the dissertation. The faculty mentor supervises and approves the choosing of a topic, the choosing of a theoretical framework, the development of the research methods, the actual conduct of the research and the writing of the results. For either dissertation (traditional or three article) the dissertation committee may not be officially formed until: (1) all coursework is completed; and (2) the candidacy examination has been successfully completed.

Dissertation Proposal

The dissertation proposal topic selected shall represent a major research project/area which focuses on an issue directly related to health services research and may be multidisciplinary in approach. The traditional dissertation proposal consists of the first three chapters of the dissertation in their entirety, while the Three Article Dissertation consists of Chapters 1 and 2 and any subsequent "article" written as part of the three article dissertation.

The dissertation proposal provides a detailed explanation of the research being proposed, and should address the significance of the study, provide a substantive literature review or systematic review, and describe, in detail, the methods that will be used to collect data. The proposal will be defended in a public forum to which are invited all faculty, staff and students in the college. The final draft of the dissertation proposal must be available for public viewing two weeks before the defense date. No formal work should begin on the dissertation until a majority of dissertation committee members and graduate program director approve the dissertation proposal in writing.

Dissertation proposals can be defended prior to IRB approval/exemption. However, no data collection or interaction with study participants can ever

begin until the dissertation chair and the student have obtained IRB approval or exemption. Approval of the dissertation proposal is NOT a pro forma activity and the student is cautioned never to regard it as such.

Dissertation and Final Oral Defense

The completion of a dissertation is the cornerstone of the Ph.D. program. Through the dissertation, candidates demonstrate that they are prepared to join the company of scholars and to be leaders in health services research. The candidate should work closely with his/her dissertation committee throughout this process. Dissertations must be carefully prepared, publicly available for viewing, defended in a public forum and approved by the dissertation committee, the graduate program director, and the college dean.

The dissertation committee plays a vital role in the completion of the dissertation. Candidates are expected to be in regular communication with the committee chair and members regarding the progress of the study, research results and manuscript drafts. While preparing a dissertation, candidates must be continuously enrolled for a minimum of one credit hour per semester. University resources may not be used unless a candidate is officially enrolled. Advice or assistance from committee members should not be expected unless the candidate is officially enrolled.

Dissertations must be carefully prepared according to ODU guidelines using the most current version of the Guide for the Preparation of Theses and Dissertations (obtained from The Graduate School). The APA style manual should be used to cover specific questions of style. However, the requirements of the Guide for the Preparation of Theses and Dissertations take precedence over all the guidelines contained in the APA manual. All proposed dissertation research which involves human subjects must be reviewed and approved by the college or University's Human Subjects Committee. The process and approval must be documented in the text of the dissertation. Once the dissertation is successfully defended and in its final form, the student will upload the document to ProQuest.

Once the dissertation committee approves that the dissertation is ready, the student works with the dissertation committee to set a defense date and to ensure that the defense date is made public. The student should provide sufficient copies of the dissertation for public viewing at least two weeks before the defense date. The defense itself needs to be publicized two weeks in advance as well. While the defense is publicized and open to the public in general, care should be taken to ensure that all college faculty and administrators and all departmental students receive invitations to the defense. The entire dissertation committee must attend the final oral dissertation defense. After the dissertation defense, the dissertation committee meets in a closed-door meeting to discuss the dissertation defense and to vote on its approval or disapproval. If the dissertation is not approved, it can be defended only once more (no sooner than three months after the initial defense). The final dissertation must be approved through a signature process that includes the dissertation chair, all members of the dissertation committee, the graduate program director and the dean of the College of Health Sciences. Note that a dissertation may be approved orally at the final defense, but the committee may require some changes before the final copy is approved. Final approval of the written document is the responsibility of the associate dean of the college. The Doctor of Philosophy in Health Services Research will be awarded upon the oral defense of the dissertation, the submission of the final approved copy of the dissertation and the completion of all other program requirements for graduation.

Master of Healthcare Administration Healthcare Administration (MHA)

The Healthcare Administration (M.H.A.) program allows you to earn your degree by taking courses in a hybrid format. Develop knowledge and competencies through in-person interactions and online learning.

Mission

The mission of the Healthcare Administration master's program is to educate and train the next generation of healthcare managers and leaders through excellence in competency-based education, faculty and student

scholarship, and service-learning focused primarily on Hampton Roads and the surrounding regions.

Admissions

Applications open Aug. 26 for consideration for admission to the Fall 2025 term, and applications are reviewed until the class is filled.

Priority consideration will be given to applications received by March 1. International applicants who will require an F-1 Student Visa to study in the United States must submit their application by April 15.

All applications are made through the Health Administration, Management & Policy Centralized Application Service (HAMPCAS), a centralized application service for graduate programs in health administration, healthcare management, and health policy.

Review process

For applications received by March 1 the following review process will be used:

- Applications reviewed and offers for applicant interviews by March 8
- Applicant interviews scheduled by March 19
- Interviews conducted by April 9
- Admission offers made by April 16
- Admission offers accepted by applicants by April 30
- Decision to close admissions or continue reviewing applications by April 30

For U.S. Students

- No GRE or GMAT required.
- Completion of all undergraduate degree requirements from an accredited institution prior to matriculating in the Health Administration (M.H.A.) program, with a minimum cumulative grade point average (GPA) of 3.0 on a 4.0 scale.
 - In the case where an applicant's cumulative GPA is below the minimum 3.0, reviewers may consider a replacement GPA computed from the most recent 40 semester credit hours of U.S. or Canadian coursework.
- Three (3) letters of reference from academic or workplace affiliations that reflect on an applicant's behavior, character, and leadership ability.
- Personal essay describing how the Health Administration (M.H.A.) degree will enhance your professional goals.
- Current CV/resume documenting professional experience, educational achievements, and volunteer experience.
- Official transcripts from all colleges/universities attended. Ensure the degree conferral date is listed on the awarding institution's transcript.
- Transcripts must be sent to HAMPCAS only. HAMPCAS only accepts electronic transcripts from Parchment and National Student Clearinghouse. If your school does not offer either of these services, your transcript must be sent via mail. Please use the information below to send your transcripts.
 - Parchment (<https://www.parchment.com/order/>)
 - National Student Clearinghouse (<http://www.studentclearinghouse.org/>)
- Sending transcripts to HAMPCAS by mail. Download a transcript request form after you enter each institution in HAMPCAS and send the transcript request form to the institution registrar to send transcript by mail to the address below:
 - **HAMPCAS Transcript Processing Center**
O. Box 9122 Watertown, MA 02471
- Interview: Screened applicants will meet with the Healthcare Administration (M.H.A.) admissions committee to assess interpersonal and communication skills, maturity, and an understanding and commitment to Healthcare Administration (M.H.A.) career paths.

Applicants may have the opportunity to take a campus tour on the day of the interview.

For International Students

- No GRE or GMAT required.
- Completion of all undergraduate degree requirements from an accredited institution prior to matriculating in the Healthcare Administration (M.H.A.) program, with a minimum cumulative grade point average (GPA) of 3.0 on a 4.0 scale.
- International applicants, whose native language is not English, must take the Test of English as a Foreign Language (TOEFL) – Minimum scores: Paper-based test 550, Computer-based test 213, iBT exam 80 OR International English Language Testing System (IELTS) - Minimum scores: Total 6.5, Subscores: 6.
 - **TOEFL School Code is B589**
- Three (3) letters of reference from academic or workplace affiliations that reflect on an applicant's behavior, character, and leadership ability.
- Personal essay describing how the Healthcare Administration (M.H.A.) degree will enhance the applicant's professional goals.
- Current CV/resume documenting professional experience, educational achievements, and volunteer experience
- Official transcripts from all colleges/universities attended. Ensure the degree conferral date is listed on the awarding institution's transcript.
 - In cases where a non-U.S. grading system has been used, verification must be provided by one of the following services:
 - World Education Services
 - Educational Credential Evaluators
 - If the academic institution that you attended does not issue documents in English, the credentialing agency will require that you submit a word-for-word translation of your transcripts. You can contact University Language Services (<https://www.universitylanguage.com/>) to submit your transcripts for translation and instruct them to send the translated transcript to the credentialing agency you choose.
 - HAMPCAS will ONLY accept the evaluation report from the credentialing agency. Do not send your foreign transcript to HAMPCAS.
 - All foreign transcript evaluations from the credentialing agency must be sent directly to HAMPCAS at either of the following addresses:
 - **HAMPCAS Transcript Processing Center PO Box 9122**
Watertown, MA 02471
 - **HAMPCAS Transcript Processing Center 311 Arsenal Street STE 5600**
Watertown, MA 02472
- Interview: Screened applicants will meet with the Healthcare Administration (M.H.A.) program admissions committee to assess interpersonal and communication skills, maturity, and an understanding and commitment to Healthcare Administration (M.H.A.) career paths. Applicants may have the opportunity to take a campus tour on the day of the interview.
- International students must abide by all U.S. Immigration laws throughout their enrollment in the Healthcare Administration (M.H.A.) program. This includes, but is not limited to, qualifying and obtaining a proper visa prior to attendance. For further information, please contact Human Resources at 757-446-6043.

Waivers to admission standards will be considered on a case-by-case basis to students who can demonstrate exceptional qualifications.

Curriculum Requirements

The 42/43-credit Healthcare Administration (M.H.A.) curriculum is designed to cover all Commission on Accreditation of Healthcare Management Education (CAHME) core competencies and to provide

all students with a deep and broad understanding and appreciation of the healthcare system and healthcare management consistent with the program's mission (https://www.evms.edu/education/masters_programs/healthcare_administration/mission/).

All courses are delivered in a hybrid format consisting of in-person sessions and online assignments. The Healthcare Administration (M.H.A.) degree can be completed in five semesters for full-time students but can be completed on a part-time basis. Part-time students will have a maximum of six years to complete degree requirements from the date they start their first course.

The Healthcare Administration (M.H.A.) curriculum will consist of two tracks to meet the experience needs for incoming students. Students enrolled in Track I (43 credit hours) will be students who have little to no experience in healthcare settings. Track I students will be required to take an administrative introduction course, which will consist of gaining health care administration exposure and experience at a local healthcare organization. Students enrolled in Track II will have healthcare experience and do not need this initial exposure for the healthcare environment. Throughout the program, students will work closely with their academic advisor to ensure proper course sequencing and competency development, leading to successful graduation.

Course Sequence – Track I (43 credit hours)

Year 1 - Fall Semester		9
HADM 600	Introduction to Health Care Systems	
HADM 601	Policy and Politics of Health	
HADM 602	Organizational Management	
Year 1 - Spring Semester		9
HADM 605	Health Law and Ethics	
HADM 606	Health Economics	
HADM 607	Effective Information Technology for Healthcare Organizations	
Year 1 - Summer Semester		7
HADM 610	Financing Healthcare	
HADM 611	Operations Management and Performance Improvement	
HADM 612	Administrative Introduction	
Year 2 - Fall Semester		9
HADM 700	Leadership	
HADM 701	Supply Chain Management	
HADM 702	Healthcare Marketing	
Year 2 - Spring Semester		9
HADM 705	Conflict Analysis & Negotiations	
HADM 706	Healthcare Strategy	
HADM 715	Administrative Residency	
Total Credit Hours		43

Course Sequence – Track II (42 credit hours)

Year 1 - Fall Semester		9
HADM 600	Introduction to Health Care Systems	
HADM 601	Policy and Politics of Health	
HADM 602	Organizational Management	
Year 1 - Spring Semester		9
HADM 605	Health Law and Ethics	
HADM 606	Health Economics	
HADM 607	Effective Information Technology for Healthcare Organizations	

Year 1 - Summer Semester		6
HADM 610	Financing Healthcare	
HADM 611	Operations Management and Performance Improvement	
Year 2 - Fall Semester		9
HADM 700	Leadership	
HADM 701	Supply Chain Management	
HADM 702	Healthcare Marketing	
Year 2 - Spring Semester		9
HADM 705	Conflict Analysis & Negotiations	
HADM 706	Healthcare Strategy	
HADM 715	Administrative Residency	
Total Credit Hours		42

Certificate Health Management Certificate

Healthcare management is a multidisciplinary field of inquiry and practice that is concerned with the organization, financing, delivery and quality of health services for individuals and populations. The Graduate Healthcare Management Certificate is a 15-credit hour program designed to provide the learner with leadership and strategic management tools specifically for the healthcare environment.

Curriculum Requirements

Required		
MPHO 620	Health Management and Systems Thinking	3
MPHO 733	Financing Healthcare	3
Select three of the following:		9
MPHO 690	Leadership	
MPHO 721	Healthcare Strategy	
MPHO 723	Policy and Politics of Health	
MPHO 727	Organizational Management

Overview

The College of Sciences is committed to providing graduate programs of the highest quality. Our degree programs are designed to prepare students for careers in the sciences and to lay broad foundations for specialized training in these fields of knowledge. We offer a strong academic environment where students can grow and discover. Students learn in the classroom, in the laboratory, in the field, and around the world.

The college is comprised of the Departments of Biological Sciences, Chemistry and Biochemistry, Computer Science, Mathematics and Statistics, Ocean and Earth Sciences, Physics, and Psychology. The Departments of Biological Sciences, Chemistry and Biochemistry, Mathematics and Statistics, Ocean and Earth Sciences, and Physics cooperate with the Darden College of Education and Professional Studies to provide the necessary courses for a Master's of Science in Education in each of the respective fields.

Programs

The College of Sciences has developed graduate programs in the basic and applied sciences that meet the needs of the region, the state, the nation, and the world. These programs address a variety of challenges, ranging from basic research to the quest for solutions to contemporary problems in science. The importance of these challenges is reflected by the more than \$15 million in research and training grant expenditures generated by the college. The college provides the nation with much-needed graduate programs in broad fields of concentration leading to both master's and doctoral degrees. Related program emphases within the major areas of study are designed to meet the professional needs of the students and communities served.

The college's faculty of 200 highly skilled professional educators is devoted to guiding students toward an assimilation of the most current scientific theories, research, and practices.

College Financial Aid

The College of Sciences has established competitive teaching and research assistantship stipends that are distributed by each department. In addition, each department has fellowship and tuition exemption funds available for competitive distribution.

Dominion Graduate Scholars

Programs in the College of Sciences offer a number of very competitive awards for graduate students newly admitted into Ph.D. programs. Some of these are Dominion Graduate Scholar research assistantships that carry a minimum stipend of \$22,000 for a the academic year and full tuition. These Dominion Scholars must be enrolled in at least nine hours of graduate courses each semester, and three graduate credits during the summer to meet institutional eligibility requirements.

All admission materials are considered as a part of the evaluation process. Students apply to specific graduate programs and may inquire about the Dominion Graduate Scholar research assistantship. After a student has been appointed to a Dominion Scholar research assistantship, the graduate program director will submit a copy of their letter-of-offer, letter-of-acceptance and the awardee's credential summary.

Minimum criteria for eligibility are as follows:

1. GRE scores: 310 combined verbal and quantitative, and at least a 4.0 on the analytical writing section.
2. GRE scores (older version): 1200 combined verbal and quantitative, or 1300 in any two of verbal, quantitative, or analytical.
3. Undergraduate GPA of 3.20 overall and 3.50 in the major, out of 4.00 maximum.
4. Evidence of research aptitude by undergraduate thesis/research, publications, M.S. thesis and/or letters of reference.
5. Information concerning the Dominion Graduate Scholar Program may be obtained from the graduate program director for the program of interest.
6. Written acknowledgment from a faculty member agreeing to serve as the student's major advisor, if the student is accepted.

Holly Gaff, Chair

Ian Bartol and David Gauthier, Associate Chairs

Daniel Barshis, Ecological Sciences Ph.D. Graduate Program Director

Piotr Kraj, Biology Master's Graduate Program Director

The Department of Biological Sciences provides a broad selection of course offerings. The degree program in biology allows for the selection of elective subjects most suited to the individual's vocational interests. In addition, the Department of Biological Sciences partners with the Graduate School to offer an interdisciplinary Ph.D. in Biomedical Sciences.

Programs

Doctor of Philosophy Program

- Ecological Sciences (PhD) (p. 354)

Master of Science Programs

- Biology (MS) (p. 350)
- Biology with a Concentration in Microbiology and Immunology (MS) (p. 351)
- Biology with a Concentration in One Health (MS) (p. 353)

Doctor of Philosophy - Biomedical Sciences

Barbara Hargrave, Graduate Program Director

In this interdisciplinary program all students are required to master a broad knowledge of the basic biomedical sciences. Refer to the Graduate School

(<http://catalog.odu.edu/graduate/graduateschool/>) page of this catalog for details.

Master of Science Biology (MS)

Piotr Kraj, Graduate Program Director

The Department of Biological Sciences provides a broad selection of course offerings. The degree program in biology allows for the selection of elective subjects most suited to the individual's vocational interests.

The curriculum for the Master of Science program is developed around one's interests such as:

- botany,
- ecology,
- immunology,
- infectious diseases,
- marine biology,
- microbiology,
- physiology,
- biomechanics,
- environmental pollution,
- marine benthic ecology,
- systematic biology, and
- zoology.

In addition, there are specially designed concentration areas in:

- Microbiology and Immunology
- One Health

Facilities and Equipment in the Department of Biological Sciences include:

- microscopy: electron, fluorescence and confocal,
- animal care facilities: terrestrial and aquatic,
- spectroscopy,
- cell culture,
- DNA sequencing: Sanger and Next-Generation,
- GIS (Geographic Information System),
- digital imaging,
- a greenhouse,
- herbarium,
- zoological museum, and
- field science wet laboratories.

In addition, excellent opportunities exist for research and instruction off-campus at field research sites including:

- Blackwater Ecological Preserve,
- Virginia Coast Reserve-Long Term Ecological Research Site,
- Virginia Institute of Marine Sciences Eastern Shore Marine Laboratory, and
- other regional agencies and facilities.

Admission Information

Students who wish to enter this program should apply to the Master of Science in biology program and indicate their proposed field of study in the Statement of Interest, a required component of the application. Applications for admission can be obtained via the Internet at <http://www.odu.edu/admission/graduate> (<http://www.odu.edu/admission/graduate/>) or from:

Office of Graduate Admissions
Old Dominion University
Norfolk, VA 23529-0050
(757) 683-3685

Requirements for regular admission to the master’s program in biology are:

- 1. a bachelor’s degree in biology or a related field from an accredited college or university;
- 2. a grade point average of at least 3.00 on a 4.00 scale;
- 3. two letters of recommendation;
- 4. an essay describing the area of biology of interest for graduate study, professional goals and motivation for graduate study in biology; and
- 5. written acknowledgment from a Department of Biological Sciences faculty member agreeing to serve as the student’s major advisor, if the student is accepted.

The Test of English as a Foreign Language (TOEFL) is required of all applicants whose native language is not English: minimum scores are 550 for the paper-based test, 213 for the computer-based or 79 on internet-based test.

Deadlines for application to the program are:

- February 1 for summer admission, early fall admission and consideration for a graduate teaching assistantship;
- June 1 for fall semester admission; and
- October 1 for spring semester admission.

Curriculum Requirements

Two degree options are available — thesis and non-thesis. A minimum of 32 semester hours of graduate credit is required; three-fifths of these credits must be at the 600-level or above and 20 credits must be Biology department coursework. Students must pass a course with a grade of C (2.0) or better for the course to count towards the 32 degree required hours.. Research (BIOL 698) is required of all students. All students must deliver a scientific presentation in an appropriate public forum; for thesis students, the presentation should be at a scientific meeting. Coursework will include 5 core courses; the remaining credits are selected according to the interest of the student, with the guidance and approval of the student’s faculty advisory committee. A substantial research project and a defense of the written thesis (BIOL 699) are required of students selecting the thesis option. Thesis students will complete a thesis defense (final oral exam) covering the research and appropriate coursework. Non-thesis students will complete a comprehensive written and/or oral examination on the program of study.

Biology Core

Many pertinent graduate courses are offered for the Master of Science in Biology programs that can be applied toward the degree requirements. A program of study is developed by the student with approval of advisory committee and the Graduate Program Director.

A set of five core courses is required:

RCR Course		
BIOL 747/847	Responsible and Ethical Conduct of Research	3
Statistics Course *		
BIOL 757/857	Statistics in Biology	4
Fundamentals Course		
Select one of the following:		3
BIOL 523	Cellular and Molecular Biology	
BIOL 524	Comparative Animal Physiology	
BIOL 759	Foundations and Principles in Ecology	
Data Analysis Course		
Select one of the following:		3
BIOL 701	Practical Computing for Biology	
BIOL 772	Modeling and Simulation in the Life Sciences	
BIOL 732	GIS in the Life Sciences	
Research Course **		
BIOL 698	Research in Biology	3
Total Credit Hours		16

- * BIOL 757/BIOL 857 is the recommended statistics course for this program. However, depending upon your area of research/concentration, another course may be approved by your graduate program director.
- ** No more than three credits of BIOL 698 can be applied to the total number of credits required.

Biology Courses

Elective Coursework *	
Select 16 credits of electives	16
Total Credit Hours	16

- * Remaining credits are elective, based on student interests, with guidance and approval of the student's faculty advisory committee. Students choosing the thesis option will need to take BIOL 699. Additional core courses, beyond the five required, can be used as elective credits.

Master of Science Biology with a Concentration in Microbiology and Immunology (MS)

Piotr Kraj, Graduate Program Director

The Department of Biological Sciences provides a broad selection of course offerings. The degree program in biology allows for the selection of elective subjects most suited to the individual’s vocational interests.

The curriculum for the Master of Science program is developed around one’s interests such as:

- botany,
- ecology,
- immunology,
- infectious diseases,
- marine biology,
- microbiology,
- physiology,
- biomechanics,
- environmental pollution,
- marine benthic ecology,
- systematic biology, and
- zoology.

In addition, there are specially designed concentration areas in:

- Microbiology and Immunology
- One Health

Facilities and Equipment in the Department of Biological Sciences include:

- microscopy: electron, fluorescence and confocal,
- animal care facilities: terrestrial and aquatic,
- spectroscopy,
- cell culture,
- DNA sequencing: Sanger and Next-Generation,
- GIS (Geographic Information System),
- digital imaging,
- a greenhouse,
- herbarium,

Non-thesis students will complete a comprehensive written and/or oral examination on the program of study.

Biology Core

Many pertinent graduate courses are offered for the Master of Science in Biology programs that can be applied toward the degree requirements. A program of study is developed by the student with approval of advisory committee and the Graduate Program Director.

A set of five core courses is required:

RCR Course		
BIOL 747/847	Responsible and Ethical Conduct of Research	3
Statistics Course *		
BIOL 757/857	Statistics in Biology	4
Fundamentals Course		
Select one of the following:		3
BIOL 523	Cellular and Molecular Biology	
BIOL 524	Comparative Animal Physiology	
BIOL 759	Foundations and Principles in Ecology	
Data Analysis Course		
Select one of the following:		3
BIOL 701	Practical Computing for Biology	
BIOL 772	Modeling and Simulation in the Life Sciences	
BIOL 732	GIS in the Life Sciences	
Research Course **		
BIOL 698	Research in Biology	3
Total Credit Hours		16

* BIOL 757/BIOL 857 is the recommended statistics course for this program. However, depending upon your area of research/concentration, another course may be approved by your graduate program director.

** No more than three credits of BIOL 698 can be applied to the total number of credits required.

Microbiology and Immunology Concentration

All students in the MS in Biology – Microbiology and Immunology concentration will complete at least 31 credits, consisting of the set of five core courses and at least an additional 12 credits selected from the following:

RCR Course		
BIOL 747	Responsible and Ethical Conduct of Research	3
Statistics Course		
BIOL 757	Statistics in Biology	4
Fundamentals Course		
BIOL 523	Cellular and Molecular Biology	3
Data Analysis Course		
Select one of the following:		3
BIOL 701	Practical Computing for Biology	
BIOL 772	Modeling and Simulation in the Life Sciences	
BIOL 732	GIS in the Life Sciences	
Research Course *		
BIOL 698	Research in Biology	3
Microbiology & Immunology Concentration Courses		
Select four of the following:		12
BIOL 503	Medical Microbiology	
BIOL 516	Clinical Immunology	
BIOL 525	Cancer Biology	
BIOL 530	Microbial Pathogenesis	
BIOL 536	Infectious Disease Epidemiology	
BIOL 537	One Health: People, Animals and the Environment	

BIOL 540	Methods in Immunological Research
BIOL 557	General Virology
BIOL 562	Microbial Genetics
BIOL 563	Cell Signaling in Host Pathogen Interactions
BIOL 565	Biotechnology
BIOL 570	Diseases that Changed our World
BIOL 582	Human and Veterinary Parasitology
BIOL 640	Microbial Toxins
BIOL 702	Biomedical Sciences Journal Club
BIOL 705	Advanced Microbiology
BIOL 730	Emerging Infectious Diseases
BIOL 740	Vaccinology
BIOL 745	Advanced Immunology
BIOL 748	Functional Genomics and Proteomics in Animal Models
BIOL 771	Vector-Borne Diseases

Elective Courses **

Select 4 credits of electives 4

Total Credit Hours 32

* No more than three credits of BIOL 698 can be applied to the total number of credits required.

** Remaining credits are elective, based on student interests, with guidance and approval of the student's faculty advisory committee. Students choosing the thesis option will need to take BIOL 699. Additional core courses, beyond the five required, can be used as elective credits.

Master of Science Biology with a Concentration in One Health (MS)

Piotr Kraj, Graduate Program Director

The Department of Biological Sciences provides a broad selection of course offerings. The degree program in biology allows for the selection of elective subjects most suited to the individual's vocational interests.

The curriculum for the Master of Science program is developed around one's interests such as:

- botany,
- ecology,
- immunology,
- infectious diseases,
- marine biology,
- microbiology,
- physiology,
- biomechanics,
- environmental pollution,
- marine benthic ecology,
- systematic biology, and
- zoology.

In addition, there are specially designed concentration areas in:

- Microbiology and Immunology
- One Health

Facilities and Equipment in the Department of Biological Sciences include:

- microscopy: electron, fluorescence and confocal,
- animal care facilities: terrestrial and aquatic,
- spectroscopy,

- cell culture,
- DNA sequencing: Sanger and Next-Generation,
- GIS (Geographic Information System),
- digital imaging,
- a greenhouse,
- herbarium,
- zoological museum, and
- field science wet laboratories.

In addition, excellent opportunities exist for research and instruction off-campus at field research sites including:

- Blackwater Ecological Preserve,
- Virginia Coast Reserve-Long Term Ecological Research Site,
- Virginia Institute of Marine Sciences Eastern Shore Marine Laboratory, and
- other regional agencies and facilities.

The One Health concentration is for students in the MS program that have a specific interest in aspects of the interdisciplinary One Health paradigm, a strategy for expanding interdisciplinary collaborations and communications in aspects of health for humans, animals and the environment. The concentration will introduce students to the concepts of One Health and their application. Students will be admitted to the concentration after selection of their guidance committee and approval of their program of study.

Admission Information

Students who wish to enter this program should apply to the Master of Science in biology program and indicate their proposed field of study in the Statement of Interest, a required component of the application. Applications for admission can be obtained via the Internet at <http://www.odu.edu/admission/graduate> (http://www.odu.edu/admission/graduate/) or from:

Office of Graduate Admissions
Old Dominion University
Norfolk, VA 23529-0050
(757) 683-3685

Requirements for regular admission to the master's program in biology are:

1. a bachelor's degree in biology or a related field from an accredited college or university;
2. a grade point average of at least 3.00 on a 4.00 scale;
3. two letters of recommendation;
4. an essay describing the area of biology of interest for graduate study, professional goals and motivation for graduate study in biology; and
5. written acknowledgment from a Department of Biological Sciences faculty member agreeing to serve as the student's major advisor, if the student is accepted.

The Test of English as a Foreign Language (TOEFL) is required of all applicants whose native language is not English: minimum scores are 550 for the paper-based test, 213 for the computer-based or 79 on internet-based test.

Deadlines for application to the program are:

- February 1 for summer admission, early fall admission and consideration for a graduate teaching assistantship;
- June 1 for fall semester admission; and
- October 1 for spring semester admission.

Curriculum Requirements

Two degree options are available — thesis and non-thesis. A minimum of 32 semester hours of graduate credit is required; three-fifths of these credits must be at the 600-level or above and 20 credits must be Biology department coursework. Students must pass a course with a grade of C (2.0) or better for the course to count towards the 32 degree required hours.. Research (BIOL 698) is required of all students. All students must deliver a scientific presentation in an appropriate public forum; for thesis students,

the presentation should be at a scientific meeting. Coursework will include 5 core courses; the remaining credits are selected according to the interest of the student, with the guidance and approval of the student's faculty advisory committee. A substantial research project and a defense of the written thesis (BIOL 699) are required of students selecting the thesis option. Thesis students will complete a thesis defense (final oral exam) covering the research and appropriate coursework. Non-thesis students will complete a comprehensive written and/or oral examination on the program of study.

One Health Concentration

All students in the MS in Biology – One Health concentration will complete at least 32 credits, consisting of the set of five core courses, two required courses, and an additional 6 credits of coursework chosen from the concentration courses listed below.

RCR Course

BIOL 747	Responsible and Ethical Conduct of Research	3

Statistics Course

BIOL 757	Statistics in Biology	4

Fundamentals Course

BIOL 523	Cellular and Molecular Biology	3

Data Analysis Course

Select one of the following:		3

BIOL 701	Practical Computing for Biology	
BIOL 772	Modeling and Simulation in the Life Sciences	
BIOL 732	GIS in the Life Sciences	

Research Course *

BIOL 698	Research in Biology	3

Concentration Courses - Required

BIOL 536	Infectious Disease Epidemiology	3
BIOL 537	One Health: People, Animals and the Environment	3

Concentration Electives

Select two of the following:		6

BIOL 540	Methods in Immunological Research	
BIOL 557	General Virology	
BIOL 570	Diseases that Changed our World	
BIOL 730	Emerging Infectious Diseases	
BIOL 740	Vaccinology	
BIOL 771	Vector-Borne Diseases	
ECON 535	Health Economics: A Global Perspective	
ENVH 520	Communicable Diseases	
ENVH 523	Vector-Borne Diseases and Their Control	
HLSC 776	Global Health	

Elective Courses **

Select four credits of electives		4

Total Credit Hours		32

* No more than three credits of BIOL 698 can be applied to the total number of credits required.

** Remaining credits are elective, based on student interests, with guidance and approval of the student's faculty advisory committee. Students choosing the thesis option will need to take BIOL 699. Additional core courses, beyond the five required, can be used as elective credits.

Doctor of Philosophy Ecological Sciences (PhD)

Daniel Barshis, Graduate Program Director

The primary goal of the doctoral program in ecological sciences is to provide advanced training in ecological, evolutionary, and integrative biology.

The program has notable strengths in a broad range of biological sub-disciplines, including:

- ecosystem studies,
- experimental ecology,
- community ecology,
- behavioral ecology,
- marine biology,
- molecular genetics/genomics,
- conservation biology,
- systematics,
- modeling,
- evolutionary biology,
- biomechanics,
- parasitology, and
- functional morphology.

Program faculty conduct studies in a variety of terrestrial, freshwater, and marine environments on several continents, and their research focuses on a broad spectrum of taxa, including, but not limited to:

- vascular plants,
- polychaetes,
- mollusks,
- crustaceans,
- corals,
- insects,
- arachnids,
- birds,
- fishes, and
- amphibians.

Many faculty combine active field research with parallel laboratory studies. Quantitative approaches are encouraged and the opportunity exists to obtain a master's degree in statistics while pursuing a doctorate in ecological sciences. The program is enhanced by excellent on-campus resources that include a scanning electron microscopy lab, genetic sequencing facilities, herbarium, aquatics laboratory, water tunnel and flow quantification facility, GIS facilities, greenhouse, and digital imaging facilities. Field research sites have been established in:

- the Virginia Coastal Reserve,
- Blackwater Ecologic Preserve,
- Great Dismal Swamp,
- Atlantic Ocean,
- Chesapeake Bay, and
- other areas.

Admission

Application forms for admission to the Ph.D. program in ecological sciences are available from the Office of Admissions and online (<http://www.odu.edu/admission/graduate> (<http://www.odu.edu/admission/graduate/>)). The following should be sent to the Admissions Office:

1. the completed application form;
2. official transcripts from all universities attended (including institutions from which a degree has not yet been/was not awarded);
3. test of English as a Foreign Language (TOEFL) score (from students whose native language is not English);
4. three letters of recommendation, including one from the applicant's undergraduate or graduate major advisor (if applicable);

5. a statement of professional goals that includes specific research interests; and,
6. a current CV.

The deadline for application to the program is **February 1** for the subsequent fall semester. Students may be admitted during the spring and summer semesters as well, provided they obtain permission from the Graduate Program Director. If an applicant is interested in requesting financial aid, an application for institutional graduate financial assistance should be completed during the application process (see Office of Admissions web page for form).

To qualify for admission, a student needs:

1. a satisfactory academic average (overall GPA score of at least 3.0 on a 4.0 scale, and overall GPA in the sciences of at least 3.0);
2. a TOEFL score of at least 550 (paper-based test), 213 (computer-based test), or 79 (internet-based test) for applicants whose native language is not English;
3. satisfactory letters of recommendation; and
4. a statement of professional goals as stated above.

A master's degree is desirable but not required. The applicant is expected to have a background in the sciences, with an appropriate undergraduate degree and substantial course work in biology, chemistry or geology.

Applicants are strongly advised to contact the ODU faculty member closest to their area of interest prior to submitting an application to determine whether that faculty member is accepting new graduate students. No student, regardless of qualifications, is admitted to the Ecological Sciences Program without the approval of a specific faculty advisor. Potential applicants therefore should initiate a dialogue, preferably by email, with an appropriate member of the program faculty. Applicants should consult the list of faculty in the Department of Biological Sciences, which includes a brief description of their research interests. Applicants may also find it desirable to visit the campus for an interview with a potential advisor and the Graduate Program Director.

It is important for potential applicants to realize that many considerations enter into the decision to accept a student into the program. In addition to the strength of an applicant's credentials (transcripts, personal statement, and letters of recommendation), the availability of space in the appropriate faculty advisor's lab and availability of adequate financial aid may influence the decision. Of these, space in an appropriate advisor's lab is the most important consideration after an applicant's academic qualifications. For this reason, applicants are strongly encouraged to contact a potential advisor directly.

Curriculum Requirements

Many pertinent graduate courses are offered for the Ecological Sciences PhD program that can be applied toward the degree requirements. A program of study is developed by the student with approval of advisory committee and the Graduate Program Director.

A set of six core courses is required:

RCR Course

BIOL 847	Responsible and Ethical Conduct of Research	3

Statistics Course *

BIOL 857	Statistics in Biology	4

Fundamentals Course

Select one of the following:		3

BIOL 804	Animal Ecophysiology	
BIOL 810	Advanced Cell Biology	
BIOL 849	Biogeography	
BIOL 859	Foundations and Principles in Ecology	

Data Analysis Course

Select one of the following:		3

BIOL 801	Practical Computing for Biology	

BIOL 872	Modeling and Simulation in Life Sciences	
BIOL 803	Advanced Genomics Data Analysis	
BIOL 832	GIS in the Life Sciences	
Research Course ***		12-18
BIOL 898	Research in Biology	
Dissertation Course		3
BIOL 899	Dissertation	
Elective Coursework **, ****		21-45
Total Credit Hours		49-79

- * BIOL 857 is the recommended statistics course for this program. However, depending upon your area of research/concentration, another course may be approved by your graduate program director.
- ** Remaining credits are elective, based on student interests, with guidance and approval of the student's faculty advisory committee. Additional core courses, beyond the five required, can be used as elective credits.
- *** 18 (12 if MS holding)
- **** 45 (21 if MS holding)

Additional Requirements

Program Requirements

Program requirements are designed to provide a firm foundation in conceptual elements of ecological, evolutionary, and integrative biology, while moving students expeditiously toward their own research. In general, students must complete:

- 48 hours beyond the master's degree, or
- in the absence of a master's, 78 hours beyond the bachelor's degree.

The student's program of study should be broad and balanced. Coursework varies with each student, depending on background and goals. Enrollment in a weekly ecology seminar is required, on average, one semester each year. Professional experience (environmental management or teaching) is encouraged. A five-member advisory committee of faculty is selected to guide the student through his or her course of study and to provide initial approval of the dissertation research. This committee also administers the comprehensive written and oral candidacy examinations, which are taken after all required coursework is completed and the research skill requirement (proficiency in one foreign language, computer programming, or a quantitative skill approved by the advisory committee) is satisfied. The written exam must be passed before the oral exam may be taken. Once the candidacy exams are completed and a dissertation committee approves a written dissertation prospectus, the student advances to candidacy. At least three of the members of the original advisory committee, including the committee chair (student's major advisor), will compose the dissertation committee. This committee approves a written dissertation prospectus and will supervise the research. At this time, the student's attention turns almost exclusively to their own research. However, students continue to participate in seminar courses on a variety of topics, and an average of one seminar course per year of residency on campus is required. At the conclusion of their research, the student submits a dissertation to the committee and presents a public defense of this work.

Department of Chemistry and Biochemistry

Web Site: <http://www.odu.edu/chemistry> (<http://www.odu.edu/chemistry/>)

1000H New Chemistry Building
Norfolk, VA 23529-0126
(757) 683-4078

Craig A. Bayse, Chair
Bala Ramjee, Graduate Program Director

Overview

The Department of Chemistry and Biochemistry strives to provide a high quality of education in Chemistry and Biochemistry for both graduate and undergraduate students and to engage in scholarly research at the forefront in both the fields of chemistry and biochemistry. The department's variety of research programs provide students with a broad based education which prepares graduates for successful careers and a lifetime of learning. In addition to offering the Master of Science program and Doctor of Philosophy program in Chemistry, the Department of Chemistry and Biochemistry also partners with the Graduate School to offer an interdisciplinary Ph.D. program in Biomedical Sciences.

Programs

The Department of Chemistry and Biochemistry offers programs leading to a linked 5-year BSMS program, master of science with either a thesis or a non-thesis option, and doctor of philosophy in Chemistry and Biochemistry.

Programs

Doctor of Philosophy Program

- Chemistry (PhD) (p. 357)

Master of Science Program

- Chemistry (MS) (p. 356)

Doctor of Philosophy - Biomedical Sciences

Dr. Barbara Hargrave, Graduate Program Director

In this interdisciplinary program all students are required to master a broad knowledge of the basic biomedical sciences. Refer to the Graduate School (<http://catalog.odu.edu/graduate/graduateschool/>) page of this catalog for details.

Master of Science Chemistry (MS)

The Department of Chemistry and Biochemistry offers a program of study leading to the degree of master of science. This program offers a sound academic background of coursework and research to prepare the student for further graduate study or employment in fields requiring an advanced degree. Areas of specialization within the program include: analytical chemistry, biochemistry, environmental chemistry, inorganic chemistry, materials chemistry, organic chemistry, and physical chemistry.

Admission

An application (<http://www.odu.edu/admission> (<http://www.odu.edu/admission/>)), transcripts, two letters of recommendation from former college instructors, a resume, a writing sample, and an essay about career goals are required for consideration of admission to the program. The submission of Graduate Record Examination (GRE) scores is optional for domestic students, but strongly recommended for international applicants. All international applicants must satisfy ODU's English proficiency requirements for admission. International students can demonstrate English proficiency by providing an Internet Based TOEFL (iBT) or IELTS score. Admission to regular status requires a grade point average of 3.00 in the major and 2.80 overall (on a 4.00 scale). General university admission requirements also apply. In addition, a Bachelor of Science degree (or equivalent) with a major in chemistry (or another science) is expected, although applications from majors in all science disciplines are welcome. Undergraduate courses in organic chemistry, inorganic chemistry, analytical chemistry (quantitative and instrumental analysis), physical chemistry, and calculus are required for regular admission. Deficiencies in any of these areas will be identified and must be rectified by taking undergraduate coursework.

To be considered for a teaching assistantship, students must demonstrate both written and oral fluency in the English language. All domestic and international students who are not native English speakers are required

to take the SPEAK test. Students who have a score of 26 or better on the Speaking portion of the iBT TOEFL or a score of 8 on the IELTS are eligible to request a waiver for the SPEAK test requirement.

Curriculum Requirements

Core Courses

There are six core areas. These are:

- analytical chemistry
- biochemistry
- environmental chemistry
- inorganic chemistry
- organic chemistry
- physical chemistry

Students enrolled in either the research/thesis or non-thesis option must take one course from each of three different core areas.

Options

Candidates for the master's degree have two options in their program: the Research/Thesis option and the Non-Thesis option.

Thesis option

Courses	24
Research and Thesis	6
CHEM 790	Master's Seminar
	1
Total Credit Hours	31

Non-thesis option*

Courses	27
Independent study	3
CHEM 790	Master's Seminar (**)
	1
Total Credit Hours	31

* Ph.D students seeking a non-thesis master's degree after the successful completion of candidacy can use six credits of CHEM 898 toward this 27 credit requirement and additionally substitute CHEM 898 for CHEM 698.

** Ph.D. students seeking a non-thesis master's degree after successful completion of their candidacy can substitute CHEM 890 for CHEM 790.

Up to 15 hours may be taken in related courses given by other departments pending approval from the Graduate Studies Committee of the Department of Chemistry and Biochemistry. At least 60 percent of the credit hours must be from 600-level courses or higher.

Students who earn a grade of less than a B- in any two graduate courses will not be allowed to continue in the M.S. program.

Additional Requirements

Writing Proficiency Policy

The departmental graduate committee will request a writing sample from each new student. The graduate committee will refer students in need of remedial assistance to the Writing Center.

Seminar

All students are required to register for seminar (CHEM 790, one credit, pass/fail) and attend departmental seminars for one semester.

Research and Thesis

During their first semester (and not later than the end of their first academic year), students electing the Research/Thesis Option are required to interview the chemistry graduate faculty, choose a graduate faculty research advisor, and select a research committee in consultation with their advisor and the

Graduate Program Director. Upon completion of their research, students must write a formal thesis describing their research, present their work in a public seminar, and pass an oral examination by their research committee.

Non-Thesis Option

Not later than the end of their first academic year, students electing the Non-Thesis Option are required to interview the chemistry graduate faculty and choose an independent study advisor. Non-thesis students and their independent study advisor will then agree upon an independent study project. Upon completion of their independent study project, non-thesis students must write a formal Independent Study Report acceptable to their independent study advisor and the Graduate Studies Committee and pass an oral exam on their project.

Doctor of Philosophy Chemistry (PhD)

The Ph.D. program in Chemistry prepares students in the application of chemical principles to address many of society's technical, environmental, and biomedical problems. Students will be able to provide leadership in industrial, governmental and educational institutions in directing research and/or development to solve these problems. The Ph.D. degree is granted to students who have:

1. mastered advanced knowledge of definite sub-fields of chemistry
2. become familiar with research in these specific fields and developed perceptions of opportunities for further scientific advances
3. demonstrated the capacity to perform original, independent, and scholarly scientific investigation in their specific field and interpret their results.

All students admitted to the program must read and understand the regulations and policies described here and elsewhere throughout this catalog relevant to Old Dominion University's requirements for Ph.D. degrees. The essential credit requirements for the Ph.D. are:

A minimum of 78 credit hours beyond the Bachelor's degree, and
48 credit hours beyond the Master's degree.

Admission

Students with either a bachelor's or a master's degree may apply directly to the Ph.D. program. An application (<http://www.odu.edu/admission> (<http://www.odu.edu/admission/>)), undergraduate and graduate transcripts, two letters of recommendation from former college instructors, a resume, a writing sample, and an essay about career goals are required for consideration of admission to the program. The submission of Graduate Record Examination (GRE) scores is optional for domestic students, but strongly recommended for international applicants. All international applicants must satisfy ODU's English proficiency requirements for admission. Admission to regular status requires a grade point average of 3.00 in the major and 3.00 overall (based on a 4.00 scale). General university admission requirements apply. In addition, a Bachelor of Science degree (or equivalent) with a major in chemistry (or another science) is expected, although applications from majors in all science disciplines are welcome. Undergraduate courses in inorganic chemistry, organic chemistry, analytical chemistry (quantitative and instrumental analysis), physical chemistry, and calculus are required for regular admission. Deficiencies in any of these areas will be identified and must be rectified by taking undergraduate coursework in these areas.

To be considered for a teaching assistantship, students must demonstrate both written and oral fluency in the English language. All domestic and international students who are not native English speakers are required to take the SPEAK test. Students who have a score of 26 or better on the Speaking portion of the iBT TOEFL or a score of 8 on the IELTS are eligible to request a waiver for the SPEAK test requirement.

Curriculum Requirements

The broad requirements for granting the Ph.D. are as follows:

- satisfactory performance in core and elective courses,
- successful completion of both written and oral portions of the Candidacy Examination,
- completion of the dissertation prospectus,
- presentation of two graded seminars,
- and completion of a satisfactory dissertation and defense of the dissertation.

A minimum of 78 semester hours is required for students entering the Ph.D. program with a bachelor's degree in the following manner:

- Doctoral Research or Dissertation (1- 9 credits every semester)
- Graduate Orientation course (3 credits)
- Two semesters of Ph.D. seminar (2 x 2 credits each)
- Three core courses (3 x 3 credits each)
- Three elective courses (3 x 3 credits each) and
- Seminar course (1 credit per semester) until students achieve ABD status

A maximum of 12 semester hours may be transferred from non-degree status at Old Dominion University or from another University and applied towards the Ph.D. course requirements at the discretion of the graduate program director.

A minimum of 48 semester hours is required for students entering the Ph.D. program with a master's degree. All the requirements listed above for those entering the Ph.D. Program with a bachelor's degree are also applicable to those entering with a master's degree. However, courses taken as part of master's degree from ODU can be used to satisfy some of the above Ph.D. requirements.

Students who earn a grade of less than a B- in any two graduate courses will not be allowed to continue in the Ph.D. program.

Core Courses

Students must choose one course from three different core areas. The core areas are:

- analytical chemistry
- biochemistry
- environmental chemistry
- inorganic chemistry
- organic chemistry
- physical chemistry

Classes from each area are listed on the following pages.

Elective Courses

Students are required to take nine credit hours of elective courses. The courses are to be chosen upon consultation with their advisor and/or their guidance committee.

Additional Requirements

Writing Proficiency Policy

The departmental graduate committee will request a writing sample from each new student. If the graduate committee feels that remedial assistance in writing is needed, the student will be referred to the Writing Center.

Teaching

Students are required to spend at least one semester as a teaching assistant.

Seminar

All students are required to register for seminar CHEM 890 (one credit, graded pass/fail) and attend departmental seminars throughout their graduate career. Twice during their career, students will register for CHEM 891 (two credits) and present a seminar, which will receive a letter grade. In the

second year, students will give a background literature talk on their research. The second semester of CHEM 891 may not be taken in the same semester as graduation.

Advisor Selection

During their first semester (and not later than the end of their first semester), students are required to interview the chemistry graduate faculty (a signed sheet of at least three faculty members is required), choose a graduate faculty research advisor, and select a guidance committee in consultation with their advisor and the Graduate Program Director.

Candidacy Examination

A student enrolled in the Ph.D. program in chemistry becomes a candidate for the doctoral degree by passing the Ph.D. candidacy examination. This examination consists of a written portion and oral portion. The student is required to submit a written description of a novel research idea in the form of a grant proposal, and then present and defend the idea to his or her guidance committee.

Dissertation

The dissertation is the final and most important part of the work required for the Ph.D. degree. The dissertation must be based on original research and make a contribution to existing knowledge of sufficient interest to warrant publication in a refereed journal. The candidate normally works closely with the research advisor, who is chair of the dissertation committee.

Dissertation Defense

The final examination of the candidate consists of the oral defense of the dissertation. This public examination is conducted by the dissertation committee with the research advisor serving as chair.

Department of Computer Science

Web Site: <https://www.cs.odu.edu/>

Engineering & Computational Sciences Bldg.
4700 Elkhorn Ave, Suite 3300
Norfolk, VA 23529-0162

Ravi Mukkamala, Department Chair
Yaohang Li, Graduate Program Director - Admissions
Andrey Chernikov, Graduate Program Director – Master’s
Michele Weigle, Graduate Program Director – PhD

Programs

The Department of Computer Science offers programs leading to the Master of Science (MS) with a major in computer science, a linked five-year combined BSCS and MS with a major in computer science, and the Doctor of Philosophy (PhD) in computer science. The Department of Computer Science also offers a Master of Science in computer science with an information and communications technology (ICT) concentration (jointly with the Information Technology and Decision Sciences Department in the Strome College of Business). The department also offers two graduate certificates: Cybersecurity (12 credit hours) and Computer Science for Teachers (18 credit hours), which is targeted towards licensed high school teachers. In support of these degree programs, the department has excellent state-of-the-art computing facilities.

Computer science traces its foundation to mathematics, logic, and engineering. Studies in computer science encompass theory, experimental techniques, and engineering methodology. The computer science curriculum exposes students to aspects of each of these disciplines and fosters an appreciation and understanding of them. Students are exposed to the broad theoretical basis of computer science through lecture and laboratory experience. The Department of Computer Science has a unique curricular model that applies computer science education to the real world. In addition, the Department of Computer Science offers a set of courses to professionals who need supplementary experience. A graduate of the computer science program will have a broad fundamental knowledge of the field and in-depth knowledge in a particular subject area. To acquire breadth, graduate students in the department are required to take core courses which together

with the undergraduate core courses cover major aspects of computers and computation.

The department's MS degrees are available *both on-campus and online*. At the master's level, the department supports in-depth study in the following areas:

- data science and data analytics
- machine learning and artificial intelligence
- bioinformatics
- web science and digital libraries
- high performance computing
- cybersecurity
- computer networking
- software engineering
- computational foundations

At the PhD level, areas of specialization are limited only by the interests of the available faculty.

Linked Bachelor of Science in Computer Science and Master of Business Administration

This program allows students to earn a Bachelor of Science in Computer Science and a Master of Business Administration. After students have satisfactorily completed their undergraduate requirements, they must complete the remaining requirements in the MBA program. Additional information can be found in the section on BS/MBA Linked Program at the beginning of the College of Sciences section of this Catalog and the Strome College of Business section in the Graduate Catalog (<http://catalog.odu.edu/graduate/stromecollegeofbusiness/>).

Linked Bachelor of Science in Computer Science and Master of Science in Computer Science

This program allows for exceptionally successful students to earn both a BSCS and an MS in Computer Science by allowing up to 12 credits of graduate coursework to count toward both their bachelor's and master's degree in Computer Science. All options available under the MS degree are available under this program. Students must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree).

Admission

To be admitted to the linked program, students must have completed at least 60 undergraduate credit hours with at least 24 credit hours from ODU. Students must have completed CS 361, CS 381, MATH 212 and all prerequisites for those courses. At the time of admission, they must have an overall GPA of 3.00 or better, and an overall GPA of 3.00 or better in CS and MATH courses.

Interested students who meet the admission requirements should apply to the graduate program director, after consulting with the undergraduate chief departmental advisor, as soon as possible upon completing the required courses and 60 credit hours. In consultation with the graduate program director, a student will:

1. Officially declare an undergraduate Computer Science major with the undergraduate chief departmental advisor.
2. Draft a schedule of graduate courses to be taken as an undergraduate to be presented to the undergraduate chief departmental advisor.
3. Apply, during their senior year, to the Office of Graduate Admissions for admission to the master's in computer science program.

Students who have completed at least six hours of graduate courses upon attaining senior standing (completion of 90 credit hours) and who have earned a GPA of 3.00 or better in those courses will not be required to take the Graduate Record Exam (GRE) for admission to the master's program. Otherwise, in keeping with normal admission requirements for the MS in computer science, students will take the GRE as an undergraduate and will subsequently be reevaluated for continuation into the master's program.

Once students have been awarded their bachelor's degree and fulfilled all regular admission requirements for the MS in computer science, they will be officially admitted into the MS program.

Program Requirements

Students in the program will fulfill all normal admission and curricular requirements for both a Bachelor of Science in Computer Science and an MS in computer science with the following exceptions:

1. Students in the program may count up to 12 hours of graduate courses, at the 500 or 600 level, excluding independent study, taken as an undergraduate toward both the bachelor's and master's degrees in computer science.
 - a. Students in the program may substitute computer science graduate courses for undergraduate courses according to the following schema. All students must complete an undergraduate writing intensive course in the major. Students may substitute 500- and 600-level courses for the upper-level CS electives in the undergraduate program so long as they have the prerequisites for those courses. 700- or 800-level courses may not be used.
 - b. Students will not receive credit for both the 400 and 500 level version of the same course.
 - c. Students in the program may make a written petition for other substitutions to the graduate program director, who will consider them in consultation with the chief departmental advisor and the instructor(s) of the courses involved.
 - d. To maximize the accelerated benefit one or more of the following required courses should be selected: CS 517, CS 518, CS 550, or CS 571.

NOTES:

1. In accordance with University policy, up to 21 hours of graduate courses taken as an undergraduate may be counted toward the bachelor's degree in computer science. However, only 12 hours of graduate courses taken as an undergraduate may also be counted toward the MS degree in computer science. This will limit students' scheduling flexibility subsequently.
2. Like students in the regular MS in computer science program, students in the linked BSCS/MS computer science degree may count no more than 12 hours at the 500-level toward their MS degree. Students are advised against taking all 12 of those 500-level credits as an undergraduate, since doing so will limit their scheduling flexibility subsequently.

Linked Bachelor of Science in Computer Science and Master of Science in Data Science and Analytics

This program allows for exceptionally successful students to earn both a BSCS and an MS in Data Science and Analytics by allowing up to 12 credits of graduate coursework to count toward both their bachelor's degree in Computer Science and master's degree in Data Science and Analytics. All options available under the MS degree are available under this program. Students must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree).

Admission

To be admitted to the linked program, students must have completed at least 60 undergraduate credit hours with at least 24 credit hours from ODU. Students must have completed CS 361, CS 381, MATH 212 and all prerequisites for those courses. At the time of admission, they must have an overall GPA of 3.00 or better, and an overall GPA of 3.00 or better in CS and MATH courses.

Interested students who meet the admission requirements should apply to the graduate program director, after consulting with the undergraduate chief departmental advisor, as soon as possible upon completing the required courses and 60 credit hours. In consultation with the graduate program director, a student will:

1. Officially declare an undergraduate Computer Science major with the undergraduate chief departmental advisor.
2. Draft a schedule of graduate courses to be taken as an undergraduate to be presented to the undergraduate chief departmental advisor.
3. Apply, during their senior year, to the Office of Graduate Admissions for admission to the master's in Data Science and Analytics program.

Students who have completed at least six hours of graduate courses upon attaining senior standing (completion of 90 credit hours) and who have earned a GPA of 3.00 or better in those courses will not be required to take the Graduate Record Exam (GRE) for admission to the master's program. Otherwise, in keeping with normal admission requirements for the MS in Data Science and Analytics, students will take the GRE as an undergraduate and will subsequently be reevaluated for continuation into the master's program.

Once students have been awarded their bachelor's degree and fulfilled all regular admission requirements for the MS in data science and analytics, they will be officially admitted into the MS program.

Program Requirements

Students in the program will fulfill all normal admission and curricular requirements for both a Bachelor of Science in Computer Science and an MS in Data Science and Analytics with the following exceptions:

1. Students in the program may count up to 12 hours of graduate courses, at the 500 or 600 level, excluding independent study, taken as an undergraduate toward both the bachelor's and master's degrees.
 - a. Students in the program may substitute computer science graduate courses for undergraduate courses according to the following schema. All students must complete an undergraduate writing intensive course in the major. Students may substitute 500- and 600-level courses for the upper-level CS electives in the undergraduate program so long as they have the prerequisites for those courses. 700- or 800-level courses may not be used.
 - b. Students will not receive credit for both the 400 and 500 level version of the same course.
 - c. Students in the program may make a written petition for other substitutions to the graduate program director, who will consider them in consultation with the chief departmental advisor and the instructor(s) of the courses involved.

The graduate courses taken must be from the following:

CS 550	Database Concepts	3
Choose three from the following:*		9
CS 522	Introduction to Machine Learning	
CS 532	Web Science	
CS 569	Data Analytics for Cybersecurity	
CS 580	Introduction to Artificial Intelligence	
Total Credit Hours		12

* Substitutions of other computer science courses may be made with approval of the graduate program director.

NOTE:

1. In accordance with University policy, up to 21 hours of graduate courses taken as an undergraduate may be counted toward the bachelor's degree in computer science. However, only 12 hours of graduate courses taken as an undergraduate may also be counted toward the MS degree in Data Science and Analytics. This will limit students' scheduling flexibility subsequently.

Master of Science Computer Science (MS)

Yaohang Li, Graduate Program Director - Admissions
Andrey Chernikov, Graduate Program Director – Master's

This program is designed for students with a strong background in computer science. ODU's Department of Computer Science supports in-depth study at the graduate level in areas such as data science, machine learning, bioinformatics, web science and digital libraries, high performance computing, cyber security, data mining, networking, software engineering, and computational foundations.

The department's MS degrees are available *both on-campus and online*.

Admission

Entrance Requirements

Students entering the Master of Science program in computer science should meet the minimum university graduate admission requirements (<https://www.odu.edu/admission/graduate> (<https://www.odu.edu/admission/graduate/>)).

In addition, an applicant must have a strong background in computer science. Students who do not have a sufficient background in computer science may enter the graduate program as *provisional students* and make up for their deficiencies by taking appropriate courses.

Two letters of recommendation from faculty members of academic institutions are required in addition to all transcripts at the postsecondary level. For students whose native language is not English, either a TOEFL score of 550 (paper-based) and 79 (internet-based) or IELTS score of 6.5 is also required.

Curriculum Requirements

The departmental requirements for the Master of Science degree are described below. All requirements must be satisfied in addition to the University requirements outlined under the University Requirements for Graduate Degrees & Certificates section of this catalog.

All degree options require 31 credit hours, including 16 credits of core coursework.

Core Courses

CS 500	Foundations of Computing	3
or CS 600	Algorithms and Data Structures	
CS 522	Introduction to Machine Learning	3

or CS 580	Introduction to Artificial Intelligence	
CS 550	Database Concepts	3
or CS 650	Advanced Databases	
CS 620	Introduction to Data Science and Analytics	3
CS 665	Computer Architecture	3
CS 690	Colloquium	1
Total Credit Hours		16

Colloquium

In addition to taking CS 690 Colloquium, each student is required to attend at least 10 departmental colloquiums during their MS study.

Degree Options

Three options are available for candidates for Masters degrees:

- thesis option
- project option
- course option

Thesis Option

Core Coursework	16
must include CS 600 and CS 650	
CS Electives	9
CS 699 Thesis Research	6
Total Credit Hours	31

Students in the thesis option are required to take CS 600 and CS 650 as part of the core coursework requirement.

The candidate is required to write a thesis and make an oral presentation of the results.

Project Option

Core Coursework	16	
CS Electives	12	
CS 698	Master's Project	3
Total Credit Hours		31

The candidate is required to prepare a written report on the project and to present it orally.

Courses Option

Core Coursework	16
CS Electives	15
Total Credit Hours	31

The candidate is required to complete an exit examination that requires a comprehensive written report and an oral examination.

Course Restrictions

All credit hours must be in Computer Science (CS) unless recommended by the student's MS thesis or project advisor and approved by the GPD.

No more than 12 credit hours of 500-level courses may count towards the degree requirements.

No more than 3 credit hours of CS 697 Independent Study in Computer Science may count towards the degree requirements.

Since internship is not a degree requirement, the courses CS 667, CS 668, and CS 669 *do not* count towards MS course requirements.

Although 800-level courses are primarily meant for PhD students, these courses may count as 700-level courses for the purposes of MS credit requirements.

Master of Science Computer Science with a Concentration in Information & Communications Technology (MS)

Yaohang Li, Graduate Program Director - Admissions
Andrey Chernikov, Graduate Program Director – Master's

ICT (Information and Communications Technology) is the infrastructure and components that enable contemporary business computing. This MS program in Computer Science offers a unique combination of computer science technical knowledge and business IT skills that prepares graduate students for success in the business world of the 21st century. The program emphasizes cutting-edge ICT skills, which can provide a basis for job entry, career development and flexibility amid the rapid changes in Information Technology.

Admission

Entrance Requirements

Students entering the Master of Science program in computer science should meet the minimum university graduate admission requirements (<https://www.odu.edu/admission/graduate> (<https://www.odu.edu/admission/graduate/>)).

In addition, an applicant must have a strong background in computer science. Students who do not have a sufficient background in computer science may enter the graduate program as *provisional students* and make up for their deficiencies by taking appropriate courses.

Two letters of recommendation from faculty members of academic institutions are required in addition to all transcripts at the postsecondary level. For students whose native language is not English, either a TOEFL score of 550 (paper-based) and 79 (internet-based) or IELTS score of 6.5 is also required.

Curriculum Requirements

This concentration, offered jointly with the Department of Information Technology and Decision Sciences in the Strome College of Business, is appropriate for students with either a bachelor's degree in business administration with a major in information systems and a computer science minor or with a bachelor's degree in computer science with a business administration minor.

The departmental requirements for the Master of Science degree with concentration in Information and Communications Technology are described below. All requirements must be satisfied in addition to the University requirements outlined under the University Requirements for Graduate Degrees & Certificates section of this catalog.

This degree requires 31 credit hours, including 16 credits of core coursework. At the end of the program, the candidate is required to complete an exit examination that requires a comprehensive written report and an oral presentation.

Core Courses

CS 500	Foundations of Computing	3
or CS 600	Algorithms and Data Structures	
CS 550	Database Concepts	3
or CS 650	Advanced Databases	
CS 522	Introduction to Machine Learning	3
or CS 580	Introduction to Artificial Intelligence	
CS 620	Introduction to Data Science and Analytics	3
CS 665	Computer Architecture	3
CS 690	Colloquium	1
Total Credit Hours		16

Colloquium

In addition to taking CS 690 Colloquium, each student is required to attend at least 10 departmental colloquiums during their MS study.

Electives

For the remaining 15 credit hours, students must take 6 credit hours of electives from Computer Science and 9 credit hours from the following set of IT/BNAL electives.

CS Electives		6
IT/BNAL Electives		9
IT 651	Business Intelligence	
IT 652	Information and Communications Technology for Big Data	
BNAL 503	Data Visualization and Exploration	
BNAL 515	Advanced Business Analytics/Big Data Applications	
BNAL 721	Simulation Modeling for Business and Supply Chain Systems	
Total Credit Hours		15

Course Restrictions

No more than 12 credit hours of 500-level courses may count towards the degree requirements.

No more than 3 credit hours of CS 697 Independent Study in Computer Science may count towards the degree requirements.

Since internship is not a degree requirement, the courses CS 667, CS 668, and CS 669 *do not* count towards MS course requirements.

Although 800-level courses are primarily meant for PhD students, these courses may count as 700-level courses for the purposes of MS credit requirements.

Doctor of Philosophy Computer Science (PhD)

Yaohang Li, Graduate Program Director - Admissions
Michele Weigle, Graduate Program Director – PhD

In the ODU PhD program, research is led by our graduate faculty who have interests in artificial intelligence and data analytics, bioinformatics, computer networking, cybersecurity, parallel algorithms and computing, scientific and high-performance computing, stochastic modeling, and web science and digital libraries. The research groups are described on the Department of Computer Science Research webpage (<https://www.odu.edu/computer-science/research/>).

Admission

Students entering the PhD program in the Computer Science Department should meet the minimum university graduate admission requirements (<https://www.odu.edu/admission/graduate/>).

Students may be admitted directly to the PhD program with either a bachelor's or a master's degree. Prior to applying for admission, students are encouraged to visit the department's website and ensure that their research interests match with that of a faculty member.

Students are expected to show proficiency in Problem Solving and Programming, Introduction to Computer Architecture, Advanced Data Structures and Algorithms, Introduction to Theoretical Computer Science, and Operating Systems at an undergraduate level. Those entering the PhD program with deficiencies in these areas will have to make them up.

Applicants are required to take the GRE general test. Two letters of recommendation from faculty members of academic institutions are required in addition to all transcripts at the postsecondary level. For students whose

native language is not English, either a TOEFL score of 550 (paper-based) and 79 (internet-based) or IELTS score of 6.5 is also required.

Curriculum Requirements

A candidate for the doctoral degree in computer science must meet all of the following requirements in addition to the university requirements outlined under the Academic Information section in this Catalog:

- Complete a minimum of 78 credit hours beyond the bachelor's degree or 48 credit hours beyond the master's degree (credits include those for formal coursework, breadth requirements, and dissertation/research work). All credit hours must be in computer science unless recommended by the student's PhD dissertation advisor and approved by the GPD.
- Attend at least 10 departmental colloquium events *and* take the 1 credit hour CS 690 Colloquium.
- Develop a dissertation topic that is approved by the student's PhD dissertation advisor.
- Pass the candidacy examination. *After this step, and after formal courses are complete and the topic for the dissertation is approved by the advisor, the student is considered to be a PhD candidate.*
- Write and defend the dissertation prospectus (proposal).
- Complete 23 credit hours of CS 899 (Doctoral Dissertation).
- Successfully defend the dissertation.

The above must be completed within eight years after admission to the PhD program. Note that students with a degree in a discipline outside of computer science may be required to take prerequisite undergraduate courses that will not be counted towards the 78 credit hours requirement.

Course Requirements

All students must complete 48 credit hours as specified below:

CS 690	Colloquium	1
CS 800	Research Methods	3
CS courses that meet the breadth course requirements (see below)		12
CS Electives		9
CS 899 Doctoral Dissertation		23
Total Credit Hours		48

Additional Notes:

- CS 800 Research Methods must be taken during a student's first year in the PhD program (or within one year of completing required undergraduate prerequisites).
- CS Electives may include up to 9 credits of CS 898 Doctoral Research or up to 6 credits of graduate coursework outside of computer science, with the approval of the student's PhD dissertation advisor and the GPD.
- Since internship is not a degree requirement, the courses CS 667, CS 668, and CS 669 *do not* count towards PhD course requirements.

Students *without* a master's degree in computer science or related field must complete an *additional 30 credit hours* (for a *total of 78 credit hours* of graduate coursework) as specified below:

CS 522 or CS 580	Introduction to Machine Learning Introduction to Artificial Intelligence	3
CS 600	Algorithms and Data Structures	3
CS 620	Introduction to Data Science and Analytics	3
CS 650	Advanced Databases	3
CS 665	Computer Architecture	3
CS Electives		15
Total Credit Hours		30

Additional Notes:

- CS Electives may include up to 6 credits of CS 898 Doctoral Research.
- At least three-fifths of the minimum required hours for a doctoral degree must be completed at the 800 level. This means that students required to take 78 credit hours must have *at least 47 credit hours at the 800 level*. All students will complete at least 35 credit hours at the 800 level by satisfying the CS 800, CS 899, and breadth course requirements, so 12 additional credit hours of 800 level courses are required.

Breadth Course Requirements

Excellence in breadth is assessed through graduate coursework at ODU and is evaluated by multiple ODU CS faculty members. To demonstrate this, a student must earn a GPA of at least 3.5 in *four (4)* CS graduate courses at the 600 level or above that meet the following conditions:

1. At least *one course* in *three (3) different* research areas.
2. At least *three (3) courses* at the 800 level. (A student may take four 800-level courses, or three 800-level courses and one 600-level course.)
3. The four courses must be regular courses that also earn a letter grade (thus CS 697, CS 891, CS 896, CS 898, and CS 899 *do not* count towards this requirement). Most CS 895 Topics courses will count towards this requirement, and those eligible will be assigned to an appropriate research area.
4. Courses transferred from another university *do not* count towards this requirement.

See the Department of Computer Science webpage or contact the GPD for information on the course to research area mapping.

Additional Requirements

Advisor

Upon admission to the PhD program, a faculty advisor will be assigned to the student for general guidance. The student, however, is expected to find a dissertation advisor by the time he or she completes formal coursework. The guidelines for advising are outlined under Student Advising in the University Requirements for Graduate Degrees (<http://catalog.odu.edu/graduate/universityrequirementsforgraduatedegrees/>) section of the Graduate Catalog.

Candidacy Examination Process

Upon completing formal coursework (not counting CS 899 credits), before becoming heavily involved in dissertation work, and no later than three years after acceptance into the PhD program (preferably during the first 24 months after admission into the program), the student must pass the Candidacy Examination process. Students may satisfy this requirement by passing the Candidacy Examination or by completing an acceptable Research Event. Both options require a written and an oral component.

Option 1: Candidacy Examination

The topics and papers covered in the Candidacy Examination are set by the student's PhD advisor and other members of the appropriate research area committee. The student will be provided a set of 5-10 papers to review in their research area.

Written Component: The student will write a summary of the papers, highlighting their contributions to the research area, noting how they are related and how they are different. The student must also propose areas for potential future work. Ideally, this document could form the basis for the related work section of the student's dissertation proposal. The written summary should be 15-20 pages in the standard ODU dissertation format.

Oral Component: After the written component has been approved by the area committee, the student will give an oral presentation (about 20-30 minutes long) on the subject to the area committee. At the end of the presentation, the area committee may ask questions to further assess the student's understanding of the papers. At the end of the examination process, the committee will make a pass/fail decision and report this to the GPD.

The goal of this exam is to assess the student's understanding of the content of the papers and the student's ability to critically analyze and articulate

the important issues raised in the papers. The student should also be able to identify potential areas for future research that build off of these papers.

A *pass decision* means that the area committee believes that the student is prepared and qualified to undertake PhD-level research in computer science.

A *fail decision* means that the area committee believes the student is not ready to undertake PhD-level research in computer science. The area committee should provide recommendations to the student on how to improve their performance. A student who fails the Candidacy Examination may retake the exam once or may attempt the Research Event option once. Two failures will result in the student being dismissed from the PhD program. The student may request a different set of papers to be assigned for a retake.

Option 2: Research Event

Students who enter the PhD program with an acceptable MS thesis or are first author on a high-quality academic submission may be able to satisfy the Candidacy Examination process without taking the Candidacy Exam. Each research area committee determines its own set of conferences and journals in their research area that would be acceptable.

Written Component: The written component may be satisfied either through either an accepted publication or a high-quality, but rejected, submission to an approved conference or journal. For either option, the student must be the first author.

- Accepted: The research area committee may approve an accepted publication to count as the written component of the Candidacy Examination process.
- Rejected: The research area committee may approve a rejected, but high-quality, submission as the *baseline* for the written component of the Candidacy Examination process. In addition to the submitted paper, the student must construct a document that outlines how the student would address the reviewers' comments.

Oral Component: After the written component has been approved by the area committee, the student will give an oral presentation (about 20-30 minutes long) on the subject to the area committee. At the end of the presentation, the area committee may ask questions to further assess the student's understanding of the research and related work. At the end of the examination process, the committee will make a pass/fail decision and report this to the GPD.

A *pass decision* means that the area committee believes that the student is prepared and qualified to undertake PhD-level research in computer science.

A *fail decision* means that the area committee believes the student is not ready to undertake PhD-level research in computer science. The area committee should provide recommendations to the student on how to improve their performance. A student who fails the Research Event option may attempt the Research Event option once more or may take the Candidacy Exam once. Two failures will result in the student being dismissed from the PhD program.

To use the Research Event option, the student must provide the GPD and the chair of the appropriate research area committee a copy of the document proposed to satisfy the requirement. The document will be evaluated by the area committee to determine if it meets the stated criteria. The chair of the area committee will notify the student and the GPD of the outcome of the evaluation (acceptable or unacceptable). If the publication is deemed unacceptable, the student may submit another publication or take the Candidacy Examination. This does not count as an attempt.

If a student is not first author on a submitted paper to an approved conference/journal before they have completed formal coursework, they must take the Candidacy Examination within the next 6 months.

After passing the Candidacy Exam, completing formal coursework, and having an approved dissertation topic, the student must register for at least 1 credit hour each semester (including summer) until graduation.

Dissertation Committee

After the candidacy exam has been passed and dissertation topic approved, the Dissertation Committee is formed to supervise the dissertation research.

A Dissertation Committee is formed according to the following guidelines:

1. The faculty advisor selects *at least three members* of the Dissertation Committee in cooperation with the student and the Graduate Studies Committee.
2. The Dissertation Committee must consist of *at least two ODU faculty members*.
3. At least one member of the Dissertation Committee must be from outside the student's department/school at ODU or a non-ODU academic or professional with special knowledge of the dissertation subject area. No more than one-third of the committee's membership can be individuals external to the University.
4. Additional members may be appointed to the committee. Adjuncts (approved for graduate instruction) and non-university members may be added with approval of the GPD.
5. All committee members must be certified for graduate instruction. The current research interests of the computer science members of the committee should be related to the research goals of the student.
6. The Dissertation Committee must complete a PhD Dissertation Committee Form. This form is submitted to the GPD and to the Dean of the College of Sciences for approval.

Dissertation Prospectus

The oral examination of the written dissertation prospectus, or proposal, is designed to test the student's knowledge of background material related to the dissertation topic and to determine if the student has identified a significant problem, has a plan of attack, and is ready to proceed with the dissertation research.

At least one week before the scheduled oral examination time (and preferably two weeks before), the student must provide the examination committee with a written dissertation research proposal. The proposal should contain the following items (not necessarily in this order):

- a comprehensive literature review on the dissertation topic that should in particular discuss limitations of current approaches and open problems in the topic area
- a description of the research problem
- a discussion of how the problem relates to other work in the field
- a detailed research plan, including proposed tasks and a timeline for completion
- a list of expected contributions.

During the examination, the student will give a 45-minute presentation of the dissertation proposal to be followed by questions from the committee. The examination committee will be made up of at least three faculty members, all of whom must be graduate certified. These are typically the members of the student's dissertation committee. The exam is expected to last no more than 2 hours.

The presentation of the dissertation proposal is open to the public and will be publicized by the GPD at least one week in advance of the exam. Once the presentation has concluded and the audience has asked general questions, the audience will be excused. The examination by the committee will be held in private, but graduate faculty members are welcome to observe the exam.

Dissertation

A minimum of 23 credit hours of dissertation work (CS 899) is required. The work must represent an achievement in research and must be a significant contribution in the field. Students are required to publish (or have in the revision process) at least one paper in a refereed journal or refereed conference proceedings based on their dissertation work.

Dissertation Defense

The dissertation defense is an oral presentation of the dissertation results, open to the University community. The dissertation committee will examine the candidate after the presentation. The examination committee must be provided with the completed dissertation at least two weeks before the examination date.

Time Requirement

PhD students should normally be full-time. A full-time student can be expected to satisfy all the PhD requirements in three to five years when entering with an MS degree or four to six years with a bachelor's degree. No student (full-time or part-time) will be allowed to study for the PhD degree beyond eight years from the date of admission into the program.

Certificate Computer Science for Teachers Certificate

Michele Weigle, Computer Science for Teachers Certificate Program Coordinator

The purpose of this certificate is to educate students in foundational and advanced aspects of computing. Students will gain knowledge in algorithm design and analysis, relational databases, and advanced topics in computer science. Students will develop skills in analyzing algorithm complexity and designing SQL relational databases. Coursework will provide students with discipline specific content needed to teach college-level coursework in computer science. Graduates will be able to understand and discuss foundational computing topics and database architecture and modeling.

The primary target audience is licensed high school teachers in computer science or a related subject, who hold a master's degree in another field. Students enrolled in master's degree programs at Old Dominion University with a background in math or computer science will also be targeted.

Full-time and part-time students may enroll in the certificate program. Both non-degree seeking and degree seeking students may enroll. Degree seeking students may take courses in conjunction with their regular course load.

The courses in this certificate are available both in a traditional face-to-face format and fully online.

Admission

All students will be required to apply to the certificate program. The admission requirements will be based on enrollment status at the institution.

Degree-seeking students will:

- Gain advisor approval before applying to the program.
- Submit a completed online application.
- Be enrolled in a master's degree program at ODU.
- Have a background in undergraduate mathematics comparable to a minor in math, computer science, engineering, physics, or equivalent.
- Have a background in basic computer programming, preferably C++ or Java and exposure to at least one other programming language, and basic data structures.

Non-degree seeking students will:

- Submit a completed online application and application fee.
- Submit official transcripts of all undergraduate and graduate coursework from regionally accredited institutions.
- Have a master's degree from an accredited academic institution.
- Submit record of current teaching license.
- Have a background in undergraduate mathematics comparable to a minor in math, computer science, engineering, physics, or equivalent.

Students who have not earned a degree in the United States must also submit:

- Current scores on the Test of English as a Foreign Language (TOEFL), with a minimum score of 230 on the computer based TOEFL or 80 on the TOEFL iBT.
- A sample of scholarly writing.
- Three letters of recommendation, at least one of which evaluates proficiency in English.

Curriculum Requirements

The curriculum is designed to provide students with knowledge of foundational and advanced aspects of computing. Coursework will provide students with principles of computing including discrete mathematics, basic automata theory, and algorithm design and analysis. The core courses will train students to analyze computer algorithms and design relational databases. Students will be educated in SQL database procedures, entity-relationship modeling, database normalization, and database transaction concurrency.

The certificate requires a total of 18 credit hours.

Core Courses		
CS 500	Foundations of Computing	3
CS 550	Database Concepts	3
Select four of the following electives:		12
CS 517	Computational Methods and Software	
CS 522	Introduction to Machine Learning	
CS 532	Web Science	
CS 571	Operating Systems	
CS 580	Introduction to Artificial Intelligence	
CS 600	Algorithms and Data Structures	
CS 620	Introduction to Data Science and Analytics	
CS 624	Data Analytics and Big Data	
CS 625	Data Visualization	
CS 665	Computer Architecture	
CS 722	Machine Learning	
CS 732	Human Computer Interaction	
CS 733	Natural Language Processing	
CS 734	Introduction to Information Retrieval	
Total Credit Hours		18

Note that students who wish to apply these credits towards a Masters degree in computer science may count no more than four (4) 500-level courses towards the Masters degree requirements.

Certificate Cybersecurity Certificate

Shuai Hao, Cybersecurity Certificate Program Coordinator

This online certificate program, which may be completed in one year, is designed to train working professionals (in computer science and related fields) in cybersecurity. The courses offered under this program may be taken by current students or new students. A student must first apply to the certificate program and be admitted to the program to be eligible to receive the certificate.

A student admitted to this program may subsequently apply for the MS in Computer Science. If admitted, the courses taken during the certificate program may be considered towards the MS program.

Curriculum Requirements

Candidates for the program must at least have a 4-year bachelor's degree from an accredited academic institution. The program requires a student to take four courses (or 12 credits). Each course has a normal letter grade, and the student is expected to obtain a C or better in each course and maintain a 3.0 GPA overall. *The current offerings are listed below, but additional electives may be added in future.*

All students are required to take CS 562. Students can choose any three of the remaining courses listed below.

Required Course		
CS 562	Cybersecurity Fundamentals	3
Select three of the following:		9
CS 563	Cryptography for Cybersecurity	
CS 564	Networked Systems Security	
CS 565	Information Assurance for Cybersecurity	
CS 569	Data Analytics for Cybersecurity	
Total Credit Hours		12

N. Rao Chaganty, Statistics Program Director

Graduate Study in Computational and Applied Mathematics

The master's and doctoral programs in computational and applied mathematics offered by the Department of Mathematics and Statistics are designed to produce applied mathematicians and statisticians who can meet the growing demand for analytical and computational skills in traditional scientific and multi-disciplinary fields. Students in the program can choose to pursue an option in either applied mathematics, mathematics of data science, statistics, or biostatistics.

Applied mathematics is the application of mathematics to the solution of non-mathematical problems. Such problems may originate in math-oriented fields (physics, chemistry, and engineering) as well as in such areas such as geology, oceanography, meteorology, biology, ecology, environmental health, economics, actuarial science, business (operations and market research), banking, and medicine. Students will learn to use methods of applied mathematics, machine learning, data analysis, probability, statistics, biostatistics, numerical analysis, and scientific computing in seeking solutions to such problems. For work in computational and applied mathematics, training in an additional field of application is a necessity.

The desire and ability to use mathematics to bring together various disciplines is the unique characteristic of an applied mathematician. Not only has mathematical modeling and solving of societal and scientific problems increased the demand for applied mathematicians, but the flexibility and breadth of knowledge inherent in this discipline make it attractive for those who do not want to become irreversibly specialized.

Old Dominion University is one of the few American institutions offering a program expressly in applied mathematics. There are approximately 26 graduate program faculty members in the Department of Mathematics and Statistics, and current enrollment in the program is about 50 students. Areas of faculty research include analytical and numerical modeling in oceanography and meteorology, computational fluid dynamics and stability theory, elasticity and fracture mechanics, combustion theory, magnetohydrodynamics, mathematical biology, numerical analysis and approximation, optimization, applied probability, statistical inference, reliability, multivariate statistics, generalized linear models, estimating equations, biostatistics, nonparametric statistics, bioinformatics, machine learning, data science and high performance computing.

Facilities within the metropolitan area include the NASA/Langley Research Center, the Virginia Modeling, Analysis and Simulation Center (VMASC), and the Eastern Virginia Medical School.

Program Financial Aid. The Department of Mathematics and Statistics offer graduate assistantships with stipends awarded to students after a competitive review process. The level of award is determined on the basis of previous experience and performance as a graduate assistant and on the student's academic achievement and potential in applied mathematics or statistics. In addition, a number of teaching and research positions are available for financial support of graduate assistants during the summer months (June and July).

Writing Proficiency. All students in the graduate program are expected to demonstrate an acceptable level of writing ability. Students needing help to remedy their writing deficiencies will be referred to the Writing Center for diagnosis and assistance. All M.S. candidates will enroll in one of the MATH 632, STAT 632, and BDA 632 for a master's project.

Programs

Doctor of Philosophy Programs

- Computational and Applied Mathematics (PhD) (p. 369)
- Computational and Applied Mathematics with a Concentration in Mathematics of Data Science (PhD) (p. 370)

Master of Science Programs

- Computational and Applied Mathematics with a Concentration in Applied Mathematics (MS) (p. 365)
- Computational and Applied Mathematics with a Concentration in Biostatistics (MS) (p. 366)
- Computational and Applied Mathematics with a Concentration in Mathematics of Data Science (MS) (p. 367)
- Computational and Applied Mathematics with a Concentration in Statistics (MS) (p. 368)

Master of Science Computational and Applied Mathematics with a Concentration in Applied Mathematics (MS)

The M.S. candidate must complete a minimum of 33 normal credit hours of course work designed to fulfill an option in either applied mathematics, mathematics of data science, statistics or biostatistics. Each option includes 18 credit hours of Core Courses. With approval of the graduate program director, up to six of the 33 credits may be chosen from a field of application (e.g. oceanography, ecosystem analysis, computer science, economics, health sciences, operations research, physics and engineering mechanics) in which the student applies analytical and numerical techniques to another discipline. All programs of study must be approved by the graduate program director, and substitutions may be made only with their approval.

Concentrations

- **Applied Mathematics:** Students electing the concentration in Applied Mathematics will pursue course work in advanced mathematical analysis, differential equations, numerical methods, transform methods and data science. They will take electives in other methods of applied mathematics, or in an application area. A Master's Project will bring them in contact with the research frontier.
- **Statistics:** Students electing the concentration in Statistics will pursue course work in mathematical statistics, advanced regression analysis including responses surfaces, factorial designs, time series, advanced statistical computing. They will take electives in other areas of statistics and biostatistics. A Modeling Project involving statistical analysis of real-life data is required.
- **Biostatistics Concentration:** Students electing the concentration in Biostatistics will pursue course work in mathematical statistics, and biostatistical methods including survival analysis, clinical trials, categorical and longitudinal data analysis. They will take electives in

other areas of statistics and biostatistics. A Modeling Project involving statistical analysis of biomedical or health care data is required.

- **Mathematics of Data Science:** Students electing the concentration in Mathematics of Data Science will pursue course work in data science including mathematical statistics, regression and time series analysis, mathematical foundation of machine learning and genome data science. A Master's Project will bring them in contact to the real world applications.

Admission

An applicant to the master's program in computational and applied mathematics should have a bachelor's degree in mathematics, statistics, computer science, or an application area with a strong mathematics component (e.g., physics or engineering). Undergraduate mathematics preparation should include course work in linear algebra, advanced calculus, differential equations, probability, real analysis, and numerical methods. Undergraduate averages of 2.80 overall (4.00 scale) and 3.00 in the major and related mathematics courses are required.

A student who does not fully meet all requirements for admission as a regular graduate student may be allowed, with permission of the program director, to enroll as a provisional graduate student. Students lacking adequate preparation will be required to make up their deficiencies by taking appropriate undergraduate courses in addition to those specified for the master's program.

A formal application form, official transcripts, and two letters of recommendation should be forwarded to the Office of Admissions. It is recommended that applicants supply Graduate Record Examination aptitude scores.

The following material should be mailed directly to the director of the graduate program in computational and applied mathematics, Department of Mathematics and Statistics: a list of all mathematics courses taken and other courses closely allied to the applicant's primary interests in applied math or statistics along with the texts used (titles and authors), chapters studied or topics covered, and grades. This information should be enclosed with the financial aid application (if the applicant is submitting one).

Students may enroll in the program on either a full-time or part-time basis. Courses are offered on a regular basis during the late afternoon and early evening hours which allows part-time students to obtain master's degrees or post-master's graduate credit.

Curriculum Requirements

Computational and Applied Mathematics

Common Core Courses		
BDA 501	Programming Languages for Data Science	3
BDA 511	Introduction to Machine Learning	3
BDA 531	Modern Statistical Methods for Big Data Analytics	3
MATH 616	Computational Linear Algebra	3
STAT 625	Probability Theory for Data Science	3

Total Credit Hours		33

Applied Mathematics Concentration

Select 15 hours of the following:		15
MATH 617	Measure and Integration	
MATH 618	Applied Functional Analysis	
MATH 622	Numerical Solutions to Differential Equations	

or MATH 721	Advanced Applied Numerical Methods I
MATH 637	Tensor Calculus and Differential Geometry
MATH 691	Engineering Analysis I
MATH 692	Engineering Analysis II
BDA 620	Large-Scale Optimization

Total Credit Hours **15**

Additional Requirements

Master's Project Requirement

The M.S. candidate will be assigned to a faculty advisor for a master's project. Each student will enroll in MATH 632, STAT 632 and BDA 632 to complete his/her project. The master's project is designed not only to broaden students' analytical competency but also to enhance students' writing and reporting skills on a technical subject.

Colloquium Requirement

In order to develop an appreciation for the breadth of contemporary research in applied mathematics and statistics, all M.S. candidates will attend at least 80% and succinctly summarize and evaluate in writing at least eight professional seminars given by research faculty or external seminar visitors. The Richard F. Barry Colloquium Series is run by the department throughout the academic year. The department also conducts seminars jointly with other departments.

Master of Science Computational and Applied Mathematics with a Concentration in Biostatistics (MS)

The M.S. candidate must complete a minimum of 33 normal credit hours of course work designed to fulfill an option in either applied mathematics, mathematics of data science, statistics or biostatistics. Each option includes 18 credit hours of Core Courses. With approval of the graduate program director, up to six of the 33 credits may be chosen from a field of application (e.g. oceanography, ecosystem analysis, computer science, economics, health sciences, operations research, physics and engineering mechanics) in which the student applies analytical and numerical techniques to another discipline. BDA 611	Mathematical Foundations of Machine Learning	
BDA 620	Large-Scale Optimization	
BDA 640	Genomic Data Science	
BDA 745	Transform Methods for Data Science	
STAT 626	Statistical Theory for Data Science	
STAT 637	Advanced Regression and Time Series	
or MATH 622	Numerical Solutions to Differential Equations	
or BDA 721	High-Dimensional Statistics	
Total credit hours		15

Additional Requirements

Master's Project Requirement

The M.S. candidate will be assigned to a faculty advisor for a master's project. Each student will enroll in MATH 632, STAT 632 and BDA 632 to complete his/her project. The master's project is designed not only to

broaden students' analytical competency but also to enhance students' writing and reporting skills on a technical subject.

Colloquium Requirement

In order to develop an appreciation for the breadth of contemporary research in applied mathematics and statistics, all M.S. candidates will attend at least 80% and succinctly summarize and evaluate in writing at least eight professional seminars given by research faculty or external seminar visitors. The Richard F. Barry Colloquium Series is run by the department throughout the academic year. The department also conducts seminars jointly with other departments.

Master of Science Computational and Applied Mathematics with a Concentration in Statistics (MS)

The M.S. candidate must complete a minimum of 33 normal credit hours of course work designed to fulfill an option in either applied mathematics, mathematics of data science, statistics or biostatistics. Each option includes 18 credit hours of Core Courses. With approval of the graduate program director, up to six of the 33 credits may be chosen from a field of application (e.g. oceanography, ecosystem analysis, computer science, economics, health sciences, operations research, physics and engineering mechanics) in which the student applies analytical and numerical techniques to another discipline. All programs of study must be approved by the graduate program director, and substitutions may be made only with his or her approval.

Concentrations

- **Applied Mathematics:** Students electing the concentration in Applied Mathematics will pursue course work in advanced mathematical analysis, differential equations, numerical methods, transform methods and data science. They will take electives in other methods of applied mathematics, or in an application area. A Master's Project will bring them in contact with the research frontier.
- **Statistics:** Students electing the concentration in Statistics will pursue course work in mathematical statistics, advanced regression analysis including responses surfaces, factorial designs, time series, advanced statistical computing. They will take electives in other areas of statistics and biostatistics. A Modeling Project involving statistical analysis of real-life data is required.
- **Biostatistics Concentration:** Students electing the concentration in Biostatistics will pursue course work in mathematical statistics, and biostatistical methods including survival analysis, clinical trials, categorical and longitudinal data analysis. They will take electives in other areas of statistics and biostatistics. A Modeling Project involving statistical analysis of biomedical or health care data is required.
- **Mathematics of Data Science:** Students electing the concentration in Mathematics of Data Science will pursue course work in data science including mathematical statistics, regression and time series analysis, mathematical foundation of machine learning and genome data science. A Master's Project will bring them in contact to the real world applications.

Admission

An applicant to the master's program in computational and applied mathematics should have a bachelor's degree in mathematics, statistics, computer science, or an application area with a strong mathematics component (e.g., physics or engineering). Undergraduate mathematics preparation should include course work in linear algebra, advanced calculus, differential equations, probability, real analysis, and numerical methods. Undergraduate averages of 2.80 overall (4.00 scale) and 3.00 in the major and related mathematics courses are required.

A student who does not fully meet all requirements for admission as a regular graduate student may be allowed, with permission of the program director, to enroll as a provisional graduate student. Students lacking

adequate preparation will be required to make up their deficiencies by taking appropriate undergraduate courses in addition to those specified for the master's program.

A formal application form, official transcripts, and two letters of recommendation should be forwarded to the Office of Admissions.

The following material should be mailed directly to the director of the graduate program in computational and applied mathematics, Department of Mathematics and Statistics: a list of all mathematics courses taken and other courses closely allied to the applicant's primary interests in applied math or statistics along with the texts used (titles and authors), chapters studied or topics covered, and grades. This information should be enclosed with the financial aid application (if the applicant is submitting one).

Students may enroll in the program on either a full-time or part-time basis. Courses are offered on a regular basis during the late afternoon and early evening hours which allows part-time students to obtain master's degrees or post-master's graduate credit.

Additional Requirements

Master's Project Requirement

The M.S. candidate will be assigned to a faculty advisor for a master's project. Each student will enroll in MATH 632, STAT 632 and BDA 632 to complete his/her project. The master's project is designed not only to broaden students' analytical competency but also to enhance students' writing and reporting skills on a technical subject.

Colloquium Requirement

In order to develop an appreciation for the breadth of contemporary research in applied mathematics and statistics, all M.S. candidates will attend at least 80% and succinctly summarize and evaluate in writing at least eight

professional seminars given by research faculty or external seminar visitors. The Richard F. Barry Colloquium Series is run by the department throughout the academic year. The department also conducts seminars jointly with other departments.

Doctor of Philosophy Computational and Applied Mathematics (PhD)

A minimum of 78 credit hours beyond the bachelor's degree and 48 hours beyond the master's degree is required. Each student will be assigned an Advisory Committee, and together they will plan a complete program of course work designed to meet the student's objectives and to fulfill a concentration in mathematics of data science, or an option in applied mathematics, statistics, or biostatistics. The student is strongly encouraged to select courses in more than one of the concentration or option areas and in a field of application whenever such courses contribute appropriately to his or her program. Each program, however, must be directed and approved by the student's Advisory committee. A student receiving a grade of C+ or lower in any graduate course may be dismissed from the program. The concentration in Mathematics of Data Science and the three options offered under the PhD Program in Computational and Applied Mathematics are Applied Mathematics, Statistics, and Biostatistics:

- **Mathematics of Data Science Concentration:** Students electing the concentration in Mathematics of Data Science will pursue course work in the mathematical and statistical analysis of computational data science, including advanced machine learning, linear models, multivariate statistics, high dimensional statistics and applied functional data analytics. A PhD thesis project will bring them in contact with the research frontier.
- **Applied Mathematics Option:** Students electing the concentration in Applied Mathematics will pursue course work in advanced mathematical analysis, differential equations, numerical methods, transform methods, and data science. They will take electives in other methods of applied mathematics, or in an application area. A PhD thesis project will bring them in contact with the research frontier.
- **Statistics Option:** Students electing the concentration in Statistics will pursue course work in mathematical statistics, advanced regression analysis including responses surfaces, factorial designs, time series, advanced statistical computing. They will take electives in other areas of statistics and biostatistics. A PhD thesis project involving statistical analysis of real-life data is required.
- **Biostatistics Option:** Students electing the concentration in Biostatistics will pursue course work in mathematical statistics, and biostatistical methods including survival analysis, clinical trials, categorical and longitudinal data analysis. They will take electives in other areas of statistics and biostatistics. A PhD thesis project involving statistical analysis of biomedical or health care data is required.

Applicants who appear to be qualified for study at an advanced graduate level may be admitted to the doctoral program in computational and applied mathematics. These will be students with very strong backgrounds in mathematics, statistics, computer science, or application areas with a mathematics component (e.g. physics or engineering).

Students may be admitted directly to the Ph.D. program with either a bachelor's or a master's degree. A grade point average of 3.00 (4.00 scale) in the major and related mathematics courses is required.

Students are required to submit a formal application form, official transcripts, and three letters of recommendation to the Office of Admission.

Curriculum Requirements

Computational and Applied Mathematics Core

Common core courses

MATH 617	Measure and Integration	3
STAT 626	Statistical Theory for Data Science	3

MATH 898	Research	6
or STAT 898	Research	
Dissertation credits		18
MATH 899	Dissertation	
or STAT 899	Dissertation	
Total Credit Hours		30

Applied Mathematics Option:

Select 18 credits of the following:		18
MATH 605	Complex Variables I	
MATH 618	Applied Functional Analysis	
MATH 622	Numerical Solutions to Differential Equations	
MATH 637	Tensor Calculus and Differential Geometry	
MATH 638	Mathematical Theories of Continua	
MATH 693	Engineering Analysis III	
MATH 801 & MATH 802	Asymptotic and Perturbation Methods and Integral Equations	
MATH 821 & MATH 822	Advanced Applied Numerical Methods I and Advanced Applied Numerical Methods II	
MATH 803 or MATH 825	Advanced Applied Mathematics I Computational Fluid Dynamics	
BDA 845	Transform Methods for Data Science	
Total Credit Hours		18

Biostatistics Option:

Select 18 credits of the following		18
STAT 825	Linear Statistical Models	
STAT 827	Advanced Statistical Inference I	
STAT 828	Advanced Statistical Inference II	
STAT 830	Multivariate Statistics	
STAT 840	Advanced Clinical Trials	
STAT 849	Advanced Nonparametric Statistics	
BDA 640	Genomic Data Science	
BDA 821	High-Dimensional Statistics	
BDA 831	Applied Functional Data Analysis	
Total Credit Hours		18

Statistics Option:

Select 18 credits of the following:		18
STAT 630	Time Series Models	
STAT 640	Survival Analysis	
STAT 825	Linear Statistical Models	
STAT 827	Advanced Statistical Inference I	
STAT 828	Advanced Statistical Inference II	
STAT 830	Multivariate Statistics	
STAT 847	Advanced Analysis of Longitudinal Data	
STAT 849	Advanced Nonparametric Statistics	
STAT 850	Advanced Categorical Data Analysis	
BDA 821	High-Dimensional Statistics	
BDA 831	Applied Functional Data Analysis	
Total Credit Hours		18

Additional Requirements

Colloquium Requirement

In order to develop an appreciation for the breadth of contemporary research in applied mathematics and statistics, all Ph.D. candidates will attend at least 80% and succinctly summarize and evaluate in writing at least 16

professional seminars given by research faculty or external seminar visitors. The Richard F. Barry Colloquium Series is run by the department throughout the academic year. The department also conducts seminars jointly with other departments.

Foreign Language

A foreign language is not required.

Residency Requirement

An essential feature of doctoral study is the provision of total concentration on the field of study for significant periods of time. Students who wish to pursue a part of their doctoral study on a part-time basis may do so, but all doctoral students shall spend at least two academic years engaged in full-time graduate study.

Admission to Candidacy Examination

At the end of the core mathematics or statistics course work and prior to selecting a dissertation advisor, the student must pass an Admission to Candidacy Examination designed to test scholarly competence and knowledge and to give the examiners a basis for constructive recommendations on subsequent study. The written portion of this examination will be based upon an examination syllabus that will be provided to each student. The outcome of this examination will be reported to the vice provost for graduate studies and research as passed, failed, additional work to be completed, or to be re-examined. In the event of a re-examination, the outcome must be reported as passed or failed. This decision is final. The examination must be passed at least eight months prior to the granting of the degree.

Dissertation

A doctoral dissertation representing an achievement in research and a significant contribution to the field is required. Students must register for MATH 898 or MATH 899 each semester in which they are doing substantial work on their dissertations. A minimum of 24 hours of such research credit is required.

Defense of Dissertation

This examination will be oral and must be completed at least four weeks before the date on which the degree is to be conferred. The dissertation committee members must have the completed dissertation at least two weeks before the date of the oral examination. Under normal circumstances, it is expected that the student will have had a research paper accepted for publication prior to the dissertation defense.

Doctor of Philosophy Computational and Applied Mathematics with a Concentration in Mathematics of Data Science (PhD)

A minimum of 78 credit hours beyond the bachelor's degree and 48 hours beyond the master's degree is required. Each student will be assigned an Advisory Committee, and together they will plan a complete program of course work designed to meet the student's objectives and to fulfill a concentration in mathematics of data science, or an option in applied mathematics, statistics, or biostatistics. The student is strongly encouraged to select courses in more than one of the concentration or option areas and in a field of application whenever such courses contribute appropriately to his or her program. Each program, however, must be directed and approved by the student's Advisory committee. A student receiving a grade of C+ or lower in any graduate course may be dismissed from the program. The concentration in Mathematics of Data Science and the three options offered under the PhD Program in Computational and Applied Mathematics are Applied Mathematics, Statistics, and Biostatistics:

- Mathematics of Data Science Concentration: Students electing the concentration in Mathematics of Data Science will pursue course

work in the mathematical and statistical analysis of computational data science, including advanced machine learning, linear models, multivariate statistics, high dimensional statistics and applied functional data analytics. A PhD thesis project will bring them in contact with the research frontier.

- **Applied Mathematics Option:** Students electing the concentration in Applied Mathematics will pursue course work in advanced mathematical analysis, differential equations, numerical methods, transform methods, and data science. They will take electives in other methods of applied mathematics, or in an application area. A PhD thesis project will bring them in contact with the research frontier.
- **Statistics Option:** Students electing the concentration in Statistics will pursue course work in mathematical statistics, advanced regression analysis including responses surfaces, factorial designs, time series, advanced statistical computing. They will take electives in other areas of statistics and biostatistics. A PhD thesis project involving statistical analysis of real-life data is required.
- **Biostatistics Option:** Students electing the concentration in Biostatistics will pursue course work in mathematical statistics, and biostatistical methods including survival analysis, clinical trials, categorical and longitudinal data analysis. They will take electives in other areas of statistics and biostatistics. A PhD thesis project involving statistical analysis of biomedical or health care data is required.

Admission

Applicants who appear to be qualified for study at an advanced graduate level may be admitted to the doctoral program in computational and applied mathematics. These will be students with very strong backgrounds in mathematics, statistics, computer science, or application areas with a mathematics component (e.g. physics or engineering).

Students may be admitted directly to the Ph.D. program with either a bachelor's or a master's degree. A grade point average of 3.00 (4.00 scale) in the major and related mathematics courses is required.

Students are required to submit a formal application form, official transcripts, and three letters of recommendation to the Office of Admission.

Department of Ocean & Earth Sciences

406 Oceanography and Physics Building
Norfolk, VA 23529
757-683-4285
www.odu.edu/oes

Kevin Yeager, Chair
Richard Zimmerman, Graduate Program Director

Our integrated curriculum uses active learning by promoting research and education. It is designed to give graduates the skill sets to prepare them for a range of careers in academia, and the public and private sectors. The graduate program in OES draws from the strength of our diverse faculty and their active research programs that span the globe. Graduate students have the opportunity to take part in research projects among a broad suite of field sites from the local waters of the Chesapeake Bay to the polar regions.

Programs

Doctor of Philosophy Program

- Oceanography (PhD) (p. 373)

Master of Science Program

- Ocean and Earth Sciences (MS) (p. 372)

Certificate Program

- Spatial Analysis of Coastal Environments Certificate (p. 374)

Master of Science Ocean and Earth Sciences (MS)

406 Oceanography and Physics Building

Richard Zimmerman, Graduate Program Director

Mission

The Department of Ocean and Earth Sciences acquires and disseminates knowledge of the earth system, including the relationships among the biological, chemical, geological, and physical components of our planet. It is critical that we understand both natural and human-induced processes that change this system so we are prepared to meet present and future challenges to our society. With curiosity, creativity, scholarship, and respect as cornerstones of our philosophy, we strive to increase scientific knowledge and literacy through excellence in research, education, and service to the Commonwealth of Virginia and society in general.

General Description of Graduate Degrees

Two graduate programs are offered:

- Master of Science, Ocean and Earth Sciences
- Doctor of Philosophy, Oceanography

The Master of Science degree has both thesis and non-thesis options. The Ph.D. degree follows the traditional path of original research in the field of oceanography. For both degree paths, areas of emphasis are biological, chemical, geological, and physical oceanography, and the earth and geological sciences. Interdisciplinary studies are emphasized and an integral part of the student experience. The curricula are designed to prepare graduates for professional practice in their area of interest. Official transcripts, 3 letters of recommendation, TOEFL scores (international students), and a statement of goals and interest for graduate study should all be submitted to the Office of Admissions by January 1 for full consideration.

The department receives support from the Commonwealth and local philanthropic sources, as well as from private industry, and considerable support from federal agencies such as the National Science Foundation.

Establishment of the Virginia Graduate Marine Science consortium by the General Assembly in 1979 demonstrated the Commonwealth's determination to achieve excellence in marine science. The purpose of the consortium is to advance marine science instruction, research, training, and advisory services and to enhance Virginia's position in seeking funding to carry out these activities. Charter members of the consortium are Old Dominion University, the University of Virginia, Virginia Polytechnic Institute and State University, and the College of William and Mary. The Samuel L. and Fay M. Slover endowment to Old Dominion University in 1986 significantly accelerated the program of oceanographic studies. In 1991, a Center for Coastal Physical Oceanography (CCPO) was established at Old Dominion University by the Commonwealth of Virginia. The center is a Designated Center for Excellence.

The Department of Ocean and Earth Sciences is housed in two buildings. The Oceanography/Physical Sciences Building contains state-of-the-art

teaching laboratories, computer facilities, and research laboratories for geological sciences and biological, chemical and geological oceanography. The Center for Coastal Physical Oceanography is located in ODU's Innovation Research Park and contains most of the department's physical oceanography laboratories. The Department maintains a 55-foot research vessel, R/V Fay Slover, primarily for estuarine and coastal studies. In addition to R/V Slover, the Department has a number of small boats suitable for near-shore investigations.

Admission

Applicants who have obtained a bachelor's degree in a science (e.g., biology, chemistry, geology, physics), mathematics, or engineering, with a minimum 3.00 grade point average in their major and a 2.80 overall grade point average, are eligible for regular admission to the program. At least two semesters of calculus are also required. Ocean and earth sciences is an interdisciplinary endeavor and it is expected that applicants have science courses outside their major.

For students wishing to study geological/earth sciences, an undergraduate major in geology is required for regular admission. Students wishing to study physical oceanography should have majored in physics, mathematics, engineering, computer science, meteorology or a related physical sciences. Such applicants must have completed 36 hours in one of these fields and completed mathematics through partial differential equations.

An applicant who does not meet all requirements for admission as a regular graduate student may be admitted as a provisional graduate student. Students lacking adequate preparation for the program may make up deficiencies by taking appropriate undergraduate courses.

Curriculum Requirements

The student shall meet all university requirements for graduate degrees outlined in the Requirements for Graduate Degree section in this catalog, including at least 30 hours of graduate study. A maximum of 12 hours of credit may be transferred into a graduate degree program from non-degree status at Old Dominion University or from another accredited institution, except in the case of an approved inter-institutional program. All students are expected to demonstrate competency in oral communication and proficiency in writing.

Course Distribution

A minimum of 13 hours of basic course work in the four sub-disciplines of oceanography is required of all M.S. students. This core program consists of:

Required Core Courses

OEAS 604	Introduction to Physical Oceanography	3
OEAS 610	Advanced Chemical Oceanography	3
OEAS 620	Advanced Geological Sciences	3
OEAS 640	Advanced Biological Oceanography	4

Electives

Courses to be approved by the student's guidance committee.	17

Total Credit Hours	30

Students must achieve a grade of B or better in each of the four core courses. Students may repeat any individual core course only once; if a student fails to earn a grade of B or better on repeating a core course, then the student will be dismissed from the program.

The remaining 17 credits are chosen from a list of graduate courses approved by the student's guidance committee. At least 60 percent of all courses must be at the 600 level or above. For the non-thesis option, up to three hours of research may be used to meet course requirements. For the thesis option, up to six hours of research may be used to meet the course requirements.

Non-Thesis Option

A student in the non-thesis program must pass a written comprehensive examination testing breadth of knowledge in oceanography. The examination is given twice yearly, normally in October and March. The

examination grades are fail, pass, or pass with distinction. A student who has failed the examination may retake it only once.

Thesis Option

Before a student embarks on thesis research, a thesis advisory committee must be formed. Further information on university guidelines for forming this committee can be found in the Requirements for Graduate Degrees section of this catalog. The student must also submit a thesis proposal which outlines the research to be undertaken and identifies the resources required for completion of the research. Guidelines for the preparation of the thesis proposal are available from the graduate program director. Any student whose thesis research requires departmental funding must obtain prior approval from the department chair and graduate program director. No funds will be given without this approval. The thesis proposal requires the approval of the graduate program director and the student’s thesis advisory committee.

As part of the thesis requirement, the student is required to present a public defense of the research. The public defense and approval of the thesis by the student’s Thesis Committee satisfy the comprehensive examination requirement. Students in the thesis program should consult the graduate program director regarding the preparation of the M.S. thesis, scheduling a thesis defense, and the final submission of the thesis.

Additional Requirements

Ship Time Requirement and/or Field Work

MS graduate students must participate in field activities for a total of 5 days.

Request to Graduate

The student should complete an Application for Graduation form through the Registrar’s Office. The deadline for submitting this application is listed in the class schedule each semester and usually falls near the end of the semester preceding the one during which graduation is anticipated. It is the student’s responsibility to meet these deadlines and submit the necessary paperwork for graduation.

Removal of Incompletes

At least one month prior to graduation, all incomplete grades should be cleared. An Academic Record Change form is used for this purpose, and the instructor of the course and the department chair need to sign this form.

Doctor of Philosophy Oceanography (PhD)

Richard Zimmerman, Graduate Program Director

Our integrated curriculum uses active learning by promoting research and education. It is designed to give graduates the skill sets to prepare them for a range of careers in academia, and the public and private sectors. The graduate program in OES draws from the strength of our diverse faculty and their active research programs that span the globe. Graduate students have the opportunity to take part in research projects among a broad suite of field sites from the local waters of the Chesapeake Bay to the polar regions.

Admission

The doctoral degree in oceanography is granted to students who have:

1. mastered definite fields of knowledge, become familiar with research in these specific fields, and developed an informed understanding of opportunities for further advances;
2. demonstrated the capacity to do original, independent, scholarly work in their specific fields; and
3. shown the ability to integrate the field of specialization with the larger domains of knowledge and understanding.

All students are expected to demonstrate competency in oral communication and proficiency in writing.

All students in the oceanography Ph.D. program are responsible for reading and understanding the regulations and policies set forth throughout this catalog regarding requirements for the Ph.D. degree. The essential credit requirements for the Ph.D. are as follows: the student shall complete 48 credit hours beyond the master’s degree or 78 credit hours for students admitted to the program with a bachelor’s degree. Up to 24 credits can be granted for dissertation.

Curriculum Requirements

Students who do not have an M.S. degree in oceanography normally complete the following within the first year:

OEAS 604	Introduction to Physical Oceanography	3
OEAS 610	Advanced Chemical Oceanography	3
OEAS 620	Advanced Geological Sciences	3
OEAS 640	Advanced Biological Oceanography	4
Total Credit Hours		13

Additional Requirements

Waiving the requirement to take any of the core courses requires the approval of the GPD. Students must achieve a grade of B or better in each of these four core courses. Students may repeat any individual core course only once; if a student fails to earn a grade of B or better on repeating a core course, then the student will be dismissed from the program.

In consultation with the advisor and guidance committee, students will plan a complete program of course work designed to meet their objectives (see the section above). Depending on the entry status of the student, the following credit hours are also required:

- Those entering the Ph.D. program with an M.S. degree in oceanography must complete any needed core courses (see above), and a minimum of 48 credit hours of lecture courses and dissertation research.
- Those entering the Ph.D. program with a B.S. or M.S. degree in a discipline outside of oceanography shall complete 13 credit hours of the core courses listed above, and a minimum of 65 hours of additional lecture courses and dissertation research, for a total of 78 credit hours.

A maximum of 12 graduate credit hours may be transferred into a graduate degree program from non-degree status at Old Dominion University or from another accredited institution, except in the case of an approved interinstitutional program.

Major Advisor and Guidance Committee

A major advisor must be identified to the graduate program director (GPD), at least provisionally, prior to admission to the program. After receiving admission to the program and enrollment, students should consult with the GPD and their major advisor for guidance on initial course work. Before the completion of nine semester hours (i.e. before the end of the student’s first semester), the student will form a guidance committee in consultation with the major advisor. Please see the graduate program director and the Requirements for Graduate Degrees section of this catalog for further information on forming a guidance committee.

Plan of Study—Curriculum Plan

Sometime in the first year of study, the student shall prepare a plan of study with the aid and approval of the guidance committee. Students should see the graduate program director and refer to the Requirements for Graduate Degrees section of this catalog for further information on preparing a plan of study.

Diagnostic Examination

Although not required, the guidance committee has the option to administer a written and oral diagnostic examination during the first semester of residence (or before nine credit hours have been completed) for students entering the program with an M.S. degree in oceanography. For students matriculating with a bachelor’s degree or an M.S. degree in another field, the optional diagnostic examination should be administered no later than the third semester of residence (or before completion of 27 credit hours).

The diagnostic examination will be prepared by the student’s guidance committee in consultation with the graduate program director. The results of this examination are used as guidance for the curriculum plan. The guidance committee may also recommend to the graduate program director, based on the student’s performance in the four oceanography core courses, that the diagnostic examination be waived.

Computer Language Skills

To satisfy this requirement the student must either take a course in MATLAB programming (OEAS 595) or solve a substantial problem by writing an original computer program. The student’s advisor in consultation with the guidance committee develops the problem and a reasonable timetable for its completion. The problem must be solved independently with no help from others. The results will be evaluated by the advisor and guidance committee who will determine whether the student has solved the posed problem to their satisfaction. This computer language skills requirement should be completed before taking the candidacy exam.

Ship Time and/or Fieldwork Requirement

Each student is required to have at least ten days of shipboard experience, fieldwork, or a combination of the two.

Candidacy Exam

Near the completion of course work and before becoming heavily involved in dissertation work, the student shall pass a candidacy examination designed to test scholarly competence and knowledge of oceanography. The exam has written and oral portions prepared by the guidance committee. Additional details on the structure, form and content of the candidacy exam are available from the graduate program director and in the Requirements for Graduate Degrees section in this Catalog.

Formation of a Dissertation Committee

After the candidacy examination has been passed and the dissertation committee formed, the guidance committee’s responsibilities are completed. The dissertation committee is a new committee and is formed to supervise the student’s dissertation research. Students should see the graduate program director or refer to the Requirements for Graduate Degrees section in this Catalog for further information on the formation of a dissertation committee.

Changes to the dissertation committee must be made in advance of the oral dissertation defense. Such changes are made only with the approval of the GPD and college dean.

Advancement to Candidacy

Advancement to candidacy is a formal step that occurs after the student has:

- 1. completed formal coursework;
- 2. passed the Ph.D. written and oral components of the candidacy examination; and,
- 3. submitted a topic that is approved by the dissertation committee chair.

The student must be advanced to candidacy at least 12 months before the time the degree is expected to be received, but usually not before the completion of one-and-a-half years of graduate work.

Dissertation Preparation

General regulations and procedures governing the submission of a doctoral dissertation are given in the Guide for Preparation of Theses and Dissertations (obtained at https://www.odu.edu/content/dam/odu/offices/graduate-studies/thesis-dissertation/docs/thesis_dissertation_guide.pdf). Students should read this guide carefully before beginning to write their dissertation. Writing the dissertation as chapters that can be submitted for publication is encouraged.

Please note that the thesis and dissertation guide in place at the start of the semester will remain in force for the entire semester, and any changes made to the guide over the academic year (and the dates of these changes) will be listed on the cover page of the guide. Changes to the previous guide will also be noted on the cover page of the guide, or in a separate document that can be downloaded from the same site as the complete guide. For more

information on dissertation preparation and approval in the College of Sciences, contact your graduate program director.

Dissertation Defense

The format of a dissertation defense is determined by the dissertation committee with the approval of the GPD. The defense is chaired by the director of the dissertation committee. The chair will act as moderator, ruling on questions of procedure and protocol that may arise during the defense. Students should see the graduate program director or refer to the Requirements for Graduate Degrees section in this catalog for further information on the format of the dissertation defense.

Satisfactory performance on this examination (oral dissertation defense) and adherence to all regulations outlined above complete the requirements for the Ph.D. degree. All requirements for the doctoral degree must be completed within eight calendar years from the date of initial registration in the program.

Dissertation Acceptance and Submission

Once the dissertation committee has approved the dissertation, the student and major advisor must review the entire dissertation to ensure that it adheres to the format described in the Guide for Preparation of Theses and Dissertations before submitting the dissertation to the GPD for final review. Ten days should be allowed for GPD review. Once the GPD has approved the dissertation, the student submits the dissertation to the associate dean in the College of Sciences for approval. All approvals must be completed by the day before commencement. However, the associate dean generally requires that all dissertations be submitted prior to this deadline. Students should consult with the GPD for further details.

Request to Graduate

The student should obtain a copy of the form Application for Graduation from the Registrar’s Office and complete this application. The deadline for submitting this application is listed on the Registrar’s Office website at www.odu.edu/registrar (<http://www.odu.edu/registrar/>) and usually falls near the end of the semester preceding the one during which graduation is anticipated. It is the student’s responsibility to meet these deadlines and submit the necessary paperwork for graduation.

Removal of Incompletes

At least one month prior to graduation, all incomplete grades should be cleared. An Academic Record Change form is used for this purpose, and the instructor of the course and the department chair need to sign this form.

**Certificate
Spatial Analysis of Coastal
Environments Certificate**

The Certificate in Spatial Analysis of Coastal Environments provides an interdisciplinary program for students wishing to pursue careers in coastal management or research, remote sensing, or applications of geographic information systems (GIS). Rendered upon completion of the requirements, the certificate is an academic affidavit comprised of courses in geography, biology, and ocean and earth, and is administered by the Department of Ocean and Earth Sciences and the Department of Political Science and Geography. Students must take courses in the areas listed below and complete them with a cumulative GPA of 3.00 or higher and no grade below a C (2.00). The certificate is available to postgraduate professionals who meet the requirements. Students with comparable professional experience may be able to show competence in selected courses through examination.

Curriculum Requirements

Core Courses (Both courses are required)		
GEOG 502	Geographic Information Systems	3
GEOG 504	Digital Techniques for Remote Sensing	3
Interpretive Analysis Courses		
Select two of the following:		6

BIOL 504	Conservation Biology and Sustainable Development	
GEOG 520	Marine Geography	
GEOG 522	Coastal Geography	
GEOG 590	Applied Cartography/GIS	
GEOG 595	Topics in Geography	
OEAS 551	Data Collection and Analysis in Oceanography	
Capstone Seminar		
GEOG 519	Spatial Analysis of Coastal Environments	3
or OEAS 519	Spatial Analysis of Coastal Environments	
Total Credit Hours		15

Department of Physics

306 Oceanography & Physics Building (OCNPS)
Main Office: (757) 683-3468
<http://www.odu.edu/physics> (<http://www.odu.edu/physics/>)

Sebastian Kuhn, Chair
Balsa Terzic, Graduate Program Director

The Department of Physics offers programs of study leading to both the M.S. degree in physics and the Ph.D. degree in physics. Primary focus is placed on the Ph.D. program, and most students enrolled for graduate study are enrolled in that program. Students have the opportunity to perform research in state-of-the-art facilities under faculty direction. Graduates are prepared for research at the highest levels in academia, government laboratories, and corporate laboratories.

Programs

Doctor of Philosophy Program

- Physics (PhD) (p. 375)

Master of Science Program

- Physics (MS) (p. 375)

Master of Science Physics (MS)

Admission

Applicants for admission to graduate study must have an earned bachelor's degree in physics or a closely related discipline from an accredited institution or an equivalent degree from a foreign institution. The applicant is normally required to have a minimum cumulative grade point average of 3.0 on a 4.0 scale. The general portion of the Graduate Record Examination (GRE) is optional for application to either the master's or the doctoral program; applicants to the doctoral program are encouraged to take the GRE specialized physics test as well. The Test of English as a Second Language (TOEFL) is required of all nonnative speakers of English who have resided in the U.S. for less than ten years.

While no promise of financial support is given for M.S. students, occasionally they will be supported as teaching assistants. Old Dominion University requires that all graduate teaching assistants who do not speak English as a first language pass a test of spoken English.

Admission decisions are based on undergraduate achievement, GRE scores (if available), and personal reference letters. Graduate study may commence at the beginning of any academic term. Decisions regarding financial support for students entering in the fall term are normally made by April 15, so a student's completed application must be received by January 15. Anyone who applies after January 15 should communicate directly with the Department of Physics concerning the availability of support.

Curriculum Requirements

A student may select either the thesis or non-thesis option. For either option, each student's course of study must have the advance approval of the graduate program director.

Non-Thesis Option

Thirty graduate credits that must include the following courses:

PHYS 556	Intermediate Quantum Mechanics	3
or PHYS 621	Quantum Mechanics I	
PHYS 603	Classical Mechanics	3
PHYS 604	Classical Electrodynamics I	3
PHYS 791	Seminar I	1

No more than 12 credits numbered at the 500 level may be used to meet this requirement.

Up to 12 credits from other University departments may be used to meet this requirement if approved by the graduate program director.

Written Examination

In addition to these course requirements, the candidate must pass a written comprehensive examination. It is usually taken just before the student's third semester of study. If a student fails this examination, he or she is allowed a second attempt, which must be at the time when the Written Examination is next given. In all but the most extraordinary circumstances, a student will not be allowed any additional attempts to pass this examination. Normally, this written examination is the same as the written portion of the Ph.D. Candidacy Examination, graded at the master's level.

Thesis Option

Thirty graduate credits that must include the following courses:

PHYS 556	Intermediate Quantum Mechanics	3
or PHYS 621	Quantum Mechanics I	
PHYS 603	Classical Mechanics	3
PHYS 604	Classical Electrodynamics I	3
PHYS 698	Research	3
PHYS 699	Thesis	3
PHYS 791	Seminar I	1

No more than 12 credits numbered at the 500 level may be used to meet this requirement.

Up to 12 credits from other university departments may be used to meet this requirement if approved by the graduate program director.

Thesis Research

A student's research is supervised by his or her MS thesis committee. The committee is composed of three faculty members from the Physics Department (thesis advisor plus two additional faculty).

The format of the thesis is specified by the Guide for Preparation of Theses and Dissertations. The thesis defense is the final examination that a student must pass to receive a master's degree. This is a public presentation of the results contained in his or her thesis.

Doctor of Philosophy Physics (PhD)

The broad requirements for the Ph.D. degree are

1. satisfactory performance in a designated core of graduate courses,
2. successful completion of the Ph.D. Candidacy Examination, which has both written and oral parts,
3. successful completion of a teaching requirement, and
4. satisfactory completion of a dissertation.

Each student's course of study must have the advance approval of the graduate program director.

Admission

Applicants for admission to graduate study must have an earned bachelor's degree in physics or a closely related discipline from an accredited institution or an equivalent degree from a foreign institution. The applicant is normally required to have a minimum cumulative grade point average of 3.0 on a 4.0 scale. The general portion of the Graduate Record Examination (GRE) is optional for application to either the master's or the doctoral program; applicants to the doctoral program are encouraged to take the GRE specialized physics test as well. The Test of English as a Second Language (TOEFL) is required of all nonnative speakers of English who have resided in the U.S. for less than ten years.

It is normally expected that most incoming Ph.D. students will be supported as teaching assistants. Old Dominion University requires that all graduate teaching assistants who do not speak English as a first language pass a test of spoken English.

Admission decisions are based on undergraduate achievement, GRE scores if available, and personal reference letters. Graduate study may commence at the beginning of any academic term. Decisions regarding financial support for students entering in the fall term are normally made by April 15, so a student's completed application must be received by January 15. Anyone who applies after January 15 should communicate directly with the Department of Physics concerning the availability of support.

Curriculum Requirements

Seventy-eight graduate credits beyond the undergraduate degree or 48 graduate credits beyond the master's degree must be taken and must include the following courses:

PHYS 601	Mathematical Methods of Physics I	3
PHYS 602	Mathematical Methods of Physics II	1
PHYS 603	Classical Mechanics	3
PHYS 604	Classical Electrodynamics I	3
PHYS 621	Quantum Mechanics I	3
PHYS 804	Classical Electrodynamics II	3
PHYS 807	Statistical Mechanics	3
PHYS 811	Computational Physics	3
PHYS 821	Quantum Mechanics II	3
PHYS 891	Seminar I	1
PHYS 892	Seminar II	1

A minimum of six additional credits for specialized full-semester courses at the 800 level must be taken. A student may waive or substitute for any of these courses with the approval of the graduate program director.

Up to 12 credits from other university departments may be used to meet this requirement if approved by the graduate program director. A student may waive PHYS 892, with the approval of the Graduate Program Committee, if he or she presents a paper at a scientific meeting. Before formation of his or her dissertation committee, a student is formally advised about these courses and other academic matters by graduate faculty advisors.

Additional Requirements

Ph.D. Candidacy Examination

A student admitted to the Ph.D. program in physics becomes a bona fide candidate for the Ph.D. degree by passing the Ph.D. Candidacy Examination. The purpose of this comprehensive examination is to determine if a student has the foundation and maturity to begin research in physics. A student who does not pass the Ph.D. Candidacy Examination within the allowed number of attempts explained below will be dismissed from the Ph.D. program. However, that student would still have the opportunity to satisfy the requirements for the M.S. degree in physics.

The Ph.D. Candidacy Examination consists of two parts—the Written Examination and the Oral Examination. Each part must be passed independently in order to pass the Ph.D. Candidacy Examination.

After passing the Written Examination, a student has to form a dissertation committee. Details of the committee are stated in the Dissertation section below.

Written Examination

The written examination is given two times each year—in late May and early January. A student admitted to the Ph.D. program must take this examination by the beginning of his or her third semester of graduate study. In circumstances such that the student has not had the appropriate courses to meet this deadline, he or she may petition the Graduate Program Committee for an extension. If a student fails this examination, he or she is allowed a second attempt, which must be at the time when the Written Examination is next given. In all but the most extraordinary circumstances, a student is dismissed from the Ph.D. program after failing the written examination twice.

Oral Examination

The Oral Examination is a one-hour presentation given by a student to an oral examination committee (normally consisting of his or her dissertation committee, minus the external member), meeting in closed session, normally on a topic relevant to the student's dissertation research. This presentation must be made within one year after a student passes the written examination. A request for extension of the deadline must be made in writing to the Graduate Program Committee.

A student's dissertation advisor, in consultation with the student, may choose from two possible formats for this presentation:

1. a presentation by the student directly on his or her dissertation research or
2. a presentation on a specific topic that the student has been assigned to investigate for several months.

For either option, the student must write a short paper of 10 or fewer pages on his or her presentation topic and give it to all members of the oral examining committee at least two weeks before the scheduled date of the examination. The committee will determine whether the student passes or fails the oral examination. More than one negative vote from the examining committee will result in failure. A student who fails the oral examination will be allowed a second attempt. The student's dissertation advisor will decide the format and timing of such a second attempt, with the provision that the second attempt must be completed within six months of the first attempt. Extensions of the deadline for completing this requirement must be requested in writing to the Graduate Program Committee.

Dissertation

The dissertation is the final and most important requirement that must be completed by a candidate for the Ph.D. degree in physics. It must be based on original research in physics that makes a contribution to existing knowledge and be of sufficient quality and interest to merit publication in a refereed physics journal. Research that is classified by the U. S. Government (in a way that restricts its distribution) is not a suitable basis for a dissertation, as one essential characteristic of a dissertation is that its contents must be disseminated freely.

The candidate's dissertation research is supervised generally by his or her dissertation committee. Close supervision is provided by the candidate's research advisor, who is a member of the dissertation committee and may be a tenured, tenure-track, research, or adjunct member of the graduate-certified faculty of the Department of Physics. If the research advisor is a tenured or tenure-track member of the faculty, he or she is the chair of the candidate's dissertation committee. If the research advisor is an adjunct or research faculty member, a tenured or tenure-track graduate-certified faculty member must serve as co-advisor and also serve as chair of the dissertation committee. The dissertation committee is composed of five members, a majority of whom must be tenured or tenure-track members of the graduate-certified faculty of the Department of Physics and one of whom must be a tenured or tenure-track faculty member of the graduate-certified faculty

in a department of Old Dominion University other than the Department of Physics. It is the responsibility of the research advisor and the candidate to nominate prospective members for the dissertation committee to the graduate program director, who must formally approve the membership of the dissertation committee.

The format of the dissertation is specified by the Guide for Preparation of Theses and Dissertations, and variations allowed within the Department of Physics are specified by the graduate program director.

Dissertation Defense

The final examination that a candidate must pass in order to receive the Ph.D. is an oral examination by the dissertation committee based on the candidate's public presentation of the results contained in his or her dissertation. This defense is conducted in two phases:

1. a public presentation in front of the dissertation committee that is open to any person who may wish to attend and direct relevant questions to the candidate and
2. a closed session between the candidate and the dissertation committee in which the candidate is questioned further by that committee.

The dissertation committee determines by majority vote whether the candidate passes or fails this final oral defense. If the candidate fails, he or she is allowed only one additional attempt to pass at a later time.

Teaching Requirement

Each candidate for the Ph.D. degree must earn a minimum of four teaching credits, which are defined in the following way:

- One such credit is awarded for teaching a one-hour recitation for one semester in the Department of Physics, and
- Two such credits are awarded for teaching a one-semester laboratory course in the Department of Physics.

The graduate program director may approve the substitution of an equivalent amount of teaching experience for this requirement.

Department of Psychology

Web Site: <http://sci.odu.edu/psychology/>

Mills Godwin Bldg
Norfolk, VA 23529

George Noell, Chair

Graduate Study

The Department of Psychology offers a program of study leading to the degree of Master of Science in psychology and programs leading to the Doctor of Philosophy with concentrations in health psychology, human factors psychology, and industrial/organizational psychology.

The department also participates in a program leading to the degree of Doctor of Philosophy in clinical psychology. This program, the Virginia Consortium Program in Clinical Psychology, is a joint venture of the Departments of Psychology at Old Dominion University and Norfolk State University.

Programs

Doctor of Philosophy Programs

- Clinical Psychology (PhD) (p. 378)
- Psychology with a Concentration in Clinical Psychology (PhD) (p. 379)
- Psychology with a Concentration in Health Psychology (PhD) (p. 380)
- Psychology with a Concentration in Human Factors Psychology (PhD) (p. 382)
- Psychology with a Concentration in Industrial and Organizational Psychology (PhD) (p. 383)

Master of Science Program

- Psychology (MS) (p. 377)

Certificate Program

- Modeling and Simulation for Human Factors Psychology Certificate (p. 385)

Master of Science Psychology (MS)

James Paulson, Graduate Program Director

The master's program in psychology offers a course of study leading to the Master of Science in general psychology. The master's degree program is appropriate for individuals wishing to gain additional research experience prior to enrolling in a psychology doctoral program at Old Dominion University or another university or for those individuals who are seeking the master's as a terminal degree. The curriculum is designed to provide a strong background in statistics, research methods, and general psychology so that the student will have a wide range of choices for future professional education and development. The master's degree is not a licensing or practicing degree.

The master's program uses a mentor-model, such that an applicant is admitted based on the recommendation of a faculty member who is interested in mentoring that applicant. In addition to reasonable GRE scores and GPAs, successful applicants have research interests and/or experiences that coincide with their mentor. Therefore, it is recommended that applicants explicitly identify the desired mentor(s) whose research program best fits with their career goals in their application. Applicants are also encouraged to contact potential mentors prior to applying.

Once admitted, graduate students are expected to work closely with members of the faculty and to participate in the research and other professional activities that are available within the department. Faculty are involved in research in the general areas of clinical, health, developmental, human factors, organizational, personnel, and community psychology. Individual faculty research interests can be found on the ODU Psychology Department website.

Admission

To qualify for admission, a candidate must meet the general university admission requirements. In addition, applicants are highly encouraged to meet the following preferred minimum qualifications:

1. The applicant should have taken at least five undergraduate psychology courses, including undergraduate courses in psychological statistics and psychological research methods.
2. The applicant should submit official scores for the Graduate Record Examination (GRE) (applicants who do not have a bachelor's degree in psychology should also take the advanced psychology GRE test).
3. The applicant should submit transcripts of all undergraduate and graduate work.
4. The applicant should submit a copy of their curriculum vitae or academic resume.
5. The applicant should submit a brief statement outlining their personal goals, academic objectives, and research interests, with attention to how these interests are compatible with identified faculty research.
6. The applicant should request that three letters of reference be submitted on their behalf, at least two of which are from former college or university faculty.

All credentials in support of applications should be sent to the Office of Admissions or uploaded into the Office of Admissions website.

Curriculum Requirements

To qualify for the Master of Science in psychology, a student must meet the following requirements:

1. The student must maintain a B average (3.00 on a 4.00 scale) in a minimum of 36 hours of course work.
2. The student is required to successfully complete a core of courses established by the faculty with at least a B (3.00) average in these courses. Core courses consist of a sequence of 11 hours in research tools coursework (PSYC 713, PSYC 727, and PSYC 728) and a 6 hours of supervised research (PSYC 698 and PSYC 699) that culminates in the Thesis.

Core Courses

PSYC/CPSY 713	Research Methods in Psychology	3
PSYC/CPSY 727	Analysis of Variance and Experimental Design	4
PSYC/CPSY 728	Regression and Correlational Design	4
PSYC/CPSY 698	Research in Psychology	3
PSYC/CPSY 699	Thesis	1-3

Research Coursework

Select Two of the Following:		6
PSYC/CPSY 651	Developmental Psychology	
PSYC/CPSY 661	Psychopathology	
PSYC 731	Human Cognition	
PSYC 741	Sensation and Perception	
PSYC 749	Social and Affective Bases of Behavior	
PSYC 750	Organizational Psychology	
PSYC 763	Personnel Psychology	

Electives 13

Selected in Consultation with Academic Advisor

Total Credit Hours 34-36

Electives

PSYC 662	Human-Computer Interface Design	3
PSYC 731	Human Cognition	3
PSYC 741	Sensation and Perception	3
PSYC 745	Applied Psychometrics	3
PSYC 750	Organizational Psychology	3
PSYC 770	Human Factors Psychology	3
PSYC 771	Ergonomics	3
PSYC 763	Personnel Psychology	3
PSYC 836	Multilevel Models: HLM	3
PSYC 846	Structural Equation Modeling	3
PSYC 851	Organizational Leadership	3
PSYC 853	Job Attitudes and Motivation	3
PSYC 864	Human Resource Development	3
PSYC 865	Psychology of Personnel Selection	3
MSIM 601	Introduction to Modeling and Simulation	3

Other relevant courses

Courses that are not listed but are relevant to the student's goals may be used to fulfill the requirements for the degree as approved by the student's advisor. Courses that are taken outside the Psychology Department to be used to fulfill degree requirements need to be approved by the master's graduate program director.

3. In addition to core courses, students are required to complete an additional 13 hours of coursework (electives); therefore, students are required to complete a minimum of 36 credit hours for the degree. Elective courses should be selected after consultation with the student's academic advisor in order to support that student's learning and research objectives. Students enrolled in the Master's program may not enroll in 800-level courses without instructor permission.
4. Prior to beginning thesis research, the student will submit a request to the graduate program director to form a thesis committee. The student will identify two members of the committee and the graduate program director will appoint the third member. When the student has completed

the research, a written thesis must be submitted to the thesis committee. Completion of the thesis depends on acceptance of the thesis by the thesis committee and the graduate program director, as well as passing an oral exam in a public defense of the thesis.

Additional Requirements

To maintain their standing in the program students must demonstrate progress toward completing degree requirements, i.e., enrollment and satisfactory performance in courses during the fall and spring semesters. Students who have completed all course work and are working on their thesis must register for PSYC 998 (<http://catalog.odu.edu/search/?P=PSYC%20998>) (one credit) in fall and spring semesters continuously until graduation. The graduate catalog requires students who are using university resources or consulting with faculty to be registered for a minimum of one credit. Students who fail to register for one credit may be terminated from the program in at the end of the semester in which they failed to register.

If students have not completed their thesis by the end of their third year, they must submit a plan to their advisor and the graduate program director outlining target dates for completing the various elements of the thesis. Students may be terminated from the program if they fail to meet their target dates.

Students will not be allowed to validate courses that are older than eight years. They must retake the course(s), or complete an alternative course that meets the current requirements, that have exceeded the eight-year limit.

Doctor of Philosophy Clinical Psychology (PhD)

Christina M. Rodriguez, PhD, Graduate Program Director

The Department of Psychology has participated in the Virginia Consortium Program in Clinical Psychology for over 43 years. This unified PhD program is offered jointly by Old Dominion University and Norfolk State University, and it is nationally accredited by the American Psychological Association. Students are engaged in research activities and clinical work throughout their training. The Program follows a scientist-practitioner training model. NOTE: This joint program is no longer accepting applications and is scheduled to close by 2031 when the last accepted students complete the program.

Admission

This program is no longer accepting applications. Please see the PhD in Psychology with a Concentration in Clinical Psychology page.

Curriculum Requirements

The Clinical Psychology PhD program of the Virginia Consortium Program in Clinical Psychology (VCPCP) provides students with a high level of professional training consistent with the standards required for accreditation by the American Psychological Association (APA). To attain the degree, a minimum of five years of post-baccalaureate training is required, including four years full-time in residence (excluding the pre-doctoral internship and doctoral dissertation). An oral and written comprehensive examination, empirical doctoral dissertation, multiple years of clinical practicum training, and a full-time one year APA-approved pre-doctoral clinical internship are also required for the degree. The APA pre-doctoral internships are offered outside the Consortium. Additional details about the VCPCP program can be found in its Program Handbook which is available on the Consortium's website (www.odu.edu/vcpcp) (<https://sci.odu.edu/vcpcp/>).

Two pathways toward degree completion are possible:

PATH A: For students **entering the program with a master's degree**, students are required to complete a minimum of **116 credit hours** as noted below. Students entering the program who have already completed an empirical master's thesis in a graduate program prior to admission may have it evaluated to meet the program's requirement for a Foundational Research Project (FRP). Students with a master's degree but without an empirical master's thesis will be required to complete an FRP or, alternatively, may

elect to pursue a master's thesis (see Path B below). The following curricular requirements will be followed for students in Path A:

Path A Curriculum Requirements

Core Courses		
CPSY 632	Intellectual Assessment	3
CPSY 651	Developmental Psychology	3
CPSY 661	Psychopathology	3
CPSY 664	Clinical Assessment: Personality and Individual Differences	3
CPSY 700	Clinical and Ethical Practice	3
CPSY 713	Research Methods in Psychology	3
CPSY 720	Multicultural Issues in Clinical Psychology	3
CPSY 725	Cognitive Behavioral Therapy	3
CPSY 727	Analysis of Variance and Experimental Design	4
CPSY 728	Regression and Correlation Design	4
CPSY 749	Social and Affective Bases of Behavior	3
CPSY 801	Empirically-Supported Therapies	3
CPSY 826	Biological and Cognitive Aspects of Behavior	3
Total Credits for Core Courses		41
Clinical Practicum		33
CPSY 895	Clinical Practicum	
or CPSY 896	Advanced Clinical Practicum	
Research		18
CPSY 883	Research in Clinical Psychology	
Clinical Dissertation		12
CPSY 899	Clinical Dissertation	
Internship		12
CPSY 890	Internship in Clinical Psychology	
Total Credit Hours		116

PATH B: For students **entering the program *without a master's degree*** from a graduate program, students are required to complete a minimum of **116 credit hours**. Students who are not interested in completing a master's thesis would complete a Foundational Research Project (FRP) and notify the program within their first semester their intention to follow Path A.

Otherwise, students entering the program without a master's degree earned from a graduate program may first attain a master's degree in Old Dominion University (*36 credits*) followed by completing the requirements for the doctoral degree (*80 credits*). The following curricular requirements will be followed for students in Path B:

Path B Curriculum Requirements

Master's Degree in Psychology		36
See curriculum for M.S. in Psychology for more information.		
Clinical Psychology students will be advised by their research mentor or DCT regarding the appropriate courses to take to prepare them for the PhD in Clinical Psychology.		
The Graduate Program Director for the M.S. in Psychology program will work with Clinical Psychology students regarding curriculum choices for the master's program.		
Total Credit Hours		36
PhD in Clinical Psychology		
Section A-Required Foundational Core (9 credits)*		
Select three of the following:		9
CPSY 651	Developmental Psychology	
CPSY 661	Psychopathology	
CPSY 720	Multicultural Issues in Clinical Psychology	
CPSY 749	Social and Affective Bases of Behavior	

CPSY 826	Biological and Cognitive Aspects of Behavior	
(*whichever two courses not selected for master's Section B contribute here)		
Section B-Required Clinical Courses (54 credits)		
Required Clinical Courses		6
CPSY 725	Cognitive Behavioral Therapy	
CPSY 801	Empirically-Supported Therapies	
Clinical Practicum		33
CPSY 895	Clinical Practicum	
or CPSY 896	Advanced Clinical Practicum	
Internship in Clinical Psychology		12
CPSY 890	Internship in Clinical Psychology	
Section C-Required Research Courses (20 credits)		
Research in Clinical Psychology		8
CPSY 883	Research in Clinical Psychology	
Clinical Dissertation		12
CPSY 899	Clinical Dissertation	
Total Credit Hours		80

Additional Requirements

Student Evaluation

Students are regularly evaluated in academic course work, research activities, clinical work, and professional behavior. A formal evaluation of student's progress is conducted at least annually. Each student is also evaluated through a written and oral comprehensive examination.

Dissertation Award

The David Leigh Pancoast Award is given to the student in the Virginia Consortium Program in Clinical Psychology with the outstanding doctoral dissertation.

**Doctor of Philosophy
Psychology with a Concentration in
Clinical Psychology (PhD)**

Christina M. Rodriguez, PhD, Director of Clinical Training

The PhD in Clinical Psychology is a doctoral concentration in the ODU Department of Psychology. A founding member of the American Psychological Association (APA) accredited Virginia Consortium Program in Clinical Psychology, ODU has led the administration of the Consortium and trained doctoral students in clinical psychology for over 43 years.

The ODU Clinical PhD Program applied for APA accreditation as a clinical psychology PhD program, independent of the Consortium, in Summer 2025 with a site visit anticipated in Fall 2026. Although the timeline and application outcome are not assured, we hope to receive independent APA Accreditation on Contingency in Spring 2027; if a student completes a program that is Accredited on Contingency prior to graduation, that student is deemed to have completed an APA accredited program. We will provide updates on the status of our ongoing efforts to secure independent APA accreditation online.

This PhD program requires four years in residence with an additional final year in a 12-month predoctoral internship that is completed off-site. The program follows a scientist-practitioner training model wherein students are engaged in research activities and clinical work throughout their training.

Admission

Admission to the PhD in Psychology is available through Graduate Admissions. Applicants must select Clinical Psychology to obtain the correct application. All applications for clinical psychology have a deadline of December 1. To be considered for admission to the Clinical Ph.D. program, an applicant is required to have a baccalaureate degree with a substantive

background in psychology, substantive research experience, clinically relevant experience, three compelling letters of recommendation, and strong fit to the program mission and to a specific research mentor. A personal interview is also required prior to selection.

Students are admitted into the program with a specific research mentor (please see the website to see which faculty affiliated with the clinical program are recruiting in any given year). Applicants are encouraged to contact potential research mentors for additional information and to express interest to be prepared to clearly indicate their alignment with the mentor in their personal statements.

For applications to receive full review, the following materials are required:

1. Official scores on the Graduate Record Examination are currently optional.
2. Official transcripts of academic coursework (transcripts from every institution contributing to the baccalaureate degree and transcripts for additional advanced degrees as applicable).
3. Supplemental application materials for clinical psychology includes:
 - a. A personal statement outlining (a) personal career goals, (b) how those career goals fit with the training program, (c) clinical interests, experiences, and goals, (d) research interests, experiences, and goals, (e) how those research interests and goals align with the program and with potential specific research mentor(s).
 - b. Statement that articulates your unique background and experiences that have shaped your career aspirations and would contribute to serving a diverse community.
 - c. A curriculum vitae.
4. A minimum of three professional letters of recommendation.
5. Ranked choices of potential research mentors.
6. Completed graduate school application.

Curriculum Requirements

The PhD in Psychology Concentration in Clinical Psychology provides students with a high level of professional training. As the program seeks accreditation as independent institution, the curriculum follows the standards required for accreditation by the American Psychological Association (APA). To attain the degree, a minimum of five years of post-baccalaureate training is required, including four years full-time in residence (excluding predoctoral internship). An oral and written comprehensive examination, empirical doctoral dissertation, multiple years of clinical practicum training, and a full-time one year APA-approved predoctoral clinical internship are also required for the degree. All APA predoctoral internships are nationally competitive clinical placements that are offered off-site.

Students are required to complete a minimum of **87 credit hours** as noted below.

Coursework	
CPSY 632	Intellectual Assessment
CPSY 651	Developmental Psychology
CPSY 661	Psychopathology
CPSY 664	Clinical Assessment: Personality and Individual Differences
CPSY 700	Clinical and Ethical Practice
CPSY 713	Research Methods in Psychology
CPSY 720	Multicultural Issues in Clinical Psychology
CPSY 725	Cognitive Behavioral Therapy
CPSY 727	Analysis of Variance and Experimental Design
CPSY 728	Regression and Correlation Design
CPSY 749	Social and Affective Bases of Behavior
CPSY 801	Empirically-Supported Therapies
CPSY 826	Biological and Cognitive Aspects of Behavior

Total Credits for Required Coursework		0
Clinical Practicum		27
CPSY 895 or CPSY 896	Clinical Practicum Advanced Clinical Practicum	
Research		6
CPSY 698	Research in Psychology	
CPSY 699	Thesis	
Clinical Dissertation		12
CPSY 899	Clinical Dissertation	
Internship		1
CPSY 890	Internship in Clinical Psychology	

Additional Requirements

Student Evaluation

Students are regularly evaluated in academic course work, research activities, clinical work, and professional behavior. A formal evaluation of student’s progress is conducted at least annually. Each student is also evaluated through a written and oral comprehensive examination.

Doctor of Philosophy Psychology with a Concentration in Health Psychology (PhD)

James F. Paulson, Graduate Program Director

Doctor of Philosophy - Psychology

The Doctor of Philosophy in Psychology program is comprised of three doctoral concentrations: Health Psychology, Human Factors Psychology, and Industrial/Organizational Psychology. The program involves a blend of core training and requirements and concentration-specific training and requirements.

Overview of Topical Areas

The health psychology doctoral program emphasizes psychological theory and research as they apply to understanding how psychological, behavioral, and cultural factors contribute to physical and emotional health and illness and how these can be used to create prevention and intervention programs that improve well-being.

The general philosophy and plan of the HP psychology program at Old Dominion University is to provide graduate training consisting of four phases:

1. A core of basic courses in health psychology and related areas, acquired primarily at the master’s level.
2. In-depth training in statistics, methodology, and grant and manuscript writing;
3. Research experience in a field of health psychology;
4. Completion of a dissertation representing a significant contribution to health psychology.

Admission

The graduate program in health psychology (HP) admits students at two levels: with a master’s degree or with a bachelor’s degree. Degrees held must be in psychology or a related field. Each applicant must submit:

1. Official scores on the General Test of the Graduate Record Examination (GRE);
2. A brief statement outlining personal goals and academic objectives;.
3. Three letters of reference, at least two of which are from former college/ university teachers or research supervisors;.
4. Transcripts of all prior academic work;.

5. A sample of recent academic writing (e.g., a paper required in an undergraduate course). Applicants are encouraged to submit a writing sample.

Curriculum Requirements

Core Requirements

The Ph.D. in Psychology requires at least 84 semester hours of credit beyond the bachelor's degree or at least 48 semester hours of post-master's training. Students entering the program with a bachelor's degree must complete the first phase of the program by meeting the requirements for the master's degree in Psychology (i.e., 36 semester hours with appropriate course work). For the student with a bachelor's degree, completion of the program requires approximately four years of study. For the student who holds the master's degree upon entering the Ph.D. program, completion requires approximately three years. The student is required to complete a core of master's-level courses with at least a B average. If the GPA falls below 3.0 the student may be placed on probation or suspended from graduate study as specified in the University Catalog. Further, if the student receives a grade of C or lower, they will also be placed on probation; a second C or worse may result in dismissal from the program.

The core courses consist of the following:

Core Courses

PSYC 713	Research Methods in Psychology	3
PSYC 727	Analysis of Variance and Experimental Design	4
PSYC 728	Regression and Correlational Design	4
Dissertation		12
PSYC 899	Dissertation	
Total Credit Hours		23

Health Psychology Concentration

In addition to the core requirements for the PhD in Psychology, the PhD concentration in Health Psychology requires the following courses:

PSYC 745/845	Applied Psychometrics	3
PSYC 735	Health Psychology	3
PSYC 844	Program Evaluation	3
PSYC 833	Grant and Manuscript Writing	3
Select two of the following:		6
PSYC 651	Developmental Psychology	
PSYC 661	Psychopathology	
PSYC 731/831	Human Cognition	
PSYC 749/849	Social and Affective Bases of Behavior	
Total Credit Hours		18

Additional Requirements

In addition to these requirements, students must complete the following requirements:

After completing the master's degree and/or before taking the candidacy examination, students are expected to form a committee of three graduate faculty members who will serve as a guidance committee. This committee assists the student in developing a plan of study tailored to the student's needs and interests. The plan of study outlines the minimum of 48 hours of post-master's training, including:

1. Completion of one additional quantitative course (3 credits);
2. Maintenance of a strong focus in research methods and statistics; and
3. Development of a viable research program.

Candidacy Examination

Prior to admission to candidacy (i.e., the beginning of formal work on the dissertation), each student is required to pass a written and oral candidacy examination. A student must pass both the written and oral parts to pass

the candidacy examination. The examination may not be reported as passed if there is more than one dissenting vote. A candidacy examination cannot be passed conditionally. A pass on the examination cannot be made contingent upon other factors such as the completion of additional course work, the preparation of extra research projects, and so on. If either part (written or oral) of the candidacy examination is failed, the faculty may permit the student to take it once more at a time mutually satisfactory but within 12 months from the date of the first examination. If either part of the examination is failed, the student may be required by the faculty to retake only that part. The student is allowed two attempts on the candidacy exam. The faculty considers a complete scheduled exam (written and oral combination) as one attempt. If the student fails the exam on two attempts, they may be asked to leave the program. There are two options for HP candidacy examination depending on the student's specialty and faculty approval:

1. Qualifying Exam:
 - a. Written questions that assess core Health Psychology topics and those relevant to research in Health Psychology, and the student's specific area of specialization (e.g., statistics, methodology, ethics, health, mental health, public health, health discrepancies).
 - b. An oral examination during which the student defends responses to the written questions.
2. Major Area Paper:
 - a. A review paper (quantitative or qualitative) or theoretical analysis of a research area designated by the student as an important area for contemporary applied psychological sciences.
 - b. The resulting paper should define the student as an expert in that area, and be of publishable quality.
 - c. The student must defend the work to the guidance committee, and submit the work for publication in a journal relevant to the student's research specialty or as a book chapter. The major area paper may be submitted as a grant proposal instead of as a journal publication or book chapter with prior approval from the guidance committee.

Research Emphasis

A major objective of the HP program is to provide the student with substantial experience in planning, designing, conducting, and reporting results of independent research. Toward this end, a student is expected to engage in a variety of research activities. This expectation is reflected in the program's few traditional classroom course requirements beyond the master's degree. The time should be spent on mostly research-related activities (e.g., reading, individual study [research], and dissertation). The student is expected to acquire research experiences that go well beyond formal course requirements. These research experiences may take a variety of forms and occur in a variety of settings. For example, the student is encouraged to engage in both laboratory and field research related to the HP sciences specialty, to serve as a member of a larger research team when appropriate or available (perhaps serving as a graduate research assistant on an externally sponsored grant), and to engage in independent non-sponsored research. The student is also encouraged to seek out opportunities to conduct research projects (including grants and contracts funded through the Old Dominion University Research Foundation) on his or her own and in collaboration with faculty members. The accumulation of these research experiences should result in presentation of papers at professional meetings, the publication of manuscripts in refereed journals, the publication of technical reports, and the submission of grant/contract proposals.

Graduate Student Teaching

Teaching a course is an experience that is worthwhile regardless of the eventual career role(s) that a student envisions, and the experience should be taken seriously for its professional value. Benefits associated with teaching a course include expanding and solidifying knowledge about general and Health psychology, polishing communication skills, and establishing professional identification. Although there are other ways to acquire these benefits (e.g., presentations at conferences, consulting experiences, organizing and conducting workshops), teaching a course systematically builds these experiences into a student's plan of study. Moreover, any student who plans an academic career should teach one or more courses in

preparation for that career. The student should also recognize that during the course of graduate training, financial support is often provided by the Psychology Department from graduate teaching assistant or adjunct teaching funds. This type of financial support almost always requires that the student be partially or fully responsible for teaching a course.

Dissertation

The doctoral dissertation must represent an achievement in research and a significant contribution to knowledge in the major area of study. It is equivalent to no more than 24 semester hours of course work.

Dissertation Defense

An oral examination in defense of the dissertation is required. The aim of the defense is to explore with the candidate the methodological and substantive contributions of the completed dissertation.

Research Opportunities

HP faculty conduct research on a wide variety of health-related topics. Students have access to laboratory facilities as well as field settings in which faculty work. Research is supported by a variety of funding agencies from federal (including the National Institutes of Health) to state agencies. Students are encouraged to become engaged in one of these research programs early in the process of their education.

Doctor of Philosophy
Psychology with a Concentration in
Human Factors Psychology (PhD)

James F. Paulson, Graduate Program Director

Overview of the Topical Areas

The HF doctoral program follows the scientist-practitioner model with emphasis on psychological theory and behavioral science, statistics and research methodology, practical experience, and fundamental and innovative areas of human factors/engineering psychology. The following is a partial list of these areas:

- aviation psychology
- behavioral modeling
- complex system operation
- display design
- driving and navigational performance
- ergonomics
- human-computer interaction
- perception and performance
- medical systems
- neuroergonomics
- simulation
- team performance
- training
- usability testing
- warnings and alarms
- virtual environments
- information processing and workload
- human-robot interaction

Admission

The PhD in Psychology with a concentration in Human Facotrs admits students at two levels: with a master’s degree or with a bachelor’s degree. Degrees held must be in psychology or a related field. Each applicant must submit:

1. Official scores on the General Test of the Graduate Record Examination (GRE);
2. A brief statement outlining personal goals and academic objectives;

3. Three letters of reference, at least two of which are from former college/ university teachers or research supervisors;.
4. Transcripts of all prior academic work;.
5. A sample of recent academic writing (e.g., a paper required in an undergraduate course).Applicants are encouraged to submit a writing sample.

Curriculum Requirements

The program requires at least 84 semester hours of credit beyond the bachelor’s degree with at least 48 hours being post-master’s education. For the individual entering with a bachelor’s degree, the general plan of graduate education consists of four phases:

1. A core of basic psychology, acquired while working toward the master’s degree;
2. Broad education in the general area of human factors psychology;
3. Research and applied experience in human factors psychology; and
4. Completion of a dissertation representing a significant professional contribution to human factors psychology.

For the individual entering with a master’s degree, a minimum of 48 hours of doctoral-level credits is required, based on the faculty’s and the Ph.D. program director’s review of the student’s educational background. Students who enter with a master’s degree will typically pursue a plan of study identical in spirit to the latter three phases of the plan of study followed by a student entering with a bachelor’s degree (see phases listed above). The student will form a guidance committee within the first year of entry. These are graduate faculty members who assist in developing the plan of study tailored to the student’s needs and interests. This plan of study outlines the minimum 48 hours of post-master’s education. For the student who holds the master’s degree upon entering the Ph.D. program, completion will require approximately three years.

For the student with a bachelor’s degree, completion of the program requires approximately five years of study. A student entering the program with a bachelor’s degree must complete the first phase of the program by meeting the requirements for the master’s degree in general psychology (i.e., 36 semester hours with appropriate course work). The student is required to complete successfully a core of master’s-level courses, with at least a B average in these courses. If the GPA falls below 3.0 the student may be placed on probation or suspended from graduate study as specified in the University Catalog. Further, if the student receives a C grade or less he or she will also be placed on probation; a second C or worse may result in dismissal from the program.

Core Requirements

The Ph.D. in Psychology requires at least 84 semester hours of credit beyond the bachelor’s degree or at least 48 semester hours of post-master’s training. Students entering the program with a bachelor’s degree must complete the first phase of the program by meeting the requirements for the master’s degree in Psychology (i.e., 36 semester hours with appropriate course work). For the student with a bachelor’s degree, completion of the program requires approximately four years of study. For the student who holds the master’s degree upon entering the Ph.D. program, completion requires approximately three years. The student is required to complete a core of master’s-level courses with at least a B average. If the GPA falls below 3.0 the student may be placed on probation or suspended from graduate study as specified in the University Catalog. Further, if the student receives a grade of C or lower, they will also be placed on probation; a second C or worse may result in dismissal from the program.

The core courses consist of the following:

Core Courses		
PSYC 713	Research Methods in Psychology	3
PSYC 727	Analysis of Variance and Experimental Design	4
PSYC 728	Regression and Correlational Design	4
Dissertation		12

PSYC 899	Dissertation	
Total Credit Hours		23

Human Factors Psychology Concentration

In addition to the core requirements for the PhD in Psychology, the PhD concentration in Human Factors Psychology requires the following courses:

PSYC 731/831	Human Cognition	3
PSYC 741/841	Sensation and Perception	3
Total Credit Hours		6

Additional Requirements

Completion of the first phase requires two years of study. Following the student's second year, the student forms a guidance committee of graduate faculty members who assist in developing a plan of study tailored to the student's needs and interests. The plan of study outlines the student's minimum 48 hours of post-master's education.

Candidacy Examination

Prior to admission to doctoral candidacy (i.e., the beginning of formal work on the dissertation), each student is required to pass a qualifying examination to evaluate a student's achievement and understanding of concepts, theories, practices, and empirical facts about fundamental HF information, as well as information relevant to the student's major area of concentration within HF. The examination consists of a six-hour essay exam covering general HF knowledge (a reading list is provided) and a 10-page literature review covering knowledge in the student's area of concentration (the literature review may be incorporated into the student's dissertation proposal). The literature review can be turned in any time during the semester, but MUST be submitted within a week of completion of the general knowledge essay exam. If the both written components are passed, the oral part of the examination must be completed within one month of notification. The oral exam covers the material contained on the candidate's reading list, answers on the written exam, and the literature review. A student must pass both the written and oral parts to pass the candidacy examination. The examination may not be reported as passed if there is more than one dissenting vote by exam committee members. A candidacy examination cannot be passed conditionally. A pass on the examination cannot be made contingent upon other factors such as the completion of additional course work or the preparation of extra research projects. If either part (written or oral) of the candidacy examination is failed, the faculty may permit the student to take it once more at a time mutually satisfactory but within 6 to 12 months from the date of the first examination. If either part of the examination is failed, the student may be required by the faculty to retake only that part. The student is allowed two attempts on the candidacy exam. If the student fails the exam twice, they may be asked to leave the program. When determining failure, the faculty considers a complete scheduled exam as one attempt. Failure of one part of the exam on the first attempt (such as the written part), but then failure of a different part of the exam (even the oral part) at the second attempt is considered two failures.

Publication and Application

Prior to graduation, students are required to submit a research article as first author for publication in a refereed journal, and to create an application of research methodology and/or computing skills. An example of such an application might include a data analysis program, a simulation program or a patentable technology innovation.

Practical Experience

The student must obtain professional practice experiences during the course of graduate education. An internship is one excellent option for meeting this requirement. However, the student can also meet the requirement by participating in at least two applied research projects or consulting activities under the direct supervision of a Ph.D. psychologist (or psychologists). The student's guidance committee establishes the criteria for meeting the professional-practice experience requirement and judges the adequacy of the experiences.

Graduate Student Teaching

Teaching an academic course is an experience that is worthwhile regardless of the eventual career role(s) that a student envisions, and the experience should be taken seriously for its professional value. Benefits associated with teaching a course include expanding and solidifying knowledge about general and HF psychology, polishing communication skills, and establishing professional identification. Although there are other ways to acquire these benefits (e.g., presentations at conferences, consulting experiences, organizing and conducting workshops), teaching a course systematically builds these experiences into a student's plan of study. Moreover, any student who plans an academic career should teach one or more courses in preparation for that career. During the course of graduate training, financial support is often provided by the Psychology Department from graduate teaching assistant or adjunct teaching funds. This type of financial support almost always requires that the student be partially or fully responsible for teaching a course.

Dissertation

The doctoral dissertation must represent an achievement in research and a significant contribution to knowledge in the major area of study. It is equivalent to no more than 24 semester hours of course work.

Dissertation Defense

An oral examination in defense of the dissertation is required. The aim of the defense is to explore with the candidate the methodological and substantive contributions of the completed dissertation.

Research Opportunities

Lab facilities are available for research in cognition, human perception and performance, modeling and simulation, and psychophysiology. Facilities include personal computers, local area networked testing stations, sound-attenuated testing chambers, driving simulators, flight simulators, and a human-computer interaction laboratory. Access to university computing and multimedia development facilities is also available. To complement the program's emphasis on modeling and simulation, students also have access to the Virginia Modeling, Analysis and Simulation Center (VMASC). VMASC is an ODU-affiliated research and development center where scientists from a number of disciplines create and test computer models and simulation applications to benefit industrial, academic, and governmental interests.

Research is supported by private sector, local, state or federal governmental organizations (e.g., National Science Foundation, National Institutes of Health, NASA, etc.), or one of the military services. Doctoral students are encouraged to become engaged in one of these research programs early in the process of their education.

Doctor of Philosophy Psychology with a Concentration in Industrial and Organizational Psychology (PhD)

James F. Paulson, Graduate Program Director

Overview of the Topical Areas

The program covers current theoretical and practical issues and topics within I-O psychology. The following is a partial list of these areas:

- Job Analysis
- Psychological Testing
- Selection Systems
- Personnel Training
- E-Training
- Human Resource Development
- Human Resource Management
- Occupational Safety and Health

- Work Motivation
- Work-Family Interface
- Career Development
- Job Satisfaction
- Organizational Commitment
- Leadership
- Group and Team Processes
- Organization Development and Change
- Organizational Justice
- New Forms of Work Organization, such as Telework and Virtual Teams
- International Aspects of I-O Psychology

Admission

The PhD in Psychology with a concentration in Industrial and Organizational Psychology admits students at two levels: with a master's degree or with a bachelor's degree. Degrees held must be in psychology or a related field. Each applicant must submit:

1. Official scores on the General Test of the Graduate Record Examination (GRE);
2. A brief statement outlining personal goals and academic objectives;.
3. Three letters of reference, at least two of which are from former college/university teachers or research supervisors;.
4. Transcripts of all prior academic work;.
5. A sample of recent academic writing (e.g., a paper required in an undergraduate course). Applicants are encouraged to submit a writing sample.

Curriculum Requirements

The program requires at least 84 semester hours of credit beyond the bachelor's degree with at least 48 hours being post-master's education. Post-master's credits include up to 24 dissertation research credits. For the individual entering with a bachelor's degree, the general plan of graduate education consists of four phases:

1. Course work in general psychology, acquired while working toward the master's degree;
2. Broad education in the general area of I-O psychology;
3. Research and professional-practice experience in I-O psychology; and
4. Completion of a dissertation representing a significant professional contribution to I-O psychology.

For the individual entering with a master's degree, a minimum of 48 hours of doctoral-level credits is required, based on a review of the student's educational background by the faculty and the Ph.D. programs director. The entering student holding a master's degree must pursue a plan of study identical in spirit to the latter three phases of the student with the bachelor's degree (see phases listed above).

For the student with a bachelor's degree, completion of the program requires approximately five years of study. For the student who holds the master's degree upon entering the Ph.D. program, completion requires approximately three years. A student entering the program with a bachelor's degree must meet the requirements for the master's degree in general psychology (i.e., 36 semester hours with appropriate course work). The student is required to complete a core of master's-level courses with at least a B average. If the GPA falls below 3.0 the student may be placed on probation or suspended from graduate study as specified in the University Catalog. Further, if the student receives a C grade or less they will also be placed on probation; a second C or worse may result in dismissal from the program.

Core Requirements

The Ph.D. in Psychology requires at least 84 semester hours of credit beyond the bachelor's degree or at least 48 semester hours of post-master's training. Students entering the program with a bachelor's degree must complete the first phase of the program by meeting the requirements for the master's degree in Psychology (i.e., 36 semester hours with appropriate course work).

For the student with a bachelor's degree, completion of the program requires approximately four years of study. For the student who holds the master's degree upon entering the Ph.D. program, completion requires approximately three years. The student is required to complete a core of master's-level courses with at least a B average. If the GPA falls below 3.0 the student may be placed on probation or suspended from graduate study as specified in the University Catalog. Further, if the student receives a grade of C or lower, they will also be placed on probation; a second C or worse may result in dismissal from the program.

The core courses consist of the following:

Core Courses		
PSYC 713	Research Methods in Psychology	3
PSYC 727	Analysis of Variance and Experimental Design	4
PSYC 728	Regression and Correlational Design	4
Dissertation		12
PSYC 899	Dissertation	
Total Credit Hours		23

Industrial and Organizational Psychology Concentration

In addition to the core requirements for the PhD in Psychology, the PhD concentration in Industrial/Organizational Psychology requires the following courses:

PSYC 745/845	Applied Psychometrics	3
PSYC 750/850	Organizational Psychology	3
PSYC 763/863	Personnel Psychology	3
Select six of the following:		18
PSYC 810	Seminar in Professional Aspects of Industrial/Organizational Psychology	
PSYC 822	Occupational Health Psychology	
PSYC 851	Organizational Leadership	
PSYC 864	Human Resource Development	
PSYC 865	Psychology of Personnel Selection	
PSYC 879	Careers	
PSYC 895	Topics in Psychology I	
PSYC 896	Topics in Psychology II	
Total Credit Hours		27

Additional Requirements

Students may be permitted to substitute another course within the Psychology department or from another university department for one or more of the six doctoral-level courses with permission of their guidance committee.

By November 1 of the third fall of study for a student entering with a bachelor's degree, or the first fall of study for a student entering with a master's degree, a plan of study must be prepared with the aid and approval of the academic mentor. The plan of study is then given to the Ph.D. programs director for approval. The plan of study outlines the student's minimum 48 hours of post-master's education. The student must include a plan to complete at least six of the doctoral-level content courses listed above.

Candidacy Examination

Prior to admission to candidacy (i.e., the beginning of formal work on the doctoral dissertation), each student is required to pass a candidacy exam. A student must pass both the written and oral parts to pass the candidacy examination. The examination may not be reported as passed if there is more than one dissenting vote. A candidacy examination cannot be passed conditionally. A pass on the examination cannot be made contingent upon other factors such as the completion of additional course work, the preparation of extra research projects, and so on. If either part (written

or oral) of the candidacy examination is failed, the faculty may permit the student to take it once more at a time mutually satisfactory but within 12 months from the date of the first examination. If either part of the examination is failed, the student may be required by the faculty to retake only that part. The student is allowed two attempts on the candidacy exam. If the student fails the exam twice, they may be asked to leave the program. When determining failure, the faculty considers a complete scheduled exam as one attempt. Failure of one part of the exam on the first attempt (such as the written part), but then failure of a different part of the exam (even the oral part) at the attempt is considered two failures. There are two methods an IO student might use to pass the candidacy exam:

1. The student publishes a series of manuscripts (see the IO Guide for details), at least one as first author, in peer-reviewed journals and completes an oral defense based on those manuscripts; or
2. The student completes a qualifying examination covering the student's areas of specialization. The candidate is examined broadly in the areas, not merely in a single aspect of concentration. The examination consists of a written part (12 hours) and an oral part (two hours).

Practical Experience

The student must obtain professional practice experiences during the course of graduate education. An internship is one excellent option for meeting this requirement. However, the student can also meet the requirement by active involvement in applied research or consulting activities under the direct supervision of one or more Ph.D. psychologists. The student's academic mentor establishes the criteria for meeting the professional-practice experience requirement and judges the adequacy of the experiences.

Graduate Student Teaching

Teaching a course is an experience that is worthwhile regardless of the eventual career role(s) that a student envisions, and the experience should be taken seriously for its professional value. Benefits associated with teaching a course include expanding and solidifying knowledge about general and I-O psychology, polishing communication skills, and establishing professional identification. Although there are other ways to acquire these benefits (e.g., presentations at conferences, consulting experiences, organizing and conducting workshops), teaching a course systematically builds these experiences into a student's plan of study. Moreover, any student who plans an academic career should teach one or more courses in preparation for that career. The student should also recognize that during the course of graduate training, financial support is often provided by the Psychology Department from graduate teaching assistant or adjunct teaching funds. This type of financial support almost always requires that the student be partially or fully responsible for teaching a course.

Dissertation

The doctoral dissertation is a significant and creative research achievement and a significant contribution to knowledge in I-O psychology. An oral examination in defense of the dissertation is required. The aim of the defense is to evaluate the doctoral candidate's mastery of the methodological and substantive contributions of the completed dissertation.

Research Opportunities

Laboratory and field research programs are conducted by the I-O faculty on such diverse topics as selection systems, training systems, development and implementation of performance appraisal systems, team performance and assessment, work-family interface, workplace diversity and inclusion, organizational change, occupational safety and health, innovation management, telework, virtual teams, and international I-O issues. Research is supported by a variety of agencies such as the National Science Foundation; National Institutes of Health; National Institute for Occupational Safety and Health; the NASA/Langley Research Center; the Virginia Modeling, Analysis and Simulation Center; and the military services. Students are encouraged to become engaged in one of these research programs early in the process of their education.

Certificate Modeling and Simulation for Human Factors Psychology Certificate

Mark Scerbo, Program Coordinator

Human factors is a discipline in which principles of cognition, information processing, learning, and perception are applied to the design of technology. Knowledge of human factors helps create a better match between user capabilities and system demand. Further, an understanding of human capabilities helps designers generate more veridical models of human behavior. Applying principles of human factors can create more effective simulator training systems. This modeling and simulation certificate provides students with a focus on psychological principles that address end-user capabilities with models of human behavior and with knowledge/skill acquisition.

This certificate is designed for graduate students in psychology who are interested in pursuing a career in modeling and simulation or for doctoral students who wish to focus on human factors issues in modeling and simulation. It is anticipated that students will complete the program in 2 semesters (full time enrollment) or 2 years (part-time enrollment or working to complement a graduate degree).

Admissions

Requirements for this program include a strong background in basic and applied areas of psychology as well as quantitative research methods. All applicants admitted to the certificate program must meet ODU requirements for admission to a graduate program in psychology—holding a baccalaureate or master's degree from a regionally-accredited institution or an equivalent degree from a foreign institution.

Curriculum Requirements

A 3.00 GPA for the four-course sequence is required for successful completion. Total amount of credit: 12.

Core Course		
MSIM 601	Introduction to Modeling and Simulation	3
Foundation Courses		
PSYC 731/831	Human Cognition	3
PSYC 741/841	Sensation and Perception	3
PSYC 770/870	Human Factors Psychology	3

School of Supply Chain, Logistics & Maritime Operations

Overview

The School of Supply Chain, Logistics, and Maritime Operations offers an interdisciplinary curriculum to facilitate maritime-focused education in supply chain and logistics. Developed in collaboration with maritime supply chain partners throughout Coastal Virginia, the curriculum leverages the knowledge, skills, and strategic vision of world-class, industry-aligned faculty to ensure up-to-date insights and relevance for students transitioning to and from the practitioner world.

The interdisciplinary nature of this program allows students to seamlessly integrate their learning journey with specializations in industry 4.0, maritime and military defense logistics, port and ship operations, cybersecurity, data science, and supply chain informatics/analytics, among others.

Programs

Master's Degrees

- Maritime Trade and Supply Chain Management (MS) (p. 386)

Certificates

- Artificial Intelligence (AI) in Supply Chain Operations Certificate (p. 387)
- Maritime, Ports, and Logistics Management Certificate (p. 387)
- Supply Chain Management Certificate (p. 388)

Master of Science

Maritime Trade and Supply Chain Management (MS)

Dr. Rafael Diaz, Graduate Program Coordinator

The Master of Maritime Trade and Supply Chain Management is a maritime-focused graduate program that provides managers and supply chain professionals the opportunity to expand their knowledge, update their skill sets, and enhance their work with supply chain partners, transportation carriers, shippers, sourcing agents, warehouse managers, as well as third parties and governments directly or indirectly involved in the movement of cargo and material flow. The **30-credit hour** program requires critical thinking and investigation, all while gaining hands-on experience with industry partners. *This program is available on-campus and online.*

The MS in *Maritime Trade and Supply Chain Management* provides a comprehensive and interdisciplinary education through its core courses, electives, and capstone experience. Core classes establish a strong foundation in supply chain principles along the plan-source-make-deliver cycle, while *also* offering specialized insights into maritime trade dynamics and port efficiency. Cutting-edge advancements transforming supply chains are also explored as a core class. The interdisciplinary nature of the program offers a diverse pool of classes to choose as electives - from *analytics*, *industry 4.0*, and *maritime logistics* to *sustainability* and *public procurement*, among others. The program culminates in a *capstone* course, where students apply their knowledge to real-world challenges, ensuring they graduate with both theoretical expertise and practical problem-solving abilities.

Admission Requirements

Prospective students may apply for admission to the program for the fall, spring, and summer semesters. We welcome applicants who have earned bachelor's degrees from accredited institutions. Admission to the program is competitive and is granted only to those who show high ability and likely success in graduate study. Successful applicants will stand well above the average in most of the criteria used to measure graduate student promise.

To be considered for admission, students must submit the following:

- A bachelor's degree from a regionally-accredited university in the U.S. or an equivalent foreign institution;
- Official copies of transcripts of all colleges and universities attended;
- Two letters of recommendation from individuals familiar with the applicant's professional and/or academic background;
- A current resume;
- A statement of professional goals;
- Completion of GRE or GMAT; a waiver may be available for those who already have successfully completed a graduate degree or certificate, or those who have an undergraduate GPA ≥ 3.0 , or those who have taken the prerequisite course(s) determined and approved by the director of the program; and,
- English language requirements: TOEFL (IBT): 79, TOEFL (paper-based): 550, IELTS: 6.5 for those whose native language is not English (waived if an applicant has earned a college degree from an institution in an English-speaking country).

Students may be considered for conditional admission. Contact the Graduate Program Director for more information.

Application Deadlines

Fall Semester

Domestic Students - June 15th

International Students - May 15th

Spring Semester

Domestic Students - November 1st

International Students - October 1st

Curriculum Requirements

The program has been designed to address the advanced educational needs of students and employers in the area of maritime trade and supply chain studies. This proposed program consists of 30 credit hours: five core courses (15 credit hours), four electives (12 credit hours), and one capstone course (3 credit hours).

Core Courses

SCLM 550	Supply Chain 4.0 Technologies and Innovations	3
SCLM 630	Strategic Sourcing and Procurement	3
SCLM 641	Supply Chain Management and Logistics	3
PORT 611	International Maritime Transport	3
PORT 612	Port Operations and Management	3

Approved Electives (CHOOSE 4) 12

Electives must be approved in advance by the Graduate Program Coordinator **

BNAL 503	Data Visualization and Exploration	3
BNAL 507	Prescriptive Analytics of Management Science	3
BNAL 515	Advanced Business Analytics/Big Data Applications	3
BNAL 532	Predictive Analytics for Business	3
BNAL 721	Simulation Modeling for Business and Supply Chain Systems	3
CS 522	Introduction to Machine Learning	3
CS 580	Introduction to Artificial Intelligence	3
CS 733	Natural Language Processing	3
CYSE 530	Introduction to Cybersecurity Risk Management	3
CYSE 531	Advanced Techniques Cybersecurity Risk Management	3
CYSE 600	Cybersecurity Principles	3
ENMA 625	Introduction to Homeland Security Logistics	3
ENMA 724	Risk Analysis	3

IT 564	Essentials of Project Management	3
IT 650	Database Management Systems	3
IT 651	Business Intelligence	3
IT 660	Digitalizing Enterprises	3
PORT 613	International Maritime and Admiralty Law	3
PPCM 718	Public Sector Contract Administration	3
PPCM 726	Introduction to Public Procurement	3
PPCM 728	Public Sector Contract Planning and Formation	3
PADM 714	Public-Private Partnerships	3
PADM 734	Negotiation and Dispute Resolution	3
PORT 617	Transportation Management	3
SCLM 515	Maritime and Supply Chain Safety and Security	3
SCLM 519	Maritime and Supply Chain Risk and Insurance	3
SCLM 542	Supply Chain and Maritime Intelligence	3
SCLM 561	Warehousing, Distribution and Material Management	3
SCLM 572	Vessel Fleet Operations	3
SCLM 573	Inland Waterways and Dredging Operations	3
SCLM 574	Shipbuilding and Ship Repair Logistics	3
SCLM 581	Freight Brokerage and 3PL Services	3
SCLM 586	Cruise Ship Operations	3
Capstone Course		
SCLM 690	Supply Chain, Logistics, and Maritime Capstone	3

** Electives must be approved by the Graduate Program Director.

*** Students are allowed to take PPCM 726, PPCM 718, or PPCM 728 with the approval of the director of the PPCM program and the Graduate Program Coordinator at the School of Supply Chain, Logistics, and Maritime Operations.

**** Students can take one of the three PPCM courses (PPCM 726, PPCM 718, or PPCM 728) as an approved elective to be applied to the degree work.

Additional Requirements

Continuance

To remain in good standing after admission to the program, students must maintain a minimum, cumulative grade point average of 3.0 in all graduate course work attempted at the University. Students who fall below this minimum standard will have 12 credit hours to remedy this deficiency.

Additionally, students may earn no more than 2 courses with a grade of C or lower. Further, any student receiving a failing grade (F) in a course will be dismissed from the program.

Financial Assistance

Financial aid is available to graduate students at Old Dominion University. Financial aid may be available in the form of University fellowships, tuition grants, and research assistantships. In addition to the financial aid offered by the University, graduate students may be eligible for aid and student loans administered by other agencies. For information about part-time employment, scholarships, and student loans, contact the Office of Student Financial Aid.

For information and forms concerning application, contact:
Admissions Office
Old Dominion University
Norfolk, VA 23529
Phone: (757) 683-3685

For information concerning financial aid, contact:
Office of Student Financial Aid
Old Dominion University

Certificate

Artificial Intelligence (AI) in Supply Chain Operations Certificate

The Graduate Certificate in Artificial Intelligence in Supply Chain Operations is designed to educate students on the application of machine learning algorithms to the systems, activities, and processes that are employed to move goods from the supplier to the end user. The application of automation and AI to logistics can ensure more resilient, adaptable and sustainable supply chains.

Admission Requirements

The following admission requirements will apply to all applicants. All students must:

- Submit a completed online application and the application fee.
- Submit transcripts of all undergraduate and graduate work from regionally accredited institutions.
- Have earned a baccalaureate degree from a regionally accredited institution of higher education, or international equivalent.

Applicants who have not earned a degree in the United States must also submit:

- Current scores on the Test of English as a Foreign Language (TOEFL), with a minimum score of 230 on the computer-based TOEFL or 80 on the TOEFL iBT.

Curriculum Requirements

The certificate is awarded based upon the student's successful completion of 12 credit hours of graduate level courses:

AI/CYSE 510	Artificial Intelligence (AI) Methods and Models	3
AI/PHIL 546	Artificial Intelligence (AI) Ethics and Policy	3
SCLM 550	Supply Chain 4.0 Technologies and Innovations	3
SCLM 641	Supply Chain Management and Logistics	3
AI Practicum *		0
Total Credit Hours		12

* AI 669/DASC 669

Certificate

Maritime, Ports, and Logistics Management Certificate

Dr. Rafael Diaz, Graduate Programs Coordinator

This certificate program is designed to help working maritime and port professionals develop and sharpen their maritime and port management skills. The program consists of four graduate courses that expose students to global maritime transport, port management (with a focus on shipbuilding and ship repair logistics), maritime and admiralty law, and maritime security and risk analysis.

Admission Requirements

Admission to the certificate program will require a bachelor's degree (or equivalent).

Curriculum Requirements

The certificate is awarded based upon the student's successful completion of 12 credit hours of graduate level courses in Ports and Maritime Management:

Required Courses

PORT 611	International Maritime Transport	3
PORT 613	International Maritime and Admiralty Law	3
Electives: Select two of the following:		6
PORT 612	Port Operations and Management	
SCLM 515	Maritime and Supply Chain Safety and Security	
SCLM 581	Freight Brokerage and 3PL Services	
Total Credit Hours		12

Certificate Supply Chain Management Certificate

Dr. Rafael Diaz, Graduate Program Coordinator

This certificate program is designed to help working supply chain professionals develop and enhance their supply chain management and leadership/planning skills. The program consists of four graduate courses that expose students to supply chain management and logistics, supply chain 4.0 and the superimposition of AI/ML, analytics, big data, and cybersecurity on supply chain processes, distribution center and material handling management, and strategic sourcing and supply management.

Admission Requirements

All applicants admitted to the certificate program must meet Old Dominion University requirements for graduate admission: an earned baccalaureate degree from a regionally-accredited institution or an equivalent degree from a foreign institution. Those whose native language is not English must satisfy any one of the following: a minimum score of 550 on the paper-based TOEFL, a 79 on the TOEFL IBT, an overall 6.5 or higher on the IELTS, a 150 on the GRE's verbal reasoning, a 480 on the GRE's verbal, a 480 on the SAT's critical reading, a 26 on the SAT's reading test, an O level pass in English for the GCSE or GCE, or a C or higher on the CPE.

Curriculum Requirements

The certificate is awarded based upon the student's successful completion of 12 credit hours of graduate level courses in Supply Chain Management.

For On-Campus Students & ODUGlobal Students

Required Courses		6
SCLM 630	Strategic Sourcing and Procurement	3
SCLM 641	Supply Chain Management and Logistics	3
Electives: Select two of the following:		
SCLM 519	Maritime and Supply Chain Risk and Insurance	
SCLM 542	Supply Chain and Maritime Intelligence	
SCLM 550	Supply Chain 4.0 Technologies and Innovations	
SCLM 561	Warehousing, Distribution and Material Management	
Total Credit Hours		12

Overview

One mission of the Old Dominion University Graduate School is to serve graduate students and graduate programs in an interdisciplinary framework that coordinates and optimizes available resources and enhances the visibility and value of graduate education across the region and world. The purpose of the Graduate School is to advocate for graduate students and graduate programs in a centralized manner so that policies and practices are consistently developed and applied across the academic colleges and schools. The work includes ongoing support for the university's forward-focused vision.

A second mission is to expand international collaborations via prestigious scholarships for undergraduates and graduate students, and support faculty who seek international teaching collaborations. Further, the English Language Center provides support for international recruiting, an intensive English language program for pre-matriculated students, an academic pathway program for conditionally admitted students (the Monarch English Transition Program), coursework for ODU students with interest in teaching multilingual students, and short-term contract programs focused on language and culture.

For more information regarding graduate programs or services, contact the Graduate School at 757-683-4885 or graduateschool@odu.edu.

Programs

Doctor of Philosophy Programs

- Biomedical Sciences with a Concentration in Bioelectrics (PhD) (p. 389)
- Biomedical Sciences with a Concentration in Bioinformatics and Genomics (PhD) (p. 390)
- Biomedical Sciences with a Concentration in Biological Chemistry (PhD) (p. 391)
- Biomedical Sciences with a Concentration in Microbiology and Immunology (PhD) (p. 393)
- Biomedical Sciences with a Concentration in One Health (PhD) (p. 394)
- Biomedical Sciences with a Concentration in Stem Cells and Regenerative Medicine (PhD) (p. 395)

Certificate Program

- Conservation Leadership Certificate (p. 396)
- Homeland Security Certificate (p. 397)

Doctor of Philosophy Biomedical Sciences with a Concentration in Bioelectrics (PhD)

Barbara Hargrave, Graduate Program Director

In this interdisciplinary program, students will master a broad range of basic biomedical science topics. Integration of the basic courses is reinforced by a rotation of laboratory experiences and by special seminars that highlight disciplinary interrelationships and approaches to biomedical research. The

student progresses from a core of basic courses to in-depth study of specific biomedical problems. This includes advanced doctoral courses and the doctoral research project. Under the guidance of the graduate faculty, the student will integrate knowledge from the broad spectrum of biomedical disciplines into their focus on an area of specialization.

The program graduate will be a scientist with a broad biomedical education and a demonstrated ability to carry out original and creative research, cognizant of disciplinary interfaces and implications and capable of pursuing and/or recommending continuing lines of study. They will be prepared to bridge the gap between practice and discovery in the art of medicine and the practice of science. The graduate is capable of serving in an industrial, governmental, or academic teaching or research setting, either independently or as a member of a team.

Admission

The requirements for admission to the biomedical sciences Ph.D. program are as follows:

1. A bachelor's degree from an accredited college or university with a B (3.00) average. Students with advanced degrees are encouraged to apply.
2. In addition to the University's English Language Proficiency Requirements, international applicants must have either a score of 84 on the TOEFL, with a score of 26 on the speaking portion, or an IELTS overall score of 8.
3. Prior training in biology (two years), calculus and/or statistics, and organic chemistry (one year). Additional courses in biology, chemistry, and physics are recommended.

Application Procedures

The completed application for the biomedical sciences Ph.D. program will include the following items:

1. Transcripts of coursework only from institutions awarding a bachelor's or master's degree.
2. A statement of personal goals and academic objectives.
3. Writing sample on a science related topic (from a course or from your research experience).
4. Resume listing all degrees earned and work experience.
5. Three letters of recommendation on letterhead, from faculty members at colleges attended who are familiar with the applicant's academic and research capabilities.
6. A completed application form.
7. Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS) test scores, sent directly from ETS to the ODU International Graduate Admissions Office. Test scores must accompany applications for non-native English speaking candidates with a degree issued outside of the United States.

Applications must be completed online at <http://www.odu.edu/admission/graduate> (<http://www.odu.edu/admission/graduate/>) by the deadline posted on the website. The applicant is responsible for ensuring all application materials are received and the application is complete in all respects.

Students holding a bachelor's degree in another, related field, such as computer science, mathematics, or physics may need to take leveling courses in biological and chemical sciences or pursue master's level work in those fields. The Biological Sciences department and the Chemistry & Biochemistry department both offer master's degrees.

Financial Support

Sources of financial aid available to biomedical sciences Ph.D. students include:

1. Research and teaching assistantships
2. Students on research or teaching assistantships may be eligible for a tuition waiver.
3. Financial Aid

Curriculum Requirements

To accomplish the objectives of the program, the student:

1. Enrolls in the basic biomedical sciences courses to develop a broad foundation for more advanced course work and dissertation research;
2. Selects a concentration and completes the required advanced courses. Students choose the concentration with the selection of the mentor, which varies based on how they entered the program;
3. Completes at least 78 credit hours beyond the bachelor's degree or 50 to 51 credit hours beyond the master's degree;
4. Presents two seminars;
5. Candidacy Exam and Prospectus: Develops a written interdisciplinary research NIH style proposal based on preliminary and proposed research that is accepted by the student's committee. Successfully presents and passes an oral exam on the grant proposal and on coursework. The proposal must provide evidence of original and independent thinking.
6. Develops an interdisciplinary research proposal in NIH format that is accepted by the guidance committee;
7. Performs publishable research to demonstrate the ability to complete original and creative research projects; and
8. Prepares and successfully defends a dissertation.

Biomedical Sciences Core

Core Courses

BIOL 810	Advanced Cell Biology	3
BIOL 847	Responsible and Ethical Conduct of Research	3
BIOL 857	Statistics in Biology	4
BMS 899	Dissertation Research	6

BIOE 890	Graduate Seminar *	
Total Credit Hours		13

* Two graded seminar courses required.

Electives

Optional elective courses require permission of dissertation committee.

Additional Requirements

Continuance

Students must maintain a 3.0 GPA and receive no more than one course grade of B- or lower to continue in the Ph.D. program. Students are also required to complete Responsible Conduct of Research training within their first 12 completed credit hours in the program.

Teaching

Students are required to successfully complete the GTAI Institute and teach at least one semester. International students or students where English is not their first language are required to either pass the SPEAK test or

demonstrate they have received a score of 26 or better on the speaking portion of their iBT TOEFL exam.

Exit Requirements

Students must complete the following in order to graduate:

1. Academic requirements - All core and concentration course requirements
2. Publication Research
3. Exit Survey

Additional Requirements

Continuance

Students must maintain a 3.0 GPA and receive no more than one course grade of B- or lower to continue in the Ph.D. program. Students are also required to complete Responsible Conduct of Research training within their first 12 completed credit hours in the program.

Teaching

Students are required to successfully complete the GTAI Institute and teach at least one semester. International students or students where English is not their first language are required to either pass the SPEAK test or demonstrate they have received a score of 26 or better on the speaking portion of their iBT TOEFL exam.

Exit Requirements

Students must complete the following in order to graduate:

1. Academic requirements - All core and concentration course requirements
2. Publication Research
3. Exit Survey

Doctor of Philosophy Biomedical Sciences with a Concentration in Microbiology and Immunology (PhD)

Barbara Hargrave, Graduate Program Director

In this interdisciplinary program, students will master a broad range of basic biomedical science topics. Integration of the basic courses is reinforced by a rotation of laboratory experiences and by special seminars that highlight disciplinary interrelationships and approaches to biomedical research. The student progresses from a core of basic courses to in-depth study of specific biomedical problems. This includes advanced doctoral courses and the doctoral research project. Under the guidance of the graduate faculty, the student will integrate knowledge from the broad spectrum of biomedical disciplines into their focus on an area of specialization.

The program graduate will be a scientist with a broad biomedical education and a demonstrated ability to carry out original and creative research, cognizant of disciplinary interfaces and implications and capable of pursuing and/or recommending continuing lines of study. They will be prepared to bridge the gap between practice and discovery in the art of medicine and the practice of science. The graduate is capable of serving in an industrial, governmental, or academic teaching or research setting, either independently or as a member of a team.

Admission

The requirements for admission to the biomedical sciences Ph.D. program are as follows:

1. A bachelor's degree from an accredited college or university with a B (3.00) average. Students with advanced degrees are encouraged to apply.
2. In addition to the University's English Language Proficiency Requirements, international applicants must have either a score of 84 on the TOEFL, with a score of 26 on the speaking portion, or an IELTS overall score of 8.
3. Prior training in biology (two years), calculus and/or statistics, and organic chemistry (one year). Additional courses in biology, chemistry, and physics are recommended.

Application Procedures

The completed application for the biomedical sciences Ph.D. program will include the following items:

1. Transcripts of coursework only from institutions awarding a bachelor's or master's degree.
2. A statement of personal goals and academic objectives.
3. Writing sample on a science related topic (from a course or from your research experience).
4. Resume listing all degrees earned and work experience.
5. Three letters of recommendation on letterhead, from faculty members at colleges attended who are familiar with the applicant's academic and research capabilities.
6. A completed application form.
7. Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS) test scores, sent directly from ETS to the ODU International Graduate Admissions Office. Test

scores must accompany applications for non-native English speaking candidates with a degree issued outside of the United States.

Applications must be completed online at [http://www.odu.edu/admission/graduate/](http://www.odu.edu/admission/graduate) by the deadline posted on the website. The applicant is responsible for ensuring all application materials are received and the application is complete in all respects.

Students holding a bachelor's degree in another, related field, such as computer science, mathematics, or physics may need to take leveling courses in biological and chemical sciences or pursue master's level work in those fields. The Biological Sciences department and the Chemistry & Biochemistry department both offer master's degrees.

Financial Support

Sources of financial aid available to biomedical sciences Ph.D. students include:

1. Research and teaching assistantships
2. Students on research or teaching assistantships may be eligible for a tuition waiver.
3. Financial Aid

Curriculum Requirements

To accomplish the objectives of the program, the student:

1. Enrolls in the basic biomedical sciences courses to develop a broad foundation for more advanced course work and dissertation research;
2. Selects a concentration and completes the required advanced courses. Students choose the concentration with the selection of the mentor, which varies based on how they entered the program;
3. Completes at least 78 credit hours beyond the bachelor's degree or 50 to 51 credit hours beyond the master's degree;
4. Presents two seminars;
5. Candidacy Exam and Prospectus: Develops a written interdisciplinary research NIH style proposal based on preliminary and proposed research that is accepted by the student's committee. Successfully presents and passes an oral exam on the grant proposal and on coursework. The proposal must provide evidence of original and independent thinking.
6. Develops an interdisciplinary research proposal in NIH format that is accepted by the guidance committee;
7. Performs publishable research to demonstrate the ability to complete original and creative research projects; and
8. Prepares and successfully defends a dissertation.

Biomedical Sciences Core

Core Courses		
BIOL 810	Advanced Cell Biology	3
BIOL 847	Responsible and Ethical Conduct of Research	3

Certificate Conservation Leadership Certificate

This interdisciplinary certificate in Conservation Leadership was developed, and is implement by Old Dominion University, in collaboration with the U.S. Fish and Wildlife Service (USFWS) as a part of a long-term, sustainable program of conservation-related service-learning, internships, and leadership programs. The certificate will facilitate the development of the next generation of professionals who can address the challenges for conservation posed by a changing climate and sea level rise.

Curriculum Requirements

The certificate requires four core courses (3 credit hours each) and one elective (3 credit hours). One of the core courses is a mentored internship, preferably at a USFWS or related facility. A unique aspect of this certificate is the requirement to take one course (3 credit hours) that is designated as a service-learning course in which the student will be engaged in a project at a USFWS (or related) facility.

Required Courses

BIOL/OEAS 566	Introduction to Mitigation and Adaptation	3
BIOL/OEAS 567	Sustainability Leadership	3
OEAS 658	Participatory and Agent-Based Modeling, Simulation, and Visualization	3
CL 668	Internship in Conservation Leadership	3

Electives

Select one of the following: 3-5

BIOL 504	Conservation Biology and Sustainable Development	
BIOL 545	Community Ecology	
BIOL 732	GIS in the Life Sciences	
COMM 600	Intercultural Communication: History, Theory and Application	

HLSC 778	Global Environmental Health	
POLS 555	The Politics of Climate Change	
PHIL 542	Studies in Applied Ethics	
Total Credit Hours		15-17

Certificate

Homeland Security Certificate

The ODU Graduate School offers a Graduate Certificate in Homeland Security. Designed to familiarize individuals with today's and tomorrow's homeland security challenges, the certificate program provides a multi-disciplinary, educational foundation in a broad range of homeland security issues and fosters an environment for information interchange, cooperation, and collaboration across governmental, business, non-profit, academic, and military organizations.

The Homeland Security Graduate Certificate Program is designed to provide knowledge useful in the development and improvement of organizational processes related to avoiding, preparing for, managing and recovering from major security-related problems. The certificate allows students to draw courses from several colleges of the University to tailor a program particularly suited for their needs.

Designed for career professionals in many aspects of public service including law enforcement, port operations and emergency management, this certificate will serve those who wish to pursue a homeland security option as part of their professional development or as a step towards a Master's Degree in Public Administration.

The Graduate Certificate in Homeland Security will be offered in face-to-face, online, and hybrid formats.

Admission Requirements

All degree-seeking applicants admitted to the certificate program must meet ODU requirements for graduate admission: an earned baccalaureate degree from a regionally-accredited institution or an equivalent degree from a foreign institution. Those whose native language is not English must submit a minimum score of 230 on the computer-based TOEFL or 80 on the TOEFL iBT.

Non-degree seeking students are required to have these same credentials, though documentation is not required. Ultimately, students must apply to the program in order to obtain the certificate.

Curriculum Requirements

Required Courses

ENMA 625	Introduction to Homeland Security Logistics	3

Electives

Select three of the following:		9

GEOG 573	Geographic Information Systems for Emergency Management
CYSE 600	Cybersecurity Principles
CYSE 605	Leadership and Management in Cybersecurity
PADM 712	Emergency Management and Policy
ENMA 724	Risk Analysis

Total Credit Hours		12

Continuing Education

Web Site: <http://www.odu.edu/cepd> (<http://www.odu.edu/cepd/>)

Renee Felts, Associate Vice President, Continuing Education
Robert Doherty, Director, Continuing Education

Continuing Education is focused on delivering practical, applied knowledge through its non-credit, and credit-bearing courses, certificates and certification preparatory classes. Staff interact with each of the academic colleges to utilize the existing courses in an interdisciplinary fashion, frequently at the request of the military, businesses and various industry sectors.

Mission

Continuing Education will meet the evolving needs of our local, regional and global community via online and face-to-face offerings. We help students, professional and lifelong learners move ahead and stay ahead.

Vision

Continuing Education will seek to add value to University programs by engaging with students, faculty, and alumni to help achieve their personal and professional goals.

Prior Learning Assessment

The Prior Learning Assessment unit awards Credit for Prior Learning (CPL) and offers students the opportunity to have their prior learning assessed and applied for academic credit. Visit odu.edu/prior-learning-assessment for more information.

Programs

Certificate Programs

- Public Sector Leadership Certificate (p. 402)

Center for Professional Development

The primary mission of the Center for Professional Development (CPD) is to develop interdisciplinary certificate programs targeted for specific groups of professionals. The CPD will work across the ODU campus, including all academic colleges as well as ODUGlobal, in developing new multidisciplinary certificates.

Non-Credit Continuing Education Programs

Hospitality Management Programs

XHSP 3000- Hospitality Management Certificate- The Hospitality Management Certificate is broken down into 3 Courses that each contain 4 Modules and last 4 weeks. The courses include Sales & Marketing, Hotel Operations, and Personnel & Financial Management. The content includes an explanation of both the management and operational functions of lodging operations, an overview of the history and challenges of the lodging industry, identifies traits and behaviors of successful lodging leaders, gives a strong base for revenue management, labor and operational budgeting, safety and security, and an exploration of the future of the industry.

Health Science Programs

XCMA 2000- Certified Medical Assistant- Our program includes three in-demand healthcare certifications: Clinical Medical Assistant, EKG Technician and Phlebotomy Technician. The program combines convenient online course with in-person clinical experience supervised by health professionals. In as little as five months, students are prepared to sit for nationally recognized exams through the National Health Career Association.

XMBC 3000- Medical Billing and Coding- This program includes two in-demand healthcare certifications: Certified Professional Biller (CPB) and Certified Professional Coder (CPC). Throughout the 30-week online course, students will learn about health insurance, billing principles, medical

terminology, medical records, and professional coding services for medical providers, along with job preparation guidance. The program is taught by industry experts from the credentialing body, AAPC, and includes textbooks, practice exams, certification exams, real-world practice software, and career services.

XHLC 2060- Dental Assistant- The Dental Assistant program enables learners to embark on a career in dental healthcare by providing the essential knowledge and skills needed to prepare for the Registered Dental Assistant (RDA) certification examination. Included in this course is the Registered Dental Assistant (RDA) certification.

XHLC 2080- Sterile Processing Technician- The Sterile Processing Technician program equips you for employment in surgical environments across a range of settings, including hospitals, surgical centers, clinics, and other medical facilities. Included in this course is the Certified Registered Central Services Technician (CRCST) certification.

XHLC 2090- Behavior Technician and the Medical Office- The Behavior Technician and Medical Office dual-certification training course offers a comprehensive curriculum that encompasses both front office skills and expertise in working within the behavioral health field. Included in this program are the Registered Behavior Technician (RBT) and Certified Medical Administrative Assistant (CMAA) certifications.

XHLC 2100- Behavior Technician Specialist- The Behavior Technician Specialist certification enables you to conduct individual patient sessions and provide behavior analysis services, all supervised by a licensed Board Certified Behavior Analyst (BCBA). Included in this course is the Registered Behavior Technician (RBT) certification.

XHLC 2110- Allied Healthcare Professional- The Allied Healthcare Professional program serves as a gateway into the healthcare sector, integrating the expertise of pharmacy technician, electronic health records management, billing and coding, and medical office administration. Included in this program are the CMAA (Certified Medical Administrative Assistant), CEHRS (Certified Electronic Health Records Specialist, CPhT (Certified Pharmacy Technician Certification), and MCBC (Medical Coder & Biller Certification) certifications.

XHLC 2120- Electronic Health Records Specialist- The Electronic Health Records Specialist program prepares individuals for healthcare careers by offering thorough training in the management of electronic health records. Included in this course is the CEHRS (Certified Electronic Health Records Specialist) certification.

XHLC 2150- Health Unit Coordinator- The Health Unit Coordinator program equips individuals to excel in coordinating healthcare units, imparting the essential skills and knowledge needed for efficient administration within healthcare environments. Included in this program are the Certified Health Unit Coordinator (CHUC) and Certified Electronic Health Records Specialist (CEHRS) certifications.

XHLC 2180- Medical Front Office Administration Specialist- The Medical Front Office Administrative Specialist program offers an ideal introduction to the front office setting within the healthcare industry. Included in this course is the Certified Medical Administrative Assistant (CMAA) certification.

XHLC 2190- Medical Front Office and Electronic Health Records- The Medical Front Office and Electronic Health Records program prepares individuals for proficient management of patient data, essential handling of health records, medical office procedures, and other critical aspects of healthcare roles. Included in this program are the Certified Medical Administrative Assistant (CMAA) and Certified Electronic Health Records Specialist (CEHRS) certifications.

XHLC 2200- Medication Care Coordinator- The Medication Care Coordinator program readies participants to offer outstanding assistance within a pharmacy context, emphasizing the importance of seamless service and optimal patient engagement. Included in this program are the Certified Pharmacy Technician (CPhT) and Certified Medical Administrative Assistant (CMAA) certifications.

XHLC 2210- Medical Front Office Assistant and Administration

Specialist- The Medical Front Office Assistant and Administrative Specialist program unveils the pathway for individuals to embark on a promising journey within the administrative realm of the healthcare industry, focusing on the critical roles at the front office. Included in this program are the Medical Coder and Biller Certification (MCBC) and Certified Medical Administrative Assistant (CMAA) certifications.

XHLC 2230- Pharmacy Technician Professional (ASHP/ACPE)- The Pharmacy Technician Professional program provides practical skills crucial for employment in pharmacies, including the management of medication orders and customer assistance, all within this ASHP/ACPE Accredited curriculum.

XHLC 2240- Pharmacy Technician Specialist- The Pharmacy Technician Specialist program imparts essential skills in managing medications and providing support in pharmacy environments, equipping students with the expertise needed for professional success. Included in this course is the Certified Pharmacy Technician (CPhT) certification.

XHLC 2250- NASM Personal Trainer & Nutrition Coach- The NASM Personal Trainer and Nutrition Coach program prepares participants for a fulfilling journey into the growing fields of fitness and nutrition, setting the stage for a rewarding career in health and wellness. Included in this program are the Certified Personal Trainer (CPT) and Certified Nutrition Coach (CNC) certifications.

XHLC 2260- Mental Health Support Specialist- The Mental Health Support Specialist program offers specialized training to assist psychiatrists, therapists, and clients in the care and management of mental health and substance use disorders, contributing valuable skills to support healing and recovery processes. Included in this course is the Mental Health Technician Certified (MHTC) certification.

XHLC 2270- Mental Health Support Professional- The Mental Health Support Professional program delivers a thorough education designed to jump start a career in the mental health field, with a special focus on the utilization and management of electronic health records to enhance patient care. Included in this program are the Mental Health Technician Certified (MHTC) and Certified Electronic Health Records Specialist (CEHRS) certifications.

Registered Play Therapy

The Registered Play Therapy Program provides professionals and students in the community with the opportunity to learn more about play therapy or to receive the training necessary to become a Registered Play Therapist (RPT). The Play Therapy program is offered as a series of eight (8) weekend workshops worth 19 continuing education hours each (16 contact CE's and 3 non-contact CE's). Individuals can attend one or all of the workshops. Old Dominion University is approved by the Association for Play Therapy to offer continuing education specific to play therapy (APT Approved Provider #08-234).

The Registered Play Therapy workshops are aligned with the guidelines established by the *Association for Play Therapy* and pertain to five main areas:

- Play Therapy History
- Play Therapy Seminal or Historically Significant Theories
- Play Therapy Skills and Methods
- Play Therapy Special Topics
- Cultural & Social Diversity

XPCL 4000-Workshop #1: Principles of Play Therapy- This workshop will provide information about the rationale, philosophy, history, and theoretical underpinnings specific to the application of play therapy with various populations and in different settings. Basic facilitation skills, specific goals, and the role of the play therapist will be explored and practiced in relation to specific theories and in terms of general process of play therapy.

XPCL 4010-Workshop #2: Expressive Arts in Play Therapy- The therapeutic power of selected games, structured activities and expressive arts will be explored as they pertain to play therapy. Techniques specific

to art, drama, children's literature, puppets, and music will be illuminated as ideal mediums through which children and adolescents express and heal themselves through the process of play therapy. Basic techniques and strategies for incorporating such tools and techniques will be described, demonstrated, and practiced.

XPCL 4005-Workshop #3: Games, Activities, and Narrative Techniques in Play Therapy- The therapeutic power of selected games, structured activities, and narrative techniques will be explored as they pertain to play therapy. Basic techniques and strategies for incorporating such tools and techniques will be described, demonstrated, and practiced.

XPCL 4015- Workshop #4: Systematic Interventions: Family Play Therapy and Filial Therapy- Fundamental, theoretical, and philosophical concepts related to systems theory and utilizing play therapy techniques in family counseling will be presented. Basic skills and methods to incorporate in family play therapy will be described, demonstrated, and practiced. In addition, methods will be covered illustrating how to implement filial therapy for parents to become healthy agents in their children's lives.

XPCL 4030- Workshop #5: Group Play Therapy: Play Therapy Skills and Methods in Group Work- Theoretical and philosophical concepts of Group Play Therapy with children, adolescents, and adults will be discussed. Group logistics, process, conflict resolution, and group facilitation skills will be described. Basic skills and methods to incorporate in group play therapy will be described, demonstrated, and practiced. In addition, multicultural and ethical considerations in group play therapy will be addressed.

XPCL 4025- Workshop #6: Play Therapy and Creative Interventions with Adolescents, Teens, and Adults- Research has indicated that play therapy is an effective treatment modality with people of all ages. This workshop will explore the process of play therapy and creative interventions when working with adolescents and adults. Basic skills and methods to incorporate in play therapy with adolescents and adults will be described, demonstrated, and practiced. Multicultural considerations and societal influences that specifically pertain to this population will also be addressed.

XPCL 4020- Workshop #7: Utilizing Sandtray in Play Therapy- Through experiential sand tray exercises and didactic methods, information about the rationale, history, and general application of sand tray in play therapy will be illustrated. Basic facilitation skills, theoretical constructs, and strategies for processing sand tray will be discussed, demonstrated, and practiced.

XPCL 4045- Workshop #8: Addressing Trauma, Grief, and Loss Through Play Therapy- This workshop will investigate specific issues faced by children, adolescents, and families affected by difficult environmental and systematic situations. The implications of trauma, grief, and loss as a result of abuse, crisis, death and divorce will be reviewed as they pertain to the process. The process of play, techniques, treatment plans and consultation procedures will also be explored. Skills and methods to incorporate play therapy techniques to address trauma, grief, and loss will be described, demonstrated, and practiced.

Business/Executive Development Programs**Executive Certificate in Financial Planning**

XEDC 1511- General Financial Planning Principles, Professional Conduct, and Regulation- This course examines basic financial planning concepts for developing client relationships; gathering, analyzing, and evaluating financial documents, statements, and other information; developing and communicating relevant recommendations to clients; implementing recommendations through the use of a financial planning team; and monitoring the financial plan on a periodic basis, all within CFP Board professional and regulatory standards. Students will develop a pragmatic perspective of the field of financial planning as they learn to analyze personal financial statements, understand time value of money concepts, explore education funding techniques, advise clients regarding the management of debt, apply behavioral finance concepts, gain an understanding of federal and state regulatory requirements, learn the ethical environment of financial planning and integrate the legal and economic aspects of financial planning within a practice.

XEDC 1512- Risk Management, Insurance, and Employee Benefits

Planning- This course explores fundamental insurance, annuity, and employee benefit concepts and products. Students will gain knowledge of the principles of risk and insurance; learn how to analyze and evaluate risk exposures; and understand the concepts of personal and business insurance for life, health, disability, long-term care and property insurance. Students will also develop perspectives regarding the integration of social insurance (e.g. Medicare, workers compensation) within the framework of financial planning. Equity-based compensation, non-qualified deferred compensation and other employee benefits will also be presented and discussed.

XEDC 1513- Investment Planning- This course examines the characteristics, uses and taxation of investment vehicles: stocks, bonds, cash and cash equivalents, promissory notes, guaranteed investment contracts, real estate, and alternative investments. Students will also develop an understanding of the various types of risk: systematic and unsystematic, purchasing power, interest rate, business, and financial risk. Students are introduced to quantitative investment concepts, measures of investment returns, bond and stock valuation concepts, investment theory, portfolio development and analysis, investment strategies, asset allocation, and asset pricing models.

XEDC 1514- Tax Planning- This course focuses on income tax fundamentals and calculations, tax accounting, characteristics and income taxation of business entities, basis, depreciation, and cost recovery concepts. The impact of the alternative minimum tax (AMT), passive activity, at-risk rules, charitable contributions and charitable deductions on a client's financial plan is also studied. Students will gain an understanding of the tax consequences of like-kind exchanges and the disposition of property and will learn how the loss of a spouse through death or divorce affects a client's tax status.

XEDC 1515- Retirement Savings and Income Planning- Students will be exposed to retirement needs analyses, types and characteristics of retirement plans, qualified plan rules and options, and provisions of tax-advantaged plans. The effects of ERISA on retirement plans is examined and the impact of Social Security on a client's retirement plan is also discussed. Students will gain an understanding of plan distribution options, rules, alternatives, and taxation, and will also explore key factors affecting plan selection for businesses and investment considerations for retirement plans.

XEDC 1516- Estate Planning- This course analyzes the various techniques and strategies used in developing estate plans based on client criteria and needs. Property titling, property transfer at death, gifting strategies, and sources of estate liquidity are discussed. Students will also gain insight on wills, probate, and the types, uses and taxation of trusts during estate planning.

XEDC 1517- Capstone: Financial Plan Development Course- Students participate in a case analysis and evaluation in which the following major areas of financial planning are integrated:

- General Financial Planning Principles, Professional Conduct, and Regulation
- Risk Management, Insurance, and Employee Benefits Planning
- Investment Planning
- Income Tax Planning
- Retirement Savings and Income Planning
- Estate Planning

SHRM Learning System

XEDC 1165- SHRM Learning System- The SHRM Learning System for SHRM-CP and SHRM-SCP includes five modules covering the comprehensive SHRM Body of Competency and Knowledge™ (SHRM BoCK™) so you'll learn everything you need for the SHRM-CP or SHRM-SCP exam. Study with learning modules that provide an in-depth exploration of the knowledge domains and behavioral competencies tested on the SHRM exams. SHRM Certified Professional (SHRM-CP™) and SHRM Senior Certified Professional (SHRM-SCP™) are the new standard for all HR professionals around the globe, as it is among the first HR certification that is focused on the practical, real-life information HR professionals need to

excel in their careers today, including behavioral competencies, knowledge and skills.

XEDC 1164- SHRM Essentials- The perfect course for managers who need to know basic HR concepts BEFORE disciplinary action is required and HR has to get involved. This program provides a broad overview of the human resource function. Key topic areas include: Essentials of HR Management, Employment Law, Effective Recruitment, Basics of Compensation, and Orienting and Training your employees.

Paralegal Certificate Program

XLGL 3010- Paralegal Certificate Program- This face-to-face offering is taught by an esteemed faculty of judges and attorneys. Students learn legal processes, court structure, interviewing, investigation, document preparation, file maintenance, correspondence, research, writing and analysis, as well as substantive topics of law, such as Tort Law, Contract Law and Civil Procedures. Students will be trained in online legal research with individual subscriptions to LexisNexis and Westlaw.

XLGL 3020- Paralegal Certificate Program, Self-Paced- The self-paced version of our Paralegal Certificate program is designed for students to study when convenient for them and can be done completely online. Students will be assigned their own attorney/judge liaison and learn legal processes, court structure, interviewing, investigation, document preparation, file maintenance, correspondence, research, writing and analysis, as well as substantive topics of law, such as Tort Law, Contract Law and Civil Procedures. Students will be trained in online legal research with individual subscriptions to LexisNexis and Westlaw.

Project Management and Lean Six Sigma Certificates

XLSS 5010- Lean Six Sigma Green Belt Certification- This program focuses on managing quality projects utilizing the fundamentals of Lean and Six Sigma methodologies. Lean topics include the concepts of the elimination of waste and reduction of cycle time in organizational processes. Six Sigma principles consist of problem solving techniques, data collection and analysis, reduction of process variation, process capability and control, and continual improvement.

XLSS 5040- Lean Six Sigma Black Belt Certification- Build upon the process improvement skills acquired during the Green Belt certification with our industry-leading Lean Six Sigma Black Belt certification. In just seven sessions over the course of two to three months, you'll master the tools to mentor Green Belts and other team members using real-world process improvement methods. Black belts leverage the tools and concepts in their lean six sigma "toolbox" to successfully lead projects that deliver meaningful results to the organization.

XITS 4100- Project Management Essentials- Project Management Essentials equips participants with the crucial skills needed to manage and direct projects successfully across various industries, ensuring effective leadership and organizational outcomes. This offering includes the following certification(s): Certified Associate in Project Management (CAPM)

XIPJ 5000- PMP Exam Preparation- Old Dominion University's Project Management Professional (PMP)® Exam Preparation course prepares you for the PMP® exam offered through the Project Management Institute (PMI®). The PMP® credential has become the most recognized certification in Project Management in the world and is considered the gold standard of PM qualifications. Recognized and demanded by organizations worldwide, the PMP® validates your competence to perform in the role of a project manager, leading and directing projects and teams. To earn your PMP® credential, you must meet the experience and education requirements, and pass the PMP® examination.

Professional Development Programs

XGEN 2060- Au Pair Career Development Strategies for Personal & Professional Success- This Au Pair weekend class will help you develop a successful plan for your personal and career goals. Become more aware of who you are and what you want in your life and career. This class will help you become more aware, competitive and employable in any part of the world by developing key soft skills.

Digital Career Programs

Cybersecurity

XCYS 2500- Cybersecurity Fundamentals- This course is designed to introduce participants to the critical field of cybersecurity, emphasizing the skills and knowledge needed to navigate the evolving threat landscape. It adopts a workshop format to ensure a comprehensive learning experience, incorporating a mix of lectures, case studies, and hands-on labs. The course aims to prepare learners for the ISACA Cybersecurity Fundamentals Certificate Exam by covering a wide range of topics, from cybersecurity principles and privacy to risk management and security architecture.

XCYS-3000 Cybersecurity Audit- The Cybersecurity Audit Certificate equips audit and assurance professionals with the necessary expertise to thrive in assessing cybersecurity processes, policies, and tools. It aids in fortifying organizational infrastructure against cyber threats. Additionally, this certificate offers IT risk professionals insights into cyber-related risks and strategies for mitigating them.

XCYS 3010- Cybersecurity Bootcamp- The Cybersecurity Bootcamp is a 24-week part-time program designed to prepare participants for careers in the fast-growing field of cybersecurity. It includes courses on fundamentals, advanced networking and cryptography, security operations and incident response, and certification preparation for the CompTIA Security+ exam. The program emphasizes hands-on learning through labs, projects, and a real-world capstone project, ensuring practical skills in areas like penetration testing, incident response, and secure network design. Participants receive unlimited career support, including resume assistance, interview preparation, and salary negotiation coaching. Graduates can pursue diverse roles in industries such as finance, healthcare, and technology with competitive salaries and job stability.

Digital Marketing Bootcamp

XDGM 2020- Digital Marketing Bootcamp- The Digital Marketing Bootcamp is a part-time Career Bootcamp that teaches the essential skills necessary to launch a digital marketing career. Learners will start with the fundamentals and progress through a variety of strategies and topics to solve complex marketing challenges within the evolving tech space.

Software Development Bootcamp

XSWD 2010- Software Development Bootcamp- 24 Week Part-Time- Over the course of 24 weeks, you will learn how to build, test, and deploy software applications using JavaScript on the client- (front-end) and server-side (back-end) of an application. Starting with fundamentals, you will quickly move into more complex programming concepts that are solidified through challenges, such as: pair programming, weekly projects, lab exercises, and code reviews. The projects that you create throughout the program will be used to build your portfolio, which will serve as a showcase of your work and be a valuable asset in your post-bootcamp job hunt. You will also receive time with a professional career mentor through one-on-one coaching sessions and bi-weekly workshops. In the final four weeks, you will work with a client and your classmates on a team to develop a real product. This is what we call your “capstone project”. At the end of the program, you will demonstrate your capstone project to an audience of hiring partners and tech community members at our Demo Day. This bootcamp part-time bootcamp is typically held during the weekday evenings and weekends.

Data Analytics Bootcamp

XDAB 2010- Data Science and Analytics Bootcamp, Extended Class- The Data Analytics Bootcamp is a part-time, flex, mentor-led, Career Bootcamp that covers a variety of tools used to drive and guide complex, big data-oriented decisions. Learners will become experts in analysis, cleaning, mining, synthesis, and decision-making in order to influence key decisions with an increasingly complex business environment.

UX/UI Design Bootcamp

XUIX 2010- UX/UI Design Bootcamp- The process for creating the outward facing appearance of a website or application is referred to as user interface (UI) design, while the process of gathering research and using data to inform design decisions is referred to as user experience (UX) design. In this program, you will learn both. Starting with the fundamentals, you

will quickly advance through topics of increasing complexity, applying creative problem-solving skills to design, and iterating on your designs based on research. You will learn how to defend your designs with data using performance metrics that you create. Lastly, you will leave this program knowing how to clearly implement every step of the design process, from concept to full-scale design prototypes.

General IT Related Programs

XITS 3400- AWS Cloud Foundations- AWS Academy Cloud Foundations is intended for students who seek an overall understanding of cloud computing concepts, independent of specific technical roles. It provides a detailed overview of cloud concepts, AWS core services, security, architecture, pricing, and support.

XITS 3410- AWS Solutions Architect- AWS Academy Solutions Architect is focused on the design of cost and performance optimized solutions. This is an ideal starting point for candidates with AWS Cloud or strong on-premises IT experience.

XITS 4000- IT Systems Support Specialist- Our online, asynchronous program is designed to equip you with the necessary skills and knowledge to become an IT Support Specialist. The program comprises multiple modules that cover essential topics such as technical support, hardware and operating systems, software, programming and databases, networking and storage, cybersecurity essentials, and cloud computing.

XITS 4020- Microsoft Office Specialist- The Microsoft Office Specialist program provides essential computer skills, along with training in business communication, etiquette, and problem-solving, covering a broad range of topics necessary for proficiency in the modern workplace. This offering includes the following certification(s): Microsoft Office Specialist (MOS)

XITS 4040- Red Hat Linux System Administrator I- The first of two courses covering the core system administration tasks needed to manage Red Hat Enterprise Linux servers Red Hat System Administration I is designed for IT professionals without previous Linux system administration experience. The course provides students with Linux administration competence by focusing on core administration tasks. This course also provides a foundation for students who plan to become full-time Linux system administrators by introducing key command-line concepts and enterprise-level tools. This course is the first of a two-course series that takes a computer professional without Linux system administration knowledge to become a fully capable Linux administrator.

XITS 4050- Red Hat Linux System Administrator II- Red Hat System Administration II is the second part of the RHCSA training track for IT professionals who have already attended Red Hat System Administration I. The course goes deeper into core Linux system administration skills in storage configuration and management, installation and deployment of Red Hat Enterprise Linux, management of security features such as SELinux, control of recurring system tasks, management of the boot process and troubleshooting, basic system tuning, and command-line automation and productivity. This course assumes that students have attended Red Hat System Administration I.

XITS 4070- Cybersecurity Analyst (CySA+)- The Cybersecurity Analyst program prepares participants for a profession in cybersecurity, with a focus on defensive tactics designed to protect organizations against emerging threats and vulnerabilities. This offering includes the following certification(s): CompTIA CySA+

XITS 4080- Ethical Hacker (PenTest+)- The Ethical Hacker program prepares participants for a cybersecurity career, focusing on offensive tactics designed to proactively defend organizations from potential threats and ensure their digital assets remain secure. This offering includes the following certification(s): CompTIA PenTest+

XITS 4160- IT Helpdesk Administrator- The IT Help Desk Administrator program serves as an ideal entry point into the IT field, concentrating on the development and upkeep of network systems for businesses and organizations, preparing participants for critical support roles. This offering includes the following certification(s): CompTIA Network+, CompTIA A+

XITS 4210- CompTIA Security+ Preparation- The new CompTIA Security+ (SY0-701) represents the latest and greatest in cybersecurity, covering the most in-demand skills related to current threats, automation, zero trust, IoT, risk – and more. Once certified, you’ll understand the core skills needed to succeed on the job – and employers will notice too. The Security+ exam verifies you have the knowledge and skills required to: Assess the security posture of an enterprise environment and recommend and implement appropriate security solutions. Monitor and secure hybrid environments, including cloud, mobile, Internet of Things (IoT), and operational technology. Operate with an awareness of applicable regulations and policies, including principles of governance, risk, and compliance. Identify, analyze, and respond to security events and incidents. CompTIA Security+ is compliant with ISO 17024 standards and approved by the U.S. DoD to meet Directive 8140.03M requirements.

XCLO-2000 Cloud Fundamentals- The Cloud Fundamentals Certificate program is designed to help students learn essential cloud computing principles, covering concepts, governance, security, and service support. Explore how the cloud facilitates remote connection of critical services and data, enabling businesses globally to pursue digital transformation and enhance agility.

XDAT-2000 Data Science Fundamentals

With the Data Science Fundamentals Certificate, you’ll showcase your comprehension of vital data analysis principles and techniques for leveraging data in guiding strategic business choices. You’ll be able to articulate data attributes, classifications, applications, and frameworks, delineate various data management systems, and discuss fundamental principles and protocols of data governance.

XITA-2000 IT Audit Fundamentals- The IT Audit Fundamentals Certificate establishes a groundwork of knowledge and expertise essential for a successful career as an IT auditor. It encompasses fundamental audit principles, effective control utilization for conducting objective audits, and the hands-on application of audit principles in real-world scenarios.

XITR-2000 IT Risk Fundamentals- The IT Risk Fundamentals Certificate is designed for individuals seeking to gain insight into risk and information and technology (I&T)-related risk. It can be used as a pathway to the CRISC® certification.

XNET-2000 Networks and Infrastructure Fundamentals- Through the Networks and Infrastructure Fundamentals Certificate, you’ll bolster and validate your comprehension of network architecture, infrastructure, and components, along with mastering the foundational terminology of networking.

XISA-5000 Certified Information Systems Auditor® (CISA®)- Certified Information Systems Auditor® (CISA®) is globally recognized as the gold standard for auditing, monitoring, and evaluating IT and business systems. Earning a CISA certification demonstrates your expertise and ability to apply a risk-based approach to audit engagements. Registration includes Online Course, Review Manual, Certification Exam, QAE Database, and Student Membership.

XISM-5000 Certified Information Security Manager® (CISM®)- Certified Information Security Manager® (CISM®) validates your capacity to evaluate risks, establish robust governance, and proactively handle incidents. It emphasizes emerging technologies like AI and blockchain, ensuring your skillset aligns with evolving security challenges and industry standards. By addressing critical issues such as data breaches and ransomware attacks, CISM keeps IT professionals ahead of the curve.

XRIS-5000 Certified in Risk and Information Systems Control® (CRISC®)- The Certified in Risk and Information Systems Control® (CRISC®) certification will elevate your proficiency in Risk Management. By delving into a proactive strategy rooted in Agile methodology, you’ll acquire the skills to bolster your company’s resilience, provide value to stakeholders, and streamline Risk Management practices throughout the organization.

Certificate Public Sector Leadership Certificate

This certificate program is interdisciplinary in nature and is focused on organizational leadership within non-profit, military, governmental, and other public sector entities. Leadership theories, best practices, and competencies are addressed for students enrolled in this program. Four key competency areas within the scope of leadership are presented to those employed or seeking employment in military and other public organizations: financial management, strategic management, contracting principles, and network security.

Members of the Armed Forces in Hampton Roads requested this program in order to provide officers with enhanced knowledge and understanding of leadership components pertinent to public sector work. Graduates will be prepared to lead teams in contract negotiations, finance, and strategic initiatives. In addition, they will have a strong understanding of cyber security within this arena. The courses are ones that will meet the needs of both military and other public sector organizations.

Admission Requirements

All applicants admitted to the certificate program must meet ODU requirements for graduate admission: an earned baccalaureate degree from a regionally-accredited institution or an equivalent degree from a foreign institution. Those whose native language is not English must submit a minimum score of 230 on the computer-based TOEFL or 80 on the TOEFL iBT.

Curriculum Requirements

CYSE 600	Cybersecurity Principles	3
PADM 671	Public Budgeting and Financial Management	3
FOUN 722	Introduction to Applied Statistics and Data Analysis	3
PPCM 726	Introduction to Public Procurement	3
PADM 745	Managing Development and Change in Organizations	3
Total Credit Hours		15

Jeremiah F. Creedon, *Director Emeritus of Transportation Research*

Edward M. Cross, *Professor Emeritus of Information Systems and Decision Sciences**

Ernest "Jim" Cross, Jr., *Professor Emeritus of Aerospace Engineering**

Gary R. Crossman, *Professor Emeritus of Engineering Technology*

William "Bill" H. Crouch, *Associate Professor Emeritus of Information Technology and Decision Sciences*

Jon R. Crunkleton, *Associate Professor Emeritus of Finance*

Gabriel T. Csanady, *Professor Emeritus of Oceanography**

Frederick W. Culpepper, *Professor Emeritus of Occupational and Technical Studies**

William "Bill" G. Cunningham, *Eminent Scholar Emeritus and Professor Emeritus of Educational Leadership and Counseling*

Stephen G. Cupschalk, *Associate Professor Emeritus of Mechanical Engineering*

Robert "Rob" F. Curry, *Director Emeritus of Advising for Distance Learning*

D

Ram C. Dahiya, *Eminent Scholar Emeritus and Professor Emeritus of Mathematics and Statistics*

Dayle A. Daines, *Associate Professor Emerita of Biological Sciences*

Kenneth G. Daley, *University Professor Emeritus and Professor Emeritus of Art**

Jane H. Dané, *Associate Vice President Emerita for Enrollment Management*

Joseph C. Daniel, Jr., *Professor Emeritus of Biological Sciences and Dean Emeritus of College of Sciences**

Mona J. Danner, *Professor Emerita of Sociology and Criminal Justice*

Dennis A. Darby, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Michele L. Darby, *Eminent Scholar Emerita, University Professor Emerita and Professor Emerita of Dental Hygiene**

Daniel M. Dauer, *Eminent Scholar Emeritus and Professor Emeritus of Biological Sciences*

Anne S. Daughtrey, *Professor Emerita of Management**

Donald D. Davis, *Associate Professor Emeritus of Psychology*

John J. Davye, *Professor Emeritus of Music**

Frank P. Day, *Eminent Scholar Emeritus and Professor Emeritus of Biological Sciences*

Chandra R. de Silva, *Professor Emeritus of History*

Diana L. Deadrick, *Associate Professor Emerita of Management*

Walter F. Deal, III, *Associate Professor Emeritus of Occupational and Technical Studies*

Elizabeth S. deBedts, *Associate Professor Emerita of Library Science**

Ralph deBedts, *Professor Emeritus of History**

Dianne DeBeixedon, *Associate Professor Emerita of Art*

Charles M. DeHority, *Professor Emeritus of Management**

David E. Delzell, *Professor Emeritus of Biological Sciences**

Ayodeji "Deji" O. Demuren, *Professor Emeritus of Mechanical and Aerospace Engineering*

Valerian Derlega, *Professor Emeritus of Psychology*

John J. DeRolf, III, *Professor Emeritus of Educational Leadership and Services**

Amin N. Dharamsi, *Professor Emeritus of Electrical and Computer Engineering*

Beth Ann Dickie, *Director Emerita, Office of Educational Accessibility*

Gail K. Dickinson, *Professor Emerita of STEM Education and Professional Studies*

Terry L. Dickinson, *Professor Emeritus of Psychology*

Paul A. Dicklin, *Associate Professor Emeritus of Speech Communication and Theater Arts (posthumous)**

Fred C. Dobbs, *Professor Emeritus of Ocean and Earth Sciences*

Leonard E. Dobrin, *Associate Professor Emeritus of Sociology and Criminal Justice**

Carol A. Doll, *Professor Emerita of Teaching and Learning*

Frances McGrath Dolloph, *Community and Student Success Director Emerita, Distance Learning*

John Mark Dorrepaal, *Professor Emeritus of Mathematics and Statistics*

Lawrence G. Dotolo, *President Emeritus of the Virginia Tidewater Consortium*

Michael J. Doviak, *Associate Professor Emeritus of Mathematics and Statistics*

Suzanne D. Doviak, *Senior Lecturer Emerita of Mathematics and Statistics**

Lynn H. Doyle, *Associate Professor Emerita of Educational Leadership*

Christine "Chris" Drake, *Professor Emerita of Political Science and Geography*

William A. Drewry, *Professor Emeritus of Civil and Environmental Engineering**

James "Jim" P. Duffy, *Associate Vice President Emeritus for Academic Affairs*

Cynthia B. Duncan, *University Librarian Emerita**

Perry M. Duncan, *Associate Professor Emeritus of Psychology*

Thomas H. Dunham, *Associate Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Robert "Bob" F. Dunker, *Medical Director Emeritus of Student Health Services*

ReNeé S. Dunman, *Assistant Vice President Emerita for Equity and Diversity*

William M. Dunstan, Jr., *Professor Emeritus of Ocean, Earth and Atmospheric Sciences**

E

Carolyn S. Eakin, *Director Emerita of Technology and Data Analysis*

John L. Echternach, *Eminent Scholar Emeritus of Physical Therapy**

Patricia A. Edwards, *Senior Lecturer Emerita of Art*

Mary C. Enderson, *Professor Emerita of Teaching and Learning*

A. James "Jim" English, *Associate Professor Emeritus of Community and Environmental Health**

Elizabeth H. Esinhart, *Senior Lecturer Emerita of Political Science and Geography*

Edward R. Estes, Jr., *Professor Emeritus of Civil Engineering Technology**

Natalie W. Etheridge, *Associate Professor Emerita of Health, Physical Education and Recreation**

Rodney "Rod" L. Evans, Jr., *Senior Lecturer Emeritus of Philosophy and Religious Studies*

F

John A. Fahey, *Associate Professor Emeritus of Foreign Languages and Literatures**

Joong Fang, *Professor Emeritus of Philosophy**

Anita C. Fellman, *Professor Emerita of History*

Dale J. Feltes, *Director Emeritus of Design and Construction*

Raymond E. Ferrari, *Associate Professor Emeritus of Mechanical Engineering Technology**

T. Ross Fink, *Professor Emeritus of Education**

Charlene E. Fleener, *Associate Professor Emerita of Teaching and Learning*

Ike L. Flory, *Associate Professor Emeritus of Engineering Technology*

Beverly "Bev" Forbes, *Associate Director Emerita for Experiential Education Programs*

Lewis S. Ford, Louis I. Jaffe *Professor Emeritus of Humanities and Professor Emeritus of Philosophy and Religious Studies**

Jennifer J. Foss, *Director Emerita of Student Health Services*

Stephen J. Foster, *Professor Emeritus of Foreign Languages and Literatures*

Willard C. Frank, *Associate Professor Emeritus of History**

Mark Fravel, *Professor Emeritus of Educational Curriculum and Instruction**

Frederick G. Freeman, *Professor Emeritus of Psychology*

Justin C. Friberg, *Professor Emeritus of Political Science and Geography**

Morel A. Fry, *Assistant University Librarian Emerita for Administration*

Agnes Rose Fuller Wynne, *Master Lecturer Emerita of Music**

G

Robert A. Gable, *Eminent Scholar Emeritus and Professor Emeritus of Communication Disorders and Special Education*

Ann E. Gargett, *Professor Emerita of Ocean, Earth and Atmospheric Sciences*

Lucille L. Garner, *Librarian III Emerita**

Glenn A. Gerdin, *Associate Professor Emeritus of Electrical and Computer Engineering*

William "Bill" R. Gideon, *Associate Director Emeritus for Military Programs, Distance Learning*

Henry Barry Gillen, *Associate Professor Emeritus of Psychology**

Philip S. Gillette, *Associate Professor Emeritus of Political Science and Geography*

Billy J. Gilpin, *Associate Professor Emeritus of Mathematics and Statistics**

Myron Glassman, *Professor Emeritus of Marketing*

Albert S. Glickman, *Eminent Professor Emeritus of Psychology**

Albert I. Godden, *Associate Professor Emeritus of Mechanical Engineering Technology**

Gennaro L. Goglia, *Professor Emeritus of Mechanical Engineering and Mechanics**

Andrew S. Gordon, *Professor Emeritus of Biological Sciences*

Fred W. Granger, *Associate Professor Emeritus of Information Technology and Decision Sciences*

William H. Graves, *Professor Emeritus of Counseling and Human Services and Dean Emeritus of the Darden College of Education*

Deborah C. Gray, *Clinical Associate Professor Emerita of Nursing*

Douglas G. Greene, *Professor Emeritus of History*

Richard V. Gregory, *Professor Emeritus of Chemistry and Biochemistry*

Gail Grisetti, *Associate Professor Emerita of Physical Therapy and Athletic Training**

Chester E. Grosch, *Eminent Professor Emeritus and Professor Emeritus of Ocean, Earth, and Atmospheric Sciences**

Vance E. Grover, *Professor Emeritus of Accounting**

Elizabeth C. Guy, *Associate Professor Emerita of Psychology (posthumous)**

H

John R. Hackworth, *University Professor Emeritus and Associate Professor Emeritus of Engineering Technology*

Randy C. Haddock, *Senior Lecturer Emeritus, College of Engineering and Technology*

David R. Hager, *Professor Emeritus of Political Science and Higher Education Administration**

Jane M. Hager, *Professor Emerita of Teaching and Learning**

Adolphus C. Hailstork, *Eminent Scholar Emeritus and Professor Emeritus of Music*

Jean R. Halladay, *Associate Professor Emeritus of English**

Hiroyuki Hamada, *Associate Professor Emeritus of Exercise Science, Sport, Physical Education and Recreation*

Thomas T. Hamilton, *Associate Professor Emeritus of History**

David F. Harnage, *Chief Operating Officer Emeritus**

Ruth F. Harrell, *Professor Emerita of Special Education**

Wynford L. Harries, *Eminent Scholar Emeritus and Professor Emeritus of Physics**

Richard E. Harrington, *Associate Professor Emeritus of Engineering Technology**

David Alan Harris, *Associate Professor Emeritus of History**

Ransom B. Harris, *Professor Emeritus of Philosophy and Religious Studies**

Thomas L. Harris, *Professor Emeritus of Educational Leadership and Counseling**

Scott B. Harrison, *Associate Vice President Emeritus for Administration in Student Enrollment, Engagement, and Services*

Lawrence J. Hatab, *Professor Emeritus of Philosophy and Religious Studies, Louis I. Jaffe Professor Emeritus of Arts and Letters, Eminent Scholar Emeritus, and University Professor Emeritus*

Mark D. Havey, *Eminent Scholar Emeritus, University Professor Emeritus and Professor Emeritus of Physics (posthumous)**

Harold G. Hawn, *Professor Emeritus of Music**

Alex Hawryluk, *Professor Emeritus of Management**

John H. Heinbockel, *Professor Emeritus of Mathematics and Statistics*

Paul Heine, *Associate Professor Emeritus of Exercise Science, Sport, Physical Education, and Recreation and Associate Dean Emeritus of the Darden College of Education**

Loree C. Heller, *Professor Emerita of Medical Diagnostic and Translational Sciences*

Richard Heller, *Eminent Scholar Emeritus and Professor Emeritus of Medical Diagnostic and Translational Sciences*

Carl O. Helvie, *Professor Emeritus of Nursing**

Carl N. Helwig, *Associate Professor Emeritus of Educational Foundations and Special Programs**

David E. Henderson, *Professor Emeritus of Civil Engineering**

Erlene M. Hendrix, *Associate Professor Emerita of Communication and Theatre Arts*

James D. Hendry, *Associate Professor Emeritus of Electrical Engineering Technology**

Elizabeth S. Henry, *Associate Professor Emerita of Psychology*

James O. Henry, *Professor Emeritus of Educational Leadership and Services**

Laurie J. Henry, *University Professor Emerita and Associate Professor Emerita of Accountancy*

Louis H. Henry, *Professor Emeritus of Economics and Dean Emeritus of the Honors College*

Peggy Hester, *Professor Emerita of Human Movement Studies and Special Education*

Robert C. Hill, *Professor Emeritus of Accounting**

Carol F. Hines, *Associate Professor Emerita of Art**

Carole P. Hines, *Associate Professor Emerita of English**

Samuel Philip Hines, Jr., *Associate Professor Emeritus of English**

Gene W. Hirschfeld, *Eminent Professor Emeritus and Professor Emeritus of Dental Hygiene**

Leonard A. Hobbs, *Associate Professor Emeritus of Electrical Engineering Technology (posthumous)**

Edward T. Hodges, *Associate Professor Emeritus of Mathematics**

Brian J. Hodson, *Director Emeritus of Information Technology in the Darden College of Education*

Joyce M. Hoffmann, *Associate Professor Emerita of English*

Robert H. Holden, *Professor Emeritus of History*

John F. Holley, *Associate Professor Emeritus of Foreign Languages and Literatures*

John R. Holsinger, *Eminent Scholar Emeritus and Professor Emeritus of Biological Sciences**

Paul J. Homsher, *Professor Emeritus of Biological Sciences**

William E. Hopkins, *Professor Emeritus of Sociology**

Lisa A. Horth, *Professor Emerita of Biological Sciences*

Clare W. Houseman, *Associate Professor Emerita of Nursing*

Ian David Howard, *Professor Emeritus of Physics**

Curtis William Howard, III, *Assistant Professor Emeritus of Psychology**

Gilbert R. Hoy, *Eminent Scholar Emeritus and Professor Emeritus of Physics**

Steve C. Hsiung, *Professor Emeritus of Engineering Technology*

Jen-Kuang Huang, *Professor Emeritus of Mechanical and Aerospace Engineering*

Michael E. Hucles, *Associate Professor Emeritus of History*

Sylvia C. Hudgins, *Professor Emerita of Finance*

Jesse W. Hughes, *Professor Emeritus of Accounting*

Donna K. Hughes-Oldenburg, *Library Faculty Emerita*

Natalie Hutchinson, *Senior Lecturer Emerita of Mathematics and Statistics*

I

Samir R. Ibrahim, *Professor Emeritus of Mechanical and Aerospace Engineering**

Linda Irwin-DeVitis, *Professor Emerita of Teaching and Learning**

Thomas "Tom" L. Isenhour, *Professor Emeritus of Chemistry and Biochemistry*

Isao Ishibashi, *Professor Emeritus of Civil and Environmental Engineering*

Arminda B. Israel, *Coordinator Emerita of the Military Career Transition Program and Academic Advisor Emerita*

J

Alexander B. Jackson, *Professor Emeritus of Art (posthumous)**

Charles W. Jackson, *Professor Emeritus of Exercise Science, Physical Education and Recreation**

Katherine M. Jackson, *Master Lecturer Emerita of English*

Edward H. Jacobs, *Professor Emeritus of English*

Louis H. Janda, *Associate Professor Emeritus of Psychology**

James "Jim" Jarrett, *Professor Emeritus of Human Movement Sciences*

Beverley B. Johnson, *Associate Professor Emerita of Health, Physical Education and Recreation**

David E. Johnson, *Associate Professor Emeritus of Art*

Dorothy E. Johnson, *Associate Professor Emerita of History**

Lynn S. Johnson, *Senior Lecturer Emerita of Management*

Ole S. Johnson, *Professor Emeritus of Marketing**

Roger A. Johnson, *Associate Professor Emeritus of Educational Curriculum and Instruction*

Ronald "Ron" E. Johnson, *University Professor Emeritus and Associate Professor Emeritus of Ocean, Earth and Atmospheric Sciences**

Cynthia M. Jones, *Eminent Scholar Emerita and Professor Emerita of Ocean and Earth Sciences*

Dorothy M. Jones, *Associate Professor Emerita of Business Management**

Elliott C. Jones, *Associate Professor Emeritus of Art*

Franklin Ross Jones, *Professor Emeritus of Educational Leadership and Counseling and Dean Emeritus of the Darden College of Education**

Maximilian B. Jones, *Professor Emeritus of Management**

Richard "Rick" L. Jones, *Senior Lecturer Emeritus of Engineering Technology*

William B. Jones, *Associate Professor Emeritus of Philosophy and Religious Studies*

David I. Joyner, *Professor Emeritus of Educational Curriculum and Instruction**

Sharon Ann Judge, *Professor Emerita of Communication Disorders and Special Education*

William "Bill" Q. Judge, *Professor Emeritus of Management and Entrepreneurship and E.V. Williams Endowed Chair Emeritus of Strategic Management*

Elaine M. Justice, *University Professor Emerita and Associate Professor Emerita of Psychology*

K

Osama A. Kandil, *Eminent Scholar Emeritus and Professor Emeritus of Mechanical and Aerospace Engineering**

Hideaki Kaneko, *Professor Emeritus of Mathematics and Statistics*

Kenneth Karloff, *Assistant Professor Emeritus of Educational Curriculum and Instruction**

Janet E. Katz, *Associate Dean Emerita, College of Arts and Letters and Associate Professor Emerita of Sociology and Criminal Justice*

Allan H. Kaufman, *Associate Professor Emeritus of Occupational and Technical Studies*

Charles "Chuck" B. Keating, *Professor Emeritus of Engineering Management and Systems Engineering*

John F. Keeling, Jr., *Senior Lecturer Emeritus of Management**

Richard K. Keplar, *Associate Professor Emeritus of Engineering Technology**

Robert Lee Kernell, *Professor Emeritus of Physics**

Katharine C. Kersey, *Director Emerita (2008) & University Professor Emerita and Professor Emerita of Teaching and Learning (2014)**

Lewis S. Keyes, *Associate Professor Emeritus of Chemistry and Biochemistry**

Govind S. Khandelwal, *Professor Emeritus of Physics**

Sue C. Kimmel, *Professor Emerita of STEM Education & Professional Studies*

Earl C. Kindle, *Professor Emeritus of Oceanography and Geophysical Sciences**

Deborah "Deb" Kinney, *Coordinator Emerita for Undergraduate Student Services, Department of Electrical and Computer Engineering*

Raymond H. Kirby, *Professor Emeritus of Psychology**

Paul W. Kirk, Jr., *Professor Emeritus of Biological Sciences**

Jeanie P. Kline, *Executive Academic Initiatives Administrator Emerita*

Lee M. Klinefelter, *Professor Emeritus of Engineering**

Karl F. Knight, *Professor Emeritus of English**

Stephen "Steve" E. Knott, *Senior Lecturer Emeritus of Human Movement Sciences*

Carl F. Koch, *Professor Emeritus of Geological Sciences*

James V. Koch, *President Emeritus and Board of Visitors Professor Emeritus of Economics*

James "Jim" Kosnik, *Professor Emeritus of Music and University Professor Emeritus*

Karen M. Kott, *Associate Professor Emerita of Physical Therapy and Athletic Training*

Edgar A. Kovner, *Professor Emeritus of Mechanical Engineering Technology**

Sridharan Krishnaswami, *Lecturer Emeritus of Management**

John E. Kroll, *Associate Professor Emeritus of Mathematics and Statistics*

Terry R. Kubichan, *University Distinguished Teacher Emerita and Senior Lecturer Emerita of Accountancy*

John W. Kuehl, *Associate Professor Emeritus of History*

Harry S. Kuper, *Associate Professor Emeritus of Chemistry and Biochemistry**

L

Ralph V. Lahaie, *Professor Emeritus of Speech Communication and Theater Arts**

Philip J. Langlais, *Professor Emeritus of Psychology*

John D. Lape, *Lecturer Emeritus of Information Technology and Decision Sciences*

Mounir C. Laroussi, *Professor Emeritus of Electrical & Computer Engineering*

Roland W. Lawrence, *Associate Professor Emeritus of Engineering Technology**

William "Bill" M. Leavitt, *Associate Professor Emeritus of Public Service*

John Hirst Lederle, *Associate Professor Emeritus of Engineering Technology**

Larry D. Lee, *Associate Professor Emeritus of Mathematics and Statistics*

Lorraine M. Lees, *University Professor Emerita and Professor Emerita of History*

Mark Lesley, *Associate Professor Emeritus of Mathematics and Statistics*

Parker Lesley, *Professor Emeritus of Art**

Irwin B. Levinstein, *Associate Professor Emeritus of Computer Science*

Gerald L. Levy, *Professor Emeritus of Biological Sciences**

Robin J. Lewis, *Professor Emerita of Psychology*

Ling X. Li, *Eminent Scholar Emerita, University Professor Emerita, and Professor Emerita of Information Technology and Decision Sciences*

Linda Lane Lilley, *Associate Professor Emerita of Nursing*

Elizabeth Lipsmeyer, *Associate Professor Emerita of Art*

Elizabeth Locke, *Senior Lecturer Emerita of Rehabilitation Sciences*

Lucien X. Lombardo, *Professor Emeritus of Sociology and Criminal Justice*

Christopher W. Lovell, *Associate Professor Emeritus of Educational Leadership and Counseling*

Cameron A. Lowe, *Associate Professor Emeritus of Dental Hygiene and Dental Assisting**

Frederick A. Lubich, *Professor Emeritus of World Languages and Cultures*

Robert A. Lucking, *Professor Emeritus of Teaching and Learning*

John C. Ludwick, *Professor Emeritus of Oceanography**

Judy Luedtke, *Executive Director Emerita of Student Transition and Family Programs*

James "Pete" G. Luton, *Professor Emeritus of Dental Hygiene**

M

John E. MacCormack, *Professor Emeritus of Music**

Robert H. MacDonald, *Professor Emeritus of Educational Curriculum and Instruction*

Robert A. Magoon, *Professor Emeritus of Educational Leadership and Services**

George C. Maihafer, *Associate Professor Emeritus of Physical Therapy and Athletic Training*

Debra "Debbie" A. Major, *Eminent Scholar Emerita and Professor Emerita of Psychology*

Jean A. Major, *University Librarian Emerita*

Wendell E. Malbon, *Professor Emeritus of Mathematical Sciences**

Kurt J. Maly, *Professor and Eminent Scholar Emeritus of Computer Science and Kaufman Professor Emeritus of Computer Science*

Alan Mandell, *Professor Emeritus of Educational Curriculum and Instruction (posthumous)**

M. Lee Manning, *Eminent Scholar Emeritus and Professor Emeritus of Teaching and Learning*

Thomas E. Manore, *Associate Professor Emeritus of Management Information Systems**

Alf J. Mapp, Jr., *Eminent Scholar Emeritus and Louis I. Jaffe Professor Emeritus of English**

Donald K. Marchand, *Associate Professor Emeritus of Geological Sciences**

Joseph M. Marchello, *Professor Emeritus of Mechanical and Civil Engineering**

Edward "Ed" P. Markowski, *University Professor Emeritus and Professor Emeritus of Information Technology and Decision Sciences*

Marilyn F. Marloff, *Professor Emerita of Communication and Theatre Arts*

Harold G. Marshall, *Morgan Professor Emeritus and Professor Emeritus of Biological Sciences*

Mary E. Marshall, *Senior Lecturer Emerita of Philosophy and Religious Studies*

Sharon M. Martin, *Community and Student Success Director Emerita*

Otto B. Martinson, *Professor Emeritus of Accounting**

Richard A. Massey, *Associate Vice President Emeritus of Foundations*

Terri M. Mathews, *Associate Dean Emerita, College of Sciences*

Alfred Warren Matthews, *Professor Emeritus of Philosophy and Religious Studies*

Ernest J. Mauer, *Professor Emeritus of Art**

Steven D. Maurer, *Professor Emeritus of Management**

NorLisa "Lisa" Mayes, *Executive Director Emerita of Academic Success Initiatives and Support*

William Mazel, *Associate Professor Emeritus of Finance**

Russell Bruce McAfee, *Professor Emeritus of Management*

Garrett J. McAuliffe, *University Professor Emeritus and Professor Emeritus of Counseling and Human Services*

Vernon A. McCart, *Fine and Performing Arts Reference Librarian and Librarian III Emeritus*

Richard C. McCleary, *Professor Emeritus of Philosophy**

Robert C. McClelland, *Professor Emeritus of Ancient Languages**

Gayle B. McCombs, *University Professor Emerita and Professor Emerita of Dental Hygiene*

John R. McConaugha, *Associate Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Linda F. McGreevy, *Professor Emerita of Art*

Timothy "Tim" C. McKee, *Associate Professor Emeritus of Accounting**

James J. McNally, *Professor Emeritus of English**

Griffith J. McRee, Jr., *Associate Professor Emeritus of Electrical and Computer Engineering**

John "Jack" P. McSweeney, *Professor Emeritus of Educational Leadership and Counseling**

Edward Grant Meade, *Professor Emeritus of Political Science**

Donna W. Meeks, *University Policy Manager and Executive Secretary to the Board of Visitors Emerita*

Chuh Mei, *Eminent Scholar Emeritus and Professor Emeritus of Aerospace Engineering*

Heinz K. Meier, *Eminent Professor Emeritus, Dean Emeritus of the School of Arts and Letters, and Professor Emeritus of History (posthumous)**

Regula A. Meier, *Associate Professor Emerita of Foreign Languages and Literatures**

Berhanu Mengistu, *Professor Emeritus of Public Service*

Constance "Connie" L. Merriman, *Associate Dean Emerita, Strome College of Business*

Jane T. Merritt, *Professor Emerita of History*

Arthur B. Metheny, *Professor Emeritus of Health, Physical Education, Recreation, and Athletics**

Robert F. Michel, *Associate Professor Emeritus of Engineering Technology**

Roland R. Mielke, *University Professor Emeritus and Professor Emeritus of Modeling, Simulation and Visualization Engineering*

Leonid I. Mihalap, *Associate Professor Emeritus of Foreign Languages and Literatures**

Peter J. Mikulka, *Professor Emeritus of Psychology*

John C. Miller, *Eminent Professor Emeritus of English**

Malvern L. Miller, *Associate Professor Emeritus of Occupational and Technical Studies**

Linda Miller-Dunleavy, *Master Lecturer Emerita of Communication Disorders and Special Education*

Leona "Shelley" Mishoe, *Professor Emerita of Community and Environmental Health*

Susan C. Mitchell, *Director Emerita of Webb University Center and Auxiliary Services*

Taj O. Mohieldin, *Professor Emeritus of Engineering Technology*

Joseph P. Mooney, *Professor Emeritus of Educational Leadership and Services**

Kenneth "Ken" G. Mopper, *Eminent Scholar Emeritus and Professor Emeritus of Chemistry and Biochemistry*

Raymond "Ray" F. Morgan, *Professor Emeritus of Educational Curriculum and Instruction*

Jay D. Morris, *Senior Lecturer Emeritus of Computer Science*

Sara A. Morris, *Associate Professor Emerita of Management*

Gary R. Morrison, *Professor Emeritus of STEM Education and Professional Studies*

Ula K. Motekat, *Professor Emeritus of Accounting**

Moustafa R. Moustafa, *Professor Emeritus of Engineering Technology*

Gail E. Mullin, *Professor Emeritus of Economics*

Arthur C. Munyan, *Professor Emeritus of Geophysical Sciences**

Susan L. Murray, *Senior Lecturer Emerita of Nursing*

Lytton John Musselman, *Eminent Scholar Emeritus, Professor Emeritus of Biological Sciences and Mary Payne Hogan Distinguished Professor Emeritus of Botany*

Donald A. Myers, *Professor Emeritus of Teaching and Learning**

Bismarck Myrick, *Lecturer Emeritus of Political Science and History**

N

Tracy B. Nabers, *Associate Professor Emeritus of Mechanical Engineering Technology (posthumous)**

Joyce L. Neff, *Professor Emerita of English*

Christianne Nesbitt, *Associate Professor Emerita of Nursing*

Kneeland K. Nesius, *University Professor Emeritus and Associate Professor Emeritus of Biological Sciences**

Dwight H. Newell, *Constance and Colgate Darden Professor Emeritus and Professor Emeritus of Educational Leadership and Services**

Jack W. Nickson, *Professor Emeritus of Economics**

Ahmed K. Noor, *Eminent Scholar Emeritus and Professor Emeritus of Modeling, Simulation and Visualization Engineering*

Ali Nowroozi, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Arthur E. Nudelman, *Associate Professor Emeritus of Sociology and Criminal Justice**

O

George F. Oertel, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Donald P. Ogdon, *Professor Emeritus of Psychology**

Roy C. Ogle, *Professor Emeritus of Medical Diagnostic and Translational Sciences*

Virginia S. O'Herron, *University Librarian Emerita*

Renee E. Olander, *Associate Vice President Emerita for Regional Higher Education Centers*

Emilia L. Oleszak, *Associate Professor Emerita of Biological Sciences*

Richard C. Overbaugh, *Professor Emeritus of Teaching and Learning*

Charles "Mike" M. Overstreet, *Associate Professor Emeritus of Computer Science*

Allan D. Owen, *Associate Professor Emeritus of Music**

William "Bill" A. Owings, *Professor Emeritus of Educational Foundations and Leadership**

P

Kay Palmer, *Associate Professor Emerita of Nursing*

Richard A. Palmer, *Assistant Professor Emeritus of Chemistry and Biochemistry**

David L. Pancoast, *Associate Professor Emeritus of Psychology**

Elizabeth G. Pappas, *Associate Professor Emerita of Music**

John M. Patterson, *Associate Professor Emeritus of Occupational and Technical Studies**

William H. Patterson, *Associate Professor Emeritus of Accounting**

William W. Patterson, Jr., *Associate Professor Emeritus of Information Systems and Decision Sciences**

Marian L. Pauson, *Associate Professor Emerita of Philosophy and Religious Studies**

Kathy L. Pearson, *University Professor Emerita and Associate Professor Emerita of History*

Michael P. Pearson, *University Professor Emeritus and Professor Emeritus of English*

E. Vernon Peele, *Dean Emeritus of the School of Arts and Letters**

Janet Peery, *University Professor Emerita and Professor Emerita of English*

Helen L. Perry, *Associate Professor Emerita of Education**

Leland D. Peterson, *Professor Emeritus of English**

Margaret C. Phillips, *Professor Emerita of Mathematical and Computing Sciences**

Victor A. Pickett, *Professor Emeritus of Art**

Wolfgang Pindur, *Professor Emeritus of Urban Studies and Public Administration (posthumous)**

Emily V. Pittman, *Professor Emerita of Health and Physical Education**

Melvin A. Pittman, *Dean Emeritus of the School of Sciences**

Patricia Pleban, *Associate Professor Emerita of Chemistry and Biochemistry*

Stanley R. Pliska, *Professor Emeritus of History**

Louis G. Plummer, *Professor Emeritus of Education**

Deborah M. Polca, *Senior Associate Athletic Director Emerita*

Norman H. Pollock, *Associate Professor Emeritus of History**

Karen Polonko, *University Professor Emerita and Professor Emerita of Sociology and Criminal Justice (posthumous)**

Linda L. Pond, *Master Lecturer Emerita of Teaching and Learning*

Bryan E. Porter, *Associate Dean Emeritus, The Graduate School, University Professor Emeritus, Professor Emeritus of Psychology*

Mary Barclay Porter-Troupe, *Senior Lecturer Emerita of English*

Ramamurthy Prabhakaran, *Professor Emeritus of Mechanical and Aerospace Engineering and Eminent Professor Emeritus*

Gene Hill Price, *Senior Lecturer Emeritus of Computer Science*

Wenton Maurice Pritchard, *Professor Emeritus of Physics**

Harold J. Protsman, *Professor Emeritus of Music**

Anthony J. Provenzano, Jr., *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

David Putney, *Associate Professor Emeritus of Philosophy and Religious Studies*

Q

Usman A. Qureshi, *Professor Emeritus of Economics**

R

David P. Radcliffe, *Associate Director Emeritus for Military Operations*

Philip Raisor, *Professor Emeritus of English*

John W. Ramsey, *Professor Emeritus of Political Science**

Robert E. Ratzlaff, *Associate Professor Emeritus of Biological Sciences*

Sharon A. Raver-Lampman, *University Professor Emerita and Professor Emerita of Communication Disorders and Special Education*

Anne Raymond-Savage, *Associate Professor Emerita of Educational Curriculum and Instruction and Vice Provost Emerita for Distance Learning*

Zia Razzaq, *Professor Emeritus of Civil & Environmental Engineering*

James B. Reece, *Professor Emeritus of English**

William T. Reece, *Professor Emeritus of Accounting**

Thomas Jackson Reed, *Associate Professor Emeritus of Finance**

Elbridge K. Reid, *Associate Professor Emeritus of Sociology and Criminal Justice**

Theodore P. Remley, Jr., *Professor Emeritus of Counseling and Human Services*

Lindsay L. Rettie, *Professor Emerita of Dental Hygiene and Dental Assisting and Dean Emerita of the College of Health Sciences*

Sheri A. Reynolds, *University Professor Emerita and Professor Emerita of English*

George "Steve" S. Rhiel, *University Professor Emeritus and Associate Professor Emeritus of Information Technology and Decision Sciences*

Carolyn H. Rhodes, *Professor Emerita of English and Women's Studies**

Ernest L. Rhodes, *Professor Emeritus of English**

John H. Richardson, Jr., *Associate Professor Emeritus of Biological Sciences*

Roger S. Richman, *Professor Emeritus of Urban Studies and Public Administration*

Betty R. Ricks, *Associate Professor Emerita of Management**

William C. Riesenbergl, *Associate Professor Emeritus of Dental Hygiene**

June H. Ritchie, *Associate Director Emerita, Center for Learning and Teaching*

John M. Ritz, *Professor Emeritus of STEM Education and Professional Studies*

Willard E. Robb, *Associate Professor Emeritus of Music**

Albert Sidney Roberts, Jr., *Professor Emeritus of Mechanical Engineering**

James T. Robey, *Associate Professor Emeritus of Accounting**

Jack E. Robinson, *Associate Professor Emeritus of Educational Foundations and Leadership*

Thomas M. Robinson, *Associate Professor Emeritus of Health, Physical Education, and Recreation**

Patrick J. Rollins, *Professor Emeritus of History (posthumous)**

Alfred B. Rollins, Jr., *President Emeritus and Professor Emeritus of History**

Robert K. Rose, *Professor Emeritus of Biological Sciences*

Helen C. Rountree, *Professor Emerita of Anthropology*

Thomas "Tom" C. Royer, *Eminent Scholar Emeritus and Slover Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Leonard I. Ruchelman, *Eminent Scholar Emeritus and Professor Emeritus of Urban Studies and Public Administration*

Edwin Murray Rudisill, *Professor Emeritus of Educational Curriculum and Instruction*

Nancy A. Rudolph, *Community and Student Success Director Emerita, Distance Learning*

Charles E. Ruhl, *Professor Emeritus of English**

Joseph H. Rule, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Richard A. Rutyna, *Associate Professor Emeritus of History**

S

Annabel L. Sacks, *Director of Student Services Emerita*

Janis V. Sanchez-Hucles, *Professor Emerita of Psychology*

Allen G. Sandler, *Associate Professor Emeritus of Early Childhood, Speech-Language Pathology and Special Education*

Kent L. Sandstrom, *Professor Emeritus of Sociology and Criminal Justice*

Kehar S. Sangha, *Professor Emeritus of Economics**

Clifford C. Saunders, *Professor Emeritus of Sociology**

Judith S. Schapiro, *Professor Emerita of Child Study and Special Education**

Joanne Scheibman, *Associate Professor Emerita of English*

Adrienne D. Schellings, *Associate Professor Emerita of Library Science**

Rocco Schiavilla, *Eminent Scholar Emeritus and Professor Emeritus of Physics*

Henry H. Schmoele, Jr., *Associate Professor Emeritus of Vocational and Technical Education**

Karl H. Schoenbach, *Eminent Scholar Emeritus and Professor Emeritus of Electrical and Computer Engineering*

Reiko M. Schwab, *Associate Professor Emerita of Educational Leadership and Counseling**

Ann V. Schwarz-Miller, *Associate Professor Emerita of Economics*

Louis Searleman, *Associate Professor Emeritus of Accounting**

Herbert Lee Sebren, *Associate Professor Emeritus of English**

Scott R. Sechrist, *Associate Professor Emeritus of Medical Diagnostic and Translational Sciences*

Timothy "Tim" S. Seibles, *Professor Emeritus of English*

Bruce Seifert, *Professor Emeritus of Finance*

Gregory V. Selby, *Professor Emeritus of Mechanical and Aerospace Engineering*

Simon H. Serfaty, *Eminent Scholar Emeritus and Professor Emeritus of International Studies*

Joseph C. Sever, Jr., *Associate Professor Emeritus of Communication Disorders and Special Education*

William W. Seward, *Professor Emeritus of English**

Stephen P. Shao, *Professor Emeritus of Management Information Systems and Decision Sciences**

Stewart N. T. Shen, *Professor Emeritus of Computer Science**

Calder S. Sherwood, III, *Professor Emeritus of Chemical Science and Physical and Geophysical Science**

David L. Shores, *Professor Emeritus of English**

Deanne Shuman, *Professor Emerita of Dental Hygiene*

Charles K. Sibley, *Professor Emeritus of Art**

Jose G. Simon, *Associate Professor Emeritus of Foreign Languages and Literatures**

Carol Simpson, *Professor Emerita of Ocean, Earth and Atmospheric Sciences and Provost and Vice President for Academic Affairs Emerita*

John Taylor Sims, *Professor Emeritus of Marketing**

Anusorn Singhapakdi, *Professor Emeritus of Marketing*

Charles M. Smith, *Associate Professor Emeritus of Educational Curriculum and Instruction**

Donald H. Smith, *Associate Professor Emeritus of Sociology and Criminal Justice*

Eugene F. Smith, *Associate Professor Emeritus of Engineering Technology**

Janis Krebs Smith, *University Distinguished Teacher Emerita and Senior Lecturer Emerita of English*

Theodore F. Smith, *Associate Professor Emeritus of Marketing*

Ronald "Ron" W. Snapp, *Associate Professor Emeritus of Art*

Petra E. Snowden, *Associate Professor Emerita of Educational Leadership and Counseling*

John A. Sokolowski, *Associate Professor Emeritus of Computational Modeling and Simulation Engineering*

Carmine Thomas "Tom" Somma, *Associate Professor Emeritus of Medical Diagnostic and Translational Sciences*

Daniel E. Sonenshine, *Professor Emeritus of Biological Sciences*

Randall S. Spencer, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Ulysses Van Spiva, *Professor Emeritus of Educational Leadership and Counseling and Dean Emeritus of the Darden College of Education**

Randall R. Spurrier, *Master Lecturer Emeritus of Accountancy*

Judith M. St. George, *Clinical Supervisor Emerita of Student Health Services*

George M. Stabler, *Professor Emeritus of Sociology and Criminal Justice**

William D. Stanley, *Eminent Professor Emeritus of Engineering Technology*

Robert L. Stern, *Professor Emeritus of Political Science**

Ralph W. Stevens, *University Professor Emeritus and Associate Professor Emeritus of Biological Sciences*

Peter C. Stewart, *Associate Professor Emeritus of History*

Edgar Stillwell, *Associate Professor Emeritus of Biological Sciences**

Maureen D. Stiner, *Senior Lecturer Emerita of Finance*

Yates Stirling, III, *Associate Professor Emeritus of Engineering**

John W. Stoughton, *Professor Emeritus of Electrical and Computer Engineering*

Raymond S. Strangways, *Professor Emeritus of Economics*

Sharon C. Stull, *Lecturer Emerita of Dental Hygiene*

Glen Sussman, *University Professor Emeritus and Professor Emeritus of Political Science and Geography**

David P. Swain, *University Professor Emeritus and Professor Emeritus of Kinesiology & Health Science*

Cynthia Wright Swaine, *Instructional Services Librarian Emerita**

Robert "Jim" J. Swanson, *University Professor Emeritus and Professor Emeritus of Biological Sciences*

Mary K. Swartz, *Registrar Emerita*

James R. Sweeney, *Associate Professor Emeritus of History*

John J. Swetits, *Professor Emeritus of Mathematics and Statistics*

Deborah L. Swiecinski, *Associate Vice President Emerita for Financial Services*

Donald J. Swift, *Eminent Scholar Emeritus and Professor Emeritus of Ocean, Earth and Atmospheric Sciences**

T

John R. Tabb, *Professor Emeritus of Economics and Dean Emeritus of the College of Business and Public Administration**

Wayne K. Talley, *Eminent Scholar Emeritus and Professor Emeritus of Economics*

Michael "Mike" Tamburello, *Associate Professor Emeritus of Rehabilitation Sciences*

John "Jeff" F. Tanner, Jr., *Dean Emeritus, Strome College of Business, and Professor Emeritus of Marketing*

James Albert Tatem, Jr., *Associate Professor Emeritus of Health, Physical Education, and Recreation**

Albert Teich, Jr., *Professor Emeritus of Finance**

Lee J. Tepley, *Lecturer Emeritus of Music**

Gerald Wayne Thompson, *Associate Professor Emeritus of Educational Curriculum and Instruction**

Lenora Hicks Thompson, *Senior Executive Director Emerita of Counseling Services*

Sophie K. Thompson, *Associate Professor Emerita of Medical Diagnostic and Translational Sciences*

George William "GW" Thompson, III, *Director Emeritus of the Center for Major Exploration*

William H. Thornton, *Associate Professor Emeritus of Engineering Technology**

Surenda N. Tiwari, *Eminent Scholar Emeritus and Professor Emeritus of Mechanical Engineering**

Shunichi Toida, *Associate Professor Emeritus of Computer Science*

Susan Lynn Tolle, *Professor Emerita of Dental Hygiene and University Professor Emerita*

Alan Rufus Tonelson, *Professor Emeritus of Education**

Stephen "Steve" W. Tonelson, *Professor Emeritus of Communication Disorders and Special Education*

Patrick K. Tow, *Associate Professor Emeritus of Health, Physical Education and Recreation (posthumous)**

Alfred S. Townsend, *Associate Professor Emeritus of Music*

Cecelia Taliaferro Tucker, *Assistant to the President Emerita for Community Relations*

Kimberly Adams Tufts, *Professor Emerita of Nursing*

Andrew C. Tunogi, *Professor Emeritus of Philosophy**

Charles "Charlie" G. Turner, *Associate Professor Emeritus of Economics*

John E. Turner, *Associate Professor Emeritus of Occupational and Technical Studies*

John Tweed, *Professor Emeritus of Mathematics and Statistics*

Joseph M. Tyrrell, *Professor Emeritus of History**

V

Margaret Daugherty Van Damm, *Associate Professor Emerita of English**

John D. Van Norman, *Professor Emeritus of Chemical Sciences**

Jay Wallace Van Orden, *Eminent Scholar Emeritus and Professor Emeritus of Physics*

Karen Vaughan, *Faculty Administrator Emerita, University Libraries*

Paul Thomas Vernier, *Research Professor Emeritus of the Frank Reidy Research Center for Bioelectronics*

Charles E. Vogan, *Professor Emeritus of Music**

Leposava Vušković, *Eminent Scholar Emerita and Professor Emerita of Physics*

W

Nancy L. Wade, *Associate Professor Emerita of Biological Sciences**

William H. Wagner, *Associate Professor Emeritus of Art*

John R. Waitekus, *Physician Emeritus of Student Health Services*

Alice P. Wakefield, *Associate Professor Emerita of Teaching and Learning*

Martha L. Walker, *Associate Professor Emerita of Rehabilitation Sciences*

Leon R. L. Wang, *Professor Emeritus of Civil and Environmental Engineering**

Stanley E. Warner, Jr., *Professor Emeritus of Accounting**

Sandra "Sandy" Miller Waters, *Executive Director Emerita for Advising Administration and Academic Partnerships*

Harold Q. Webb, *Professor Emeritus of Management**

Lewis W. Webb, Jr., *President Emeritus**

Katarina E. Wagar, *Associate Professor Emerita of Sociology and Criminal Justice*

Stanley E. Weinstein, *Professor Emeritus of Mathematics and Statistics**

Thomas L. Wells, *Associate Professor Emeritus of Political Science and Geography**

Marek Wermus, *Associate Professor Emeritus of Information Technology and Decision Sciences*

Terri N. Wheaton, *Director Emerita of Intake and Student Success Online*

Rogers D. Whichard, *Professor Emeritus of French Language and Literature**

William F. Whitbeck, *Professor Emeritus of Marketing**

Debbie Harmison White, *Senior Associate Athletic Director Emerita for External Relations*

Edward L. White, *Professor Emeritus of the School of Engineering**

Garland White, *Associate Professor Emeritus of Sociology and Criminal Justice**

Frederick D. Whitehurst, *Professor Emeritus of Accounting*

George William "Bill" Whitehurst, *George M. and Linda H. Kaufman University Lecturer Emeritus of Public Affairs*

George "Rich" R. Whittecar, *University Professor Emeritus and Associate Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

John Christian Wild, *Associate Professor Emeritus of Computer Science*

Melvin H. Williams, *Eminent Scholar Emeritus and Professor Emeritus of Exercise Science, Physical Education and Recreation**

Roy L. Williams, *Professor Emeritus of Chemistry and Biochemistry**

Daniel S. Wilson, *Associate Professor Emeritus of English**

Harold S. Wilson, *Professor Emeritus of History*

Jack H. Wilson, *Professor Emeritus of English*

Larry W. Wilson, *Associate Professor Emeritus of Computer Science*

Charles E. Wilson, Jr., *University Professor Emeritus, Dean Emeritus of the College of Arts and Letters, and Professor Emeritus of English*

Conrad S. Wilson, Jr., *Associate Professor Emeritus of English**

Barbara A. Winstead, *Professor Emerita of Psychology*

Konrad G. Winters, *Associate Professor Emeritus of Communication and Theatre Arts**

Pauline K. Wise, *Associate Professor Emerita of Elementary Education**

Philip R. Wohl, *Associate Professor Emeritus of Mathematics and Statistics**

Denny T. Wolfe, Jr., *Professor Emeritus of Educational Curriculum and Instruction*

Lloyd Wolfenbarger, Jr., *Professor Emeritus of Biological Sciences*

George T. Wong, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Ronald R. Woodard, *Director Emeritus of Transfer Services, Distance Learning*

Robert J. Wunderlin, *Associate Professor Emeritus of Psychology**

X

Li D. Xu, *Professor Emeritus of Information Technology and Decision Sciences*

Y

Betty J. H. Yarborough, *Eminent Scholar Emeritus and Constance and Colgate Darden Professor of Education Emeritus**

Steve A. Yetiv, *University Professor Emeritus, Louis I. Jaffe Professor Emeritus of Arts & Letters, and Professor Emeritus of Political Science and Geography (posthumous)**

Gilbert "Gil" R. Yochum, *Professor Emeritus of Economics*

Robert F. Young, *Associate Professor Emeritus of Music**

James H. Yuan, *Professor Emeritus of Chemistry and Biochemistry*

Helen Yura, *Professor Emerita of Nursing**

Z

Jacques S. Zaneveld, *Professor Emeritus of Oceanography**

Donald "Don" J. Zeigler, *Professor Emeritus of Political Science and Geography**

Dennis Zeisler, *University Professor Emeritus and Professor Emeritus of Music**

Douglas E. Ziegenfuss, *Professor Emeritus of Accountancy*

Michele L. Zimmerman, *Associate Professor Emerita of Nursing*

* Deceased

AAST - African-American Studies

AAST 597 Independent Study (1-3 Credit Hours)

Students are exposed to opportunities to conduct independent research and/or study in areas focused on the political, social and cultural experiences of people of African descent in the U.S. and the African Diaspora.

Prerequisites: Permission of instructor

ACCT - Accounting

ACCT 505 Accounting and Auditing in the Public/Nonprofit Sector (3 Credit Hours)

The application of accounting principles to governmental funds and not-for-profit organizations. Emphasis is placed on budgeting and control as well as auditing concerns for such entities.

Prerequisites: Enrollment in a Strome College of Business Master's program; ACCT 305 and ACCT 306 or the equivalent with a C or better, and 6 hours from ACCT 307, ACCT 311, ACCT 411/ACCT 511, ACCT 425 or ACCT 426 or the equivalent with a C or better; or ACCT 301 or the equivalent with a C or better, and 6 hours of ACCT 302, ACCT 311, or ACCT 421 or the equivalent with a C or better, and an overall grade point average of 3.00 in all coursework taken at Old Dominion University

ACCT 511 Financial Auditing (3 Credit Hours)

Current financial auditing processes are emphasized, and Generally Accepted Accounting Principles (GAAP) are used to evaluate the fairness of financial statements. Additionally, standards and ethics of the public accounting profession, generally accepted auditing standards, and public reporting are covered.

Prerequisites: Enrollment in a Strome College of Business Master's program, ACCT 305 and ACCT 306 or the equivalent with a C or better, and 6 hours of coursework from ACCT 311, ACCT 425 or ACCT 426 or the equivalent with a C or better; or ACCT 301 or the equivalent with a C or better and 6 hours from ACCT 302, ACCT 311, or ACCT 421 or the equivalent with a C or better; and an overall grade point average of 3.00 in all coursework taken at Old Dominion University

ACCT 521 Taxation (3 Credit Hours)

An analysis of federal income tax law and its application to personal and business tax situations. Reconciliation of tax and accounting concepts.

Prerequisites: Graduate standing and a level of competency in accounting at the intermediate level or higher

ACCT 522 Tax Research (3 Credit Hours)

An intensive course in taxation. Focuses on the choice of business entity by covering taxation of corporations (both C and S corporations), partnerships and sole proprietorships. The course emphasizes research skills and professional ethics.

Prerequisites: Enrollment in a Strome College of Business Master's program, ACCT 305 and ACCT 306 or the equivalent with a B- or better and 3 hours of coursework from ACCT 307 or ACCT 311 or the equivalent with a B- or better; or ACCT 301 and ACCT 421 or the equivalent with a B- or better, 3 hours of coursework from ACCT 302 or ACCT 311 or the equivalent with a B- or better; and an overall grade point average of 3.00 in all coursework taken at Old Dominion University

ACCT 540 Introduction to Accounting (3 Credit Hours)

This course provides a succinct working knowledge of the underlying concepts of financial and managerial accounting. With a strong emphasis on the interpretation of real-world financial statements, the course teaches students how to read, analyze, and interpret financial and managerial accounting data to make informed business decisions.

Prerequisites: Admission to the MBA program OR approval by the MBA program office/instructor

ACCT 550 International and Advanced Accounting (3 Credit Hours)

The study of accounting for international operations and business combinations.

Prerequisites: Enrollment in a Strome College of Business Master's program; ACCT 305, ACCT 306 and ACCT 307 or the equivalent with a B- or better and 3 hours of coursework from ACCT 311, ACCT 425, or ACCT 426 or the equivalent with a B- or better; or ACCT 301 and 302 or the equivalent with a B- or better and 3 hours of coursework from ACCT 311 or ACCT 421 or the equivalent with a B- or better or equivalent; and an overall grade point average of 3.00 in all coursework taken at Old Dominion University

ACCT 623 Accounting Analytics and Operational Reviews (3 Credit Hours)

Accounting analytics appropriate for professional accountants, whether in public accounting, industry, or government/non-profit. Much of the course involves hands-on learning focusing on decision, descriptive, predictive, and prescriptive analytics using the latest analytics/data visualization software.

ACCT 624 Information Technology Assurance Services (3 Credit Hours)

Standards, ethics, and practice of information technology assurance services particularly as it concerns the governance and control of information systems.

ACCT 625 Fraud Examination and Forensic Accounting (3 Credit Hours)

Standards, ethics, and practice of fraud examination and forensic accounting particularly as it concerns the accounting profession.

ACCT 626 Financial and Global Accounting (3 Credit Hours)

This course covers current financial accounting standards and the problems faced by national and multinational corporations in reporting financial information to external users in a global economy. There will be a discussion of the various techniques for presenting and analyzing financial statements and the ethical issues related to those presentations.

ACCT 627 Operational Cost Control (3 Credit Hours)

Covers cost concepts and analysis in both a manufacturing and service operational environment. Provides an introduction to activity based costing and standard cost systems, methodology for measuring productivity changes and cost of quality and measurement and control of operating performance.

ACCT 630 Business Valuations using Financial Statement Analysis (3 Credit Hours)

This course covers the analysis and interpretation of financial statements, including the significant accounting issues involved in performing an effective valuation of a company.

ACCT 640 Professional Ethics and Legal Issues In Accounting (3 Credit Hours)

An intensive course covering ethical and legal issues confronted by practicing accountants. The course emphasizes rigorous analysis of complex situations leading to appropriate solutions.

Prerequisites: Enrollment in a Strome College of Business master's program and a B- or better in ACCT 301 and ACCT 302 or the equivalent

ACCT 645 Accounting for Decision Making (3 Credit Hours)

This course provides students with an integrated financial and managerial accounting framework and captures how it can be used to promote value relevant decision making along with the use of data analytics tools. From a financial perspective, the content showcases a review of the financial reporting process and the development of financial statements for external users to provide students with a sufficient fluency to be intelligent readers of financial accounting information. From a managerial perspective, the course adopts a set of tools that utilize managerial accounting information that provides direction for students to solve business problems and promote internal decision-making, planning, and control. By the end of the course, students should be able to prepare and analyze financial statements and use accounting information for managerial decision making.

Prerequisites: ACCT 540 or ACCT 609 or course instructor approval

ACCT 650 Tax Strategies for Business Decisions (3 Credit Hours)

An intensive course in taxation. Focuses on the choice of business entity by covering taxation of corporations (both C and S corporations), partnerships and sole proprietorships. The course emphasizes research skills and professional ethics.

ACCT 651 Taxation of Corporations I (3 Credit Hours)

Covers federal income taxation of corporations and shareholders. Includes organizing a corporation; establishing capital structure; determining tax liability; dividends and other non-liquidating distributions; stock redemptions; and liquidations.

ACCT 652 Taxation of Partners and Partnerships (3 Credit Hours)

Taxation of partners and partnerships: formation, termination, distributions and liquidations, and sales of partnership interests. Limited partnerships in conjunction with their use as tax shelters, and the multifaceted attributes of family partnerships.

ACCT 653 Taxation of Estates and Gifts (3 Credit Hours)

Examines transfers under federal estate and gift tax laws. Includes property owned by the decedent; retained life estates; transfers taking effect at death; transfers with retained powers; concurrent property interest; powers of appointment; valuation problems; expenses, debts, and taxes; charitable bequests; marital deduction; taxable inter vivos gifts; gift splitting and credits; consideration of Chapter 14 and asset freezing techniques; and transfer taxation of life insurance.

ACCT 654 Income Taxation of Estates, Trusts & Beneficiaries (3 Credit Hours)

Examines simple, complex, and revocable trusts; trusts accumulation distributions; income in respect of decedents; trust accounting income; distributable net income; terminations; excess deductions; basis rules; and the decedent's final income tax return.

Prerequisites: ACCT 653

ACCT 655 Taxation of Corporations II (3 Credit Hours)

Analyzes the different types of taxable and tax-free acquisitions and reorganizations. Includes determining tax consequences for corporations and shareholders involved in an acquisition or reorganization and analyzing necessary requirements for a tax-free corporate division (spin-off). Covers aspects of filing consolidated federal income tax returns.

Prerequisites: ACCT 651

ACCT 656 Taxation of Deferred Compensation (3 Credit Hours)

Discusses federal income taxation of deferred compensation plans with emphasis on qualified retirement plans. Reviews plan qualification requirements, reporting and disclosure requirements, and distribution rules. Includes discussion of specific types of plans such as Sec. 401(K) and ESOPs.

Prerequisites: ACCT 651

ACCT 657 State and Local Taxation (3 Credit Hours)

Examines state levying of individual income, corporate income, property, sales, and excise taxes.

ACCT 658 Tax Aspects of International Business (3 Credit Hours)

Taxation of foreign persons conducting business in the U.S. including FIRPTA, source of income rules, and residency requirements; taxation of U.S. individuals and businesses doing business abroad including FSCs, CFCs, FHP Co's and possessions corporations.

Prerequisites: ACCT 425 and 426 or equivalent

ACCT 660 Taxation of Property Transactions (3 Credit Hours)

Covers determination of realized and recognized gains and losses and their tax treatment on property dispositions. Includes consequences of property transactions, such as depreciation, depletion, basis and capital gains problems.

Prerequisites: ACCT 521 or equivalent

ACCT 661 Taxation of the Small Business Corporation (3 Credit Hours)

Covers federal income taxation of S corporations including election eligibility; termination of status; treatment of income and deduction items; distributions; and basis of stock and debt. Also discusses compensation arrangements in closely held corporations; fiscal year issues; personal service corporations; the advantages of C corporations versus S corporations; corporation liquidation and redemption rules; and the S corporations' built-in gains tax.

Prerequisites: ACCT 521 or equivalent

ACCT 662 Tax Procedure and Practice (3 Credit Hours)

Discusses procedures for dealing with the IRS. Includes sources of IRS policy; processing returns; auditing returns; rulings and determination letters; assessments and collections; and interest and civil penalties.

ACCT 667 Cooperative Education (1-3 Credit Hours)

Student participation in a full-time professional work experience.

Prerequisites: Permission of the departmental chair in accordance with departmental Cooperative Education policies; student participation in a professional work experience; approval for enrollment and allowable credits are determined by the department; additional support may be provided by the Monarch Internship and Co-Op Office in at least one semester prior to enrollment

ACCT 668 Accounting Internship (1-3 Credit Hours)

The course is a practicum in the profession of accounting where theories, concepts, and financial management techniques are applied in a business environment.

Prerequisites: Permission of the department chair or graduate program director for the MS in Accounting

ACCT 695 Selected Topics in Accounting (3 Credit Hours)

Study designed for students who have had one of the required courses waived or for students desiring additional work in an area of particular interest in accounting.

Prerequisites: Permission of the department chair and the graduate program director, and a minimum GPA of 3.0 or higher in graduate work in the MS in Accounting program

ACCT 697 Independent Study in Taxation (3 Credit Hours)

Individually supervised research projects in selected tax areas. Approval of supervising professor as to topic and evaluation of project required at time of registration.

ACCT 727 Strategic Cost Management (3 Credit Hours)

This course focuses on advanced costing concepts, current management accounting practices, and analytical techniques employed by controllers in supporting their organizations' strategic planning processes.

ACCT 730 Financial Management Decision Making (3 Credit Hours)

This course provides an overview of the role of financial accounting in internal and external decision making. Financial modeling with an emphasis on assessing and valuing economic return will be included.

ACCT 747 Seminar in Controllorship (3 Credit Hours)

This course is the capstone course for the study of management accounting. It includes a review of management accounting practices and analytical techniques employed by controllers in supporting their organization's strategic decision-making process.

ACCT 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of graduation.

Prerequisites: All coursework in the MS program in Accounting

ACCT 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

AI - Artificial Intelligence

AI 510 Artificial Intelligence (AI) Methods and Models (3 Credit Hours)

This course offers an introduction to Artificial Intelligence (AI). Students will explore the field's fundamental concepts, techniques, and applications. Methods, such as Generative AI (GenAI) that enable machines to learn and process information, and models, such as machine learning (ML) that uses data sets to recognize patterns and make decisions without human intervention will be covered. The course is designed for non-specialists and does not require prior computer science or programming knowledge.

AI 521 Generative AI in Cybersecurity (3 Credit Hours)

This course provides an in-depth examination of the intersection between Generative AI (Gen AI) and Cybersecurity. It focuses on the dual nature of advanced AI systems as both enhancers and potential threats to security infrastructure. Students will acquire a comprehensive understanding of the underlying principles, algorithms, and practical applications of Gen AI models in the discovery of attack vectors, identification of cyber threats, and automation of security tasks. Additionally, the course will address defensive strategies aimed at mitigating the risks stemming from AI-driven cyberattacks.

AI 546 Artificial Intelligence (AI) Ethics and Policy (3 Credit Hours)

This course explores whether and how ethical AI is possible by examining moral standards as they apply to the various dimensions of AI development and use. It reviews the major ethical theories and discusses how principles such as transparency, privacy, safety, non-discrimination, and sustainability should govern the creation and use of AI technologies. Moreover, it considers how these principles could serve as the ethical framework for the social and policy structures that regulate and shape the future development of these technologies.

AI 566 Principles and Practices of Cyber Defense (3 Credit Hours)

This course is designed to help students gain a thorough understanding of vulnerabilities and attacks in systems and networks and learn cyber defense best practices. It covers fundamental security design principles and defense strategies and security tools used to mitigate various cyber attacks. The topics may include identification of Recon Ops, intrusion detection, identification of C2 Ops, data exfiltration detection, identifying malicious codes, network security techniques, cryptography, malicious activity detection, system security architectures, defense in depth, distributed/cloud and virtualization.

AI 581 Trustworthy Health Analytics (3 Credit Hours)

This course offers a comprehensive, project-driven approach to integrating AI in healthcare, focusing on building prototype models for prevention, diagnosis, and treatment while stressing the need of adopting ethical, responsible methods to reduce risks and improve patient outcomes.

AI 583 Artificial Intelligence Applications in Health (3 Credit Hours)

This course offers an exploration of how artificial intelligence (AI) is transforming healthcare delivery and improving patient outcomes. Building on foundational knowledge from AI Ethics and Policy and AI Methods and Models, students will dive deeper into the integration of AI in clinical and operational contexts. Key topics include the role of AI in diagnostics and personalized medicine and other AI implementations in healthcare.

AI 595 Topics in Artificial Intelligence (AI) (1-3 Credit Hours)

The advanced study of selected artificial intelligence topics designed to permit small groups of qualified students to work on subjects of mutual interest. These courses will appear in the course schedule and will be more fully described in information distributed to academic advisors.

AI 610 Strategic Artificial Intelligence (AI) Leadership (3 Credit Hours)

This course examines the leadership and organizational challenges of successfully integrating AI into business strategy and operations. Students will explore AI's impact on organizational structure, culture, and decision-making processes, and develop the skills to lead AI-driven transformations while considering ethical implications and societal impact.

AI 611 AI Product Management & Operations (3 Credit Hours)

This course will go over AI product management, as well as the challenges in operations for AI based products. The primary focus will be on the foundations for leadership, product development, and operations for AI products, which differ significantly from those found in typical software products.

AI 620 Foundations of Artificial Intelligence (AI) in Education and Learning Technologies (3 Credit Hours)

This course introduces students to the foundational concepts of Artificial Intelligence (AI) as applied to education and learning design. Students will explore key AI frameworks and theories within the context of learning design, including the use of AI tools in various educational processes. Topics covered include AI-enhanced course design, AI application in instructional delivery, the role of AI in assessments and personalized feedback, AI in research and evaluation, and AI's impact on academic integrity, as well as additional ethical considerations.

AI 621 Applications of Artificial Intelligence (AI) in Education and Learning Technologies (3 Credit Hours)

This course focuses on the practical application of AI in designing instructional strategies, activities, and materials. Students will use AI tools to brainstorm various pedagogical techniques as well as to create still images, videos, animations, audio narration, slides-based presentations, gamification, virtual environments, and personal AI learning assistants/chatbots. Through hands-on projects, students will demonstrate mastery of the instructional design process by developing AI-enhanced tools and media to solve real-world instructional problems.

AI 669 Artificial Intelligence (AI) Practicum (3 Credit Hours)

Students demonstrate an ability to integrate and synthesize competencies from their certificate or degree program coursework applied to concentration areas. Students produce high quality written products and an e-portfolio that demonstrate the analysis, synthesis and intersection of AI knowledge with specific domains.

Prerequisites: Good academic standing (Graduate GPA of at least 3.0)

AL - Arts and Letters

AL 595 Topics in Humanities (1-3 Credit Hours)

An advanced study of selected topics in humanities.

AL 596 Topics in Social Studies (3 Credit Hours)

An advanced study of selected topics in social studies.

AL 597 Tutorial Work in Arts and Letters Topics (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Permission of instructor

AL 695 Topics (1-3 Credit Hours)

An interdisciplinary study of selected topics in arts and letters.

AL 795 Topics (1-3 Credit Hours)

1-3 credits. Seminar on special interdisciplinary topics for small groups of qualified students.

Prerequisites: Advanced graduate standing

AL 797 Tutorial Work in Arts and Letters Topics (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

AL 895 Topics (1-3 Credit Hours)

Seminar on special interdisciplinary topics for small groups of qualified students.

Prerequisites: Advanced graduate standing

AL 897 Tutorial Work in Arts and Letters Topics (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

ANTR - Anthropology

ANTR 697 Tutorial Work in Special Topics in Anthropology (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of a member of the graduate faculty. Conferences and papers as appropriate.

ANTR 698 Tutorial Work in Special Topics in Anthropology (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of a member of the graduate faculty. Conferences and papers as appropriate.

ARTH - Art History

ARTH 508 Hieronymus Bosch (3 Credit Hours)

Before Dalí...before Magritte...before De Chirico, there was Hieronymus Bosch. Well before the advent of the Surrealism movement in the twentieth century, the late fifteenth-century/early sixteenth-century Dutch painter Hieronymus Bosch rocked the art world with his fantastical, disturbing, and enigmatic paintings. Bosch's contemporaries and modern scholars have deemed his art as the product of both his madness and genius. This course will critically examine Bosch and his work. Students will work like detectives, first by dismantling long-standing misinterpretations about Bosch's work, then by analyzing and deciphering his iconography through the lens of the period in which he lived, including art theory, politics, religion, devotion, and alchemy, among other topics.

Prerequisites: Graduate standing

ARTH 510 Michelangelo (3 Credit Hours)

This course examines the life, sculptures, paintings, and architecture of one of the greatest Italian Renaissance artists, Michelangelo Buonarroti.

Prerequisites: Graduate standing

ARTH 511 Caravaggio (3 Credit Hours)

This course examines the life and revolutionary paintings of the Italian Baroque painter Caravaggio.

Prerequisites: Graduate standing

ARTH 516 Myths of Venice (3 Credit Hours)

Venice is set apart from other cities in Italy and from Europe not only by its geography—a city seemingly floating on water, with canals instead of streets—but also by its unique history, traditions, and cultural identity. The consideration and examination of its mythical origins in the fifth century, through its history as a territory of the Byzantine Empire, and the establishment of their Republic in 1297, this course will examine how Venice fashioned its own identity through its art and architecture during the Italian Renaissance.

Prerequisites: Graduate standing

ARTH 517 Renaissance and Baroque Women (3 Credit Hours)

This course will examine the ways in which prevailing ideas about women shaped visual imagery, and in turn, how these images, influenced, perpetuated, and even changed perceptions about women from the fifteenth through seventeenth centuries in Italy (Renaissance and Baroque periods). Students will explore how text and visual imagery informed one another, and closely examine works of art by women artists, commissioned by women patrons, and works featuring women through thematic topics. Although patriarchy dominated the Renaissance and Baroque periods, the course will recover the histories of women artists, patrons, and writers, and examine how women navigated the gender oppression of their periods to reclaim their power and value.

Prerequisites: Graduate standing

ARTH 520 Pompeii (3 Credit Hours)

This seminar is an exploration of the visual and material culture of Pompeii, incorporating a broad spectrum of evidence, ranging from the city's temples to the wall paintings in the city's brothels. The goal of the class is to instill a working knowledge of the most recent scholarship on the ancient city and to contextualize Pompeii's art and architecture in the historical narrative of the city and the broader body of scholarship on Roman cultural history.

Prerequisites: Graduate standing

ARTH 534 Romantic Architecture (3 Credit Hours)

A survey of the aesthetic, technological and social forces that transformed international architecture in the 18th and 19th centuries.

Prerequisites: Graduate standing

ARTH 535 Modern Architecture (3 Credit Hours)

An examination of the architecture, planning, and related design of the twentieth and twenty-first centuries around the globe. Special emphasis is placed on the formation of the international style between the world wars and its disintegration in the recent past.

Prerequisites: Graduate standing

ARTH 541 Realism in Modern and Contemporary Art (3 Credit Hours)

This course examines the changing motivations, contexts, and characteristics of realist art since the inception of modernism. While definitions of radical and conservative have wavered and flipped, recognizable imagery seems always to function as a critical intervention within aesthetic racial, or gender-based hegemonies. As students examine numerous artists' strategies, they will see that reality isn't always so easy to pin down.

Prerequisites: Graduate standing

ARTH 542 Painting Now (3 Credit Hours)

Anxiety about painting's purpose and relevance are woven into modern art's linear concept of history. The goal of this class is to help students understand, both intellectually and emotionally, the ambitions that motivate painting, as well as to give them an opportunity to sample the diverse practices and critical approaches that make up the painterly landscape, and finally to examine how or if it fits within the broader scope of contemporary art.

Prerequisites: Graduate standing

ARTH 550 Public Art (3 Credit Hours)

This course is a collaborative exploration of the problems and opportunities of national and international public art that combines the practical with the theoretical, and the studio with the art-historical.

Prerequisites: Graduate standing

ARTH 595 Topics in Art History (3 Credit Hours)

A study of selected topics in art history to be specified in the class schedule each semester. May be repeated for credit as topics vary.

Prerequisites: Graduate standing

ARTH 596 Topics in Art History (3 Credit Hours)

A study of selected topics in art history to be specified in the class schedule each semester. May be repeated for credit as topics vary.

Prerequisites: Graduate standing

ARTH 597 Tutorial Work in Art History (3 Credit Hours)

Independent research on a topic to be selected under the guidance of a faculty advisor.

Prerequisites: Graduate standing; approval of program director

ARTH 598 Tutorial Work in Art History (3 Credit Hours)

Independent research on a topic to be selected under the guidance of a faculty advisor.

Prerequisites: Graduate standing; approval of program director

ARTH 668 Internship (3 Credit Hours)

An unpaid, structured work experience in a museum, gallery, archive, or related environment for credit. Criteria for evaluation will be determined by work supervisor and cooperating faculty advisor. May be repeated for credit. Available for pass/fail grading only.

Prerequisites: Graduate standing; Approval of program director

ARTH 695 Topics in Art History (3 Credit Hours)

Topics to be specified in the class schedule. Intensive critical investigations of specialized areas in art history. May be repeated for credit as topics vary.

Prerequisites: Graduate standing

ARTH 697 Tutorial in Art History (3 Credit Hours)

Independent research on a topic to be selected under the guidance of a faculty advisor.

Prerequisites: Graduate standing and approval of program director

ARTS - Art, Studio

ARTS 512 Photo Seminar 1 (3 Credit Hours)

The first of a two-semester sequence of concentrated individual work. Students will identify a topic and create a complete body of work. Lectures, readings, discussion, critique, and field trips to develop the articulation of ideas and the clarification of purpose.

ARTS 513 Photo Seminar 2 (3 Credit Hours)

This is the second in a two-semester sequence of concentrated individual work. Through readings, discussion, critiques, field trips, and intense individual work, students will compile a body of work realizing their personal vision and articulate their ideas through the crafting of an artist statement.

ARTS 531 Drawing Studio (3 Credit Hours)

Further concentration on conceptual content and drawing skills, development of individual body of work exploring preferred concepts, subject matter, techniques, and media. May be repeated for credit.

ARTS 532 Figure Drawing Anatomy (3 Credit Hours)

A study of visually important aspects of the structural, skeletal and muscular systems of the body. Anatomical study will be related to drawing from the live model.

ARTS 533 Figure Drawing/ Composition (3 Credit Hours)

This course places the emphasis on advanced composition using the figure as the central theme. The figure's expressive potential, along with a study of historical responses to figure drawing, will be examined in depth.

Prerequisites: ARTS 532

ARTS 542 Painting and Drawing Studio (3 Credit Hours)

Students develop an individual body of work exploring preferred concepts, subject matter, techniques, and media in close consultation with faculty. Written proposal by students required at registration.

ARTS 550 Printmaking Studio (3 Credit Hours)

Experimental work in selected print media.

ARTS 555 Letterpress Printmaking (3 Credit Hours)

A visual and literary investigation of language and wordplay using foundry and wood type and a Vandercook SP-20 proofing press. Projects include expressive printed impressions of personal poetry and song lyric, political rant, and broadsides for entertainment or proselytizing. A theme group project such as a folio or a bound book, is usually assigned.

ARTS 561 Sculpture Studio (3 Credit Hours)

Experimental work reflecting individual initiative and attitude.

ARTS 563 Advanced Ceramics (3 Credit Hours)

An advanced course in the science and art of ceramics. Students will engage in guided independent research, developing their own direction by investigating clay bodies, glazes, firing methods and contemporary ceramic art.

ARTS 569 Assemblage (3 Credit Hours)

Assemblage combines elements of various art and non-art media and materials. Lectures will be comprised of presentations about relevant artists, gallery and studio visits, and critiques. Studio time allows students to explore personal directions in the medium.

ARTS 572 Art Therapy (3 Credit Hours)

This class is designed to initiate students from both studio art and non-studio backgrounds to the study of art therapy. It examines the history of art therapy in the United States, introduces the Expressive Therapies Continuum (ETC), and explores the application of art therapy techniques and their underlying rationales.

ARTS 573 The Book (3 Credit Hours)

The book as a work of art. Lecture will explore historical and technical aspects of book design and production. Studio work will be devoted to the production of a series of books involving page design, paper selection, printing and binding.

ARTS 581 Crafts III: Fibers (3 Credit Hours)

Advanced work in pattern drafting, loom techniques, off-loom weaving and fabric painting.

ARTS 591 Advanced Jewelry and Metalsmithing (3 Credit Hours)

This course offers further exploration and concentration on jewelry and metalsmithing techniques. Through readings, discussions, self-directed and self-determined projects, students will explore new methods and content to develop an individual body of work. Additional emphasis will be placed on developing supplemental portfolio materials. May be repeated once for credit.

Prerequisites: Permission of instructor

ARTS 593 Jewelry and Metalsmithing Studio (3 Credit Hours)

This course offers further exploration and concentration on jewelry and metalsmithing techniques. Through readings, discussions, self-directed and self-determined projects, students will explore new methods and content to develop an individual body of work. Additional emphasis will be placed on developing supplemental portfolio materials. May be repeated for credit once.

ARTS 595 Topics in Studio Art (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on studio projects of mutual interest.

Prerequisites: permission of the instructor

ARTS 597 Tutorial Work in Special Studio Topics (3 Credit Hours)

Independent investigation of a subject to be selected under the advisement of the instructor.

ARTS 668 Internship (3 Credit Hours)

A structured work experience involving aspects of art, design or craft; film or video making; and/or museum/gallery work.

ARTS 695 Graduate Seminar: Special Topics in Contemporary Art (3 Credit Hours)

Topics to be specified in the class schedule. Intensive critical investigations of selected aspects of the visual arts which focus on the role of the artist in contemporary urban society. May be repeated for credit as topics vary.

ARTS 697 Independent Study (3-6 Credit Hours)

Supervised individual inquiry in specific studio projects relating to the areas of major interest.

Prerequisites: permission of graduate program director required

ARTS 698 Graduate Studio (3-6 Credit Hours)

Supervised individual inquiry in specific studio projects relating to the areas of major interest.

Prerequisites: permission of graduate program director required

ARTS 700 Directed Field Experience (3-6 Credit Hours)

Intern experiences in museums, community centers and arts programs, teaching assistantships, special apprenticeships, and field projects under the supervision of graduate faculty. Required of all M.F.A. candidates.

Prerequisites: permission of graduate program director required

ARTS 701 Thesis Exhibition (3 Credit Hours)

Required of M.F.A. candidates. Course requirements to be determined by the student's advisory committee. Final grade to be determined by the student's thesis review committee.

Prerequisites: permission of graduate program director required

ARTS 702 Documentation (3 Credit Hours)

Studio work in preparation for required graduate exhibition. Public exhibition to be approved by the student's advisory committee and must be accompanied by final review. Documentation may be required. Required of all M.A. and M.F.A. candidates. Final grade to be determined by the student's thesis review committee.

Prerequisites: permission of graduate program director required

ARTS 797 Graduate Studio (3-6 Credit Hours)

Supervised individual inquiry in specific studio projects relating to areas of major interest. Individual studio spaces will be assigned.

Prerequisites: permission of graduate program director required

ARTS 798 Graduate Studio (3-6 Credit Hours)

Supervised individual inquiry in specific studio projects relating to areas of major interest. Individual studio spaces will be assigned.

Prerequisites: permission of graduate program director required

ARTS 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

ASIA - Asian Studies

ASIA 595 Topics in Asian Studies (3 Credit Hours)

This course is designed for small groups of qualified students to conduct advanced study of selected topics on Asian Studies, topics which may not be taught in regularly scheduled classes. The description of the course for each offering will appear in the course schedule that is distributed to each advisor.

Prerequisites: Appropriate survey source or permission of the instructor

ASTP - Astrophysics

ASTP 506 Observational Astronomy (3 Credit Hours)

Observational techniques in astronomy with emphasis on constellation identification, celestial movements, and telescopic observation. Individualized night observations are required.

ASTP 508 Astronomy for Teachers (3 Credit Hours)

A course in astronomy dealing with stars and stellar systems. Topics will include observational astronomy, the electromagnetic spectrum, relativity, stellar and galactic structures, cosmology, and the search for extraterrestrial intelligence.

ASTP 595 Special Topics in Astrophysics (3 Credit Hours)

In-depth study of a selected topic in astrophysics at the introductory graduate level. May include a laboratory or computational component.

Prerequisites: Permission of the instructor

AT - Athletic Training

AT 602 Foundations of Sports Medicine for Health Care Providers (3 Credit Hours)

An overview of tissue response to injury and pain transmission provide the foundation from which students will learn about physical agents and specific conditions from a medical perspective. Pathology for specific injuries will be taught, and students will become familiar with the theoretical and practical application of physical agents as it relates to tissue response to injury and pain control. An introduction to the basic principles and underlying theories relating to examination and treatment techniques will also be presented.

Prerequisites: Students must be admitted into the Master of Science in Athletic Training degree program

AT 603 Clinical Examination and Patient Care-Spine & Head (4 Credit Hours)

This course is designed to provide information relative to the prevention, recognition, evaluation, treatment, rehabilitation, and return to function and/or activity of athletic injuries involving the spine or head.

Prerequisites: Students must be admitted into the Master of Science in Athletic Training program

AT 604 Clinical Examination and Patient Care-Lower Extremity (4 Credit Hours)

This course is designed to provide information relative to the prevention, recognition, evaluation, treatment, rehabilitation, and return to function and/or activity of athletic injuries involving the lower extremity.

Prerequisites: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 605 Clinical Examination and Patient Care-Upper Extremity (4 Credit Hours)

This course is designed to provide information relative to the prevention, recognition, evaluation, treatment, rehabilitation, and return to function and/or activity of athletic injuries involving the upper extremity.

Prerequisites: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 607 Management of Medical Conditions for Healthcare Providers I (3 Credit Hours)

Instruction and practice in advanced first aid, Emergency Cardiac Care techniques, and oxygen administration for the paramedical professional. A study of the knowledge and skills required to recognize, triage, refer, and treat, as appropriate, internal injuries, general medical conditions, and disabilities of patients involved in physical activity.

Prerequisites: Students must be admitted into the Master of Science in Athletic Training program

AT 612 Functional Movement for Healthcare Providers (3 Credit Hours)

This course is designed to cover the anatomical and mechanical analysis of human musculoskeletal function. Principles of biomechanics, connective tissue behavior, and muscle physiology are integrated with joint structure and function to form the basis of understanding normal and pathological movement.

Prerequisites: AT 691

AT 615 Research I (2 Credit Hours)

This course is designed to introduce the graduate student to research processes in the athletic training field. The focus is on understanding and recognizing principles of evidence-based practice in athletic training, understanding the elements of evidence, appraising the evidence, and considering the evidence for use in clinical practice.

Prerequisites: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 617 Management of Medical Conditions for Healthcare Providers II (3 Credit Hours)

Advanced management of acute conditions including wound management, phlebotomy, medication administration, dislocation reduction, and appropriate referral strategies. Advanced therapeutic techniques will also be incorporated.

Prerequisites: AT 607

AT 618 Current Research in Athletic Training (1 Credit Hour)

Designed to provide an understanding of evidence-based practice to the sports medicine setting and the intricacies of performing evidence-based practice research projects.

AT 623 Athletic Training Practicum I (1 Credit Hour)

This course is designed to provide practical experience in the athletic training setting and an understanding of evidence-based practice in sports medicine.

AT 625 Research II (1 Credit Hour)

This course is designed to systematically guide professional athletic training students through the research process. Coursework will focus on development of an original research idea, building the theoretical background, and identifying the rationale for a research project. Based on the nature of this course, students will be required to meet with a research supervisor outside of the time permitted for class.

Prerequisites: AT 615

AT 626 Advanced Orthopaedic Evaluation and Rehabilitation (4 Credit Hours)

This course is designed for sports medicine clinicians and will focus on advanced topics in the study of orthopaedic evaluation, assessment, management, and rehabilitation of common athletic injuries. A combination of discussion, lecture, critical review of literature, laboratory activities, and student presentations will be employed throughout the course.

AT 628 The Spine: Evaluation and Rehabilitation (3 Credit Hours)

A course designed to provide information relative to the recognition, evaluation, and treatment of athletic injuries involving the spine.

AT 630 Interprofessional Healthcare in Clinical Practice (3 Credit Hours)

This clinical experience entails interaction with healthcare providers associated with sports medicine specialties and general medical concerns.

AT 633 Athletic Training Practicum II (1 Credit Hour)

This course is designed to provide practical experience in the athletic training setting and an understanding of evidence-based practice in sports medicine.

AT 635 Research III (1 Credit Hour)

This is a course designed to guide professional athletic training students through aspects of the research process. Coursework will focus on writing the Methods sections for a research manuscript, writing the results section for a research manuscript and proper data entry techniques for a research project. Based on the nature of this course, students will be required to meet with a research supervisor and collect data for their respective project outside of the time permitted for class.

Prerequisites: AT 615 and AT 625

AT 638 Documentation & Quality Improvement for Healthcare Providers (3 Credit Hours)

This course will provide an overview of medical terminology, and best practices in medical documentation will be emphasized. Use of documentation strategies to analyze practice trends to identify and implement quality improvement strategies will be stressed.

Prerequisites: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 640 Clinical Medicine for Healthcare Providers I (3 Credit Hours)

This course introduces the healthcare student to the normal and abnormal physiology of different body systems as well as differential diagnoses in common medical conditions. Factors associated with those body systems that influence examination and intervention will be discussed. Also discussed is when referral to other practitioners is recommended and required. A case study approach is employed to enforce critical thinking and to mimic practical application.

Prerequisites: AT 691

AT 641 Clinical Medicine for Healthcare Providers II (3 Credit Hours)

This course will address health across the lifespan, as well as highlight strategies to mitigate the risk of long-term health complications. This course will additionally identify and describe various modes of imaging techniques and tests used in medical practice for the neurological, musculoskeletal, cardiovascular, and pulmonary systems.

Prerequisites: AT 691 and AT 640

AT 643 Athletic Training Practicum III (1 Credit Hour)

This course is designed to provide practical experience in the athletic training setting and an understanding of evidence-based practice in sports medicine.

AT 645 Research IV (1 Credit Hour)

This course is designed to guide professional athletic training students through aspects of the research process. Coursework will focus on writing the discussion section for a research manuscript, writing a research abstract for submission to a conference, developing an oral research presentation for a conference, and creating a poster presentation for a conference. Based on the nature of this course, students will be required to meet with a research supervisor outside of the time permitted for class.

Prerequisites: AT 615, AT 625 and AT 635

AT 647 Interprofessional Clinical I (1 Credit Hour)

This clinical experience entails interactions with healthcare providers associated with orthopedic specialties and general medical concerns.

Prerequisites: Students must be admitted in the Master of Science of Athletic Training program to register for this course

AT 648 Interprofessional Clinical II (1 Credit Hour)

This clinical experience entails interaction with healthcare providers associated with sports medicine specialties and general medical concerns.

Prerequisites: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 650 Integration of Evidence for Clinical Decision Making in Sports Medicine (3 Credit Hours)

This course is designed to introduce the graduate student to research processes in the athletic training field. The focus is on understanding and recognizing principles of EBP in athletic training, understanding the elements of evidence, appraising the evidence, and considering the evidence for use in clinical practice.

AT 651 Statistical Techniques for Clinical Decision Making in Sports Medicine (3 Credit Hours)

This course includes conceptual and computational applications associated with the common statistical techniques relevant to sports medicine clinicians. The intent is to provide students with an introduction to frequently used descriptive and inferential statistical methods for clinical or research purposes in sports medicine. Lectures and laboratory exercises will be utilized to instruct students on using statistics to be intelligent consumers of the research literature. Emphasis will be placed on using statistics to make informed, evidence-based clinical decisions with the goal of enhancing patient care.

Prerequisites: AT 650

AT 652 Pharmacology (3 Credit Hours)

Introduces principles of drug therapy across the lifespan and their use pertaining to the healthcare of the physically active. An emphasis on the application of knowledge and skills required of the healthcare provider, including indications, contraindications, precautions, interactions, documentation, and governing regulations.

Prerequisites: AT 691 or other graduate-level human anatomy course as approved by the instructor

AT 653 Athletic Training Practicum IV (1 Credit Hour)

This course is designed to provide practical experience in the athletic training setting and an understanding of evidence-based practice in sports medicine.

AT 655 Teaching Strategies and Assessment (3 Credit Hours)

This course is designed to provide information related to teaching strategies and techniques along with supervised and mentored teaching experiences within fields applicable to athletic training.

AT 657 Lower Extremity Injury Management Strategies (3 Credit Hours)

Stresses clinical techniques used in the management and assessment of the lower extremity and spine through utilization of evidence-based practice.

AT 661 Behavioral Health in Sports Medicine (3 Credit Hours)

The focus of this course is on identification, referral, and coordinated treatment options for patients with mental and behavioral health conditions.

Prerequisites: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 664 Ethics in Healthcare (3 Credit Hours)

This course will provide in-depth coverage of legal and ethical concerns for sports medicine healthcare providers. Identification and analysis of applicable local, state, and federal laws and regulations that are specific to the delivery of healthcare.

Prerequisites: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 666 Athletic Training Practicum I (1 Credit Hour)

This course is designed to provide practical experience in the athletic training setting and an understanding of evidence-based practice in sports medicine.

Prerequisites: AT 603

AT 667 Athletic Training Practicum II (1 Credit Hour)

This course is designed to provide practical experience in the athletic training setting and an understanding of evidence-based practice in sports medicine.

Prerequisites: AT 604

AT 668 Athletic Training Practicum III (2 Credit Hours)

This course is designed to provide practical experience in the athletic training setting and an understanding of evidence-based practice in sports medicine.

Prerequisites: AT 605

AT 669 Athletic Training Practicum IV (1 Credit Hour)

This course is designed to provide practical experience in the athletic training setting and an understanding of evidence-based practice in sports medicine.

Prerequisites: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 670 Athletic Training Research I (1 Credit Hour)

This course is designed to systematically guide post-professional athletic training students through the research process. Coursework will focus on development of an original research idea, building the theoretical background, and identifying the rationale for a research project. Based on the nature of this course, students will be required to meet with a research supervisor outside of the time permitted for class.

Prerequisites: AT 650

AT 671 Athletic Training Research II (2 Credit Hours)

This is a course designed to guide post-professional athletic training students through aspects of the research process. Coursework will focus on writing the Methods sections for a research manuscript, writing the results section for a research manuscript and proper data entry techniques for a research project. Based on the nature of this course, students will be required to meet with a research supervisor and collect data for their respective project outside of the time permitted for class.

Prerequisites: AT 670

AT 672 Athletic Training Research III (3 Credit Hours)

This course is designed to guide post-professional athletic training students through aspects of the research process. Coursework will focus on writing the discussion section for a research manuscript, writing a research abstract for submission to a conference, developing an oral research presentation for a conference, and creating a poster presentation for a conference. Based on the nature of this course, students will be required to meet with a research supervisor outside of the time permitted for class.

Prerequisites: AT 671

AT 673 Healthcare Administration and Policy (3 Credit Hours)

An overview of administrative and organizational concepts that relate to healthcare entities that provide athletic training services. Facility design, fiscal management, organizational management, and insurance issues will be emphasized. Students will learn about the development and implementation of policies and procedures that occur within an organization that delivers patient care that can impact delivery and quality of care.

Pre- or corequisite: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 686 Performance Enhancement in Sports Medicine (3 Credit Hours)

A study of the principles and techniques utilized in optimizing physical performance and reducing injury through proper and effective strength and conditioning programs. Special emphasis will be placed on current research findings, breakthrough and advanced weight training techniques, and popular conditioning practices. This course will also provide the student with skills in exercise leadership. The student will learn how to lead resistance training, flexibility training, cardiovascular training involving a variety of exercise modes, and group exercise.

Prerequisites: AT 612

AT 687 Contemporary Issues in Athletic Training (2 Credit Hours)

Seminar-based course that will involve discussion of critical questions and contemporary issues and problems in athletic training/sports medicine.

Prerequisites: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 689 Professional Competence Assessment in Athletic Training (3 Credit Hours)

Knowledge and skills for successful pursuit of athletic training credentials, including Board Of Certification (BOC) examination preparation, employment, and continuing professional competence. Will include self-analysis of patient encounter portfolio and identification of clinical needs.

Prerequisites: Students must be admitted into the Master of Science of Athletic Training program to register for this course

AT 691 Gross Anatomy for the Rehabilitation Sciences (6 Credit Hours)

This course is designed to provide students in the School of Rehabilitation Sciences an interprofessional education experience that teaches the basic principles and concepts of human gross anatomy so they can apply it to their clinical practice. While multiple body systems will be covered, emphasis will be on the musculoskeletal, articular, nervous, and vascular systems.

AT 697 Independent Study in Athletic Training (3 Credit Hours)

An overview of clinical reasoning strategies and opportunities for clinical practice implementation will be provided. Students are provided a review of both human anatomy and evidence-based strategies for the delivery of care. Students will learn about the development and implementation of policies and procedures that can impact delivery and quality of care.

AT 711 Analysis of Human Motion for Sports Medicine Clinicians (3 Credit Hours)

This course includes theories and applications of techniques concerning the analysis of human motion for the sports medicine clinician. The intent of this course is to provide students with an introduction to quantitative analysis of human motion and the concepts and equipment to collect objective quantifiable data for clinical or research purposes.

AT 756 Education in Athletic Training (4 Credit Hours)

Designed to introduce current concepts of curriculum development, evaluation methods, course construction and testing as related to the athletic training clinical and didactic experience. Designed to introduce the graduate student to aspects of the management of learning and instruction; how learners learn and how teachers can facilitate their learning as related to the athletic training didactic and clinical experience.

AT 811 Analysis of Human Motion for Sports Medicine Clinicians (3 Credit Hours)

This course includes theories and applications of techniques concerning the analysis of human motion. It is designed to provide opportunities for the advanced study of motion analysis techniques for the study of human movement. The intent of this course is to provide students with an extensive knowledge concerning quantitative analysis of human motion and the concepts and equipment to collect objective quantifiable data to be used for clinical or research purposes.

AT 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

BDA - Big Data Analytics

BDA 501 Programming Languages for Data Science (3 Credit Hours)

An introductory course on programming languages and tools which are relevant to data analytics. Each language or tool is introduced as a separate module and incorporates applications in mathematics and statistics. Examples of included programming languages and tools are MATLAB, Python, R and SAS. Additional languages and tools may be covered based on current trends in data analytics. Students will complete hands-on programming assignments throughout the course.

Prerequisites: MATH 312, MATH 316 and STAT 330 or STAT 331

BDA 511 Introduction to Machine Learning (3 Credit Hours)

An introductory course on machine learning. Machine Learning is the science of discovering pattern and structure and making predictions in data sets. It lies at the interface of mathematics, statistics and computer science. The course gives an elementary summary of modern machine learning tools. Topics include regression, classification, regularization, resampling methods, and unsupervised learning. Students enrolled are expected to have some ability to write computer programs, some knowledge of probability, statistics and linear algebra.

Prerequisites: MATH 312, MATH 316, and STAT 330 or STAT 331

BDA 531 Modern Statistical Methods for Big Data Analytics (3 Credit Hours)

The statistical perspective of data mining is emphasized for majority of the course. Both applied aspects (programming, problem solving, and data analysis) and theoretical concepts (learning, understanding, and evaluating methodologies) of data mining will be covered. Topics include Regularization and Kernel Smoothing Methods, Tree-based Methods, Neural Networks and optional topics such as deep learning.

Prerequisites: BDA 511 and STAT 505 or permission of the instructor

BDA 532 Introduction to Optimization in Data Science (3 Credit Hours)

Topics considered include the solution of non-smooth optimization problems arising in data science, including unconstrained and constrained optimization problems, Lagrange multiplier methods, inequality constraints, Kuhn-Tucker conditions, and applications. Also considered are linear and nonlinear inverse problems, regularization of ill-posed problem including singular value decomposition, and Tikhonov regularization methods and sparse regularization methods, inverse eigenvalue problems and applications such as compressed sensing, image reconstruction and machine learning.

Prerequisites: MATH 307, MATH 312 and MATH 316

BDA 611 Mathematical Foundations of Machine Learning (3 Credit Hours)

This course will introduce mathematical foundations of machine learning theory and algorithms. Topics include statistical learning theory, kernel methods and generative models. Some modern machine learning methods such as dictionary learning, deep learning, online learning, and reinforcement learning may also be included, time permitting. Students enrolled are expected to have some knowledge of probability, linear algebra, optimization, and analysis.

Prerequisites: BDA 511, MATH 518 and STAT 330 or 331

BDA 620 Large-Scale Optimization (3 Credit Hours)

This course will introduce optimization methods for large-scale problems by exploiting special structures including convexity and sparsity. Topics include introduction to convexity, gradient-related methods, dual methods, sparse optimization methods and nonconvex optimization methods. Students enrolled are expected to have some knowledge of linear algebra, optimization, probability, and analysis.

Prerequisites: MATH 518 and STAT 330 or 331

BDA 632 Computational Data Analytics Project (3 Credit Hours)

Under the guidance of a faculty member in the Department of Mathematics and Statistics, the student will undertake a significant computational data analysis problem. A written report and/or public presentation of results will be required.

Prerequisites: Permission of graduate program director

BDA 640 Genomic Data Science (3 Credit Hours)

Introductory discussion on central dogma of molecular biology, concepts of transcription, translation, gene regulation, and the need for high throughput methods. Other topics covered are Introduction to R and Bioconductor, Advanced microarray data analysis, NGS data analysis using edgeR in Bioconductor, Network Biology, sequence, pathway informatics, SNPs, GWAS, informatics for genome variants.

Prerequisites: BDA 511, BDA 531, and STAT 505 or permission of the instructor

BDA 697 Topics in Big Data Science (3 Credit Hours)

Advanced study of selected topics.

BDA 721 High-Dimensional Statistics (3 Credit Hours)

Techniques for obtaining basic tail bounds and concentration inequalities, uniform laws of large numbers, Rademacher complexity of a set, covering and packing in metric spaces, and metric entropy. Also, high dimensional random matrices described in a non-asymptotic framework, with a focus on the estimation of sparse and structured covariance matrix, are studied. The sparse linear regression models and the principal component analysis in the unstructured and sparse setting will be covered.

Pre- or corequisite: STAT 727, STAT 728, MATH 616, and MATH 618

BDA 731 Applied Functional Data Analysis (3 Credit Hours)

An introduction to the statistical analysis of sample curves or functions. Topics include smoothing, registration, functional principal component analysis, scalar-on-function regression, and functional response models. All these techniques will be applied using the statistical software R.

Prerequisites: STAT 725 or STAT 825

BDA 745 Transform Methods for Data Science (3 Credit Hours)

Various transform methods from the data domain to coefficients of the data in certain discrete bases are studied. Transforms studied include FFT, DCT, wavelet transforms and framelet transform. Both theory and applications of these transforms are covered.

Prerequisites: MATH 518 and MATH 616

BDA 821 High-Dimensional Statistics (3 Credit Hours)

Techniques for obtaining basic tail bounds and concentration inequalities, uniform laws of large numbers, Rademacher complexity of a set, covering and packing in metric spaces, and metric entropy. Also, high dimensional random matrices described in a non-asymptotic framework, with a focus on the estimation of sparse and structured covariance matrix are studied. The sparse linear regression models and the principal component analysis in the unstructured and sparse setting will be covered.

Prerequisites: STAT 727, STAT 728, MATH 616, and MATH 618

BDA 831 Applied Functional Data Analysis (3 Credit Hours)

An introduction to the statistical analysis of sample curves or functions. Topics include smoothing, registration, functional principal component analysis, scalar-on-function regression, functional response models. All these techniques will be applied using the statistical software R.

Prerequisites: STAT 725 or STAT 825

BDA 845 Transform Methods for Data Science (3 Credit Hours)

Various transform methods from the data domain to coefficients of the data in certain discrete bases are studied. Transforms studied include FFT, DCT, wavelet transforms and framelet transform. Both theory and applications of these transforms are covered.

Prerequisites: MATH 518 and MATH 616

BIOE - Bioelectrics

BIOE 554 Introduction to Bioelectrics (3 Credit Hours)

Covers the electrical properties of cells and tissues as well as the use of electrical and magnetic signals and stimuli in the diagnosis and treatment of disease. Typical topics to be covered include basic cell physiology, endogenous electric fields in the body, electrocardiography, cardiac pacing, defibrillation, electrotherapy, electroporation, and electrotherapy in wound healing. In addition, ultrashort electrical pulses for intracellular manipulation and the application of plasmas to biological systems will be covered.

Prerequisites: PHYS 111N or higher and MATH 200 or higher

BIOE 754 Advanced Bioelectrics (3 Credit Hours)

Bioelectrics is a new field encompassing both the science and technology of applying electrical stimuli to biological systems. This course covers the pulsed power technology that is required to generate electrical stimuli as well as the biological responses they evoke in cells and tissues. Particular emphasis is placed on the medical applications of bioelectrics, including tumor ablation, gene electrottransfer, wound healing, decontamination with cold plasma, and treatment of cardiac arrhythmias.

Prerequisites: ECE 454 or ECE 554 or BIOE 454 or BIOE 554

BIOE 755 Biomembranes and Ion Channels (3 Credit Hours)

This course will give an overview of the structure and dynamics of biomembranes, the ion channels that are embedded in them, and the electrical properties of biomembranes. Topics include molecular dynamics modeling of biomembranes, membrane damage and repair, ion channel dynamics and their experimental assessment using patch clamping, and excitability in neurons and cardiomyocytes.

Prerequisites: ECE 454 or ECE 554 or BIOL 523

BIOE 854 Advanced Bioelectrics (3 Credit Hours)

Bioelectrics is a new field encompassing both the science and technology of applying electrical stimuli to biological systems. This course covers the pulsed power technology that is required to generate electrical stimuli as well as the biological responses they evoke in cells and tissues. Particular emphasis is placed on the medical applications of bioelectrics, including tumor ablation, gene electrottransfer, wound healing, decontamination with cold plasma, and treatment of cardiac arrhythmias.

Prerequisites: ECE 454 or ECE 554 or BIOE 454 or BIOE 554

BIOE 855 Biomembranes and Ion Channels (3 Credit Hours)

This course will give an overview of the structure and dynamics of biomembranes, the ion channels that are embedded in them, and the electrical properties of biomembranes. Topics include molecular dynamics modeling of biomembranes, membrane damage and repair, ion channel dynamics and their experimental assessment using patch clamping, and excitability in neurons and cardiomyocytes.

Prerequisites: ECE 454 or ECE 554 or BIOL 523

BIOE 890 Graduate Seminar (2 Credit Hours)

This course can be taken either as an attendee or as a presenter. Attendees will receive a pass/fail grade based on whether they satisfy the attendance requirements. Presenters will receive a letter grade for their presentation from a committee of faculty in the audience.

BIOE 891 Graduate Seminar (1 Credit Hour)

This course can be taken either as an attendee or as a presenter. Attendees will receive a pass/fail grade based on whether they satisfy the attendance requirements. Presenters will receive a letter grade for their presentation from a committee of faculty in the audience.

BIOL - Biological Sciences

BIOL 500 Plant Systematics (4 Credit Hours)

An evolutionary survey of vascular plant families and the principles and methodologies that define them; lab emphasis is placed on recognition and skills of identification. A lab and field intensive hands-on course.

Prerequisites: A botany course

BIOL 501 Entomology (4 Credit Hours)

A comprehensive survey of the insects, including taxonomy, morphology, physiology, reproductive and developmental biology, and ecology. Research techniques in entomology will be learned through both field and laboratory work.

BIOL 502 Scientific Diving Methods for Marine Research (4 Credit Hours)

This lecture/field experience course will train students in the common techniques used by marine scientists who employ scuba for their research. It satisfies the requirements for an American Academy of Underwater Scientist certification and covers other topics such as: use of underwater research equipment and marine resource surveys. A multi-day scuba trip is required.

Prerequisites: Open Water Scuba Certification and ODU Dive Physical Form signed/completed by a physician

BIOL 503 Medical Microbiology (3 Credit Hours)

This course integrates the disciplines of microbiology, immunology, and biochemistry with the pathophysiology of infections and the appropriate pharmacology in a problem-based learning setting. Students will learn the fundamental concepts and terminologies of infectious diseases. The material will be case studies in small group tutorials and emphasize independent learning.

Prerequisites: Microbiology and Biochemistry courses, anatomy course recommended, or instructor approval

BIOL 504 Conservation Biology and Sustainable Development (5 Credit Hours)

The application of fundamental biological principles to the preservation of biodiversity, including the role of ecological and evolutionary theory to the preservation of biotas on a regional and global basis. Lectures will cover modern approaches to conservation biology, including conservation ethics and management issues. Laboratories will include discussion of case studies, introduction to software applicable to conservation biology, presentations by regional conservation practitioners, and visits to relevant field sites.

BIOL 507 The Pharmacology and Neurobiology of How Recreational Drugs Work (3 Credit Hours)

This course in drug use and abuse is designed to distinguish between drug use and drug abuse as well as provide pharmacological knowledge of how recreational drugs work. Students will acquire knowledge regarding the abuse of prescription drugs, depressants, stimulants, hallucinogens, marijuana and inhalants. This information will be used to analyze pathophysiological conditions that can occur as a result of drug use and abuse.

Prerequisites: Background in cell biology

Pre- or corequisite: BIOL 508 recommended

BIOL 508 Introduction to Pharmacology (3 Credit Hours)

This is a general introductory course in pharmacology dealing with chemistry, general properties and pharmacological effects on various physiological systems, therapeutic usefulness and toxicities of drugs. The course is designed to prepare upper-level undergraduate and graduate students for more advanced courses in pharmacology.

BIOL 511 Zymology: Fermentation Science (4 Credit Hours)

This is an introductory course in the theory and practice of zymology (fermentation). Edible and potable products of fermentation (beer, wine, mead, yogurt, cheese) have been known since antiquity and play an important role in today's society. The science of fermentation touches on many biological disciplines, such as microbiology and biochemistry, and the study of yeasts has provided considerable foundation to the fields of cell biology and molecular biology. In this course, we will cover fundamentals of fermentation and its practical application to production of beer, one of the oldest beverages produced by humans.

Prerequisites: BIOL 293

BIOL 512 Plant Physiology (4 Credit Hours)

Discover the incredible secrets behind what makes our green friends tick. This course includes a traditional lecture covering the physiological and chemical processes occurring in plants. A laboratory, greenhouse, and/or field-oriented lab will provide hands-on opportunities to understand plant stress responses, nutrient use, cell metabolism-respiration, photosynthesis, hormones, and processes driving growth patterns.

BIOL 515 Marine Ecology (5 Credit Hours)

A lecture and laboratory course designed to introduce students to important ecological processes operating in coastal marine environments. The course covers synthetic topics as well as the ecology of specific marine habitats. The laboratory is designed to provide students with experience in marine research and the organisms and ecological conditions common in various marine habitats visited by the class.

Prerequisites: BIOL 291 and BIOL 331 and ENGL 211C or ENGL 221C or ENGL 231C must be passed with a grade of "C" or higher; instructor approval required

BIOL 516 Clinical Immunology (3 Credit Hours)

A description of common immunological problems seen in the clinic.

Prerequisites: Coursework in cell biology and immunology

BIOL 519 Wetland Plants (4 Credit Hours)

An exploration of the ecology of inland and coastal wetlands and their plants. This course emphasizes wetland and aquatic plant identification, field and laboratory methods, and core concepts important to wetland plants and their ecology. Linkages to wetland delineation and wetland adjacent systems will be made. Weekly field-based laboratories are expected to local wetlands focusing on hands on opportunities and research methods.

Prerequisites: A botany course

BIOL 520 Ichthyology (5 Credit Hours)

The biology of marine and freshwater fishes including morphology, physiology, evolution, distribution, ecology, and reproduction.

BIOL 522 Field Studies in Ornithology (4 Credit Hours)

A combined lecture and field study of birds with emphasis on identification, behavior, and field methods. Extensive field trips, including at least one weekend, are taken.

BIOL 523 Cellular and Molecular Biology (3 Credit Hours)

The molecular organization of eukaryotic cells is presented along with cell evolution, molecular genetics, the internal organization of the cell and the behavior of cells in multicellular organisms.

Prerequisites: course background in cell biology and genetics or permission of the instructor

BIOL 524 Comparative Animal Physiology (5 Credit Hours)

An introduction to the basic mechanisms by which different animals function. How organisms acquire and use energy, regulate their internal environment, circulate and exchange gases and wastes, receive and conduct information about their environment, and move and use muscles will be some of the topics covered. Emphasis will be on how organisms make changes in these basic mechanisms to deal with different environmental conditions.

BIOL 525 Cancer Biology (3 Credit Hours)

This course will examine how mutation leads to altered gene products and expression, subverted cell activity, cell immortalization, and tumor formation. Students will explore the differences between benign tumors and malignant tumors as well as the factors involved in malignancy. The course will conclude with the exploration of current cancer therapy.

Prerequisites: Cell Biology and Genetics courses

BIOL 526 Histology (5 Credit Hours)

The structure and function of cells, tissues and organs at both the light microscopic and ultrastructural levels.

BIOL 530 Microbial Pathogenesis (3 Credit Hours)

Examination of bacterium-host interactions with an emphasis on how bacteria cause disease, particularly the means by which the bacterium is able to circumvent host defense mechanisms

Prerequisites: microbiology course

BIOL 535 Marine Conservation Biology (3 Credit Hours)

This highly interdisciplinary science of conserving marine biodiversity will be taught through a review of old and new literature. This will include its history, marine ecology related to conservation biology, threats to marine biodiversity, assessment of extinction risk, conservation challenges of marine habitats and regions, and methods for conserving marine biodiversity.

BIOL 536 Infectious Disease Epidemiology (3 Credit Hours)

This lecture/lab course will focus on concepts related to the spread and control of infectious diseases. The lectures will focus on concepts while the labs will provide quantitative skills essential to the study of infectious diseases.

Prerequisites: Undergraduate coursework in statistics and biology

BIOL 537 One Health: People, Animals and the Environment (3 Credit Hours)

A course that examines the interdependence between human health, animal health and environmental health. The One Health approach to the threat of emerging infectious diseases includes understanding the interconnectedness of human and animal pathogens, epidemic zoonoses and corresponding environmental factors, insights into mechanisms of microbial evolution towards pathogenicity, new technologies and approaches towards disease surveillance, and political and bureaucratic strategies.

Pre- or corequisite: A Microbiology course is recommended

BIOL 540 Methods in Immunological Research (4 Credit Hours)

The major objective of this hands-on course is to prepare students to independently perform basic laboratory techniques, assays, and experiments commonly used in entry-level immunology laboratory positions. The course will cover theory, sample and reagent preparation, instrumentation, data analysis and interpretation, and applications in immunology. Several topics covered in-class include ELISAs, mammalian cell culture, and flow cytometry, however additional topics (such as confocal microscopy) will be covered using virtual technologies. This course is ideal for students who intend to pursue careers at the laboratory bench.

Prerequisites: microbiology laboratory course, immunology course

BIOL 541 Animal Behavior (5 Credit Hours)

Animal behavior with special attention to its evolution and ecological significance. Field and laboratory activities will emphasize observational and experimental techniques used to study behavior.

BIOL 544 Field Studies in Marine Biology (5 Credit Hours)

An intensive study abroad field course offered during the summer at a foreign marine laboratory where students will be engaged in lectures and field studies of coastal marine environments. Check with the Director of the Marine Biology Concentration Program for details.

Prerequisites: BIOL 331

BIOL 545 Community Ecology (3 Credit Hours)

The goal of this course is to introduce and evaluate both classical and emerging paradigms in community ecology. This will be achieved by examining those processes (biotic and abiotic) that structure ecological communities, and by exposing students to quantitative and theoretical aspects of these paradigms.

Prerequisites: Ecology course

BIOL 546 Comparative Biomechanics (3 Credit Hours)

The principles of fluid and solid mechanics will be applied to a variety of plant and animal systems to understand how organisms deal with the immediate physical world and its accompanying constraints. A diverse range of topics will be covered, including aerial flight in insects, wind resistance in trees, jet propulsion in squid, flow within blood vessels, forces on intertidal organisms, viscoelasticity in biological materials, and energy storage during terrestrial movement.

Prerequisites: Cell biology course and physics course recommended

BIOL 550 Principles of Plant Ecology (4 Credit Hours)

This course explores theoretical concepts in plant ecology through review of classical and cutting-edge literature and practice with field-based experimental design and statistical methods. This course emphasizes the structure, development, and processes that drive patterns in plant communities and the ecological communities they support. Weekly field-based laboratories involve hands-on experience and opportunities to explore field methods in ecological research.

BIOL 551 Bioinformatics and Genomics I (4 Credit Hours)

The application of computer science to biology has led to major breakthroughs in the ability to read and understand the code written in genomes. This course will give students the skills to participate in the computational revolution in biology. The course will give students hands-on experience in writing simple yet powerful computer programs in the Python programming language and making beautiful data visualizations in the R programming language. Students will also learn how to combine existing pieces of bioinformatics software for their own workflows.

Prerequisites: background in introductory-level biology and permission of the instructor

BIOL 552 Bioinformatics and Genomics II (4 Credit Hours)

The application of computer science to biology has led to major breakthroughs in the ability to read and understand the code written in genomes. This course will give students the skills to participate in the computational revolution in biology. The course will build on the knowledge of writing programs. Students will learn about some key techniques “under the hood” of software that have been critical to the genomics revolution. Topics will include: graph algorithms, evolutionary trees, probability models for DNA and protein sequences, and an introduction to deep learning in biology.

Prerequisites: BIOL 551 or permission of the instructor

BIOL 553 Molecular Ecology (4 Credit Hours)

This course will explore the biology of organisms by using molecular (nucleic acid and/or protein) techniques and data. It covers a wide variety of subdisciplines within Biology, including genetics, physiology, ecology, and evolution. This course will explore basic theory in population genetics, ecology, and evolution and cover DNA, RNA, and Protein techniques and their application to biological research.

BIOL 554 Research in Pathogen Biology I: Laboratory Investigation (4 Credit Hours)

This is the first course of a two-semester laboratory and analysis sequence that is designed to provide a genuine research experience for students. Students will design a novel research question in pathogen biology, then use modern laboratory techniques such as polymerase chain reaction and next-generation DNA sequencing to examine this question and test hypotheses. Data generated in this course will be analyzed in the second course in the series, BIOL 555. Data and analyses generated during these courses may be used for publication in scientific journals.

Prerequisites: BIOL 294

BIOL 555 Research in Pathogen Biology II: Analysis (4 Credit Hours)

This is the second course of a two-semester laboratory and analysis sequence that is designed to provide a genuine research experience for students. In this semester, students will analyze data generated during the previous semester in BIOL 554. Modern methods of data analysis will be used, including statistical and bioinformatics techniques. Data and analyses generated during these courses may be used for publication in scientific journals.

Prerequisites: BIOL 294; BIOL 554 preferred

BIOL 557 General Virology (3 Credit Hours)

A basic course covering the history of virology, viral taxonomy, genetics, and the molecular biology and host responses to the major mammalian virus groups. Examples of recent impacts of viruses on human health such as influenza pandemics will also be covered.

Prerequisites: courses in cell biology and genetics

BIOL 560 Frontiers in Nanoscience and Nanotechnology (1 Credit Hour)

Review of the structure, synthesis and properties of key nano-materials and their impact on living systems.

Prerequisites: graduate standing

BIOL 561 Human Cadaver Dissection (5 Credit Hours)

Students will dissect a human cadaver fully and learn all of the major structures. The course will be divided into three sections: backs and limbs, TAP (thorax, abdomen and pelvis), and head and neck. Instructor demonstrations include brain removal and dissection.

Prerequisites: BIOL 241 or BIOL 251, or its equivalent, must be passed with a grade of C (2.0) or higher

BIOL 562 Microbial Genetics (3 Credit Hours)

This course emphasizes the fundamental concepts of microbial genetics including the study of gene structure, gene regulation, operons, DNA replication, RNA biology, protein synthesis, plasmid biology, mobile genetic elements, and recombinant DNA technology.

Prerequisites: Courses in cell biology, genetics and general microbiology

BIOL 563 Cell Signaling in Host Pathogen Interactions (3 Credit Hours)

This course will emphasize cell dynamics including host and pathogen induced cellular signaling, the regulation of actin cytoskeleton rearrangement, and the modulation of host transcription and translation by different pathogens.

Prerequisites: A cell biology course

BIOL 564 Biomedical Applications of Low Temperature Plasmas (3 Credit Hours)

This course is cross listed between ECE and Biology. It is intended for senior undergraduate students and first year graduate students. The course contents are multidisciplinary, combining materials from engineering and the biological sciences. The course covers an introduction to the fundamentals of non-equilibrium plasmas, low temperature plasma sources, and cell biology. This is followed by a detailed discussion of the interaction of low temperature plasma with biological cells, both prokaryotes and eukaryotes. Potential applications in medicine such as wound healing, blood coagulation, sterilization, and the killing of various types of cancer cells will be covered.

BIOL 565 Biotechnology (3 Credit Hours)

This course provides an overview of how microbes are manipulated to solve practical problems through biotechnology. Topics to be covered include basic concepts in microbial technology, industrial microbiology, microbes in drug development, food microbiology, microbial interactions, gut microbiota, and metagenomics.

BIOL 566 Introduction to Mitigation and Adaptation (3 Credit Hours)

Students will be introduced to the science underpinning mitigation of human-induced changes in the Earth system, including but not limited to climate change and sea level rise, and adaptation to the impacts of these changes. The course will cover the environmental hazards and the opportunities and limitations for conservation, mitigation and adaptation. Cross listed with OEAS 566.

BIOL 567 Sustainability Leadership (3 Credit Hours)

In this class, students will discover what makes a leader for sustainability. They will consider a range of global and local crises from a leadership point of view in the context of sustainability science, which addresses the development of communities in a rapidly changing social, economic, and environmental system-of-systems environment. The course will be based on taking a problem-motivated and solution-focused approach to the challenges considered. The course includes a service learning project focusing on a leadership experience in solving a real-world environmental problem.

Prerequisites: BIOL 566 or OEAS 566

BIOL 570 Diseases that Changed our World (3 Credit Hours)

Despite advancements in the development of antimicrobials and vaccines and in securing clear water and food supplies, modern civilizations are not immune to epidemic diseases. This course will provide insight into the role of different technologies in the struggle to attain disease control and eradication and explore the challenge of forecasting emerging plagues, describing the nature and evolution of diseases and conveying their significance in shaping Western culture and civilization, their impact, their consequences, their costs, and the lessons learned.

BIOL 571 Marine Vertebrate Ecology, Management & Conservation (3 Credit Hours)

Course will explore the biology, diversity and major life history patterns of a suite of marine megafauna, including sea turtles, marine mammals, seabirds and sharks. Students will determine the major drivers behind large-scale declines of many marine megafauna species and be challenged to understand and attempt to solve conservation and management issues.

Prerequisites: A Marine Biology course

BIOL 575 Neurobiology (3 Credit Hours)

This course will focus on understanding brain structure as well as the morphology and function of the central nervous system in general. Fundamental processes such as neuron morphogenesis, guidance, polarity, migration, and growth cone motility will be emphasized. The cellular and molecular basis of neurological disorders also will be discussed.

Prerequisites: BIOL 250 or BIOL 293 must be passed with a grade of "C" or higher or permission of instructor

BIOL 576 Cancer Immunology and Immunotherapy (3 Credit Hours)

Introduction to the immune system, tumor antigens, immunosuppressive cells and molecules, and cancer immunotherapy treatment approaches.

Prerequisites: BIOL 123N, BIOL 124N, and BIOL 293 (Cell Biology), or equivalent undergraduate coursework or permission of the instructor

BIOL 578 Microbial Ecology (3 Credit Hours)

Study of the interactions between microorganisms, particularly bacteria, and their environment. Emphasis is placed on nutrient cycling and the influence of microbes on global mineral dynamics. The effects of physical and chemical factors on distribution and activity of microbes in their environments and applications of these interactions are studied (biotechnology).

Prerequisites: a general microbiology course

BIOL 579 Microbial Ecology Laboratory (1 Credit Hour)

A laboratory for measurement of microbial numbers and activity in natural environments.

Pre- or corequisite: BIOL 578

BIOL 581 Forensic and Medical Entomology (5 Credit Hours)

This course provides a comprehensive survey of the insects used in legal investigations and medically important insects. Topics covered include the taxonomy, morphology, physiology, reproductive and developmental biology, and ecology of these insects along with the diseases they may vector. Research techniques in forensic and medical entomology will be learned through both field and laboratory activities.

BIOL 582 Human and Veterinary Parasitology (3 Credit Hours)

The course will emphasize the principles of parasitism, including biology, physiology, genetics, morphology, and phylogeny of the major parasitic groups with a specific focus on the significant parasites of humans and animals of veterinary importance. The general biology of parasites including their life cycles, diagnosis, and treatment will be included as well.

Pre- or corequisite: A cell biology course

BIOL 590 Advanced Human Physiology (4 Credit Hours)

All major physiological systems with emphasis on normal physiology. Some clinical applications made but not stressed.

BIOL 596 Topics in Biological Sciences (1-4 Credit Hours)

A structured specialty course for students at the senior level. Courses may include lecture and laboratory components.

Prerequisites: Permission of the instructor

BIOL 598 Independent Study in Biology (1-3 Credit Hours)

Supervised (non-lab/field) project selected to suit the needs of the individual student. Requires completion of formal scientific paper documented with appropriate primary technical literature (see GPD for details). Unstructured course.

Prerequisites: permission of the GPD and permission of instructor

BIOL 609 Special Readings in Biology (3 Credit Hours)

Reading and discussion course designed to explore a field of specific interest.

BIOL 640 Microbial Toxins (3 Credit Hours)

This course will focus on the mechanisms of action of microbial toxins, including those affecting the host's nervous system, immune function, metabolism, protein synthesis, and homeostasis. The structure and function of representatives of several toxin types will be analyzed for their potential applications to biotechnology and medicine.

Prerequisites: A general microbiology course required and a microbial pathogenesis course recommended

BIOL 661 Topics in Biology (1-3 Credit Hours)

Supervised projects and practica selected to meet the specific objectives of the student.

BIOL 669 Internship in Biology (3 Credit Hours)

With approval of Advisory Committee.

BIOL 671 Molecular and Immunological Techniques (4 Credit Hours)

A lab-intensive course emphasizing current methods in molecular biology.

BIOL 695 Topics in Biology (1-3 Credit Hours)

A specially designed course concerning specific topics in the biological, environmental or allied health fields.

BIOL 698 Research in Biology (1-9 Credit Hours)

Supervised research.

BIOL 699 Thesis (1-3 Credit Hours)

This course is selected with the recommendation of the faculty advisor.

BIOL 700 Cardiovascular Physiology (4 Credit Hours)

This physiology course will focus solely on cardiovascular physiology. Lectures will focus on basic and advance cardiovascular principles. The laboratory will focus on the use of current cardiovascular research.

BIOL 701 Practical Computing for Biology (3 Credit Hours)

This hands-on training course emphasizes the use of general computing tools to work more effectively in the biological sciences. It integrates a broad range of powerful and flexible tools that are applicable to ecologists, molecular biologists, physiologists, and anyone who has struggled analyzing large or complex data sets. Text file manipulation with regular expressions, basic shell scripting, programming in Python and R, interaction with remote devices, and basic graphical concepts will be reviewed.

BIOL 702 Biomedical Sciences Journal Club (1 Credit Hour)

Review and discussion of current papers in the areas of biomedical sciences. Student presentation, discussions and readings in this field required.

BIOL 703 Advanced Genomics Data Analysis (3 Credit Hours)

This course is designed to teach students the various steps involved in analyzing next-generation sequencing data for gene expression profiling and polymorphism identification and analyses. The class will follow a workshop setting with a combination of lectures, paper discussions, and instructor and student led programming sessions.

BIOL 704 Animal Ecophysiology (3 Credit Hours)

This course integrates the physiological and biochemical function of wild animals with population-scale and community-scale ecological patterns. Both organismal mechanisms and comprehensive theories will be included. The course primarily draws on peer-reviewed literature and includes lecture and discussion.

BIOL 705 Advanced Microbiology (3 Credit Hours)

Investigate microbiology from historical perspectives to modern molecular microbiology; ecological and biomedical components; bacteria and viruses. Discussions will include how to design experiments and evaluate results.

Prerequisites: A microbiology course

BIOL 706 Core Concepts in Biology (3 Credit Hours)

This course is designed to equip students with core concepts and fundamental skill sets for all sub-disciplines in the biological sciences. Major topics will include evolutionary and ecological processes, foundational concepts in comparative physiology, cellular biology, microbiology, immunology, genetics, advanced molecular biology, and the interrelatedness of the human, animal, and environmental domains. The course emphasizes the integration of topics and builds the analytical skills and conceptual framework that prepares students for advanced study and research in the biological sciences.

BIOL 707 Ecosystem Ecology (5 Credit Hours)

Ecological principles at ecosystem level of biological organization. Discussion of energy flow, nutrient cycling, ecosystem stability and ecosystem modeling. Laboratory involves field trips and methods of measuring ecosystem parameters.

Prerequisites: a general ecology course

BIOL 708 Biology Seminar (1 Credit Hour)

This graduate seminar offers a dynamic exploration of the biological sciences through a rotating roster of faculty presenting diverse topics. Participants will engage in discussions of contemporary research papers, receive training in science communication and career development, and/or analyze seminal texts that have shaped the field.

BIOL 709 Current Issues in Biology (1 Credit Hour)

The course is a weekly lecture series of invited external and internal experts in Biology that will highlight the broad nature of biology research. Students will achieve a comprehensive understanding of biology through reinforcement of key fundamental concepts and exposure to a wide range of sub-disciplines.

BIOL 710 Advanced Cell Biology (3 Credit Hours)

This course will cover selected current topics in cell biology that reflect recent advances in the field. Major topics include membranes and transport, signal transduction, cell adhesion and motility, cell cycle, apoptosis, and specialized cell functions. Students will read current research papers that describe the latest innovations in microscopic and molecular analysis of cellular function. This course is built on previous coursework in cell biology by reinforcing key fundamental concepts and performing a more in-depth examination of cellular mechanisms.

Prerequisites: Course background in cell biology recommended

BIOL 711 Advanced Skills in Biology (2 Credit Hours)

This course provides hands-on training in cutting-edge methodologies for biological sciences research. Students will engage in supervised laboratory or field exercises, depending on their disciplinary focus, mastering advanced techniques, instrumentation, and data collection methodologies. By applying these methods to real research problems, this course aims to bridge theoretical knowledge with practical application, preparing students to contribute effectively to the advancement of biological research.

BIOL 712 Biological Microscopy (4 Credit Hours)

Lectures will cover theory and concepts of specimen preparation and operation of various microscopes used in the biological sciences. The laboratory experience will include specimen preparation to viewing.

Prerequisites: permission of the instructor

BIOL 713 Biology Education and Teaching (1 Credit Hour)

This graduate-level course is designed to prepare future faculty for effective teaching in the biological sciences at the university level. Students will explore pedagogical theories and practices specifically tailored for higher education, focusing on instructional strategies, assessment methods, and curricular design principles that foster student engagement and success. Through a combination of theory and hands-on applications, participants will critically examine the integration of technology, inclusivity, and active learning techniques in university classrooms. Emphasis will be placed on developing reflective teaching practices that empower future faculty to inspire and mentor the next generation of scientists

BIOL 714 Biomedical Sciences Laboratory (2 Credit Hours)

Three laboratory rotations (6 credits) are required by the curriculum.

Prerequisites: approval of the program director

BIOL 715 Biomedical Sciences Laboratory (2 Credit Hours)

BIOL 716 Endocrinology (5 Credit Hours)

The biochemical integration of hormones and related agents on vertebrate physiology with emphasis on human endocrinology. Recent literature will be stressed.

BIOL 720 Systematic Ichthyology (3 Credit Hours)

A systematic survey of fishes emphasizing life history, anatomy, identification and classification.

Prerequisites: BIOL 520

BIOL 724 Neuromuscular Physiology (3 Credit Hours)

This course will provide a comprehensive discussion of the physiological and chemical properties of nerve and muscle cells.

BIOL 730 Emerging Infectious Diseases (3 Credit Hours)

Discussion on current studies into new and reemerging infectious diseases with an examination of the infectious agent and factors involved in disease emergence, prevention and elimination.

Prerequisites: A microbiology course

BIOL 731 Systematics and Speciation (3 Credit Hours)

Principles of systematic biology and discussion of speciation theory, with emphasis on generation, analysis, and interpretation of taxonomic data and application of these data to a better understanding of classification and speciation processes. Modern theories of evolutionary biology and phylogenetics will be stressed. A research paper is required.

BIOL 732 GIS in the Life Sciences (3 Credit Hours)

This course is designed to introduce students to geographic information systems through examples and applications in the life sciences.

BIOL 737 Advanced One Health (3 Credit Hours)

One Health is a concept that stresses the interconnectedness of human, animal, and environmental/ecosystem health and seeks an integrative approach to human and animal health issues. The concept provides a framework for examining complex health issues such as vector-borne and emerging infectious diseases, antimicrobial resistance, and food safety and security. In our globalized world, new approaches to preventing, treating, and controlling diseases are urgently needed as emerging diseases are increasing in frequency due to interconnected ecosystems and the close connections between humans and animals.

Prerequisites: An introductory One Health course (BIOL 437W or BIOL 537 or equivalent)

BIOL 740 Vaccinology (3 Credit Hours)

This course will explore a broad range of concepts important to the field of vaccinology. Primary literature will be used to discuss vaccine development topics such as vaccine design and production, delivery methods, adjuvants, One Health, and zoonotic vaccines. HIV, TB, malaria, influenza, and parasite vaccines will be included.

BIOL 745 Advanced Immunology (3 Credit Hours)

Current concepts in cellular and molecular immunology and host defense based on critical review of the primary literature.

BIOL 747 Responsible and Ethical Conduct of Research (3 Credit Hours)

Required of all graduate students admitted to Biology programs. The course will introduce students to the responsible conduct of science and scientific research.

BIOL 748 Functional Genomics and Proteomics in Animal Models (3 Credit Hours)

The purpose of this course is to show how animal models of human diseases can be created and analyzed using genomic and proteomic technologies. The course will overview high throughput methods of generating disease models in mice and describe ongoing efforts in this field. Attempts to identify molecular mechanisms of the disease will be presented with particular emphasis on drug target discovery.

Pre- or corequisite: An immunology course

BIOL 749 Biogeography (3 Credit Hours)

Emphasis on historical biogeography, utilizing both dispersal and vicariance models for explanations of the geographic distribution of organisms. Ecological explanations are also considered. Useful techniques for biogeographic analyses, such as comparison of area cladograms are discussed at length.

BIOL 750 Marine Benthic Ecology (4 Credit Hours)

Application of ecological principles at the community level to marine benthic environments. Discussion of community structure, animal-sediment relationships, roles of benthic communities in marine ecosystems.

Prerequisites: BIOL 515 or equivalent

BIOL 754 Phylogeny and Molecular Lecture and Laboratory (5 Credit Hours)

This course is intended to be an introduction to the processes and procedures used to reconstruct the evolutionary history of living organisms. Topics include project planning, sampling strategies, molecular techniques, and analytical and tree-building programs used to infer phylogeny. Lab provides computer experience in multiple phylogenetic software packages.

Prerequisites: Instructor approval required

BIOL 755 Molecular Genetics (3 Credit Hours)

Current molecular understanding of genetic processes will be reviewed. Applications to areas such as development and evolution will also be covered.

BIOL 756 Phylogeny and Molecular Systematics (5 Credit Hours)

This course is intended to be an introduction to the processes and procedures used to reconstruct the evolutionary history of living organisms. Topics include project planning, sampling strategies, molecular techniques, and analytical and tree-building programs used to infer phylogeny. Lab provides computer experience in multiple phylogenetic software packages.

BIOL 757 Statistics in Biology (4 Credit Hours)

Both a refresher course and an introduction to commonly used modern statistical methods for graduate students in Biology. The focus is on application and hypothesis testing with examples drawn from the field of biology. The course requires a substantial amount of homework and self-initiative outside the classroom.

Prerequisites: course background in statistics

BIOL 758 Molecular Ecology (4 Credit Hours)

Scientists are increasingly using molecular methods to help them address fundamental questions in the population ecology and evolution of biological species. This class will introduce graduate students to the basic concepts and methods in molecular evolution, phylogenetics and methods into their research. Theory and concepts from lecture will be illustrated through reading and discussion of current scientific literature. Students will also directly apply the course material to a class project investigating population structure of marine species from the tropical Indo-Pacific, for which they will be trained in methods of DNA extraction, PCR and sequencing. They will present their results orally in a mini-symposium at the end of the course.

Prerequisites: BIOL 671

BIOL 759 Foundations and Principles in Ecology (3 Credit Hours)

A survey of the seminal ideas and perspectives in historical and contemporary ecology. The course is designed to provide a broad overview of the important theoretical and conceptual paradigms in ecology.

BIOL 762 Restoration Ecology (3 Credit Hours)

This course will cover the field of environmental restoration guided by ecological theory and empirical research and connects with many broad themes in ecology, including physiology, genomics, biodiversity, conservation, species dispersal and migration, and population dynamics. This course will cover underlying principles guiding successful restoration, foundational and recent empirical research in this field, and restoration policies and practice.

BIOL 770 Advanced Study in Biology (3 Credit Hours)

Under the guidance of members of the graduate faculty and with the approval of the program track coordinator, the student will carry out in-depth studies of selected topics relevant to the area of specialization. Extensive surveys and analyses of the literature. Written reviews, comprehensive and synoptic, and oral presentations are required of each student.

BIOL 771 Vector-Borne Diseases (3 Credit Hours)

Study of the role of insects, ticks and other invertebrates in the transmission of disease. Different areas of disease transmission will be examined, including physiological and biochemical aspects of microbial survival in the vector and transmission to vertebrate hosts, as well as ecological aspects.

BIOL 772 Modeling and Simulation in the Life Sciences (4 Credit Hours)

Course is designed to introduce students to modeling and simulation techniques using examples and applications in the life sciences.

BIOL 775 Grant Writing in Biology (3 Credit Hours)

Provides students with the skills to write competitive grant proposals to both private and federal funding sources (emphasis on NIH and NSF). Students will learn how to find the most appropriate funding mechanisms and how to position themselves to be competitive. Different grant writing formats will be illustrated through proposal development projects.

BIOL 781 Autoimmunity and Transplantation (3 Credit Hours)

Major research advances in immunology have resulted in substantially increasing the understanding of the molecular and cellular basis of autoimmune diseases and transplantation. The course will focus on these new advances to improve the understanding of these diseases. Topics will include a brief review of the immune system; multiple sclerosis, arthritis and other immune diseases; and the molecular and cellular basis of transplantation and chronic rejection of organ grafts.

Prerequisites: course background in cell biology and immunology recommended

BIOL 789 Gross Anatomy (6 Credit Hours)

An intense study of all systems from a regional approach. Extensive dissections required in lab. Clinical applications utilized.

Prerequisites: An anatomy course recommended

BIOL 795 Special Topics in Biology (1-4 Credit Hours)

Study of special topics.

Prerequisites: permission of the instructor

BIOL 800 Cardiovascular Physiology (4 Credit Hours)

This physiology course will focus solely on cardiovascular physiology. Lectures will focus on basic and advance cardiovascular principles. The laboratory will focus on the use of current cardiovascular research.

BIOL 801 Practical Computing for Biology (3 Credit Hours)

This hands-on training course emphasizes the use of general computing tools to work more effectively in the biological sciences. It integrates a broad range of powerful and flexible tools that are applicable to ecologists, molecular biologists, physiologists, and anyone who has struggled analyzing large or complex data sets. Text file manipulation with regular expressions, basic shell scripting, programming in Python and R, interaction with remote devices, and basic graphical concepts will be reviewed.

BIOL 802 Biomedical Sciences Journal Club (1 Credit Hour)

Review and discussion of current papers in the areas of biomedical sciences. Student presentation, discussions and readings in this field required.

BIOL 803 Advanced Genomics Data Analysis (3 Credit Hours)

This course is designed to teach students the various steps involved in analyzing next-generation sequencing data for gene expression profiling and polymorphism identification and analyses. The class will follow a workshop setting with a combination of lectures, paper discussions, and instructor and student led programming sessions.

BIOL 804 Animal Ecophysiology (3 Credit Hours)

This course integrates the physiological and biochemical function of wild animals with population-scale and community-scale ecological patterns. Both organismal mechanisms and comprehensive theories will be included. The course primarily draws on peer-reviewed literature and includes lecture and discussion.

BIOL 805 Advanced Microbiology (3 Credit Hours)

Investigate microbiology from historical perspectives to modern molecular microbiology; ecological and biomedical components; bacteria and viruses. Discussions will include how to design experiments and evaluate results.

Prerequisites: A microbiology course

BIOL 806 Core Concepts in Biology (3 Credit Hours)

This course is designed to equip students with core concepts and fundamental skill sets for all sub-disciplines in the biological sciences. Major topics will include evolutionary and ecological processes, foundational concepts in comparative physiology, cellular biology, microbiology, immunology, genetics, advanced molecular biology, and the interrelatedness of the human, animal, and environmental domains. The course emphasizes the integration of topics and builds the analytical skills and conceptual framework that prepares students for advanced study and research in the biological sciences.

BIOL 807 Ecosystem Ecology (5 Credit Hours)

Ecological principles at ecosystem level of biological organization. Discussion of energy flow, nutrient cycling, ecosystem stability and ecosystem modeling. Laboratory involves field trips and methods of measuring ecosystem parameters.

Prerequisites: a general ecology course

BIOL 808 Biology Seminar (1 Credit Hour)

This graduate seminar offers a dynamic exploration of the biological sciences through a rotating roster of faculty presenting diverse topics. Participants will engage in discussions of contemporary research papers, receive training in science communication and career development, and/or analyze seminal texts that have shaped the field.

BIOL 809 Current Issues in Biology (1 Credit Hour)

The course is a weekly lecture series of invited external and internal experts in Biology that will highlight the broad nature of biology research. Students will achieve a comprehensive understanding of biology through reinforcement of key fundamental concepts and exposure to a wide range of sub-disciplines.

BIOL 810 Advanced Cell Biology (3 Credit Hours)

This course will cover selected current topics in cell biology that reflect recent advances in the field. Major topics include membranes and transport, signal transduction, cell adhesion and motility, cell cycle, apoptosis, and specialized cell functions. Students will read current research papers that describe the latest innovations in microscopic and molecular analysis of cellular function. This course is built on previous coursework in cell biology by reinforcing key fundamental concepts and performing a more in-depth examination of cellular mechanisms.

Prerequisites: Course background in cell biology is recommended

BIOL 811 Advanced Skills in Biology (2 Credit Hours)

This course provides hands-on training in cutting-edge methodologies for biological sciences research. Students will engage in supervised laboratory or field exercises, depending on their disciplinary focus, mastering advanced techniques, instrumentation, and data collection methodologies. By applying these methods to real research problems, this course aims to bridge theoretical knowledge with practical application, preparing students to contribute effectively to the advancement of biological research.

BIOL 812 Biological Microscopy (4 Credit Hours)

Lectures will cover theory and concepts of specimen preparation and operation of various microscopes used in the biological sciences. The laboratory experience will include specimen preparation to viewing.

Prerequisites: permission of the instructor

BIOL 813 Biology Education and Teaching (1 Credit Hour)

This graduate-level course is designed to prepare future faculty for effective teaching in the biological sciences at the university level. Students will explore pedagogical theories and practices specifically tailored for higher education, focusing on instructional strategies, assessment methods, and curricular design principles that foster student engagement and success. Through a combination of theory and hands-on applications, participants will critically examine the integration of technology, inclusivity, and active learning techniques in university classrooms. Emphasis will be placed on developing reflective teaching practices that empower future faculty to inspire and mentor the next generation of scientists.

BIOL 814 Biomedical Sciences Laboratory (2 Credit Hours)

Three laboratory rotations (6 credits) are required by the curriculum.

Prerequisites: approval of the program director

BIOL 816 Endocrinology (5 Credit Hours)

The biochemical integration of hormones and related agents on vertebrate physiology with emphasis on human endocrinology. Recent literature will be stressed.

BIOL 820 Systematic Ichthyology (3 Credit Hours)

A systematic survey of fishes emphasizing life history, anatomy, identification and classification.

Prerequisites: BIOL 520

BIOL 824 Neuromuscular Physiology (3 Credit Hours)

This course will provide a comprehensive discussion of the physiological and chemical properties of nerve and muscle cells.

BIOL 830 Emerging Infectious Diseases (3 Credit Hours)

Discussion on current studies into new and reemerging infectious diseases with an examination of the infectious agent and factors involved in disease emergence, prevention and elimination.

Prerequisites: A microbiology course

BIOL 831 Systematics and Speciation (3 Credit Hours)

Principles of systematic biology and discussion of speciation theory, with emphasis on generation, analysis, and interpretation of taxonomic data and application of these data to a better understanding of classification and speciation processes. Modern theories of evolutionary biology and phylogenetics will be stressed. A research paper is required.

BIOL 832 GIS in the Life Sciences (3 Credit Hours)

This course is designed to introduce students to geographic information systems through examples and applications in the life sciences.

BIOL 837 Advanced One Health (3 Credit Hours)

One Health is a concept that stresses the interconnectedness of human, animal, and environmental/ecosystem health and seeks an integrative approach to human and animal health issues. The concept provides a framework for examining complex health issues such as vector-borne and emerging infectious diseases, antimicrobial resistance, and food safety and security. In our globalized world, new approaches to preventing, treating, and controlling diseases are urgently needed as emerging diseases are increasing in frequency due to interconnected ecosystems and the close connections between humans and animals.

Prerequisites: An introductory One Health course (BIOL 437W or BIOL 537 or equivalent)

BIOL 840 Vaccinology (3 Credit Hours)

This course will explore a broad range of concepts important to the field of vaccinology. Primary literature will be used to discuss vaccine development topics such as vaccine design and production, delivery methods, adjuvants, One Health, and zoonotic vaccines. HIV, TB, malaria, influenza, and parasite vaccines will be included.

BIOL 845 Advanced Immunology (3 Credit Hours)

Current concepts in cellular and molecular immunology and host defense based on critical review of the primary literature.

BIOL 847 Responsible and Ethical Conduct of Research (3 Credit Hours)

The course will introduce students to the responsible conduct of science and scientific research.

BIOL 848 Functional Genomics and Proteomics in Animal Models (3 Credit Hours)

The purpose of this course is to show how animal models of human diseases can be created and analyzed using genomic and proteomic technologies. The course will overview high throughput methods of generating disease models in mice and describe ongoing efforts in this field. Attempts to identify molecular mechanisms of the disease will be presented with particular emphasis on drug target discovery.

Pre- or corequisite: An immunology course

BIOL 849 Biogeography (3 Credit Hours)

Emphasis on historical biogeography, utilizing both dispersal and vicariance models for explanations of the geographic distribution of organisms. Ecological explanations are also considered. Useful techniques for biogeographic analyses, such as comparison of area cladograms are discussed at length.

BIOL 850 Marine Benthic Ecology (4 Credit Hours)

Application of ecological principles at the community level to marine benthic environments. Discussion of community structure, animal-sediment relationships, roles of benthic communities in marine ecosystems.

Prerequisites: BIOL 515 or equivalent

BIOL 854 Phylogeny and Molecular Lecture and Laboratory (5 Credit Hours)

This course is intended to be an introduction to the processes and procedures used to reconstruct the evolutionary history of living organisms. Topics include project planning, sampling strategies, molecular techniques, and analytical and tree-building programs used to infer phylogeny. Lab provides computer experience in multiple phylogenetic software packages.

Prerequisites: Instructor approval required

BIOL 855 Molecular Genetics (3 Credit Hours)

Current molecular understanding of genetic processes will be reviewed. Applications to areas such as development and evolution will also be covered.

BIOL 856 Phylogeny and Molecular Systematics (5 Credit Hours)

This course is intended to be an introduction to the processes and procedures used to reconstruct the evolutionary history of living organisms. Topics include project planning, sampling strategies, molecular techniques, and analytical and tree-building programs used to infer phylogeny. Lab provides computer experience in multiple phylogenetic software packages.

BIOL 857 Statistics in Biology (4 Credit Hours)

Both a refresher course and an introduction to commonly used modern statistical methods for graduate students in Biology. The focus is on application and hypothesis testing with examples drawn from the field of biology. The course requires a substantial amount of homework and self-initiative outside the classroom.

Prerequisites: course background in statistics

BIOL 858 Molecular Ecology (4 Credit Hours)

Scientists are increasingly using molecular methods to help them address fundamental questions in the population ecology and evolution of biological species. This class will introduce graduate students to the basic concepts and methods in molecular evolution, phylogenetics and methods into their research. Theory and concepts from lecture will be illustrated through reading and discussion of current scientific literature. Students will also directly apply the course material to a class project investigating population structure of marine species from the tropical Indo-Pacific, for which they will be trained in methods of DNA extraction, PCR and sequencing. They will present their results orally in a mini-symposium at the end of the course.

Prerequisites: BIOL 671

BIOL 859 Foundations and Principles in Ecology (3 Credit Hours)

A survey of the seminal ideas and perspectives in historical and contemporary ecology. The course is designed to provide a broad overview of the important theoretical and conceptual paradigms in ecology.

BIOL 861 Ecological Sciences Internship (3-6 Credit Hours)

Internship experience.

Prerequisites: approval of advisory committee

BIOL 862 Restoration Ecology (3 Credit Hours)

This course will cover the field of environmental restoration guided by ecological theory and empirical research and connects with many broad themes in ecology, including physiology, genomics, biodiversity, conservation, species dispersal and migration, and population dynamics. This course will cover underlying principles guiding successful restoration, foundational and recent empirical research in this field, and restoration policies and practice.

BIOL 871 Vector-Borne Diseases (3 Credit Hours)

Study of the role of insects, ticks and other invertebrates in the transmission of disease. Different areas of disease transmission will be examined, including physiological and biochemical aspects of microbial survival in the vector and transmission to vertebrate hosts, as well as ecological aspects.

BIOL 872 Modeling and Simulation in Life Sciences (4 Credit Hours)

Course is designed to introduce students to modeling and simulation techniques using examples and applications in the life sciences.

BIOL 875 Grant Writing in Biology (3 Credit Hours)

Provides students with the skills to write competitive grant proposals to both private and federal funding sources (emphasis on NIH and NSF). Students will learn how to find the most appropriate funding mechanisms and how to position themselves to be competitive. Different grant writing formats will be illustrated through proposal development projects.

BIOL 880 Advanced Study in Biology (3 Credit Hours)

Under the guidance of members of the graduate faculty and with the approval of the program track coordinator, the student will carry out in-depth studies of selected topics relevant to the area of specialization. Extensive surveys and analyses of the literature. Written reviews, comprehensive and synoptic, and oral presentations are required of each student.

BIOL 881 Autoimmunity and Transplantation (3 Credit Hours)

Major research advances in immunology have resulted in substantially increasing the understanding of the molecular and cellular basis of autoimmune diseases and transplantation. The course will focus on these new advances to improve the understanding of these diseases. Topics will include a brief review of the immune system; multiple sclerosis, arthritis and other immune diseases; and the molecular and cellular basis of transplantation and chronic rejection of organ grafts.

Prerequisites: course background in cell biology and immunology recommended

BIOL 889 Gross Anatomy (6 Credit Hours)

An intense study of all systems from a regional approach. Extensive dissections required in lab. Clinical applications utilized.

Prerequisites: Anatomy and Physiology course

BIOL 890 Biomedical Doctoral Seminar (2 Credit Hours)

Doctoral students in the Biomedical Sciences program will attend seminars, learn how to properly give a seminar, and present a seminar on their own research.

BIOL 895 Special Topics in Biology (1-4 Credit Hours)

Study of special topics.

Prerequisites: permission of the instructor

BIOL 898 Research in Biology (1-9 Credit Hours)

Supervised research.

BIOL 899 Dissertation (1-6 Credit Hours)**BIOL 998 Master's Graduate Credit (1 Credit Hour)**

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

BIOL 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

BM - Biomedical Sciences (Medical Masters)

BM 501 Foundations of Disease (10 Credit Hours)

Foundations of Disease teaches foundational knowledge that provides the fundamental building blocks necessary to progress to subsequent organ system modules within the curriculum. This course covers molecular cell biology and biochemistry, the interaction of cells with their environment, including the structure and function of tissues, electrical activity in cellular function, autonomic physiology, and the basic principles of pharmacology.

BM 502 Introduction to Organ Systems (8 Credit Hours)

Introduction to Organ Systems represents the transition to organ system courses in the Care Forward Curriculum. Students will explore the histology, immunology, microbiology, pathology, physiology/pathophysiology, and pharmacology of the following – heme, musculoskeletal (muscle/bone), skin, and gastrointestinal organ systems. Integration is achieved across all major medical basic science disciplines, from normal anatomic and physiologic functions to abnormal disease states to relevant pharmacotherapy.

BM 503 Hormones (4 Credit Hours)

The Hormones course will enable students to acquire and apply knowledge of internal homeostasis/metabolism from basic science to clinical situations. Students will review the embryological and anatomical development of the endocrine system; they will acquire and apply physiological, pharmacological, and pathological knowledge necessary to prevent, evaluate, and treat metabolic, and endocrine disorders.

BM 519 Medical School Preparation 2.0 (3 Credit Hours)

This course will explore non-academic aspects of preparing for admission to and success in medical school. The students will develop communication skills by engaging in team-based activities and mock interviews. They will be introduced to clinical skills by participating in standardized patient encounters. Group activities will help students develop their professionalism and professional identity. Guest physician lecturers will enhance the students' knowledge of the practice of medicine.

BM 524 Medical School Preparation 1.0 (1 Credit Hour)

Medical School Prep will discuss the expectations of a medical student/physician, on overview of community engaged learning opportunities, and application preparation guidance. The 15 AAMC Core Competencies for medical school students will be reviewed, why they are important in a future career as a physician, and how one might display them through application materials. Students will also be instructed on how to participate in Community Engaged Learning, and an average of 40 hours each semester of engagement will be required. Finally, the MD and DO medical school applications will be reviewed, including personal statements and topics such as how to decide where to apply and budgeting for the application cycle will be discussed. Twice a semester reflections will be due covering topics such as characteristics of a good medical student/physician and resilience and wellness.

BM 525 Medical School Preparation 1.5 (1 Credit Hour)

Medical School Prep will discuss the expectations of a medical student/physician, on overview of community engaged learning opportunities, and application preparation guidance. The 15 AAMC Core Competencies for medical school students will be reviewed, why they are important in a future career as a physician, and how one might display them through application materials. Students will also be instructed on how to participate in Community Engaged Learning, and an average of 40 hours each semester of engagement will be required. Finally, the MD and DO medical school applications will be reviewed, including personal statements and topics such as how to decide where to apply and budgeting for the application cycle will be discussed. Twice a semester reflections will be due covering topics such as characteristics of a good medical student/physician and resilience and wellness.

BM 530 Foundational Science II (8 Credit Hours)

Foundational Science II is a 17-week module divided into four blocks. In the first block, molecular and cell biology will be reviewed. In block two, metabolism and cell signaling will be covered. In the third block, the interaction of cells with their environment will be explored, including the structure and function of tissues, electrical activity in cellular function, autonomic physiology and the basic principles of biostatistics and pharmacology will be introduced. In the final block of the module, a brief introduction to microorganisms will be provided and then learning the foundations of immunology. Together, the module will provide the foundational building blocks necessary to progress to subsequent modules in the curriculum.

BM 534 MCAT Preparation (4 Credit Hours)

The students will take an MCAT preparation course taught by Kaplan Test Prep during the spring of year 1. The faculty advisors and academic counselors will monitor students' progress in the course.

BM 536 Human Structure (7 Credit Hours)

The Human Structure course provides a comprehensive overview of clinically relevant human anatomy through a case-based, collaborative approach. The module describes the human body's form, structure, function, and development by recognizing typical variations and using these variations to describe and explain clinically relevant abnormalities. Students utilize critical thinking skills and then learn to integrate the anatomical sciences, and medical imaging while engaging with content that strongly emphasizes cultural humility, professionalism, and ethical behavior.

BME - Biomedical Engineering

BME 503 Introduction to Mathematical Modeling in Physiology (3 Credit Hours)

This course introduces model development and model formulation with differential equations in physiology. Students will learn how to use Matlab to solve differential equations and visualize their results. The physiological focus will be on cellular physiology, particularly ion channel dynamics and homeostasis.

Prerequisites: BIOL 240 or BIOL 250 and MATH 200 or MATH 205 or MATH 211

BME 504 Introduction to Biomaterials (3 Credit Hours)

This course will introduce the properties of biomedical materials used as implants, prostheses, orthosis, and tissue-engineered materials as medical devices in contact with tissues and organs. Biocompatibility, immunological responses, wound healing, clotting cascade, surface compatibility and characterization of materials used for implantable medical devices will be introduced. Other topics such as ethical considerations and medical device regulatory mechanisms will be presented.

Prerequisites: BIOL 240 or BIOL 250 and MATH 200 or MATH 205 or MATH 211

BME 505 Biomechanics (3 Credit Hours)

The purpose of this course is to achieve a broad overview of biomechanics, focused on the musculoskeletal system. Students will explore multiscale mechanics, including whole-body movement and mechanical properties of the structures in the musculoskeletal system. Additionally, students will survey the experimental methods and computational modeling techniques used in biomechanics research.

Prerequisites: BIOL 240 or BIOL 250, and MATH 212

BME 509 Introduction to Regenerative Medicine (3 Credit Hours)

This course will introduce fundamental knowledge in regenerative medicine including therapeutic applications of biomaterials, tissue and stem cell engineering, gene therapy and bioelectronics, with emphasis on structure-function relationships of biologic systems. In addition to lecture, students will have opportunities for group discussions and presentations on milestone work related to tissue regeneration. Students will leave with a thorough understanding of true mammalian regeneration, wound healing/repair processes, and medical device milestones as related to human tissue regeneration and repair.

Prerequisites: BIOL 240 or BIOL 250 and MATH 200 or MATH 205 or MATH 211

BME 530 Therapy and Function Models for Medical Simulation (3 Credit Hours)

This course introduces students to the main Modeling & Simulation models. (1) Anatomical modeling based on robust medical image segmentation and meshing methodologies. (2) A therapy model to determine the impact of a medical intervention by synthesizing the effect of a therapy on the patient's tissues. (3) A collision model, which interacts with anatomy and therapy models, is used for haptics-driven simulations. This course will also explore physiological simulation and the use of finite elements to model biomechanics.

Prerequisites: ECE 250 or CS 250 or CS 251 and CS 260 or equivalent

BME 554 Introduction to Bioelectronics (3 Credit Hours)

This course covers the electrical properties of cells and tissues as well as the use of electrical and magnetic signals and stimuli in the diagnosis and treatment of disease. Typical topics to be covered include basic cell physiology, endogenous electric fields in the body, electrocardiography, cardiac pacing defibrillation, electrotherapy, electroporation, electrotherapy in wound healing. In addition ultra-short electrical pulses for intracellular manipulation and the application of plasmas to biological systems will be covered.

BME 562 Introduction to Medical Image Analysis (3 Credit Hours)

Introduction to basic concepts in medical image analysis. Medical image registration, segmentation, feature extraction, and classification are discussed. Basic psychophysics, fundamental ROC analysis and FROC methodologies are covered. Cross-listed with ECE 562/MSIM 562.

BME 564 Biomedical Applications of Low Temperature Plasmas (3 Credit Hours)

This course is cross listed with ECE and Biology. It is designed to be taken by senior undergraduate students and first year graduate students. The course contents are multidisciplinary, combining materials from engineering and the biological sciences. The course covers an introduction to the fundamentals of non-equilibrium plasmas, low temperature plasma sources, and cell biology. This is followed by a detailed discussion of the interaction of low temperature plasma with biological cells, both prokaryotes and eukaryotes. Potential applications in medicine such as wound healing, blood coagulation, sterilization, and the killing of various types of cancer cells will be covered.

Prerequisites: Senior standing

BME 595 Topics in Biomedical Engineering (1-3 Credit Hours)

This course explores specialized topics in biomedical engineering, providing an in-depth study of emerging trends, technologies, and applications in the field. Topics may vary by semester and are designed to enhance students' understanding of cutting-edge developments in biomedical engineering.

Prerequisites: Departmental approval

BME 597 Independent Study in Biomedical Engineering (1-3 Credit Hours)

This course allows students to pursue independent research or study in biomedical engineering under the guidance of a faculty mentor. Students will explore specific areas of interest, develop problem-solving skills, and gain hands-on experience in a focused topic. A written report or presentation may be required as part of the course. Supervised and approved by the advisor.

Prerequisites: Departmental approval

BME 612 Digital Signal Processing I (3 Credit Hours)

This course covers fundamentals of digital signal processing. Topics include frequency domain analysis of discrete-time signals and linear systems, sampling and reconstruction of signals, the Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT), and digital filter design and implementations. Practical applications and examples will be discussed. Problem solving using MATLAB is required. Cross-listed with ECE 612.

Prerequisites: ECE 381 or equivalent

BME 695 Topics in Biomedical Engineering (3 Credit Hours)

This course will be offered as needed, depending upon the need to introduce special subjects to target specific areas of master's-level specializations in biomedical engineering.

BME 698 Master's Project (1-3 Credit Hours)

Individual project directed by the student's professor in major area of study.

BME 699 Master's Thesis (1-9 Credit Hours)

Directed research for the master's thesis.

Prerequisites: departmental approval

BME 700 Cardiovascular Physiology (4 Credit Hours)

This physiology course will focus solely on cardiovascular physiology. Lectures will focus on basic and advance cardiovascular principles. The laboratory will focus on the use of current cardiovascular research.

BME 702 Biomedical Sciences Journal Club (1 Credit Hour)

Review and discussion of current papers in the areas of biomedical sciences. Student presentation, discussions and readings in this field required.

BME 710 Advanced Cell Biology (3 Credit Hours)

This course will cover selected current topics in cell biology that reflect recent advances in the field. Major topics include membranes and transport, signal transduction, cell adhesion and motility, cell cycle, apoptosis, and specialized cell functions. Students will read current research papers that describe the latest innovations in microscopic and molecular analysis of cellular function. This course is built on previous coursework in cell biology by reinforcing key fundamental concepts and performing a more in-depth examination of cellular mechanisms.

Prerequisites: Course background in cell biology recommended

BME 711 Biological Mechanisms for Biomedical Engineers (3 Credit Hours)

This course is designed for students without a sufficient background in biology and physiology, providing them with the essential biological foundations needed for biomedical engineering. It equips students with a comprehensive understanding of biological and physiological systems, chemical building blocks of life (proteins, lipids, carbohydrates, nucleic acids), the structure and function of various human organs, cell structure and function, key concepts in cellular and molecular biology, molecular genetics and genetic engineering, human physiology relevant to biomedical applications, as well as pathophysiology and disease mechanisms. The course also introduces biological characterization techniques, such as cellular and molecular analyses and immunohistological characterization of tissues.

BME 712 Engineering Fundamentals in Biomedicine (3 Credit Hours)

This course introduces students without a sufficient engineering background to the essential mathematical and engineering principles needed for biomedical engineering. Students will build foundational knowledge in mathematical concepts and core engineering areas, such as mechanical and electrical engineering. This foundation will enable them to analyze, design, and implement engineering solutions to biomedical challenges. Emphasis is placed on problem-solving, critical thinking, and understanding the integration of engineering concepts within biological systems, equipping students with the insights needed for interdisciplinary work in biomedical engineering.

BME 714 Biomedical Sciences Laboratory (2 Credit Hours)

Three laboratory rotations (6 credits) are required by the curriculum.

Prerequisites: Approval of the Program Director

BME 720 Modern Biomedical Instrumentation (3 Credit Hours)

This course covers the design of modern biomedical instruments including select diagnostic, assistive, therapeutic, prosthetic, imaging, and virtual devices and systems. Techniques for mechanical, electrical, and chemical sensor and transducer design; stimulation and measurement; data acquisition; digital signal processing; and data visualization will be examined.

BME 721 Mathematical Modeling in Physiology (3 Credit Hours)

This course on mathematical modeling in human physiology emphasizes the development of mathematical models, their implementation, and the interpretation of simulation data. The course focuses on cellular physiology, including membrane channels, excitability, and calcium dynamics; it also covers intercellular communication and spatially distributed systems.

BME 726 Biomaterials (3 Credit Hours)

This course covers fundamental principles and properties of biomedical materials used as implants, prostheses, orthosis, and tissue-engineered materials as medical devices in contact with tissues and organs. Advanced concepts of biocompatibility and material characterization will be discussed. Physiological response factors associated with materials and implanted devices used in the human body will be presented, including immunological responses, wound healing, clotting cascade and surface compatibility. Other topics such as ethical considerations and medical device regulatory mechanisms will be discussed.

BME 730 Predoctoral Fellowship Grant Writing (1 Credit Hour)

This course is designed to guide predoctoral students through the process of developing and writing competitive fellowship grant applications. Students will work one-on-one with a mutually agreeable faculty mentor to identify funding opportunities, refine research proposals, and draft key components of their applications. Emphasis will be placed on understanding the expectations of funding agencies, writing clear and compelling narratives, and addressing reviewer criteria. By the end of the course, students may have a polished grant proposal.

BME 731 Finite Element Analysis (3 Credit Hours)

This course provides an understanding of the finite element method (FEM) as derived from an integral formulation perspective. It demonstrates the solutions of (1-D and 2-D) continuum mechanics problems such as solid mechanics, fluid mechanics and heat transfer. It also provides insight into the theoretical formulation and numerical implementation of finite element methods.

BME 740 Regenerative Medicine (3 Credit Hours)

This course explores the engineering principles and techniques applied to regenerative medicine. Topics include advanced engineering methods for scaffold development, material characterization techniques, and the evaluation of tissue-engineered constructs through in vitro and in vivo analysis. Students will gain a comprehensive understanding of how engineering tools are utilized to address challenges in regenerating tissues and organs, bridging the gap between biology and engineering in regenerative medicine.

Prerequisites: Either BIOL 240 or BIOL 250 and one of MATH 200 or MATH 205 or MATH 211

BME 741 Principles of Visualization (3 Credit Hours)

Well-designed graphical media capitalizes on human facilities for processing visual information and thereby improves comprehension, memory, inference, and decision making. This course teaches techniques and algorithms for creating effective visualizations based on principles and techniques from graphic design, visual art, perceptual psychology and cognitive science. Both users and developers of visualization tools and systems will benefit from this course.

BME 747 Responsible Conduct of Research (2 Credit Hours)

The course will introduce students to the responsible conduct of science and scientific research.

BME 751 Computational and Statistical Methods in Biomedical Engineering (3 Credit Hours)

This course covers the theoretical foundation and application of commonly used techniques in biomedical engineering. Topics include linear algebra, partial differential equations, regression analysis, applied probabilities, multivariate distributions, Bayesian statistics, hypothesis tests, multiple comparisons, ANOVA, solution of non-linear equations, numerical methods and optimization. Programming software will be used to perform simulations and analyze biomedical data.

Prerequisites: Graduate status

BME 754 Advanced Bioelectrics (3 Credit Hours)

Bioelectrics is a new field encompassing both the science and technology of applying electrical stimuli to biological systems. This course covers the pulsed power technology that is required to generate electrical stimuli as well as the biological responses they evoke in cells and tissues. Particular emphasis is placed on the medical applications of bioelectrics, including tumor ablation, gene electrotransfer, wound healing, decontamination with cold plasma, and treatment of cardiac arrhythmias.

Prerequisites: ECE 454 or ECE 554 or BIOE 454 or BIOE 554

BME 755 Biomembranes and Ion Channels (3 Credit Hours)

This course will give an overview of the structure and dynamics of biomembranes, the ion channels that are embedded in them, and the electrical properties of biomembranes. Topics include molecular dynamics modeling of biomembranes, membrane damage and repair, ion channel dynamics and their experimental assessment using patch clamping, and excitability in neurons and cardiomyocytes.

Prerequisites: ECE 454 or ECE 554 or BIOL 523

BME 760 Autonomous and Robotic Systems Analysis and Control (3 Credit Hours)

Kinematics, dynamics and control of complex non-linear electro-mechanical systems, particularly robotic manipulators.

BME 762 Applied Medical Image Analysis (3 Credit Hours)

Course explores hands-on exposure to state-of-the-art algorithms in medical image analysis, which builds on open-source software (Insight Segmentation and Registration Toolkit - ITK), as well as the principles of medical image acquisition in the modalities of clinical interest. Medical imaging modalities - X-rays, CT, and MRI/ITK image pipeline; image enhancement, feature detection; segmentation - basic techniques, feature-based classification and clustering, graph cuts, active contour and surface models; surface and volume meshing; registration - transformations, similarity criteria; shape and appearance models are all explored and discussed in this course.

Prerequisites: Knowledge of C++ and object-oriented programming

BME 770 Advanced Study in Biology (3 Credit Hours)

Under the guidance of members of the graduate faculty and with the approval of the program track coordinator, the student will carry out in-depth studies of selected topics relevant to the area of specialization. Extensive surveys and analyses of the literature. Written reviews, comprehensive and synoptic, and oral presentations are required of each student.

BME 775 Grant Writing in Biology (3 Credit Hours)

Provides students with the skills to write competitive grant proposals to both private and federal funding sources (emphasis on NIH and NSF). Students will learn how to find the most appropriate funding mechanisms and how to position themselves to be competitive. Different grant writing formats will be illustrated through proposal development projects.

BME 783 Digital Image Processing (3 Credit Hours)

Principles and techniques of two-dimensional processing of images. Concepts of scale and spatial frequency. Image filtering in spatial and transform domains. Applications include image enhancement and restoration, image compressing, biomedical imaging for diagnosis of disease, and image segmentation for computer vision.

Prerequisites: ECE 782 or ECE 882

BME 785 Advanced Manufacturing Technology (3 Credit Hours)

Treatment of the next generation of manufacturing technology. Topics include additive manufacturing; rapid prototyping; electronic manufacturing; micro and nanofabrication; process simulation; product life cycle management; and sustainable design and manufacturing.

Prerequisites: MAE 682 or permission of Program Director

BME 792 Biomechanics (3 Credit Hours)

The purpose of this course is to achieve a broad overview of biomechanics, focused on the musculoskeletal system. Students will explore multiscale mechanics, including whole-body movement and mechanical properties of the structures in the musculoskeletal system. Additionally, students will survey the experimental methods and computational modeling techniques used in biomechanics research.

Prerequisites: MATH 212 or equivalent

BME 794 Cellular Biomechanics (3 Credit Hours)

A broad introduction to the field of cellular biomechanics. Topics include overview of cell architecture, cytoskeleton, adhesion and molecular motors, biomolecular/biopolymer dynamics and mechanics, techniques to measure cell mechanical properties, techniques to mechanically stimulate cells, models of cell mechanical behavior, mechanobiology and mechanotransduction. Will include discussion of classic and current research articles. Course content will aim to cater to students with diverse backgrounds – students with biological science background will be exposed to physical science concepts and analysis; students with engineering/physical science background will be exposed to biological phenomena and concepts.

Pre- or corequisite: MATH 212

BME 795 Special Topics in Biomedical Engineering (1-3 Credit Hours)

Special courses covering selected graduate-level topics in biomedical engineering.

BME 797 Independent Study (1-3 Credit Hours)

This course allows students to develop specialized expertise by independent study (supervised by a faculty member).

Prerequisites: departmental approval

BME 800 Cardiovascular Physiology (4 Credit Hours)

This physiology course will focus solely on cardiovascular physiology. Lectures will focus on basic and advance cardiovascular principles. The laboratory will focus on the use of current cardiovascular research.

BME 802 Biomedical Sciences Journal Club (1 Credit Hour)

Review and discussion of current papers in the areas of biomedical sciences. Student presentation, discussions and readings in this field required.

BME 810 Advanced Cell Biology (3 Credit Hours)

This course will cover selected current topics in cell biology that reflect recent advances in the field. Major topics include membranes and transport, signal transduction, cell adhesion and motility, cell cycle, apoptosis, and specialized cell functions. Students will read current research papers that describe the latest innovations in microscopic and molecular analysis of cellular function. This course is built on previous coursework in cell biology by reinforcing key fundamental concepts and performing a more in-depth examination of cellular mechanisms.

Prerequisites: Course background in cell biology recommended

BME 811 Biological Mechanisms for Biomedical Engineers (3 Credit Hours)

This course is designed for students without a sufficient background in biology and physiology, providing them with the essential biological foundations needed for biomedical engineering. It equips students with a comprehensive understanding of biological and physiological systems, chemical building blocks of life (proteins, lipids, carbohydrates, nucleic acids), the structure and function of various human organs, cell structure and function, key concepts in cellular and molecular biology, molecular genetics and genetic engineering, human physiology relevant to biomedical applications, as well as pathophysiology and disease mechanisms. The course also introduces biological characterization techniques, such as cellular and molecular analyses and immunohistological characterization of tissues.

BME 812 Engineering Fundamentals in Biomedicine (3 Credit Hours)

This course introduces students without a sufficient engineering background to the essential mathematical and engineering principles needed for biomedical engineering. Students will build foundational knowledge in mathematical concepts and core engineering areas, such as mechanical and electrical engineering. This foundation will enable them to analyze, design, and implement engineering solutions to biomedical challenges. Emphasis is placed on problem-solving, critical thinking, and understanding the integration of engineering concepts within biological systems, equipping students with the insights needed for interdisciplinary work in biomedical engineering.

BME 814 Biomedical Sciences Laboratory (2 Credit Hours)

Three laboratory rotations (6 credits) are required by the curriculum.

Prerequisites: Approval of the Program Director

BME 820 Modern Biomedical Instrumentation (3 Credit Hours)

This course covers the design of modern biomedical instruments including select diagnostic, assistive, therapeutic, prosthetic, imaging, and virtual devices and systems. Techniques for mechanical, electrical, and chemical sensor and transducer design; stimulation and measurement; data acquisition; digital signal processing; and data visualization will be examined.

BME 821 Mathematical Modeling in Physiology (3 Credit Hours)

This course on mathematical modeling in human physiology emphasizes the development of mathematical models, their implementation, and the interpretation of simulation data. The course focuses on cellular physiology, including membrane channels, excitability, and calcium dynamics; it also covers intercellular communication and spatially distributed systems.

BME 826 Biomaterials (3 Credit Hours)

This course cover fundamental principles and properties of biomedical materials used as implants, prostheses, orthosis, and tissue-engineered materials as medical devices in contact with tissues and organs. Advanced concepts of biocompatibility and material characterization will be discussed. Physiological response factors associated with materials and implanted devices used in the human body will be presented, including immunological responses, wound healing, clotting cascade and surface compatibility. Other topics such as ethical considerations and medical device regulatory mechanisms will be discussed.

BME 830 Predoctoral Fellowship Grant Writing (1 Credit Hour)

This course is designed to guide predoctoral students through the process of developing and writing competitive fellowship grant applications. Students will work one-on-one with a mutually agreeable faculty mentor to identify funding opportunities, refine research proposals, and draft key components of their applications. Emphasis will be placed on understanding the expectations of funding agencies, writing clear and compelling narratives, and addressing reviewer criteria. By the end of the course, students may have a polished grant proposal.

BME 831 Finite Element Analysis (3 Credit Hours)

This course provides an understanding of the finite element method (FEM) as derived from an integral formulation perspective. It demonstrates the solutions of (1-D and 2-D) continuum mechanics problems such as solid mechanics, fluid mechanics and heat transfer. It also provides insight into the theoretical formulation and numerical implementation of finite element methods.

BME 840 Regenerative Medicine (3 Credit Hours)

This course explores the engineering principles and techniques applied to regenerative medicine. Topics include advanced engineering methods for scaffold development, material characterization techniques, and the evaluation of tissue-engineered constructs through in vitro and in vivo analysis. Students will gain a comprehensive understanding of how engineering tools are utilized to address challenges in regenerating tissues and organs, bridging the gap between biology and engineering in regenerative medicine.

Prerequisites: Either BIOL 240 or BIOL 250 and one of MATH 200 or MATH 205 or MATH 211

BME 841 Principles of Visualization (3 Credit Hours)

Well-designed graphical media capitalizes on human facilities for processing visual information and thereby improves comprehension, memory, inference, and decision making. This course teaches techniques and algorithms for creating effective visualizations based on principles and techniques from graphic design, visual art, perceptual psychology and cognitive science. Both users and developers of visualization tools and systems will benefit from this course.

BME 847 Responsible Conduct of Research (2 Credit Hours)

The course will introduce students to the responsible conduct of science and scientific research.

BME 851 Computational and Statistical Methods in Biomedical Engineering (3 Credit Hours)

This course covers the theoretical foundation and application of commonly used techniques in biomedical engineering. Topics include linear algebra, partial differential equations, regression analysis, applied probabilities, multivariate distributions, Bayesian statistics, hypothesis tests, multiple comparisons, ANOVA, solution of non-linear equations, numerical methods and optimization. Programming software will be used to perform simulations and analyze biomedical data.

Prerequisites: Graduate status

BME 854 Advanced Bioelectrics (3 Credit Hours)

Bioelectrics is a new field encompassing both the science and technology of applying electrical stimuli to biological systems. This course covers the pulsed power technology that is required to generate electrical stimuli as well as the biological responses they evoke in cells and tissues. Particular emphasis is placed on the medical applications of bioelectrics, including tumor ablation, gene electrotransfer, wound healing, decontamination with cold plasma, and treatment of cardiac arrhythmias.

Prerequisites: ECE 454 or ECE 554 or BIOE 454 or BIOE 554

BME 855 Biomembranes and Ion Channels (3 Credit Hours)

This course will give an overview of the structure and dynamics of biomembranes, the ion channels that are embedded in them, and the electrical properties of biomembranes. Topics include molecular dynamics modeling of biomembranes, membrane damage and repair, ion channel dynamics and their experimental assessment using patch clamping, and excitability in neurons and cardiomyocytes.

Prerequisites: ECE 454 or ECE 554 or BIOL 523

BME 860 Autonomous and Robotic Systems Analysis and Control (3 Credit Hours)

Kinematics, dynamics and control of complex non-linear electro-mechanical systems, particularly robotic manipulators.

BME 862 Applied Medical Image Analysis (3 Credit Hours)

Course explores hands-on exposure to state-of-the-art algorithms in medical image analysis, which builds on open-source software (Insight Segmentation and Registration Toolkit - ITK), as well as the principles of medical image acquisition in the modalities of clinical interest. Medical imaging modalities - X-rays, CT, and MRI/ITK image pipeline; image enhancement, feature detection; segmentation - basic techniques, feature-based classification and clustering, graph cuts, active contour and surface models; surface and volume meshing; registration - transformations, similarity criteria; shape and appearance models are all explored and discussed in this course.

Prerequisites: Knowledge of C++ and object-oriented programming

BME 870 Advanced Study in Biology (3 Credit Hours)

Under the guidance of members of the graduate faculty and with the approval of the program track coordinator, the student will carry out in-depth studies of selected topics relevant to the area of specialization. Extensive surveys and analyses of the literature. Written reviews, comprehensive and synoptic, and oral presentations are required of each student.

BME 875 Grant Writing in Biology (3 Credit Hours)

Provides students with the skills to write competitive grant proposals to both private and federal funding sources (emphasis on NIH and NSF). Students will learn how to find the most appropriate funding mechanisms and how to position themselves to be competitive. Different grant writing formats will be illustrated through proposal development projects.

BME 883 Digital Image Processing (3 Credit Hours)

Principles and techniques of two-dimensional processing of images. Concepts of scale and spatial frequency. Image filtering in spatial and transform domains. Applications include image enhancement and restoration, image compressing, biomedical imaging for diagnosis of disease, and image segmentation for computer vision.

Prerequisites: ECE 783 and ECE 883

BME 885 Advanced Manufacturing Technology (3 Credit Hours)

Treatment of the next generation of manufacturing technology. Topics include additive manufacturing; rapid prototyping; electronic manufacturing; micro and nanofabrication; process simulation; product life cycle management; and sustainable design and manufacturing.

Prerequisites: MAE 682 or permission of Program Director

BME 892 Biomechanics (3 Credit Hours)

The purpose of this course is to achieve a broad overview of biomechanics, focused on the musculoskeletal system. Students will explore multiscale mechanics, including whole-body movement and mechanical properties of the structures in the musculoskeletal system. Additionally, students will survey the experimental methods and computational modeling techniques used in biomechanics research.

Prerequisites: MATH 212 or equivalent

BME 894 Cellular Biomechanics (3 Credit Hours)

A broad introduction to the field of cellular biomechanics. Topics include overview of cell architecture, cytoskeleton, adhesion and molecular motors, biomolecular/biopolymer dynamics and mechanics, techniques to measure cell mechanical properties, techniques to mechanically stimulate cells, models of cell mechanical behavior, mechanobiology and mechanotransduction. Will include discussion of classic and current research articles. Course content will aim to cater to students with diverse backgrounds – students with biological science background will be exposed to physical science concepts and analysis; students with engineering/physical science background will be exposed to biological phenomena and concepts.

Pre- or corequisite: MATH 212

BME 895 Special Topics in Biomedical Engineering (1-3 Credit Hours)

Special courses covering selected graduate-level topics in biomedical engineering.

BME 897 Independent Study (1-3 Credit Hours)

This course allows students to develop specialized expertise by independent study (supervised by a faculty member).

Prerequisites: departmental approval

BME 899 PHD Dissertation Research (1-9 Credit Hours)

Directed research for the doctoral dissertation.

BME 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

BMS - Biomedical Sciences

BMS 898 Doctoral Research (1-9 Credit Hours)

Supervised doctoral research.

Prerequisites: Instructor approval required

BMS 899 Dissertation Research (1-6 Credit Hours)

Directed research for the doctoral dissertation.

BMS 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

BNAL - Business Analytics

BNAL 503 Data Visualization and Exploration (3 Credit Hours)

This course introduces students to concepts and processes, technologies, and methodologies that are commonly used in data visualization that an organization may use to enhance its descriptive, predictive, and prescriptive methods for making fact-based decisions.

Prerequisites: A grade of C or better in BNAL 306 or an equivalent course or instructor's permission

BNAL 507 Prescriptive Analytics of Management Science (3 Credit Hours)

Students are introduced to prescriptive analytics through formulation and solution of mathematical models, with a particular focus on optimization models. The business use of the models, as well as their limitations, is emphasized. Topics include linear, integer, non-linear programming, network models, genetic algorithms, decision analysis, and project management models.

Prerequisites: A grade of C or better in BNAL 306 or an equivalent course or permission of the instructor

BNAL 515 Advanced Business Analytics/Big Data Applications (3 Credit Hours)

This course addresses advanced business analytics techniques and the application of such techniques to large data sets. Some alternative business analytics strategies are introduced. Descriptive, predictive, and prescriptive models are included. Topics covered in this course include data visualization and exploration, cluster analysis, and developing and calibrating predictive models for big data. Applications of multivariate, logistic, and probit regression to business analytics are discussed. Software packages such as SAS/JMP/SPSS may be used.

Prerequisites: A grade of C or better in BNAL 306 or BNAL 606 or an equivalent course or instructor's permission

BNAL 530 Probability and Statistics (3 Credit Hours)

This course provides a foundational understanding of probability and statistics in a business context. Students learn to analyze data, make informed decisions, and solve business problems using statistical techniques. Topics include sampling distributions, confidence intervals, hypothesis testing, simple and multiple regressions, and time series forecasting. Emphasis is placed on the application of the tools to business problems.

Prerequisites: Admission to the MBA program OR approval by the MBA program office

BNAL 532 Predictive Analytics for Business (3 Credit Hours)

Predictive analytics techniques for business. Applications include both shorter term forecasting for sales and operations management as well as forecasting for long term planning. Emphasis is on statistical methods to obtain and evaluate forecasts. Statistical models are implemented using standard software such as MINITAB, EXCEL, R, and/or Python.

Prerequisites: BNAL 306 or an equivalent course or permission of the instructor

BNAL 576 Simulation Modeling and Analysis for Business Systems (3 Credit Hours)

Simulation modeling is an integral part of the analytics revolution, enabling the creation of models that can represent the variability that exists in many real business systems. This course covers the theory and application of simulation modeling, with an emphasis on how simulation provides predictive and prescriptive analytics to support business decision-making. Topics include simulation fundamentals, the project life-cycle, model development, input and output analysis, verification and validation, and the presentation of a simulation study. We utilize a major commercial simulation software package for assignments and class projects.

BNAL 630 Intelligent Systems & Business Analytics (3 Credit Hours)

This course explores the intersection of intelligent systems and business analytics. Students gain insights into leveraging artificial intelligence and data analysis techniques to drive informed decision-making and solve complex business problems. Topics include descriptive analytics, predictive analytics, prescriptive analytics, AI, machine learning, and real-world case studies in various industries.

Prerequisites: BNAL 530 OR MBA 600 and BNAL 606

BNAL 667 Cooperative Education (1-3 Credit Hours)

Approval for enrollment and allowable credits are determined by the department. Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment.

BNAL 668 Internship in Business Analytics (1-3 Credit Hours)

Approval for enrollment and allowable credits are determined by the department. Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment.

BNAL 695 Selected Topics in Business Analytics (3 Credit Hours)

Advanced topics in business analytics offered periodically.

Prerequisites: Permission of the department chair and graduate program director

BNAL 697 Independent Study (3 Credit Hours)

Affords students the opportunity to undertake independent study under the direction of a faculty member.

Prerequisites: Permission of the instructor

BNAL 711 Multivariate Statistical Methods for Business (3 Credit Hours)

An applied study of statistical methods including analysis of variance, cross-sectional multiple regression, time series regression, panel data methods, discriminant analysis, and generalized linear models. Data analyzed using a computerized statistical package. Emphasizes development of the student's ability to use statistics for independent research.

Prerequisites: BNAL 606 or equivalent

BNAL 712 Advanced Statistical Models in Business Research (3 Credit Hours)

Advanced statistical models that are commonly encountered in business research. Topics include confirmatory factor analysis as well as structural equation modeling. Emphasis is on model development as well as use of statistical software in analyzing realistic business-oriented data sets.

Prerequisites: BNAL 711

BNAL 715 Multilevel Modeling in Business Research (1 Credit Hour)

This course introduces the fundamentals of multilevel modeling. Alternative methods of analysis are discussed and critiqued. Use of specialized multilevel modeling software is demonstrated. Topics include a detailed discussion of the issues associated with variable centering. Applications to business research investigations are emphasized.

Prerequisites: BNAL 711 or permission of the instructor

BNAL 721 Simulation Modeling for Business and Supply Chain Systems (3 Credit Hours)

This course covers both the theory and application of simulation modeling and analysis to business, supply chain, and logistics systems. Both discrete-event and continuous simulation modeling approaches are covered, using a major commercial simulation package. Emphasis will be on the use of simulation as a tool to support business, supply chain, and logistics decision making.

Prerequisites: BNAL 606 or STAT 330 or MSIM 601 or BNAL 476 or BNAL 576 or BNAL 722, or BNAL 822, or instructor's permission

BNAL 722 Agent-Based Simulation and Modeling (3 Credit Hours)

This course will explore both the conceptual and technical aspects of agent-based simulation, particularly as utilized for modeling of business systems. Students will explore the roots and literature of agent-based modeling and related fields. Students will also learn to develop agent-based simulation models using a major commercial simulation package.

Prerequisites: MBA 600 or BNAL 606 or MSIM 601 or BNAL 476 or BNAL 576 or BNAL 721 or BNAL 821

BNAL 796 Selected Topics in Business Analytics (1-3 Credit Hours)

The advanced study of selected topics not offered on a regular basis.

BNAL 821 Simulation Modeling for Business and Supply Chain Systems (3 Credit Hours)

This course covers both the theory and application of simulation modeling and analysis to business, supply chain, and logistics systems. Both discrete-event and continuous simulation modeling approaches are covered, using a major commercial simulation package. Emphasis will be on the use of simulation as a tool to support business, supply chain, and logistics decision making.

Prerequisites: BNAL 606 or STAT 330 or MSIM 601 or BNAL 476 or BNAL 576 or BNAL 722 or BNAL 822, or permission of the instructor or department

BNAL 822 Agent-Based Simulation and Modeling (3 Credit Hours)

This course will explore both the conceptual and technical aspects of agent-based simulation, particularly as utilized for modeling of business systems. Students will explore the roots and literature of agent-based modeling and related fields. Students will also learn to develop agent-based simulation models using a major commercial simulation package.

Prerequisites: MBA 600 or BNAL 606 or MSIM 601 or BNAL 476 or BNAL 576 or BNAL 721 or BNAL 821

BP - Biomedical Research (MS & PhD)

BP 700 Molecules to Cells (2 Credit Hours)

This course presents the basic cellular functions and processes. The course is divided into three modules which study genome and gene expression, biochemistry of the cell, cell organelles, the cytoskeleton and protein trafficking.

BP 701 Molecular and Cellular Techniques (2 Credit Hours)

This course provides an understanding of research techniques commonly employed in biomedical science research laboratories. Lectures cover molecular cloning and analysis, detection systems including PCR and real time PCR, working with proteins, basics of cell culture, and additional cutting-edge topics. Select techniques will be covered in the complementary hands-on laboratory component of this course.

BP 703 Cell Communication and Signaling (3 Credit Hours)

This is a foundational course covering basic cell membrane function, major cell signaling pathways, signaling pathway/network interaction, cell specialization, tissue histology and immunology.

BP 704 Molecular Genetics (2 Credit Hours)

This course covers key aspects of molecular genetics including the important concept of genetic screens as well as mutational analysis of gene and pathway function. Students learn the basic principles of Mendelian genetics, patterns of inheritance and human genetics; learn how model organisms (yeast, nematodes, flies, fish, mice) are utilized in the lab to study cellular pathways; and discuss the ethical considerations of genetic research.

BP 706 Cell Energetics & Organ Function (3 Credit Hours)

This course integrates elements of cellular metabolism with organ system physiology. Students will gain an understanding of and critically discuss the cellular metabolic pathways required for normal function and the systemic organ function with a focus on human physiology.

BP 708 Oral Communication Forum (1 Credit Hour)

This course is designed to equip students with the essential skills and knowledge required for delivering effective oral presentations of scientific papers and personal research projects. Through a combination of interactive exercises, didactic lectures, and personalized mentoring, students will gain confidence in their communication abilities and learn how to deliver impactful presentations. The course will also cover specialized topics such as elevator pitch-style and poster presentations.

BP 709 Scientific Writing & Research Design (1 Credit Hour)

Students learn how to design and write a realistic research proposal (R21 NIH grant format), and gain a general understanding of how different techniques can be used to address a wide range of research questions. The final version of the proposals are peer-reviewed and discussed in the format of an NIH grant study section.

BP 710 Oral Communication Forum (1 Credit Hour)

This course is designed to equip students with the essential skills and knowledge required for delivering effective oral presentations of scientific papers and personal research projects. Through a combination of interactive exercises, didactic lectures, and personalized mentoring, students will gain confidence in their communication abilities and learn how to deliver impactful presentations. The course will also cover specialized topics such as elevator pitch-style and poster presentations.

BP 719 Biomedical Sciences Lab Rotation I (2 Credit Hours)

Students get hands-on laboratory experience in these lab rotations, with help from a pre-designated faculty member. These courses are designed for students to sample different types of research models, techniques and subject matter.

BP 720 Biomedical Sciences Lab Rotation II (2 Credit Hours)

Students get hands-on laboratory experience in these lab rotations, with help from a pre-designated faculty member. These courses are designed for students to sample different types of research models, techniques and subject matter.

BP 721 Biomedical Sciences Lab Rotation III (2 Credit Hours)

Students get hands-on laboratory experience in these lab rotations, with help from a pre-designated faculty member. These courses are designed for students to sample different types of research models, techniques and subject matter.

BP 771 Methods & Logic in Translational Biology (3 Credit Hours)

This is an advanced course that emphasizes the key elements required to successfully design and conduct translational projects. The course serves as a bridge between basic research and the clinical manifestations of disease, and covers therapies of the future that are still under development.

BP 773 Responsible Conduct in Science (1 Credit Hour)

Series of lectures expose graduate students to moral and ethical dilemmas in biomedical sciences. The course will also expose students to peer review processes related to the submission of grants and manuscripts.

BP 781 Applied Biostatistics & Bioinformatics (3 Credit Hours)

This course is structured into three independent modules: biostatistics, bioinformatics and structural bioinformatics. The biostatistics module provides an introductory overview of the concepts behind and practical use of statistical analysis as it relates to the life sciences. The bioinformatics module provides an overview of basic bioinformatics concepts and commonly used tools, to include databases and genomic/proteomic resources, sequence analysis and genetic mapping, gene expression concepts, IPA and omic data analysis. The structural bioinformatics module provides students with fundamental knowledge of structural bioinformatics and computer-based approaches for protein structure visualization, comparison and classification.

BP 795 Special Topics: (2 Credit Hours)

Guided readings and discussions of current research topics in a specialized area.

Prerequisites: instructor approval

BP 798 Research (1-6 Credit Hours)

Students conduct research in the laboratory. This course is repeatable for credit.

BP 799 Thesis (1 Credit Hour)

A review of the literature and written presentation of the research as the MS thesis.

BP 819 Lab Rotation I (2 Credit Hours)

Students get hands-on laboratory experience in these lab rotations, with help from a pre-designated faculty member. These courses are designed for students to sample different types of research models, techniques and subject matter.

BP 820 Lab Rotation II (2 Credit Hours)

Students get hands-on laboratory experience in these lab rotations, with help from a pre-designated faculty member. These courses are designed for students to sample different types of research models, techniques and subject matter.

BP 821 Lab Rotation III (2 Credit Hours)

Students get hands-on laboratory experience in these lab rotations, with help from a pre-designated faculty member. These courses are designed for students to sample different types of research models, techniques and subject matter.

BP 873 Responsible Conduct in Science (1 Credit Hour)

This course features a series of lectures that expose graduate students to moral and ethical dilemmas in biomedical sciences. The course will also expose students to peer review processes related to submission of grants and manuscripts.

BP 883 Responsible Conduct in Science (1 Credit Hour)

Series of lectures exposes graduate students to moral and ethical dilemmas in biomedical sciences. The course also exposes students to peer review processes related to the submission of grants and manuscripts.

BP 895 Special Topics (2 Credit Hours)

Guided readings and discussions of current research topics in a specialized area.

Prerequisites: approval of instructor

BP 898 Research (1-9 Credit Hours)

Students conduct research in the laboratory. This course is repeatable for credit.

BP 899 Dissertation (1-9 Credit Hours)

A review of the literature and written presentation of research as the PhD thesis.

BUSN - Business Administration

BUSN 501 Business Planning for Entrepreneurs I (2 Credit Hours)

Students are introduced to readily available resources to research and analyze a comprehensive feasibility process including a clear statement of the business idea/model, selection of the North American Industry Classification System (NAICS) codes, and research and analysis of the applicable industry, market and competitors. A marketing strategy, to include pricing, is developed, with emphases on social media and similar outreach tools.

BUSN 551 Business Planning for Entrepreneur (2 Credit Hours)

Students are introduced to readily available resources to research and analyze a comprehensive feasibility process including a clear statement of the business idea/model, selection of the North American Industry Classification System (NAICS) codes, and research and analysis of the applicable industry, market and competitors. A marketing strategy, to include pricing, is developed, with emphases on social media and similar outreach tools.

BUSN 610 Strategic Artificial Intelligence (AI) Leadership (3 Credit Hours)

This course examines the leadership and organizational challenges of successfully integrating AI into business strategy and operations. Students will explore AI's impact on organizational structure, culture, and decision-making processes, and develop the skills to lead AI-driven transformations while considering ethical implications and societal impact.

BUSN 800 Seminar in International Business (3 Credit Hours)

This course will provide students with a comprehensive understanding of the environmental issues, institutions, opportunities, challenges, problems and managerial processes that are unique to international business. Both the micro and macro contexts in which international business is conducted will be examined.

BUSN 801 Research/Teaching Colloquium (1 Credit Hour)

The one-hour Research/Teaching Colloquium is mainly intended to promote research/teaching competencies of doctoral students through their exposure to presentations on and discussions of various topics dealing with research, writing, publishing and effective teaching. The presentations may be by faculty members, outside speakers or doctoral students.

BUSN 999 Doctoral Graduate Credit (1-10 Credit Hours)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

CAT - Counseling and Art Therapy

CAT 600 Basic Counseling Skills (3 Credit Hours)

Students will learn and develop basic counseling and art psychotherapy skills through didactic lectures, readings, in class role plays, and practical fieldwork to experience therapeutic and client relationships. Students will facilitate intake, risk assessment, art therapy assessment, and basic counseling and art psychotherapy skills with Standardized Patients. Students will experience the client role through process groups. Students will attend clinical case presentations and additional preparatory trainings. Open only to counseling & art therapy students.

CAT 601 Advanced Counseling Skills I (1 Credit Hour)

This course combines academic discussion and in-class practical applications of advanced counseling and art psychotherapy skills. Students will develop advanced counseling and art therapy skills through exploration and application of theoretical orientation, case formulation, implementation of the Expressive Therapies Continuum, and advanced counseling skills. Students will demonstrate the ability to integrate theory with advanced counseling and psychotherapy skills via weekly in-class practical applications and three reflective papers. Open only to counseling & art therapy students.

CAT 602 Advanced Counseling Skills II (1 Credit Hour)

This course combines academic discussion and in-class practical applications of advanced clinical mental health counseling and art psychotherapy skills. Students will demonstrate knowledge in micro-skills: self-disclosure, challenge and confrontation, accurate empathy, and immediacy, client selection, crisis intervention, case management, case formulation, and theoretical orientation. Students will demonstrate the ability to integrate theory with advanced clinical mental health counseling and psychotherapy skills. Open only to counseling & art therapy students.

CAT 603 Group Counseling (3 Credit Hours)

This course includes the study of group counseling and psychotherapy techniques and practice. Emphasis is on use of group dynamics, process illumination, and stages of group development. Cultural and ethical considerations are explored. Open only to counseling & art therapy students.

CAT 604 Individual Counseling (3 Credit Hours)

This course provides students with the opportunity to integrate various theoretical approaches to individual counseling and psychotherapy and their relation to art psychotherapy approaches. The therapist's values and ethics are addressed. Principles of dynamics, therapeutic factors, therapist and client roles and behaviors, leadership styles and approaches, selection criteria, art-based communication, and short- and long-term individual clinical mental health counseling and art therapy will be reviewed. The goal of the course is to provide the student with an opportunity to continue the development of an approach to individual clinical mental health counseling, psychotherapy, and art therapy. Open only to counseling & art therapy students.

CAT 605 Processes & Materials I (3 Credit Hours)

This course is designed so that the student will directly experience the therapeutic usefulness and understand the psychological implications of a variety of materials and processes grounded in the Expressive Therapies Continuum (ETC) and clinical mental health counseling theories. Students apply basic understanding of the language of art and the range of possible therapeutic responses for skills in creativity in counseling/mental health and art psychotherapy. Open only to counseling & art therapy students.

CAT 606 Processes & Materials II (3 Credit Hours)

This course is designed so that the student will directly experience the therapeutic usefulness and understand the psychological implications of a variety of materials and processes grounded in the Expressive Therapies Continuum (ETC) and clinical mental health counseling theories. Students apply advanced understanding of the language of art and the range of possible therapeutic responses for creativity in counseling/mental health and art psychotherapy. Open only to counseling & art therapy students.

CAT 607 Case Presentation Skills (1 Credit Hour)

This course is designed so that the student will directly experience the therapeutic usefulness and understand the psychological implications of a variety of materials and processes grounded in the Expressive Therapies Continuum (ETC) and clinical mental health counseling theories. Students apply advanced understanding of the language of art and the range of possible therapeutic responses for creativity in counseling/mental health and art psychotherapy. Open only to counseling & art therapy students.

CAT 608 Psychopathology (3 Credit Hours)

Students learn descriptive criteria for psychiatric diagnoses, the use of the DSM 5-TR, and theories of psychopathology. A goal of the course is for students to develop an ability to recognize symptoms, conditions, behaviors, verbalizations, and art expressions of functional and organic disorders. Open only to counseling & art therapy students.

CAT 609 Assessment (3 Credit Hours)

Students explore the fundamentals of assessment in clinical mental health counseling using a variety of assessment techniques including and not limited to intake interviews, psychological testing, risk assessments, and art-based assessments of psychosocial, cognitive, and emotional functioning. Students are introduced to principles of case formulation for developing treatment plans from assessment results. Student develop skills to administer and document in progress notes and reports a variety of specific instruments and procedures used in appraisal and evaluation in psychotherapy, clinical mental health counseling, and art therapy. Open only to counseling & art therapy students.

CAT 610 Theories of Development (3 Credit Hours)

Following a family life cycle perspective, students explore human psychological development from birth to death. Students are exposed to various theories of personality development. Cultural and environmental influences are addressed. Open only to counseling & art therapy students.

CAT 611 Introduction to Art Therapy (1 Credit Hour)

This course offers an overview of the history and growth of art therapy as a profession, along with an overview of theoretical approaches that have evolved from the founding practitioners in the field. Students develop a specific definition of art therapy that conveys a personal approach, as well as a clear understanding of the role of art therapists in various work settings. Current developments and future directions within the field are also explored. Open only to counseling & art therapy students.

CAT 612 Medical Art Therapy (1 Credit Hour)

This course reviews the clinical implications for clinical mental health counseling and art therapy in medical settings to include diagnoses, management and treatment of various medical disorders, overviews of practice settings, and psychological impacts of medical illness. This course provides foundational concepts and experiences related to ethical practice of clinical mental health counseling and art therapy in medical settings. Open only to counseling & art therapy students.

CAT 614 Clinical Case Conference (1 Credit Hour)

Students demonstrate the ability to effectively communicate clinical material and integrate theory and counseling practice through structured case presentations. Students integrate case assessment, case formulation, treatment planning knowledge with counseling and art therapy theories applied to clients. Open only to counseling & art therapy students.

CAT 615 Research Methods & Program Evaluation (3 Credit Hours)

This course provides students with the opportunity to understand the purposes, methods, and the ethical, legal, and cultural considerations of research. Students will demonstrate the necessary skills to design and prepare to conduct a research study and/or program evaluation. Students will learn how to use research, research skills, and findings to assess effectiveness of clinical mental health counseling, art therapy, and mental health services by becoming an informed consumer of mental health, counseling, and art therapy research. Open only to counseling & art therapy students.

CAT 616 Cultural Humility (3 Credit Hours)

This course supports the development of culturally humble counselors and art therapists through multicultural orientation with regard to intersecting identities including age, gender, sexual orientation, ethnicity, nationality, socio-economic status, developmental ability, physical ability, education, family values, and religious and spiritual values. Through review of the current literature, application to clinical practice, and self-assessment, students will explore culture and their own unintentional biases, develop strategies for working with diverse individuals, groups, and communities, foster critical thinking skills, and explore the role of the counselor and art therapist in culturally alert and responsive practices for clinical mental health counseling, art therapy, social justice, and advocacy. Open only to counseling & art therapy students.

CAT 617 Family Counseling (3 Credit Hours)

This course provides students with a foundation in the basic concepts of family and couples clinical mental health counseling and art therapy. Students learn about family counseling theories, techniques, genograms, family assessments, and documentation. Open only to counseling & art therapy students.

CAT 618 Ethics & Professionalism (3 Credit Hours)

This course addresses professional identity, professional ethics, and the ethical practices of counseling and art therapy. Students prepare to enter the job market and review the requirements for professional licensure and credentials for counselors and art therapists. Open only to counseling & art therapy students.

CAT 619 Creativity Symbolism Metaphor (3 Credit Hours)

This course reviews various theories and models of creativity, symbolism, metaphor, and artistic language. The types, formation, and roles of symbolism and its relation to psychopathology and mental health, and the role of metaphor in therapy are explored. Students explore the function and interpretation of symbols in dreams, artwork, world religions, myths and fairy tales, and daily life and examine the role of symbolism in assessment, clinical mental health counseling, and therapy. Students develop a deeper understanding of symbolic language to enhance their understanding of their own inner experiences and those of their clients. Open only to counseling & art therapy students.

CAT 620 Addictions (3 Credit Hours)

This course provides an overview of Addiction Counseling. Topics that will be covered include drugs and society, substance and process addictions, evidence-based best practices for the substance abuse counselor, assessment, the recovery process, addiction and the family, and prevention strategies. This course covers diagnosis and treatment of addictive disorders and includes an overview of the philosophies and evidenced-based best practices, policies, and outcomes of the most generally accepted models of treatment, recovery, relapse prevention, and continuing care for addictions and other substance abuse related problems. Students also gain awareness of the impact of drug abuse on society and an appreciation of the cultural context within which addiction and recovery occurs. Open only to counseling & art therapy students.

CAT 621 Career Counseling (3 Credit Hours)

This course includes the study of theory and process of career counseling. Students will acquire skills to incorporate career development theory into the practice of counseling. Students will be introduced to career assessment tools and occupational methods. Open only to counseling & art therapy students.

CAT 622 Trauma & Neuroscience Informed Counseling (3 Credit Hours)

The course will review and engage students in the current literature of Trauma Informed Counseling Practices. The objective is for the student to build skills in understanding how to treat survivors of trauma, understand the etiology of behaviors, emotions, and functioning related to trauma, and develop age-appropriate treatment plans based in best counseling practice. Open only to counseling & art therapy students.

CAT 623 Trauma & Neuroscience Informed Art Therapy (2 Credit Hours)

The course will review and engage students in the current literature of neuroscience as it applies to trauma work in counseling and art psychotherapy. The objective is for the student to build advanced skills in understanding of neuroscience concepts applied to treat survivors of trauma, understand the etiology of behaviors, emotions, and functioning related to trauma, and develop treatment plans based in best practices. Open only to counseling & art therapy students.

CAT 624 Trauma & Neuroscience Informed Art Therapy & Counseling (3 Credit Hours)

This elective course will engage students in cultural immersion to learn about cultural similarities and differences in art, the arts, and art psychotherapy, and varied aspects of the impacts of trauma (war trauma, trauma experiences of families, combat trauma, survivors of sex trafficking, and historical trauma). Students will engage in content and experientials that explore art expression, role of art, artists, therapists, and art therapists in society, art/crafts processes, preferences or prohibitions to various art processes or media, and conventional/cultural symbolism; cultural appropriation in art therapy; and cultural sensitivity to the use of art processes and materials in art therapy for trauma informed approaches integrated into art psychotherapy and counseling in various community settings. Open only to counseling & art therapy students.

CAT 625 Community Art (1 Credit Hour)

This course introduces students to philosophies, theories, and practices of community art and socially engaged art in various community settings and projects. Open only to counseling & art therapy students.

CAT 627 Countertransference/Jung (1 Credit Hour)

This elective course facilitates through reading and discussion the exploration of the impact of transference and countertransference in work with patients. The impact on the therapist is explored with depth and implications for informing work with patients is explored. Open only to counseling & art therapy students.

CAT 628 Exploration of the Psyche (1 Credit Hour)

This course aims to enliven the students' understanding of the psyche and its processes, and to increase their understanding of the psychic processes both in the therapeutic process and in their own lives. Open only to counseling & art therapy students.

CAT 630 Art Therapy in the Schools (1 Credit Hour)

This elective course introduces principles underlying comprehensive school art therapy service delivery. Topics explored include special and alternative education settings, program development, and research supporting art therapy in schools.

CAT 631 Applied Cultural Sensitivity (4 Credit Hours)

Applied Cultural Sensitivity in Counseling & Art Psychotherapy will engage students in cultural immersion to learn about cultural similarities and differences in mental health services, counseling, and art psychotherapy, and varied aspects of the impacts of trauma related to culture. Students will engage in content and experientials that explore art expression, role of art, artists, therapists, and art therapists in society, art/crafts processes, preferences or prohibitions to various art processes or media, and conventional/cultural symbolism; cultural appropriation in art therapy; and cultural sensitivity to the use of art processes and materials in art therapy for trauma informed approaches integrated into art psychotherapy and counseling in various community settings. Open only to counseling & art therapy students.

CAT 636 Individual Supervision III (1 Credit Hour)

The student receives one hour of individual faculty clinical site supervision per week from a licensed professional counselor and registered art therapist to discuss clinical topics related to the clinical mental health counseling and art therapy treatment of children/adolescents/adults and couples and their families in various settings. Through supervision and presentation of case materials, students explore assessment, case formulations, treatment planning and implementation, and developing basic and advanced skills in response to observations of clients' verbal, behavioral, and artistic communications. Supervision provides opportunities for integration of didactic information with clinical mental health counseling experiences and art therapy. Open only to counseling & art therapy students.

CAT 639 Art Therapy in the Schools (1 Credit Hour)

This elective course introduces principles underlying comprehensive school art therapy service delivery. Topics explored include special and alternative education settings, program development, and research supporting art therapy in schools. Open only to counseling & art therapy students.

CAT 641 Group Supervision with Adolescents (1.5 Credit Hours)

Students meet in a supervision group (no more than 1:8 for min 1.5 hours per week) with a faculty clinical site supervisor who is a licensed professional counselor and a registered art therapist, to discuss clinical topics related to the clinical mental health counseling and art therapy treatment of children/adolescents/adults and couples and their families in various settings. Through supervision and presentation of case materials, students explore assessment, case formulations, treatment planning and implementation, and developing basic and advanced skills in response to observations of clients' verbal, behavioral, and artistic communications. Supervision provides opportunities for integration of didactic information with clinical mental health counseling experiences and art therapy. Open only to counseling & art therapy students.

CAT 653 Trauma & Neuroscience Informed Therapy (3 Credit Hours)

The course will review and engage students in the current literature of Trauma Informed Practices, neuroscience as it applies to trauma work in counseling, and resources of trauma informed care (assessments, workbooks, & practices). The objective is for the student to build skills in understanding trauma informed care and of neuroscience concepts applied to the treatment of survivors of trauma, understand the etiology of behaviors, emotions, and functioning related to trauma, and develop treatment plans based in practice. Open only to counseling & art therapy students.

CAT 668 Internship (1-3 Credit Hours)

Students attend internship experience for 300 hours over the semester to engage and learn about the treatment setting. Students work with clients for a minimum of 120 direct client contact hours each semester in clinical practice. Students provide counseling, counseling interventions, Assessments, individual, group and/or family counseling and art therapy for an average minimum of 9 hours per week. The other hours on site are for students to attend team meetings, in-service conferences, and all related milieu activities, and to complete documentation. Students rotate through one site per semester to obtain experience with children, adolescents, and adults. Students attend individual supervision with a faculty clinical site supervisor for 1 hour per week minimum. Students attend group supervision with a faculty clinical group site supervisor for a minimum of 1.5 hours per week. Open only to counseling & art therapy students.

CAT 669 Practicum (3 Credit Hours)

Students attend practicum experience for 100 hours during their first practicum semester to engage and learn about the treatment setting and develop basic clinical mental health counseling skills. Students work with clients for 40 hours of direct contact over the 100 hours. Students attend practicum up to 18 hours per week up to 16 weeks. Students earn up to 120 direct client contact hours each semester. Students provide counseling, counseling interventions, art-based assessments, individual, group and/or family clinical mental health counseling and art therapy for an average minimum of 9 hours per week. The other hours on site are for students to attend team meetings, in-service conferences, and all related milieu activities, and to complete documentation. Students attend individual supervision with a faculty clinical site supervisor for 1 hour per week minimum. Students attend group supervision with a faculty clinical group site supervisor for a minimum of 1.5 hours per week. Open only to counseling & art therapy students.

CAT 670 Practica Fieldwork (1 Credit Hour)

Students attend practicum fieldwork to complete 40 direct client contact hours and a minimum of 100 total hours to experience the therapeutic and client relationships. Students will facilitate intake, risk assessment, art therapy assessment, basic counseling skills with Standardized Patients, and direct client contact at assigned sites under the supervision of faculty who are licensed professional counselors and registered art therapists. Student will experience the client role through process groups. Students attend individual supervision with a faculty clinical site supervisor for 1 hour per week minimum. Students attend group supervision with a faculty clinical group site supervisor for a minimum of 1.5 hours per week. Open only to counseling & art therapy students.

CAT 690 Capstone Project (1 Credit Hour)

The student develops and executes a project of excellence based on the literature in counseling and art therapy. The student documents the Capstone Project through a professional paper, poster brief, and/or presentation. Open only to counseling & art therapy students.

CAT 698 Independent Study Research Methods (1 Credit Hour)

This course provides students with the opportunity to understand the purposes, methods, and the ethical considerations of research and to apply and demonstrate the necessary skills to design and conduct research. Students will develop skills in collaboration and working on a research team. Open only to counseling & art therapy students.

CCL - Community College Leadership

CCL 766 Seminar on the Modern Community College: Foundations, Philosophy, and Vision (3 Credit Hours)

A critical examination of the future of the community college, considering the current strengths and weaknesses within the higher education community. Ultimately, the course strives to prepare students to understand, assess, and contribute to the betterment of community college education. Students develop and articulate thoughts, ideas, and opinions on how to re-imagine the community college in order to improve institutional performance and to more effectively serve all students.

CCL 809 Seminar on Doctoral Research and the Dissertation (3 Credit Hours)

This course is designed to prepare students for dissertation research on the community college and higher education. It provides information on the dissertation process to help students be successful in a doctoral program. The course is designed to help doctoral students enhance their abilities to search the scholarly literature, narrow their research topic, and improve their skills in areas such as critical reading and inquiry, critical thinking, and scholarly writing. Students will become familiar with the important events in the dissertation process, begin to develop a literature review on their topic, become familiar with the components of a dissertation proposal, and develop an initial dissertation prospectus.

CCL 820 Community College Leadership (3 Credit Hours)

Provides students with the theory, knowledge and skills needed to be an effective leader within the community college system. Course assignments take a practical approach to identifying and applying theoretical principles and personal leadership style.

Prerequisites: Acceptance into the doctoral program or permission of the instructor

CCL 824 Community College Finance, Fundraising, and Resource Management (3 Credit Hours)

An examination of the necessary financial knowledge and skills required for community college leaders through the exploration of how the mission and goals of the community college are directly connected to financial considerations. Course activities help prepare students to take leadership roles in budget decisions, development of state and local government appropriations, fundraising, resource management, and financial decisions that are based on data and realistic institutional goals.

Prerequisites: Acceptance into the doctoral program or permission of the instructor

CCL 826 Community College Curriculum, Program Development, and Quality Assurance (3 Credit Hours)

A critical examination of community college curricula and program development. Students will develop the knowledge to understand and defend curricular issues related to developmental education, transfer education, career, technical and vocational education, continuing education, and general education.

Prerequisites: Acceptance into the doctoral program or permission of the instructor

CCL 830 Community College Politics, Policy, and Advocacy (3 Credit Hours)

An analysis of the political factors that influence educational policy decisions at community colleges and other higher education institutions. The course will examine policy-in-action in order to help students understand the relationships community college leaders build with community college boards of trustees, county commissioners, state legislators, and federal representatives.

Prerequisites: Acceptance into the doctoral program or permission of the instructor

CCL 866 Seminar on the Modern Community College: Foundations, Philosophy, and Vision (3 Credit Hours)

A critical examination of the future of the community college, considering the current strengths and weaknesses within the higher education community. Ultimately, the course strives to prepare students to understand, assess, and contribute to the betterment of community college education. Students develop and articulate thoughts, ideas, and opinions on how to re-imagine the community college in order to improve institutional performance and to more effectively serve all students.

CCL 868 Internship in Community College Leadership (3-6 Credit Hours)

Provides students an opportunity to obtain hands-on experience in a leadership role at a community college setting. The students learn about leadership skills at the community college by observing a mentor/site supervisor and by being given leadership tasks associated with the site chosen.

Prerequisites: acceptance into the doctoral program or permission of the instructor

CCL 881 Dissertation Seminar (3 Credit Hours)

A seminar that focuses on the design, implementation, and evaluation of community colleges under real-life conditions in the field. Students and faculty work with community college decision makers utilizing problem solving skills and analysis.

CCL 895 Topics in Community College Leadership (1-3 Credit Hours)

Study of selected topics in community college leadership.

Prerequisites: permission of the instructor

CCL 897 Independent Study (1-3 Credit Hours)

Independent study of special topics in community college leadership for doctoral students.

Prerequisites: Permission of the instructor

CCL 899 Dissertation (1-12 Credit Hours)

Directed research for the doctoral dissertation.

Prerequisites: Permission of faculty advisor

CCL 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after advancement to candidacy. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

CDSE - Communication Disorders and Special Education

CDSE 597 Independent Study in Special Topics in Education (1-4 Credit Hours)

Independent study of selected topics in education.

CDSE 695 Topics in Education (1-3 Credit Hours)

This course offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest in the special education field.

Prerequisites: permission of the instructor

CDSE 697 Independent Study in Special Education (1-3 Credit Hours)

Independent study of special topics in special education.

Prerequisites: permission of the instructor

CDSE 795 Topics in Education (1-3 Credit Hours)

The advanced study of selected topics and emergent research related issues that permits small groups of qualified students to study subjects of mutual interest, which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of instructor

CDSE 797 Independent Study in Special Education (1-3 Credit Hours)

Independent study of special topics in special education for advanced graduate students.

Prerequisites: permission of the instructor

CDSE 895 Topics in Education (1-3 Credit Hours)

The advanced study of selected topics and emergent research related issues that permits small groups of qualified students to study subjects of mutual interest, which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of instructor

CDSE 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

CEE - Civil and Environmental Engineering

CEE 512 Computational Methods in Structures (3 Credit Hours)

Analysis of 2-D and 3-D determinate and indeterminate truss/beam/frame structures by the unified direct stiffness matrix method, for both hand-calculation and computer implementation. Popular commercialized (NASTRAN) software will also be discussed.

Prerequisites: CEE 310

CEE 514 Masonry Structures Design (3 Credit Hours)

Masonry materials, reinforced beams and lintels, walls, columns and pilasters, shear walls, and buildings.

Prerequisites: CEE 310

CEE 515 Steel Structures Design (3 Credit Hours)

Load and resistance factor design methods for steel structures.

Prerequisites: CEE 310

CEE 516 Wood Structures Design (3 Credit Hours)

Design of wood structures based on national design specification and load and resistance factor design.

Prerequisites: CEE 310

CEE 530 Foundation Engineering (3 Credit Hours)

Subsurface exploration, site preparation, design of shallow and deep foundations, and retaining structures.

Prerequisites: CEE 323 with a grade of C or better

CEE 531 Slope Stability and Earth Structures Design (3 Credit Hours)

Slope stability analysis, including limit equilibrium procedures, finite element method, seepage analysis, and advanced topics such as rapid drawdown, construction of embankments on soft soil, and seismic slope stability. Lateral earth retention systems, including gravity walls, excavation support systems, and applications of geosynthetic material, will be covered.

Prerequisites: CEE 323

CEE 532 Introduction to Earthquake Engineering (3 Credit Hours)

An overview of earthquake processes and details of the characteristics of destructive ground motion; the effects of such motion on civil engineering structures; reviews of current design practice in mitigating earthquake hazards for various civil engineering structures such as buildings, bridges, dams, lifelines, ports and harbors.

Prerequisites: permission of the instructor

CEE 533 Geomaterials Stabilization (3 Credit Hours)

This course studies soil and aggregate's physical, chemical and biological stabilization procedures. Students are introduced to chemical stabilization analysis and design using materials such as cement, lime, and fly ash. Physical ground modification, compaction methods and mechanical stabilization application and design are also studied.

Prerequisites: CEE 323

CEE 540 Hydraulic Engineering (3 Credit Hours)

Hydraulic transients; flow control structures; computer analysis of hydraulic systems; design of pipelines, open channels and culverts.

Prerequisites: CEE 340

CEE 546 Urban Stormwater Hydrology (3 Credit Hours)

Storm rainfall analysis, design rainfall hyetographs, runoff calculation procedures, detention basins, use of mathematical models to analyze and design urban storm drainage systems.

Prerequisites: CEE 340

CEE 547 Groundwater Hydraulics (3 Credit Hours)

Description of well hydraulics in single and multiple well systems. Determination of aquifer parameters from pumping tests. Use of computer models to determine drawdowns due to multiple well systems.

Prerequisites: CEE 340

CEE 550 Water Distribution and Wastewater Collection System Design (3 Credit Hours)

Design of water distribution systems, sanitary sewer systems and appurtenances.

Prerequisites: CEE 330

Pre- or corequisite: CEE 340

CEE 552 Air Quality (3 Credit Hours)

Study of air quality management standards and regulations and pollutant dynamics. Design and operation of emission control equipment for mobile and stationary sources of air pollution.

Prerequisites: CEE 350

CEE 554 Hazardous Waste Treatment (3 Credit Hours)

Study of sources, generation rates and characteristics of hazardous wastes and their regulation, handling, and design of treatment and disposal facilities.

Prerequisites: CEE 350

CEE 555 Pollution Prevention and Green Engineering (3 Credit Hours)

Application of engineering methods for the prevention of pollution. Review of the pollution prevention related regulations. Study of source reduction methods, analysis of environmentally conscious manufacturing methods, process changes, life cycle analysis, and water/energy conservation methods. Evaluation of pollution prevention case studies.

CEE 557 Adaptation to Sea Level Rise (3 Credit Hours)

Investigation of complex relationships between humans and coastlines and study of how humans adapt and develop adaptation measures and solutions to tackle flooding caused by rising sea levels and subsequent heavy storm events. This course also evaluates natural and nature-based systems, engineered systems, different flood-proofing methods, and impacts of sea level rise on coastal water quality and the potential impacts on disease transmission.

Prerequisites: CEE 340 or CET 332

CEE 558 Sustainable Development (3 Credit Hours)

Overview of social, economical, technical environmental aspects of regional, national and international efforts to achieve sustainable development. Discussion of the integration of industrial activity and ecological concerns utilizing principles of zero emissions, pollution prevention and design for the environment.

Prerequisites: permission of instructor

CEE 559 Biofuels Engineering (3 Credit Hours)

Course covers the overview of renewable energy sources; fundamentals of biofuels; biomass and types of biomass (e.g., woody biomass, forest residues, agricultural residues, energy crops); composition of lignocelluloses (cellulose, hemicellulose, and lignin); biomass conversion technologies; thermochemical, supercritical water, and biochemical conversion processes; types of biofuels from biomass; liquid fuels (bioethanol, bio-oil, biocrude, and hydrocarbons); gaseous fuels (synthesis gas, hydrogen, biodiesel); solid fuels (biochar, torrefied biomass); biodiesel from vegetable oils, algae to biofuels; value-added processing of biofuel residues; economic and environmental assessments; policies and future R&D.

Prerequisites: permission of the instructor

CEE 571 Transportation Operations I (3 Credit Hours)

This is the first course in transportation operations and traffic flow theory. Topics include traffic engineering studies, capacity analysis, intersection control, traffic flow models, shockwave analysis, signal warrant analysis, and safety analysis. Course includes applications of modeling and simulation to isolated intersections.

Prerequisites: CEE 370

CEE 574 Transportation Data Analytics (3 Credit Hours)

This course presents the basic techniques for transportation data analytics. It will discuss statistical modeling, prominent algorithms, and visualization approaches to analyze both small- and large-scale data sets generated from transportation systems. Practices of using different data for various real-world traffic/transportation applications and decision making will also be discussed., STAT 330); any programming language such as C, Python or Java is beneficial but not required.

Prerequisites: Basic probability and statistics (e.g

CEE 575 Geometric Design of Highways (3 Credit Hours)

This course provides students with an understanding of basic principles and techniques in order to develop skills in the highway geometric design process. It introduces design methods for three-dimensional layout for roadways, considering cross section (lanes and shoulders, curbs, medians, roadside slopes and ditches, sidewalks), horizontal alignment (tangents and curves), and vertical alignment (grades and vertical curves).

CEE 582 Introduction to Coastal Engineering (3 Credit Hours)

Classical small amplitude wave theory, wave transformations in shallow water, shoaling, refraction, diffraction, reflection, breaking. Wave induced near shore currents and sediment transport processes. Alternatives to mitigate coastal erosion processes. Introduction to coastal structures.

Prerequisites: permission of the instructor

CEE 595 Topics in Civil and Environmental Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in civil and/or environmental engineering.

Prerequisites: Permission of the instructor

CEE 667 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. May be repeated for credit. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

CEE 668 Internship (1-3 Credit Hours)

Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career-related experience.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

CEE 669 Practicum (1-3 Credit Hours)

Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career-related experience.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

CEE 695 Topics in Civil and Environmental Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in civil and/or environmental engineering.

Prerequisites: Permission of the instructor

CEE 697 Independent Study in Civil and Environmental Engineering (1-3 Credit Hours)

Individual analytical, experimental and/or design study selected by the student. Approved and supervised by the advisor.

Prerequisites: permission of the instructor

CEE 698 Master's Project (1-3 Credit Hours)

Individual project, investigation under the direction of the student's major professor.

CEE 699 Thesis (1-6 Credit Hours)

Research leading to the Master of Science thesis.

CEE 700 Civil and Environmental Engineering Experimental Design (3 Credit Hours)

Graduate-level overview of engineering experimental design and analysis with emphasis on statistical methods; practical and proper statistical methods applicable to multidisciplinary, real-world civil and environmental engineering problems.

CEE 701 Applied Mathematics for Civil and Environmental Engineers (3 Credit Hours)

An examination of numerical and approximate mathematical methods for civil and environmental engineers with applications; finite-difference and finite-integral techniques for single and simultaneous ordinary differential equations; classical and finite-difference solutions of partial differential equations such as heat, wave, Laplace, and plate equation; and finite element applications selected from geotechnical, environmental, hydraulics/water resources, ocean, transportation, and structural engineering.

CEE 710 Structural Dynamics (3 Credit Hours)

Free and forced vibration of discrete and continuous systems; elastic and inelastic response of structures under dynamic loads.

CEE 711 Finite Element Analysis (3 Credit Hours)

To provide an understanding of the finite element method (FEM) as derived from an integral formulation perspective. To demonstrate the solutions of (1-D and 2-D) continuum mechanics problems such as solid mechanics, fluid mechanics and heat transfer.

CEE 712 Advanced Reinforced Concrete (3 Credit Hours)

Ultimate-strength theory, yield line methods, limit design, and other relevant advanced topics in the theory and design of concrete structures.

CEE 713 Prestressed Concrete (3 Credit Hours)

Analysis and design of prestressed concrete members and structures. Shrinkage, creep and losses, shear, bond and anchorages are discussed.

CEE 714 Advanced Structural Analysis (3 Credit Hours)

Elastic analysis of framed structures using matrix and numerical techniques.

CEE 715 Engineering Optimization I (3 Credit Hours)

Formulation and solution algorithms for Linear Programming (LP) problems. Unconstrained and constrained nonlinear programming (NLP) problems. Optimum solution for practical engineering systems. (Cross-listed with MAE 715 and MAE 815)

CEE 717 Bridge Structures Design (3 Credit Hours)

Design of steel, concrete, and composite bridges using modern techniques and current specifications.

Prerequisites: CEE 410 and CEE 415/CEE 515 or equivalent

CEE 718 Flood Resistant Structural Design (3 Credit Hours)

Analysis and design of flood protective shields for residential and commercial buildings, floodwalls and gates under hydrostatic, hydrodynamic, and floating debris impact forces, safety of dams and levees, sea-level rise issues for buildings and bridges, ASCE, IBC, and FEMA guidelines for flood resistant structural design, case histories.

CEE 719 Inelastic Structures (3 Credit Hours)

Inelastic analysis and behavior of framed structures.

CEE 720 Structural Stability (3 Credit Hours)

Fundamentals of elastic and inelastic stability of beams, columns and frames.

CEE 721 Plates (3 Credit Hours)

Classical and modern methods for the solution of plates of various shapes and boundary conditions, continuous and axially loaded plates and plates on elastic supports. Design examples.

CEE 722 Cluster Parallel Computing (3 Credit Hours)

Detailed numerical step-by-step procedures to exploit parallel and sparse computation under MPI (Message, Passing, Interface) computer environments are explained. Large-scale engineering/science applications are emphasized. Simultaneous linear equations are discussed.

CEE 723 Seismic Design of Steel Structures (3 Credit Hours)

Analysis and design of steel structures under seismic loading conditions, introduction to design specifications for steel structures.

Prerequisites: CEE 310 or equivalent

CEE 724 Retrofitting Methods for Bridges and Buildings (3 Credit Hours)

Retrofitting methods for bridges and buildings combined with related advanced structural analysis and design techniques.

Prerequisites: CEE 310 or equivalent

CEE 725 Smart Structures (3 Credit Hours)

This course covers structural systems integrated with sensing, data processing, and control devices, which control and reduce the vibration of structures. Students will learn about basic theories of smart structures, smart materials, sensors, structural health monitoring (SHM) as well as their application to civil infrastructures.

CEE 730 Advanced Foundation Engineering (3 Credit Hours)

Advanced analysis and design of shallow and deep foundations and retaining structures.

Prerequisites: CEE 430/CEE 530

CEE 731 Advanced Soil Mechanics (3 Credit Hours)

Detailed study of shear strength of soils and its application to slope stability and embankment design and analysis. Advanced laboratory shear tests are included.

Prerequisites: CEE 323

CEE 732 Engineering Behavior of Soils (3 Credit Hours)

Detailed study of physiochemical behavior of soils, fabric, rheology, effective stress path, and their applications to various geotechnical engineering problems.

Prerequisites: CEE 323

CEE 733 Soil Dynamics (3 Credit Hours)

Study of soil behavior under dynamic loadings. Laboratory and field techniques for determining soil properties and liquefaction potential. Design examples.

Prerequisites: CEE 323

CEE 741 Open Channel Flow (3 Credit Hours)

Momentum and energy principles, design of open channels, use of mathematical models for flow calculations in rivers, introduction to unsteady open channel flow.

Prerequisites: CEE 340

CEE 747 Groundwater Flow (3 Credit Hours)

Mathematical formulations of laws governing groundwater flow and contaminant transport. Unsaturated flow. Use of computer models for modeling groundwater aquifers.

Prerequisites: CEE 340

CEE 751 Physicochemical Treatment Processes (3 Credit Hours)

Physical and chemical processes used in the treatment of water and waste water are covered. Separation, isolation and reaction processes are characterized as well as reactor engineering.

Prerequisites: CEE 350

CEE 752 Biological Wastewater Treatment (3 Credit Hours)

The use of microorganisms to treat domestic and industrial waste waters for organics and nutrient removal are studied. Characteristics of individual waste water components and the appropriate treatment processes to remove these components are covered.

Prerequisites: CEE 350

CEE 753 Advanced Processes for Water and Wastewater Treatment (3 Credit Hours)

Theory, operation and application of advanced water and waste water treatment systems, including land application, dissolved solids, organic contaminant and nutrient removal processes. Emphasis on system development for waste water reclamation/recycling.

Prerequisites: CEE 751 and CEE 752

CEE 754 Environmental Engineering Microbiology (3 Credit Hours)

A lecture and laboratory course dealing with the study of the principles and applications of microbiology in waste water treatment, water treatment, stream self-purification and their effects in environmental engineering.

Prerequisites: CEE 350

CEE 755 Water Quality Management (3 Credit Hours)

Characterization of water quality in natural systems and the human activities that result in contaminant input to these systems are studied. Management practices for minimizing contaminant input and for restoring contaminated waters are discussed.

CEE 756 Water Quality Modeling (3 Credit Hours)

Formulation of mathematical equations to describe the fate and transport of aqueous contaminants in dynamic surface water systems. Use of water quality computer models to predict various contamination scenarios.

Prerequisites: MATH 307, CEE 340, CEE 350 or permission of the instructor

CEE 759 Carbon-Free Clean Energy (3 Credit Hours)

The course presents an overview of carbon-free energy sources (nuclear, wind, solar, hydropower, and geothermal). The current status, conversion processes, economics, and environmental issues of these forms of energy will be discussed.

CEE 760 Managing Phosphorous in Circular Economy (3 Credit Hours)

This course is focused on the importance of management of phosphorous in preserving sustainable environments. The objectives of the course are to provide an overview of different phosphorous management/recovering/recycling strategies; basics of circular economy; role of microalgae in recovery and recycling of phosphorous; phosphorous recovery from wastewater; and application of the principles of circular economy towards global and regional phosphorous management.

CEE 761 Water Resources Processes and Analysis Methods (3 Credit Hours)

This course examines interactive hydrologic processes in water resource; modifications of climate change to these processes; and modern simulation and systematic analysis methods incorporating the modifications into practices of water resource planning, utilization, protection, and engineering.

CEE 762 Aquatic Chemistry in Environmental Engineering (3 Credit Hours)

Chemical reactions in natural and engineered systems are studied with emphasis placed on developing kinetic expressions and assessing chemical equilibrium. Kinetic and equilibrium expressions are applied to engineering problems to predict the reaction time and products of specific reactions.

Prerequisites: CHEM 123N

CEE 770 Transportation Safety (3 Credit Hours)

This course focuses on major transportation safety issues including transportation safety goals, safety of various transportation modes, identification of problematic locations, selection of safety countermeasures and their evaluation, safety data and modeling issues.

Prerequisites: CEE 471/CEE 571

CEE 771 Transportation Operations II (3 Credit Hours)

This is the second course in transportation operations and traffic flow theory. Topics covered include design of progressive signal systems, queuing theory, car following models, and applications of microscopic traffic simulation to corridor studies.

Prerequisites: CEE 471/CEE 571

CEE 772 Intelligent Transportation Systems (3 Credit Hours)

This course examines how ITS can be used to enhance mobility and safety. The topics covered in the course include systems engineering approach to ITS, traveler response to technologies and information, ITS planning and evaluation, and ITS deployment and operational performance.

Prerequisites: CEE 370

CEE 773 Transportation Planning (3 Credit Hours)

This course covers transportation planning processes that include policy direction, transportation data, travel demand forecasting models, and decision-making/stakeholders issues.

CEE 774 Transportation Network Flow Models (3 Credit Hours)

This course provides a rigorous introduction to transportation network modeling, with special emphasis on network equilibrium problems. Topics include: elementary graph theory, shortest path problem nonlinear optimization, optimization of univariate functions, deterministic and stochastic user equilibrium.

Prerequisites: CEE 370 or equivalent

CEE 775 Transportation Network Algorithms (3 Credit Hours)

Fundamental models and algorithms in optimization, stochastic modeling and parallel computing will be discussed and illustrated with transportation applications.

CEE 776 Simulation in Transportation Networks (3 Credit Hours)

Principles of simulation modeling. Microscopic, mesoscopic and macroscopic traffic simulation models. Driver behavior in networks. Calibration and validation of traffic simulation models. Traffic simulation software.

CEE 777 Econometric Modeling in Transportation (3 Credit Hours)

The class focuses on the development of econometric modeling and its application in the field of transportation engineering. Topics to be covered include statistical inference, linear regression, count data models, discrete choice models, survival analysis, time series modeling, spatial modeling, panel data analysis, and structural equation modeling. Students will have a better understanding of the concepts and theories of econometrics and will be equipped with well-suited modeling and analysis techniques.

Prerequisites: Graduate student status

CEE 782 Design of Coastal Structures (3 Credit Hours)

Nonlinear wave theories; wave forces on slender piles and seawalls; design of rubblemound structures; design philosophy, initial costs, maintenance costs, optimized design using stochastic methods; design of renourished beaches. Advanced alternative solutions for shore protection.

Prerequisites: CEE 482/CEE 582

CEE 787 Dredging and Beach Engineering (3 Credit Hours)

Types of dredges, factors affecting dredge performance; hydraulic dredges (cutter, hopper) and mechanical dredges systems (bucket, clamshell, etc.); shoaling rate determination; inlet sand bypassing systems; beach renourishment schemes. Design of beach renourishment/projects.

Prerequisites: CEE 330

CEE 788 Coastal Hydrodynamics and Sediment Processes (3 Credit Hours)

This course discusses the hydrodynamics of the coastal environment and reviews waves, low-frequency motions, and coastal responses, including sediment processes and beach evolution. Specific topics to be covered include: review of linear wave theory; introduction to nonlinear waves; wave-averaged motions and radiation stresses; wave and current boundary layers; wave setup, longshore current, rip current, undertow, and nearshore circulation; wave dissipation mechanisms; and fluid-sediment interaction. An introduction to cohesive sediments, sediment concentration and transport models, and beach morphology will also be addressed.

Prerequisites: CEE 482/CEE 582

CEE 789 Computational Environmental Fluid Dynamics (3 Credit Hours)

Fluid dynamics conservation laws as transport phenomena. Classical, finite-difference models for advection, diffusion and combined fluid flows. Explicit and implicit schemes to solve unsteady, free-surface fluid flow and diffusion (dispersion) problems in one and multi-dimensions. Turbulence models.

Prerequisites: CEE 330

CEE 795 Topics in Civil and Environmental Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in civil and/or environmental engineering.

Prerequisites: Permission of the instructor

CEE 797 Independent Study (1-3 Credit Hours)**CEE 800 Civil and Environmental Engineering Experimental Design (3 Credit Hours)**

Graduate-level overview of engineering experimental design and analysis with emphasis on statistical methods; practical and proper statistical methods applicable to multidisciplinary, real-world civil and environmental engineering problems.

CEE 801 Applied Mathematics for Civil and Environmental Engineers (3 Credit Hours)

An examination of numerical and approximate mathematical methods for civil and environmental engineers with applications; finite-difference and finite-integral techniques for single and simultaneous ordinary differential equations; classical and finite-difference solutions of partial differential equations such as heat, wave, Laplace, and plate equation; and finite element applications selected from geotechnical, environmental, hydraulics/water resources, ocean, transportation, and structural engineering.

CEE 810 Structural Dynamics (3 Credit Hours)

Free and forced vibration of discrete and continuous systems; elastic and inelastic response of structures under dynamic loads.

CEE 811 Finite Element Analysis (3 Credit Hours)

To provide an understanding of the finite element method (FEM) as derived from an integral formulation perspective. To demonstrate the solutions of (1-D and 2-D) continuum mechanics problems such as solid mechanics, fluid mechanics and heat transfer.

CEE 812 Advanced Reinforced Concrete (3 Credit Hours)

Ultimate-strength theory, yield line methods, limit design, and other relevant advanced topics in the theory and design of concrete structures.

CEE 813 Prestressed Concrete (3 Credit Hours)

Analysis and design of prestressed concrete members and structures. Shrinkage, creep and losses, shear, bond and anchorages are discussed.

CEE 814 Advanced Structural Analysis (3 Credit Hours)

Elastic analysis of framed structures using matrix and numerical techniques.

CEE 815 Engineering Optimization I (3 Credit Hours)

Formulation and solution algorithms for Linear Programming (LP) problems. Unconstrained and constrained nonlinear programming (NLP) problems. Optimum solution for practical engineering systems. (Cross-listed with MAE 715/MAE 815)

CEE 817 Bridge Structures Design (3 Credit Hours)

Design of steel, concrete, and composite bridges using modern techniques and current specifications.

Prerequisites: CEE 410 and CEE 415/CEE 515 or equivalent

CEE 818 Flood Resistant Structural Design (3 Credit Hours)

Analysis and design of flood protective shields for residential and commercial buildings, floodwalls and gates under hydrostatic, hydrodynamic, and floating debris impact forces, safety of dams and levees, sea-level rise issues for buildings and bridges, ASCE, IBC, and FEMA guidelines for flood resistant structural design, case histories.

CEE 819 Inelastic Structures (3 Credit Hours)

Inelastic analysis and behavior of framed structures.

CEE 820 Structural Stability (3 Credit Hours)

Fundamentals of elastic and inelastic stability of beams, columns and frames.

CEE 821 Plates (3 Credit Hours)

Classical and modern methods for the solution of plates of various shapes and boundary conditions, continuous and axially loaded plates and plates on elastic supports. Design examples.

CEE 822 Cluster Parallel Computing (3 Credit Hours)

Detailed numerical step-by-step procedures to exploit parallel and sparse computation under MPI (Message, Passing, Interface) computer environments are explained. Large-scale engineering/science applications are emphasized. Simultaneous linear equations are discussed.

CEE 823 Seismic Design of Steel Structures (3 Credit Hours)

Analysis and design of steel structures under seismic loading conditions, introduction to design specifications for steel structures.

Prerequisites: CEE 310 or equivalent

CEE 824 Retrofitting Methods for Bridges and Buildings (3 Credit Hours)

Retrofitting methods for bridges and buildings combined with related advanced structural analysis and design techniques.

Prerequisites: CEE 310 or equivalent

CEE 825 Smart Structures (3 Credit Hours)

This course covers structural systems integrated with sensing, data processing, and control devices, which control and reduce the vibration of structures. Students will learn about basic theories of smart structures, smart materials, sensors, structural health monitoring (SHM) as well as their application to civil infrastructures.

CEE 830 Advanced Foundation Engineering (3 Credit Hours)

Advanced analysis and design of shallow and deep foundations and retaining structures.

Prerequisites: CEE 430/CEE 530

CEE 831 Advanced Soil Mechanics (3 Credit Hours)

Detailed study of shear strength of soils and its application to slope stability and embankment design and analysis. Advanced laboratory shear tests are included.

Prerequisites: CEE 323

CEE 832 Engineering Behavior of Soils (3 Credit Hours)

Detailed study of physiochemical behavior of soils, fabric, rheology, effective stress path, and their applications to various geotechnical engineering problems.

Prerequisites: CEE 323

CEE 833 Soil Dynamics (3 Credit Hours)

Study of soil behavior under dynamic loadings. Laboratory and field techniques for determining soil properties and liquefaction potential. Design examples.

Prerequisites: CEE 323

CEE 841 Open Channel Flow (3 Credit Hours)

Momentum and energy principles, design of open channels, use of mathematical models for flow calculations in rivers, introduction to unsteady open channel flow.

Prerequisites: CEE 340

CEE 847 Groundwater Flow (3 Credit Hours)

Mathematical formulations of laws governing groundwater flow and contaminant transport. Unsaturated flow. Use of computer models for modeling groundwater aquifers.

Prerequisites: CEE 340

CEE 851 Physiochemical Treatment Processes (3 Credit Hours)

Physical and chemical processes used in the treatment of water and waste water are covered. Separation, isolation and reaction processes are characterized as well as reactor engineering.

Prerequisites: CEE 350

CEE 852 Biological Wastewater Treatment (3 Credit Hours)

The use of microorganisms to treat domestic and industrial waste waters for organics and nutrient removal are studied. Characteristics of individual waste water components and the appropriate treatment processes to remove these components are covered.

Prerequisites: CEE 350

CEE 853 Advanced Processes for Water and Wastewater Treatment (3 Credit Hours)

Theory, operation and application of advanced water and waste water treatment systems, including land application, dissolved solids, organic contaminant and nutrient removal processes. Emphasis on system development for waste water reclamation/recycling.

Prerequisites: CEE 751 and CEE 752

CEE 854 Environmental Engineering Microbiology (3 Credit Hours)

A lecture and laboratory course dealing with the study of the principles and applications of microbiology in waste water treatment, water treatment, stream self-purification and their effects in environmental engineering.

Prerequisites: CEE 350

CEE 855 Water Quality Management (3 Credit Hours)

Characterization of water quality in natural systems and the human activities that result in contaminant input to these systems are studied. Management practices for minimizing contaminant input and for restoring contaminated waters are discussed.

CEE 856 Water Quality Modeling (3 Credit Hours)

Formulation of mathematical equations to describe the fate and transport of aqueous contaminants in dynamic surface water systems. Use of water quality computer models to predict various contamination scenarios.

Prerequisites: MATH 307, CEE 340, CEE 350 or permission of the instructor

CEE 859 Carbon-Free Clean Energy (3 Credit Hours)

The course presents an overview of carbon-free energy sources (nuclear, wind, solar, hydropower, and geothermal). The current status, conversion processes, economics, and environmental issues of these forms of energy will be discussed.

CEE 860 Managing Phosphorous in Circular Economy (3 Credit Hours)

This course is focused on the importance of management of phosphorous in preserving sustainable environments. The objectives of the course are to provide an overview of different phosphorous management/recovering/recycling strategies; basics of circular economy; role of microalgae in recovery and recycling of phosphorous; phosphorous recovery from wastewater; and application of the principles of circular economy towards global and regional phosphorous management.

CEE 861 Water Resources Processes and Analysis Methods (3 Credit Hours)

This course examines interactive hydrologic processes in water resource; modifications of climate change to these processes; and modern simulation and systematic analysis methods incorporating the modifications into practices of water resource planning, utilization, protection, and engineering.

CEE 862 Aquatic Chemistry in Environmental Engineering (3 Credit Hours)

Chemical reactions in natural and engineered systems are studied with emphasis placed on developing kinetic expressions and assessing chemical equilibrium. Kinetic and equilibrium expressions are applied to engineering problems to predict the reaction time and products of specific reactions.

Prerequisites: CHEM 123N

CEE 870 Transportation Safety (3 Credit Hours)

This course focuses on major transportation safety issues including transportation safety goals, safety of various transportation modes, identification of problematic locations, selection of safety countermeasures and their evaluation, safety data and modeling issues.

Prerequisites: CEE 471/CEE 571

CEE 871 Transportation Operations II (3 Credit Hours)

This is the second course in transportation operations and traffic flow theory. Topics covered include design of progressive signal systems, queuing theory, car following models, and applications of microscopic traffic simulation to corridor studies.

Prerequisites: CEE 471/CEE 571

CEE 872 Intelligent Transportation Systems (3 Credit Hours)

This course examines how ITS can be used to enhance mobility and safety. The topics covered in the course include systems engineering approach to ITS, traveler response to technologies and information, ITS planning and evaluation, and ITS deployment and operational performance.

Prerequisites: CEE 370

CEE 873 Transportation Planning (3 Credit Hours)

This course covers transportation planning processes that include policy direction, transportation data, travel demand forecasting models, and decision-making/stakeholders issues.

CEE 874 Transportation Network Flow Models (3 Credit Hours)

This course provides a rigorous introduction to transportation network modeling, with special emphasis on network equilibrium problems. Topics include: elementary graph theory, shortest path problem nonlinear optimization, optimization of univariate functions, deterministic and stochastic user equilibrium.

CEE 875 Transportation Network Algorithms (3 Credit Hours)

Fundamental models and algorithms in optimization, stochastic modeling and parallel computing will be discussed and illustrated with transportation applications.

CEE 876 Simulation in Transportation Networks (3 Credit Hours)

Principles of simulation modeling. Microscopic, mesoscopic and macroscopic traffic simulation models. Driver behavior in networks. Calibration and validation of traffic simulation models. Traffic simulation software.

CEE 877 Econometric Modeling in Transportation (3 Credit Hours)

The class focuses on the development of econometric modeling and its application in the field of transportation engineering. Topics to be covered include statistical inference, linear regression, count data models, discrete choice models, survival analysis, time series modeling, spatial modeling, panel data analysis, and structural equation modeling. Students will have a better understanding of the concepts and theories of econometrics and will be equipped with well-suited modeling and analysis techniques.

Prerequisites: Graduate student status

CEE 882 Design of Coastal Structures (3 Credit Hours)

Nonlinear wave theories; wave forces on slender piles and seawalls; design of rubblemound structures; design philosophy, initial costs, maintenance costs, optimized design using stochastic methods; design of renourished beaches. Advanced alternative solutions for shore protection.

Prerequisites: CEE 482/CEE 582

CEE 887 Dredging and Beach Engineering (3 Credit Hours)

Types of dredges, factors affecting dredge performance; hydraulic dredges (cutter, hopper) and mechanical dredges systems (bucket, clamshell, etc.); shoaling rate determination; inlet sand bypassing systems; beach renourishment schemes. Design of beach renourishment/projects.

Prerequisites: CEE 330

CEE 888 Coastal Hydrodynamics and Sediment Processes (3 Credit Hours)

This course discusses the hydrodynamics of the coastal environment and reviews waves, low-frequency motions, and coastal responses, including sediment processes and beach evolution. Specific topics to be covered include: review of linear wave theory; introduction to nonlinear waves; wave-averaged motions and radiation stresses; wave and current boundary layers; wave setup, longshore current, rip current, undertow, and nearshore circulation; wave dissipation mechanisms; and fluid-sediment interaction. An introduction to cohesive sediments, sediment concentration and transport models, and beach morphology will also be addressed.

Prerequisites: CEE 482/CEE 582

CEE 889 Computational Environmental Fluid Dynamics (3 Credit Hours)

Fluid dynamics conservation laws as transport phenomena. Classical, finite-difference models for advection, diffusion and combined fluid flows. Explicit and implicit schemes to solve unsteady, free-surface fluid flow and diffusion (dispersion) problems in one and multi-dimensions. Turbulence models.

Prerequisites: CEE 330

CEE 892 Doctor of Engineering Project (1-12 Credit Hours)

Directed individual study applying advanced level technical knowledge to identify, formulate, and solve a complex, novel problem in Civil and Environmental Engineering.

CEE 895 Topics in Civil and Environmental Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in civil and/or environmental engineering.

Prerequisites: Permission of the instructor

CEE 897 Independent Study (1-3 Credit Hours)

Individual analytical, experimental and/or design study selected by the student. Approved and supervised by the advisor.

Prerequisites: permission of the instructor

CEE 899 Dissertation Research (1-9 Credit Hours)

Research for the dissertation.

CEE 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

CEE 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

CGE - Center for Global Engagement

CGE 549 Linguistics for Working with Multilingual Populations (3 Credit Hours)

This course introduces fundamental concepts in linguistics essential for working with multilingual populations. Students examine core structural components of language including sound systems, word formation, sentence structure, and meaning, developing skills to analyze linguistic data across diverse languages and global English varieties. The course examines the intricate relationships between language, culture, and society through topics such as linguistic worldviews, regional and social variation, multilingualism, writing systems, and language-based discrimination. This course includes a service-learning component which involves working directly with local multilingual learners at ODU and within the community.

CGE 550 Social Justice & Literacy for Immigrant and Refugee Learners (3 Credit Hours)

This course provides an introduction to issues critical to the education of immigrant- and refugee-background learners. Students will learn to actively participate in refugee and immigrant communities, acquire an awareness of this population's experiences and needs, and explore issues related to social justice, education, language, and access. Language development theories and pedagogical strategies to engage collaboratively and compassionately with multilingual and multicultural newcomers are explored and practiced.

CGE 596 Topics in Language, Culture, and Society (3 Credit Hours)

The advanced study of selected topics in language, culture, and society designed to permit small groups of qualified students to work on subjects of mutual interest, which because of their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described by academic advisors.

CGE 650 Graduate Oral Communication (3 Credit Hours)

This course is designed for multilingual and/or international graduate and professional students who are preparing to engage in scholarly activity in their academic disciplines. Students will develop the speaking skills needed to prepare and deliver academic presentations as well as effectively participate in seminar-style discussions and other formal group settings. Students are expected to tailor the opportunities provided by the course to their respective disciplines. A variety of areas of pronunciation will be covered while paying special attention to comprehensibility and individual students' needs. Graduate Monarch English Transition (MET) Program Exit Criteria: Earn a grade point average of 3.0 in academic courses and grades of B or higher and 85% attendance or higher in the MET courses.

CGE 652 Graduate Academic Writing (3 Credit Hours)

This course is designed for graduate multilingual and/or international graduate and professional students who are preparing to engage in scholarly activity in their academic disciplines. In this course, students learn writing practices required in order to write cohesive, coherent, and convincing academic papers. Writing skills are developed through guided examination and analysis of discipline-specific authors and texts. Students are expected to tailor the opportunities provided by the course to their respective disciplines. Problems with sentence structure, lexical grammar, and diction are addressed individually. Graduate Monarch English Transition (MET) Program Exit Criteria: Earn a grade point average of 3.0 in academic courses and grades of B or higher and 85% attendance or higher in the MET courses.

CGE 695 Topics in Graduate Communication (1-3 Credit Hours)

The study of selected topics designed to permit qualified students to work on subjects of mutual interest in a seminar format which may not be offered regularly due to their specialized nature.

CHAE - Contemporary Human Anatomy Education

CHAE 800 Advanced Anatomical Sciences (3 Credit Hours)

This course will provide exposure to the four cardinal anatomical sciences. Gross Anatomy, Micro Anatomy, Embryology & Neuroanatomy. The course will include anatomy, histology and embryology, and multiple neuroanatomy online lectures and labs to ensure students are well versed in each of the specialties.

CHAE 801 Advanced Medical Imaging (3 Credit Hours)

This course provides the principles and applications of medical imaging and clinical-case scenarios using evidence-based approaches and peer-reviewed materials that contribute to the integration of concepts relating to the major medical diagnostic techniques used to examine the different regions of the human body. The learning experience in this course fosters self-directed and independent study and builds clinical problem-solving skills. This educational approach will also help students to develop skills such as recognition and interpretation of human structures and the variations presented in medical imaging. Students will learn to apply these skills in an educational and/or scientific research environment. The format of this course is aligned with the educational framework established in CHAE 800.

CHAE 803 Contemporary Teaching Anatomy (3 Credit Hours)

Anatomy is one of the oldest disciplines in human history. From Hippocrates and Galen to da Vinci and Vesalius and into the Enlightenment and modern age, knowledge of anatomy has evolved, experiencing many paradigm shifts in the way it is learned and taught. In this course, students will examine the culture-history of anatomy instruction and place this heritage in context with contemporary needs, issues, and best practices relating to course development, course management, dissection, grading, and integration of content in diverse academic settings.

CHAE 813 Stewards of Anatomy Education (3 Credit Hours)

This course will address what it means to be a steward of teaching anatomy, preparing students for a variety of settings and tasks associated with leadership in anatomy education. Topics include a cross-section of various classroom settings and teaching anatomy to the public. It further discusses the role of teaching assistants, sessional teachers, and engaging clinical faculty in anatomy education. The course ends with lessons on research and scholarship within the anatomical sciences, potentially suitable for students to share with professionals in their discipline, advancing anatomy education knowledge.

CHAE 814 Anatomy Education Foundations (3 Credit Hours)

The purpose of this course is to prepare future anatomy educators to analyze instructional situations and determine appropriate methods to support student learning. This is achieved by exploring foundational human anatomy education approaches, discussing pedagogical strategies, and developing assessments aligned with theories of adult learning.

CHAE 815 Teaching & Tech for Anatomy (3 Credit Hours)

This course provides a comparison of traditional and contemporary teaching modalities such as the use of body donations and medical imaging. Course topics will include ethics and donor acquisition, variations in lab experiences, and technology in teaching modalities. Various emergent teaching methods will be discussed and learners will place them into their professional contexts.

CHAE 900 Research (2-6 Credit Hours)

The goal of this course is submission of the doctoral candidate's research proposal to Institution Review Board and receiving approval to collect data. Prerequisites Advisor approval required.

CHEM - Chemistry and Biochemistry

CHEM 511 Natural Products Chemistry in the Carribean (4 Credit Hours)

A bioinorganic and natural products course that entails the chemistry of the use of chromium, vanadium, and herbs in medicine and the use of tunicates as biomonitors of heavy metal pollution in Jamaica. This is a study abroad course intended for the Maymester term.

Prerequisites: CHEM 211 and CHEM 212 with a C or better

CHEM 515 Intermediate Organic Chemistry (3 Credit Hours)

An in-depth look at organic reaction mechanisms, including polar, pericyclic, radical and organometallic reactions.

CHEM 521 Instrumental Analysis Lecture (3 Credit Hours)

Designed to be taken concurrently with CHEM 522. A study of the basic principles of spectroscopic, chromatographic, and electrochemical methods of quantitative chemical analysis. Methods of chemical instrumentation are also included.

CHEM 522 Instrumental Analysis Laboratory (3 Credit Hours)

An intensive laboratory study of the principles of analytical chemistry. Experiments in spectroscopic, chromatographic, and electrochemical methods are conducted to illustrate fundamental principles and to provide the opportunity to develop skills in the use of instrumentation for chemical measurement.

Pre- or corequisite: CHEM 521 with a grade of C or better

CHEM 539 Introduction to Pharmaceutical Chemistry (3 Credit Hours)

An introduction to the fundamental concepts of drug action including pharmacodynamics (effect of drugs on the body) and pharmacokinetics (ADME: absorption, distribution, metabolism and elimination) of drugs; an introduction to the process of new drug discovery and synthesis will also be taught.

Prerequisites: CHEM 213 and CHEM 214 with a grade of "C" or better; CHEM 321 and CHEM 441 recommended

CHEM 541 Biochemistry Lecture (3 Credit Hours)

This course is a one-semester survey of the major molecular constituents, bioenergetics, enzymes, nucleic acid structure, and genetic information transfer pathways fundamental to biochemistry.

CHEM 542 Biochemistry Laboratory (4 Credit Hours)

Principles and techniques of biochemical and immunological procedures involving protein characterization and isolation, enzymology, bioinformatics, and common molecular biology techniques for nucleic acids will be presented. (This is a writing intensive course.)

Pre- or corequisite: CHEM 541 with a grade of C or better

CHEM 543 Intermediate Biochemistry (3 Credit Hours)

This course presents and in-depth study of protein structure, folding, and synthesis. The major metabolic pathways will be studied in detail regarding thermodynamics and mechanism of regulation or control of individual enzymes and entire metabolic pathways. Concepts of metabolic disease will be introduced and effects on integrated metabolism will be presented.

Prerequisites: CHEM 541 with a grade of C or better or equivalent

CHEM 549 Environmental Chemistry (3 Credit Hours)

An overview of the natural chemical systems operating in the atmosphere, in the terrestrial environment (both water and soils), and in the oceans, and the potential effects that human activities may have on them. Specific topics include the origin and evolution of the earth and life, the chemistry of the atmosphere (including the ozone layer and greenhouse effect), the organic and inorganic components of soil and water, chemical weathering of rocks, metal complexation, biological processes in soil and water, and global-scale chemical processes.

CHEM 551 Advanced Inorganic Chemistry (3 Credit Hours)

Theoretical aspects of modern inorganic chemistry: bonding theories, stereochemistry, acid-base theories, coordination compounds, organometallic and bioinorganic compounds.

CHEM 552 Advanced Inorganic Chemistry Laboratory (2 Credit Hours)

Advanced topics in inorganic synthesis.

Prerequisites: CHEM 551 with a grade of C or better

CHEM 553 Essentials of Toxicology (3 Credit Hours)

Fundamental principles of toxicology: dose-response relationship, toxicologic testing, chemical and biological factors influencing toxicity, organ toxicology, carcinogenesis, mutagenesis, teratogenesis.

CHEM 560 Frontiers in Nanoscience and Nanotechnology (1 Credit Hour)

Nanotechnology presents unparalleled opportunities for advances in technology and medicine. Simultaneously, nanotechnology presents new challenges to organisms and to our environment. These undefined risk factors threaten to slow the development of new technologies and novel medical therapies. This course will review: structure, synthesis and properties of key nanomaterials; key applications of nanomaterials in technology and medicine; and impacts of nanomaterials on plant and animal physiology and the environment more generally. This course will be team-taught by faculty members in Biological Sciences, Chemistry and Biochemistry, and Engineering.

CHEM 595 Selected Topics (1-3 Credit Hours)

Study of selected topics.

Prerequisites: permission of the instructor

CHEM 669 In-Service Practicum (3-6 Credit Hours)

6 credits; 50 hours per credit. One semester of work experience in local hospital, forensic, or industrial laboratory. Available for pass/fail grading only.

Prerequisites: CHEM 631 632

CHEM 670 Graduate Orientation (3 Credit Hours)

An introduction to graduate studies in chemistry. Topics include responsible conduct of research (RCR), grant writing skills, oral presentation of chemical research and methods for searching the chemical literature. Attendance at departmental seminars is required. Limited to first-year chemistry doctoral students.

CHEM 685 Frontiers in Chemistry (1-3 Credit Hours)

Topics representing the most recent advances in various fields of chemistry or ones which represent an interdisciplinary advancement.

Prerequisites: permission of the department chair

CHEM 695 Topics in Chemistry (1-3 Credit Hours)

Study of selected topics in chemistry.

Prerequisites: permission of the department chair

CHEM 698 Master's Research (1-9 Credit Hours)**CHEM 699 Master's Thesis (3 Credit Hours)**

Master's Thesis.

Prerequisites: Departmental permission required

CHEM 701 Advanced Analytical Chemistry (3 Credit Hours)

The theoretical and practical foundation of analysis with emphasis on recent analytical developments and current literature; topics may include figures of merit and data treatment, sampling and extraction, HPLC, electrochemistry, circular dichroism, FT-IR, Raman, MS, electrophoresis and NMR. Lectures are given by experts in those techniques.

CHEM 702 Advanced Analytical Chemistry II (3 Credit Hours)

This course will review the most cutting-edge advanced analytical chemistry instrumentation and methods, spanning three core areas of analytical chemistry (spectroscopy, separation, and electrochemistry) and offering an in-depth understanding of objectives, motivations, and future directions. The course will focus on advanced instrumentation and methodologies that can achieve ultra-sensitive analysis and detection, including single molecular spectroscopy, nanoparticle probes, high-speed separation in microfluidic devices, and ultramicroelectrodes for sensing and imaging.

Prerequisites: Instrumental Analysis (or its equivalent)

CHEM 703 Chromatographic Separations by HPLC and GC (3 Credit Hours)

This course covers basic principles of chromatography emphasizing high performance liquid chromatography (HPLC) and gas chromatography (GC), as well as separation modes, instrumentation, detection methods, quantification, and sample preparation including solid phase extraction. Examples from environmental sciences, biosciences and industry will be stressed.

CHEM 704 HPLC and GC Laboratory (2-3 Credit Hours)

This lab course consists of six to seven independent HPLC and GC exercises based on examples from environmental, bioscience, and industrial applications.

CHEM 715 Automation and Management of the Clinical Chemistry Laboratory (1 Credit Hour)

The basic principles of management of the clinical chemistry laboratory and regulatory issues in laboratory management are presented.

Prerequisites: permission of the instructor

CHEM 716 Electrochemical Methods of Analysis (1-2 Credit Hours)

This course presents the fundamental principals and practical applications of modern electrochemical methods of analysis. Lectures and text readings cover the basic concepts and fundamental principals of this division of analytical techniques. Detailed descriptions and demonstrations of modern electrochemical research instrumentation will be provided. Students will obtain hands-on experience with this instrumentation by performing a required chemical determination using an electroanalytical method, and by undertaking a special analytical project. Research applications of other electroanalytical techniques and instrumentation, in addition to those actually used by the students in this course, will be discussed and/or demonstrated.

CHEM 720 Experimental Design and Data Treatment (3 Credit Hours)

A hands-on approach to experimental design and multivariate data analysis. Modern computer-based chemometric theories will be presented.

CHEM 723 Modern Synthetic Organic Chemistry (3 Credit Hours)

An examination of the design of complex organic molecules and natural products. Topics covered will include: retrosynthetic analysis; stereochemical control; application of fundamental organic reactions to develop synthetic strategies; implementation of protecting groups in organic synthesis; construction of carbocyclic and heterocyclic ring systems, organometallic coupling reactions, and contemporary methods.

Prerequisites: CHEM 728 or CHEM 828 or permission of the instructor

CHEM 724 Bioinorganic Chemistry (3 Credit Hours)

This course is a survey of the mechanisms of biochemical activity of the trace elements. Topics include oxygen uptake, oxidation-reduction, metabolism, and toxicity.

CHEM 725 Physical Organic Chemistry (3 Credit Hours)

Approaches to the study of reaction mechanisms, including molecular orbital theory, thermochemistry, kinetics, isotope effects, solvent and substituent effects (including linear free energy relationships), acidity, acid catalysis, and detection of reactive intermediates.

CHEM 726 Medicinal Chemistry (3 Credit Hours)

Study of the chemistry and mode of action of various medicinal and physiologically active compounds.

Prerequisites: CHEM 211 and CHEM 213 or one-year equivalent organic chemistry courses; CHEM 415/CHEM 515 and CHEM 441/CHEM 541 are helpful

CHEM 728 Organic Reactions (3 Credit Hours)

A comprehensive evaluation of modern organic transformations with emphasis on the fundamentals of each reaction, their utility and applications. Topics covered will include: nomenclature, classes of compounds, functional group exchanges (oxidation and reduction reactions), bond forming reactions (carbon-carbon, carbon-oxygen, and carbon-nitrogen), introduction to protecting groups, and reaction control by steric, electronic and topological considerations.

Prerequisites: CHEM 415 or CHEM 515 or equivalent or permission of the instructor

CHEM 734 Organic Spectroscopy (3 Credit Hours)

Organic functional group and structure analysis with ultraviolet, infrared, nuclear magnetic resonance, mass, and other spectroscopic techniques.

CHEM 736 Introduction to Organic Synthesis (3 Credit Hours)

Detailed coverage of fundamental organic transformations with emphasis on reduction, oxidation, carbon-carbon bond formation, and protecting group strategy.

CHEM 738 Organometallics (3 Credit Hours)

This course examines important transformations of organotransition-metal species. There is an emphasis on basic mechanism, structure-reactivity relationships, and applications in organic synthesis with applications of organotransition-metal catalysis towards industrial applications.

CHEM 740 Coordination and Transition Metal Chemistry (3 Credit Hours)

This course is based on the coordination and transition metal chemistry of first row, second row, and third row transition metals.

Prerequisites: CHEM 351

CHEM 742 Advanced Mass Spectroscopy (3 Credit Hours)

This course trains students in the theory and application of advanced mass spectrometric methods as used in all subdisciplines of chemistry and biochemistry.

CHEM 743 Organic Geochemistry (3 Credit Hours)

Organic geochemistry is the study of organic compounds originally produced by photosynthesis and altered as they cycle through the soils, atmosphere, rivers, oceans, and crustal rocks. This course will include the carbon/oxygen cycles, biomarkers, organic matter diagenesis/catagenesis, analytical techniques used in organic geochemistry, and an introduction to carbon isotopes.

CHEM 744 NMR Spectroscopy (3 Credit Hours)

NMR is a highly specific spectroscopic technique. It can probe the individual atoms in molecules via a limitless array of distinct experiments tailored to nearly every need. While NMR experiments can contain up to several hundred magnetic pulses, the effect of the pulses and therefore the utility of each experiment can be understood via a primarily visual approach. This course offers a visual-based approach to discuss spectrometer hardware, basic NMR theory, and a series of one, two and three-dimensional NMR experiments, with applications to small molecules, proteins, nucleic acids and their interactions.

CHEM 747 Medical Biochemistry (3 Credit Hours)

This course focuses on the applied biochemistry associated with human biological systems. Topics to be covered include the hormonal control of metabolism, vitamins, minerals, diagnostic tests; the biochemistry of the digestive system; connective tissue and bone; the immune system; the urinary system; and the nervous systems, among others. Exams involve answering United States Medical Licensing Exam type questions in some instances. Medical biochemistry case studies are presented and discussed in class that relate to the biochemical basis of disease to enhance the learning experience. Students will also write a research paper and give an in-class presentation on selected topics.

Prerequisites: CHEM 541 and CHEM 543 (or) CHEM 765

CHEM 748 Environmental Chemistry Laboratory (3 Credit Hours)

Study of the basic principles and methods of trace chemical analysis of environmental systems, including spectroscopic, chromatographic, and electrochemical instrumental methods, in addition to wet chemical methods.

CHEM 749 Environmental Chemistry (3 Credit Hours)

An overview of the natural chemistry systems operating in the atmosphere, in the terrestrial environment (both water and soils), and in the oceans, and the potential effects that human activities may have on them. Specific topics include the origin and evolution of the earth and life, the chemistry of the atmosphere (including the ozone layer and greenhouse effect), the organic and inorganic components of soil and water, chemical weathering of rocks, metal complexation, biological processes in soil and water, and global-scale chemical processes.

CHEM 754 Quantum Chemistry (3 Credit Hours)

Overview of the development and application of quantum mechanics from a chemical perspective.

CHEM 755 Computational Chemistry (3 Credit Hours)

Comprehensive overview of ab initio (quantum) calculations and molecular dynamic simulations, the two most widely used computational methods. Plus a brief overview of other computational applications in chemistry and biology.

Prerequisites: CHEM 754 or permission of the instructor

CHEM 756 Inorganic Reaction Mechanisms (3 Credit Hours)

This course is a survey of the major mechanisms of inorganic and organometallic chemistry. Topics include kinetics, ligand substitution, electron transfer, and photochemistry.

CHEM 758 Atmospheric Chemistry (3 Credit Hours)

An introductory survey of atmospheric chemistry and physics. Topics to be covered include atmospheric composition, atmospheric pressure, simple models, atmospheric transport, geochemical cycles, the greenhouse effect, aerosols, stratospheric ozone, the oxidizing power of the troposphere, ozone air pollution, satellite orbits, and radiative transfer. The course will also provide a survey of satellite remote sensing. It will conclude with the basics of satellite remote sensing, including a brief survey of satellite instruments.

CHEM 760 Molecular Spectroscopy (3 Credit Hours)

An introductory survey of the rotational, vibrational and electronic spectroscopy of molecules from the perspective of quantum mechanics and group theory.

Prerequisites: CHEM 333

CHEM 763 Mechanisms of Sensing and Signal Transduction (3 Credit Hours)

Living organisms must sense and respond to changes in their environment, which requires perceiving extracellular stimuli and converting this information into tangible changes to intracellular function. Sensory and metabolic pathways must integrate stimuli from multiple signals to coordinate cell-wide or organism-wide responses, and signal transduction pathways must be considered in the context of the networks they comprise. Signal transduction networks are the very definition of ‘wholes’ that are greater and more complex than the sums of their parts. This course will have a dual focus on mechanisms of signal transduction, with an emphasis on macromolecular structure, and on network modeling.

CHEM 765 Advanced Biochemistry (3 Credit Hours)

This course will cover macromolecular structure, function, thermodynamic stability and folding kinetics; protein chemistry; molecular biology; and molecular mechanisms of disease and bioinformatics.

CHEM 769 Nucleic Acids Biochemistry (3 Credit Hours)

A comprehensive presentation of the chemistry of RNA and DNA, including modern concepts of gene regulation, the control over transcription, RNA processing and translation, cell cycle control and molecular carcinogenesis.

CHEM 775 Physical Biochemistry (3 Credit Hours)

This course will examine the physical characterization of macromolecules, polarized light, absorption and fluorescence, sedimentation and transport hydrodynamics, electrophoretic mobility, light scattering, and structural x-ray crystallography of proteins and nucleic acids.

CHEM 779 Kinetics and Thermodynamics (3 Credit Hours)

A survey of modern theories of reaction rates and mechanisms, classic thermodynamic functions, and an introduction to statistical thermodynamics.

CHEM 781 Protein Bioinformatics and Functional Genomics (3 Credit Hours)

Students will learn cutting-edge bioinformatics and genomics approaches to gain an in depth understanding of genetic and protein evolution as it relates to genetic mutation and adaption and to protein structure, folding and function. The theory and computational skills needed to analyze protein, DNA and non-coding RNA sequences as well as protein structures will be taught and applied. Comparative genomics studies will be conducted, focusing on current topics such as viral outbreaks where students will elucidate functional variations leading to enhanced virulence in isolates during a pandemic such as Zika.

CHEM 790 Master's Seminar (1 Credit Hour)

Master's students attend seminars given by researchers from across the country in order to expose them to additional areas of research in chemistry and biochemistry.

CHEM 791 Master's Seminar (2 Credit Hours)

Master's students attend seminars, attend a class on giving seminars, and present a seminar on their own research.

CHEM 795 Selected Topics in Chemistry and Biochemistry (3 Credit Hours)

Thorough coverage of areas selected to meet special needs and interests.

Prerequisites: permission of the instructor

CHEM 801 Advanced Analytical Chemistry (3 Credit Hours)

The theoretical and practical foundation of analysis with emphasis on recent analytical developments and current literature; topics may include figures of merit and data treatment, sampling and extraction, HPLC, electrochemistry, circular dichroism, FT-IR, Raman, MS, electrophoresis and NMR. Lectures are given by experts in those techniques.

CHEM 802 Advanced Analytical Chemistry II (3 Credit Hours)

This course will review the most cutting-edge advanced analytical chemistry instrumentation and methods, spanning three core areas of analytical chemistry (spectroscopy, separation, and electrochemistry) and offering an in-depth understanding of objectives, motivations, and future directions. The course will focus on advanced instrumentation and methodologies that can achieve ultra-sensitive analysis and detection, including single molecular spectroscopy, nanoparticle probes, high-speed separation in microfluidic devices, and ultramicroelectrodes for sensing and imaging.

CHEM 816 Electrochemical Methods of Analysis (1-2 Credit Hours)

This course presents the fundamental principals and practical applications of modern electrochemical methods of analysis. Lectures and text readings cover the basic concepts and fundamental principals of this division of analytical techniques. Detailed descriptions and demonstrations of modern electrochemical research instrumentation will be provided. Students will obtain hands-on experience with this instrumentation by performing a required chemical determination using an electroanalytical method, and by undertaking a special analytical project. Research applications of other electroanalytical techniques and instrumentation, in addition to those actually used by the students in this course, will be discussed and/or demonstrated.

CHEM 823 Modern Synthetic Organic Chemistry (3 Credit Hours)

An examination of the design of complex organic molecules and natural products. Topics covered will include: retrosynthetic analysis; stereochemical control; application of fundamental organic reactions to develop synthetic strategies; implementation of protecting groups in organic synthesis; construction of carbocyclic and heterocyclic ring systems, organometallic coupling reactions, and contemporary methods

Pre- or corequisite: CHEM 728 or CHEM 828 or permission of the instructor

CHEM 824 Bioinorganic Chemistry (3 Credit Hours)

This course is a survey of the mechanisms of biochemical activity of the trace elements. Topics include oxygen uptake, oxidation-reduction, metabolism, and toxicity.

CHEM 825 Physical Organic Chemistry (3 Credit Hours)

Approaches to the study of reaction mechanisms, including molecular orbital theory, thermochemistry, kinetics, isotope effects, solvent and substituent effects (including linear free energy relationships), acidity, acid catalysis, and detection of reactive intermediates.

CHEM 826 Medicinal Chemistry (3 Credit Hours)

Study of the chemistry and mode of action of various medicinal and physiologically active compounds.

CHEM 828 Organic Reactions (3 Credit Hours)

A comprehensive evaluation of modern organic transformations with emphasis on the fundamentals of each reaction, their utility and applications. Topics covered will include: nomenclature, classes of compounds, functional group exchanges (oxidation and reduction reactions), bond forming reactions (carbon-carbon, carbon-oxygen, and carbon-nitrogen), introduction to protecting groups, and reaction control by steric, electronic and topological considerations

Prerequisites: CHEM 415 or CHEM 515 or equivalent or permission of the instructor

CHEM 834 Organic Spectroscopy (3 Credit Hours)

Organic functional group and structure analysis with ultraviolet, infrared, nuclear magnetic resonance, mass, and other spectroscopic techniques.

CHEM 836 Introduction to Organic Synthesis (3 Credit Hours)

Detailed coverage of fundamental organic transformations with emphasis on reduction, oxidation, carbon-carbon bond formation, and protecting group strategy.

CHEM 838 Organometallics (3 Credit Hours)

This course examines important transformations of organotransition-metal species. There is an emphasis on basic mechanism, structure-reactivity relationships, and applications in organic synthesis with applications of organotransition-metal catalysis towards industrial applications.

CHEM 840 Coordination and Transition Metal Chemistry (3 Credit Hours)

This course examines the coordination and transition metal chemistry of first row, second row, and third row transition metals.

CHEM 842 Advanced Mass Spectroscopy (3 Credit Hours)

This course trains students in the theory and application of advanced mass spectrometric methods as used in all subdisciplines of chemistry and biochemistry.

CHEM 843 Organic Geochemistry (3 Credit Hours)

Organic geochemistry is the study of organic compounds originally produced by photosynthesis and altered as they cycle through the soils, atmosphere, rivers, oceans, and crustal rocks. This course will include the carbon/oxygen cycles, biomarkers, organic matter diagenesis/catagenesis, analytical techniques used in organic geochemistry, and an introduction to carbon isotopes.

CHEM 844 NMR Spectroscopy (3 Credit Hours)

NMR is a highly specific spectroscopic technique. It can probe the individual atoms in molecules via a limitless array of distinct experiments tailored to nearly every need. While NMR experiments can contain up to several hundred magnetic pulses, the effect of the pulses and therefore the utility of each experiment can be understood via a primarily visual approach. This course offers a visual-based approach to discuss spectrometer hardware, basic NMR theory, and a series of one, two and three-dimensional NMR experiments, with applications to small molecules, proteins, nucleic acids and their interactions.

CHEM 847 Medical Biochemistry (3 Credit Hours)

This course focuses on the applied biochemistry associated with human biological systems. Topics to be covered include the hormonal control of metabolism, vitamins, minerals, diagnostic tests; the biochemistry of the digestive system; connective tissue and bone; the immune system; the urinary system; and the nervous systems, among others. Exams involve answering United States Medical Licensing Exam type questions in some instances. Medical biochemistry case studies are presented and discussed in class that relate to the biochemical basis of disease to enhance the learning experience. Students will also write a research paper and give an in-class presentation on selected topics.

CHEM 849 Environmental Chemistry (3 Credit Hours)

An overview of the natural chemistry systems operating in the atmosphere, in the terrestrial environment (both water and soils), and in the oceans, and the potential effects that human activities may have on them. Specific topics include the origin and evolution of the earth and life, the chemistry of the atmosphere (including the ozone layer and greenhouse effect), the organic and inorganic components of soil and water, chemical weathering of rocks, metal complexation, biological processes in soil and water, and global-scale chemical processes.

CHEM 854 Quantum Chemistry (3 Credit Hours)

Overview of the development and application of quantum mechanics from a chemical perspective.

CHEM 855 Computational Chemistry (3 Credit Hours)

Comprehensive overview of ab initio (quantum) calculations and molecular dynamic simulations, the two most widely used computational methods. Plus a brief overview of other computational applications in chemistry and biology.

CHEM 856 Inorganic Reaction Mechanisms (3 Credit Hours)

This course is a survey of the major mechanisms of inorganic and organometallic chemistry. Topics include kinetics, ligand substitution, electron transfer, and photochemistry.

CHEM 858 Atmospheric Chemistry (3 Credit Hours)

An introductory survey of atmospheric chemistry and physics. Topics to be covered include atmospheric composition, atmospheric pressure, simple models, atmospheric transport, geochemical cycles, the greenhouse effect, aerosols, stratospheric ozone, the oxidizing power of the troposphere, ozone air pollution, satellite orbits, and radiative transfer. The course will also provide a survey of satellite remote sensing. It will conclude with the basics of satellite remote sensing, including a brief survey of satellite instruments.

CHEM 859 Statistical Thermodynamics in Chemistry (3 Credit Hours)

An introduction to statistical mechanics from a chemical perspective. Topics to be covered include ensembles and postulates and their mathematical background; basic thermodynamics; distinguishable and indistinguishable systems; ideal monatomic gas; monatomic crystals; ideal diatomic gas; ideal polyatomic gas; chemical equilibrium; rates of chemical reactions; and quantum statistics.

Prerequisites: Permission from department chair

CHEM 860 Molecular Spectroscopy (3 Credit Hours)

An introductory survey of the rotational, vibrational and electronic spectroscopy of molecules from the perspective of quantum mechanics and group theory.

CHEM 863 Mechanisms in Sensing and Signal Transduction (3 Credit Hours)

Living organisms must sense and respond to changes in their environment, which requires perceiving extracellular stimuli and converting this information into tangible changes to intracellular function. Sensory and metabolic pathways must integrate stimuli from multiple signals to coordinate cell-wide or organism-wide responses, and signal transduction pathways must be considered in the context of the networks they comprise. Signal transduction networks are the very definition of 'wholes' that are greater and more complex than the sums of their parts. This course will have a dual focus on mechanisms of signal transduction, with an emphasis on macromolecular structure, and on network modeling.

CHEM 865 Advanced Biochemistry (3 Credit Hours)

This course will cover macromolecular structure, function, thermodynamic stability and folding kinetics; protein chemistry; molecular biology; and molecular mechanisms of disease and bioinformatics.

CHEM 868 Internship - Chemistry & Biochemistry (1 Credit Hour)

This course is designed to provide individual students with advanced on-the-job professional experience. Internship assignments must be approved within the student's program of study. Direct supervision is given by an experienced professional at the internship site.

CHEM 869 Nucleic Acids Biochemistry (3 Credit Hours)

A comprehensive presentation of the chemistry of RNA and DNA, including modern concepts of gene regulation, the control over transcription, RNA processing and translation, cell cycle control and molecular carcinogenesis.

CHEM 875 Physical Biochemistry (3 Credit Hours)

This course will examine the physical characterization of macromolecules, polarized light, absorption and fluorescence, sedimentation and transport hydrodynamics, electrophoretic mobility, light scattering, and structural x-ray crystallography of proteins and nucleic acids.

CHEM 879 Kinetics and Thermodynamics (3 Credit Hours)

A survey of modern theories of reaction rates and mechanisms, classic thermodynamic functions, and an introduction to statistical thermodynamics.

CHEM 881 Protein Bioinformatics and Functional Genomics (3 Credit Hours)

Students will learn cutting-edge bioinformatics and genomics approaches to gain an in depth understanding of genetic and protein evolution as it relates to genetic mutation and adaption and to protein structure, folding and function. The theory and computational skills needed to analyze protein, DNA and non-coding RNA sequences as well as protein structures will be taught and applied. Comparative genomics studies will be conducted, focusing on current topics such as viral outbreaks where students will elucidate functional variations leading to enhanced virulence in isolates during a pandemic such as Zika.

CHEM 890 Chemistry Seminar (1 Credit Hour)

Students attend seminars given by researchers from across the country on order to expose them to additional areas of research in chemistry and biochemistry.

CHEM 891 Doctoral Seminar (2 Credit Hours)

Students attend seminars; attend a class on giving seminars; and present a seminar on their own research.

CHEM 895 Selected Topics in Chemistry and Biochemistry (3 Credit Hours)

Thorough coverage of areas selected to meet special needs and interests.

Prerequisites: permission of the instructor

CHEM 898 Doctoral Research (1-9 Credit Hours)**CHEM 899 Dissertation (1-9 Credit Hours)****CHEM 998 Master's Graduate Credit (1 Credit Hour)**

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

CHEM 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

CL - Conservation Leadership

CL 668 Internship in Conservation Leadership (3 Credit Hours)

The internship will focus on a "real-world" issue that constitutes a leadership challenge in conservation. The student is expected to use the concepts of adaptation science to analyze the issue and to develop options of how to address the issue.

Prerequisites: BIOL 467 OR BIOL 567 OR OEAS 467 OR OEAS 567

COMM - Communications

COMM 500 Intercultural Communication (3 Credit Hours)

This course is designed to introduce students to the study of communication in cultural contexts, the purpose of which is to prepare students to live and work within an increasingly multicultural world. This is accomplished by first defining and critically analyzing concepts of culture. Throughout the semester, the course will investigate theories of culture and communication that address the development of cultural identity, intercultural communication competence, the role of verbal and nonverbal communication across cultures, the cultural composition of the U.S., and finally ethical communication and challenges in a globalized era.

COMM 501 Communication Theory (3 Credit Hours)

An overview of general and contextual theories of communication. Focus is on the nature of communication theory, the role of theory in communication inquiry, and the relationships among theory, research, and practice.

COMM 503 Public Information and Crisis Communications (3 Credit Hours)

This course introduces students to the basic elements of public information as it pertains to assisting organizations avoid, mitigate and recover from crisis situations. Students will have the opportunity to both observe and participate in crisis communications situations.

COMM 504 Emergency Management Communication (3 Credit Hours)

This course introduces students to the multi-layered challenges associated with communication in the event of accidents, crises and natural disasters. In addition to incorporating basic elements of public relations as it pertains to assisting organizations avoid, mitigate and recover from external crisis situations, students will have the opportunity to both observe and participate in crafting multi-agency responses to these unplanned events.

COMM 505 Communication and Culture in the Middle East (3 Credit Hours)

The course examines the tensions between modernity and tradition in the context of Middle East culture. Cultural variables for study include myth and religion, family structures and the use of science and technology.

COMM 512 Interpersonal Communication Theory and Research (3 Credit Hours)

A survey of classic and contemporary theories and research of communication in personal and social relationships across the lifespan. Emphasizes communication as a means to facilitate conditions for development of positive relational outcomes.

COMM 521 Communication and Conflict Management (3 Credit Hours)

Focus on theory and research of communication processes in conflict episodes across social and personal relational contexts. Applications of communication approaches to conflict management are emphasized.

COMM 522 Listening to Self, Others, Nature, & the Divine (3 Credit Hours)

The listening course introduces students to: 1) Practices for exploring and developing listening competencies, 2) Theoretical perspectives and models of listening, and 3) Research on listening. Practice, theory, and research are all integrated across the contexts of self, others, nature, and the divine.

Prerequisites: Graduate standing

COMM 523 Nonviolent Communication and Peace (3 Credit Hours)

Perspectives on nonviolent communication and peace are covered from the micro level (e.g., individual beliefs and worldviews) to interpersonal relationships (e.g., conflict management), groups (e.g., tribes, gangs), organizational systems (e.g., businesses, governments), and macro or global level (e.g., political relationships between nations).

COMM 524 Communicating Love (3 Credit Hours)

This course investigates the history, types, characteristics, functions, and applications of love in everyday life, emphasizing the communication of altruistic/compassionate/agape love in four interrelated contexts: self, spirit, others, and creation. Theory, research, and applications of love will be explored within the spiritual, scientific, and dialogic (the conversation between science and spirit) perspectives.

COMM 525 Family Communication Theory and Research (3 Credit Hours)

A survey of classic and contemporary theories and research of communication in family units, family relationships, and family interfacing with society. The course emphasizes communication in the social construction of evolving "family" realities as well as communication as means to facilitate conditions for development of positive domestic outcomes.

COMM 527 Children's Communication Theory and Research (3 Credit Hours)

A survey of theories and research of communication during childhood. Emphasis is on children as developing communicators, their relationships, and their interactions with media. Factors affecting optimal development of children's communication and development of applications to enhance children's communication development are emphasized.

COMM 537 Podcasting (3 Credit Hours)

In today's digital landscape, storytelling is a powerful tool for effective communication. This course explores the intersection of strategic communication and podcasting, equipping students with the skills to craft compelling narratives that engage audiences across various platforms. Through a combination of theoretical insights, practical exercises, and hands-on podcasting projects, students will learn how to develop, produce, and distribute podcasts strategically to achieve communication objectives.

COMM 538 The Advertising Industry (3 Credit Hours)

This course explores the history, theory, industry, and practice of advertising as a communication discipline. This course explores the origins of advertising and its evolution into its contemporary, technologically-driven form while introducing students to skills and concepts necessary for work in the field.

COMM 543 Hispanic Film (3 Credit Hours)

A topical study of the major works of Spanish and Latin American film from Bunuel to the present. The course explores many issues, including those related to gender, race, symbolism, and class struggle.

Prerequisites: COMM 270A or THEA 270A or permission of instructor

COMM 544 German Cinema I (3 Credit Hours)

The first half of the 20th century was the most creative and destructive period in German and European history. Its rich cultural achievements included Viennese psychoanalytical theory of the turn of the century, Art Nouveau, German Expressionism, and the avant garde aesthetics of the Weimar Republic. Conversely, World War I and II exposed the cultural agony and human depravity of modern civilization. This course will trace these various aspects and developments in a variety of exemplary genres. Readings and discussions in German. (Cross-listed with WCS 445/WCS 545 and GER 445/GER 545)

COMM 545 Communication Analysis and Criticism (3 Credit Hours)

A survey of the key methods used in critiquing various forms of human and mediated communication for the purpose of becoming more discerning consumers of public and mass mediated messages. Analysis will include films, television, and radio programs, advertisements, newspapers, public discourses, speeches, and conversations.

COMM 547 Electronic Media Law and Policy (3 Credit Hours)

This course focuses on legal and policy issues related to modern media systems and technologies, with an emphasis on legal considerations of electronic media. Subjects include First Amendment issues concerning news, programming, and advertising; station licensing; and challenges to traditional legal thought brought about by new technologies.

COMM 548 Global Media Industries (3 Credit Hours)

An examination of the rise of broadcast technology and world flow of information and entertainment. Theory and policy issues of systems of broadcast ownership, access, regulation, programming, transborder, broadcasting and cultural imperialism and dominance of Western programming will be addressed.

COMM 555 Critical Analysis of Journalism (3 Credit Hours)

A critical examination of the news industry as practiced in the printed press, network and cable television, magazines, the Internet, and alternative press. Class examines the political economy of journalism, the sociology of journalistic practice, international news flows, ideological/political control of news, and mythological narrative forms within news.

COMM 556 Organizations and Social Influence (3 Credit Hours)

Focuses on theories, research and applications of the social influence function of communication in a variety of organizational contexts. Examines traditional and nontraditional social influence theories and research as applied to organizational change.

COMM 557 Market Research (3 Credit Hours)

The foundation of any successful strategic communications, from marketing to public relations to advertising, is research. This course introduces students to secondary and primary research methods in an applied way, having students actually design and conduct full research studies for a client in the community. Students will discuss and conduct various forms of market research (situation, stakeholder, and competitor), explaining how it is integral to strategic thinking and responsible growth in order to directly prepare them for work in the field.

COMM 560 Social Marketing (3 Credit Hours)

Social marketing, the process through which communications professionals attempt to introduce, reinforce, or augment social change through theories and practices of marketing, is a growing field with implications ranging from social entrepreneurship to international relations to community resiliency. This course will introduce the theories of social marketing, applying them through collaborations with a local organization or cause. Students will focus on a practical approach to constructing a brand through communication strategy and media tactics, and how those relate to constructing and maintaining the identity of a larger organization while also promoting social benefit.

COMM 562 Sport Communication (3 Credit Hours)

A survey of sport media and communications. This course will expose students to the rapidly evolving sport media landscape, analyzing the communication processes involved in both strategic communication and journalism, through the mediums used to convey messages. The internal and external audiences involved in sport communication will be examined, both through an analysis of journalism's impact on sport and an exploration of the strategic communication planning process.

COMM 571 International Film History (3 Credit Hours)

An examination of world cinema as a technology, a business, an institution, and an art form from inception to the present. Emphasis is on the narrative fiction film, its technological and aesthetic development, economic organization, and socio-cultural context. Representative classic and contemporary works will be screened and analyzed.

COMM 572 New Media Topics: Theories and Practices (3 Credit Hours)

This seminar investigates one or two particular emergent new media practices and theories. The topics will be chosen at the discretion of the instructor but may include issues such as 'mobile media,' 'micro media and audiences,' and 'social media.'

COMM 573 Television and Society (3 Credit Hours)

The role of television in the cultural, psychological, and economic life of America. The structure and design of television programs; and the history and function of television in reinforcing or altering public perceptions of ideas, events, and people. Major critical approaches are employed in examining television's social impact and global reach.

COMM 578 Media Marketing and Promotion (3 Credit Hours)

This course introduces students to the ways in which different media forms are used for advertising and marketing purposes. Emphasis is on electronic media, though other approaches, such as direct marketing techniques and the increasing use of new media technologies for marketing, are also examined.

COMM 579 American Film History (3 Credit Hours)

An examination of American motion pictures as an art form, a business and an institution from inception to the present. Primary attention is accorded to the narrative fiction film, its technological and aesthetic development, economic organization and social impact. This course highlights the many connections between film history and American culture.

COMM 580 The Video Documentary II (3 Credit Hours)

Discussion/presentation topics range from production field work to post-production editing. The final third of the semester will be devoted to compiling the rough footage in post production.

COMM 584 Strategic Media Design and Production (3 Credit Hours)

This course is designed to extend students' knowledge of the media elements of strategic communications, from graphics to images to video. Students will discuss how to ground creative production in strategy for a client, how to focus on content and storytelling for a specific stakeholder, and how to create an extended, coherent plan using both creative and organizational goals. This is not intended to make students 'creative' but instead to show students how to design, direct, and manage the work that a media production team might do.

COMM 585 Film and Television Genres (3 Credit Hours)

This course is designed to examine the conventions and meanings of various film and television genres within their broader aesthetic, socio-historical, cultural, and political contexts. Each time the class is offered it will focus in depth on a different genre, such as the gangster, the Western, the musical, the comedy, science fiction, among others. Class may be repeated for credit as long as the genres are different.

COMM 586 Advanced Filmmaking (3 Credit Hours)

This course offers students an opportunity to collaborate on a faculty led project beyond the scope of typical classroom projects. Students will execute an assigned duty for the duration of the semester.

Prerequisites: Permission of the instructor

COMM 589 Health and Interpersonal Communication (3 Credit Hours)

This course is designed to give an overview of contemporary scholarship on phenomena within the scope of interpersonal health communication.

COMM 590 ROAR Communications Agency (3 Credit Hours)

In this course, students gain hands-on experience working in an agency setting. They work directly with clients to create specific materials, and learn new tools and software suitable for each project. We emphasize building students' professional qualifications connected to their interests and the client's needs that bridge the gap between coursework and a career. Students will conduct situation analyses, choose audiences and strategy, and create professional-quality materials for clients. If they take the class for a second semester, students will have more senior roles, where they interface more extensively with the client and become team leaders with bigger projects.

COMM 591 Communication and Activism (3 Credit Hours)

This course will delve into activism and social change from a local and global perspective in order to enhance students' perspectives of social change as it manifests via popular media and community action.

COMM 595 Topics in Communication (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

COMM 596 Topics in Communication (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

COMM 597 Tutorial Work in Special Topics in Communication (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

COMM 598 Tutorial Work in Special Topics in Communication (3 Credit Hours)

Topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

COMM 600 Intercultural Communication: History, Theory and Application (3 Credit Hours)

Students begin with an overview and then cover (1) past intercultural communication research, (2) the philosophical underpinning and ethics behind intercultural communication research, and (3) current developments in intercultural communication theory. They then address the application of intercultural communication theory in specific intercultural communication contexts (e.g. business, education, health and international travel).

COMM 601 Lifespan Communication Research and Theory (3 Credit Hours)

This course takes a developmental approach to the study of communication by exploring the culminating effects of communication as it evolves across our lifetime. It encompasses all phases of life (birth-death) across interactions within family, work, social, health, and spiritual contexts. The focus is on foundational and contemporary lifespan theories and research.

COMM 602 Digital Communication Theory and Research (3 Credit Hours)

This class looks at emerging theories of new media and their transformative effects on industrial practices, news dissemination, cultural production, social interaction, and political engagement across the lifespan. Students engage in ongoing theoretical debates and participate in various online endeavors that offer real world research opportunities.

COMM 603 Social Change and Communication Systems (3 Credit Hours)

Examines the role of various communication systems in enacting social change involving commercial, governmental and not-for-profit contexts. Topics include persuasive techniques, community engagement, mobilizing large-scale social movements, and the political consequences of human and digital communication across the lifespan.

COMM 604 Lifespan Communication Research Methods (3 Credit Hours)

An overview of social scientific and qualitative methods used in lifespan development communication research. Includes survey, experiment, observations, content and conversation analyses with an emphasis on developmental methods. Approaches to studying communication of children, adolescents, and later life are included.

Prerequisites: COMM 601

COMM 605 Critical Methods and Digital Communication (3 Credit Hours)

This class surveys the major methodological approaches available to critical communication researchers, such as semiology, structuralism, post-structuralism, neo-Marxism, and psychoanalysis, among others, within a cultural studies tradition. Special attention is paid to various digital communication technologies and how they are utilized throughout the lifespan.

Prerequisites: COMM 602

COMM 615 Construction of the Gendered Body (3 Credit Hours)

This course will examine: (1) the nature-nurture controversy as reflected in current theories about gender as a significant factor in the transformation of physical bodies into social bodies, (2) cultural objects and institutions that shape our gender roles and expectations, and (3) nonverbal language and power and the status of the sexes.

COMM 623 Relational Communication Across the Lifespan (3 Credit Hours)

This course explores theories and research of communication in everyday relationships across the lifespan from early childhood relationships until relationships at the end of life. Communication in personal and social relationships, within age cohorts (early childhood, adolescence, adulthood) are highlighted.

Prerequisites: Permission of the instructor

COMM 624 Positive Communication Across the Lifespan (3 Credit Hours)

This course examines communication theories and research in light of the theories and research of positive psychology. Topics include: strengths-based communication theorizing, communication and happiness, positive communication functions, creative communication, and positive communication outcomes (health, wellness, peace, hope).

Prerequisites: Permission of the instructor

COMM 626 Lifespan Communication, Geography, and Food (3 Credit Hours)

This course examines the intersections of communication, geography, and food from lifespan and global perspectives. Topics to be covered include communication and cooking; dinner table talk; food and folk culture; virtual rituals; the portrayals of food in media (e.g., film, television, CMC, print); the roles of race, class, and gender in food production/consumption; the commercialization of food; fast food and slow food; globalization vs. the 'locavore' movement; visualization and symbolic communication about food and nutrition; and market and supermarket geographies.

COMM 628 Mediated Human Communication in the Digital Age (3 Credit Hours)

This course conceptualizes the relationship established by the processes of human communication that are mediated by new media technologies. The course examines how such technologies affect social relationships, and how cultural values influence usage patterns of these technologies.

COMM 630 The Information Society (3 Credit Hours)

This course explores the theories, questions, claims and myths that have accompanied the rise of new communication technologies and electronically derived digital information that define the 'Electronic Revolution,' also known as the Information Society.

COMM 650 Religious Communication (3 Credit Hours)

The seminar surveys the relationship between communication and religion with an emphasis on theory, research and applications. Topics may include the communication of religious beliefs/values via story, ritual, ceremony, worship, prayer and mediated communications.

COMM 668 Internship (3 Credit Hours)

A structured work experience providing both a conceptual understanding and on-the-job training in some aspect of lifespan and digital communication. A journal, a final paper, a log of hours, a portfolio of work, and a satisfactory evaluation by work supervisor and cooperating faculty member are required.

Prerequisites: COMM 601 or COMM 602

COMM 678 Race and Television (3 Credit Hours)

This course examines the relationships among race, racial identity, and television. Multiple scholarly traditions are used to examine the interactions among television texts, audiences and institution, and historical and contemporary race relations.

COMM 685 Lifespan and Digital Communication Capstone Course (3 Credit Hours)

A capstone seminar for non-thesis students in their final semester to synthesize the relationships between lifespan and digital communication. Students will develop and complete a research paper or a digital communication project that they will present to a COMM graduate committee.

Prerequisites: COMM 601, COMM 602, COMM 603, COMM 604, and COMM 605; permission of graduate program director

COMM 689 Thesis Preparation (3 Credit Hours)

This course is intended for students in the Master of Arts in Lifespan and Digital Communication program who choose the thesis option. Course topics include: developing a thesis proposal, thesis rules and regulations, the thesis committee, presenting and defending a thesis proposal, and acquiring the essential tools needed to write and successfully defend an MA thesis.

Prerequisites: COMM 601, COMM 602, COMM 603, COMM 604, and COMM 605

COMM 695 Topics in Communication (1-3 Credit Hours)

The study of selected topics designed to permit qualified students to work on subjects of mutual interest in a seminar format which, due to their specialized nature, may not be offered regularly.

COMM 697 Tutorial in Special Topics in Communication (3 Credit Hours)

Independent reading and study of a topic under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Permission of the department chair

COMM 698 Thesis Research (3 Credit Hours)

This course is intended for students in the Master of Arts in Lifespan and Digital Communication program who choose the thesis option. During the time a student is working on the MA thesis they must be enrolled in COMM 698, followed by COMM 699.

Pre- or corequisite: COMM 689

COMM 699 Thesis (3 Credit Hours)

This course is intended for students in the Master of Arts in Lifespan and Digital Communication program who choose the thesis option. During the time a student is working on the MA thesis they must be enrolled in COMM 698 followed by COMM 699.

COMM 725 Interpersonal Health Communication (3 Credit Hours)

This course is designed to provide an overview of contemporary scholarship on phenomena within the scope of interpersonal health communication. Students will become familiar with fundamental communication processes that are involved in managing physical and mental health. Additionally, they will develop an awareness of how communication among friends, family members, professionals, and others influences people's well-being, and how, in turn, health and illness shape communication and relationship dynamics. Topics to be covered include patient identity and self-disclosure, social support, patient-provider communication, end-of-life care, and health education. Consistent with the goals of graduate education, students are expected to engage with the course content, exercise critical thinking skills, develop advanced reading and writing competencies, and develop a sense of practical applications of theory and research.

COMM 795 Selected Topics in Communication Studies (1-3 Credit Hours)

The advanced study of selected topics in communication studies will be covered in such a way as to permit small groups of qualified students to study subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: Permission of the instructor

COMM 797 Independent Research in Communication Studies (1-3 Credit Hours)

Independent research directed by professors/faculty members examining communication topics.

Prerequisites: Permission of the instructor

COMM 895 Selected Topics in Communication Studies (1-3 Credit Hours)

The advanced study of selected topics in communication studies are covered in such a way as to permit small groups of qualified students to study subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: Permission of the instructor

COMM 897 Independent Research in Communication Studies (1-3 Credit Hours)

Independent research directed by professors/faculty members examining communication topics.

Prerequisites: Permission of the instructor

COMM 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

COUN - Counseling

COUN 601 Principles of Professional Counseling and Ethics (3 Credit Hours)

Aligned with a spiral approach to learning, students will be introduced to theory, practice, methods, basic principles, and concepts used by counselors in educational settings and community agencies. In subsequent courses, these topics will be revisited in depth. The course will emphasize professional and ethical issues related to counseling.

COUN 631 Counseling for Lifespan Development (3 Credit Hours)

A study of phase and stage theories of lifespan development with application to counseling. Current research findings on major developmental issues (e.g., gender) will be emphasized.

Prerequisites: Admission to counseling graduate program or graduate program director approval

COUN 633 Counseling and Psychotherapy Techniques (3 Credit Hours)

The course focuses on development of attitudes and skills essential to effective professional counseling. Emphasis is on conducting the helping interview, as well as conducting an intake interview, a mental status evaluation, a biopsychosocial history, a mental health history, and a psychological assessment for treatment planning and caseload management.

Pre- or corequisite: Admission to Counseling Graduate Program or Graduate Program Director approval

COUN 634 Advanced Counseling and Psychotherapy Techniques, Crisis, and Trauma (3 Credit Hours)

This course provides an overview of advanced techniques used by counselors, including crisis and trauma response and the principles of trauma-informed care.

Prerequisites: COUN 601, COUN 650, and COUN 633 with a grade of B or higher

COUN 642 Structured Counseling Groups (3 Credit Hours)

This course is designed to prepare students to facilitate structured counseling groups for children and adolescents primarily in the K-12 school setting. CACREP Required Content: GROUP WORK - studies that provide both theoretical and experiential understandings of group purpose, development, dynamics, theories, methods, skills, and other group approaches in a multicultural society, including all of the following: (a) principles of group dynamics, including group process components, developmental stage theories, group members' roles and behaviors, and therapeutic factors of group work; (b) group leadership or facilitation styles and approaches, including characteristics of various types of group leaders and leadership styles; (c) theories of group counseling, including commonalities, distinguishing characteristics, and pertinent research and literature; and (d) group counseling methods, including group counselor orientations and behaviors, appropriate selection criteria and methods, and methods of evaluation of effectiveness. Students will be required to complete 20 hours of fieldwork with K-12 aged youth, preferably in a school setting.

Prerequisites: Admission to Counseling graduate program or graduate program director approval; COUN 601, COUN 633, COUN 650 and COUN 678

COUN 644 Group Counseling and Psychotherapy (3 Credit Hours)

Developing effective group leadership competencies is the focus for the course. Identification of group dynamics, use of group level process, and the self-development of the leader are some major topics.

Prerequisites: Admission to Counseling graduate program or graduate program director approval; COUN 601, COUN 633, and COUN 650

COUN 645 Testing and Client Assessment (3 Credit Hours)

This course examines individual and group approaches to formal and informal assessment techniques, including diagnosis. It includes an examination of: the history of assessment; basic test statistics; test worthiness (reliability, validity, and cross-cultural issues); the selection, administration, and interpretation of assessment instruments; and ethical and legal issues relative to assessment. The focus of this class is on major concepts and principles of psychological testing and evaluation and use of standardized instruments with differing populations. Pre- or

Corequisites: COUN 633

COUN 647 Addictive Disorders (3 Credit Hours)

Examines the etiology, risk factors, assessment, counseling approaches and treatment of alcoholism and other addictions.

Prerequisites: Admission to Counseling graduate program or graduate program director approval; COUN 601, COUN 633, and COUN 650

COUN 648 Foundations of Career Development (3 Credit Hours)

Principles and theories of career development, occupational and educational information, employment trends, concepts and principles for effective work in educational and career planning and development are considered.

Prerequisites: Admission to Counseling graduate program or graduate program director approval; COUN 601, COUN 645, and COUN 650

COUN 650 Theories of Counseling and Psychotherapy (3 Credit Hours)

A study of major theories of counseling and psychotherapy. The primary focus is on providing students with a theoretical foundation upon which to develop their own approach for providing counseling and psychotherapy.

COUN 655 Social and Cultural Issues in Counseling (3 Credit Hours)

Designed to engage helping professionals in cultural self-awareness and the search for solutions to disparities in society through counseling work. Emphasis on the social identities of gender, race, ethnicity, religion, ability, class, sexual orientation, and age.

Prerequisites: Admission to counseling graduate program or graduate program director approval and COUN 601

COUN 666 Internship in College Counseling (1-6 Credit Hours)

This internship is designed to provide individual students with a planned program of advanced on-the-job professional experience in a college or university setting. A university instructor will coordinate internship assignments. An experienced professional in the college or university setting will provide direct supervision. Available for pass/fail grading only. Completion of a background check is required prior to commencing the field placement.

Prerequisites: Departmental permission and COUN 601, COUN 633, COUN 634, COUN 644, COUN 645, COUN 648, COUN 650, COUN 669, COUN 685, and COUN 686

COUN 667 Internship in Mental Health Counseling (1-9 Credit Hours)

This counselor education experience is designed to provide a planned program of supervised clinical instruction in mental health counseling in an appropriate professional setting, including provision of direct service and performance of indirect professional activities under appropriate clinical supervision of a site supervisor as well as classroom instruction and supervision. This pass/fail course requires successful completion of 300 hours of counseling field placement work and 120 hours of direct service in each of two semesters of enrollment. Completion of a background check is required prior to commencing the field placement.

Prerequisites: Admission to the Counseling Graduate Program or graduate program director approval, approved application; COUN 601, COUN 633, COUN 634, COUN 644, COUN 645, COUN 648, COUN 650, COUN 669, COUN 680, and COUN 685

COUN 668 Internship in School Counseling (1-6 Credit Hours)

This internship is designed to provide individual students with a planned program of advanced on-the-job professional experience in a school setting. A university instructor will coordinate internship assignments. An experienced professional in the school setting will provide direct supervision. Available for pass/fail grading only. Completion of a background check is required prior to commencing the field placement.

Prerequisites: Admission to the Counseling Graduate Program or graduate director approval; approved application; COUN 601, COUN 633, COUN 634, COUN 642, COUN 645, COUN 648, COUN 650, COUN 669, COUN 676, COUN 677 & COUN 678

COUN 669 Practicum in Counseling (3 Credit Hours)

This supervised experience will enable students to practice basic and intermediate individual and group counseling skills with clients while integrating knowledge and skills learned in previous course work. Completion of a background check is required prior to commencing the field placement.

Prerequisites: Admission to the Counseling graduate program or graduate director approval; COUN 601, COUN 633, COUN 642 or COUN 644, COUN 650, and COUN 634 with a grade of B or higher (see Program Handbook for other prerequisites based on specialty area)

COUN 670 Introduction to Counseling Supervision (3 Credit Hours)

This course provides an opportunity to learn one's personal style for supervision, to have supervised field supervision experiences and to gain an understanding of the different models of supervision.

Prerequisites: Admission to the Counseling Graduate Program or graduate director approval; COUN 601, COUN 669

COUN 676 Professional Issues in School Counseling K-12 (3 Credit Hours)

A professional seminar that emphasizes the contemporary role of the school counselor as leader and advocate in delivering school counseling programs to all students. Emphasis is placed on acquiring the awareness, knowledge and skills necessary to negotiate the cultural, educational, and contextual forces that impact the lives and academic achievement of students in a pluralistic society. Twenty hours of observation in a school is required. Completion of a background check is required prior to commencing the field placement. In addition, students are also required to attend a one-day program on a pre-determined date during the semester.

Prerequisites: Admission to the Counseling Graduate Program or graduate director approval

COUN 677 School Culture, Learning, and Classroom Management (3 Credit Hours)

School counselor's role in contributing to a safe, equitable, and culturally responsive school culture; promoting student learning and achievement; and the practice of effective teaching and classroom management. Cultural, political, economic, ethical, and legal issues are addressed. Twenty hours of observation in a school is required. Completion of a background check is required prior to commencing the field placement.

Prerequisites: Admission to the Counseling graduate program or graduate program director approval; COUN 676

COUN 678 Counseling Children and Adolescents in School Settings (3 Credit Hours)

This course will provide an overview of theories and techniques of counseling children and adolescents in school settings. Emphasis will be placed upon the counselor's role as a facilitator of normal developmental processes to promote academic success.

Prerequisites: Admission to the Counseling graduate program or graduate director approval; COUN 601, COUN 633, and COUN 650

COUN 679 School Counseling Program Development K-12 (3 Credit Hours)

This course is designed as a capstone experience that synthesizes graduate course work into a practical school counseling program manual. Emphasis is placed on assessment, data collection and analysis, design and development, implementation and evaluation of systemic school counseling programs K-12. Specific emphasis is given to the integration of assessed needs, the National Standards for School Counseling Programs and the Virginia Standards of Learning.

Prerequisites: Admission to the Counseling Graduate Program or graduate director approval; COUN 601, COUN 642 or COUN 644, COUN 648, and COUN 676

COUN 680 Mental Health Counseling (3 Credit Hours)

This course will examine the broad range of roles and functions of the mental health counselor within contemporary professional practice settings.

Prerequisites: Admission to the counseling graduate program or graduate director approval

COUN 681 Couples Counseling (3 Credit Hours)

Couples counseling focuses on development of effective counseling skills in working with couples.

Prerequisites: Admission to the Counseling graduate program or graduate director approval; COUN 601, COUN 633, and COUN 650

COUN 685 Diagnosis and Treatment Planning in Mental Health Counseling (3 Credit Hours)

A course focused on developing knowledge, attitudes, and skills essential to effective DSM-5 diagnosis, client conceptualization assessment, and clinical treatment planning. Emphasis on the use of client conceptualization models as a basis for treatment planning in mental health counseling.

Prerequisites: Admission to the Counseling graduate program or graduate director approval; COUN 601, COUN 633, COUN 645, and COUN 650

COUN 686 College Counseling (3 Credit Hours)

Overview of counseling services provided on college and university campuses. Topics include wellness of students, multicultural issues, ethical and legal issues, crisis and disaster response, advocacy, and program evaluation.

Prerequisites: Admission to the counseling graduate program or graduate program director approval

COUN 689 Understanding Military Connected Children and Families (4 Credit Hours)

Participants will learn about the unique academic, social, and emotional challenges faced by military connected children and their families. Participants will review, analyze and practice research-based learning and behavioral strategies and interventions to address these needs. This course will also introduce effective practices for supporting children through deployment separation, reunion and reintegration, and grief and trauma, including promoting school connectedness, fostering resiliency, facilitating coping skills, and designing customized academic, social, and behavioral supports. This course is required for completion of the Military Child and Family Education graduate certificate.

Prerequisites: Acceptance into the Military Child and Families Graduate Certificate Program

COUN 691 Family Systems and Family Development (3 Credit Hours)

The course offers a study of the family as a system, family life cycle stages, tasks, and difficulties that families may experience as they move through their developmental stages. Concepts and principles applicable to helping people within a systems perspective will also be discussed.

Prerequisites: Admission to the Counseling graduate program or graduate director approval; COUN 601, COUN 633, and COUN 650

COUN 695 Topics in Counseling (1-3 Credit Hours)

The study of selected topics in counseling.

Prerequisites: Admission to the counseling graduate program or graduate director approval

COUN 697 Independent Study (3-6 Credit Hours)

Individualized study under the supervision of a graduate faculty member.

COUN 698 Research in Counseling (3 Credit Hours)

Research on a topic or project related to counseling.

Prerequisites: Permission of the instructor

COUN 707 Adult and College Student Development (3 Credit Hours)

Exploration of theories informing practice regarding late adolescent, young adult, and adult psychological and cognitive development, adjustment, and learning in the two- and four- year college and university context. Influences of individual differences highlighted. Applications for college counseling, higher education, and community college practitioners, professionals, and leaders.

COUN 742 Advanced Counseling Theory and Practice (3 Credit Hours)

An in-depth study of selected counseling theories through the study of cases.

Prerequisites: COUN 601, COUN 633, COUN 645 and COUN 650

COUN 744 Advanced Group Counseling. (3 Credit Hours)

Development of group leadership skills through group experiences in class and in the field.

Prerequisites: COUN 601, COUN 633, COUN 644, COUN 645, and COUN 650

COUN 783 Complementary and Alternative Therapies (3 Credit Hours)

This course provides an overview of complementary and alternative therapies being used in mental health today, looking at their effectiveness and safety in treating specific client populations and for use in treating specific disorders, including ADHD, addictions, and anxiety. Modalities covered include acupuncture, nutritional medicine, herbal medicine, biofeedback, meditation, hypnotherapy, aromatherapy, and others.

Prerequisites: Admission to the Counseling graduate program or graduate program director approval

COUN 786 Spirituality in Counseling (3 Credit Hours)

An overview of methods for integrating spirituality into counseling as a means of promoting holistic wellness for both clients and counselors. Emphasis will be placed upon theories of spiritual development, beliefs inherent in major wisdom traditions, implicit and explicit strategies for integrating spirituality into counseling, and the counselor's own personal and professional awareness and growth.

COUN 795 Topics in Counseling (1-6 Credit Hours)

The study of selected topics in counseling.

COUN 797 Topics in Counseling (1-6 Credit Hours)

Individual study under the supervision of a graduate faculty member.

COUN 801 Current Issues in Counseling and Counselor Education (3 Credit Hours)

The course will focus on the current issues in counseling to include the role of ethical and legal considerations in counselor education and supervision, theories and skills in leadership, social and cultural issues to include social change theory and advocacy action planning, and developmental counseling.

COUN 807 Adult and College Student Development (3 Credit Hours)

Exploration of theories informing practice regarding late adolescent, young adult, and adult psychological and cognitive development, adjustment, and learning in the two- and four- year college and university context. Influences of individual differences highlighted. Applications for college counseling, higher education, and community college practitioners, professionals, and leaders.

COUN 820 Counselor Education Teaching and Practice (3 Credit Hours)

This course prepares students to teach counseling and related courses. Topics covered are learning theories, retention of material, motivation, classroom instructional strategies and techniques, and assessment of learning from the core learning expectations.

COUN 835 Advanced Counseling Research Design and Assessment (3 Credit Hours)

The doctoral-level course examines advanced topics and controversies in qualitative and quantitative counseling research; this integration of theoretical with applied counseling material will augment the department's standard doctoral research offerings.

Prerequisites: FOUN 814 and FOUN 722

COUN 842 Advanced Counseling Theory and Practice (3 Credit Hours)

An in-depth study of selected counseling theories through the study of cases.

Prerequisites: COUN 601, COUN 633, COUN 645 and COUN 650

COUN 844 Advanced Group Counseling (3 Credit Hours)

Development of group leadership skills through group experiences in class and in the field.

Prerequisites: COUN 601, COUN 633, COUN 644, COUN 645, and COUN 650

COUN 845 Diagnosis and Treatment Planning (3 Credit Hours)**COUN 846 Advanced Counseling Supervision (3 Credit Hours)**

This course provides advanced training and skill development in supervision. Specific topics in supervision will also be examined. These include: ethical and legal issues, multicultural competency in supervision; theories of counselor development; theories/models, processes, and skills in supervision.

COUN 848 Multicultural Perspectives in Counselor Education, Supervision, and Research (3 Credit Hours)

Counseling doctoral students will study multicultural issues in counselor preparation graduate programs, counseling supervision, and counseling research.

Prerequisites: Admission to Ph.D. program or graduate program director approval

COUN 868 Internship in Counseling (3-6 Credit Hours)

This internship is designed to provide individual students with a planned program of advanced on-the-job professional experience in a college, school, or community/agency setting. In addition, supervisory and teaching experiences are required. Internship assignments will be controlled and coordinated by a university instructor. Direct supervision is given by an experienced professional in the setting. Minimum of 600 hours.

COUN 869 Advanced Supervised Practicum in Counseling (3 Credit Hours)

This advanced supervised practicum in counseling experience will enable doctoral-level students to develop and/or refine advanced counseling skills and conceptually link counselor practice and supervision. Minimum of 200 hours.

Prerequisites: COUN 801, COUN 820, COUN 742/COUN 842, COUN 744/COUN 844

COUN 883 Complementary & Alternative Therapies in Mental Health Counseling (3 Credit Hours)

The course provides an overview of complementary and alternative therapies being used in mental health today, looking at their effectiveness and safety in treating specific client populations and for use in treating specific disorders, including ADHD, depression, addictions, and anxiety. Modalities covered include acupuncture, nutritional medicine, herbal medicine, biofeedback, meditation, hypnotherapy, aromatherapy, and others.

Prerequisites: Admission to the Counseling graduate program or graduate program director approval

COUN 886 Spirituality in Counseling (3 Credit Hours)

An overview of methods for integrating spirituality into counseling as a means of promoting holistic wellness for both clients and counselors. Emphasis will be placed upon theories of spiritual development, beliefs inherent in major wisdom traditions, implicit and explicit strategies for integrating spirituality into counseling, and the counselor's own personal and professional awareness and growth.

COUN 895 Topics in Counseling (1-6 Credit Hours)

The study of selected topics in counseling.

COUN 897 Independent Study (3-6 Credit Hours)

Individualized study under the supervision of a graduate faculty member.

COUN 898 Dissertation Seminar (3 Credit Hours)

This seminar is designed to assist students in making substantive progress in identifying and developing their dissertation proposal. Students will critically examine the current literature associated with their research interests and examine applicable conceptual constructs and methodologies.

Prerequisites: COUN 801, COUN 820, COUN 835, COUN 842, COUN 844, COUN 846, COUN 848, COUN 869, FOUN 813 and FOUN 814

COUN 899 Dissertation (1-12 Credit Hours)

1-12 credits.

COUN 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

COUN 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

CPD - Center for Professional Development

CPD 517 Digital Leadership (3 Credit Hours)

This course explores technology as it relates to leadership experiences. Theories, case studies and real world examples are analyzed to show both successful and unsuccessful uses of online and digital approaches that inform leaders' communication strategies. Students will explore how their own digital identities may impact their futures as leaders. They will also learn how to create digital identities that will shape their professional identities throughout their careers.

Prerequisites: Graduate standing

CPSY - Clinical Psychology

CPSY 632 Intellectual Assessment (3 Credit Hours)

Provides training in theories of intelligence and psychometric properties, administration, scoring and interpretation of major individually administered intelligence tests for children, adolescents and adults.

CPSY 651 Developmental Psychology (3 Credit Hours)

This course covers topics related to the physical, cognitive, social and emotional aspects of growth, from conception to death. It focuses on human growth and development, but other organisms are also considered.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 661 Psychopathology (3 Credit Hours)

The course provides a conceptual basis for the study of abnormal behavior. Students conduct an in-depth review of the literature related to the classification, etiology, and treatment of mental disorders.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 664 Clinical Assessment: Personality and Individual Differences (3 Credit Hours)

This course covers history of personality theory and assessment, and psychometrics, and introduces tools and techniques aimed at understanding individual differences in personality and assessment of major psychopathology.

Prerequisites: Student must be a clinical Ph.D. degree student or receive permission of the instructor

CPSY 698 Research in Psychology (3 Credit Hours)

Individual project under guidance of a research advisor. Required for students choosing thesis option. Limited to a total of 3 hours of credit.

Prerequisites: Students must be in the clinical psychology Ph.D. program and receive permission from the instructor

CPSY 699 Thesis (3 Credit Hours)

Individual project under guidance of a research advisor. Required for students choosing thesis option.

Prerequisites: Students must be in the clinical psychology Ph.D. program and receive permission from the instructor; CPSY 698

CPSY 700 Clinical and Ethical Practice (3 Credit Hours)

Introduces basic therapy skills to clinical psychology students and explores the ethical framework which guides the profession.

Prerequisites: Must be enrolled in the doctoral clinical psychology program

CPSY 713 Research Methods in Psychology (3 Credit Hours)

This course will cover research design and methodology. Topics may include experimental, quasi-experimental, single subject and survey research; validity; reliability; psychometric theory; confounds; measurement; sampling; inductive inference. Additionally, this course will cover Responsible Conduct of Research, including completion of CITI course, protection of human subjects, University Human Subjects Committee and IRB, APA Style, paper structure, references, tables, figures, etc., research proposal writing, including searching for sources, writing, oral presentation, data collection and management issues (e.g., Qualtrics, SONA, data cleaning). Students are required to complete a Research Proposal with Introduction and Methods and Data Analysis Plan and give an oral presentation of research proposal.

Prerequisites: Students must be in the clinical psychology Ph.D. program

CPSY 720 Multicultural Issues in Clinical Psychology (3 Credit Hours)

The course covers issues relevant to diverse populations to enhance student development of cultural humility and improved cultural competence in clinical practice. The course reviews conceptual and theoretical foundations as well individual and systemic influences that contribute to mental health.

Prerequisites: Students must be enrolled in the clinical psychology PhD program or receive permission from the instructor

CPSY 725 Cognitive Behavioral Therapy (3 Credit Hours)

Covers theory and techniques of cognitive and behavioral approaches. Applications for assessment and treatment of adults, children, couples and families are discussed.

Prerequisites: This course is limited to clinical psychology PhD students or permission of instructor

CPSY 727 Analysis of Variance and Experimental Design (4 Credit Hours)

Review of the basic descriptive and inferential statistical procedures with a heavy emphasis on fundamental and advanced analysis of variance techniques. Topics include contrasts, factorial designs, within-subject and mixed designs, and analysis of covariance. Course materials are covered in the context of classical experimental and quasi-experimental design.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 728 Regression and Correlation Design (4 Credit Hours)

Course covers correlation with heavy emphasis on regression analysis in the context of the general linear model. Topics include partial correlations, categorical and continuous interactions, non-linear regression, and multivariate statistics. Course materials are covered in the context of correlational designs and survey research.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 736 Multilevel Models: HLM (3 Credit Hours)

Social science data frequently have a hierarchical or multilevel structure as a consequence of sampling designs or repeated measures. The purpose of the course is to introduce students to the basic principles and applications of hierarchical linear modeling in social science research. Topics covered include an introduction to multilevel analyses, random intercept models, random slope models, hypotheses testing, hierarchical models for limited dependent variables, model fitting, three-level models, and repeated-measures applications.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 744 Program Evaluation (3 Credit Hours)

This course is designed to introduce students to the field of program evaluation as well as to give students practical experience conducting a program evaluation. Students will get experience creating and conducting qualitative and quantitative assessments. A course goal is to work in small groups to conduct a program evaluation.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

Pre- or corequisite: CPSY 727/CPSY 827 and CPSY 728/CPSY 828 (or current enrollment)

CPSY 745 Psychometric Theory (3 Credit Hours)

This course introduces classical test theory, including definitions and equations for test reliability, standard error of measurement, and related statistics. Additional topics include scaling, item statistics useful in test constructions, norms commonly used in educational and psychological testing, test validity and exploratory factor analysis. If time permits, Item Response (IRT) and Generalizability Theory are introduced.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

Pre- or corequisite: CPSY 728 or CPSY 828 or equivalent

CPSY 746 Structural Equation Modeling (3 Credit Hours)

This course covers the topics of linear structural equation modeling and focuses on estimation, measurement models, confirmatory and hierarchical factor analysis, structural equations, longitudinal models, multisample analyses, and mean structures.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

Pre- or corequisite: CPSY 745 or CPSY 845 or equivalent

CPSY 749 Social and Affective Bases of Behavior (3 Credit Hours)

This course discusses the behavior of the human as a member of a group and the experience and expression of emotion. Topics include attitude theory and change, interpersonal attraction, stereotypes and discrimination, social cognition and social affect, aggression, theories of emotion and emotion regulation.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 795 Topics in Clinical Psychology I (1-4 Credit Hours)

Study of selected topics in clinical psychology.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 796 Topics in Clinical Psychology II (1-4 Credit Hours)

Study of selected topics in clinical psychology.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 801 Empirically-Supported Therapies (3 Credit Hours)

Empirically-Supported Therapies is designed to foster the integration of clinical science and the practice of psychotherapy. Course objectives include learning how to identify, evaluate, and implement empirically supported interventions for various psychological disorders.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 814 Research in Clinical Psychology (1-6 Credit Hours)

Individual research project under guidance of a research advisor.

Prerequisites: student must be enrolled in the doctoral clinical PhD program

CPSY 826 Biological and Cognitive Aspects of Behavior (3 Credit Hours)

This course provides an integrative overview of how brain structure and functioning produces behavior and cognition in both normal and clinical contexts. Students learn gross neuroanatomy and physiology of the nervous system (primarily central), a working knowledge of functional neuroanatomy, and how the central nervous system functions in an integrated fashion. Students also learn the basics of brain-behavior relationships and how these present normally and in clinical cases in order to gain a general and broader understanding of cognitive processes.

Prerequisites: Students must be in the clinical PhD program or receive permission of the instructor

CPSY 833 Grant and Manuscript Writing (3 Credit Hours)

The course is designed: (1) to teach students to write article-length scholarly manuscripts in APA format of publishable quality, and (2) to teach students the critical components of grant applications. By the end of this course, each student will have prepared a manuscript that is ready for submission to a peer-reviewed journal and have completed sections of a federal grant application.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 835 Health Psychology (3 Credit Hours)

This course focuses on contemporary theory and research topics in health psychology. The course examines psychological and behavioral issues affecting health maintenance, coping with life-threatening illnesses and chronic diseases, and health promotion. The course uses the biopsychosocial (mind-body) model as an organizing framework, emphasizing the dynamic interactions among biological, social, personality, and behavioral factors jointly in influencing people's health. The course is conducted as a seminar.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 836 Multilevel Models: HLM (3 Credit Hours)

Social science data frequently have a hierarchical or multilevel structure as a consequence of sampling designs or repeated measures. The purpose of the course is to introduce students to the basic principles and applications of hierarchical linear modeling in social science research. Topics covered include an introduction to multilevel analyses, random intercept models, random slope models, hypotheses testing, hierarchical models for limited dependent variables, model fitting, three-level models, and repeated-measures applications.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 844 Program Evaluation (3 Credit Hours)

This course is designed to introduce students to the field of program evaluation as well as to give students practical experience conducting a program evaluation. Students will get experience creating and conducting qualitative and quantitative assessments. A course goal is to work in small groups to conduct a program evaluation.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

Pre- or corequisite: CPSY 727/CPSY 827 and CPSY 728/CPSY 828 (or current enrollment)

CPSY 846 Structural Equation Modeling (3 Credit Hours)

This course covers the topics of linear structural equation modeling and focuses on estimation, measurement models, confirmatory and hierarchical factor analysis, structural equations, longitudinal models, multisample analyses, and mean structures.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

Pre- or corequisite: CPSY 745 or CPSY 845 or equivalent

CPSY 849 Social and Affective Bases of Behavior (3 Credit Hours)

This course discusses the behavior of the human as a member of a group and the experience and expression of emotion. Topics include attitude theory and change, interpersonal attraction, stereotypes and discrimination, social cognition and social affect, aggression, theories of emotion and emotion regulation.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CPSY 883 Research in Clinical Psychology (1-4 Credit Hours)

Individual project under guidance of a research advisor.

Prerequisites: Students must be in the clinical psychology Ph.D. program

CPSY 890 Internship in Clinical Psychology (4 Credit Hours)

Pre-doctoral internship in clinical psychology.

Prerequisites: Students must be in the clinical psychology Ph.D. program

CPSY 895 Clinical Practicum (3 Credit Hours)

Student assigned to a clinical practice setting to learn the skills of a clinical psychologist under close supervision. Various mental health settings throughout southeastern Virginia are used for this experience.

CPSY 896 Advanced Clinical Practicum (3-6 Credit Hours)

Student assigned to a practice setting to be given an opportunity to learn the advanced skills of a clinical psychologist under close supervision. Various mental health settings throughout the area are used.

CPSY 899 Clinical Dissertation (1-6 Credit Hours)

Student works with research mentor to develop, write, and defend an empirical dissertation.

CPSY 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

Prerequisites: Students must be in the clinical psychology Ph.D. program or receive permission from the instructor

CRIM - Criminology

CRIM 700 Proseminar in Criminology and Criminal Justice (3 Credit Hours)

This course provides students with a broad overview of enduring topics and emerging issues in criminology and criminal justice. It also explores the history and role of criminology as an academic discipline and criminal justice as an institutional system in American society.

CRIM 701 Criminology and Public Policy (3 Credit Hours)

This course covers the policy process as it relates to crime legislation, criminological theory and implications for public policy.

CRIM 702 Advanced Criminological Theory (3 Credit Hours)

This course is an examination of criminological theory for the advanced student. The focus is on critical analysis of both contemporary and historical criminological theories. In order to aid in the development of a critical understanding of theory, beyond understanding the content of central theories, the class focuses on discussion of theory development and testing. In addition, the class focuses on an understanding of the relationship of one theory to another as well as the state of empirical evidence surrounding each theory.

CRIM 703 Inequality, Crime and Justice (3 Credit Hours)

This course examines the linkages between social characteristics and crime. The course concentrates on what we know about the impact of gender, age, race and social class on crime and criminal justice.

CRIM 705 Multivariate Statistics in Criminological Research (3 Credit Hours)

This course teaches multivariate statistical techniques to train criminal justice researchers and policy makers to explore the causes and consequences of crime and criminal justice policies. Although the exact statistical techniques covered may vary, they will typically include multiple regression, multiple discriminate analysis, logistic regression, factor analysis, cluster analysis and path analysis.

CRIM 710 Qualitative Methods in Criminology and Criminal Justice (3 Credit Hours)

The central goal of this graduate seminar is to enable students to create and critique qualitative research designs focused on contemporary issues in criminology and criminal justice. A number of qualitative approaches will be covered including field observational research, focused interviews, case studies and content analysis. The seminar explores techniques, strengths and limitations of these varied qualitative methodologies.

CRIM 715 Advanced Quantitative Techniques in Criminology & Criminal Justice (3 Credit Hours)

This course explores advanced statistical techniques commonly used in research on crime and justice. The major focus of the course will be hierarchical linear modeling (HLM), a diverse set of techniques that extend standard multivariate analysis to accommodate nested data. Other advanced techniques will also be covered: event history/survival models, time series, etc.

CRIM 720 Advanced Research Methods in Criminology & Criminal Justice (3 Credit Hours)

This course provides students with advanced understanding of issues in criminology/criminal justice research including: history, philosophy, sociology, epistemology, politics and ethics of social science research; methodological questions of reliability, validity, conceptualization, operationalization, scale construction, data collection methodologies, sampling.

CRIM 740 Social Structures, Crime and Justice (3 Credit Hours)

This course examines the links between social structures and institutions, and justice at the individual, neighborhood, city, state and country levels. Students explore the ways in which structures and institutions are both agents of social control and facilitators or initiators of crime. Emphasis will be placed on theories, methodologies and empirical assessments.

CRIM 745 Crime and Communities (3 Credit Hours)

This course provides a foundation of the most important theories and research relating to residential communities and crime. The casual linkages between features of neighborhoods and social disorder will be explored in the context of criminological theories. Students will emerge with sufficient knowledge to develop a class or design a significant research project.

CRIM 750 Crimes of the State (3 Credit Hours)

This course explores crimes of the state from a sociological and criminological perspective by examining historical and current cases of governmental crime. This will cover the history, theory and method of the field; controls of and constraints on state crime; and cases of state crime.

CRIM 755 Researching the Criminal Justice System (3 Credit Hours)

Students will develop original research projects on the criminal justice system, police, courts and /or corrections. Projects will be designed to culminate in a publishable paper.

CRIM 760 Life Course Criminology (3 Credit Hours)

This course is designed to introduce graduate students to life-course perspectives for understanding crime and deviant behavior. Students discuss the various methodologies, both quantitative and qualitative, most commonly found in studies of the life course today.

CRIM 795 Topics in Criminal Justice (1-3 Credit Hours)

Topics vary by semester

CRIM 797 Independent Study (1-3 Credit Hours)

Supervised independent study arranged with instructor and approved by graduate program director.

CRIM 800 Proseminar in Criminology and Criminal Justice (3 Credit Hours)

This course provides students with a broad overview of enduring topics and emerging issues in criminology and criminal justice. It also explores the history and role of criminology as an academic discipline and criminal justice as an institutional system in American society.

CRIM 801 Criminology and Public Policy (3 Credit Hours)

To familiarize students with the policy process as it relates to crime legislation, criminological theory and implications for public policy.

CRIM 802 Advanced Criminological Theory (3 Credit Hours)

This course is an examination of criminological theory for the advanced student. The focus is on critical analysis of both contemporary and historical criminological theories. In order to aid in the development of a critical understanding of theory, beyond understanding the content of central theories, the class focuses on discussion of theory development and testing. In addition, the class focuses on an understanding of the relationship of one theory to another as well as the state of empirical evidence surrounding each theory.

CRIM 803 Inequality, Crime and Justice (3 Credit Hours)

This course examines the linkages between social characteristics and crime. The course concentrates on what is known about the impact of gender, age, race and social class on crime and criminal justice.

CRIM 805 Multivariate Statistics in Criminological Research (3 Credit Hours)

This course teaches multivariate statistical techniques to train criminal justice researchers and policy makers to explore the causes and consequences of crime and criminal justice policies. Although the exact statistical techniques covered may vary, they will typically include multiple regression, multiple discriminate analysis, logistic regression, factor analysis, cluster analysis and path analysis.

CRIM 810 Qualitative Methods in Criminology and Criminal Justice (3 Credit Hours)

The central goal of this graduate seminar is to enable students to create and critique qualitative research designs focused on contemporary issues in criminology and criminal justice. A number of qualitative approaches will be covered including field observational research, focused interviews, case studies and content analysis. The seminar explores techniques, strengths and limitations of these varied qualitative methodologies.

CRIM 811 Interviewing and Ethnography (3 Credit Hours)

This course focuses on the methodological, practical, and theoretical considerations involved in designing interview-based or ethnographic research studies. Practical in its approach, students will leave this course with the necessary skills, competencies, and instruments/protocols necessary to complete data collection for an interview-based or ethnographic project.

CRIM 815 Advanced Quantitative Techniques in Criminology & Criminal Justice (3 Credit Hours)

This course explores advanced statistical techniques commonly used in research on crime and justice. The major focus of the course is hierarchical linear modeling (HLM), a diverse set of techniques that extend standard multivariate analysis to accommodate nested data. Other advanced techniques are also covered: event history/survival models, time series, etc.

CRIM 820 Advanced Research Methods in Criminology & Criminal Justice (3 Credit Hours)

This course provides students with advanced understanding of issues in criminology/criminal justice research including: history, philosophy, sociology, epistemology, politics and ethics of social science research; methodological questions of reliability, validity, conceptualization, operationalization, scale construction, data collection methodologies, sampling.

CRIM 830 Corrections (3 Credit Hours)

This course examines issues surrounding jail and prison environments in the U.S. Topics include the philosophy of incarceration, inmate rights, inmate (mal)adaptation, misconduct, inmate and correctional officer safety and well-being, classification, rehabilitative programming, and evidence-based solutions and scholarly opportunities aimed at improving the experience of both inmates and staff.

CRIM 840 Social Structures, Crime and Justice (3 Credit Hours)

This course examines the links between social structures and institutions, and justice at the individual, neighborhood, city, state and country levels. Students explore the ways in which structures and institutions are both agents of social control and facilitators or initiators of crime. Emphasis will be placed on theories, methodologies and empirical assessments.

CRIM 845 Crime and Communities (3 Credit Hours)

This course provides a foundation of the most important theories and research relating to residential communities and crime. The casual linkages between features of neighborhoods and social disorder will be explored in the context of criminological theories. Students will emerge with sufficient knowledge to develop a class or design a significant research project.

CRIM 848 Queer Communities, Crime, and Victimization (3 Credit Hours)

This course provides a systematic introduction to the study of queer communities in criminology and criminal justice, while still drawing from diverse academic disciplines, such as sociology, history, and women's, gender, and sexuality studies. We will first explore the contexts of LGBTQ individuals' criminalized conduct across time and space, as well as our guiding theoretical lens. We will critically interrogate existing literatures on queer peoples' victimization as well as their offending. Finally, we will explore emerging public health and education concerns.

CRIM 850 Crimes of the State (3 Credit Hours)

This course explores crimes of the state from a sociological and criminological perspective by examining historical and current cases of governmental crime. This course covers the history, theory and method of the field; controls of and constraints on state crime; and cases of state crime.

CRIM 855 Researching the Criminal Justice System (3 Credit Hours)

Students develop original research projects focusing on the criminal justice system, police, courts and/or corrections. Projects are designed to culminate in a publishable paper.

CRIM 860 Life Course Criminology (3 Credit Hours)

This course is designed to introduce graduate students to life-course perspectives for understanding crime and deviant behavior. Students discuss the various methodologies, both quantitative and qualitative, most commonly found in studies of the life course today.

CRIM 861 Gender and Crime (3 Credit Hours)

This course provides a systematic introduction to the study of gender and crime. We first explore theories, trends, patterns, and pathways, which include gendered contexts of risk, victimization, and offending. We also explore the role of the state, such as in regulating reproduction or in furthering criminalization and surveillance through institutions such as schools, the crimino-legal system, and carceral settings. Other topics, including the experiences of women in criminal justice occupations, are also discussed.

CRIM 890 Professional Development and Dissertation Seminar (3 Credit Hours)

This course enhances the process of professionalization of students by supporting ongoing dissertation progress as well as preparing the student for publishing, grant writing, and the job market.

CRIM 895 Topics in Criminal Justice (1-3 Credit Hours)

Topics vary by semester.

CRIM 897 Independent Study (1-3 Credit Hours)

Supervised study arranged with an instructor and approved by the graduate program director.

CRIM 899 Dissertation (1-9 Credit Hours)

Dissertation hours.

CRIM 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

CRIM 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

CRJS - Criminal Justice

CRJS 521 Deviant Behavior (3 Credit Hours)

A study of various definitions and forms of deviant behavior, theoretical explanations of causes of deviant behavior, and the impact of deviant behavior on society and the individual.

CRJS 526 Criminological Theory (3 Credit Hours)

An in-depth study of the major theoretical issues in criminology. Deals extensively with issues of crime causation.

CRJS 527 Gender-Based Violence (3 Credit Hours)

This course takes an expansive and intersectional approach to studying various forms of gender-based violence, from the interpersonal to the systemic, institutional, and cultural. Prevalence, risk factors, theoretical explanations, and legal remedies related to topics such as intimate partner violence, sexual assault on college campuses, gender-based violence in the military, sexual violence against undocumented immigrants, commercial sexual exploitation, and racism and reproductive health will be examined.

CRJS 541 Drugs and Society (3 Credit Hours)

The study of sociological and social psychological explanations of drug-using behaviors and of legal and medical control of drugs. Topics include changes in the legal status of drugs, cross-cultural and historical variations in the control of drugs, and social epidemiology of drug use in contemporary society.

CRJS 550 Blacks, Crime and Justice (3 Credit Hours)

Examines historical and contemporary theories and research on African-Americans, criminal behavior and the administration of justice. Selected topics will include African-American perspectives, the death penalty, victimization, police brutality, and justice systems in Africa and the Caribbean.

CRJS 562 Substantive Criminal Law (3 Credit Hours)

This course deals with the major substantive concepts involved in American criminal law, including development of criminal law, elements of criminal liability, defenses against criminal responsibility, and descriptions and definitions of specific offenses.

CRJS 575 Criminal Justice Systems Around the World (3 Credit Hours)

The study of criminal justice systems around the world in order to understand how criminal behavior is defined and responded to in various cultures. Cultural differences will be highlighted in order to recognize that definitions of and responses to crimes closely reflect the cultures in which they exist.

CRJS 595 Topics in Criminal Justice (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

CRJS 596 Topics in Criminal Justice (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

CRJS 597 Tutorial Work in Special Topics in Criminal Justice (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

CRJS 598 Tutorial Work in Special Topics in Criminal Justice (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

CRJS 620 Criminological Theory (3 Credit Hours)

An in-depth study of the major theoretical issues in criminology. The course deals extensively with issues of crime causation, the way theory shapes and informs the study of crime and related social issues, and the relationship between theory, research, and practice.

CRJS 625 The Administration of Criminal Justice (3 Credit Hours)

An analysis of the criminal justice system with an emphasis on the decision-making responsibilities of its officials.

CRJS 627 Violence Against Women (3 Credit Hours)

This course examines the many ways in which violence against women functions as an agent of social control. Violence is viewed on a continuum in order to determine how a variety of acts contribute to the subordination of women. Specific types of violence are explored including: wife assault, rape, incest, sexual harassment and pornography.

CRJS 663 Corrections (3 Credit Hours)

A study of society's response to crime through its use of institutional and noninstitutional corrections. Topics include inmate culture, correction officer behavior and community corrections programs.

CRJS 668 Internship (3 Credit Hours)

Students gain first-hand experience in professional settings which are deemed appropriate given their academic background and career objectives. Students are required to complete a research project that corresponds to their specific internship placement

Prerequisites: Permission of the instructor

CRJS 695 Topics in Criminal Justice (3 Credit Hours)

Advanced seminars on selected topics in criminal justice. Topics will vary by semester.

CRJS 696 Topics in Criminal Justice (3 Credit Hours)

Advanced seminars on selected topics in criminal justice. Topics will vary by semester.

CRJS 697 Independent Study in Special Topics in Criminal Justice (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Approval of the department chair

CRJS 698 Independent Study in Special Topics in Criminal Justice (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Approval of the department chair

CRJS 699 Thesis (3-9 Credit Hours)

Thesis hours.

CRJS 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

CS - Computer Science

CS 500 Foundations of Computing (3 Credit Hours)

The course aims to provide students foundational training in computing. This includes topics in discrete mathematics, counting and combinatorics, probability, proofs methods, basic automata theory and algorithm design and analysis.

Prerequisites: MATH 211 or equivalent, CS 250 or CS 251 or CS 253 or equivalent experience with programming and basic data structures

CS 502 Formal Software Foundations (3 Credit Hours)

Laboratory work required. Foundational principles and techniques for building correct-by-construction software systems with provable guarantees. Includes functional programming, algebraic and polymorphic data types, pattern matching, computer-assisted theorem proving, proof automation, extraction of certified executable code, examples of verified algorithms.

Prerequisites: CS 381 or equivalent experience

CS 510 Professional Workforce Development I (3 Credit Hours)

Laboratory work required. Provides students with challenges of business environments in developing a technology based project. Students identify a societal problem, identify solutions, define project solutions, develop project objectives, conduct feasibility analysis, establish organizational group structure to meet project objectives and develop formal specifications. Students make formal technical project presentations and develop web documentation. Students prepare a draft grant proposal.

CS 511 Professional Workforce Development II (3 Credit Hours)

Laboratory work required. Students write professional documents and continue the development of the project defined in CS 410/510. Written work is reviewed and returned for corrective rewriting. Students will design and develop a project prototype using accepted best practices of professional software development. They will demonstrate the prototype to a formal panel and defend its satisfaction of the goals established in CS 410/510. This is a writing intensive course.

CS 517 Computational Methods and Software (3 Credit Hours)

Laboratory work required. Algorithms and software for fundamental problems in scientific computing. Topics: properties of floating point arithmetic, linear systems of equations, matrix factorizations, stability of algorithms, conditioning of problems, least-squares problems, eigenvalue computations, numerical integration and differentiation, nonlinear equations, iterative solution of linear systems.

CS 518 Web Programming (3 Credit Hours)

Laboratory work required. Overview of Internet and World Wide Web; web servers and security, HTTP protocol; web application and design; server side scripts and database integration, and programming for the Web.

Prerequisites: A grade of C or better in CS 312 and CS 330, or equivalent experience

CS 522 Introduction to Machine Learning (3 Credit Hours)

Laboratory work required. An introduction to machine learning with a focus on practical aspects of various learning techniques. Topics include supervised learning (linear models, probabilistic models, support vector machine, decision trees, neural networks, etc.), unsupervised learning (scaling, dimension reduction, clustering, etc.), reinforcement learning, and model evaluation. The course will also discuss applications on image analysis, text processing, and biomedical informatics.

Prerequisites: MATH 316 and CS 150 or CS 151 or CS 153 (or equivalent programming experience)

CS 531 Web Server Design (3 Credit Hours)

Laboratory work required. Extensive coverage of the hypertext transfer protocol (HTTP), specifications and commentary (IETF RFCs), and implications for servers and clients. Students will develop a web server providing common HTTP functionality and implementing all HTTP (including unsafe and conditional) methods, content negotiation, transfer and content encoding, basic & digest authentication, and server-side execution of programs (i.e., dynamic resources). Frequent in-class demonstrations of progress and protocol conformance will be required.

Prerequisites: Familiarity with Internet and network (including socket) programming

CS 532 Web Science (3 Credit Hours)

An overview of the World Wide Web and associated decentralized information structures, focusing mainly on the computing aspects of the Web: how it works, how it is used, and how it can be analyzed. Students will examine a number of topics including: web architecture, web characterization and analysis, web archiving, Web 2.0, social networks, collective intelligence, search engines, web mining, information diffusion on the web, and the Semantic Web.

CS 533 Web Security (3 Credit Hours)

Provides detailed experience with: principles of web security, attacks and countermeasures, the browser security model, web app vulnerabilities, injection, denial-of-service, TLS attacks, privacy, fingerprinting, same-origin policy, cross site scripting, authentication, JavaScript security, emerging threats, defense-in-depth, techniques for writing secure code, web archiving, and rehosting.

Prerequisites: A grade of C or better in CS 312 and CS 330

CS 541 App Development for Smart Devices (3 Credit Hours)

Laboratory work required. Project-oriented coverage of the principles of application design and development for Android platform smart devices. Topics include user interface; input methods; data handling; network techniques; localization and sensing. Students are required to produce a professional-quality mobile application.

Prerequisites: Knowledge of Java

CS 545 Introduction to Quantum Computing (3 Credit Hours)

The course covers the fundamental concepts of quantum information and computation, including the quantum bits, single- and multi-gate circuits, and related concepts like superposition, entanglement, interference, measurements, basic theory, quantum communication protocols, and time-permitted basic algorithms in quantum computing. The class focuses on the material required to transition from theory to practical use cases based on the class's interests. Familiarity with Jupyter Notebooks, linear algebra, and discrete structures is recommended.

Prerequisites: Prior programming experience, with preference for Python

CS 550 Database Concepts (3 Credit Hours)

Laboratory work required. Three level database architecture. The relational database model and relational algebra. SQL and its use in database procedures and with conventional programming languages. Entity relationship modeling. Functional dependencies and normalization. Transactions, concurrency and recovery.

Prerequisites: Familiarity with elementary set theory, propositional logic, and any two programming languages are expected; a course in finite mathematics or discrete structures is recommended

CS 554 Network Management (3 Credit Hours)

Laboratory work required. The administration of computer networks and their interaction with wide area networks: network topologies for local and wide area networks, common protocols and services, management of distributed file services, routing and configuration, security, monitoring and trouble-shooting.

CS 555 Introduction to Networks and Communications (3 Credit Hours)

Internet and the 5-layered protocol architecture for the Internet, applications built on top of data networks, specifically the Internet, the web, the transport layer, TCP and UDP protocols, the network layer, the data link layer, also some of the technologies for the physical layer.

Prerequisites: Familiarity with C++ or Java programming for Unix systems

CS 558 Unix System Administration (3 Credit Hours)

Laboratory work required. Aspects of administering a SOLARIS/UNIX operating system in a networked environment are covered. Topics covered include installation, file system management, backup procedures, process control, user administration, device management, Network File Systems (NFS), Network Information Systems (NIS), UNIX security, Domain Name Services (DNS), and integration with other operating systems.

Prerequisites: experience with UNIX

CS 560 Computer Graphics (3 Credit Hours)

Laboratory work required. An introduction to graphical systems and methods. Topics include basic primitives, windowing, transformations, hardware, interaction devices, 3-D graphics, curved surfaces, solids, and realism techniques such as visible surface, lighting, shadows, and surface detail. Requires project involving OpenGL programming.

CS 562 Cybersecurity Fundamentals (3 Credit Hours)

Introduction to networking and the Internet protocol stack; Vulnerable protocols such as HTTP, DNS, and BGP; Overview of wireless communications, vulnerabilities, and security protocols; Introduction to cryptography; Discussion of cyber threats and defenses; Firewalls and IDS/IPS; Kerberos; Transport Layer Security, including certificates; Network Layer Security.

CS 563 Cryptography for Cybersecurity (3 Credit Hours)

This course covers mathematical foundations, including information theory, number theory, factoring, and prime number generation; cryptographic protocols, including basic building blocks and protocols; cryptographic techniques, including key generation and key management, and applications; and cryptographic algorithms--DES, AES, stream ciphers, hash functions, digital signatures, etc.

Prerequisites: MATH 162M

CS 564 Networked Systems Security (3 Credit Hours)

Authentication in cyber systems including password-based, address-based, biometrics-based, and SSO systems; Authorization and accounting in cyber systems; Securing wired and wireless networks; Secured applications including secure e-mail services, secure web services, and secure e-commerce applications; Security and privacy in cloud environments.

CS 565 Information Assurance for Cybersecurity (3 Credit Hours)

Introduction to information assurance. Topics to be covered include metrics, planning and deployment; identity and trust technologies; verification and evaluation, and incident response; human factors; regulation, policy languages, and enforcement; legal, ethical, and social implications; privacy and security trade-offs; system survivability; intrusion detection; and fault and security management.

Prerequisites: MATH 162M or familiarity with computer security area

CS 566 Principles and Practice of Cyber Defense (3 Credit Hours)

This course is to help students gain a thorough understanding of vulnerabilities and attacks in systems and networks and learn cyber defense best practices. It covers fundamental security design principles and defense strategies and security tools used to mitigate various cyber attacks. The topics may include identification of Recon Ops, intrusion detection, identification of C2 Ops, data exfiltration detection, identifying malicious codes, network security techniques, cryptography, malicious activity detection, system security architectures, defense in depth, distributed/cloud and virtualization.

CS 567 Introduction to Reverse Software Engineering (3 Credit Hours)

Laboratory work required. Covers all the major components such as static analysis, dynamic analysis, Windows x86/64 Assembly, APIs, DLL/process injection, covert launching methods, behaviors, anti-disassembly, anti-VM, packing/unpacking, shell code, C++, buffer overflow attacks and various kinds of networking attacks; includes a final project that analyzes a piece of real malware.

Prerequisites: CS 250 or CS 251 or CS 253 and CS 270 or equivalent experience

CS 569 Data Analytics for Cybersecurity (3 Credit Hours)

The course introduces classical and advanced models and techniques in machine learning and deep learning. It applies these techniques in the cybersecurity domain including anomaly detection, network security, and malware detection and classification. Advanced applications such as self-driving cars and IoT systems are also discussed. In addition, cyber-attacks on machine learning techniques and AI systems and the possible consequences are also discussed.

Prerequisites: CS 462/CS 562 or CS 465/CS 565 or experience in cybersecurity

CS 570 Introduction to Computer Architecture (3 Credit Hours)

This course provides an overview of the fundamentals of computer architecture. Major components include basic computer logic, integrated circuits, instruction sets, cache-RAM interaction, virtual memory, the fetch/execute cycle, basics of microprogramming, pipelined implementation, parallel processors including SISD, MIMD, SIMD, and SPMD. The course also introduces hardware multithreading, multicores, multiprocessors, GPUs, multiprocessor network topologies, and cluster networking.

Prerequisites: Instructor permission required

CS 571 Operating Systems (3 Credit Hours)

Operating system structures. Multiprogramming and multiprocessing. Process management. Memory and other resource management. Storage management, I/O systems, distributed systems. Protection and security. The concepts will be illustrated through example systems such as Unix and Windows.

Prerequisites: ECE 346 or ECE 443 or a grade of C or better in CS 361 and CS 170; a grade of C or better in ENGN 122 or CS 150 or CS 260

CS 575 Introduction to Computer Simulation (3 Credit Hours)

Efficient implementation methods. Time management. Planning and design of simulation experiments. Statistical issues in simulation. Generation of random numbers and stochastic variates. Programming with graphically- and text-based simulation languages. Verification and validation of simulation models. Distributed simulation. Special topics such as HLA will be discussed.

CS 576 Systems Programming (3 Credit Hours)

Laboratory work required. This course is to help students fully understand and utilize the internal workings and capabilities provided by modern computing, networking and programming environments. Topics include: Shell Script Programming, X Windows (Xlib and Motif), UNIX internals (I/O, Processes, Threads, IPC and Signals), Network Programming (UDP/TCP Sockets and Multicasting) and Java Systems Programming (SWING, Multithreading and Networking).

CS 578 Computational Geometry, Methods and Applications (3 Credit Hours)

The discipline of Computational Geometry is devoted to the study of algorithms which are formulated in terms of spatially embedded arrangements of objects, such as points, lines, surfaces, and solids. This course covers fundamental algorithms including convex hulls, polygon triangulations, point location, Voronoi diagrams, Delaunay triangulations, binary space partitions, quadrees, and other topics.

CS 580 Introduction to Artificial Intelligence (3 Credit Hours)

Laboratory work required. Introduction to concepts, principles, challenges, and research in major areas of AI. Areas of discussion include: natural language and vision processing, machine learning, machine logic and reasoning, robotics, expert and mundane systems.

CS 581 Trustworthy Health Analytics (3 Credit Hours)

This course offers a comprehensive, project-driven approach to integrating AI in healthcare, focusing on building prototype models for prevention, diagnosis, and treatment while stressing the need of adopting ethical, responsible methods to reduce risks and improve patient outcomes.

CS 586 Introduction to Parallel Computing (3 Credit Hours)

Laboratory work required. The motivation for and successes of parallel computing. A taxonomy of commercially available parallel computers. Strategies for parallel decompositions. Parallel performance metrics. Parallel algorithms and their relation to corresponding serial algorithms. Numerous examples from scientific computing, mainly in linear algebra and differential equations. Implementations using public-domain network libraries on workstation clusters and computers.

CS 588 Principles of Compiler Construction (3 Credit Hours)

Laboratory work required. Theoretical and practical aspects of compiler design and implementation. Topics will include lexical analysis, parsing, translation, code generation, optimization, and error handling.

CS 591 Honors Research I in Computer Science (3 Credit Hours)

Laboratory work required. Students perform mentored research in a group environment to develop computational approaches in addressing computer science challenges. The project needs approval by the Computer Science Honors Program director, and registration requires approval of the research mentor and the Graduate Program Director. A GPA of 3.00 or better is required, or approval by the director of the Computer Science Honors Program.

CS 592 Honors Research II in Computer Science (3 Credit Hours)

Laboratory work required. Students continue mentored research using the project defined in CS 591. Students will present the work and findings to the public. The project needs approval by the Computer Science Honors Program director, and registration requires approval of the research mentor and the Graduate Program Director. A GPA of 3.00 or better is required, or approval by the director of the Computer Science Honors Program.

Prerequisites: A grade of B or better in CS 591

CS 595 Topics in Computer Science (1-3 Credit Hours)

Special topics.

CS 597 Independent Study in Computer Science (1-3 Credit Hours)

Independent study under the direction of an instructor.

Prerequisites: permission of the instructor

CS 600 Algorithms and Data Structures (3 Credit Hours)

This course covers the following topics: (i) Basic introduction to algorithms, their design and analysis (ii) Asymptotic notation (iii) Recurrence Relations and their solutions (iv) Sorting and Order Statistics: various algorithms for sorting and their analysis, lower bounds for sorting, computing medians, modes and various order statistics (v) Paradigms for algorithm design and analysis: Dynamic Programming, Greedy Method, Amortized Analysis, and (vi) Graphs and Elementary Graph Algorithms: Breadth-first and Depth-first Search, Topological Sort, Minimum Spanning Trees and Shortest Paths Algorithms.

Prerequisites: CS 361 or equivalent and CS 381 or equivalent

CS 620 Introduction to Data Science and Analytics (3 Credit Hours)

This course will explore data science as a burgeoning field. Students will learn fundamental principles and techniques that data scientists employ to mine data. They will investigate real life examples where data is used to guide assessments and draw conclusions. This course will introduce software and computing resources available to a data scientist to process, visualize, and model different types of data including big data. Cross-listed with DASC 620.

CS 624 Data Analytics and Big Data (3 Credit Hours)

This course introduces the essential data science tools to work with different types of data including streaming data and big data, including static and streaming data using Python software packages; modeling and predictive analysis using basic machine learning techniques; work with real sample data sets from different disciplines, e.g., the health sciences and finance industry; and how to work with big data using emerging technology such as Apache Spark.

CS 625 Data Visualization (3 Credit Hours)

This course covers the theory and application of data visualization. This includes issues in data cleaning to prepare data for visualization, theory behind mapping data to appropriate visual representations, introduction to visual analytics, and tools used for data analysis and visualization. Modern visualization software and tools will be used to analyze and visualize real-world datasets to reinforce the concepts covered in the course.

CS 626 Web Archiving Theory, Practice, and Implications (3 Credit Hours)

An interdisciplinary introduction to web archiving fundamentals including web crawling, collection development and summarization including planning, analyzing, and sharing collections. Includes a review of ethical and legal issues, trustworthiness, preservation, security, and cultural impact of web archiving.

Prerequisites: This course is intended for computer science students with limited information studies skills, as well as information science studies students with limited computer science skills

CS 635 Parallel Computer Architecture (3 Credit Hours)

This is a first course in parallel architecture, with an emphasis on the description and evaluation of commercially available machines. Topics to be covered include: parallelization and performance metrics, scalability and the "laws" of Amdahl and Gustavson, computational similarity, models of computation, parallelization paradigms, network characteristics and topology, communication calculus and templates, pipelining and parallelism, processor types, memory hierarchy, cache coherence protocols, latency-hiding mechanisms, routing algorithms, and languages and libraries to support parallel architecture.

Prerequisites: CS 665

CS 640 Digital Image Processing and Applications (3 Credit Hours)

Laboratory work required. The course covers digital image processing techniques including representation, sampling and quantization, imaging geometry, image transforms, image enhancement, image filtering, color image processing, image segmentation, and morphological image processing. Applications include image restoration, image compression, pattern recognition, and image fusion.

Prerequisites: Prior programming experience

CS 650 Advanced Databases (3 Credit Hours)

This course focuses on advanced database systems, with an emphasis on NoSQL databases to handle the challenges of scalability, flexibility, and high availability in real-world applications. Unlike typical database courses, it delves into the distinct data models and architectures of NoSQL systems, such as document, key-value, column-family, and graph databases. Students will receive hands-on experience developing safe, distributed, and scalable NoSQL-based solutions for modern data-intensive applications.

CS 656 Database Methodology (3 Credit Hours)

Laboratory work required. Analysis, design and implementation of databases and database applications using modern software engineering methods. Database CASE tools. Analysis using process, function, and dataflow analysis in conjunction with entity relationship modeling. Database diagrams and database design. Application suite design and high level design of applications. Refining implementations.

Prerequisites: CS 550

CS 660 3D Computer Graphics (3 Credit Hours)

Laboratory work required. The mathematical tools needed for the geometrical aspects of 3D computer graphics. Fundamentals: homogeneous coordinates, transformations and perspective. Theory of parametric and implicit curve and surface models: polar forms, Bezier arcs and de Casteljau subdivision, continuity constraints, B-splines, tensor product, and triangular patch surfaces. Representations of solids and conversions among them. Beometric algorithms for graphics problems, with applications to ray tracing, hidden surface elimination, etc.

Prerequisites: CS 560

CS 665 Computer Architecture (3 Credit Hours)

A detailed and quantitative study of the architecture of modern uni-processor computers. The major components are: the technology drivers, performance measures, instruction sets (including 80X86, VAX, and a generic RISC which is very similar to the MIPS series), processor implementation, advanced pipelining and superscalar features, cache and memory design, and I/O. The emphasis is on obtaining quantitative measures of performance, describing interactions of the various components, studying trade-offs between the components in commercial processors, and integration into a complete computer system including interaction of the software and hardware. (offered spring)

CS 667 Cooperative Education (1-3 Credit Hours)**CS 668 Internship (1-3 Credit Hours)**

Requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain a short duration career-related experience.

CS 669 Practicum (1-3 Credit Hours)**CS 690 Colloquium (1 Credit Hour)**

A one-hour weekly lecture given by faculty from Old Dominion and other institutions.

CS 695 Topics (1-3 Credit Hours)

CS 697 Independent Study in Computer Science (1-3 Credit Hours)

Independent study under the direction of an instructor.

Prerequisites: permission of the instructor

CS 698 Master's Project (3 Credit Hours)

Departmental permission required.

CS 699 Thesis Research (3 Credit Hours)

Departmental permission required.

CS 712 Stochastic Modeling (3 Credit Hours)

Stochastic processes are ways of quantifying the dynamic relationship of sequences of random events. This course will expose the participants to standard concepts and methods of stochastic modeling, as well as the rich diversity of applications. Topics include, but not limited to, Markov chains in discrete and continuous time, Poisson processes, renewal theory and branching processes.

CS 714 Monte Carlo Simulation (3 Credit Hours)

This course serves to illustrate important principles in Monte Carlo simulation methods and to demonstrate their power in applications. The course covers Metropolis-Hastings algorithm, Gibbs sampler, Markov Chain Monte Carlo, acceptance-rejection method, Monte Carlo integration, quasi-Monte Carlo, random walk, and random number generation.

CS 722 Machine Learning (3 Credit Hours)

This course presents both the foundational and the practical aspects of modeling, analyzing, and mining of computerized data sets, including classification, regression, clustering, semi-supervised learning, structured sparsity learning, etc. The course assignments are designed to contain both theoretical and programming components in order to train students to gain hands-on-experience.

CS 723 Introduction to Bioinformatics (3 Credit Hours)

This course introduces the fundamental knowledge in bioinformatics and the current advances in selected directions. The topics include: fundamental concepts and experimental techniques in molecular biology, computational methods in genomic sequence comparison and analysis, and computational methods in molecular structural modeling.

CS 724 High Performance Computing and Big Data (3 Credit Hours)

This course introduces parallel and distributed programming principles and has emphasis on hands-on programming and deploying high-performance computing applications with big data for different science and engineering disciplines. Topics includes programming on emerging technologies such as NVIDIA GPU, Hadoop Framework, and Apache Spark for large scale data analytics and mining applications.

CS 725 Information Visualization (3 Credit Hours)

This course covers the theory and application of information visualization and of visual analytics, the science of combining interactive visual interfaces and information visualization technique with automatic algorithms to support analytical reasoning through human-computer interaction. Research on visual perception, cognition, interactive visual interfaces, and visual analytics will be covered. Practical techniques for the display of complex multivariate data will be addressed. Course projects will require the development of interactive web-based interfaces to analyze and visualize real-world datasets.

Prerequisites: CS 625

CS 726 Application of Graphs in Bioinformatics (3 Credit Hours)

This course links the fundamental concepts and algorithms of graphs with the actual biological problems. Various biological problems will be selected to discuss the formulation of the graph, the graph algorithms, and the performance analysis.

CS 727 Data Analytics for Protein Structural Data (3 Credit Hours)

The goal of this course is to understand fundamental concepts and to survey current advances in computational structural bioinformatics. In the scope of computational structural bioinformatics, computational methods are developed to address 3-dimensional structure-related biological problems that often involve protein and RNA. The topics include basics of protein, DNA and RNA structures, principle of protein structure prediction, deep learning in protein structure problems and cryo-electron microscopy data and challenges.

CS 728 Deep Learning Fundamentals and Applications (3 Credit Hours)

This course covers key components of deep learning framework, including loss functions, regularization, training and batch normalization. The course also covers several fundamental deep learning architectures such as multilayer perceptrons, convolutional neural network, recurrent neural network and transformers, as well as advanced topics including graph neural network and deep reinforcement learning.

Prerequisites: CS 422 or CS 522 or CS 480 or CS 580 or CS 620 or CS 722 or CS 822 or CS 733 or CS 833, or other equivalent courses at the discretion of the instructor

CS 732 Human Computer Interaction (3 Credit Hours)

This course introduces students to principles and research methods in human-computer interaction (HCI), an interdisciplinary area studying the interaction between humans and interactive computing systems. Students will learn to model computer users and interfaces, significant cognitive and social phenomena surrounding the human use of computers, apply empirical techniques for task analysis and interface design, and evaluate designs qualitatively and quantitatively.

Prerequisites: Prior programming experience required

CS 733 Natural Language Processing (3 Credit Hours)

Natural language processing (NLP) techniques are the crux of many leading modern technologies. Advances in NLP are also critical in the pursuit of Artificial Intelligence. This course will discuss core problems in NLP and the state-of-the-art tools and techniques as well as advanced NLP research topics. The topics will include language models, part-of-speech tagging, syntactic parsing, word embedding, statistical machine translation, text summarization, question answering, and dialog interaction. At the end of the course, students will be familiar with many language-processing tasks and applications.

Prerequisites: CS 580

CS 734 Introduction to Information Retrieval (3 Credit Hours)

Laboratory work required. Theory and engineering of information retrieval in the context of developing web-based search engines. Topics include issues related to crawling, ranking, query processing, retrieval models, evaluation, clustering, machine learning, and other aspects related to building web search engines. Students will perform a mix of hands-on development and coding, as well as theoretical exploration of the research literature.

CS 735 Web Archiving Forensics (3 Credit Hours)

Explores the veracity of information on the web and social media. Digital information is easy to manipulate, copy, and delete, but web archives offer a trusted method for timestamping the appearance of web pages and their contents. Students will investigate how web archives can be used to establish the priority of information, as well as how they can be hacked or used to obfuscate the provenance of falsified content.

Prerequisites: Graduate standing and familiarity with command line utilities

CS 740 Computer Vision (3 Credit Hours)

This course covers the following topics: Image processing and filters; Edges and features; Interest points and features; Bag of words representation; Convolutional neural networks; Object detection; Image formation; 3D reconstruction; Motion analysis; and Light and shading.

Prerequisites: CS 422 and CS 480, or CS 522 and CS 580, or equivalent courses with the permission of the instructor

CS 741 Data-Driven Computational Imaging (3 Credit Hours)

This course introduces the basic concepts of computational imaging. The topics include principles of imaging systems, role of computational methods in enhancing imaging systems, computational imaging inverse problems, and data-driven machine learning approaches to solve inverse problems in computational imaging.

Prerequisites: Knowledge of linear algebra and prior programming experience

CS 742 High-Performance Computing on Emerging Architectures (3 Credit Hours)

With the advent of large learning models in machine learning, high-performance computing is playing a major role in realizing these models. This course deals with large-scale computing on high-performance emerging architectures, particularly heterogeneous architectures consisting of CPUs and GPUs. The course will expose students to different programming environments for efficiently programming emerging heterogeneous architectures.

Prerequisites: CS 250 or CS 350 or CS 361 or CS 381, or equivalent courses with the permission of the instructor

CS 744 Performance Evaluation of Computer Systems and Networks (3 Credit Hours)

The course will introduce some of the commonly used techniques in the performance evaluation of computing systems. Students will be exposed to a variety of analytical and simulation tools used in this field. The applicability of the techniques will be illustrated through case studies.

CS 745 Utility-Scale Quantum Computing (3 Credit Hours)

The course is project-driven and is designed to help transition from theory to actual implementation, particularly in utility-scale quantum computing. The course covers (i) the fundamental concepts of quantum information and computation, (ii) mapping computational problems onto quantum circuits, (iii) understanding noise in near-term quantum computers, and (iv) executing quantum circuits on real quantum hardware.

Prerequisites: Knowledge of Python, Linear Algebra, and Discrete Structures

CS 751 Introduction to Digital Libraries (3 Credit Hours)

Digital Libraries (DLs) are an increasingly popular research area that encompass more than traditional information retrieval or database methods and techniques. The course will cover a brief history of DL development, with emphasis on World Wide Web implementations. Case studies will be performed on various DLs. The class will focus heavily on project work. At the end of the course, students will be prepared to develop, evaluate, or apply digital library technologies in their work environment. Topics include: Repositories; Distributed Searching; Metadata Harvesting; Preservation, Reference Linking and Citation Analysis.

CS 752 Wireless Communications and Mobile Computing (3 Credit Hours)

This course looks at fundamental issues in the area of wireless networks and mobile computing. The course material is organized around the following broad themes: Basics of mobile and wireless communications; Cellular communications: Bandwidth allocation and reservation, Location management, Call admission strategies and QoS issues: Mobile IP and Mobile TCP; Mobile Ad-Hoc Networks (MANET): Routing, Multimedia and QoS support; Sensor networks.

CS 761 Malware Analysis and Reverse Engineering (3 Credit Hours)

Theory and practice in analysis and mitigation of malware in networked machines. Theoretical topics include methods of attack anatomy, identification, reverse and anti-reverse engineering. Practice entails learning tools and techniques used by malware attackers, defenders and analysts in lab-based projects conducted in a secure 'sandbox' mode.

CS 762 Memory Analysis and Forensics (3 Credit Hours)

This course is based on the Intel processor architecture employed in Windows, Linux and MacOS operating systems. Students will learn how memory is assigned to processes and how it is addressed, how memory data structures can be exploited by malware, and what is available for forensic analysis of memory. The course involves several hands-on lab work on recognizing process data structures in memory, memory acquisition, and use of a set of tools to catch the malware while preserving evidence from live memory analysis. Course requires a set of assigned reading and lab work.

Prerequisites: CS 270, CS 471, or instructor's permission

CS 764 Blockchains and Cryptocurrencies: Fundamentals, Technologies, and Economics (3 Credit Hours)

This course covers different aspects of cryptocurrencies, including P2P networks, distributed consensus, Bitcoin and Ethereum, blockchain technologies, cryptographic techniques (secure hashing, encryption, decryption, digital signatures), privacy and anonymity, mining and mining puzzles, wallets, smart contracts, case studies, cryptocurrency ecosystem, legal aspects, implications and impact on economy and finance, and future of cryptocurrencies.

Prerequisites: CS 471, CS 455/CS 555 or equivalent experience

CS 765 Internet of Things Security (3 Credit Hours)

This course covers various topics in Internet of Things (IoT) security, including web security, network security, mobile app security and secure cryptocurrency. It provides an in-depth study of various attack techniques and methods to defend against them. The course adopts the 'learning by doing' principle. Students are supposed to learn the attacks by performing them in a networked virtual machine environment. They will also play with a number of security tools to understand how they work and what security guarantee they provide. Laboratory work required.

Prerequisites: basic knowledge of programming, computer networks and operating systems; no prior knowledge of computer security is necessary

CS 772 Advanced Computer and Network Security (3 Credit Hours)

This course is a research-oriented, graduate-level course, centering around basic protocols and technique, as well as advanced, state-of-the-art topics to secure computer and Internet services. Topics include: System and Software Security, Cryptography and PKI, Internet Infrastructure and Network Security, Web and Browser Security, Cloud Security, and Online Privacy.

Prerequisites: CS 455 or CS 555

CS 773 Data Mining and Security (3 Credit Hours)

Introduction to data mining; Algorithms including naive Bayes, Decision Trees and Rules, Association Rules, Linear classification, and Clustering; Cross validation, Lift charts, ROC Curves; SVM, Bayesian networks, K-means clustering; Data transformation; PCA; Ensemble Learning; Application of data mining to security and privacy including authentication, authorization, and intrusion detection; Privacy-preserving data mining.

Prerequisites: CS 471 and CS 455 or CS 555

CS 776 Architectural Support for Cloud Computing (3 Credit Hours)

Cloud computing requires a great deal of architectural support. This course investigates various types of architectural support that make cloud computing almost infinitely scalable while maintaining efficiency. The course will look at various types of support provided by Google, Amazon, Facebook, Yahoo! and others.

CS 779 Design of Network Protocols (3 Credit Hours)

Understanding the design, implementation and performance of network protocols using TCP/IP protocol suite as a case study. The students will have hands-on experience on low-level tools and will access and study the source code of these protocols and writing networking software applications. Topics include: socket interface, IPv4 and IPv6, routing, UDP, multicasting and IGMP, TCP specification, implementation and performance.

Prerequisites: CS 455/CS 555 or equivalent

CS 781 AI for Health Sciences (3 Credit Hours)

This course explores the application of AI in health sciences, focusing on machine learning, NLP, computer vision, generative AI techniques for diagnostics, treatment planning, patient monitoring, and biomedical research. It covers precision medicine, ethical AI, and the integration of AI into practice. Students will gain a deep understanding and practical skills to develop innovative AI solutions that address real-world challenges in health sciences.

Prerequisites: Prior programming experience

CS 782 Generative AI (3 Credit Hours)

This course provides a deep dive into the foundations and current advancements in generative AI. It covers key concepts such as transformer models, GANs, VAEs, LLMs, and their applications across various fields, emphasizing both theory and hands-on learning, including ethical considerations such as fairness and bias mitigation. Students will develop a comprehensive understanding of generative AI and gain practical experience.

Prerequisites: Prior programming experience

CS 791 Graduate Seminar (1-3 Credit Hours)

Seminar.

Prerequisites: permission of the instructor

CS 795 Topics in Computer Science (1-3 Credit Hours)

Topics in computer science.

CS 796 Topics in Computer Science (1-3 Credit Hours)

Topics in computer science.

Prerequisites: permission of the instructor

CS 800 Research Methods (3 Credit Hours)

Introduction to research methods in computer science. Topics include academic publishing, academic writing, literature reviews, responsible conduct of research, and presenting research results. Research faculty will present overviews of their research and how research is conducted in their labs.

CS 812 Stochastic Modeling (3 Credit Hours)

Stochastic processes are ways of quantifying the dynamic relationship of sequences of random events. This course will expose the participants to standard concepts and methods of stochastic modeling, as well as the rich diversity of applications. Topics include, but not limited to, Markov chains in discrete and continuous time, Poisson processes, renewal theory and branching processes.

CS 814 Monte Carlo Simulation (3 Credit Hours)

This course serves to illustrate important principles in Monte Carlo simulation methods and to demonstrate their power in applications. The course covers Metropolis-Hastings algorithm, Gibbs sampler, Markov Chain Monte Carlo, acceptance-rejection method, Monte Carlo integration, quasi-Monte Carlo, random walk, and random number generation.

CS 822 Machine Learning (3 Credit Hours)

This course presents both the foundational and the practical aspects of modeling, analyzing, and mining of computerized data sets, including classification, regression, clustering, semi-supervised learning, structured sparsity learning, etc. The course assignments are designed to contain both theoretical and programming components in order to train students to gain hands-on-experience.

CS 823 Introduction to Bioinformatics (3 Credit Hours)

This course introduces the fundamental knowledge in bioinformatics and the current advances in selected directions. The topics include: fundamental concepts and experimental techniques in molecular biology, computational methods in genomic sequence comparison and analysis, and computational methods in molecular structural modeling.

CS 824 High Performance Computing and Big Data (3 Credit Hours)

This course introduces parallel and distributed programming principles and has emphasis on hands-on programming and deploying high-performance computing applications with big data for different science and engineering disciplines. Topics include programming on emerging technologies such as NVIDIA GPU, Hadoop Framework, and Apache Spark for large scale data analytics and mining applications.

CS 825 Information Visualization (3 Credit Hours)

This course covers the theory and application of information visualization and of visual analytics, the science of combining interactive visual interfaces and information visualization technique with automatic algorithms to support analytical reasoning through human-computer interaction. Research on visual perception, cognition, interactive visual interfaces, and visual analytics will be covered. Practical techniques for the display of complex multivariate data will be addressed. Course projects will require the development of interactive web-based interfaces to analyze and visualize real-world datasets.

Prerequisites: CS 625

CS 826 Application of Graphs in Bioinformatics (3 Credit Hours)

This course links the fundamental concepts and algorithms of graphs with the actual biological problems. Various biological problems will be selected to discuss the formulation of the graph, the graph algorithms, and the performance analysis.

CS 827 Data Analytics for Protein Structural Data (3 Credit Hours)

The goal of this course is to understand fundamental concepts and to survey current advances in computational structural bioinformatics. In the scope of computational structural bioinformatics, computational methods are developed to address 3-dimensional structure-related biological problems that often involve protein and RNA. The topics include basics of protein, DNA and RNA structures, principle of protein structure prediction, deep learning in protein structure problems and cryo-electron microscopy data and challenges.

CS 828 Deep Learning Fundamentals and Applications (3 Credit Hours)

This course covers key components of deep learning framework, including loss functions, regularization, training and batch normalization. The course also covers several fundamental deep learning architectures such as multilayer perceptrons, convolutional neural network, recurrent neural network and transformers, as well as advanced topics including graph neural network and deep reinforcement learning.

Prerequisites: CS 422 or CS 522 or CS 480 or CS 580 or CS 620 or CS 722 or CS 822 or CS 733 or CS 833, or other equivalent courses at the discretion of the instructor

CS 832 Human Computer Interaction (3 Credit Hours)

This course introduces students to principles and research methods in human-computer interaction (HCI), an interdisciplinary area studying the interaction between humans and interactive computing systems. Students will learn to model computer users and interfaces, significant cognitive and social phenomena surrounding the human use of computers, apply empirical techniques for task analysis and interface design, and evaluate designs qualitatively and quantitatively.

Prerequisites: Prior programming experience required

CS 833 Natural Language Processing (3 Credit Hours)

Natural language processing (NLP) techniques are the crux of many leading modern technologies. Advances in NLP are also critical in the pursuit of Artificial Intelligence. This course will discuss core problems in NLP and the state-of-the-art tools and techniques as well as advanced NLP research topics. The topics will include language models, part-of-speech tagging, syntactic parsing, word embedding, statistical machine translation, text summarization, question answering, and dialog interaction. At the end of the course, students will be familiar with many language-processing tasks and applications.

Prerequisites: CS 580

CS 834 Introduction to Information Retrieval (3 Credit Hours)

Laboratory work required. Theory and engineering of information retrieval in the context of developing web-based search engines. Topics include issues related to crawling, ranking, query processing, retrieval models, evaluation, clustering, machine learning, and other aspects related to building web search engines. Students will perform a mix of hands-on development and coding, as well as theoretical exploration of the research literature.

CS 835 Web Archiving Forensics (3 Credit Hours)

Explores the veracity of information on the web and social media. Digital information is easy to manipulate, copy, and delete, but web archives offer a trusted method for timestamping the appearance of web pages and their contents. Students will investigate how web archives can be used to establish the priority of information, as well as how they can be hacked or used to obfuscate the provenance of falsified content.

Prerequisites: Graduate standing and familiarity with command line utilities

CS 840 Computer Vision (3 Credit Hours)

This course covers the following topics: Image processing and filters; Edges and features; Interest points and features; Bag of words representation; Convolutional neural networks; Object detection; Image formation; 3D reconstruction; Motion analysis; and Light and shading.

Prerequisites: CS 422 and CS 480, or CS 522 and CS 580, or equivalent courses with the permission of the instructor

CS 841 Data-Driven Computational Imaging (3 Credit Hours)

This course introduces the basic concepts of computational imaging. The topics include principles of imaging systems, role of computational methods in enhancing imaging systems, computational imaging inverse problems, and data-driven machine learning approaches to solve inverse problems in computational imaging.

Prerequisites: Knowledge of linear algebra and prior programming experience

CS 842 High-Performance Computing on Emerging Architectures (3 Credit Hours)

With the advent of large learning models in machine learning, high-performance computing is playing a major role in realizing these models. This course deals with large-scale computing on high-performance emerging architectures, particularly heterogeneous architectures consisting of CPUs and GPUs. The course will expose students to different programming environments for efficiently programming emerging heterogeneous architectures.

Prerequisites: CS 250 or CS 350 or CS 361 or CS 381, or equivalent courses with the permission of the instructor

CS 844 Performance Evaluation of Computer Systems and Networks (3 Credit Hours)

The course will introduce some of the commonly used techniques in the performance evaluation of computing systems. Students will be exposed to a variety of analytical and simulation tools used in this field. The applicability of the techniques will be illustrated through case studies.

CS 845 Utility-Scale Quantum Computing (3 Credit Hours)

The course is project-driven and is designed to help transition from theory to actual implementation, particularly in utility-scale quantum computing. The course covers (i) the fundamental concepts of quantum information and computation, (ii) mapping computational problems onto quantum circuits, (iii) understanding noise in near-term quantum computers, and (iv) executing quantum circuits on real quantum hardware.

Prerequisites: Knowledge of Python, Linear Algebra, and Discrete Structures

CS 851 Introduction to Digital Libraries (3 Credit Hours)

Digital Libraries (DLs) are an increasingly popular research area that encompass more than traditional information retrieval or database methods and techniques. The course will cover a brief history of DL development, with emphasis on World Wide Web implementations. Case studies will be performed on various DLs. The class will focus heavily on project work. At the end of the course, students will be prepared to develop, evaluate, or apply digital library technologies in their work environment. Topics include: Repositories; Distributed Searching; Metadata Harvesting; Preservation, Reference Linking and Citation Analysis.

CS 852 Wireless Communications and Mobile Computing (3 Credit Hours)

This course looks at fundamental issues in the area of wireless networks and mobile computing. The course material is organized around the following broad themes: Basics of mobile and wireless communications; Cellular communications: Bandwidth allocation and reservation, Location management, Call admission strategies and QoS issues; Mobile IP and Mobile TCP; Mobile Ad-Hoc NETWORKS (MANET): Routing, Multimedia and QoS support; Sensor networks.

CS 861 Malware Analysis and Reverse Engineering (3 Credit Hours)

Theory and practice in analysis and mitigation of malware in networked machines. Theoretical topics include methods of attack anatomy, identification, reverse and anti-reverse engineering. Practice entails learning tools and techniques used by malware attackers, defenders and analysts in lab-based projects conducted in a secure 'sandbox' mode.

CS 862 Memory Analysis and Forensics (3 Credit Hours)

This course is based on the Intel processor architecture employed in Windows, Linux and MacOS operating systems. Students will learn how memory is assigned to processes and how it is addressed, how memory data structures can be exploited by malware, and what is available for forensic analysis of memory. The course involves several hands-on lab work on recognizing process data structures in memory, memory acquisition, and use of a set of tools to catch the malware while preserving evidence from live memory analysis. Course requires a set of assigned reading and lab work.

Prerequisites: CS 270, CS 471, or instructor's permission

CS 864 Blockchains and Cryptocurrencies: Fundamentals, Technologies, and Economics (3 Credit Hours)

This course covers different aspects of cryptocurrencies, including P2P networks, distributed consensus, Bitcoin and Ethereum, blockchain technologies, cryptographic techniques (secure hashing, encryption, decryption, digital signatures), privacy and anonymity, mining and mining puzzles, wallets, smart contracts, case studies, cryptocurrency ecosystem, legal aspects, implications and impact on economy and finance, and future of cryptocurrencies.

Prerequisites: CS 471, CS 455/CS 555 or equivalent experience

CS 865 Internet of Things Security (3 Credit Hours)

This course covers various topics in Internet of Things (IoT) security, including web security, network security, mobile app security and secure cryptocurrency. It provides an in-depth study of various attack techniques and methods to defend against them. The course adopts the 'learning by doing' principle. Students are supposed to learn the attacks by performing them in a networked virtual machine environment. They will also play with a number of security tools to understand how they work and what security guarantee they provide. Laboratory work required.

Prerequisites: basic knowledge of programming, computer networks and operating systems; no prior knowledge of computer security is necessary

CS 872 Advanced Computer and Network Security (3 Credit Hours)

This course is a research-oriented, graduate-level course, centering around basic protocols and technique, as well as advanced, state-of-the-art topics to secure computer and Internet services. Topics include: System and Software Security, Cryptography and PKI, Internet Infrastructure and Network Security, Web and Browser Security, Cloud Security, and Online Privacy.

Prerequisites: CS 455 or CS 555

CS 873 Data Mining and Security (3 Credit Hours)

Introduction to data mining; Algorithms including naive Bayes, Decision Trees and Rules, Association Rules, Linear classification, and Clustering; Cross validation, Lift charts, ROC Curves; SVM, Bayesian networks, K-means clustering; Data transformation; PCA; Ensemble Learning; Application of data mining to security and privacy including authentication, authorization, and intrusion detection; Privacy-preserving data mining.

Prerequisites: CS 471 and CS 455 or CS 555

CS 876 Architectural Support for Cloud Computing (3 Credit Hours)

Cloud computing requires a great deal of architectural support. This course investigates various types of architectural support that make cloud computing almost infinitely scalable while maintaining efficiency. The course will look at various types of support provided by Google, Amazon, Facebook, Yahoo! and others.

CS 879 Design of Network Protocols (3 Credit Hours)

Understanding the design, implementation and performance of network protocols using TCP/IP protocol suite as a case study. The students will have hands-on experience on low-level tools and will access and study the source code of these protocols and writing networking software applications. Topics include: socket interface, IPv4 and IPv6, routing, UDP, multicasting and IGMP, TCP specification, implementation and performance.

Prerequisites: CS 455/CS 555

CS 881 AI for Health Sciences (3 Credit Hours)

This course explores the application of AI in health sciences, focusing on machine learning, NLP, computer vision, generative AI techniques for diagnostics, treatment planning, patient monitoring, and biomedical research. It covers precision medicine, ethical AI, and the integration of AI into practice. Students will gain a deep understanding and practical skills to develop innovative AI solutions that address real-world challenges in health sciences.

Prerequisites: Prior programming experience

CS 882 Generative AI (3 Credit Hours)

This course provides a deep dive into the foundations and current advancements in generative AI. It covers key concepts such as transformer models, GANs, VAEs, LLMs, and their applications across various fields, emphasizing both theory and hands-on learning, including ethical considerations such as fairness and bias mitigation. Students will develop a comprehensive understanding of generative AI and gain practical experience.

Prerequisites: Prior programming experience

CS 891 Graduate Seminar (1-3 Credit Hours)

Seminar.

Prerequisites: permission of the instructor

CS 895 Topics in Computer Science (1-3 Credit Hours)

Topics in computer science.

CS 896 Topics in Computer Science (1-3 Credit Hours)

Topics in computer science.

Prerequisites: permission of the instructor

CS 898 Doctoral Research (1-9 Credit Hours)

Independent study at the doctoral level under the direction of an instructor.

Prerequisites: Permission of the instructor

CS 899 Doctoral Dissertation (1-9 Credit Hours)

Research for the doctoral dissertation. Departmental permission required.

CS 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

CS 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

CSD - Communication Sciences and Disorders

CSD 549 Clinical Observation and Writing in Communication Sciences and Disorders (3 Credit Hours)

Speech-language pathology/audiology students will learn practical and foundational clinical skills necessary for deconstructing speech-language pathology treatment sessions, for identifying important parts-of-speech, and for completing disciplinary writing tasks. Objectives in this class are met using guided observations.

CSD 551 Introduction to Speech Sound Disorders (3 Credit Hours)

This course emphasizes causes, identification, and treatment of speech sound disorders. The class is designed to acquaint students with speech development from infancy through childhood, introduce assessment procedures and treatment principles, and build awareness and understanding of cultural and linguistic differences.

Prerequisites: Permission of instructor

CSD 553 Speech and Language Development (3 Credit Hours)

This course reviews speech and language development from the perspective of the speech-language pathologist.

CSD 558 Speech and Hearing Science (3 Credit Hours)

The content of this course focuses upon basic acoustics, speech acoustics, psychoacoustics, speech perception, and clinical laboratory instrumentation. The course is designed to provide fundamental information regarding normal and abnormal aspects of speech and hearing processes.

Prerequisites: Grade of C- or better in CSD 460 or CSD 560

CSD 560 Hearing Disorders and Basic Audiometry (3 Credit Hours)

A study of the physics of sound, anatomy, and physiology of the human ear, basic audiometry and hearing disorders.

CSD 561 Aural Rehabilitation I (3 Credit Hours)

A study of audiological findings and the implications for hearing therapy; speech and language development of the deaf.

CSD 597 Independent Study in Communication Sciences and Disorders (1-3 Credit Hours)

Independent study of special topics in communication sciences and disorders.

Prerequisites: Permission of instructor

CSD 612 Research and Evidence Based Practice in Speech-Language Pathology (3 Credit Hours)

This course will provide students with a background in evidence-based clinical practice by understanding elements of quality research methods. Students will learn how to identify reputable research outcomes that influence clinical decisions in speech-language pathology.

CSD 649 Clinical Procedures in Speech-Language Pathology (3 Credit Hours)

This course teaches students basic clinical procedures and competencies in speech-language pathology with an emphasis on language sampling and identification of grammatical categories, skills required by professionals practicing in the field of speech-language pathology.

Prerequisites: Permission of instructor

CSD 651 Spoken and Written Language Disorders: School-Aged Children (3 Credit Hours)

This course focuses on the relationship between spoken and written language and its role in language-based learning disabilities in school-aged students. It addresses the characteristics of language, reading, and spelling impairments; the subtypes of these disorders; and the different assessment and intervention approaches used with them.

Prerequisites: CSD 453 or CSD 553 or permission of the instructor

CSD 652 Speech Sound Disorders (3 Credit Hours)

The emphasis of this course is clinical assessment and intervention for phonology and articulation skills that can be disrupted in speech sound disorders including motor speech disorders.

Prerequisites: CSD 551

CSD 653 Language Disorders: Birth to Five Years (3 Credit Hours)

An advanced study of the diagnosis and intervention for infants and preschoolers with suspected language disorders arising from a variety of etiologies. This course has a particular emphasis on assessment and intervention using principles of evidence-based practice.

Prerequisites: CSD 453/CSD 553 or permission of instructor

CSD 655 Voice and Resonance Disorders (2 Credit Hours)

This course emphasizes the current etiological theories, research, diagnostic procedures, and therapeutic techniques related to voice and resonance disorders. Students will study terminology and concepts related to the resonance, phonation, and respiration systems underlying voice production.

Prerequisites: Permission of instructor

CSD 656 Theories and Therapies in Stuttering (2 Credit Hours)

This course emphasizes current etiological theories, research, diagnostic procedures and therapeutic techniques related to stuttering.

Prerequisites: Permission of instructor

CSD 657 Aphasia (3 Credit Hours)

The objective of this course is to investigate the etiologies, communicative disorders, diagnostic methods and therapeutic techniques related to aphasia, dyslexia and dysgraphia related to acquired neurologic conditions.

CSD 658 Swallowing Disorders (3 Credit Hours)

This course reviews the structures and neural bases of swallowing, common etiologies that cause dysphagia, and clinical techniques used in assessment and management of swallowing disorders in pediatric and adult populations.

CSD 659 Augmentative and Alternative Communication (3 Credit Hours)

This course will identify populations that may benefit from Augmentative and Alternative Communication (AAC) for nonverbal communication disorders, describe the assessment process relative to AAC and tenets of intervention, provide information regarding legal issues related to AAC, and demonstrate how to acquire and use AAC instrumentation.

Prerequisites: Permission of instructor

CSD 660 Procedures in Audiology (3 Credit Hours)

Advanced study of the physics of sound, anatomy, and physiology of audition, hearing disorders, and audiometric procedures, providing knowledge and skills necessary for a speech-language pathologist.

CSD 662 Cognitive-Communication Disorders (3 Credit Hours)

The objective of this course is to investigate the etiologies, cognitive impairments, communication manifestations, diagnostic methods and therapeutic techniques related to traumatic brain injury, right hemisphere brain damage, and various dementias.

Prerequisites: Permission of instructor

CSD 663 Clinical Perspectives on Autism Spectrum Disorders (2 Credit Hours)

Students in this class will study diagnostic and intervention methods necessary for speech-language pathologists treating people diagnosed with Autism Spectrum Disorders.

Prerequisites: CSD 453/CSD 553 or equivalent

CSD 664 Culturally Sustaining Communication Practices in Speech-Language Pathology (1 Credit Hour)

Students will discuss cultural competence as applied in the speech-language pathology clinical process, including a self-examination of bias and effective communication through a culturally-responsive lens.

Prerequisites: Permission of instructor

CSD 665 Theories of Supervision in Speech-Language Pathology (1 Credit Hour)

Students will discuss models of effective clinical supervision, with an emphasis on preparation and planning to guide students, clinical fellows, and speech-language pathology assistants.

Prerequisites: Permission of instructor

CSD 668 Advanced Clinical Externship in Speech-Language Pathology (3 Credit Hours)

In this externship, students will apply advanced speech-language pathology techniques in diagnosis and intervention for individuals with communication and swallowing disorders in medical or educational settings. Students will work full time in an off-campus facility to complete clock hours for certification purposes.

Pre- or corequisite: Passing grade in CSD 669, and permission of faculty

CSD 669 Clinical Practicum in Speech-Language Pathology I, II, III (3 Credit Hours)

These practica are designed to provide students with experiences in the evaluation and treatment of a variety of communication disorders in children and adults.

Pre- or corequisite: CSD 351, CSD 352, CSD 451/CSD 551, CSD 453/CSD 553, CSD 460/CSD 560 (or equivalents) and permission of program faculty

CSD 697 Independent Study in Communication Sciences and Disorders (1-3 Credit Hours)

Independent study of special topics in communication sciences and disorders.

Prerequisites: Permission of instructor

CSD 750 Neuromotor Speech Disorders (3 Credit Hours)

The content of this course focuses on the neurological bases of speech, disorders of speech production associated with neurologic diseases, as well as methods for evaluation and treatment of those disorders.

CSD 850 Neuromotor Speech Disorders (3 Credit Hours)

The content of this course focuses upon the structural and neurological bases of speech disorders, particularly those related to laryngeal and central nervous system pathologies. Advanced expertise in neuromotor speech disorders will be developed along with in depth familiarity and analysis of related literature.

CYSE - Cybersecurity

CYSE 510 Artificial Intelligence (AI) Methods and Models (3 Credit Hours)

This course offers an introduction to Artificial Intelligence (AI). Students will explore the field's fundamental concepts, techniques, and applications. Methods, such as Generative AI (GenAI) that enable machines to learn and process information, and models, such as machine learning (ML) that uses data sets to recognize patterns and make decisions without human intervention will be covered. The course is designed for non-specialists and does not require prior computer science or programming knowledge.

CYSE 516 Cyber Defense Fundamentals (3 Credit Hours)

This course focuses on cybersecurity theory, information protection and assurance, and computer systems and networks security. The objectives are to understand the basic security models and concepts, learn fundamental knowledge and tools for building, analyzing, and attacking modern security systems, and gain hands-on experience in cryptographic algorithms, security fundamental principles, and Internet security protocol and standards. (Offered fall)

Prerequisites: permission of the instructor

Pre- or corequisite: ECE 355 or equivalent or permission of the instructor

CYSE 519 Cyber Physical System Security (3 Credit Hours)

Cyber Physical Systems (CPS) integrate computing, networking, and physical processes. The objectives of this course are to learn the basic concepts, technologies and applications of CPS, understand the fundamental CPS security challenges and national security impact, and gain hands-on experience in CPS infrastructures, critical vulnerabilities, and practical countermeasures.

Prerequisites: ECE 355 or permission of the instructor

CYSE 520 Applied Machine Learning in Cybersecurity (3 Credit Hours)

This course introduces the concepts and technologies of machine learning with a focus on applications related to cybersecurity. The objectives are to learn fundamental knowledge and practical experience and identify the use case of machine learning techniques in cybersecurity. The course will discuss traditional and advanced machine learning techniques, e.g., neural network, deep convolutional neural network, generative adversarial network, and transfer learning algorithms. Students will engage in oral and written communication by reporting and presenting the materials of the course project.

CYSE 521 Generative AI in Cybersecurity (3 Credit Hours)

This course provides an in-depth examination of the intersection between Generative AI (Gen AI) and Cybersecurity. It focuses on the dual nature of advanced AI systems as both enhancers and potential threats to security infrastructure. Students will acquire a comprehensive understanding of the underlying principles, algorithms, and practical applications of Gen AI models in the discovery of attack vectors, identification of cyber threats, and automation of security tasks. Additionally, the course will address defensive strategies aimed at mitigating the risks stemming from AI-driven cyberattacks.

CYSE 525 Cybersecurity Strategy and Policy (3 Credit Hours)

This course explores cybersecurity policy and strategy and introduces students to the essentials of strategy development and policy making in cybersecurity. Topics considered include planning principles in cyber strategy; risk management and cybersecurity policy; the connections between cybersecurity policies, businesses, and governmental institutions; the knowledge, skills, and abilities needed to develop and implement cybersecurity policy; the social, political and ethical implications that arise in cybersecurity policies and strategies; strategies to assess cybersecurity policy; and the ties between national security and cybersecurity policy.

CYSE 526 Cyber War (3 Credit Hours)

This course explores the national security dimensions of cybersecurity and examines cyber war in international relations. Exploration of cyber war begins with an examination of cybersecurity as a component of national security and investigates the topics of U.S. National Cybersecurity and other national approaches to cyber war. The topics of cyber deterrence, cyber as a military domain, the roles of international organizations in cyber war, cyber terrorism, the role of social media, and information warfare will be discussed. The international dimension of cybersecurity is also discussed.

CYSE 530 Introduction to Cybersecurity Risk Management (3 Credit Hours)

This course addresses the broad topic of risk management and how risk, threats, and vulnerabilities impact information systems. Areas of instruction include how to assess and manage risk based on defining an acceptable level of risk for information systems. Elements of a business impact analysis (BIA), business continuity plan (BCP), disaster recovery plan (DRP), and computer incident response team (CIRT) plan will also be discussed.

CYSE 531 Advanced Techniques Cybersecurity Risk Management (3 Credit Hours)

Expert-level approach on the Risk Management Framework (RMF) system Authorization to Operation (ATO), including Continuous cATO. Curriculum that is aligned to the NIST SP 800-53, Revision 5. Advanced topics include Assess and Authorize, System Categorization, Security Control Assessment, System Test Results, Plan of Action and Milestones (POA&M), and Continuous Monitoring (CONMON).

CYSE 532 Cyber Risk CSF/CMMC (3 Credit Hours)

This course introduces cybersecurity, the NIST Cybersecurity Framework (CSF), and the Cybersecurity Maturity Model Certification (CMMC) program. Topics to be addressed include the risk management fundamentals, IT risk management, and cyber risk controls; cyber threats and vulnerabilities; data security and sanitization; the NIST CSF, including its core functions, categories, and subcategories; and the CMMC comprising its levels, domains, and implementation guidelines.

CYSE 533 Cyber Risk FedRAMP/Audit (3 Credit Hours)

This course explores the Federal Risk and Authorization Management Program (FedRAMP) and Auditing. Topics to be addressed include an overview of the FedRAMP framework, including its objectives, components, and stages; the needed documents and guidelines to develop system security plans and security assessment reports; the NIST Risk Management Framework (RMF) comprising its different stages and the adoption mechanism; FISMA compliance and auditing assessment; and real-world case studies and future challenges.

CYSE 595 Topics in Cybersecurity (1-3 Credit Hours)

The advanced study of selected cybersecurity topics designed to permit small groups of qualified students to work on subjects of mutual interest. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: permission of the instructor

CYSE 597 Tutorial Work in Special Topics in Cybersecurity (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: approval of the instructor

CYSE 600 Cybersecurity Principles (3 Credit Hours)

This course provides an overview of the field of cybersecurity. It covers core cybersecurity topics including computer system architectures, critical infrastructures, cyber threats and vulnerabilities, cryptography, cryptographic protocol design, information assurance, network security, and risk assessment and management. Students are expected to become familiar with fundamental security concepts, technologies and practices, and develop a foundation for further study in cybersecurity.

CYSE 601 Advanced Cybersecurity Techniques and Operations (3 Credit Hours)

This course introduces tools and techniques used to secure and analyze large computer networks and systems. It will include significant hands-on lab work. Students will explore and map networks using a variety of diagnostic software tools, learn advanced packet analysis, configure firewalls, write intrusion detection rules, perform malware detection, forensic investigation, and practice techniques for penetration testing.

CYSE 602 Advanced Techniques for Cyber Defense (3 Credit Hours)

This course offers a deep dive into advanced cybersecurity techniques and operations, aiming to bolster cyber defense strategies. Participants will explore state-of-the-art methodologies encompassing threat analysis, incident response, ethical hacking, secure network architecture, and proactive mitigation strategies. Through immersive, hands-on experiences and real-world simulations, learners will develop the expertise required to adeptly secure digital environments against ever-evolving cyber threats. This course may be used as a leveling course.

CYSE 603 Advanced Cybersecurity Law and Policy (3 Credit Hours)

This course addresses two major cyber law subject matters. The first part of the course examines various U.S. laws and legal considerations that impact the digital and cyberspace worlds from civil and criminal perspectives. The second part, which builds upon the first, will familiarize cyber operations professionals about the extent of and limitations on their authorities to ensure operations in cyberspace are in compliance with U.S. law, regulations, directives and policies.

CYSE 605 Leadership and Management in Cybersecurity (3 Credit Hours)

This course introduces skills to manage technical professionals and lead strategic change in their organization. Based on the basic operations and functionality of cybersecurity systems, students will learn the management of cybersecurity technical professionals, including how to effectively lead and manage teams, how to launch and assess organizational change initiatives, and how to work effectively within an interdependent group to achieve common goals.

CYSE 607 Advanced Digital Forensics (3 Credit Hours)

This course introduces the concepts and technologies of digital forensics. Students will learn the advanced techniques and tools utilized for collecting, processing, and preserving digital evidence on computers, mobile devices, networks, and cloud computing environments. Students will also engage in oral and written communication to report digital forensic findings and prepare court presentation materials.

CYSE 608 Windows System for Cybersecurity (3 Credit Hours)

This course teaches the basic fundamentals of using and creating Windows Server domains using PowerShell. It also covers topics like active directory, server administration, and technologies such as Group Policy, Network Policy Server (NPS), Domain Name System (DNS), and Dynamic Host Configuration Protocol (DHCP). Additionally, it includes lessons on disk management, firewall administration, and Windows Server Networking Services like IPv4, IPv6, and more. This course may be used as a leveling course.

CYSE 609 Fundamentals of Linux System for Cybersecurity (3 Credit Hours)

This course introduces the basic operations in major Linux distros for cybersecurity using both graphical interface and command-line interface. Students will learn about the basic installation and configuration, file systems management, shell scripts, and user authentication in Linux systems. This course may be used as a leveling course.

CYSE 610 Advanced Cryptography (3 Credit Hours)

This course studies advanced topics in cryptography. It begins with an overview of necessary background in algebra and number theory, private- and public-key cryptosystems, and basic signature schemes. It then upgrades the design and analysis of modern cryptography, including how the security model is defined, how practical cryptographic algorithms work, and how to exploit flaws in the current models of cryptography.

CYSE 615 Mobile and Wireless Security (3 Credit Hours)

An overview of wireless and mobile security providing students with practical and theoretical experiences. Topics include smartphone security, mobile Internet security, mobile location privacy, and wireless ad hoc, mesh, and sensor network security.

CYSE 625 Advanced Ethical Hacking and Penetration Testing (3 Credit Hours)

This course teaches students the underlying principles and many of the techniques associated with the cybersecurity practice known as penetration testing or ethical hacking. The course covers planning, reconnaissance, scanning, exploitation, post-exploitation, and result reporting. Students will discover how system vulnerabilities can be exploited and learn to avoid such problems.

CYSE 626 Web Archiving Theory, Practice, and Implications (3 Credit Hours)

An interdisciplinary introduction to web archiving fundamentals including web crawling, collection development and summarization including planning, analyzing, and sharing collections. Includes a review of ethical and legal issues, trustworthiness, preservation, security, and cultural impact of web archiving.

Prerequisites: This course is intended for Cybersecurity students

CYSE 630 Introduction to Cybersecurity Risk Management (3 Credit Hours)

This course addresses the broad topic of risk management and how risk, threats, and vulnerabilities impact information systems. Areas of instruction include how to assess and manage risk based on defining an acceptable level of risk for information systems. Elements of a business impact analysis (BIA), business continuity plan (BCP), disaster recovery plan (DRP), and computer incident response team (CIRT) plan will also be discussed.

CYSE 631 Advanced Techniques Cybersecurity Risk Management (3 Credit Hours)

Expert-level approach on the Risk Management Framework (RMF) system Authorization to Operation (ATO), including Continuous cATO. Curriculum that is aligned to the NIST SP 800-53, Revision 5. Advanced topics include Assess and Authorize, System Categorization, Security Control Assessment, System Test Results, Plan of Action and Milestones (POA&M), and Continuous Monitoring (CONMON).

CYSE 632 Cyber Risk CSF/CMMC (3 Credit Hours)

This course introduces cybersecurity, the NIST Cybersecurity Framework (CSF), and the Cybersecurity Maturity Model Certification (CMMC) program. Topics to be addressed include the risk management fundamentals, IT risk management, and cyber risk controls; cyber threats and vulnerabilities; data security and sanitization; the NIST CSF, including its core functions, categories, and subcategories; and the CMMC comprising its levels, domains, and implementation guidelines.

CYSE 633 Cyber Risk FedRAMP/Audit (3 Credit Hours)

This course explores the Federal Risk and Authorization Management Program (FedRAMP) and Auditing. Topics to be addressed include an overview of the FedRAMP framework, including its objectives, components, and stages; the needed documents and guidelines to develop system security plans and security assessment reports; the NIST Risk Management Framework (RMF) comprising its different stages and the adoption mechanism; FISMA compliance and auditing assessment; and real-world case studies and future challenges.

CYSE 635 AI Security and Privacy (3 Credit Hours)

This course focuses on Machine Learning (ML) security and privacy. Students will understand and explore the vulnerabilities of the ML models, learn how to develop and deploy defenses to mitigate possible attacks, and gain hands-on experience to protect private data during model training and testing.

CYSE 640 Trustworthy and Responsible AI (3 Credit Hours)

This course introduces the concepts and the characteristics of trustworthy AI and the essential building blocks of AI trustworthiness with a focus on safety, reliability, resiliency, accountability and transparency, explainability and interpretability, fairness, and ethics. Students will gain an understanding of Trustworthy and Responsible AI concepts and gain hands-on experience in developing AI systems in a responsible and trustworthy manner.

CYSE 645 Advanced Cybersecurity Risk Management Practices (3 Credit Hours)

Expert-level approach on the Risk Management Framework (RMF) system Authorization to Operation (ATO), including Continuous cATO. Curriculum that is aligned to the NIST SP 800-53, Revision 5. Advanced topics include Assess and Authorize, System Categorization, Security Control Assessment, System Test Results, Plan of Action and Milestones (POA&M), and Continuous Monitoring (CONMON).

CYSE 695 Advanced Topics in Cybersecurity (1-3 Credit Hours)

The advanced study of selected cybersecurity topics designed to permit small groups of qualified students to work on subjects of mutual interest. These courses will appear in the course schedule, and will be more fully described by academic advisors.

Prerequisites: Permission of the instructor

CYSE 697 Independent Study in Cybersecurity (3 Credit Hours)

This course allows students to develop specialized expertise by independent study (supervised by a faculty member).

CYSE 698 Master's Project (3 Credit Hours)

This capstone course provides opportunities to synthesize and apply the knowledge and skills to solve real-world cyber security problems.

CYSE 800 Research Methods in Cybersecurity (3 Credit Hours)

Students learn how to use multiple research methods to conduct cybersecurity research. Students will conduct a multi-method research project in interdisciplinary groups.

Prerequisites: CYSE 600

CYSE 801 Advanced Cybersecurity Techniques and Operations II (3 Credit Hours)

Students apply the tools and techniques learned in Advanced Cybersecurity Techniques and Operations. Virtual laboratory work is conducted, and students produce scientific reports describing the results of their analyses, investigations, and diagnoses.

Prerequisites: CYSE 601

CYSE 802 Cybersecurity Seminar (3 Credit Hours)

Introduces new PhD students to the study of cybersecurity through an interdisciplinary lens through different fields of study offered as doctoral programs at ODU. Students will read studies published by ODU scholars and discuss how interdisciplinary research informs society. Students will identify possible research agendas for their doctoral studies. Professional development will be included.

CYSE 803 Moral Reasoning for Emerging Technologies (3 Credit Hours)

This course provides training in how to think critically and inclusively about moral and ethical concerns in the context of new, emerging, and developing technologies. In these contexts where ethical guidelines and practices have not been fully developed, it is necessary to have experience with flexible and adaptive training in identifying and thinking through moral concerns. Students will develop these skills through a study of philosophy of technology, history of technology, and Science and Technology Studies combined with active and creative forms of speculative application of these theories and methods.

CYSE 869 Cybersecurity Practicum (3 Credit Hours)

This course satisfies the cybersecurity PhD teaching requirement. During the semester enrolled, the student must be assigned as a teaching assistant or instructor of record and teach at least three hours of class and prepare at least one assignment, quiz or equivalent. PhD students are expected to satisfy the teaching requirement after completing their first year of study and at least one semester prior to scheduling their PhD defense.

CYSE 899 Doctoral Dissertation (1-9 Credit Hours)

Research for the doctoral dissertation.

DANC - Dance

DANC 595 Topics in Dance (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses appear in the course schedule, and are more fully described in a booklet distributed to academic advisors.

Prerequisites: Appropriate survey course or permission of the instructor

DANC 596 Topics in Dance (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses appear in the course schedule, and are more fully described in a booklet distributed to all academic advisors.

Prerequisites: Appropriate survey course or permission of the instructor

DANC 597 Tutorial Work in Special Topics in Dance (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: graduate standing and approval of the department chair

DANC 598 Tutorial Work in Special Topics in Dance (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: graduate standing and approval of the department chair

DANC 697 Tutorial Work in Special Topics in Dance (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Graduate standing and approval of the department chair

DANC 698 Tutorial Work in Special Topics in Dance (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Graduate standing and approval of the department chair

DASC - Data Science

DASC 596 Topics in Data Science (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described in information distributed to academic advisors.

DASC 597 Independent Study (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: approval of the program coordinator

DASC 600 Programming for Data Science (3 Credit Hours)

This course provides foundational programming skills essential for future coursework in data science. Designed for students with little to no prior programming experience, it develops essential skills in programming and problem-solving, equipping students with the ability to manipulate data, perform basic analyses, and create visualizations. The course emphasizes writing clean, efficient, and reproducible code.

DASC 605 Advanced Statistical Concepts in Data Science (3 Credit Hours)

This course will cover both classical and modern statistical methods used within data science. Concepts related to hypothesis testing, fundamentals of experimental design and analysis will be discussed along with tests of association for categorical data. Statistical methods that are often included in machine learning methods like sampling and bootstrapping are also included.

Prerequisites: STAT 603; Prior experience with the R language is helpful but not required

DASC 620 Introduction to Data Science and Analytics (3 Credit Hours)

This course will explore data science as a burgeoning field. Students will learn fundamental principles and techniques that data scientists employ to mine data. They will investigate real life examples where data is used to guide assessments and draw conclusions. This course will introduce software and computing resources available to a data scientist to process, visualize, and model different types of data including big data. Cross-listed with CS 620.

DASC 668 Internship (1-3 Credit Hours)

Requirements will be established by the School of Data Science and will vary with the amount of credit desired. Allows students an opportunity to gain a short duration career-related experience.

Prerequisites: Departmental permission required

DASC 669 Artificial Intelligence (AI) Practicum (3 Credit Hours)

Students demonstrate an ability to integrate and synthesize competencies from their certificate or degree program coursework applied to concentration areas. Students produce high quality written products and an e-portfolio that demonstrate the analysis, synthesis and intersection of AI knowledge with specific domains.

Prerequisites: Good academic standing (Graduate GPA of at least 3.0)

DASC 690 Data Science Capstone Project (3 Credit Hours)

The culminating course in the proposed MS in Data Science and Analytics degree program will bring students together with faculty and external partners. In consultation with a faculty advisor and a business or industry or government representative, students will be required to develop a project that aims to solve a data science/analytics problem in a real-world business, industry, or government setting. Faculty and business/industry/government representatives will serve as external mentors for the students during this experience. Note that an external mentor is not mandatory but encouraged.

Pre- or corequisite: DASC 620/CS 620, CS 624, CS 625, and STAT 603

DASC 695 Topics in Data Science (1-3 Credit Hours)

Provides the advanced student with an opportunity to study and investigate a variety of topics in the field of data science.

Prerequisites: Permission of the instructor

DASC 697 Independent Study in Data Science (1-3 Credit Hours)

Independent study under the direction of an instructor.

Prerequisites: Permission of the instructor

DASC 699 Thesis Research (3 Credit Hours)

Departmental permission required

Prerequisites: Departmental permission required

DASC 728 Deep Learning Fundamentals and Applications (3 Credit Hours)

This course covers key components of deep learning framework, including loss functions, regularization, training and batch normalization. The course also covers several fundamental deep learning architectures such as multilayer perceptrons, convolutional neural network, recurrent neural network and transformers, as well as some advanced topics such as graph neural network and deep reinforcement learning. The class activities include traditional lectures, paper reading and presentation, and projects.

Prerequisites: CS 422 or CS 522 or CS 480 or CS 580 or CS 722 or CS 822 or CS 733 or CS 833 or CS 620 or DASC 620, or other equivalent courses at the discretion of the instructor

DASC 741 Data-Driven Computational Imaging (3 Credit Hours)

This course introduces the basic concepts of computational imaging. The topics include principles of imaging systems, role of computational methods in enhancing imaging systems, computational imaging inverse problems, and data-driven machine learning approaches to solve inverse problems in computational imaging.

Prerequisites: Knowledge of linear algebra and prior programming experience

DASC 771 Fundamentals of Interpretable Machine Learning and Explainable AI (3 Credit Hours)

Laws in many countries and states within the U.S. require that predictive models impacting humans be accompanied by an understandable interpretation, yet many such models are based on so called black box models that can't be easily interpreted or explained. This course will enable students to produce explanations and interpretations for advanced ML and AI algorithms. It will review the state of the science methods for interpretable ML and explainable AI, including graphical and contextual approaches as well as model agnostic and model specific methods for generating understandable explanations and interpretations. The course will also introduce the concepts of algorithmic bias and model fairness as they relate to explanation and understanding.

Prerequisites: BDA 511/611, or CS 522, or CS 580

DASC 781 AI for Health Sciences (3 Credit Hours)

This course explores the application of AI in health sciences, focusing on machine learning, NLP, computer vision, generative AI techniques for diagnostics, treatment planning, patient monitoring, and biomedical research. It covers precision medicine, ethical AI, and the integration of AI into practice. Students will gain a deep understanding and practical skills to develop innovative AI solutions that address real-world challenges in health sciences.

Prerequisites: Prior programming experience

DASC 782 Generative AI (3 Credit Hours)

This course provides a deep dive into the foundations and current advancements in generative AI. It covers key concepts such as transformer models, GANs, VAEs, LLMs, and their applications across various fields, emphasizing both theory and hands-on learning, including ethical considerations such as fairness and bias mitigation. Students will develop a comprehensive understanding of generative AI and gain practical experience.

Prerequisites: Prior programming experience

DASC 795 Topics in Data Science (3 Credit Hours)

Provides the advanced student with an opportunity to study and investigate a variety of topics in the field of data science.

DASC 828 Deep Learning Fundamentals and Applications (3 Credit Hours)

This course covers key components of deep learning framework, including loss functions, regularization, training and batch normalization. The course also covers several fundamental deep learning architectures such as multilayer perceptrons, convolutional neural network, recurrent neural network and transformers, as well as some advanced topics such as graph neural network and deep reinforcement learning. The class activities include traditional lectures, paper reading and presentation, and projects.

Prerequisites: CS 422 or CS 522 or CS 480 or CS 580 or CS 722 or CS 822 or CS 733 or CS 833 or CS 620 or DASC 620, or other equivalent courses at the discretion of the instructor

DASC 841 Data-Driven Computational Imaging (3 Credit Hours)

This course introduces the basic concepts of computational imaging. The topics include principles of imaging systems, role of computational methods in enhancing imaging systems, computational imaging inverse problems, and data-driven machine learning approaches to solve inverse problems in computational imaging.

Prerequisites: Knowledge of linear algebra and prior programming experience

DASC 871 Fundamentals of Interpretable Machine Learning and Explainable AI (3 Credit Hours)

Laws in many countries and states within the U.S. require that predictive models impacting humans be accompanied by an understandable interpretation, yet many such models are based on so called black box models that can't be easily interpreted or explained. This course will enable students to produce explanations and interpretations for advanced ML and AI algorithms. It will review the state of the science methods for interpretable ML and explainable AI, including graphical and contextual approaches as well as model agnostic and model specific methods for generating understandable explanations and interpretations. The course will also introduce the concepts of algorithmic bias and model fairness as they relate to explanation and understanding.

Prerequisites: BDA 511/611, or CS 522, or CS 580

DASC 881 AI for Health Sciences (3 Credit Hours)

This course explores the application of AI in health sciences, focusing on machine learning, NLP, computer vision, generative AI techniques for diagnostics, treatment planning, patient monitoring, and biomedical research. It covers precision medicine, ethical AI, and the integration of AI into practice. Students will gain a deep understanding and practical skills to develop innovative AI solutions that address real-world challenges in health sciences.

Prerequisites: Prior programming experience

DASC 882 Generative AI (3 Credit Hours)

This course provides a deep dive into the foundations and current advancements in generative AI. It covers key concepts such as transformer models, GANs, VAEs, LLMs, and their applications across various fields, emphasizing both theory and hands-on learning, including ethical considerations such as fairness and bias mitigation. Students will develop a comprehensive understanding of generative AI and gain practical experience.

Prerequisites: Prior programming experience

DASC 895 Topics in Data Science (3 Credit Hours)

Provides the advanced student with an opportunity to study and investigate a variety of topics in the field of data science.

DHSC - Doctor of Health Sciences

DHSC 700 Strategic Communication (3 Credit Hours)

Communication skills have never been more important than in the 21st century where professionals must balance verbal and written interactions. Strategic communication must align the message, the medium, and the audience to help organizations achieve their goals. This course will explore those concepts and help students improve their communication skills, including topics such as professional writing, developing effective PowerPoint presentations, importance of active listening, and evolving use of social media.

DHSC 701 Management of Organizational Change (3 Credit Hours)

A study of organizational management theory and organizational models in a variety of settings as related to culture, mission, performance and change management with an emphasis on the application of management theory and research. This course provides an opportunity to explore conceptual frameworks addressing organizational development, leadership, decision making, and the stages of change management.

DHSC 702 Healthcare Delivery Systems (3 Credit Hours)

This course focuses on the identification and analysis of factors and interrelationships which influence the operation of health services organizations with specific attention to local health departments, hospitals, multi-institutional systems, integrated health systems and strategic alliances. These organizations will be viewed and discussed comparatively with other types of health service agencies.

DHSC 703 Conflict Analysis & Negotiation (3 Credit Hours)

Examine issues and principles in the management of conflict and negotiation within organizations. Topics include resolution strategies and organizational design and change. Students will examine case studies and develop a conflict scenario that applies concepts learned throughout the course.

DHSC 704 Intro to Healthcare Analytics (3 Credit Hours)

The course introduces basic concepts in healthcare analytics. Students will develop data analysis skills with an emphasis on statistical reasoning. The course is designed to teach students how to use data to make informed decisions. This process includes reviewing the data, exploring all the underlying assumptions, summarizing and analyzing the data, and finally translating the results. Discussions and assignments will focus on honing data interpretation and the ability to strategically apply analysis results to improve health outcomes.

DHSC 705 Information Technology for Healthcare Organizations (3 Credit Hours)

This course introduces research methods and their applications in the healthcare environment. The course will provide an opportunity for students to establish and advance their understanding of research through exploring the fundamental definition of study design, technical methodology, data collection, data analysis, research ethics, statistical interpretation, and effective dissemination of research results. Students will be implementing theoretical concepts to critically review relevant literature and evaluate different types of research procedures and outcomes. Students will also apply the methodologies they learn to identify and explain and prepare a preliminary research protocol. The primary focus of this course is to develop the learner's ability to understand, evaluate, and apply research methods in healthcare settings and to prepare them to become effective leaders in that environment.

DHSC 706 Research Methods (3 Credit Hours)

This course provides the key concepts related to information technology within healthcare organizations. The course explores how information technologies are used as a tool to enhance performance within healthcare organizations for positive health outcomes. Topic areas include various information technologies used in the healthcare sector; methods for assessing and ensuring information technology value; laws, regulations, and standards to guide the practice; achieving effectiveness through information technology; and the latest development including business and clinical intelligence and telemedicine.

DHSC 800 Essentials of Financial Management (3 Credit Hours)

This course covers financial management in health care organizations including, but not limited to, financial decision-making using accounting information, operation of business units, principles of economics and capital budgeting processes along with budgetary and financial controls. Financial performance will be analyzed along with revenue determination and profitability. General accounting foundations and terminology will be covered. Students will analyze "real-life" cases to apply cost allocation, marginal cost pricing, breakeven, budget variance, capital investment, and financial analysis skills. Students will also identify and explore a health care finance-related topic, and prepare a research paper.

DHSC 803 Program Evaluation (3 Credit Hours)

To ensure student learning and program quality, address accreditation standards, and satisfy institutional initiatives, formative and summative program evaluation methods will be examined in depth. Formative evaluation topics include needs assessment, evaluability assessment, structured conceptualization, implementation evaluation, and process evaluation. Summative evaluation topics include outcome evaluations, impact evaluation, cost-effectiveness and cost-benefit analysis, secondary analysis, and meta-analysis. Strategies for establishing an evaluation culture within an educational institution will be discussed. Learners will apply this knowledge to their actual working environment through a series of practical exercises.

DHSC 804 Leadership and Professionalism (3 Credit Hours)

This course will expose learners to effective leadership approaches and skill sets. Topics will include fundamentals of leadership, leadership and professionalism self-assessment, leadership philosophy, professionalism, essential leadership and professionalism skills, modeling best leadership practices and behaviors, ethics in leadership, institutional and program accreditation, handling conflict, and emerging issues. Learners will apply this learning to their professional life through a series of practical exercises.

DHSC 805 Population Health & Preventive Care (3 Credit Hours)

This course discusses the determinants of health, health behavior change, measuring health status, and influences on health status including health disparities and socioeconomic status. This includes discussion on how healthcare organizations utilize this information to improve health status among populations. Additionally, students will be able to identify and understand population-based approaches aimed at health improvement.

DHSC 900 Policy & Politics of Health (3 Credit Hours)

An introduction to the policy process, frameworks for understanding health policy issues, background research necessary for policy implementation and implementation strategies.

DHSC 901 Healthcare Strategy (3 Credit Hours)

Examination of strategy-making issues for healthcare organizations, including analysis of economic incentives, financial strategies, development of mission and goals and formulation and implementation of long-range strategies to accomplish those goals.

DHSC 903 Leading Innovation (3 Credit Hours)

Increasingly complex environments require a commitment to develop innovative solutions to address changing systems and evolving needs. This course will examine concepts and case studies of innovation in a variety of organizations, along with the tools and strategies necessary to promote effective change through discovery and networking. Students will apply information learned throughout the program to develop an innovative proposal for their place of employment or for an organization they aspire to work for.

DMSC - Medical Science

DMSC 704 Quality Improvement in Healthcare (3 Credit Hours)

This course will cover the area of healthcare quality and improvement in all facets of healthcare including, but not limited to, private practice, clinical settings, hospital systems, and other healthcare facilities. Through a series of topics that range from teamwork, analysis, and communications, to risk analysis, accreditation, and personnel factors, the course will help the learner navigate facets of quality improvement that impact every corner of the healthcare environment. General government processes, regulations, and descriptions of accountability will also be explored.

DMSC 705 Advanced Clinical Practicum I (3 Credit Hours)

This is the first in a series of two courses that will allow the student to advance their skills and knowledge within their given specialty. Students will identify areas that they wish to implement improvements or change within their healthcare system at any level. Students will also have the opportunity to reflect on this process and refine their strategies for improvement.

DMSC 801 Advanced Clinical Practicum II (3 Credit Hours)

This is the second in a series of two courses allowing students to advance their skills and knowledge within their given specialty. This second course will build upon Advanced Clinical Practice I. Students will continue with projects to improve their clinical abilities and learn more advanced ideas and concepts within the healthcare structure and systems. Students will continue working with an identified preceptor or healthcare administrator to identify personal skills they wish to advance in the clinical setting or areas to implement improvements or change within their healthcare system at any level. Students will also have the opportunity to reflect on this process and refine their strategies for improvement. Students will also be exposed to professional colleagues who will provide expertise in several areas of healthcare, including leadership, research, and administration.

DMSC 802 Capstone I (4 Credit Hours)

This course is an overview of writing and the organizational skills necessary for completion of the Capstone and submission of articles for publication. It focuses on the development of writing.

DMSC 805 Capstone II (4 Credit Hours)

This is the second in a series of 3 Capstone courses in which students will continue working on their scholarly publication and enhance their knowledge of the grant process. This semester, students will explore the detailed components of the grant application process. The major milestone of this course will be the submission of a second rough draft of the student's scholarly publication.

DMSC 806 Capstone III (4 Credit Hours)

This is the third in a series of three Capstone courses in which students will complete the scholarly manuscript and further their knowledge of the grant process. The two major milestones of this course will be the completion of a complete grant application and the submission of their scholarly manuscript to a reputable medical journal.

DMSC 807 Learning Assessment and Evaluation (3 Credit Hours)

This course explores the importance of learning assessment and evaluation in health education. Students will navigate the learning assessment and evaluation process, including identifying the fundamentals of assessment, discovering evaluation and assessment methods, and evaluating these methods for quality, validity, and reliability. Topics specific to health professions education will also be discussed, including the use of situation judgement tests and simulation in assessment.

DMSC 808 Healthcare Policy for PAs (3 Credit Hours)

This course will explore the fundamental theories of health policy, including its innovations, implementation, and analysis, emphasizing its impact on the PA profession. The course will prepare doctoral physician assistants to critically analyze health policy and its potential impact on the PA profession.

Doctoral students will be expected to write critical analyses on various health policy topics.

DMSC 809 Teaching & Learning in PA Education (3 Credit Hours)

This course is a brief overview of organizational and leadership structures in academia and PA Programs. PA Program accreditation is emphasized in the planning and execution of the PA educational curriculum. Additionally, the course prepares doctoral students to plan and evaluate appropriate instructional methods to enhance learner achievement.

DNTH - Dental Hygiene

DNTH 512 Perspectives on Dental Hygiene Practice (3 Credit Hours)

Course is designed for the licensed dental hygienist who seeks to maintain an awareness of changing trends, perspectives, evidence-based interventions and technologies in dental hygiene, health, and society that influence the dental hygiene process of care. (Offered summer.)

Prerequisites: Admission into the dental hygiene program

DNTH 514 Educational Concepts for the Health Professional I (3 Credit Hours)

This course is designed to explore various educational concepts, principles and methods of teaching for adults. Students will learn to present educational information to a diverse client population, in a variety of settings, in an ethical and professional manner. Topics include, but are not limited to, objectives, planning, implementation and evaluation of instruction; instructional strategies; delivery models; presentation skills; and techniques for communicating health information. (offered fall)

Prerequisites: Admission to the dental hygiene program

DNTH 515 Research Methods in the Health Sciences (3 Credit Hours)

Designed to develop skills in scientific methods, evidence based decision making, levels of evidence, and critical analysis of research findings. Emphasis on types of research, problem selection and hypothesis writing, research planning and design, data collection and measuring techniques, analysis and interpretation of data, research proposal writing and computer application. A written research proposal is required for graduate credit. (offered fall)

DNTH 516 Administrative Leadership and Professional Development (3 Credit Hours)

A study of current trends that influence the profession of dental hygiene including oral health care delivery, manpower, financing mechanisms, quality improvement, third party payers, professional associations, regulatory agencies and legislation. Emphasis is on ethical, political, and legal issues as they relate to the dental hygiene profession. (offered spring)

Prerequisites: Admission to the dental hygiene program

DNTH 540 Telehealthcare Technology (3 Credit Hours)

This course will examine the concept, global impact, and trends in telehealthcare technology on the client/patient, multidisciplinary practitioners, and various healthcare systems. Emphasis is on effective evidence-based decision making to reduce errors in patient care, promote care in remote or underserved geographical areas, and the ability to retrieve and evaluate healthcare information that improves access to quality, cost effective health care. (Offered spring)

Prerequisites: permission of the instructor

DNTH 597 Independent Study in Dental Hygiene (1-6 Credit Hours)

Independent reading and study on a topic selected under direction of a faculty member. (Offered fall, spring, summer)

Prerequisites: permission of instructor

DNTH 604 Clinical Administration and Teaching (3 Credit Hours)

The application of principles and theories of education and management to dental hygiene clinical education. Emphasis is on planning, implementing and evaluating clinical teaching, assessment of clinical competence, management of human and physical resources, and regulations affecting clinical education. This course is offered only during fall semester.

Corequisites: DNTH 669

DNTH 611 Modeling and Simulation Applications in Healthcare (3 Credit Hours)

This course examines the principles and innovative applications for modeling and simulation in healthcare practice, research, education, and administration with emphasis on emerging issues and trends in technology. Topics include the selection and implementation of simulation technology in conceptual epidemiology public and environmental health, dental hygiene, dentistry, nursing, medicine, laboratory sciences, healthcare management and health information. (offered summer)

DNTH 621 Aging in the 21st Century (3 Credit Hours)

This course will expose the inter-professional student to current and future challenges of aging in our society. Topics will include Healthy People 2020 objectives, health promotion and disease prevention for the aging, sociocultural issues, and theories on behavior and motivation. Common systemic and oral health conditions of the aging adult will be identified. Critical analysis of the current health environment will provide a format for discussion and identification of strategies for health promotion and disease control for the aging. Measures for promoting and maintaining oral health and overall health of the aging population will be explored, with attention to current research from the literature. This course is offered during summer semesters only.

DNTH 650 Advanced International Dental Hygiene (3-9 Credit Hours)

Faculty-led experiences offer unique opportunities for students to travel abroad, develop cross cultural competence, experience global health challenges, and engage in projects that advance oral health worldwide.

Prerequisites: DNTH 514

DNTH 660 Educational Concepts for the Health Professional II (3 Credit Hours)

Explores instructional strategies and their application to contemporary health professional roles. Emphasis is on individuals as health care specialists in business and industry; professional, private and public organizations; higher education; and the health care industry. Topics include implementation and evaluation of instruction, roles and responsibilities of faculty within an accredited program affected by state and national standards, and ethical and career related issues and trends. Students are provided with practical experience in traditional and distance education instructional methods. (offered spring)

Prerequisites: DNTH 514 or permission of the instructor

DNTH 663 Interprofessional Health Promotion (3 Credit Hours)

Course brings together students from various health disciplines to learn each other's roles and collaborate as a team using technology to promote health and prevent disease. Focus will be on optimizing health efforts and outcomes through an interprofessional approach that is guided by the research evidence and current technologies. Topics include Healthy People 2020 objectives, age, specific clinical guidelines for health promotion and illness prevention, theories on behavior and motivation, sociocultural issues, telehealth care, and various health problems. Evidence-based measures used by the team for promoting and maintaining health throughout the lifespan are emphasized. (spring only)

DNTH 668 Internship (3-9 Credit Hours)

Experience-based learning activities designed to develop a role of competence related to the individual's area of specialization while working under the supervision of a faculty member or host supervisor within an educational, health care, research, or corporate health setting. A clinical dental hygiene internship is prerequisite to DNTH 669. Available for pass/fail grade only. (offered fall, spring, summer as available)

Prerequisites: DNTH 514, DNTH 515, DNTH 604 or permission of the instructor

DNTH 669 Clinical Administration & Teaching Practicum (1 Credit Hour)

This practicum course is for students to apply principles and theories of education and management to dental hygiene clinical education. Emphasis is on planning, implementing, and evaluating clinical teaching, assessment of clinical competence, management of human and physical resources, and regulations affecting clinical education. This course is only offered during fall semester.

Corequisites: DNTH 604

DNTH 695 Topics in Dental Hygiene (1-6 Credit Hours)

Advanced seminars on selected topics in dental hygiene. Topics vary by semester. (offered fall, spring, summer)

DNTH 697 Independent Study-Dental Hygiene (1-6 Credit Hours)

Independent reading and study on a topic selected under direction of a faculty member (offered fall, spring, summer).

Prerequisites: Graduate Program Director permission required

DNTH 698 Research (3 Credit Hours)

An original thesis research project executed with the major advisor and thesis committee supervising the student's research project. A written research proposal must be submitted and approved prior to beginning the project. Required for students in the thesis option. Available as pass/fail grade only. (offered fall, spring, summer).

Prerequisites: DNTH 515; FOUN 722 or HLSC 746 or CHP 640 or equivalent statistics course approved by the graduate program director

DNTH 699 Thesis (3 Credit Hours)

Devoted to research, writing of the thesis, and scheduled conferences with the candidate's advisor and thesis committee. Students must submit an acceptable written thesis demonstrating knowledge of problem selection, data classification, analysis and interpretation and defend it. Available as pass/fail grade only. (offered fall, spring, summer)

Prerequisites: DNTH 698

DNTH 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

ECE - Electrical and Computer Engineering

ECE 503 Power Electronics (3 Credit Hours)

Power electronics provides the needed interface between an electrical source and an electrical load and facilitates the transfer of power from a source to a load by converting voltages and currents from one form to another. Topics include: alternating voltage rectification, Pulse Width Modulation (PWM), DC converters (Buck, Boost, Buck-Boost, Cuk and SEPIC converters), negative feedback control in power electronics, isolated switching mode power supply, flyback and forward power supply, solid state power switches, AC inverter. (Offered spring)

Prerequisites: ECE 303, ECE 313 and a grade of C or better in ECE 202 and ECE 287

ECE 504 Electric Drives (3 Credit Hours)

Electric drives efficiently control the torque, speed and position of electric motors. This course has a multi-disciplinary nature and includes fields such as electric machine theory, power electronics, and control theory. Topics include: switch-mode power electronics, magnetic circuit, DC motor, AC motor, Brushless DC motor, induction motor, speed control of induction motor, vector control of induction motor, stepper-motor. (offered fall)

Prerequisites: ECE 303 and a grade of C or better in ECE 202 and ECE 287

ECE 505 Power System Design & Analysis (3 Credit Hours)

This course covers basic power circuit analysis and introductory power system engineering and focuses on the transmission line design, power flow study, short circuit protection, and power distribution in electric power systems, followed by a survey of several applications and case studies. (offered fall)

Prerequisites: ECE 303 or equivalent knowledge in electric machines and circuits

ECE 506 Computer Graphics and Visualization (3 Credit Hours)

The course provides a practical treatment of computer graphics and visualization with emphasis on modeling and simulation applications. It covers digital image and signal processing basics such as sampling and discrete Fourier transform, computer graphics fundamentals, visualization principles, and software architecture for visualization in modeling and simulation. Written communication and information literacy skills are stressed in this course. (Offered fall).

Prerequisites: ECE 348 or CS 361 or MSIM 603

ECE 507 Introduction to Game Development (3 Credit Hours)

An introductory course focused on game development theory and modern practices with emphasis on educational game development. Topics include game architecture, computer graphics theory, user interaction, audio, high level shading language, animation, physics, and artificial intelligence. The developed games can run on a variety of computer, mobile, and gaming platforms. (Cross listed with MSIM 508). (Offered spring).

Prerequisites: CS 361 or ECE 348

ECE 508 Fundamentals of Electric Vehicles (3 Credit Hours)

This course covers the fundamentals of electric vehicles and focuses on the components, power control, energy management, power train dynamics and other related topics in purely electric and hybrid electric vehicle systems, including a survey of several applications and case studies. (Offered spring)

Prerequisites: ECE 303 and a grade of C or better in ECE 202 and ECE 287

ECE 509 Introduction to Distributed Simulation (3 Credit Hours)

An introduction to distributed simulation. Topics include motivation for using distributed simulation, distributed simulation architectures, time management issues, and distributed simulation approaches. Current standards for distributed simulation are presented.

Prerequisites: ECE 348

ECE 510 Model Engineering (3 Credit Hours)

The goal of this course is to develop understanding of the various modeling paradigms appropriate for capturing system behavior and conducting digital computer simulation of many types of systems. The techniques and concepts discussed typically include UML, concept graphs, Bayesian nets, Markov models, Petri nets, system dynamics, Bond graphs, etc. Students will report on a particular technique and team to implement a chosen system model. (Cross-listed with MSIM 510.)(Offered spring).

Prerequisites: ECE 306 or equivalent

Pre- or corequisite: ECE 320 or equivalent

ECE 512 Advanced Virtual Reality, Augmented Reality, and Haptics System (3 Credit Hours)

This course is designed to introduce students to the hardware and software required for humans to interact with virtual worlds, both visually and tactilely. Students will be introduced to virtual reality (VR), augmented reality (AR), and haptic devices. A discussion of relative coordinate systems will allow them to virtually position the devices in a virtual world. They will learn to build a haptic device and build an interface using a microcontroller. They will also learn how to interface the devices with a virtual world built in a standard game engine such as Unreal. The course will be project based giving the opportunity to work with VR and AR goggles.

Prerequisites: ECE 250 or CS 250 or (CS 251 and CS 260) or equivalent

ECE 515 Parallel Computing for High-Performance Data Analytics (3 Credit Hours)

Introduction to modeling and analysis of parallel execution performance of emerging simulations on modern high-performance (HPC) and Cloud computing platforms. Hands-on experience with Old Dominion University campus HPC clusters and Cloud-based platforms available globally. Programming models for large-scale and data-analytics applications. Case studies of realistic parallel scientific, engineering, and data-analytics simulations. Course projects may be assigned for students to apply the gained knowledge to analyze execution efficiency of a parallel distributed simulation.

Prerequisites: ENGN 122 or equivalent

ECE 516 Cyber Defense Fundamentals (3 Credit Hours)

This course focuses on cybersecurity theory, information protection and assurance, and computer systems and networks security. The objectives are to understand the basic security models and concepts, learn fundamental knowledge and tools for building, analyzing, and attacking modern security systems, and gain hands-on experience in cryptographic algorithms, security fundamental principles, and Internet security protocol and standards. (Offered fall)

Prerequisites: Permission of the instructor

Pre- or corequisite: ECE 355

ECE 518 Transportation Simulation and Analytics (3 Credit Hours)

This course is designed to introduce students to i) the fundamental concepts of transportation simulation; ii) traffic simulation models for the planning, design, and operations of modern transportation systems; iii) approaches to develop, calibrate, and validate transportation simulation models; and iv) methods to design and analysis of transportation simulation experiments. This course emphasizes the modeling, simulation, and analysis of emerging mobility systems such as connected/autonomous vehicles, electrical vehicles, and micro-mobility. The structured lectures and hands-on work with the simulation tools provide students the ability and practical experience to solve complex, real-world transportation problems with simulation.

Prerequisites: ECE 250, or CS 250, or CS 251 and CS 260, and ECE 306

ECE 519 Cyber Physical System Security (3 Credit Hours)

Cyber Physical Systems (CPS) integrate computing, networking, and physical processes. The objectives of this course are to learn the basic concepts, technologies and applications of CPS, understand the fundamental CPS security challenges and national security impact, and gain hands-on experience in CPS infrastructures, critical vulnerabilities, and practical countermeasures. (Offered spring)

Prerequisites: ECE 355 or permission of the instructor

ECE 530 Therapy and Function Models for Medical Simulation (3 Credit Hours)

This course introduces students to the main Modeling & Simulation models. (1) Anatomical modeling based on robust medical image segmentation and meshing methodologies. (2) A therapy model to determine the impact of a medical intervention by synthesizing the effect of a therapy on the patient's tissues. (3) A collision model, which interacts with anatomy and therapy models, is used for haptics-driven simulations. This course will also explore physiological simulation and the use of finite elements to model biomechanics.

Prerequisites: ECE 250 or CS 250 or CS 251 and CS 260 or equivalent

ECE 541 Advanced Digital Design and Field Programmable Gate Arrays (3 Credit Hours)

Course will present FPGA technologies and methods using CAD design tools for implementation of digital systems using FPGAs. Topics include advanced methods of digital circuit design including specification, synthesis, implementation and prototyping; managing multiple clock domains, static timing analysis, timing closure, system reset design, simulation, and optimization; troubleshooting using embedded logic analyzers and integrated development environments (IDEs). Practical system design examples include general purpose data processing, system on a chip (SOC) prototyping, hardware accelerators, and an introduction to domain specific architectures. (Offered spring)

Prerequisites: ECE 342

ECE 543 Computer Architecture (3 Credit Hours)

An introduction to computer architectures. Analysis and design of computer subsystems including central processing units, memories and input/output subsystems. With features based on the ARM CPU architecture, students will learn important concepts, including data paths, computer arithmetic, instruction cycles, pipelining, virtual and cache memories, direct memory access and controller design. (Offered fall).

Prerequisites: ECE 346

Pre- or corequisite: ECE 342

ECE 545 Introduction to Computer Vision (3 Credit Hours)

Overview of digital image processing including visual perception, image formation, spatial transformations, image enhancement, color image representation and processing, edge detection, image segmentation, and data processing method for computer vision applications. Hand-on projects will be introduced to better understand computer vision applications. (Offered fall)

Prerequisites: A grade of C or better in either ENGN 122 or ENGN 150 or CS 150 and a grade of C or better in ECE 304

ECE 550 Introduction to Machine Learning Engineering (3 Credit Hours)

Machine Learning provides a practical treatment of design, analysis and implementation of algorithms, which learn from examples. Topics include multiple machine learning models: linear regression, logistic regression, neural networks, support vector machines, deep learning, Bayesian learning and unsupervised learning. Students are expected to use popular machine learning tools and algorithms to solve real data engineering problems. (Offered spring)

Prerequisites: ECE 304 and a grade of C or better in either ENGN 122 or ENGN 150 or CS 150 or CS 151 or CS 153

ECE 551 Communication Systems (3 Credit Hours)

Fundamentals of communication systems engineering. Modulation methods including continuous waveform modulation (amplitude, angle). Design and analysis of modulation systems and the performance in the presence of noise. Communication simulation exercises through computer experiments. (Offered spring)

Prerequisites: ECE 304 and ECE 302

ECE 552 Introduction to Wireless Communication Networks (3 Credit Hours)

Introduction to current wireless network technologies and standards. The radio frequency spectrum and radio wave propagation models (pathloss, fading, and multipath). The radio link and link budgets. Modulation, diversity, and multiple access techniques. Wireless network planning and operation. Current and emerging wireless technologies (satellite systems, vehicular/sensor networks). (Offered fall)

Prerequisites: ECE 304 and ECE 302

ECE 553 Analysis for Modeling and Simulation (3 Credit Hours)

An introduction to analysis techniques appropriate to the conduct of modeling and simulation studies. Topics include input modeling, random number generation, output analysis, variance reduction techniques, and experimental design. In addition, techniques for verification & validation are introduced. Course concepts are applied to real systems and data.

Prerequisites: ECE 306 and ECE 304

ECE 554 Introduction to Bioelectrics (3 Credit Hours)

Covers the electrical properties of cells and tissues as well as the use of electrical and magnetic signals and stimuli in the diagnosis and treatment of disease. Typical topics to be covered include basic cell physiology, endogenous electric fields in the body, electrocardiography, cardiac pacing, defibrillation, electrotherapy, electroporation, electrotherapy in wound healing. In addition, ultrashort electrical pulses for intracellular manipulation and the application of plasmas to biological systems will be covered.

Prerequisites: PHYS 111N or higher; MATH 200 or higher

ECE 555 Network Engineering and Design (3 Credit Hours)

Emphasis is on gaining an understanding of networking design principles that entails all aspects of the network development life cycle. Topics include campus LAN models and design, VLANs, internetworking principles and design, WAN design, design of hybrid IP networks, differentiated vs. integrated services, traffic flow measurement and management. (offered spring)

Prerequisites: ECE 355 or permission of the instructor

ECE 558 Instrumentation (3 Credit Hours)

Computer interfacing using a graphical programming language with applications involving digital-to-analog conversion (DAC), analog-to-digital conversion (ADC), digital input output (DIO), Virtual Instrument System Architecture (VISA) and universal Service Bus (USB). Analysis of sampled data involving use of probability density function, mean and standard derivations, correlations, and the power spectrum. (offered spring, summer)

Prerequisites: ECE 302 or permission of the instructor

ECE 561 Automatic Control Systems (3 Credit Hours)

This course introduces the fundamental principles and methodologies of feedback control of linear systems. Learn to analyze and design current control systems found in automobiles, aircraft, autonomous vehicles, robots, and many other engineering systems. The course introduces time and frequency domain techniques including root locus, Bode, Nyquist and state space methods together with computer-aided analysis and design. These topics serve as a foundation for further studies in, for example, automation, electrical drives, power electronics, and robotics. (Offered fall)

Prerequisites: ECE 202

ECE 562 Introduction to Medical Image Analysis (MIA) (3 Credit Hours)

Introduction to basic concepts in medical image analysis. Medical image registration, segmentation, feature extraction, and classification are discussed. Basic psychophysics, fundamental ROC analysis and FROC methodologies are covered. (Offered every other spring)

Prerequisites: a grade of C or better in MATH 212

ECE 563 Design and Modeling of Autonomous Robotic Systems (3 Credit Hours)

This course focuses on autonomous robotics systems with emphasis on using modeling and simulation (M&S) for system level design and testing. Fundamental concepts associated with autonomous robotic systems are discussed. Course topics include: robotic control, architectures, and sensors as well as more advanced concepts such as error propagation, localization, mapping and autonomy. Design strategies that leverage M&S to accelerate the development and testing of sophisticated autonomous robotic algorithms for individual or teams of robots are covered.

Prerequisites: CS 150 or ENGN 122 or ENGN 150

ECE 564 Biomedical Applications of Low Temperature Plasmas (3 Credit Hours)

This course is cross listed between ECE, BME and BIOL. It is designed to be taken by senior undergraduate students and first year graduate students. The course contents are multidisciplinary, combining materials from engineering and the biological sciences. The course covers an introduction to the fundamentals of non-equilibrium plasmas, low temperature plasma sources, and cell biology. This is followed by a detailed discussion of the interaction of low temperature plasma with biological cells, both prokaryotes and eukaryotes. Potential applications in medicine such as wound healing, blood coagulation, sterilization, and the killing of various types of cancer cells will be covered. (Offered fall)

Prerequisites: Senior standing

ECE 568 Realtime Interactive Simulation and Visualization (3 Credit Hours)

This course is designed to provide students with advanced knowledge and skills in the field of real-time interactive simulation and visualization using the Unreal game engine with emphasis on applications for engineering and sciences. Topics covered include 3D computer graphics theory fundamentals, software architecture, user interaction, physics engine, artificial intelligence, animation, visual representations of complex data, cross-platform development (desktop, mobile, VR/AR). Applications include robotics simulation, transportation simulation, serious games, medical simulation, virtual laboratories, among others.

Prerequisites: ECE 250 or CS 250 or CS 251 and CS 260 or equivalent

ECE 570 Foundations of Cyber Security (3 Credit Hours)

Course provides an overview of theory, tools and practice of cyber security and information assurance through prevention, detection and modeling of cyber attacks and recovery from such attacks. Techniques for security modeling, attack modeling, risk analysis and cost-benefit analysis are described to manage the security of cyber systems. Fundamental principles of cyber security and their applications for protecting software and information assets of individual computers and large networked systems are explored. Anatomy of some sample attacks designed to compromise confidentiality, integrity and availability of cyber systems are discussed. (Offered fall).

Prerequisites: A grade of C or better in ENGN 122 or ENGN 150 or CS 150 and junior standing or permission of the instructor

ECE 571 Introduction to Solar Cells (3 Credit Hours)

This course is designed to provide the fundamental physics and characteristics of photovoltaic materials and devices. A focus is placed on i) optical interaction, absorption, and design for photovoltaic materials and systems, ii) subsequent energy conversion processes in inorganic/organic semiconductor such as generation, recombination, and charge transport, and iii) photovoltaic testing and measurement techniques to characterize solar cells including contact and series resistance, open circuit voltage, short circuit current density, fill factor, and energy conversion efficiency of photovoltaic devices. (Offered fall)

Prerequisites: ECE 332

ECE 572 Plasma Processing at the Nanoscale (3 Credit Hours)

The science and design of partially ionized plasma and plasma processing devices used in applications such as etching and deposition at the nanoscale. Gas phase collisions, transport parameters, DC and RF glow discharges, the plasma sheath, sputtering, etching, and plasma deposition.

Prerequisites: ECE 323

ECE 573 Solid State Electronics (3 Credit Hours)

The objective of this course is to understand basic semiconductor devices by understanding semiconductor physics (energy bands, carrier statistics, recombination and carrier drift and diffusion) and to gain an advanced understanding of the physics and fundamental operation of advanced semiconductor devices. Following the initial introductory chapters on semiconductor physics, this course will focus on the theory of p-n junctions, metal-semiconductor Schottky diodes, MOS capacitors, MOS field effect transistors (MOSFET) and bipolar junction transistors (BJTs). (Offered fall)

Prerequisites: ECE 313, ECE 323, ECE 332 and MATH 212

ECE 574 Optical Fiber Communications (3 Credit Hours)

This course introduces seniors and first year graduates to the physics and design of optical fiber communication systems. The topics covered are: electromagnetic waves; optical sources including laser diodes; optical amplifiers; modulators; optical fibers; attenuation and dispersion in optical fibers; photodetectors; optical receivers; noise considerations in optical receivers; optical communication systems.

Prerequisites: ECE 323

ECE 575 Transportation Data Analytics (3 Credit Hours)

This course presents the basic techniques for transportation data analytics. It will discuss statistical modeling, prominent algorithms, and visualization approaches to analyze both small- and large-scale data sets generated from transportation systems. Practices of using different data for various real-world traffic/transportation applications and decision making will also be discussed.

Prerequisites: STAT 330 or ECE 304

ECE 583 Embedded Systems (3 Credit Hours)

This course covers fundamentals of embedded systems: basic architecture, programming, and design. Topics include processors and hardware for embedded systems, embedded programming and real time operating systems. (Offered fall)

Pre- or corequisite: ECE 346

ECE 595 Topics in Electrical and Computer Engineering (1-3 Credit Hours)

Study of topics in electrical and computer engineering.

Prerequisites: departmental approval

ECE 596 Topics in Electrical and Computer Engineering (1-3 Credit Hours)

Study of topics in electrical and computer engineering.

Prerequisites: departmental approval

ECE 601 Linear Systems (3 Credit Hours)

A comprehensive introduction to the analysis of linear dynamical systems from an input-output and state space point of view. Concepts from linear algebra, numerical linear algebra and linear operator theory are used throughout. Some elements of state feedback design and state estimation are also covered.

Prerequisites: MATH 307

ECE 607 Machine Learning I (3 Credit Hours)

Course provides a practical treatment of design, analysis, implementation and applications of algorithms. Topics include multiple machine learning models: linear models, neural networks, support vector machines, instance-based learning, Bayesian learning, genetic algorithms, ensemble learning, reinforcement learning, unsupervised learning, etc.

Prerequisites: Graduate standing

ECE 611 Numerical Methods in Engineering Analysis (3 Credit Hours)

Course intended to provide graduate students in Electrical and Computer Engineering with a basic knowledge of numerical methods applied to engineering problem-solving process. The course includes the following topics: Introduction to computing (Matlab), Truncation errors and Taylor series, Numerical integration, Solution of non-linear equations, Least-Square regression, Interpolations, Ordinary and partial differential equations, and Finite difference methods. Applications to the area of electrical engineering.

Prerequisites: Graduate standing or advisor's permission (for BS/MS students)

ECE 612 Digital Signal Processing I (3 Credit Hours)

This course covers fundamentals of digital signal processing. Topics include frequency domain analysis of discrete-time signals and linear systems, sampling and reconstruction of signals, the Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT), and digital filter design and implementations. Practical applications and examples will be discussed. Problem solving using MATLAB is required.

Prerequisites: ECE 381 or equivalent

ECE 623 Electromagnetism (3 Credit Hours)

Review of electrostatic and magnetostatic concepts, time varying field, Maxwell's equations, plane wave propagation in various media, transmission lines, optical wave guides, resonant cavities, simple radiation systems, and their engineering applications.

Prerequisites: ECE 323 or equivalent

ECE 642 Computer Networking (3 Credit Hours)

The course is based on the ISO (International Standard Organization) OSI (Open Systems Interconnection) reference model for computer networks. A focus is placed on the analysis of protocols at different layers, network architectures, and networking systems performance analysis. Current topic areas include LANs, MANs, TCP/IP networks, mobile communications, and ATM.

Prerequisites: ECE 455 or ECE 555 or permission of the instructor

ECE 643 Computer Architecture Design (3 Credit Hours)

Digital computer design principles. The course focuses on design of state-of-the-art computing systems. An emphasis is placed on superscalar architectures focusing on the pipelining and out-of-order instruction execution operations.

Prerequisites: ECE 443 or ECE 543

ECE 648 Advanced Digital Design (3 Credit Hours)

This course introduces methods for using high level hardware description language such as VHDL and/or Verilog for the design of digital architecture. Topics include top-down design approaches, virtual prototyping, design abstractions, hardware modeling techniques, algorithmic and register level design, synthesis methods, and application decomposition issues. Final design project is required.

Prerequisites: ECE 341

ECE 651 Statistical Analysis and Simulation (3 Credit Hours)

An introduction to probabilistic and statistical techniques for analysis of signals and systems. This includes a review of probability spaces, random variables, and random processes. Analysis and simulation of systems with random parameters and stochastic inputs are considered.

Prerequisites: MATH 312 and one undergraduate course in probability or statistics or permission of instructor

ECE 652 Wireless Communications Networks (3 Credit Hours)

Fundamental concepts in wireless communication systems and networks: radio waveform propagation modeling (free-space, reflections and multipath, fading, diffraction and Doppler effects); physical and statistical models for wireless channels; modulation schemes for wireless communications and bandwidth considerations; diversity techniques; MIMO systems and space-time coding; multiuser systems and multiple access techniques (TDMA, FDMA, CDMA); spread spectrum and multiuser detection; introduction to wireless networking and wireless standards; current and emerging wireless technologies.

Prerequisites: ECE 451 or ECE 551 or permission of instructor

ECE 667 Cooperative Education (1-3 Credit Hours)

Student participation for credit based on academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place.

ECE 668 Internship (1-3 Credit Hours)

Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career related experience. Meant to be used for one-time experience. Work may or may not be paid. Project is completed during the term.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

ECE 669 Practicum (1-3 Credit Hours)

Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career related experience. Student is usually already employed - this is an additional project in the organization.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

ECE 695 Topics in Electrical or Computer Engineering (3 Credit Hours)

This course will be offered as needed, depending upon the need to introduce special subjects to target specific areas of master's-level specializations in electrical or computer engineering.

ECE 698 Master's Project (1-3 Credit Hours)

Individual project directed by the student's professor in major area of study.

ECE 699 Thesis (1-9 Credit Hours)

Directed research for the master's thesis.

Prerequisites: departmental approval

ECE 731 Graduate Seminar (1 Credit Hour)

Graduate seminar presentations, given by faculty, students, and invited speakers on a diverse range of technical topics of current interest. A selection of topics will help students prepare for an academic career at a university, liberal arts college, private college, or community college. These selected speakers will also present topics to help students develop essential teaching skills. Student speakers will receive advice and comments from faculties on their communication skills before and after their presentation.

Prerequisites: graduate standing

ECE 742 Computer Communication Networks (3 Credit Hours)

This is an advanced level course in data communications. A focus is placed on the analysis, modeling, and control of computer communication systems. Topics include packet switched networks, circuit switched networks, ATM networks, network programming, network control and performance analysis, network security, and wireless sensor networks.

Prerequisites: ECE 642 or permission of instructor

ECE 754 Advanced Bioelectrics (3 Credit Hours)

Bioelectrics is a new field encompassing both the science and technology of applying electrical stimuli to biological systems. This course covers the pulsed power technology that is required to generate electrical stimuli as well as the biological responses they evoke in cells and tissues. Particular emphasis is placed on the medical applications of bioelectrics, including tumor ablation, gene electrotransfer, wound healing, decontamination with cold plasma, and treatment of cardiac arrhythmias.

Prerequisites: ECE 454 or ECE 554 or BIOE 454 or BIOE 554

ECE 755 Biomembranes and Ion Channels (3 Credit Hours)

This course will give an overview of the structure and dynamics of biomembranes, the ion channels that are embedded in them, and the electrical properties of biomembranes. Topics include molecular dynamics modeling of biomembranes, membrane damage and repair, ion channel dynamics and their experimental assessment using patch clamping, and excitability in neurons and cardiomyocytes.

Prerequisites: ECE 454 or ECE 554 or BIOL 523

ECE 762 Digital Control Systems (3 Credit Hours)

Mathematical representation, analysis, and design of discrete-time and sampled-data control systems. Topics include transfer function and state space representations, stability, the root locus method, frequency response methods, and state feedback.

Prerequisites: ECE 381, ECE 461 or ECE 561, and ECE 601 or permission of instructor

ECE 763 Multivariable Control Systems (3 Credit Hours)

A comprehensive introduction to techniques applicable in control of complex systems with multiple inputs and outputs. Both the frequency domain and state variable approaches are utilized. Special topics include robust and optimal control.

Prerequisites: ECE 461 or ECE 561 and ECE 601 or permission of instructor

ECE 766 Nonlinear Control Systems (3 Credit Hours)

An introduction to mathematical representation, analysis, and design of nonlinear control systems. Topics include phase-plane analysis, Lyapunov stability theory for autonomous and nonautonomous systems, formal power series methods and differential geometric design techniques.

Prerequisites: ECE 461 or ECE 561 and ECE 601 or permission of instructor

ECE 772 Fundamentals of Solar Cells (3 Credit Hours)

The course provides an overview of the fundamentals of solar cell technologies, design, and operation. The course is designed for graduate students in Engineering and Science interested in the field of alternative energy. The course objectives are to make sure each student: understands the various forms of alternative energies, understands solar cell design, understands solar cell operation, and acquires knowledge of the various solar cells technologies. The topics to be covered include: Alternative energies; Worldwide status of Photovoltaics; Solar irradiance; Review of semiconductor properties; Generation, recombination; Basic equations of device physics; p-n junction diodes; Ideal solar cells; Efficiency limits; Efficiency losses and measurements; Module fabrication; c-Si technology; classical; Photovoltaic systems; Design of stand-alone system; Residential PV systems.

Prerequisites: Graduate standing in Engineering and Science

ECE 773 Introduction to Nanotechnologies (3 Credit Hours)

This course will introduce the rapidly emerging field of nanotechnology with special focus on underlying principles and applications relevant to the nanoscale dimensions. Specifically, this course will cover (1) the basic principles related to synthesis and fabrication of nanomaterials and nanostructures, (2) zero-, one-, two- and three-dimensional nanostructures, (3) characterization and properties of nanomaterials, and (4) application of nanoscale devices.

Prerequisites: graduate standing in Engineering and Science

ECE 774 Semiconductor Characterization (3 Credit Hours)

Introduction of basic methods for semiconductor material and device characterization. Topics include resistivity, carrier doping concentration, contact resistance, Schottky barrier height, series resistance, channel length, threshold voltage, mobility, oxide and interface trapped charge, deep level impurities, carrier lifetime, and optical, chemical and physical characterization.

Prerequisites: ECE 473 or ECE 573 or equivalent

ECE 775 Non-thermal Plasma Engineering (3 Credit Hours)

This course covers the fundamental principals governing low temperature plasma discharges and their applications. First the fundamental properties of plasmas are introduced. These include the kinetic theory of gases, collisional processes, and plasma sheaths. Then in-depth coverage of the physical mechanisms underlying the operation of non-equilibrium plasma discharges is presented, including important characteristics such as their ignition, evolution, and eventual quenching. Finally, practical applications of non-thermal plasmas, including applications in biology and medicine, are presented.

Prerequisites: graduate standing

ECE 777 Semiconductor Process Technology (3 Credit Hours)

Theory, design and fabrication of modern integrated circuits that consist of nano scale devices and materials. Topics include crystal growth and wafer preparation process including epitaxy, thin film deposition, oxidation, diffusion, ion implantation, lithography, dry etching, VLSI process integration, diagnostic assembly and packaging, yield and reliability.

Prerequisites: ECE 473 or ECE 573

ECE 780 Machine Learning II (3 Credit Hours)

Advanced topics in machine learning and pattern recognition systems. Data reduction techniques including principle component analysis, independent component analysis and manifold learning. Introduction to sparse coding and deep learning for data representation and feature extraction.

Prerequisites: ECE 607 or equivalent

ECE 782 Digital Signal Processing II (3 Credit Hours)

Review of fundamental concepts in digital signal processing: time and frequency domain analysis of discrete time signals and systems, Fourier transforms (DFT/FFT), digital filters, analysis, design, and implementation. Recursive and non-recursive digital filter analysis and design. Multirate signal processing. Random signal modeling and parameter estimation. Signal estimation, orthogonality and normal equations, optimal linear filters. Spectrum estimation. Problem solving using MATLAB is required.

Prerequisites: ECE 612 or equivalent

ECE 783 Digital Image Processing (3 Credit Hours)

Principles and techniques of two-dimensional processing of images. Concepts of scale and spatial frequency. Image filtering in spatial and transform domains. Applications include image enhancement and restoration, image compressing, and image segmentation for computer vision.

Prerequisites: ECE 381 or ECE 612 or ECE 782 or ECE 882

ECE 784 Computer Vision (3 Credit Hours)

Principles and applications of computer vision, advanced image processing techniques as applied to computer vision problems, shape analysis and object recognition.

Prerequisites: graduate standing

ECE 787 Digital Communications (3 Credit Hours)

Fundamental concepts of digital communication and information transmission: information sources and source coding; orthonormal expansions of signals, basis functions, and signal space concepts; digital modulation techniques including PAM, QAM, PSK and FSK; matched filters, demodulation and optimal detection of symbols and sequences; bandwidth; mathematical modeling of communication channels; channel capacity.

Prerequisites: ECE 451/ECE 551 or equivalent or permission of the instructor

ECE 795 Topics in Electrical and Computer Engineering (3 Credit Hours)

Topics in Electrical and Computer Engineering

Prerequisites: departmental approval

ECE 796 Topics in Electrical and Computer Engineering (3 Credit Hours)

Study of selected topics in Electrical and Computer Engineering.

Prerequisites: departmental approval

ECE 797 Independent Study (1-3 Credit Hours)

This course allows students to develop specialized expertise by independent study (supervised by a faculty member).

Prerequisites: departmental approval

ECE 831 Graduate Seminar (1 Credit Hour)

Graduate seminar presentations, given by faculty, students, and invited speakers on a diverse range of technical topics of current interest. A selection of topics will help students prepare for an academic career at a university, liberal arts college, private college, or community college. These selected speakers will also present topics to help students develop essential teaching skills. Student speakers will receive advice and comments from faculties on their communication skills before and after their presentation.

ECE 842 Computer Communication Networks (3 Credit Hours)

This is an advanced level course in data communications. A focus is placed on the analysis, modeling, and control of computer communication systems. Topics include packet switched networks, circuit switched networks, ATM networks, network programming, network control and performance analysis, network security, and wireless sensor networks.

Prerequisites: ECE 642 or permission of instructor

ECE 854 Advanced Bioelectrics (3 Credit Hours)

Bioelectrics is a new field encompassing both the science and technology of applying electrical stimuli to biological systems. This course covers the pulsed power technology that is required to generate electrical stimuli as well as the biological responses they evoke in cells and tissues. Particular emphasis is placed on the medical applications of bioelectrics, including tumor ablation, gene electrotransfer, wound healing, decontamination with cold plasma, and treatment of cardiac arrhythmias.

Prerequisites: ECE 454 or ECE 554 or BIOE 454 and BIOE 554

ECE 855 Biomembranes and Ion Channels (3 Credit Hours)

This course will give an overview of the structure and dynamics of biomembranes, the ion channels that are embedded in them, and the electrical properties of biomembranes. Topics include molecular dynamics modeling of biomembranes, membrane damage and repair, ion channel dynamics and their experimental assessment using patch clamping, and excitability in neurons and cardiomyocytes.

Prerequisites: ECE 454 or ECE 554 or BIOL 523

ECE 861 Advanced Probabilistic Methods for Electrical and Computer Engineering (3 Credit Hours)

This course focuses on three common problems in electrical and computer engineering that are best addressed using probabilistic methods: detecting the absence or presence of a signal in noise, estimating unknown parameters using noisy measurements, and allocating limited resources when demand is uncertain. Applications include computer networks, communication systems, control systems, power distribution networks, and biomedical systems. In each case, specific algorithms are presented for solving these problems along with the supporting analysis for predicting their performance.

Prerequisites: ECE 651

ECE 862 Digital Control Systems (3 Credit Hours)

Mathematical representation, analysis, and design of discrete-time and sampled-data control systems. Topics include transfer function and state space representations, stability, the root locus method, frequency response methods, and state feedback.

Prerequisites: ECE 381, ECE 461 or ECE 561, and ECE 601 or permission of instructor

ECE 863 Multivariable Control Systems (3 Credit Hours)

A comprehensive introduction to techniques applicable in control of complex systems with multiple inputs and outputs. Both the frequency domain and state variable approaches are utilized. Special topics include robust and optimal control.

Prerequisites: ECE 461 or ECE 561 and ECE 601 or permission of the instructor

ECE 866 Nonlinear Control Systems (3 Credit Hours)

An introduction to mathematical representation, analysis, and design of nonlinear control systems. Topics include phase-plane analysis, Lyapunov stability theory for autonomous and nonautonomous systems, formal power series methods and differential geometric design techniques.

Prerequisites: ECE 461 or ECE 561 and ECE 601 or permission of instructor

ECE 872 Fundamentals of Solar Cells (3 Credit Hours)

The course provides an overview of the fundamentals of solar cell technologies, design, and operation. The course is designed for graduate students in Engineering and Science interested in the field of alternative energy. The course objectives are to make sure each student: understands the various forms of alternative energies, understands solar cell design, understands solar cell operation, and acquires knowledge of the various solar cells technologies. The topics to be covered include: Alternative energies; Worldwide status of Photovoltaics; Solar irradiance; Review of semiconductor properties; Generation, recombination; Basic equations of device physics; p-n junction diodes; Ideal solar cells; Efficiency limits; Efficiency losses and measurements; Module fabrication; c-Si technology; classical; Photovoltaic systems; Design of stand-alone system; Residential PV systems.

Prerequisites: Graduate standing in Engineering and Science

ECE 873 Introduction to Nanotechnologies (3 Credit Hours)

This course will introduce the rapidly emerging field of nanotechnology with special focus on underlying principles and applications relevant to the nanoscale dimensions. Specifically, this course will cover (1) the basic principles related to synthesis and fabrication of nanomaterials and nanostructures, (2) zero-, one-, two- and three-dimensional nanostructures, (3) characterization and properties of nanomaterials, and (4) application of nanoscale devices.

Prerequisites: graduate standing in Engineering and Science

ECE 874 Semiconductor Characterization (3 Credit Hours)

Introduction of basic methods for semiconductor material and device characterization. Topics include resistivity, carrier doping concentration, contact resistance, Schottky barrier height, series resistance, channel length, threshold voltage, mobility, oxide and interface trapped charge, deep level impurities, carrier lifetime, and optical, chemical and physical characterization.

Prerequisites: ECE 473 or ECE 573 or equivalent

ECE 875 Non-thermal Plasma Engineering (3 Credit Hours)

This course covers the fundamental principals governing low temperature plasma discharges and their applications. First the fundamental properties of plasmas are introduced. These include the kinetic theory of gases, collisional processes, and plasma sheaths. Then in-depth coverage of the physical mechanisms underlying the operation of non-equilibrium plasma discharges is presented, including important characteristics such as their ignition, evolution, and eventual quenching. Finally, practical applications of non-thermal plasmas, including applications in biology and medicine, are presented.

Prerequisites: graduate standing

ECE 877 Semiconductor Process Technology (3 Credit Hours)

Theory, design and fabrication of modern integrated circuits that consist of nano scale devices and materials. Topics include crystal growth and wafer preparation process including epitaxy, thin film deposition, oxidation, diffusion, ion implantation, lithography, dry etching, VLSI process integration, diagnostic assembly and packaging, yield and reliability.

Prerequisites: ECE 473 or ECE 573

ECE 880 Machine Learning II (3 Credit Hours)

Advanced topics in machine learning and pattern recognition systems. Data reduction techniques including principle component analysis, independent component analysis and manifold learning. Introduction to sparse coding and deep learning for data representation and feature extraction.

Prerequisites: ECE 607 or equivalent

ECE 882 Digital Signal Processing II (3 Credit Hours)

Review of fundamental concepts in digital signal processing: time and frequency domain analysis of discrete time signals and systems, Fourier transforms (DFT/FFT), digital filters, analysis, design, and implementation. Recursive and non-recursive digital filter analysis and design. Multirate signal processing. Random signal modeling and parameter estimation. Signal estimation, orthogonality and normal equations, optimal linear filters. Spectrum estimation. Problem solving using MATLAB is required.

Prerequisites: ECE 612 or equivalent

ECE 883 Digital Image Processing (3 Credit Hours)

Principles and techniques of two-dimensional processing of images. Concepts of scale and spatial frequency. Image filtering in spatial and transform domains. Applications include image enhancement and restoration, image compressing, and image segmentation for computer vision.

Prerequisites: ECE 381 or ECE 612 or ECE 782 or ECE 882

ECE 884 Computer Vision (3 Credit Hours)

Principles and applications of computer vision, advanced image processing techniques as applied to computer vision problems, shape analysis and object recognition.

Prerequisites: Graduate standing

ECE 887 Digital Communications (3 Credit Hours)

Fundamental concepts of digital communication and information transmission: information sources and source coding; orthonormal expansions of signals, basis functions, and signal space concepts; digital modulation techniques including PAM, QAM, PSK and FSK; matched filters, demodulation and optimal detection of symbols and sequences; bandwidth; mathematical modeling of communication channels; channel capacity.

Prerequisites: ECE 451/ECE 551 or equivalent or permission of the instructor

ECE 892 Doctor of Engineering Project (1-12 Credit Hours)

Directed individual study applying advanced level technical knowledge to identify, formulate, and solve a complex, novel problem in electrical and computer engineering.

ECE 895 Topics in Electrical and Computer Engineering (3 Credit Hours)

Topics in Electrical and Computer Engineering.

Prerequisites: departmental approval

ECE 896 Topics in Electrical and Computer Engineering (3 Credit Hours)

Topics in Electrical and Computer Engineering

ECE 897 Independent Study (1-3 Credit Hours)

This course allows students to develop specialized expertise by independent study (supervised by a faculty member)

Prerequisites: departmental approval

ECE 899 Dissertation Research (1-9 Credit Hours)

Directed research for the doctoral dissertation.

Prerequisites: departmental approval

ECE 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

ECE 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

ECON - Economics

ECON 502 Transportation Economics (3 Credit Hours)

A survey of the transportation system in the United States including its development, pricing, and regulation. Special attention is given to railroads, highways, pipeline, water and air transportation; and the roles that these modes of transportation play in economic development.

ECON 507 Labor Market Economics (3 Credit Hours)

Economic analysis of various facets of labor markets. Emphasis is placed on the analysis of labor supply, labor demand, wage determination, earnings differentials and inequality, occupational choice, human capital investment, labor market discrimination, mobility and immigration, impact of unions, and unemployment.

ECON 510 Economics for Managers (3 Credit Hours)

Managerial economics applies key economic principles to decision making in business organizations. This course provides insight into consumer and business behavior and allows an improved understanding of how the external business environment can shape how businesses operate. Economics, at its core, a way of thinking about problems, courses of action, and the impact of decisions. Economics stresses the important of incentives as determinants of consumer and business behavior and stresses the interaction between costs and benefits in the margin with respect to decision making.

Prerequisites: Admission to the MBA program OR approval by the MBA program office/instructor

ECON 521 Public Economics (3 Credit Hours)

This course examines the interaction between government and the economy, with particular emphasis on the role of the federal government. Topics that address the motivation for government involvement in the economy include market failure, income inequality, and redistribution of income. Specific programs studied include Medicare/Medicaid, welfare programs, and the social security system.

ECON 527 Industrial Organization and Public Policy (3 Credit Hours)

A study of market structures and the conduct and performance of business firms in different market structures. The emphasis is on the theory and measurement of industrial concentration and public policy responses to industrial concentration.

ECON 531 Money and Banking (3 Credit Hours)

Examines the nature and functions of money and credit, the commercial banking system, the Federal Reserve System, the quantity theory of money, the theory of income determination, the balance of payments and exchange rates, and the history of monetary policy in the United States.

ECON 535 Health Economics: A Global Perspective (3 Credit Hours)

This course introduces the student to the economics of health care and the application of health economics to health care problems, the issues surrounding those problems, and the potential solutions to those problems. The course will emphasize institutional features of the health care industry, the market for health care, the political economy of health care, and government involvement in the delivery of health care. Further, the course will survey the delivery of health care in other countries and provide a global perspective on selected health care issues such as AIDS, water and air quality, and the aging of the population.

ECON 536 Sports Economics (3 Credit Hours)

This course introduces the student to the economics of sports in America. The course will emphasize institutional features of the sport industry. Specific topics included are: sports franchises as profit-maximizing firms; monopoly and antitrust rules as applied to the sports industry; public finance of sports; costs and benefits of a sports franchise to a city; the labor economics of professional sports; discrimination in sports; and the economics of college sports. This course may not be applied toward the major in economics as an economics elective or toward the minor in economics or the M.A. in economics. (It could, however, be used as a non-economics elective for the major.)

ECON 545 Urban Economics (3 Credit Hours)

An analysis of the economic factors which give rise to the formation of urban centers and which contribute to the following problems: urban poverty, housing conditions, traffic congestion, and the fiscal crisis faced by modern cities.

ECON 547 Natural Resource and Environmental Economics (3 Credit Hours)

Topics discussed include conservation and scarcity, market failure, fishery management, benefit-cost analysis, water resource development, environmental quality, recreation, energy, and marine resources.

ECON 551 History of Economic Thought (3 Credit Hours)

A study of the history of economic theory with attention to the economic ideas and philosophy of Adam Smith, David Ricardo, Karl Marx, J.M. Keynes and other major figures in the development of economics.

ECON 554 Economic Development (3 Credit Hours)

This course is intended to provide an introduction to the problems of economic development in the Third World, including the problems of economic growth, income distribution, poverty, urbanization, uneven development, agricultural policy, economic planning, industrial policy, trade policy, balance of payments, finance, and currency crises. To illustrate these issues we will examine the problems of certain individual countries, such as Brazil, Korea, Philippines, India, Mexico, Kenya, Indonesia, and Thailand. In the course we try to strike a balance between economic theory and institutional economics.

ECON 555 Comparative Economic Systems (3 Credit Hours)

This course examines and compares different economies from around the world, including such economies as the UK, France, Germany, Sweden, Japan, India, Korea, Russia, and China. Students look at the economic growth, GDP per capita, unemployment, inflation, income distribution, economic efficiency, institutions, policies, industrial structure, legal infrastructure, and international trade of these economies. Students study the functioning of markets and the problems of market and government failure. The course addresses the question, what is the best way to organize society?

ECON 595 Selected Topics in Economics (1-3 Credit Hours)

Taught on an occasional basis. A study of selected topics, the title of which will appear in the course schedule.

Prerequisites: Permission of the instructor

ECON 620 Economic Decision-Making (3 Credit Hours)

This course examines the economics of successful businesses and successful business strategies. During this course, students will examine the sources of competitive advantage, how competition evolves over time, and the dynamics of competitive advantage. Students will explore how firms interact with each other and how these strategic interactions shape markets. At the end of this course, students will have a broader understanding of how firms operate in markets and the interactions between consumer and business behavior.

Prerequisites: ECON 510, or MBA 606 and ECON 607

ECON 625 Mathematical Economics (3 Credit Hours)

This course focuses on the use of mathematical techniques in solving complex economic problems. Primary emphasis is given to matrix algebra, differential calculus, constrained optimization techniques and dynamic optimization techniques.

ECON 650 International Economics (3 Credit Hours)

An analysis of international trade theory, commercial policy, foreign exchange markets, open economy macroeconomics, and balance of payments. The course provides the theoretical basis to understand contemporary international economic issues. (Credit may not be applied toward the M.A. in economics.)

ECON 668 Economics Internship (1-3 Credit Hours)

The course is a practicum in the field of economics applying theories, concepts, and quantitative tools in a professional environment.

Prerequisites: Twelve hours of economics and permission of the graduate program director

ECON 695 Selected Topics in Economics (1-3 Credit Hours)

Advanced topics in economics specifically designed for school teachers. (Credit may not be applied toward the M.A. in economics or the MBA.)

Prerequisites: Permission of the instructor

ECON 696 Selected Topics in Economics (1-3 Credit Hours)

Advanced topics in economics are covered in this course.

ECON 697 Readings in Economics (3 Credit Hours)

Individual readings in a selected field under the direction of a faculty member of the department.

ECON 698 Economic Methodology and Research (3 Credit Hours)

Students writing the capstone empirical research paper will take this course. Under the supervision of a faculty member, students will discuss theoretical models, analytical techniques, data analysis, and policy recommendations resulting from their capstone research project.

ECON 699 Thesis (6 Credit Hours)

Directed research for thesis.

ECON 700 Economic Analytics (3 Credit Hours)

This course provides the skills necessary to successfully identify, acquire, manage, and analyze economic data. The course primarily focuses on the application of statistical methods in support of economic analysis. During the course, students will (1) develop research hypotheses; (2) identify data to test the hypotheses; (3) utilize coding to access and obtain data, (4) use descriptive statistics to discuss the properties of the data, (5) explore the bivariate least squares estimator, and (6) interpret and present the results of economic analysis.

ECON 701 Advanced Microeconomic Analysis (3 Credit Hours)

This course considers microeconomic theory as a means of organizing the behavior of individuals and firms in economic settings. The course provides the theoretical framework for microeconomic research in business and in government. The theory of the household and the theory of the firm will be presented in detail along with consideration of distribution theory and welfare theory. The material will be presented with the aid of graphical techniques, logic, calculus, matrix algebra, and optimization techniques.

Pre- or corequisite: ECON 625 or equivalent

ECON 703 Advanced Macroeconomic Analysis (3 Credit Hours)

This course presents classical and modern macroeconomic models, including the Solow growth model, the Ramsey infinite horizon model, the overlapping generations model, and the endogenous growth model. The course also explores classical and modern models of monetary policy. This course provides students with mathematical and analytical tools and techniques to analyze macroeconomic issues including the impact of monetary and fiscal policy and the interaction among inflation, unemployment, and interest rates.

Pre- or corequisite: ECON 625 or equivalent

ECON 706 Econometrics I (3 Credit Hours)

Single-equation econometric models; serial correlation, heteroscedasticity, specification error, missing observations, and errors-in-variables and forecasting.

Pre- or corequisite: ECON 625 or equivalent

ECON 707 Econometrics II (3 Credit Hours)

Multi-equation econometric models; problems such as identification, single-equation estimation, estimation of equation systems, and model evaluation techniques; time-series models such as autoregressive and moving average models; forecasting with time-series models.

Prerequisites: ECON 706 or equivalent

ECON 708 Econometrics III (3 Credit Hours)

Issues in cross-section and panel data, focuses on problems such as selection bias, heterogeneity, unobserved heterogeneity, treatment effects, truncation and censoring. The course covers multivariate techniques such as principal component analysis and factor analysis, along with event studies and nonparametric and semiparametric estimators.

Pre- or corequisite: ECON 706 or equivalent

ECON 752 International Trade (3 Credit Hours)

Pure theory of international trade, mathematical models of trade, instruments of trade policy, theory and practice of economic integration, trade liberalization issues from international and regional viewpoints.

Prerequisites: ECON 604 or ECON 650 or equivalent

ECON 754 Economic Development (3 Credit Hours)

Introduction to the problems of economic development in the third world, including the problems of economic growth, income distribution, poverty, urbanization, uneven development, agricultural policy, economic planning, industrial policy, trade policy, balance of payments, finance, and currency crises.

Prerequisites: ECON 604 or ECON 650

ECON 795 Selected Topics in Economics (1-3 Credit Hours)

Designed to provide the advanced student with an opportunity to study independently or in small groups and investigate specific topics of current interest in the field of economics.

Prerequisites: Ph.D. standing and permission of the chair and coordinator

ECON 801 Advanced Microeconomic Analysis (3 Credit Hours)

This course considers microeconomic theory as a means of organizing the behavior of individuals and firms in economic settings. The course provides the theoretical framework for microeconomic research in business and in government. The theory of the household and the theory of the firm will be presented in detail along with consideration of distribution theory and welfare theory. The material will be presented with the aid of graphical techniques, logic, calculus, matrix algebra, and optimization techniques.

Prerequisites: ECON 607 or equivalent

Pre- or corequisite: ECON 625 or equivalent

ECON 803 Advanced Macroeconomic Analysis (3 Credit Hours)

This course presents classical and modern macroeconomic models, including the Solow growth model, the Ramsey infinite horizon model, the overlapping generations model, and the endogenous growth model. The course also explores classical and modern models of monetary policy. This course provides students with mathematical and analytical tools and techniques to analyze macroeconomic issues including the impact of monetary and fiscal policy and the interaction among inflation, unemployment, and interest rates.

Prerequisites: ECON 618 or equivalent

Pre- or corequisite: ECON 625 or equivalent

ECON 806 Econometrics I (3 Credit Hours)

Single-equation econometric models; serial correlation, heteroscedasticity, specification error, missing observations, and errors-in-variables and forecasting.

Pre- or corequisite: ECON 625 or equivalent

ECON 807 Econometrics II (3 Credit Hours)

Multi-equation econometric models; problems such as identification, single-equation estimation, estimation of equation systems, and model evaluation techniques; time-series models such as autoregressive and moving average models; forecasting with time-series models.

Prerequisites: ECON 806 or equivalent

ECON 808 Econometrics III (3 Credit Hours)

Issues in cross-section and panel data, focuses on problems such as selection bias, heterogeneity, unobserved heterogeneity, treatment effects, truncation and censoring. The course covers multivariate techniques such as principal component analysis and factor analysis, along with event studies and nonparametric and semiparametric estimators.

Pre- or corequisite: ECON 806 or equivalent

ECON 852 International Trade (3 Credit Hours)

Pure theory of international trade, mathematical models of trade, instruments of trade policy, theory and practice of economic integration, trade liberalization issues from international and regional viewpoints.

Prerequisites: ECON 604 or ECON 650 or equivalent

ECON 854 Economic Development (3 Credit Hours)

Introduction to the problems of economic development in the third world, including the problems of economic growth, income distribution, poverty, urbanization, uneven development, agricultural policy, economic planning, industrial policy, trade policy, balance of payments, finance, and currency crises.

Prerequisites: ECON 604 or ECON 650

ECON 895 Selected Topics in Economics (1-3 Credit Hours)

Designed to provide the advanced student with an opportunity to study independently or in small groups and investigate specific topics of current interest in the field of economics.

Prerequisites: Ph.D. standing and permission of the chair and coordinator

ECON 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

ECON 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

EDUC - Education

EDUC 649 Foundations and History of Education (3 Credit Hours)

This seminar explores foundational ideas of democratic education. While focusing on the contexts and conditions of contemporary education, it traces the roots of educational theory and philosophy from the formation of the common school to the policy reforms of the 21st century. This look at the present through the past provides insight into the interactions between social, economic, political, ideological, and environmental factors and its impact on the purposes of education, school curriculum and ideas of measurement and evaluation. Students will be expected to consider the implications of/ for democratic education, historically and presently, as it relates to issues of race, class, gender, and multiculturalism.

ELS - Educational Leadership and Services

ELS 596 Topics in Education (1-3 Credit Hours)

The College of Education offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of the instructor

ELS 597 Topics in Education (1-3 Credit Hours)

The College of Education offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of the instructor

ELS 598 Topics in Education (1-3 Credit Hours)

The College of Education offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of the instructor

ELS 623 Design of Service Delivery Plans to Meet the Needs of Military Connected Children and Families (4 Credit Hours)

Students will apply their foundational and assessment knowledge for supporting military students to a capstone project in service delivery program design. This course will engage participants in surveying and considering a range of services, program elements, and strategies that may be employed to improve educational, social, and emotional school experiences for children of military-related families. Participants will engage in processes for selecting and preparing to implement optimal support strategies and structures to meet the identified needs of military students in their school setting. They will become familiar with and prepared to craft specific plans to utilize, for the benefit of military children, their peers and families: (a) various school, community, and government services; (b) classroom- and school-based programs designed to improve academic achievement and/or emotional well-being; and (c) classroom- and school-based strategies for designing and implementing programs and services that meet the needs of these children and their families.

Prerequisites: FOUN 662 and acceptance into the Military Child and Family Education Certificate Program or approval from the certificate program director

ELS 660 Program Evaluation, Research and Planning (3 Credit Hours)

In this course principal licensure candidates learn to identify organizational needs, develop research-based strategies to address those needs, and use data-driven planning to implement, monitor, and manage processes involved in implementing change strategies.

Prerequisites: ELS 600

ELS 667 Cooperative Education (1-3 Credit Hours)

Cooperative Education.

ELS 668 Internship in Educational Leadership (3-6 Credit Hours)

The internship is designed to establish a bond between theory and practice, while providing opportunities for independent and guided practice, feedback, coaching, and reflection. Ultimately, it will engage prospective administrators in planned and coordinated active learning experiences. Pre- or

Corequisites: ELS 700 or ELS 800

ELS 669 Instructional Internship (3 Credit Hours)

Each internship course will require students to complete a minimum of 160 hours in each course. Course is designed to provide field experiences which will prepare them to serve as instructional and curriculum leadership in K-12 environments. Student must produce 1) a portfolio with required artifacts; 2) prepare a 10-12 reflective paper according to identified guidelines and 3) complete internship evaluation with mentor and college supervisor at least three times during the term.

Prerequisites: ELS 673

ELS 673 Critical Issues Research (3 Credit Hours)

The student completes an in-depth study of a critical issue in his/her profession and documents the work in a critical issue paper. Student must be able to demonstrate written and oral communication skills and critical and analytical skills in dealing with a major issue in educational leadership. Course to be taken near completion of program.

Prerequisites: ELS 600, ELS 610, ELS 621, ELS 626, and ELS 660

ELS 697 Topics in Educational Leadership (1-6 Credit Hours)

The study of selected topics in educational leadership. Arranged individually with students.

ELS 700 Strategic Leadership and Management for School Improvement (3 Credit Hours)

This course is designed to give students entering the ODU Licensure program an understanding of the complex roles and challenges of a school principal, while focusing on the constantly changing nature of administrative responsibility. Students develop an integrated view of the knowledge base, research and practice of administration within a context of multiple perspectives and a wide range of thinking. The purpose of the course is to increase understanding of education, the role of educational administration, the forces that are moving education into a new era, the transitions that are occurring, and the use of the latest, best practices to improve the education of all children.

ELS 701 Accountability and Organizational Improvement (3 Credit Hours)

This course is an in-depth study of effective data based decision-making practices for contemporary school leaders. Formative and summative data based decision making practices will be explored, as well as how to work with large and small groups of staff members to analyze multiple measures of data and create school improvement designs for student and school success. An emphasis is placed on using data to make decisions at the division, school, and classroom levels.

Prerequisites: ELS 700

ELS 702 Educational Politics and Policymaking (3 Credit Hours)

This course teaches aspiring school leaders how politics and policy shapes school-based decision making and how school leaders can influence politics and policy processes to improve learning environments for children. The course focuses contemporary problems that confront school leaders as they work to improve the conditions of learning for their students, faculty and staff. To effectively address and solve problems school leaders need to understand the processes of policymaking at various educational levels and to develop the relevant skills of policymaking needed at the school level. Thus, this course addresses the following three essential principles of educational politics and policy as they apply to school level administrators: political and policy dynamics that influence their work in schools; accurately identify, diagnose, and develop the right solutions to the right problems in order to achieve instructional goals of the school and division; and confront, engage in, and effectively deal with conflict (i.e., politics) emanating from within the school, division, or community in order to achieve school and division learning goals.

Prerequisites: ELS 700

ELS 710 Strategic Communication and External Relations (3 Credit Hours)

This course serves as an introduction for prospective administrators to the social and political context of the educational environment. The underlying concept of this course is collaboration. Today's administrators face a variety of multifaceted challenges in their daily routines. Therefore, they must recognize the impact of political, socioeconomic situations, community diversity, equity issues, and school community relations on their leadership practices.

Prerequisites: ELS 700

ELS 727 Learning Theories and Professional Development (3 Credit Hours)

This course exposes students to the essential elements of instructional leadership. Central to the skills and knowledge necessary to be an effective instructional leader are a deep understanding of the learning sciences that inform us about the essence of effective teaching. Effective instructional leaders have a solid basis for assessing and promoting high quality instruction, giving them the tools to proactively build a school's organizational capacity of sustained growth in student achievement. Students will engage in reading, reflection, dialog, writing, problem solving and field-work, designed to build an understanding of how these topics are intrinsically tied to supporting teachers in their classrooms through facilitating better understandings of standards and accountability, effective lesson planning and curriculum development, assessment and grading, classroom management and discipline.

Prerequisites: ELS 700

ELS 728 Instructional Leadership and Supervision (3 Credit Hours)

This course develops student's skills, knowledge and dispositions in the area of instructional leadership. Students will explore how effective instructional leaders can use their integrated knowledge of quality instruction and the core principles of learning to set the mission and vision for the school, facilitate school improvement planning and professional development and finally how instructional supervision is used to integrate these activities and support the growth of individual teachers as well as building organizational capacity. Effective instructional leaders have a solid basis for assessing and promoting high quality instruction, giving them the tools to proactively build a school's organizational capacity for sustained growth in student achievement. Students will engage in reading, reflection, dialog, writing, problem solving and field-work, designed to help them build an integrated understanding of those leadership practices that help support teacher instructional growth and those that build organizational capacity for sustained improvement.

Prerequisites: ELS 700

ELS 753 Educational Finance and Budgeting (3 Credit Hours)

This course examines how public schools are financed, including an analysis of the sources of revenues, the distribution of revenue, and the budgeting and expenditure of revenue. Special emphasis will be placed on the Virginia funding formula, education as an investment in human capital, and how funding relates to student achievement. Students will learn the fiscal management skills and understandings necessary to manage the finances of a school or school system, including the study of system and school procedures related to budget planning, budget management, internal school account management, inventory control, and purchasing procedures.

Prerequisites: ELS 700

ELS 757 Educational Law and Ethics (3 Credit Hours)

This course is an introduction to law, particularly with respect to federal and state statutes and court decisions dealing with the public schools. The topics span a wide spectrum of law-related concerns. The study of law is intended to be practical by providing the legal understanding necessary for a school administrator to negotiate his or her way through the maze of difficult legal and ethical matters commonly faced each day.

Prerequisites: ELS 600 or ELS 700

ELS 787 Pupil Personnel Services for Diverse Populations (3 Credit Hours)

This course focuses on the theories and skills that leaders need in order to administer the broad array of special services (i.e., special education, bilingual programming, counseling, and psychological, social work, and therapy services) so that students with all diverse needs are included in regular education.

ELS 795 Topics in Educational Leadership (1-3 Credit Hours)

Study of selected topics in educational leadership.

Prerequisites: permission of the instructor

ELS 797 Topics in Educational Leadership (1-3 Credit Hours)

Topics in Educational Leadership.

ELS 800 Strategic Leadership and Management for School Improvement (3 Credit Hours)

This course is designed to give students entering the ODU Licensure program an understanding of the complex roles and challenges of a school principal, while focusing on the constantly changing nature of administrative responsibility. Students develop an integrated view of the knowledge base, research and practice of administration within a context of multiple perspectives and a wide range of thinking. The purpose of the course is to increase understanding of education, the role of educational administration, the forces that are moving education into a new era, the transitions that are occurring, and the use of the latest, best practices to improve the education of all children.

ELS 801 Accountability and Organizational Improvement (3 Credit Hours)

This course is an in-depth study of effective data based decision-making practices for contemporary school leaders. Formative and summative data based decision making practices will be explored, as well as how to work with large and small groups of staff members to analyze multiple measures of data and create school improvement designs for student and school success. An emphasis is placed on using data to make decisions at the division, school, and classroom levels.

Prerequisites: ELS 700 or ELS 800

ELS 802 Educational Politics and Policymaking (3 Credit Hours)

This course teaches aspiring school leaders how politics and policy shapes school-based decision making and how school leaders can influence politics and policy processes to improve learning environments for children. The course focuses contemporary problems that confront school leaders as they work to improve the conditions of learning for their students, faculty, and staff. To effectively address and solve problems school leaders need to understand the processes of policymaking at various educational levels and to develop the relevant skills of policymaking needed at the school level. Thus, this course addresses the following three essential principles of educational politics and policy as they apply to school level administrators: political and policy dynamics that influence their work in schools; accurately identify, diagnose, and develop the right solutions to the right problems in order to achieve instructional goals of the school and division; and confront, engage in, and effectively deal with conflict (i.e., politics) emanating from within the school, division, or community in order to achieve school and division learning goals.

Prerequisites: ELS 700 or ELS 800

ELS 810 Strategic Communication and External Relations (3 Credit Hours)

This course serves as an introduction for prospective administrators to the social and political context of the educational environment. The underlying concept of this course is collaboration. Today's administrators face a variety of multifaceted challenges in their daily routines. Therefore, they must recognize the impact of political, socioeconomic situations, community diversity, equity issues, and school community relations on their leadership practices.

Prerequisites: ELS 700 or ELS 800

ELS 811 Leadership Theory for Educational Improvement (3 Credit Hours)

This course provides the necessary knowledge to become an integral part of the educational improvement process at the school, division, and state levels. Students will analyze and relate the significant educational trends of the past 20 years to the political process, analyzing the impact on school planning. Students will take an active and vocal role in the discourse and debate about educational policy and practice. Emphasis will be placed on analyzing the context and implementing planning systems to develop mission, goals and programs that result in educational improvement.

ELS 815 Leadership for Equity and Inclusive Education (3 Credit Hours)

This course focuses on the theories and practices that help educational leaders ensure that students with special needs receive an equitable and inclusive education. Emphasis is on perspectives of difference versus deviance, historical foundations of specialized programs, current social and legal contexts that influence programming, questions of social justice, and possibilities for the inclusion of all students. While this course addresses the needs of all students, concentration is on individuals with disabilities and the laws that safeguard their rights.

ELS 821 Policy and Politics in Educational Leadership (3 Credit Hours)

This course focuses on the theories and practices needed to build relationships and support from the state political process, the local community, businesses, and media. Emphasis will be placed on the use of influence, and its impact on relationships, policies, and programs. Focus is placed on developing a shared vision to bring schools and communities together as partners in improving student learning. Two-way communication mechanisms for school improvement using political influence and power are examined.

Prerequisites: ELS 811

ELS 827 Learning Theories and Professional Development (3 Credit Hours)

This course exposes students to the essential elements of instructional leadership. Central to the skills and knowledge necessary to be an effective instructional leader are a deep understanding of the learning sciences that inform us about the essence of effective teaching. Effective instructional leaders have a solid basis for assessing and promoting high quality instruction, giving them the tools to proactively build a school's organizational capacity of sustained growth in student achievement. Students will engage in reading, reflection, dialog, writing, problem solving and field-work, designed to build an understanding of how these topics are intrinsically tied to supporting teachers in their classrooms through facilitating better understandings of standards and accountability, effective lesson planning and curriculum development, assessment and grading, classroom management and discipline.

Prerequisites: ELS 700 or ELS 800

ELS 828 Instructional Leadership and Supervision (3 Credit Hours)

This course develops student's skills, knowledge and dispositions in the area of instructional leadership. Students will explore how effective instructional leaders can use their integrated knowledge of quality instruction and the core principles of learning to set the mission and vision for the school, facilitate school improvement planning and professional development and finally how instructional supervision is used to integrate these activities and support the growth of individual teachers as well as building organizational capacity. Effective instructional leaders have a solid basis for assessing and promoting high quality instruction, giving them the tools to proactively build a school's organizational capacity for sustained growth in student achievement. Students will engage in reading, reflection, dialog, writing, problem solving and field-work, designed to help them build an integrated understanding of those leadership practices that help support teacher instructional growth and those that build organizational capacity for sustained improvement.

Prerequisites: ELS 700 or ELS 800

ELS 831 Accountability Systems in Public Education (3 Credit Hours)

This course addresses the design, development, implementation, and alignment of public education accountability systems at the federal, state, and local levels. Particular attention is given to how the design and implementation of accountability systems affects educational equity and school reform efforts.

Prerequisites: ELS 660 and ELS 880

ELS 835 Organizational Theory and Behavior in Education (3 Credit Hours)

This course includes the psychology of organizational behaviors, theories of managing people, individual and organizational learning, individual motivation and organizational behavior, interpersonal communications and perceptions, group dynamics, problem management, managing multigroup work, managing diversity, leadership and organizational culture, leadership and decision making, the effective exercise of power and influence, supervision and employee development, organizational analysis, and managing change.

ELS 853 Educational Finance and Budgeting (3 Credit Hours)

This course examines how public schools are financed, including an analysis of the sources of revenues, the distribution of revenue, and the budgeting and expenditure of revenue. Special emphasis will be placed on the Virginia funding formula, education as an investment in human capital, and how funding relates to student achievement. Students will learn the fiscal management skills and understandings necessary to manage the finances of a school or school system, including the study of system and school procedures related to budget planning, budget management, internal school account management, inventory control, and purchasing procedures.

Prerequisites: ELS 600 or ELS 700 or ELS 800

ELS 857 Educational Law and Ethics (3 Credit Hours)

This course is an introduction to law, particularly with respect to federal and state statutes and court decisions dealing with the public schools. The topics span a wide spectrum of law-related concerns. The study of law is intended to be practical by providing the legal understanding necessary for a school administrator to negotiate his or her way through the maze of difficult legal and ethical matters commonly faced each day.

Prerequisites: ELS 700 or ELS 800

ELS 869 Instructional Internship (3 Credit Hours)

Course is designed to provide field experiences that will prepare students to serve as instructional and curriculum leadership in K-12 environments. Student must 1) produce a portfolio with required artifacts; 2) prepare a 10-12 page reflective paper according to identified guidelines and 3) complete internship evaluation with mentor and college supervisor at least three times during the term. Each internship course will require students to complete a minimum of 160 hours.

Prerequisites: ELS 673

ELS 871 Educational Systems Planning and Futures (3 Credit Hours)

The course covers the theoretical framework of strategic, operational, cooperative and future planning in education, leading to the development of a cyclic planning process which includes the appropriate tasks, steps and skills to effect administrative and policy change.

ELS 874 Advanced School Finance, and Operations (3 Credit Hours)

This course examines social justice issues related to the financial, political, and operational aspects of America's public schools. The politics of current legislation, court cases, finances, and operations of the school system are included.

Prerequisites: ELS 753/ELS 853 or equivalent

ELS 876 Leadership for Social Justice (3 Credit Hours)

In this course, students study and engage in dialogue related to the critical role of education in a democratic society in a rapidly changing and increasingly complex world. Through a focused discussion of theories and concepts such as democratic schools, social justice, critical theory and power, feminism, critical race theory, and difference/normalization, students come to understand the possible roles education can play in society and their need to continuously reflect on their own vision for leadership in public schools.

ELS 878 Leadership for Teaching and Learning (3 Credit Hours)

In this course, participants examine what is currently known and explore what needs to be known about pedagogy in a context of school renewal. The foundational perspective for the course is social justice in which course participants seek ways to transform teaching/instruction so that all schools work for all students particularly those students who historically have been disenfranchised from receiving an equitable education.

ELS 879 Field Research in School Administration and Supervision (3 Credit Hours)

Field study approach to problems related to school administration and supervision.

Prerequisites: a master's degree

ELS 880 Multicultural Curriculum Leadership and Globalization (3 Credit Hours)

This course examines social justice issues related to the curriculum leadership aspect of America's public schools and abroad. This course is designed to provide advanced understanding of the curriculum development process through conception, implementation, and evaluation with a particular focus on multiculturalism. Theoretical and philosophical bases of curriculum development are addressed as well as current trends including brain-based learning, multiculturalism, globalization, organizational thinking and the strategic change process.

ELS 883 Contemporary Issues in Education (3 Credit Hours)

This course is a survey of current issues in education, as well as the political, financial, and social issues affecting education leadership. The course will explore relationships between current issues, historical perspectives, philosophical theories, and sociologic influences. The exploration of contemporary issues related to equity and achievement will serve as a critical component of the class.

ELS 895 Topics in Educational Leadership (1-3 Credit Hours)

Study of selected topics in educational leadership.

Prerequisites: permission of the instructor

ELS 896 Topics in Urban Educational Leadership (1-3 Credit Hours)

Study of selected topics in urban educational leadership.

Prerequisites: master's degree and permission of the instructor

ELS 897 Topics in Educational Leadership (1-3 Credit Hours)

Independent Study, topics in Educational Leadership.

ELS 899 Dissertation (1-12 Credit Hours)

1-12 credits.

Prerequisites: permission of faculty advisor

ELS 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

ELS 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

ENGL - English

ENGL 506 The Teaching of Literature (3 Credit Hours)

This course is designed to provide an intensive examination of issues, approaches, and methods utilized in the teaching of literature, particularly literature written for children and young adults.

ENGL 507 Chaucer's Canterbury Tales (3 Credit Hours)

A study of The Canterbury Tales with an introduction to Middle English language and culture.

ENGL 516 English Renaissance Drama (3 Credit Hours)

An extensive survey of the secular national dramas of Renaissance England that were written and performed by Shakespeare's contemporaries in London between 1576 and 1642. Students study the literary features, social contexts and ideological underpinning of representative works by Kyd, Marlowe, Jonson, Webster, Ford, and others.

ENGL 518 Jewish Writers (3 Credit Hours)

This course introduces students to the Jewish literary traditions and the cultural trends shaping these traditions and the Jewish identity. It will examine the impact of such issues as immigration, family, marginality, the Holocaust, assimilation, cultural diversity, feminism, Israel, race and religion. Readings will include short stories, poems, essays, novels, and autobiographical writing.

ENGL 519 The Harlem Renaissance (3 Credit Hours)

The class provides students with a solid grasp of the Harlem Renaissance: what it was, why it came to be, and how it continues to resonate in American culture. Students will gain a greater understanding of this period and the ways in which the artistic endeavors of the Harlem Renaissance - especially the literature - helped to transform that era and make possible the growing respect for diversity that we now enjoy.

ENGL 521 British Literature 1660-1800 (3 Credit Hours)

British literature from the Restoration of the monarchy after the Civil War and Puritan Commonwealth to the French Revolution, focusing on how cultural changes (legalized female actors, commercialized printing, colonialism, and growing market capitalism) interacted with the flowering of satire and scandalous theatrical comedy, and the emergence of modern literary forms (periodical journalism, "picturesque" poetry, and the novel).

ENGL 523 The Romantic Movement in Britain (3 Credit Hours)

A study of the literature written in Britain between 1770-1830, focusing on how the literary experiments and innovations of poets like Blake, Wordsworth, Coleridge, Byron, Percy Shelley, Keats, Burns, and Barbauld, and of novelists like Mary Shelley, Radcliffe, and Scott interacted with cultural changes such as the Industrial Revolution, the French Revolution, and the emergence of feminism and working-class radicalism.

ENGL 527 Writing in the Disciplines (3 Credit Hours)

This is a discussion/workshop course emphasizing contexts and strategies of text production in and across academic disciplines and professional settings. Students will produce a variety of texts designed to meet the needs of specific audiences.

ENGL 532 Origins and Early Development of the British Novel to 1800 (3 Credit Hours)

A study of early British novels and how the novel genre developed from and in relation to other traditions such as the epic, romance, criminal biography, periodical journalism, and travel narrative.

ENGL 533 Victorian Literature (3 Credit Hours)

A study of the chief writers and the cultural and philosophical backgrounds of the Victorian era, touching on the changes from the early to the later part of the period. Works analyzed include fiction, nonfiction prose, and poetry.

ENGL 535 Management Writing (3 Credit Hours)

This course focuses on writing as a means of making and presenting management decisions.

ENGL 536 Writing for the Government (3 Credit Hours)

This course will focus on writing for a number of government agencies through the application of rhetorical theory. The course will apply theory to practice in the process of assessing audience, context, and genre, as well as ethical writing practices.

ENGL 538 The Twentieth-Century British Novel (3 Credit Hours)

Examination and analysis of a variety of novels in their editorial and cultural contexts.

ENGL 539 Writing in Digital Spaces (3 Credit Hours)

This course will teach students the rhetorically sound development of digital media for a range of audiences within a variety of possible digital contexts through discussion of accessibility and the application of fundamentals of usability studies.

ENGL 540 General Linguistics (3 Credit Hours)

An introduction to linguistic analysis of world languages. Emphasis is on the analysis of sound systems (phonetics, phonology) and the structure of words and sentences (morphology and syntax).

ENGL 541 American Travel Literature (3 Credit Hours)

This is a survey course that examines the American experience, American identity and American culture through travel "texts" that include prose, poetry, art, and film. The course takes an interdisciplinary American Studies approach, using lenses such as race, gender, and class.

ENGL 542 English Grammar (3 Credit Hours)

This course is a descriptive study of English grammar as it relates to the contexts in which it is used, with implication for grammar pedagogy and TESOL classrooms.

ENGL 543 Southern and African American English (3 Credit Hours)

This course focuses on the linguistic diversity of the American South, with an emphasis on different dialects and cultures throughout the region. In addition to consideration of the variation in the language system, it examines the social salience of stigmatized Southern varieties and dialect discrimination, directed towards Southern and African American speakers both inside and out of the South.

ENGL 544 History of the English Language (3 Credit Hours)

A study of the origins and development of the English language. Focus is on the changes of sounds, words, and language structures across time, with deep consideration of the social and cultural factors that shape the history of English.

ENGL 545 Forensic linguistics (3 Credit Hours)

The course is an introduction to forensic linguistics—the application of linguistic analysis to language as used in legal contexts (e.g., federal, state, and local code, legal documents, government and the judicial process, etc.). Course topics include interaction in the legal process (interviews, interrogations, courtroom discourse), authorship analysis, speaker identification and profiling, multilingualism, trademarks and product warnings, language and sexual crimes, and terrorism. Students become familiar with debates in the forensic domain, theoretical issues, and tools of analysis that are suited to forensic work.

ENGL 547 The American Novel to 1920 (3 Credit Hours)

Examination of the American novel from its origins in the late eighteenth century through World War I. The course will emphasize the novel as a genre, cultural trends during the period, and such relevant literary modes as romanticism, realism, and naturalism.

ENGL 548 The American Novel 1920 to Present (3 Credit Hours)

Examination of the American novel from the end of World War I to the present day. The course will emphasize formal issues related to the genre of the novel and relevant literary and cultural trends during the period including modernism and postmodernism.

ENGL 549 Craft of Literary Nonfiction (3 Credit Hours)

A detailed study of technique in literary nonfiction with an emphasis on the memoir, the essay, reportage, and travel narrative. Especially designed for, but not limited to, creative writing students; supplements the creative writing workshops.

ENGL 550 American English (3 Credit Hours)

When people think of 'American English,' they usually have a standard form in mind. In this course, we focus on the variety of ways English is spoken in the U.S. and the social meaning of that variation. We also discuss language-based discrimination and strategies that can be used to confront it. Models for collecting, describing, and analyzing variation in American English are introduced and applied to real-life situations.

ENGL 551 Advanced Fiction Workshop (3 Credit Hours)

This course, an expansion of the principles and techniques learned in ENGL 451, focuses on the writing and criticism of the short story, the novella, and the novel. May be repeated for credit.

ENGL 552 Advanced Poetry Workshop (3 Credit Hours)

This course, an expansion of the principles and techniques learned in ENGL 452, focuses on the writing and criticism of poetry. May be repeated for credit.

Prerequisites: ENGL 352 or permission of the instructor, based on writing samples submitted

ENGL 554 Creative Nonfiction (3 Credit Hours)

A course in the techniques of writing nonfiction imaginatively within a factual context. Emphasis is placed on concern for reader psychology, selection of significant detail, and the development of a style at once lively and lucid. Assignments are made individually with regard to the student's field of interest - history, biography, science, politics, informal essay, etc. Advice is given on the marketing of promising manuscripts. May be repeated for credit.

Prerequisites: ENGL 327W or ENGL 351 or permission of the instructor, based on writing samples submitted

ENGL 555 The Teaching of Composition, Grades 6-12 (3 Credit Hours)

A study of the theory and practice of teaching writing. Special attention will be given to the ways effective teachers allow theories and experiences to inform their pedagogical strategies.

ENGL 556 The Craft of Fiction (3 Credit Hours)

A detailed study of fictional technique in the novel and short story, with emphasis on character development, conflict, point of view, plot, setting, mood, tone, and diction. Especially designed for, but not limited to, creative writing students; supplements the creative writing workshops.

ENGL 557 The Craft of Poetry (3 Credit Hours)

A detailed study of technique in poetry, with emphasis on form, imagery, rhythm, and symbolism. Especially designed for, but not limited to, creative writing students; supplements the creative writing workshops.

ENGL 559 New Literatures in English (3 Credit Hours)

A study of the diverse 'new' literatures in English of the Caribbean and Central America, Africa, India, as well as of Canada and Australia, in their current historical and political contexts.

ENGL 561 American Poetry of the Early Twentieth Century (3 Credit Hours)

Works of important American poets from 1900-1945 are studied.

ENGL 563 Women Writers (3 Credit Hours)

This course applies concepts developed through women's and gender studies scholarship using intersectional feminist frameworks that acknowledge the socially constructed nature of the word 'woman' to interpret and analyze works by writers who identify as women and speak from diverse perspectives. This is a writing intensive course.

ENGL 564 Native American Literature (3 Credit Hours)

This class offers an investigation of Native American literature both past and present and seeks to foster an appreciation for indigenous cultures, traditions, and the ongoing concerns that inform so much of Native literary output. By privileging Native centered approaches to narrative and history-keeping, the course hopes to promote a greater understanding of the issues Native peoples faced in the colonial milieu and the continued implications of those histories for Native communities and indigenous identities today.

ENGL 565 African-American Literature (3 Credit Hours)

An investigation of how African American literature has innovated, influenced, and been influenced by literary movements, historical events, social transitions, and political upheavals.

ENGL 566 Asian American Literature (3 Credit Hours)

The course introduces students to key texts in Asian American literature, supported by critical studies (and on occasion films) to interrogate the theme of Asian American identities in their multiple forms. The course will examine sociopolitical histories that undercut the literature, and the contributions of Asian American writers to the breadth and scope of American as well as global literatures today.

Prerequisites: Permission of the instructor

ENGL 573 Writing with Video (3 Credit Hours)

This course engages students in a comprehensive exploration of video as a rhetorical narrative medium, with emphasis on the actual production of video work. Writing is also integrated into the production process. From brainstorming to storyboarding and critique, writing is positioned as an integral part of the course.

ENGL 577 Language, Gender and Power (3 Credit Hours)

This class explores social hierarchy through the lenses of language and power. Using the metaphor of the 'cultural food chain' for the social order (gender, race, class, sexual orientation, and other aspects of personhood), we examine how language is central to reproducing hierarchies as well as confronting and disrupting them.

ENGL 582 Sports Journalism (3 Credit Hours)

This is primarily a sportswriting course in which students are introduced to various types and styles of sports stories that are representative of sports journalism as practiced in newspapers and magazines. The course also explores the role of sports in American society.

ENGL 583 Reporting and News Writing II (3 Credit Hours)

Designed to familiarize students with the fundamentals of beat reporting and its practice in the multi-media environment of 'converged' newsrooms. The course emphatically focuses on writing but also provides instruction on how the tools and techniques of multimedia platforms are used to enhance storytelling. Emphasis is also placed on accessing information through web-based resources and government documents.

ENGL 584 Feature Story Writing (3 Credit Hours)

Course includes discussion and practice of writing a variety of newspaper and magazine feature stories. Students will write and critique stories on people, places, businesses, trends, and issues. Assistance is given in the marketing of manuscripts.

ENGL 585 Editorial and Persuasive Writing (3 Credit Hours)

A study of the practice and function of writing editorials, commentary, reviews and columns for newspapers and online media. Lectures will focus on the techniques of crafting a persuasive argument, content analyses of Pulitzer Prize-winning editorials and columns, and guest lectures by newspaper editorial writers.

ENGL 586 Media Law and Ethics (3 Credit Hours)

Designed to introduce students to components of communication law that may affect the professional writer or broadcaster. Topics include defamation, constitutional constraints, freedom of information, privacy, copyright, and telecommunications law. Ethical issues relating to the mass media will also be examined.

ENGL 590 Professionalization in English (1-3 Credit Hours)

Advanced study of career opportunities and industry trends across a variety of fields, with a focus on reflection, synthesis, and professional development. Students will prepare a major project—as well as materials for career or educational advancement—and will discuss the nature, purpose, and value of an English degree.

Prerequisites: restricted to MA in English students

ENGL 592 Modern World Drama (3 Credit Hours)

A comparative study of selected major dramatic works of the world, featuring texts drawn from a range of cultures from around the globe. The course will begin in the late nineteenth century and continue to the present. Works written in languages other than English will be read in translation.

ENGL 593 Contemporary World Literature (3 Credit Hours)

Fiction, poetry, and plays written during the last fifty years in nations throughout the world. Most texts will have been written originally in languages other than English. The course will focus on the comparative study of works produced in a variety of cultural contexts, and will explore a range of approaches to defining or circumscribing world literature.

ENGL 595 Topics in English (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, because of their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

ENGL 596 Topics in English (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, because of their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: Permission of the instructor

ENGL 600 Introduction to Research and Criticism (3 Credit Hours)

Required of most graduate students in English, usually in the first semester. Survey of English as an academic discipline; issues and trends in scholarly journals; research strategies and conventions for graduate-level papers and master's theses; critical approaches to literature.

ENGL 615 Shakespeare (3 Credit Hours)

An application of advanced theoretical and critical approaches to Shakespeare's works. May be repeated more than once for credit if different group of works or themes is being studied.

ENGL 642 Nineteenth-Century British Novel (3 Credit Hours)

A study of 19th Century British novels in context of the economic, social, and political issues of the period, emphasizing their formal and aesthetic concerns.

ENGL 650 Creative Writing (3 Credit Hours)

Guided study and practice in writing short stories, novels, poetry, and creative nonfiction, offered in specific sections of Fiction, Poetry, and Nonfiction. This course can be repeated for credit. Students planning to write a creative thesis must take this course at least twice with their thesis director.

Prerequisites: Admission to the MFA program and permission of the instructor

ENGL 659 American Literature 1945-Present (3 Credit Hours)

Intensive study of a variety of texts from several genres reflecting the historical forces, aesthetic movements, social trends, and representative works of the period.

ENGL 660 Craft of Literary Forms (3 Credit Hours)

A detailed study of the techniques of fiction, nonfiction, and poetry with some emphasis given to the various theories informing the genres.

Prerequisites: Graduate standing and permission of instructor

ENGL 661 Craft of Poetry (3 Credit Hours)

A detailed study of the techniques of poetry with some emphasis on the various theories informing the genre.

Prerequisites: Graduate standing and permission of instructor

ENGL 662 Cybercultures and Digital Writing (3 Credit Hours)

In this course, students will explore the social, theoretical, and cultural implications of composing with the ever-evolving digital writing technologies. They will also consider how to study the practices the writers use to compose with these technologies.

Prerequisites: three units of digital writing or instructor's permission

ENGL 664 Teaching College Composition (3 Credit Hours)

An intensive examination of alternative approaches to teaching first-year and advanced composition at the college level, with special attention to current schools of composition theory and research.

ENGL 665 Teaching Writing with Technology (3 Credit Hours)

Students in this course will explore different writing environments and educational applications and learn how they are designed to help writers compose, collaborate, research, and think. Students will assess the values and theoretical assumptions underlying those applications and learn to articulate their own philosophies of using technologies in the writing classroom.

Prerequisites: ENGL 539 and either ENGL 555 or ENGL 664

ENGL 668 Graduate Internship and Project in Professional Writing (1-3 Credit Hours)

Structured work experience involving extensive writing and editing in a professional setting. The result of the internship is an analytic paper and a portfolio of written work.

Prerequisites: 15 graduate credits in English

ENGL 670 Methods and Materials in TESOL (3 Credit Hours)

The course is a practical introduction to methods, materials, and course organization in Teaching English to Speakers of Other Languages (TESOL). It includes topics such as teaching language skills (reading, writing, speaking, and listening), language assessment, teaching language in its cultural context, technology-enhanced language teaching and learning, and others.

ENGL 671 Phonology (3 Credit Hours)

The course is an introduction to the sounds and sound systems of natural languages with a particular focus on how sounds are produced and how they interact with one another in a stream of speech. It examines a variety of prosodic features of speech, including syllable structure, tone and stress, and connects the application of various phonological theories to language learning and teaching.

Pre- or corequisite: ENGL 540 is recommended

ENGL 672 Language Structure Analysis (3 Credit Hours)

The course is a survey of the structure of mainstream English and focuses on language structure analyses in relation to the context of use and the speakers/writers who use it. It is based on a descriptive approach to the study of English across registers and genres and addresses language issues that may be problematic for English language users.

Pre- or corequisite: ENGL 540 is strongly recommended

ENGL 673 Discourse Analysis (3 Credit Hours)

The course is a survey of approaches to the analysis of spoken and written discourse. Readings and assignments emphasize issues related to transcription methods, conversational discourse, narrative, social interaction, the influence of prior discourses on texts, and relationships between discourse and power.

ENGL 674 Internship in Applied Linguistics (3 Credit Hours)

A structured work experience involving teaching or work in applied linguistics in a professional setting. To be documented by a portfolio of written work.

Prerequisites: 12 graduate credits in linguistics

ENGL 675 Practicum in TESOL (3 Credit Hours)

Supervised practice in teaching English to speakers of other languages. Available to those enrolled in the M.A. in Applied Linguistics or TESOL Certificate who have completed core courses.

Prerequisites: ENGL 670 and permission of the instructor

ENGL 677 Language and Communication Across Cultures (3 Credit Hours)

This course addresses the connections between language and culture both in terms of the ways in which language may encode aspects of culture similarly or differently as well as how cultural assumptions are often made based on linguistic differences across cultures. Readings and discussions also address the effects of culture on intercultural communication.

ENGL 678 Sociolinguistics (3 Credit Hours)

Sociolinguistics is the study of language in its social context with emphasis on ethnography and other qualitative methods, quantitative methods, and linguistic and social differentiation between individuals and groups.

ENGL 679 First and Second Language Acquisition (3 Credit Hours)

The course is an overview of first and second language acquisition with an emphasis on examining evidence about second language learning which supports or fails to support different approaches to teaching other languages. It outlines the complexities and the interdisciplinarity of the field of language acquisition and introduces various research methods used in this area of inquiry.

ENGL 681 Contemporary Classics: The Thesis Reading List (3 Credit Hours)

This course offers students enrolled in the MFA in Creative Writing program the opportunity for rigorous study of contemporary master works in a particular genre. Designed to provide students with the opportunity to deeply investigate contemporary works for the required thesis reading list, this course counts as one of the literature requirements for the MFA degree. The course is best suited for students in the second year of the program; however, any MFA student may register. The course cannot be repeated for credit.

Prerequisites: Graduate standing and permission of instructor

ENGL 682 Literature for Writers (3 Credit Hours)

This course is designed to guide MFA creative writing students in an investigation of the historical works for the required thesis reading lists. Most course work will be individualized and flexible. Students in all genres will define the literary traditions they are operating in and study some of the foundational texts that inform those traditions.

Prerequisites: Graduate standing and permission of instructor

ENGL 683 Literary Editing and Publishing (3 Credit Hours)

This course is for MFA Creative Writing students, and is meant to provide basic concepts of literary editing and publishing, theoretical and practical frameworks, and hands-on/internship types of experiences managing/reading/editing for the MFA program's literary journal, Barely South Review. This course can count once toward elective credit in the MFA curriculum and may not be repeated for credit.

Prerequisites: Students must be in good graduate standing and must have earned at least 9 credit hours in the MFA program

Pre- or corequisite: This course is a corequisite for actual internship work in the journal, though students who take this course are NOT automatically guaranteed a staff position in the journal

ENGL 685 Writing Research (3 Credit Hours)

This course explores current methods and methodologies in writing research. Students will design and carry out original studies of academic, professional, or personal writing as it is practiced in classrooms, work places, and other settings.

Prerequisites: 6 graduate credits in English

ENGL 686 Introduction to Rhetoric and Writing Studies (3 Credit Hours)

This course presents key concepts, principles, traditions, and conversations that define the field of rhetoric and composition, surveying major texts, movements, issues, and methodologies. This course is designed primarily to prepare students for advanced courses in professional writing; however, it will also benefit any student who is interested in gaining insights about language, knowledge, and power from the perspective of rhetoric.

ENGL 687 Colloquium for Teachers of English (3 Credit Hours)

This course discusses theories of teaching, writing and literature and helps explore the challenges facing 21st century educators in terms of finding ways to reach the 21st century student. The course investigates ways to help students understand the inherent value of reading and writing. Additionally, the course looks at pedagogical models and examines how they can be applied to individual areas of expertise. May be repeated for credit when topic varies.

ENGL 694 Thesis Colloquium (3 Credit Hours)

All MFA students are required to take ENGL 694 before their final semester. The course brings together all genres in a collaborative focus in which students discuss specific thesis projects, format requirements, publishing opportunities and reading lists for the 10-page prefatory essay required for their defense.

Prerequisites: May be taken after 24 graduate hours have been completed

ENGL 695 Topics (1-3 Credit Hours)

The advanced study of a selected topic in English. Topics courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

ENGL 696 Independent Readings (3 Credit Hours)

Designed for the advanced student (15-20 hours) who wants to study in-depth a sharply focused area of literature, linguistics, or pedagogy. Before registering for the course, the student must make out a prospectus with the instructor and submit it. No graduate student is permitted to take more than two independent readings courses.

ENGL 697 Portfolio Preparation (3 Credit Hours)

Preparatory course designed to assist students in the development of a professional or teaching portfolio. Students will consult regularly with their committee.

Prerequisites: 21 credit hours of course work completed

ENGL 698 Thesis Research (1-9 Credit Hours)

Preparatory course designed to assist students in the writing of a thesis. Students will consult regularly with the faculty.

Prerequisites: Instructor approval and completion of 30 hours of course work required

ENGL 699 Thesis (1-9 Credit Hours)

Writing of the creative thesis.

Prerequisites: Instructor approval and completion of 30 hours of course work required

ENGL 701 Texts and Technologies (3 Credit Hours)

Tracing the development of writing technologies from Ancient Greece through contemporary blogs and wikis, this course focuses on the relationships between a text's physical qualities and its composition, production, and reception.

ENGL 703 Technologies of the Book (3 Credit Hours)

This course explores the history and future of the book, print technology, the way books are made, shared, collected, preserved, and discarded, and the status of the book within larger information systems—archives, libraries, and private collections—in the digital age. How do we reconceive the book and its place in the increasingly digital cultural archive?

ENGL 705 Discourse and Rhetoric Across Cultures (3 Credit Hours)

The course is a survey of language use both within and across cultures. Topics include relationships between language and conceptualization (linguistic relativity); description and interpretation of linguistic and rhetorical patterns; the organization, expression, and analysis of cultural meaning (e.g. frames, cultural models, narratives); relational aspects of language use; and literacy practices.

ENGL 706 Visual Rhetoric and Document Design (3 Credit Hours)

This course focuses on how visual elements work within different types of documents. Theory and research in visual rhetoric and technical communication will be used to develop models for how people process visual information in a variety of social and cultural contexts.

ENGL 710 Major Debates in English Studies (3 Credit Hours)

This course introduces students to the principal questions and concerns of the field and includes a comparison and contrast of the specialties in English, including how they form and address key issues.

Prerequisites: Reserved for degree seeking students in the PhD in English program

ENGL 715 Technical Communication Theories and Practices (3 Credit Hours)

This course surveys the history of technical communication and explores competing theories and research methodologies in the field. The tensions between workplace practices, technical communication scholarship, and technical communication pedagogy will also be explored.

ENGL 717 Teaching Professional and Technical Writing (3 Credit Hours)

This course introduces students to the field of technical communication by way of classroom practice with the goal of professionalizing students as teachers of technical communication (or technical writing). Students are asked to design undergraduate course materials and projects, which will be informed by exploration of the extensive boundaries of the field and critical consideration of the most pressing questions facing technical communication scholars and the most common problems facing technical communication practitioners today.

Prerequisites: ENGL 715 recommended

ENGL 720 Pedagogy and Instructional Design (3 Credit Hours)

Students in this course will be prepared to develop pedagogical plans, teach and assess writing in four instructional areas: advanced and professional writing courses, writing across the curriculum, workplace instruction, and distributed learning. New pedagogical tools, especially computer-based technologies, will be taught, analyzed and tested.

ENGL 721 Compositions as Applied Rhetoric (3 Credit Hours)

Students will examine how the field of rhetoric has shaped composition pedagogy in the United States from its inception at Harvard to postmodern possibilities of today's writing classroom.

Prerequisites: 3 credits of a graduate level rhetoric or composition course or instructor's permission

ENGL 722 Multilingualism and Writing Instruction (3 Credit Hours)

Examines the social and institutional contexts that shape the expectations placed on writing instruction, the cross-cultural issues that affect how multilingual students compose English texts, and the curricular strategies for designing assignments and assessing multilingual writers' work.

ENGL 724 Online Writing Instructions (3 Credit Hours)

Students will learn how to negotiate the intersection between online instruction and writing pedagogy by exploring and interrogating the ways that various means of course mediation shapes the literacy pedagogy an instructor can develop. ENGL 664 is recommended as a prerequisite.

ENGL 725 Scholarly Editing and Textual Scholarship (3 Credit Hours)

Surveys the theory and practice of scholarly editing, of the physical description of texts as material artifacts, and of the historical and social contextualization of texts as material artifacts. Focus is on texts produced in manuscripts and print, but consideration is given to oral texts and digital texts.

Prerequisites: Instructor approval required

ENGL 726 The British Periodical Press (3 Credit Hours)

A study of the British periodical press from the 1700s to c.1900 as an archival object revealing the life and culture of the Enlightenment, Romantic, and Victorian Eras. The course considers the sociocultural function of newspapers, monthlies, annuals, and serial novels, and critiques material and digital archival work.

ENGL 727 London Calling: 20th and 21st Century British Literature (3 Credit Hours)

Studies of major poets, dramatists and prose writers. Some attention will be given to the movements, trends, forces, and ideas of the period. The course coheres around a pertinent theme, historical moment, genre, or theoretical inquiry.

ENGL 728 Eighteenth Century British Literature (3 Credit Hours)

A study of the literature written in the British Isles from the “Glorious Revolution” of 1688 until 1800, focusing on how the flowering of satire and the emergence of new literary forms such as periodical journalism, the novel, and “mock heroic” poetry interacted with the growth of distinctly modern institutions and philosophies such as a free, commercial press, market capitalism, colonialism, political radicalism, and industrialism.

ENGL 730 The Digital Humanities (3 Credit Hours)

Taking historical, cultural, and theoretical views, this course bridges literary studies with new media. How has technology historically affected literature and culture? Can the democratization of information accelerate literary development? Topics will include digital archives, intellectual property in the information age, and electronic textuality.

ENGL 732 Digital Activisms (3 Credit Hours)

An exploration of the diffuse and disparate methods and practices of contemporary digital activism.

ENGL 734 Theories of Networks (3 Credit Hours)

An increasing amount of scholarship in English studies focuses on the networked interactions between texts and other texts, people, technologies, etc. To account for these various types of relationships between different types of objects a number of theories of networks have emerged. This course considers key theoretical discussions that work to define nodes, relationships between them, and how networks emerge, grow, and/or dissolve.

ENGL 735 Postcolonial Literature and Theory (3 Credit Hours)

An examination of the discourse of postcolonial critical theory literature produced in postcolonial, diasporic and global contexts.

Prerequisites: Any equivalent graduate level critical theory course or instructor permission

ENGL 736 (Against) World Literature (3 Credit Hours)

Analyzes world literature's disciplinary affordances and limitations and considers world literature's tensions with comparative literature. Students examine a theme, genre, or other literary topic as it appears in the literature of several countries. All works are assigned in English translation if not originally written in English.

ENGL 737 Narratology (3 Credit Hours)

A study of the various theories that have emerged since the early twentieth century about the form, history, and cultural significance of narrative as a specific discursive mode. Theories will range from structuralist approaches to narrative elements like plot, perspective, and voice, to politically-engaged theories like Marxist, Feminist, and Queer narratology, as well as to more recent theories such as Storyworld/Possible Worlds theory. The focus will be on linguistic, “literary” narratives, but narratives in other media (such as film or graphic novels) and other genres (such as historiography) will be also be studied.

ENGL 740 Empirical Research Methods and Project Design (3 Credit Hours)

This course focuses on the theory and design of empirical research conducted in academic and nonacademic settings. Students will examine the methodological complexities of several different approaches and conduct empirical research projects in English studies.

Prerequisites: Reserved for degree seeking students in the PhD in English program

ENGL 741 Nineteenth Century British Literature (3 Credit Hours)

A study of a selection of the literature written in Britain during the romantic and Victorian ages, focusing on the social, historical, and ideological contexts informing its production. Texts analyzed include poetry, fiction, and nonfiction.

ENGL 750 Service Learning in English Studies (3 Credit Hours)

Students will engage in service-learning activities and apply various concepts and skills from their experience and coursework to identify and respond to the needs in the community. An analytical paper and portfolio of service-learning materials are required.

Prerequisites: Instructor approval required

ENGL 751 American Literature to 1810 (3 Credit Hours)

Intensive study of a variety of texts from several genres reflecting the historical forces, aesthetic movements, social trends, and representative works of the period.

ENGL 753 Queer of Color Critique (3 Credit Hours)

This course works in and between the complex intersectional crossroads of critical race and sexuality studies, Black queer/quare studies, and performance studies. Insisting upon the inextricability of racial subjectivity, gender expression, and sexual orientation, it offers a study of critique, literature, and performance at the intersections of Black/Latinx social identities and movements in a US context, while remaining attentive to diasporic and global networks of people and power.

ENGL 754 Cultural Studies (3 Credit Hours)

A study of the historical formation of cultural studies and the theoretical principles that underwrote its emergence, development, and institutional adaptation.

ENGL 755 Critical Race Theory (3 Credit Hours)

The goal of this course is to examine various approaches to Critical Race Studies and, in light of its theoretical commitments, explore its problems, possibilities, and limitations. How might we better understand our history and contemporary politics through the methodologies of critical race theory? Does critical race theory open up new areas for exploration or does it make our understanding of race and ethnicity more indefinite? Such an exploration will require us to think carefully about race and racism, but also other forms of identity like gender, class, and sexuality.

ENGL 756 Pocahontas Unplugged: Jamestown, Pocahontas and the Forging of American Identity (3 Credit Hours)

An investigation of the cultural discourse surrounding the figure of Pocahontas in Early American literature and history, observing its construction within the dominant archive and its performance over a period of four centuries. Also seeks to understand Pocahontas from within local indigenous traditions and a larger network of indigenous agency.

ENGL 757 American Literature 1810-1870 (3 Credit Hours)

An intensive study of a variety of texts from several genres reflecting the historical forces, aesthetic movements, social trends, and representative works of the period.

ENGL 758 American Literature 1870-1946 (3 Credit Hours)

Intensive study of a variety of texts from several genres reflecting the historical forces, aesthetic movements, social trends, and representative works of the period.

ENGL 760 Classical Rhetoric and Theory Building (3 Credit Hours)

Analysis and discussion of classical theories of rhetoric, with attention to how rhetoric describes discourse in the public sphere.

ENGL 763 Seminar in Discourse Analysis (3 Credit Hours)

This course introduces students to the methodological and analytical approaches to discourse analysis. Students explore what it means to engage in meaningful, grounded, data-driven research through an examination of original research articles and by designing and conducting their own discourse analysis research project.

ENGL 764 Theories of Literature (3 Credit Hours)

An in-depth study of selected theories about the form, history, and cultural significance of literature, such as narrative theory, poststructuralism, Marxism, and feminism. Specific topics may vary by semester, but all sections will engage comprehensively with a body of theoretical texts and concerns.

ENGL 765 Modern Rhetoric and Theory Building (3 Credit Hours)

This course concerns the development of rhetoric as an academic discipline in the twentieth century, in particular how rhetoric has distinguished itself from literary, historical, philosophical, and linguistic modes of inquiry.

ENGL 766 New Media Theory and Practice I (3 Credit Hours)

This course involves hands-on instruction in a variety of software packages used to create websites and multi-media projects. Students will explore the rhetorical, literary, and technical aspects of their own projects as well as other web-based and multi-media compositions/products.

ENGL 770 Research Methods in Language Analysis (3 Credit Hours)

The course introduces general concepts, research methods, and techniques used in language analysis. Both quantitative and qualitative approaches are discussed, including the use of surveys, case studies, and experimental study designs. Two main goals are emphasized: To become a better reader of research reports and to develop research and analytical skills applicable to the analyses of spoken and written language. Previous research-oriented coursework or experience is strongly recommended.

ENGL 771 New Media Theory and Practice II (3 Credit Hours)

This course builds on the study of new media textual production and consumption in English Studies begun in New Media Theory and Practice I and gives students the opportunity to engage in more advanced theoretical and production work. This course will focus on the integration of multiple modes and media using a variety of software and hardware.

Prerequisites: ENGL 766

ENGL 775 Seminar in English Studies - Pedagogy and Curriculum Design (3 Credit Hours)

This course introduces students to literacy theory and challenges them to apply it in specific disciplines within English Studies.

Prerequisites: ENGL 720 or ENGL 820 recommended

ENGL 778 Seminar in Sociolinguistics (3 Credit Hours)

This seminar focuses on language in society, with emphasis on the everyday types of speech that people use to situate themselves in social worlds. Topics include ethnography of communication, language ideologies, linguistic style and stance, social and regional variation, and qualitative and quantitative methods of analysis.

ENGL 780 Corpus Use, Research, and Material Design (3 Credit Hours)

The course provides a hands-on introduction to the use of corpora in language studies, register, and genre analysis in combination with other methodologies. It is a survey of existing English language corpora and the central concepts and methods of corpus-based language analysis and material design. The main focus is on the use of corpora as a resource for research, teaching, and learning.

ENGL 783 Seminar in Professional Writing (3 Credit Hours)

This course will provide an intensive examination of a specific topic or issue in professional writing and serve as a field course for Professional Writing and New Media.

Prerequisites: Instructor approval

ENGL 790 Seminar in Textual Studies (3 Credit Hours)

This course will provide an intensive examination of a specific topic or issue in textual studies and serve as a field course for Rhetoric and Textual Studies.

Prerequisites: Instructor approval

ENGL 791 Seminar in Literary Studies (3 Credit Hours)

Intensive seminar in a variable topic within literary or literary/cultural studies.

ENGL 793 Seminar in Rhetoric (3 Credit Hours)

This course will provide an intensive examination of a specific topic or issue in rhetoric and serve as a field course for rhetoric and textual studies.

Prerequisites: Must be enrolled in a graduate program

ENGL 794 Seminar in New Media (3 Credit Hours)

This course will provide an intensive examination of a specific topic or issue in new media and serve as a field course for Professional Writing and New Media.

Prerequisites: Instructor approval

ENGL 795 Topics (3 Credit Hours)

Variable course material for students in the Ph.D. in English degree program.

Prerequisites: must be enrolled in a graduate program

ENGL 797 Independent Study in English (3 Credit Hours)

Provides opportunities for doctoral students to do independent research in areas of their interests. Hours to be arranged.

Prerequisites: graduate standing

ENGL 801 Texts and Technologies (3 Credit Hours)

Tracing the development of writing technologies from Ancient Greece through contemporary blogs and wikis, this course focuses on the relationships between a text's physical qualities and its composition, production, and reception.

ENGL 803 Technologies of the Book (3 Credit Hours)

This course explores the history and future of the book, print technology, the way books are made, shared, collected, preserved, and discarded, and the status of the book within larger information systems—archives, libraries, and private collections—in the digital age. How do we reconceive the book and its place in the increasingly digital cultural archive?

ENGL 805 Discourse and Rhetoric Across Cultures (3 Credit Hours)

The course is a survey of language use both within and across cultures. Topics include relationships between language and conceptualization (linguistic relativity); description and interpretation of linguistic and rhetorical patterns; the organization, expression, and analysis of cultural meaning (e.g. frames, cultural models, narratives); relational aspects of language use; and literacy practices.

ENGL 806 Visual Rhetoric and Document Design (3 Credit Hours)

This course focuses on how visual elements work within different types of documents. Theory and research in visual rhetoric and technical communication will be used to develop models for how people process visual information in a variety of social and cultural contexts.

ENGL 810 Major Debates in English Studies (3 Credit Hours)

This course introduces students to the principal questions and concerns of the field and includes a comparison and contrast of the specialties in English, including how they form and address key issues

Prerequisites: Reserved for degree seeking students in the PhD in English program

ENGL 815 Technical Communication Theories and Practices (3 Credit Hours)

This course surveys the history of technical communication and explores competing theories and research methodologies in the field. The tensions between workplace practices, technical communication scholarship, and technical communication pedagogy will also be explored.

ENGL 817 Teaching Professional and Technical Writing (3 Credit Hours)

This course introduces students to the field of technical communication by way of classroom practice with the goal of professionalizing students as teachers of technical communication (or technical writing). Students are asked to design undergraduate course materials and projects, which will be informed by exploration of the extensive boundaries of the field and critical consideration of the most pressing questions facing technical communication scholars and the most common problems facing technical communication practitioners today.

ENGL 820 Pedagogy and Instructional Design (3 Credit Hours)

Students in this course will be prepared to develop pedagogical plans, teach and assess writing in four instructional areas: advanced and professional writing courses, writing across the curriculum, workplace instruction, and distributed learning. New pedagogical tools, especially computer-based technologies, will be taught, analyzed and tested.

ENGL 821 Compositions as Applied Rhetoric (3 Credit Hours)

Students will examine how the field of rhetoric has shaped composition pedagogy in the United States from its inception at Harvard to postmodern possibilities of today's writing classroom.

Prerequisites: 3 credits of a graduate level rhetoric or composition course or instructor's permission

ENGL 822 Multilingualism and Writing Instruction (3 Credit Hours)

Examines the social and institutional contexts that shape the expectations placed on writing instruction, the cross-cultural issues that affect how multilingual students compose English texts, and the curricular strategies for designing assignments and assessing multilingual writers' work.

ENGL 824 Online Writing Instruction (3 Credit Hours)

Students will learn how to negotiate the intersection between online instruction and writing pedagogy by exploring and interrogating the ways that various means of course mediation shapes the literacy pedagogy an instructor can develop.

ENGL 825 Scholarly Editing and Textual Scholarship (3 Credit Hours)

Surveys the theory and practice of scholarly editing, of the physical description of texts as material artifacts, and of the historical and social contextualization of texts as material artifacts. Focus is on texts produced in manuscripts and print, but consideration is given to oral texts and digital texts.

Prerequisites: Instructor approval required

ENGL 826 The British Periodical Press (3 Credit Hours)

A study of the British periodical press from the 1700s to c.1900 as an archival object revealing the life and culture of the Enlightenment, Romantic, and Victorian Eras. The course considers the sociocultural function of newspapers, monthlies, annuals, and serial novels, and critiques material and digital archival work.

ENGL 827 London Calling: 20th and 21st Century British Literature (3 Credit Hours)

Studies of major poets, dramatists and prose writers. Some attention will be given to the movements, trends, forces, and ideas of the period. The course coheres around a pertinent theme, historical moment, genre, or theoretical inquiry.

ENGL 828 Eighteenth Century British Literature (3 Credit Hours)

A study of the literature written in the British Isles from the “Glorious Revolution” of 1688 until 1800, focusing on how the flowering of satire and the emergence of new literary forms such as periodical journalism, the novel, and “mock heroic” poetry interacted with the growth of distinctly modern institutions and philosophies such as a free, commercial press, market capitalism, colonialism, political radicalism, and industrialism.

ENGL 830 The Digital Humanities (3 Credit Hours)

Taking historical, cultural, and theoretical views, this course bridges literary studies with new media. How has technology historically affected literature and culture? Can the democratization of information accelerate literary development? Topics will include digital archives, intellectual property in the information age, and electronic textuality.

ENGL 832 Digital Activisms (3 Credit Hours)

An exploration of the diffuse and disparate methods and practices of contemporary digital activism.

ENGL 834 Theories of Networks (3 Credit Hours)

An increasing amount of scholarship in English studies focuses on the networked interactions between texts and other texts, people, technologies, etc. To account for these various types of relationships between different types of objects a number of theories of networks have emerged. This course considers key theoretical discussions that work to define nodes, relationships between them, and how networks emerge, grow, and/or dissolve.

ENGL 835 Postcolonial Literature and Theory (3 Credit Hours)

An examination of the discourse of postcolonial critical theory literature produced in postcolonial, diasporic and global contexts.

Prerequisites: Any equivalent graduate level critical theory course or instructor permission

ENGL 836 (Against) World Literature (3 Credit Hours)

This course analyzes world literature's disciplinary affordances and limitations and considers world literature's tensions with comparative literature. Students examine a theme, genre, or other literary topic as it appears in the literature of several countries. All works are assigned in English translation if not originally written in English.

ENGL 837 Narratology (3 Credit Hours)

A study of the various theories that have emerged since the early twentieth century about the form, history, and cultural significance of narrative as a specific discursive mode. Theories will range from structuralist approaches to narrative elements like plot, perspective, and voice, to politically-engaged theories like Marxist, Feminist, and Queer narratology, as well as to more recent theories such as Storyworld/Possible Worlds theory. The focus will be on linguistic, "literary" narratives, but narratives in other media (such as film or graphic novels) and other genres (such as historiography) will be also be studied.

ENGL 840 Empirical Research Methods and Project Design (3 Credit Hours)

This course focuses on the theory and design of empirical research conducted in academic and nonacademic settings. Students will examine the methodological complexities of several different approaches and conduct empirical research projects in English studies.

Prerequisites: Reserved for degree seeking students in the PhD in English program

ENGL 841 Nineteenth Century British Literature (3 Credit Hours)

A study of a selection of the literature written in Britain during the romantic and Victorian ages, focusing on the social, historical, and ideological contexts informing its production. Texts analyzed include poetry, fiction, and nonfiction.

ENGL 850 Service Learning in English Studies (3 Credit Hours)

Students will engage in service-learning activities and apply various concepts and skills from their experience and coursework to identify and respond to the needs in the community. An analytical paper and portfolio of service-learning materials are required.

Prerequisites: Instructor approval required

ENGL 851 American Literature to 1810 (3 Credit Hours)

Intensive study of a variety of texts from several genres reflecting the historical forces, aesthetic movements, social trends, and representative works of the period.

ENGL 853 Queer of Color Critique (3 Credit Hours)

This course works in and between the complex intersectional crossroads of critical race and sexuality studies, Black queer/quare studies, and performance studies. Insisting upon the inextricability of racial subjectivity, gender expression, and sexual orientation, it offers a study of critique, literature, and performance at the intersections of Black/Latinx social identities and movements in a US context, while remaining attentive to diasporic and global networks of people and power.

ENGL 854 Cultural Studies (3 Credit Hours)

A study of the historical formation of cultural studies and the theoretical principles that underwrote its emergence, development, and institutional adaptation.

ENGL 855 Critical Race Theory (3 Credit Hours)

The goal of this course is to examine various approaches to Critical Race Studies and, in light of its theoretical commitments, explore its problems, possibilities, and limitations. How might we better understand our history and contemporary politics through the methodologies of critical race theory? Does critical race theory open up new areas for exploration or does it make our understanding of race and ethnicity more indefinite? Such an exploration will require us to think carefully about race and racism, but also other forms of identity like gender, class, and sexuality.

ENGL 856 Pocahontas Unplugged: Jamestown, Pocahontas and the Forging of American Identity (3 Credit Hours)

An investigation of the cultural discourse surrounding the figure of Pocahontas in Early American literature and history, observing its construction within the dominant archive and its performance over a period of four centuries. Also seeks to understand Pocahontas from within local indigenous traditions and a larger network of indigenous agency.

ENGL 857 American Literature 1810-1870 (3 Credit Hours)

An intensive study of a variety of texts from several genres reflecting the historical forces, aesthetic movements, social trends, and representative works of the period.

ENGL 858 American Literature 1870-1945 (3 Credit Hours)

Intensive study of a variety of texts from several genres reflecting the historical forces, aesthetic movements, social trends, and representative works of the period.

ENGL 860 Classical Rhetoric and Theory Building (3 Credit Hours)

Analysis and discussion of classical theories of rhetoric, with attention to how rhetoric describes discourse in the public sphere.

ENGL 863 Seminar in Discourse Analysis (3 Credit Hours)

This course introduces students to the methodological and analytical approaches to discourse analysis. Students explore what it means to engage in meaningful, grounded, data-driven research through an examination of original research articles and by designing and conducting their own discourse analysis research project.

ENGL 864 Theories of Literature (3 Credit Hours)

An in-depth study of selected theories about the form, history, and cultural significance of literature, such as narrative theory, poststructuralism, Marxism, and feminism. Specific topics may vary by semester, but all sections will engage comprehensively with a body of theoretical texts and concerns.

ENGL 865 Modern Rhetoric and Theory Building (3 Credit Hours)

This course concerns the development of rhetoric as an academic discipline in the twentieth century, in particular how rhetoric has distinguished itself from literary, historical, philosophical, and linguistic modes of inquiry.

ENGL 866 New Media Theory and Practice I (3 Credit Hours)

This course involves hands-on instruction in a variety of software packages used to create websites and multi-media projects. Students will explore the rhetorical, literary, and technical aspects of their own projects as well as other web-based and multi-media compositions/products.

ENGL 870 Research Methods in Language Analysis (3 Credit Hours)

The course introduces general concepts, research methods, and techniques used in language analysis. Both quantitative and qualitative approaches are discussed, including the use of surveys, case studies, and experimental study designs. Two main goals are emphasized: To become a better reader of research reports and to develop research and analytical skills applicable to the analyses of spoken and written language. Previous research-oriented coursework or experience is strongly recommended.

ENGL 871 New Media Theory and Practice II (3 Credit Hours)

This course builds on the study of new media textual production and consumption in English Studies begun in New Media Theory and Practice I and gives students the opportunity to engage in more advanced theoretical and production work. This course will focus on the integration of multiple modes and media using a variety of software and hardware.

Prerequisites: ENGL 866

ENGL 875 Seminar in English Studies - Pedagogy and Curriculum Design (3 Credit Hours)

This course introduces students to literacy theory and challenges them to apply it in specific disciplines within English Studies.

Prerequisites: ENGL 720 or ENGL 820 recommended

ENGL 878 Seminar in Sociolinguistics (3 Credit Hours)

This seminar focuses on language in society, with emphasis on the everyday types of speech that people use to situate themselves in social worlds. Topics include ethnography of communication, language ideologies, linguistic style and stance, social and regional variation, and qualitative and quantitative methods of analysis.

ENGL 880 Corpus Use, Research, and Material Design (3 Credit Hours)

The course provides a hands-on introduction to the use of corpora in language studies, register, and genre analysis in combination with other methodologies. It is a survey of existing English language corpora and the central concepts and methods of corpus-based language analysis and material design. The main focus is on the use of corpora as a resource for research, teaching, and learning.

ENGL 883 Seminar in Professional Writing (3 Credit Hours)

This course will provide an intensive examination of a specific topic or issue in professional writing and serve as a field course for Professional Writing and New Media.

Prerequisites: Instructor approval

ENGL 890 Seminar in Textual Studies (3 Credit Hours)

This course will provide an intensive examination of a specific topic or issue in textual studies and serve as a field course for Rhetoric and Textual Studies.

Prerequisites: Instructor approval

ENGL 891 Seminar in Literary Studies (3 Credit Hours)

Intensive seminar in a variable topic within literary or literary/cultural studies.

Prerequisites: Student must be enrolled in doctoral program to take this course

ENGL 892 Dissertation Seminar (3 Credit Hours)

This course is taken prior to doctoral candidacy exams. It enables students to develop and refine a topic for the dissertation, do preliminary research, and construct a bibliography under the guidance of a faculty mentor. Students will also use the seminar to prepare bibliographies to be used in candidacy exams.

Prerequisites: All core, field, and elective coursework must be completed prior to enrollment

ENGL 893 Seminar in Rhetoric (3 Credit Hours)

This course will provide an intensive examination of a specific topic or issue in rhetoric and serve as a field course for rhetoric and textual studies.

Prerequisites: Must be enrolled in a graduate program

ENGL 894 Seminar in New Media (3 Credit Hours)

This course will provide an intensive examination of a specific topic or issue in new media and serve as a field course for Professional Writing and New Media.

Prerequisites: Instructor approval

ENGL 895 Topics (3 Credit Hours)

Variable course material for students in the Ph.D. in English degree program.

Prerequisites: must be enrolled in a graduate program

ENGL 897 Independent Study in English (1-3 Credit Hours)

Provides opportunities for doctoral students to do independent research in areas of their interests. Hours to be arranged.

Prerequisites: graduate standing

ENGL 898 Directed Research (1-9 Credit Hours)

This course can be taken as a supplement to the Dissertation Seminar for independent investigation in the topic for dissertation.

Prerequisites: instructor approval

ENGL 899 Dissertation (1-9 Credit Hours)

This course is to be taken only by students who have passed the candidacy exams for the purpose of researching and writing the dissertation.

Prerequisites: ENGL 892 and passing Candidacy examination

ENGL 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

ENGL 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

ENGN - Engineering

ENGN 620 The Entrepreneurial Engineer (2 Credit Hours)

This course is designed to provide engineers and engineering technologists with the knowledge, skills and experience needed to create products and services that will be attractive to consumer markets and to bring those products and services to market in new commercial ventures. Topics covered include: how to evaluate entrepreneurial opportunities in the engineering field; elements of a viable business plan; governance models; management succession planning; use of social media; and creating an ethical engineering enterprise in the global economy.

ENGN 623 Leadership and Human Dynamics for the Entrepreneurial Engineer (2 Credit Hours)

This course covers the concepts, skills, and characteristics of effective and successful entrepreneurial leaders in the 21st century. The course covers leadership for entrepreneurial engineers through case studies and literature review in areas such as the fundamentals of leadership, ethical leadership, social capital, emotional intelligence, and three-dimensional leadership.

ENGN 625 Business Planning for Entrepreneurial Engineers (2 Credit Hours)

This course is the capstone of the Entrepreneurship and Innovation graduate certificate for engineers. With data and expertise through prior certificate coursework, students develop and present a comprehensive and viable entrepreneurial business plan in engineering. Topics covered include: Product lifecycle management, marketing and strategic planning, entrepreneurial finance, and effective presentation techniques. The final presentation is delivered to a panel of ODU faculty and engineering practitioners who provide sound feedback to the student.

ENGN 630 Advanced Bioelectrics (3 Credit Hours)

A one-semester course covering advanced topics in bioelectrics. The course will cover advanced application of pulsed power and plasma in the medical, biological and environmental fields. (Cross-listed with ECE 630).

Prerequisites: bachelor's degree in physics, engineering or biology

ENGN 671 Carbon-Free Clean Energy (3 Credit Hours)

Nuclear power and nuclear energy; solar energy; wind energy; geothermal energy; hydroelectric power; hydrogen as energy resource; hydrogen fuel cells; hybrid technologies; global economics and environmental impacts of carbon-free energy.

ENGN 672 Energy Systems Management (3 Credit Hours)

System management principles; energy systems safety and security; automation and control; environmental effects and comparative risk assessment; energy storage; carbon sequestration; energy systems scale up issues; energy systems integration; hybrid systems; energy systems optimization; effects of public policies on energy systems management.

ENGN 695 Multidisciplinary Topics in Engineering (1-3 Credit Hours)

Special interdisciplinary or multidisciplinary topics of interest with emphasis on emerging areas in engineering.

ENGN 697 Independent Study in Energy Engineering (3 Credit Hours)

Individual analytical, experimental, computational and/or design study selected by the student and supervised by the course instructor.

ENGN 811 Methodologies for Advanced Engineering Projects (3 Credit Hours)

Critical evaluation of published literature; experimental design and analysis; optimization methods; pre-project planning; definition of scope, projects risks, technical, economical, social, and political constraints; execution strategies; effective proposal development.

Prerequisites: Graduate standing

ENGN 812 Engineering Leadership (3 Credit Hours)

Effective communication techniques, strategic planning, building collaborative relationships, conflict management, building high-performance teams, risk management, managing innovations.

Prerequisites: Graduate standing

ENGN 813 Engineering Ethics (3 Credit Hours)

Scope of engineering ethics, moral reasoning and ethical theories, the engineer's responsibility for safety, responsibilities to the employer, responsibilities to the public, rights of engineers, global issues, professional codes of ethics, case studies.

Prerequisites: Graduate standing

ENGN 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

ENMA - Engineering Management

ENMA 510 Agile Project Management (3 Credit Hours)

This course focuses the management of projects using an agile approach to respond to the continuous changes that affect project capabilities and performance. Although any project can be manage using agile project management, projects with high degree of uncertainty obtain the most benefits from this approach (e.g., R&D projects). The course covers Scrum and expands it by articulating the human and business factors that make successful agile project management. Case studies and/or short-projects are required.

Prerequisites: ENMA 401 or equivalent

ENMA 515 Introduction to Systems Engineering (3 Credit Hours)

Introduces the principles, concepts and process of systems engineering. Examination of problem formulation, analysis, and interpretation as they apply to the study of complex systems. Emphasizes the design nature of systems engineering problem solving, and includes case studies stressing realistic problems. Development of system requirements, system objectives, and the evaluation of system alternatives.

ENMA 595 Topics in Engineering Management (1-6 Credit Hours)

Special topics with emphasis placed on the recent developments in engineering management.

Prerequisites: permission of the instructor

ENMA 600 Cost Estimating and Financial Analysis (3 Credit Hours)

Introduction to the monetary aspects of engineering projects, including accounting principles; financial reports and analysis; capital budgeting; cost estimation and control; inventory management; depreciation; investment decisions. Knowledge of probability and statistics (ENMA 420 or equivalent) is assumed. Case studies and a term project are required.

Pre- or corequisite: ENMA 420 or equivalent

ENMA 601 Analysis of Organizational Systems (3 Credit Hours)

This course introduces the student to fundamental concepts in the analysis of organizations. A systems approach is taken in the examination of social, structural, procedural and environmental aspects that are of consequence to technical professionals and managers. Modules covered include: History and Systems of Organizations and Management; Basic Organizational Systems and Models emphasizing rational, natural and open systems; Organizational Behavior Models; Organizational Structure Models; Integration of Systems Perspectives.

ENMA 602 Systems Engineering Management (3 Credit Hours)

Students develop a comprehensive set of techniques and methods to design, maintain and evolve the systems engineering function in support of strategic enterprise objectives and operations.

ENMA 603 Operations Research (3 Credit Hours)

Deterministic and stochastic models for decision making. Topics include: optimization methods; linear and other programming models; network analysis; inventory analysis; queuing theory. Knowledge of probability and statistics (ENMA 420 or equivalent) is assumed.

ENMA 604 Project Management (3 Credit Hours)

Exploration of the systems approach to planning, scheduling, control, design, evaluation, and leadership of projects in technology-based organizations. The fundamental tools and techniques of project management; role of the project manager; project management systems; project selection; project life cycle; project monitoring and control; project management evaluation and auditing; project risk and failure analysis; contextual nature of project management; project knowledge.

ENMA 605 Program Capstone (1 Credit Hour)

A written, comprehensive demonstration of the candidate's competence in the fields covered by the program of study that is intended to fulfill the non-thesis master's examination requirement.

Prerequisites: Completion of minimum of the 18 core credit hours in program of study

ENMA 606 Engineering Law (3 Credit Hours)

Basic legal concepts and procedures for understanding the implications of engineering management decisions. Major emphasis on contracts and liability.

ENMA 607 Stochastic Decision Methods (3 Credit Hours)

Introduction to decision analysis and stochastic models; risk and uncertainty in decision making; probabilistic inventory problems; queuing theory; Markov processes; dynamic programming; Monte Carlo simulation of dynamic systems. Knowledge of probability and statistics (ENMA 420 or equivalent) is assumed.

ENMA 613 Logistics and Supply Chain Management (3 Credit Hours)

Studying how logistical decisions impact the performance of the firm and the entire supply chain. Topics include strategic planning, facilities location and analysis, distribution and transportation networks, forecasting, inventory management, and information systems for supply chains. Knowledge of probability and statistics (ENMA 420 or equivalent) is assumed. The course includes case studies and/or a project.

Prerequisites: ENMA 603; ENMA 420 or equivalent

ENMA 614 Quality Systems Design (3 Credit Hours)

Integrated analysis of the process quality assurance and improvement function. Quality Deming's way. Scientific sampling and control charting for quality assurance and control; the quality cost concept and economic aspects of quality decisions. Organization of the quality function for process quality improvement. Knowledge of probability and statistics (ENMA 420 or equivalent) is assumed.

Prerequisites: ENMA 420 or equivalent

ENMA 616 The Entrepreneurial Engineering Manager (3 Credit Hours)

Globalization has increased competition among the planet's enterprises. The quality of products and services has dramatically improved while prices have plummeted. Consumer expectations have risen to very high levels. This phenomenon has accelerated the need for large technical enterprises to become more agile, flexible and responsive to consumer demands. Government agencies are not exempt from this trend: U.S. Government agencies are now required to establish strategic plans for their enterprises and to develop business plans that illustrate the future directions of the enterprise and to define the resources required to realize the vision and strategy of the enterprise. This course introduces Engineering Management students to a wide range of approaches designed to facilitate start-up, enable growth and ensure the continued capability of emerging and mature technical enterprises.

ENMA 625 Introduction to Homeland Security Logistics (3 Credit Hours)

This course introduces the student to essential concepts of Homeland Security and principles of all-hazards risk management. It emphasizes understanding (1) the right balance among different hazards in mitigation, preparedness, response, and recovery; (2) the impacts of illegal and legal immigration on the economic and social stability of our communities; and (3) the emergence and evolving threats in cybersecurity, averting cybercrime, and shielding critical infrastructure. Participants will learn critical decision-making concepts and tools and techniques to improve decision-making in the interinstitutional homeland security decision space.

ENMA 641 Requirements Management, Verification and Validation (3 Credit Hours)

Comprehensive treatment of the nature and utility of requirements, verification, and validation in systems engineering processes. Topics include: establishing user requirements; traceability; baseline and evolving requirements; governing standards; requirements management; issues in requirements for complex systems; role and methods for verification and validation in systems engineering; data treatment and analysis; standards, practices, and issues for verification and validation in systems engineering.

ENMA 645 Preparation for Systems Engineering Professional Certification (3 Credit Hours)

A comprehensive treatment and review of the International Council on Systems Engineering (INCOSE) Systems Engineering Handbook v4 in preparation for INCOSE Systems Engineering Professional (SEP) Certification. This course should be taken in the final semester in which the student will graduate.

ENMA 646 Information Science for Systems and Engineering Management (3 Credit Hours)

This course aims to prepare students with the general knowledge and skills for the on-going digital transformation. The course covers: (1) preliminaries of information and informatics; (2) information and knowledge modeling; (3) fundamental concepts, models, tools, and applications of Big Data; and (4) digital mechanisms of trust and security, including: digital asset access control, digital signature, digital certification, Public Key Infrastructures, and Blockchains.

ENMA 656 Mathematical and Computational Modeling in Systems Engineering (3 Credit Hours)

The course introduces some of the mathematical structures and methods used within systems engineering. The course will cover probability theory, scheduling, critical path analysis, systems dynamics, decision analysis, and simulation. Students will be introduced to computer programming to implement the ideas in the course using the R programming language.

ENMA 660 Systems Architectures (3 Credit Hours)

Students learn the essential aspects of the systems architecture paradigm through development and analysis of multiple architecture frameworks and enterprise engineering. Emphasis is placed on systems modeling and enterprise engineering.

ENMA 661 Systems Engineering Design (3 Credit Hours)

This course covers modern modeling paradigms for deterministic and stochastic complex and dynamic systems. This includes, but is not limited to, Discrete Simulation, Queuing Systems, and Agent-based models among others. Focus will be on system analysis using different developed models in different domains such as production, logistics, security, and service, military and social.

Prerequisites: ENMA 420 or equivalent and ENMA 515 or equivalent

ENMA 667 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. Student participation for credit based on academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and the Cooperative Education program prior to the semester in which the work experience is to take place.

ENMA 668 Internship (1-3 Credit Hours)

Academic requirements will be established by the graduate program director and will vary with the amount of credit desired. Allows students an opportunity to gain short-duration career-related experience. Meant to be used for one-time experience. Work may or may not be paid. Project is completed during the term.

ENMA 669 Practicum (1-3 Credit Hours)

Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career related experience. Student is usually already employed - this is an additional project in the organization.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

ENMA 670 Cyber Systems Engineering (3 Credit Hours)

This course provides an overview of functioning of cyber systems including how a computer interacts with the outside world. The composition of critical infrastructure and functioning of different engineered systems that form critical infrastructure are discussed. Mutual dependence and interactions between cyber systems and other engineered and the resulting security risks are also explored.

Prerequisites: Undergraduate students in STEM fields or graduate students of STEM degree or instructor's approval

ENMA 690 Systems Engineering Capstone (1 Credit Hour)

A written, comprehensive demonstration of the candidate's competence in the fields covered by the systems engineering program that is intended to fulfill the non-thesis master's examination requirement.

ENMA 695 Topics in Engineering Management (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in engineering management.

Prerequisites: Permission of the instructor

ENMA 696 Topics in Engineering Management (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in engineering management.

Prerequisites: Permission of the instructor

ENMA 697 Independent Study in Engineering Management (3 Credit Hours)

Individual study selected by the student. Supervised and approved by a faculty member with the approval of the Graduate Program Director.

Prerequisites: Permission of Graduate Program Director

ENMA 698 Master's Project (1-3 Credit Hours)

The master's project is guided under the supervision of the course instructor. Projects must be approved by the Graduate Program Advisor.

Prerequisites: Graduate Program Director permission is required

ENMA 699 Thesis (1-6 Credit Hours)

Research leading to a Master of Science thesis.

Prerequisites: ENMA 721 and permission of the Graduate Program Director

ENMA 700 Economic Analysis of Capital Projects (3 Credit Hours)

This course is targeted at engineering managers who actively participate in the capital budgeting process and project justification. Topics include capital budgeting techniques (including multi-attribute decision making), utility theory, justification of new technologies, and current research in engineering economics. Reading and application of current research in the field is stressed. Case studies are used. Oral presentations and term project required.

Prerequisites: ENMA 600

ENMA 701 Digital Systems Engineering (3 Credit Hours)

Digital systems engineering applies digital technologies to the systems engineering processes and principles. This course provides students with knowledge and skills on necessary digital technologies, such as Artificial Intelligence and Machine Learning, Big Data, Blockchain, and computational modeling. The course covers: (1) preliminaries of digitalization and digital technologies; (2) data and knowledge modeling; (3) logical approach to MBSE (Model-Based Systems Engineering); (4) application of Big Data and Machine Learning in Systems Engineering; and (5) digital mechanisms of trust and security for digital engineering.

Prerequisites: ENMA 646

ENMA 702 Systemic Decision Making (3 Credit Hours)

As machine age problems have given way to systems age messes, the underlying complexity associated with understanding these situations has increased exponentially. Accordingly, the methods we use to address these situations must evolve as well. This course will introduce students to a method for thinking holistically about problems and messes conceptually founded in systems theory. This paradigm, known as systemic thinking, will be contrasted with traditional systematic thinking, and practical guidelines for the deployment of a systemic thinking approach will be provided. This paradigm will increase the student's ability to make rational decisions in complex environments.

ENMA 703 Optimization Methods (3 Credit Hours)

Covers advanced methods in Operations Research and Optimization. Focus will be on developing models and their applications in different domains including manufacturing and service. Modern optimization tools will be used to implement models for case studies, projects and research papers. The knowledge of programming and spreadsheets is expected. Contact instructor for more details.

ENMA 705 Financial Engineering (3 Credit Hours)

This course covers concepts in complex investments, how to deal with uncertainty in today's global markets, and how to engineer and manage financial decisions. The main topics include: cash flows, portfolio theory, capital management, securities, hedge funds, optimal investment and financial engineering evaluations among others.

ENMA 711 Engineering Research Methodology (3 Credit Hours)

This course prepares engineering practitioners to produce systemic applied research or robust project solutions. In the applied research track, students will learn and apply the methods, tools, and concepts required for specifying the research purpose, proposal preparation, understanding the current state of the discipline, selecting and executing the appropriate research methodology, analyzing and synthesizing results, and preparing defensible publications. In the engineering project track, students will learn problem definition and scoping, project proposal preparation, methods for establishing the current state of the problem, analytical and experimental designs for testing proposed solutions, robust methods for solution optimization, and solution validation.

ENMA 712 Multi-Criteria Decision Analysis and Decision Support Systems (3 Credit Hours)

Currently, complex engineering-economic-societal decisions are made by involving numerous sometimes conflicting criteria and attributes, different decision rules and in the presence of various stakeholders with individual preferences who are willing to go into negotiation procedures. A number of multi-criteria decisions tools involving quantitative as well as qualitative methods, together with adequate decision support tools will be introduced. Case studies on a variety of engineering, environmental and security related aspects will also be considered.

ENMA 715 Systems Analysis (3 Credit Hours)

The course is designed to provide an understanding of the interdisciplinary aspects of systems development, operation, and support. The course focuses on the application of scientific and engineering efforts to transform an operational need into a defined system configuration through the interactive process of design, test, and evaluation.

ENMA 716 Complex Adaptive Situations Environment (3 Credit Hours)

The course focuses on the manner in which information, knowledge, and awareness are processed to facilitate decision making, management and engineering in complex adaptive situations. Topics include: knowledge acquisition, formation of technical and contextual awareness, and the role of understanding.

ENMA 717 Cost Engineering (3 Credit Hours)

Introduction to parametric cost modeling techniques and methodologies; generation and application of statistical relationships between life cycle costs and measurable attributes of complex systems; sources of supporting data; quality function deployment; technology forecasting. Special emphasis on life cycle design for cost; cost risk analysis; and design optimization on cost bases. Case studies and a semester project.

ENMA 720 Multivariate Statistics for Engineering (3 Credit Hours)

Introduction to modeling multivariate structural and residual variation, using exploratory data analysis, nonparametric regression, dependence regression, and factor analytic models, with a goal of producing robust, generalizable multivariate models that support research findings. Statistical analyses will be performed in the free general public licensed R statistical software with references to Minitab and SPSS.

ENMA 721 Foundations of Research (3 Credit Hours)

This course is intended to prepare students to undertake substantiated, rigorous, scholarly research, particularly theses or dissertations. The course will focus on the approaches necessary to integrate research intent, techniques and constraints. A variety of research approaches will be investigated. Emphasis will be placed on problem formulation, literature review, proposal preparation, oral presentation, experimentation and accepted canons of research. Knowledge of probability and statistics (ENMA 420 or equivalent) is assumed. Research paper required.

ENMA 724 Risk Analysis (3 Credit Hours)

Approaches to the management of risk; probability assessment methods; risk modeling; use of software packages; extensions of decision analysis, including stochastic dominance and multiattribute methods; applications to project management, scheduling, and cost estimation.

ENMA 725 System Risk and Failure Analysis (3 Credit Hours)

This course is about the modeling of system dependencies using functional dependency network analysis to support the design of new and failure analysis of existing engineering systems. At the end of this course, students will be able to model and measure the operability and performance of today's highly networked and richly interconnected systems.

ENMA 735 Team Performance and Decision Making in Engineering (3 Credit Hours)

This course explores and models the use of teams in organizations with a specific focus on the role of teams in decision making and problem solving. Key areas include team building, assessment of team outcomes, team learning, virtual teams and team decision making. Actual work on teams is required including team deliverables.

ENMA 743 Reliability and Maintainability (3 Credit Hours)

An introduction to the theory and practice of reliability engineering, maintainability and availability. Reliability evaluation models and techniques, failure data collection and analysis, reliability testing and modeling, maintained systems, and mechanical system reliability will be discussed, culminating in a semester-length project.

Prerequisites: ENMA 420 or equivalent

ENMA 750 System of Systems Engineering (3 Credit Hours)

Comprehensive treatment of System of Systems Engineering (SoSE), including; fundamental systems principles, concepts, and governing laws; complex and simple systems; underlying paradigms, methodologies and essential methods for SoSE analysis, design, and transformation; complex system transformation; current state of SoSE research and application challenges. Explores the range of technological, human/social, organizational/managerial, policy, and political dimensions of the SoSE problem domain.

ENMA 751 Complexity, Engineering and Management (3 Credit Hours)

This course examines management and engineering of complex systems as it is undertaken in complex situations. The student will develop an understanding of the unconditional attributes of complex systems and situations that become foundational in the development of robust methods to deal with the practical reality of working in dynamic, uncertain environments. Topics will include Complexity, Complex Systems, Complex Adaptive Systems, Complex Responsive Processes, Complex Adaptive Situations Methodology, SOSE, Reciprocity, and Sociotechnical Systems.

ENMA 754 Big Data Fundamentals (3 Credit Hours)

The objectives of the course are to provide fundamental knowledge and skills of Big Data for the new generation of researchers, engineers, project managers and business managers in the emerging data-driven science and engineering paradigm. Topics to be covered include data analytics, cloud platforms and tools for Big Data, and innovative applications of Big Data.

ENMA 755 Human System Engineering (3 Credit Hours)

This course introduces concepts of Human System Engineering, focusing on designing systems that include human components. Human System Integration and Human Factors Engineering are discussed, as well as other human centered design approaches. The role of human data in systems and systems of systems design is explored, and methods to capture and represent human data, including architecture frameworks, are presented. Modeling and analysis of human centered systems is done through hands-on projects.

ENMA 756 Mission Analysis and Engineering (3 Credit Hours)

The course provides an overview of mission engineering and the role of mission engineering and the mission engineer in government acquisitions. The course presents the theoretical foundations that enable a fuller representation of complex problem as well as the required engineering and management approaches needed to deal with the high level of complexity and uncertainty. It applies the theoretical facets to specific engineering problems/cases and explores robust approaches given the conditions of the problem. Developments, on-going research, as well as gaps in knowledge and know-how are discussed.

Prerequisites: ENMA 415 or ENMA 515 or instructor approval

ENMA 760 Advanced Architectures and Tools (3 Credit Hours)

This course is designed to expand on system architectures concepts through both theory and practice. Topics include the role of architectures in system engineering, alternative methods for architecture development, tools and techniques for architecture design, and various conceptual and technical issues in the architecture development process. Class periods are equally divided between traditional lectures and practice oriented exercises.

ENMA 763 Robust Engineering Design (3 Credit Hours)

A robust design approach based on "Taguchi Methods," including off-line quality engineering and applied design-of-experiments methods, full factorial and fractional factorial designs, and response surface methods. The course is designed to enable engineers and engineering managers from all disciplines to recognize potential applications, formulate problems, plan experiments, and analyze data. Knowledge of probability and statistics (ENMA 420 or equivalent) is assumed. Students will engage in case studies, culminating in a semester-long project.

Prerequisites: ENMA 420 or equivalent

ENMA 771 Risk and Vulnerability Management of Complex Interdependent Systems (3 Credit Hours)

Seminar discussions and team projects. A systematic approach to basic principles of design, economics and management of critical infrastructure systems, including issues of risk, vulnerability and risk governance. Development of advanced methodologies, e.g. system of systems, by use of complexity analysis, dynamic/chaotic behavior, threat analysis, resilient design and management under normal and stress conditions. Adopting an agent based modeling approach under conditions of uncertainty, dysfunctionality, malicious attacks and/or presence of natural perils.

ENMA 777 Complex System Governance (3 Credit Hours)

Students will be prepared to better design, execute, evaluate, and evolve governance for complex systems. This preparation includes development of marketable capabilities to more effectively deal with governance systems and their emergent problems through: (1) development of capabilities to effectively design, analyze, and execute complex system governance, (2) identification and development of more effective intervention strategies to address underlying governance problems in operational systems, (3) employment of a range of methods, tools, and techniques, and (4) development of capabilities for generating novel insights and improvements to address systemic deficiencies in governance systems.

ENMA 780 Leadership for Engineering Managers (3 Credit Hours)

Seminar discussions and team projects. This course is designed to expose students to the concepts, skills, characteristics and emotional composition of effective and successful leaders in the 21st century. The course is intensive and requires students to immerse themselves in the course material and classroom discussion to derive meaning and value from the topics. The course objectives will be achieved by classroom discussion of the assigned material, candid self-assessment, experiential exercises and analysis of the actions of leaders, as described in case studies and literature. Areas of exploration include the fundamentals of leadership, ethical leadership, social capital, emotional intelligence and three-dimensional leadership. Ethical leadership practices is a cross-cutting theme in this course.

Prerequisites: ENMA 601 or Ph.D. status

ENMA 795 Topics in Engineering Management (3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in engineering management.

ENMA 796 Topics in Engineering Management (3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in engineering management.

ENMA 797 Independent Study in Engineering Management (1-3 Credit Hours)

Designed for advanced individualized study into an engineering management topic area. Independent study projects will be related to engineering management and completed under the supervision of a certified faculty member.

Prerequisites: Permission of the instructor and Graduate Program Director

ENMA 800 Economic Analysis of Capital Projects (3 Credit Hours)

It is targeted at engineering managers who actively participate in the capital budgeting process and project justification. Topics include capital budgeting techniques (including multi-attribute decision making), utility theory, justification of new technologies, and current research in engineering economics. Reading and application of current research in the field is stressed. Case studies are used. Oral presentations and term project required.

Prerequisites: ENMA 600

ENMA 801 Digital Systems Engineering (3 Credit Hours)

Digital systems engineering applies digital technologies to the systems engineering processes and principles. This course provides students with knowledge and skills on necessary digital technologies, such as Artificial Intelligence and Machine Learning, Big Data, Blockchain, and computational modeling. The course covers: (1) preliminaries of digitalization and digital technologies; (2) data and knowledge modeling; (3) logical approach to MBSE (Model-Based Systems Engineering); (4) application of Big Data and Machine Learning in Systems Engineering; and (5) digital mechanisms of trust and security for digital engineering.

Prerequisites: ENMA 646

ENMA 802 Systemic Decision Making (3 Credit Hours)

As machine age problems have given way to systems age messes, the underlying complexity associated with understanding these situations has increased exponentially. Accordingly, the methods we use to address these situations must evolve as well. This course will introduce students to a method for thinking holistically about problems and messes conceptually founded in systems theory. This paradigm, known as systemic thinking, will be contrasted with traditional systematic thinking, and practical guidelines for the deployment of a systemic thinking approach will be provided. This paradigm will increase the student's ability to make rational decisions in complex environments.

ENMA 803 Optimization Methods (3 Credit Hours)

Covers advanced methods in Operations Research and Optimization. Focus will be on developing models and their applications in different domains including manufacturing and service. Modern optimization tools will be used to implement models for case studies, projects and research papers. The knowledge of programming and spreadsheets is expected. Contact instructor for more details.

ENMA 805 Financial Engineering (3 Credit Hours)

This course covers concepts in complex investments, how to deal with uncertainty in today's global markets, and how to engineer and manage financial decisions. The main topics include: cash flows, portfolio theory, capital management, securities, hedge funds, optimal investment and financial engineering evaluations among others.

ENMA 811 Engineering Research Methodology (3 Credit Hours)

This course prepares engineering practitioners to produce systemic applied research or robust project solutions. In the applied research track, students will learn and apply the methods, tools, and concepts required for specifying the research purpose, proposal preparation, understanding the current state of the discipline, selecting and executing the appropriate research methodology, analyzing and synthesizing results, and preparing defensible publications. In the engineering project track, students will learn problem definition and scoping, project proposal preparation, methods for establishing the current state of the problem, analytical and experimental designs for testing proposed solutions, robust methods for solution optimization, and solution validation.

ENMA 812 Multi-Criteria Decision Analysis and Decision Support Systems (3 Credit Hours)

Currently, complex engineering-economic-societal decisions are made by involving numerous sometimes conflicting criteria and attributes, different decision rules and in the presence of various stakeholders with individual preferences who are willing to go into negotiation procedures. A number of multi-criteria decisions tools involving quantitative as well as qualitative methods, together with adequate decision support tools will be introduced. Case studies on a variety of engineering, environmental and security related aspects will also be considered.

ENMA 815 Systems Analysis (3 Credit Hours)

The course is designed to provide an understanding of the interdisciplinary aspects of systems development, operation, and support. The course focuses on the application of scientific and engineering efforts to transform an operational need into a defined system configuration through the interactive process of design, test, and evaluation.

ENMA 816 Complex Adaptive Situations Environment (3 Credit Hours)

The course focuses on the manner in which information, knowledge, and awareness are processed to facilitate decision making, management and engineering in complex adaptive situations. Topics include: knowledge acquisition, formation of technical and contextual awareness, and the role of understanding.

ENMA 817 Cost Engineering (3 Credit Hours)

Introduction to parametric cost modeling techniques and methodologies; generation and application of statistical relationships between life cycle costs and measurable attributes of complex systems; sources of supporting data; quality function deployment; technology forecasting. Special emphasis on life cycle design for cost; cost risk analysis; and design optimization on cost bases. Case studies and a semester project.

ENMA 820 Multivariate Statistics for Engineering (3 Credit Hours)

Introduction to modeling multivariate structural and residual variation, using exploratory data analysis, nonparametric regression, dependence regression, and factor analytic models, with a goal of producing robust, generalizable multivariate models that support research findings. Statistical analyses will be performed in the free general public licensed R statistical software with references to Minitab and SPSS.

ENMA 821 Foundations of Research (3 Credit Hours)

This course is intended to prepare students to undertake substantiated, rigorous, scholarly research, particularly theses or dissertations. The course will focus on the approaches necessary to integrate research intent, techniques and constraints. A variety of research approaches will be investigated. Emphasis will be placed on problem formulation, literature review, proposal preparation, oral presentation, experimentation and accepted canons of research. Research paper required.

ENMA 824 Risk Analysis (3 Credit Hours)

Approaches to the management of risk; probability assessment methods; risk modeling; use of software packages; extensions of decision analysis, including stochastic dominance and multiattribute methods; applications to project management, scheduling, and cost estimation.

ENMA 825 System Risk and Failure Analysis (3 Credit Hours)

This course is about the modeling of system dependencies using functional dependency network analysis to support the design of new and failure analysis of existing engineering systems. At the end of this course, students will be able to model and measure the operability and performance of today's highly networked and richly interconnected systems.

ENMA 835 Team Performance and Decision Making in Engineering (3 Credit Hours)

This course explores and models the use of teams in organizations with a specific focus on the role of teams in decision making and problem solving. Key areas include team building, assessment of team outcomes, team learning, virtual teams and team decision making. Actual work on teams is required including team deliverables.

ENMA 843 Reliability and Maintainability (3 Credit Hours)

An introduction to the theory and practice of reliability engineering, maintainability and availability. Reliability evaluation models and techniques, failure data collection and analysis, reliability testing and modeling, maintained systems, and mechanical system reliability will be discussed, culminating in a semester-length project.

Prerequisites: ENMA 420 or equivalent

ENMA 850 System of Systems Engineering (3 Credit Hours)

Comprehensive treatment of System of Systems Engineering (SoSE), including; fundamental systems principles, concepts, and governing laws; complex and simple systems; underlying paradigms, methodologies and essential methods for SoSE analysis, design, and transformation; complex system transformation; current state of SoSE research and application challenges. Explores the range of technological, human/social, organizational/managerial, policy, and political dimensions of the SoSE problem domain.

ENMA 851 Complexity, Engineering and Management (3 Credit Hours)

This course examines management and engineering of complex systems as it is undertaken in complex situations. The student will develop an understanding of the unconditional attributes of complex systems and situations that become foundational in the development of robust methods to deal with the practical reality of working in dynamic, uncertain environments. Topics will include Complexity, Complex Systems, Complex Adaptive Systems, Complex Responsive Processes, Complex Adaptive Situations Methodology, SOSE, Reciprocity, and Sociotechnical Systems.

ENMA 854 Big Data Fundamentals (3 Credit Hours)

The objectives of the course are to provide fundamental knowledge and skills of Big Data for the new generation of researchers, engineers, project managers and business managers in the emerging data-driven science and engineering paradigm. Topics to be covered include data analytics, cloud platforms and tools for Big Data, and innovative applications of Big Data.

ENMA 855 Human System Engineering (3 Credit Hours)

This course introduces concepts of Human System Engineering, focusing on designing systems that include human components. Human System Integration and Human Factors Engineering are discussed, as well as other human centered design approaches. The role of human data in systems and systems of systems design is explored, and methods to capture and represent human data, including architecture frameworks, are presented. Modeling and analysis of human centered systems is done through hands-on projects.

ENMA 856 Mission Analysis and Engineering (3 Credit Hours)

The course provides an overview of mission engineering and the role of mission engineering and the mission engineer in government acquisitions. The course presents the theoretical foundations that enable a fuller representation of complex problem as well as the required engineering and management approaches needed to deal with the high level of complexity and uncertainty. It applies the theoretical facets to specific engineering problems/cases and explores robust approaches given the conditions of the problem. Developments, on-going research, as well as gaps in knowledge and know-how are discussed.

Prerequisites: ENMA 415 or ENMA 515 or instructor approval

ENMA 860 Advanced Architectures and Tools (3 Credit Hours)

This course is designed to expand on system architectures concepts through both theory and practice. Topics include the role of architectures in system engineering, alternative methods for architecture development, tools and techniques for architecture design, and various conceptual and technical issues in the architecture development process. Class periods are equally divided between traditional lectures and practice oriented exercises.

ENMA 863 Robust Engineering Design (3 Credit Hours)

A robust design approach based on "Taguchi Methods," including off-line quality engineering and applied design-of-experiments methods, full factorial and fractional factorial designs, and response surface methods. The course is designed to enable engineers and engineering managers from all disciplines to recognize potential applications, formulate problems, plan experiments, and analyze data. Knowledge of probability and statistics (ENMA 420 or equivalent) is assumed. Students will engage in case studies, culminating in a semester-long project.

Prerequisites: ENMA 420 or equivalent

ENMA 871 Risk and Vulnerability Management of Complex Interdependent Systems (3 Credit Hours)

Seminar discussions and team projects. A systematic approach to basic principles of design, economics and management of critical infrastructure systems, including issues of risk, vulnerability and risk governance. Development of advanced methodologies, e.g. system of systems, by use of complexity analysis, dynamic/chaotic behavior, threat analysis, resilient design and management under normal and stress conditions. Adopting an agent based modeling approach under conditions of uncertainty, dysfunctionality, malicious attacks and/or presence of natural perils.

Prerequisites: Permission of the instructor

ENMA 877 Complex System Governance (3 Credit Hours)

Students will be prepared to better design, execute, evaluate, and evolve governance for complex systems. This preparation includes development of marketable capabilities to more effectively deal with governance systems and their emergent problems through: (1) development of capabilities to effectively design, analyze, and execute complex system governance, (2) identification and development of more effective intervention strategies to address underlying governance problems in operational systems, (3) employment of a range of methods, tools, and techniques, and (4) development capabilities for generating novel insights and improvements to address systemic deficiencies in governance systems.

ENMA 880 Leadership for Engineering Managers (3 Credit Hours)

Seminar discussions and team projects. This course is designed to expose students to the concepts, skills, characteristics and emotional composition of effective and successful leaders in the 21st century. The course is intensive and requires students to immerse themselves in the course material and classroom discussion to derive meaning and value from the topics. The course objectives will be achieved by classroom discussion of the assigned material, candid self-assessment, experiential exercises and analysis of the actions of leaders, as described in case studies and literature. Areas of exploration include the fundamentals of leadership, ethical leadership, social capital, emotional intelligence and three-dimensional leadership. Ethical leadership practices is a cross-cutting theme in this course.

Prerequisites: ENMA 601 or Ph.D. standing

ENMA 888 Ph.D. Seminar (1 Credit Hour)

Discussion of research projects, topics, and problems of Engineering Management faculty, researchers, and students. A weekly exchange of ideas and issues between faculty and Ph.D. students focused on doctoral research.

ENMA 892 Doctor of Engineering Project (1-12 Credit Hours)

Directed individual study applying advanced-level technical knowledge to identify, formulate, and solve a complex, novel problem in Engineering Management.

ENMA 895 Topics in Engineering Management (3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in engineering management.

ENMA 896 Topics in Engineering Management (3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in engineering management.

ENMA 897 Independent Study in Engineering Management (1-3 Credit Hours)

Designed for advanced individualized study into an engineering management topic area. Independent study projects will be related to engineering management and completed under the supervision of a certified faculty member.

Prerequisites: Permission of the instructor and Graduate Program Director

ENMA 898 Research in Engineering Management (1-12 Credit Hours)

Supervised research prior to passing Ph.D. candidacy exam.

Prerequisites: ENMA 721/ENMA 821 and permission of Graduate Program Director

ENMA 899 Doctoral Research (1-12 Credit Hours)

Doctoral research hours. After successfully passing the candidacy examination, all doctoral students are required to be registered for at least one graduate credit each term until the degree is complete.

Prerequisites: ENMA 821 and permission of instructor

ENMA 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

ENMA 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

ENTR - Entrepreneurship

ENTR 576 Social Entrepreneurship (3 Credit Hours)

The class draws students from all disciplines to collaborate with each other, faculty and community members as they co-design project-based solutions to pertinent social issues. Topics related to social entrepreneurship vary each year. Guided by distinguished faculty, students analyze their topic through in-depth classroom and field research, readings and off-campus trips.

ENTR 577 Design Thinking (3 Credit Hours)

Design thinking is a human-centered approach to innovation that uses design methods and tools to integrate the needs of people and organizations, the opportunities of technology, and the requirements for personal, organizational, and business success. The design thinking course introduces students to a robust process for understanding problems, ideation, innovation, and entrepreneurship. This course is facilitated using workshops where students will work in project teams in a design thinking innovation challenge.

ENVH - Environmental Health

ENVH 501 Occupational Health (3 Credit Hours)

An introduction to the industrial environment relative to health problems and the etiologically related agents.

ENVH 502 Environmental Health Administration and Law (3 Credit Hours)

A review of the concepts and practice of administering environmental health control programs within agencies at the federal, state and local levels. The principles of administration and leadership of programs in the private sector are also discussed. The constitutional, statutory and administrative law bases for organizing and conducting such programs and developing environmental policy as well as the legal implications of enforcement will be addressed. A review of all major environmental statutes and their agencies that enforce them will be addressed.

ENVH 506 Principles of Occupational Safety and Health (3 Credit Hours)

A broad overview of the field of safety. A study of the factors influencing the occurrence of accidents and incidents is set in the context of safety legislation, current issues in the practice of safety and the ethical and professional responsibilities of the safety practitioner. The course also includes discussions of product safety, fire prevention and protection systems safety and human elements in loss prevention.

ENVH 507 Occupational Safety Standards, Laws and Regulations (3 Credit Hours)

A review of the important Occupational Safety and Health Standards and Codes with particular emphasis on application of these codes to typical work situations. Governmental enforcement methodologies are also discussed.

ENVH 520 Communicable Diseases (3 Credit Hours)

An in-depth study of the communicable disease processes as they pertain to environmental sources. A detailed discussion of specific communicable diseases that are manifested by various environmental etiologic agents. Various environmental control measures to prevent the incidence of communicable diseases are presented.

ENVH 521 Food Safety (3 Credit Hours)

A comprehensive study of food and milk production, processing and preservation and controls exercised for the prevention of foodborne illnesses and spoilage.

ENVH 522 Water and Wastewater Technology (3 Credit Hours)

Introduction to water quality management and wastewater treatment technology. Topics include the effect of organic, inorganic and thermal pollutants in water quality streams, waterborne diseases, monitoring concepts, methods of water quality management, regulatory considerations, theory and application of wastewater treatment concepts, wastewater characterization, and treatment methods and disposal methods.

ENVH 523 Vector-Borne Diseases and Their Control (3 Credit Hours)

Vector-borne diseases affect the health and well-being of humans and other animals in a wide variety of ways. Arthropod vectors (e.g., mosquitoes, filth flies, ticks and related groups) transmit numerous debilitating infectious diseases that oftentimes impose significant burden on healthcare systems. This course provides insight on the ways in which arthropods impact global health and economic growth through the diseases they transmit.

ENVH 524 Residential and Institutional Environments (3 Credit Hours)

A study of the physical aspects of housing and institutions as they relate to human health and well-being. Coverage is also given to infection control in health-care facilities.

ENVH 525 Occupational Safety and Health Program Management (3 Credit Hours)

The establishment, implementation and maintenance of occupational safety and health programs. Paradigms of safety, techniques for safety training and creation of value for safety among business managers and employees are emphasized.

ENVH 526 Physical Hazards and Their Control (3 Credit Hours)

An in-depth examination of the varied types of physical hazards in the work environment and the methods of prevention, recognition and control.

ENVH 538 Environmental Emergencies and Disasters (3 Credit Hours)

This course uses a multi-disciplinary approach and draws on theory, case studies, research, and field experience to examine the global problem of environmental emergencies and disasters. Particular attention is devoted to the public health challenges posed by chemical and radiological contamination situations. Students discuss contemporary issues and controversies, complete a paper exploring current issues in the field, and spend time working in teams to craft solutions to key emergency preparedness problems.

ENVH 540 Principles of Ergonomics (3 Credit Hours)

An introduction to the terminology, concepts and applications of physiology, anthropometry, biomechanics and engineering to workplace and work methods design. Emphasis will be given to workplace design and work methods for job safety and health.

ENVH 541 Industrial Hygiene (3 Credit Hours)

An in-depth study of the chemical and physical agents responsible for occupational illness and the methods used for their measurement, evaluation and control.

ENVH 542 Industrial Hygiene Sampling Methods (3 Credit Hours)

An introduction to the detection and sampling alternatives used for estimating worker exposure to hazardous chemical, physical and biological agents in the occupational environment. Field and class activities are intended to simulate select occupational exposure situations and provide a basis for selection of the best evaluation techniques. Emphasis is on quantitative and qualitative methods typically used when estimating employee exposure to hazardous agents and the subjective decision making process.

Pre- or corequisite: ENVH 541 or permission of the instructor

ENVH 545 Air Pollution and Its Control (3 Credit Hours)

The study of air pollution in relation to air quality criteria, pollutant production, atmospheric evolution, measurement and control techniques.

ENVH 546 Physical Hazards Laboratory (2 Credit Hours)

Use and application of sampling methods and equipment for measurement of physical hazards in the work environment. Includes aspects such as ergonomics, noise, vibration and radiation.

Prerequisites: ENVH 541 or permission of the instructor

ENVH 548 Epidemiology and Biostatistics (1-3 Credit Hours)

An introductory course in the principles and practices of epidemiology and the application of statistical and mathematical design and analysis of health research studies for the understanding and control of population health and disease with emphasis on environmental applications.

ENVH 561 Hazardous Waste Management (3 Credit Hours)

Description of the hazardous waste problem, the fundamentals of the chemistry involved with hazardous waste transport, methods of identification, assessment, control, and disposal of toxic and hazardous waste are discussed. In addition the relevant legal statutes, risk assessment emergency response and case studies are presented. Introduction to the toxicological effects of exposure to hazardous waste is discussed.

ENVH 565 Hazardous Materials Management (3 Credit Hours)

The management of hazardous materials includes a wide array of interlocking regulations addressing use, manufacturing, exposure, storage, shipping and disposal. A life cycle review of hazardous materials highlighting best practices and legislation is presented. Useful in preparation for CHMM examination.

ENVH 570 Industrial Environmental Management (3 Credit Hours)

Course addresses day-to-day technical and management aspects of environmental compliance, as well as regulatory issues faced in industrial applications. Includes audits and inspections, air and water pollution and hazardous waste.

ENVH 595 Topics in Environmental Health (1-3 Credit Hours)

Advanced study of selected topics.

ENVH 598 Independent Study in Environmental Health (1-3 Credit Hours)

An opportunity is afforded students to undertake independent study under the direction of a faculty member.

Prerequisites: permission of the Program Director

ENVH 600 Principles of Environmental Health Science and Protection (3 Credit Hours)

An introduction to the chemical, physical and biological factors affecting human health and well being. The emphasis is on the application of controls to prevent disease and maximize environmental quality. (Cross-listed with CHP 602)

ENVH 603 Environmental Epidemiology (3 Credit Hours)

Collection methods, analysis and interpretation of epidemiologic data with environmental and occupational disease emphasis.

ENVH 610 Food Microbiology (4 Credit Hours)

An in-depth examination of requirements for growth of food borne disease organisms. Includes hazard analysis and critical control point methodology.

ENVH 611 Water Pollution Control (4 Credit Hours)

A study of the chemical, physical and biological causes of surface and groundwater pollution. Emphasis is given to onsite wastewater systems and protection of groundwater supplies.

ENVH 621 Advanced Toxicology I (4 Credit Hours)

An in-depth study of the adverse interaction of environmental and occupational chemical agents with humans. Students critically review articles from the current toxicology literature with regard to scientific content, methods and conclusions. Each student presents at least two reviews during the semester.

Prerequisites: ENVH 543

ENVH 632 Environmental and Occupational Health Risk Assessment (3 Credit Hours)

This course is an introduction to quantitative and qualitative risk analysis and examines the fundamental aspects of risk, focusing on environmental, occupational, and public health risks. Hazard identification, exposure assessment, dose-response evaluation, risk characterization, and risk communication are emphasized.

ENVH 643 Principles of Toxicology (3 Credit Hours)

An introduction to the fundamentals of toxicology with emphasis on the interaction of environmental and industrial chemicals with humans are studied. Exposure, dose response, kinetics and distribution of toxicants, metabolism of toxic agents, factors that affect toxicity and introductory chemical carcinogenesis are discussed.

ENVH 695 Selected Topics in Environmental Health (1-3 Credit Hours)

The study of selected topics that may not offered regularly. Special topics will appear in the schedule of classes each semester.

ENVH 722 Control of Hazards in the Workplace (3 Credit Hours)

Advanced methods for evaluation and control of hazards in the workplace.

ENVH 795 Selected Topics in Environmental Health (1-3 Credit Hours)

The study of selected topics that may not be offered regularly. Special topics will appear in the schedule of classes each semester.

Prerequisites: permission of the instructor

ENVH 822 Control of Hazards in the Workplace (3 Credit Hours)

Advanced methods for evaluation and control of hazards in the workplace.

ENVH 895 Selected Topics in Environmental Health (1-3 Credit Hours)

The study of selected topics that may not be offered regularly. Special topics will appear in the schedule of classes each semester.

Prerequisites: permission of the instructor

ENVH 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

EXSC - Exercise Science

EXSC 508 Nutrition for Fitness and Sport (3 Credit Hours)

Emphasizes the role of nutrition as a means to enhance health and performance in sport. Topics covered include energy metabolism and nutrients, regulation of metabolism by vitamins and minerals, and weight control.

EXSC 515 Exercise Testing for Normal and Special Populations (4 Credit Hours)

The application of different methodologies in the measurement of physiologic responses to exercise. Emphasis is placed on understanding American College of Sports Medicine guidelines, appropriate experimental techniques, and equipment necessary to evaluate changes in body composition and various metabolic, cardiovascular, and respiratory adjustments during exercise.

EXSC 517 Biomechanics (4 Credit Hours)

Application of physical laws and mechanical principles to the human musculoskeletal system.

Prerequisites: BIOL 240 or BIOL 250 and MATH 102M or higher with a C or better; PHYS 111N with a C- or better; EXSC 322

EXSC 521 Strength and Conditioning Applications (3 Credit Hours)

A study of the principles and techniques utilized in optimizing physical performance and reducing injury through proper and effective strength and conditioning programs. Special emphasis will be placed on current research findings, breakthrough techniques, advanced weight training techniques, and popular conditioning practices.

EXSC 528 Exercise Prescription for Chronic Disease (3 Credit Hours)

A study of pathophysiology of common diseases with concentration in the design, implementation and administration of exercise prescription for a variety of chronic diseases.

EXSC 531 Wellness Programming and Administration (3 Credit Hours)

An introduction to the principles of administration and implementation of fitness and wellness programs to individuals, groups, centers and corporate settings.

EXSC 580 Exercise Psychology (3 Credit Hours)

Exercise Psychology examines the dynamic influences that psychological factors, environmental factors, and exercise behaviors exert upon one another. The field of exercise psychology actively promotes evidence-based interventions guided by theory and behavior change techniques. Utilization of the scientist-practitioner model involves the ability to consume and appropriately apply contemporary theory and scientific findings to the practice of applied exercise psychology. The content and assignments emphasize the theoretical and applied perspectives on the science and practice of exercise psychology.

EXSC 612 Applied Research Methods in Exercise and Health Science (3 Credit Hours)

This course will prepare students to read, analyze, and apply research related to exercise science, performance, and health. Students will acquire experience in designing research proposals and gain fundamental knowledge related to research methodology. Specific topics covered may include experimental, quasi-experimental and observational research; validity and reliability; sampling strategies; principles of measurement; statistical analysis; and ethics of research.

EXSC 630 Exercise Physiology (3 Credit Hours)

Review of current physiological literature related to muscular exercise including the cardiovascular-respiratory system, metabolic effects of exercise, neuromuscular relationships, and the effects of training or diet, environment, ergogenic aids, temperature, attitude, and other factors on performance and health.

Prerequisites: HPE 509 or equivalent

EXSC 636 Research Problems in Exercise Science (3 Credit Hours)

Practice in the use of statistical and analytical techniques in solving problems in exercise science; supervised student research.

EXSC 642 Clinical Exercise Testing and Prescription (3 Credit Hours)

Principles of diagnostic exercise assessment, cardiovascular physiology, electrocardiography, ACSM guidelines to exercise testing and prescription for symptomatic and asymptomatic populations. Course includes laboratory assignments.

Prerequisites: EXSC 630 or permission of instructor

EXSC 661 Nutrition for Sports and Health (3 Credit Hours)

This course is an in-depth analysis of the role of nutrition in health and human physical and athletic performance. General areas covered include the role of the six major classes of nutrients in health and sport, physiologic and metabolic interrelationships, malnutrition, nutrition in growing and aging, and diet and nutrition in the prevention of disease.

EXSC 668 Internship in Exercise Science (6 Credit Hours)

Designed to provide detailed practical experience (200 clock hours) in an exercise science field setting.

Prerequisites: completion of 18 credit hours of graduate coursework, a minimum graduate GPA of at least 3.0, and permission of the instructor

EXSC 695 Topics in Exercise Science (1-3 Credit Hours)

Selected topic courses in exercise science and wellness.

EXSC 697 Independent Study in Exercise Science (1-3 Credit Hours)

Investigations in exercise science. Problems approved in advance are investigated under the supervision of the faculty advisor.

EXSC 698 Thesis Research in Exercise Science (3-6 Credit Hours)

Master's level thesis research in topics related to Exercise Science.

Prerequisites: permission of the advisor and committee

EXSC 699 Thesis in Exercise Science (3-6 Credit Hours)

Preparation and writing of the master's thesis.

Prerequisites: Permission of the advisor and committee

EXSC 727 Advanced Biomechanics (3 Credit Hours)

Study of the relationships among mechanics, energetics and control of human movement. Emphasis will be placed on the application of mechanical concepts in biomechanics research. Course includes laboratory assignments.

Prerequisites: EXSC 417 or EXSC 517

EXSC 730 Advanced Cardiovascular Exercise Physiology (3 Credit Hours)

A study of the physiology and pathophysiology of the cardiovascular system. Effects of exercise on the system will also be discussed.

Prerequisites: EXSC 630

EXSC 738 Exercise Endocrinology (3 Credit Hours)

This course will focus on the endocrine responses to acute and chronic exercise and how neuroendocrine function relates to health and athletic performance. Emphasis is placed on the role of the endocrine system in regulating substrate utilization during exercise, energy balance, skeletal muscle plasticity, reproductive function, and the aging process.

Prerequisites: EXSC 630

EXSC 740 Ergogenic Aids in Sport and Human Performance (3 Credit Hours)

An ergogenic aid is any technique or substance (nutritional, drug, etc.) used to enhance mental or physical performance. This course introduces students to the various classes of ergogenic aids and critically explores scientific research regarding their use, prevalence, physiological effects, and safety, as well as ethical concerns.

EXSC 827 Advanced Biomechanics (3 Credit Hours)

Study of the relationships among mechanics, energetics and control of human movement. Emphasis will be placed on the application of mechanical concepts in biomechanics research. Course includes laboratory assignments.

Prerequisites: EXSC 417 or EXSC 517

EXSC 830 Advanced Cardiovascular Exercise Physiology (3 Credit Hours)

A study of the physiology and pathophysiology of the cardiovascular system. Effects of exercise on the system will also be discussed.

Prerequisites: EXSC 630

EXSC 838 Exercise Endocrinology (3 Credit Hours)

This course will focus on the endocrine responses to acute and chronic exercise and how neuroendocrine function relates to health and athletic performance. Emphasis is placed on the role of the endocrine system in regulating substrate utilization during exercise, energy balance, skeletal muscle plasticity, reproductive function, and the aging process.

Prerequisites: EXSC 630

EXSC 840 Ergogenic Aids in Sport and Human Performance (3 Credit Hours)

An ergogenic aid is any technique or substance (nutritional, drug, etc.) used to enhance mental or physical performance. This course introduces students to the various classes of ergogenic aids and critically explores scientific research regarding their use, prevalence, physiological effects, and safety, as well as ethical concerns.

EXSC 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

FIN - Finance

FIN 610 Principles of Risk and Insurance (3 Credit Hours)

Risk theory as applied to the various fields of insurance, including life, health, property-liability and employee benefits.

Prerequisites: graduate standing and permission of the graduate program director

FIN 633 The Legal Environment of Business and the Age of Electronic Commerce (3 Credit Hours)

An understanding of the traditional legal environment of business issues is essential for management to successively utilize e-commerce and respond to legal problems that it will present. The course therefore examines dispute resolution, constitutional, tort, criminal, contract and property law, both in the context of traditional business practice and as applied to e-commerce.

Prerequisites: graduate standing

FIN 660 Corporate Finance: Value Management and Creation (3 Credit Hours)

This course focuses on the time value of money; the valuation of securities; an understanding of the types of risk and how it gets factored into a required return; appropriate criteria for evaluating the acquisition of capital assets; determining the proper mix of financing (capital structure), and financial planning. Emphasis will be on integrating accounting and other internally generated information with external economic information to develop a framework for planning and valuing a company and the securities it may issue. The key perspective will be on decision making from the perspective of the impact of management decisions on the value of a company.

Prerequisites: ECON 620 or instructor approval

Pre- or corequisite: ACCT 645 OR ACCT 609 and ACCT 611 OR instructor approval

FIN 668 Finance Internship (1-3 Credit Hours)

The course is a practicum in the field of finance, applying theories, concepts, and financial management tools in a business environment.

Prerequisites: FIN 605, graduate standing, and permission of the department chair

FIN 697 Selected Topics in Finance (1-3 Credit Hours)

Study designed for students who have had one or more of the required courses waived, or for students desiring additional work in a finance area of particular interest.

Prerequisites: permission from the department chair and the graduate program director

FIN 698 Selected Topics in Real Estate (3 Credit Hours)

Study designed for students who have had one or more of the required courses waived, or for students desiring additional work in a finance area of particular interest.

Prerequisites: permission from the department chair and the graduate program director

FIN 699 Selected Topics in Insurance (3 Credit Hours)

Study designed for students who have had one or more of the required courses waived, or for students desiring additional work in an insurance area of particular interest.

Prerequisites: permission from the department chair and the graduate program director

FIN 735 Portfolio Analysis (3 Credit Hours)

A mathematical analysis of modern investment theory. Analyzes return and risk characteristics of individual securities and portfolios and develops valuation models of various financial instruments.

Prerequisites: FIN 605

FIN 737 International Financial Management (3 Credit Hours)

Examines such topics as the financial aspects of international business including financing and hedging activities of firms involved in international transfer of goods and services and decision making in connection with the asset management financing activities of multinational corporations.

Prerequisites: FIN 605

FIN 740 Futures and Options (3 Credit Hours)

In no area of finance is the interface between academic theory and real-world practice as close as in the case of futures and options. We have now reached a stage where it is essential that all finance professionals understand how these markets work, how they can be used, and what determines prices in them. This course addresses all these issues.

Prerequisites: FIN 605

FIN 741 Corporate Financial Policy and Control (3 Credit Hours)

The course will comprise mainly cases but there will be some lecturing particularly on material not covered in FIN 605.

Prerequisites: FIN 605

FIN 795 Selected Topics in Finance (3 Credit Hours)

Designed to provide the advanced student with an opportunity to study independently or in small groups and investigate specific topics of current interest in the field of finance.

Prerequisites: Ph.D. standing and permission of the chair and coordinator

FIN 835 Portfolio Analysis (3 Credit Hours)

A mathematical analysis of modern investment theory. Analyzes return and risk characteristics of individual securities and portfolios and develops valuation models of various financial instruments.

Prerequisites: FIN 605

FIN 837 International Financial Management (3 Credit Hours)

Examines such topics as the financial aspects of international business including financing and hedging activities of firms involved in international transfer of goods and services and decision making in connection with the asset management financing activities of multinational corporations.

Prerequisites: FIN 605

FIN 860 Advanced Financial Theory (3 Credit Hours)

This course discusses the building blocks which much of financial theory is based on. In addition, a number of current topics in the literature are analyzed. Students are expected to read many of the original journal articles.

FIN 861 Seminar in Investments (3 Credit Hours)

The purpose of this course is to be acquainted with recent theoretical and empirical literature on investments, portfolio management and speculative instruments. Emphasis will be placed on the development of methodological approaches to the various research problems.

FIN 862 Seminar in International Finance (3 Credit Hours)

This course is designed to provide an in-depth understanding of the key issues of international financial management. Topics covered include balance of payments, interest rates, international capital flows/markets and asset pricing, foreign exchange risk management, and international capital budgeting.

FIN 863 Seminar in Current Financial Topics (3 Credit Hours)

This course is structured to provide the student with research developments that lie on the frontier of corporate financial management. Topics covered include optimal investment and financing decisions, cost of capital, option pricing theory, equilibrium valuation models, efficient capital markets, capital structure, dividend policy, mergers and acquisitions and international financial management.

FIN 864 Empirical Asset Pricing (3 Credit Hours)

This course represents an advanced study of empirical research methods in finance. It focuses on the empirical techniques used most often in the analysis of financial markets and how they are applied to actual market data. Topics includes: statistical properties of asset returns, nonlinear dynamics, and volatility modeling of financial assets.

FIN 865 Financial Econometrics Methods (3 Credit Hours)

This course is designed to provide an in-depth discussion of econometrics methods used to study financial markets with a focus on time series analysis.

Prerequisites: FIN 864

FIN 895 Selected Topics in Finance (3 Credit Hours)

Designed to provide the advanced student with an opportunity to study independently or in small groups and investigate specific topics of current interest in the field of finance.

Prerequisites: Ph.D. standing and permission of the chair and coordinator

FIN 899 Dissertation (1-12 Credit Hours)

An approved research project, written under the supervision of a faculty advisor, in which the student demonstrates the ability to conduct original research. The complete project must be approved by the dissertation committee.

Prerequisites: FIN 863

FIN 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

FOUN - Foundations of Education

FOUN 611 Introduction to Research Methods in Education (3 Credit Hours)

The primary goal of the course is to provide students with the knowledge and skills to access, evaluate, and synthesize empirical research. The course examines types of educational research and criteria for evaluating empirical studies. It introduces various types of research questions and associated research designs, components of research reports, sampling, validity of measures, threats to internal and external validity, and simple statistics.

Prerequisites: Students in the graduate Counseling program must take COUN 601 before taking this course

FOUN 612 Applied Research Methods in Education (3 Credit Hours)

The primary goal of this course is to provide students with the knowledge and skills to write a research proposal and conduct research. It is intended for those students who are completing a thesis to meet their program requirements, those planning on pursuing a doctoral degree, or those who anticipate conducting research for any other reasons. The course examines types of educational research and criteria for selection of topics for research projects; describes criteria for effective collection and organization of data; review of literature, analysis of data and proposal writing.

FOUN 640 Fundamentals of Measurement and Assessment (3 Credit Hours)

This course stresses the use of measurement and assessment for evaluation and decision making focusing on basic concepts applicable to all types of assessment: statistical concepts, reliability, validity, and interpretive frameworks for cognitive and non-cognitive measures.

FOUN 641 Assessment and Evaluation of Student Learning (3 Credit Hours)

The valid use of formative and summative assessment and evaluation principles for monitoring and promoting students' learning and development will be addressed. Students will learn how to construct and use a variety of formal and informal teacher assessment procedures.

FOUN 650 Human Development and Student Learning (3 Credit Hours)

This course will focus on understanding children's and adolescents' physical, social, emotional, intellectual, and speech/language development; integrating and incorporating children and adolescent differences (economic, social, racial, ethnic, religious, physical, and mental) into understanding developmental issues as they relate to instruction, including the identification and instruction of students with exceptionalities as well as special needs. Research related to the classroom application of these theories is examined and evaluated based on principles of research design and interpretation. Student must be a participant in the Teacher Residency Grant.

FOUN 722 Introduction to Applied Statistics and Data Analysis (3 Credit Hours)

Introduction to basic topics in statistical analysis, including descriptive statistics and simple inferential statistics such as correlation, regression, t-tests, one-way analysis of variance, and chi-square.

FOUN 812 Research Design and Analysis (3 Credit Hours)

This course focuses on the application of advanced research design as it is applied in various educational disciplines. It provides an in-depth examination of quantitative research approaches, sampling techniques, threats to validity, ethical considerations and reviewing, writing quantitative methodology descriptions for research proposals and reports.

FOUN 813 Program Evaluation in Education (3 Credit Hours)

Examines procedures and problems in the design and utilization of program evaluation in education. Identifies evaluation purposes and the methods of evaluation especially as affected by organizational behavior, ethical considerations, and political influences. Evaluation methodology includes, but is not limited to, design considerations, data utilization, and teacher evaluation. Both quantitative and qualitative strategies will be covered.

FOUN 816 Single Subject Research Designs (3 Credit Hours)

This course is designed to provide the student knowledge and skills that relate to single subject methodology. It includes an overview of historical and philosophical foundations, basic issues in behavioral assessment, and single subject research and design methodology, including trend and statistical analysis in single subject research. Students will analyze critically empirical research and be able to plan, implement, and evaluate original research.

FOUN 817 Mixed Methods Research in Education (3 Credit Hours)

This course will provide an overview of mixed methods research, with an emphasis on its application in education. The course will begin with a discussion of the history and philosophy of mixed methods research, and will maintain a focus on the epistemological underpinnings of both mixed methods designs and their component parts. Consideration will be given to a number of research traditions that can be subsumed under the general headings of 'quantitative' and 'qualitative' methods, including surveys, in-depth qualitative interviewing, ethnography, and social network analysis. Methods for collecting, analyzing, integrating, and reporting data from multiple sources will be discussed. The course will have an applied focus and will include lectures, presentations of applied mixed methods research by guest experts, applied and methodological readings, and student presentations.

Prerequisites: FOUN 812 and TLCI 814

FOUN 818 Analysis with Large Datasets (3 Credit Hours)

This course concentrates on sample designs, design-based estimation/inference, data preparation, and analysis of complex survey data in education.

Prerequisites: FOUN 822

FOUN 822 Applied Linear Models in Educational Research (3 Credit Hours)

Introduction to the general linear model with emphasis on concepts and applications of multiple linear regression (MLR) to problems in educational research. Topics include estimation and interpretation of MLR models, relationships between MLR and analysis of variance (ANOVA), logistic regression analysis, and trend analysis.

Prerequisites: FOUN 722

FOUN 823 Analysis of Variance Applied to Educational Research (3 Credit Hours)

Introduction of analysis of variance models as applied in education and human services, including two-way and three-way factorial designs, analysis of covariance, repeated-measures, and mixed-model analysis.

Prerequisites: FOUN 722

FOUN 824 Design and Analysis for Causal Inference in Educational Contexts (3 Credit Hours)

Introduction to research design and statistical analysis for studies intended to support causal inferences. Topics include experimental, quasi-experimental, and ex post facto design and appropriate models for data analysis.

Prerequisites: FOUN 822 and FOUN 823 or permission of instructor

FOUN 825 Applied Multilevel Modeling in Educational Research (3 Credit Hours)

This course focuses on advanced applications of statistics that are used in educational research in various educational disciplines. Specifically, the course will offer an introduction to hierarchical linear modeling (HLM) of nested data as applied to education. Topics include conceptual and statistical background of two- and three-level designs, cross-level interaction effects, and application of multilevel models for repeated measures designs. Emphasis is on estimation, interpretation, and diagnostics for multilevel models of continuous outcomes.

Prerequisites: FOUN 822 and FOUN 823 or instructor permission

FOUN 826 Applied Structural Equation Modeling in Educational Research (3 Credit Hours)

Introduction to structural equation modeling and related multivariate procedures applied to research problems in education. Topics include a brief review of exploratory factor analysis, confirmatory (structural) factor analysis, path analysis, and structural equation modeling with observed and latent variables.

Prerequisites: FOUN 822 and FOUN 823 or permission of instructor

FOUN 827 Applied Logistic Regression (3 Credit Hours)

A practical and conceptual introduction to applying logistic and probit regression models to typical questions in the social sciences. Will utilize SPSS for practical applications covering simple and multiple regression models, interactions and curvilinear effects, multinomial models, testing of assumptions, and select advanced applications such as propensity score matching and missing data analysis.

Prerequisites: FOUN 822 and FOUN 823 or permission of instructor

FOUN 830 Theories of Learning and Instruction (3 Credit Hours)

The course consists of critical discussion and analysis of major learning theories that have influenced learning and instruction in today's schools. Applications of current research to instructional design will be emphasized.

FOUN 831 Human Development in Education (3 Credit Hours)

This course introduces the domain of human development to education students by promoting their construction of a developmental perspective and adoption of a developmental theory to understand education-relevant phenomena. The course will cover central tenets of the developmental psychological perspective, several contemporary developmental approaches, and contexts of development relevant to educational processes. Furthermore, the course aims to promote students' skills in pursuing scientific knowledge about educational topics of interest in human development. The course will address life-span processes; however, the primary emphasis will be on processes and ages associated with formal educational settings (K-16).

Prerequisites: FOUN 830

FOUN 835 Motivation in Education (3 Credit Hours)

The course consists of critical discussion and analysis of major theories of motivation and research supporting these theories. Applications to education and classroom instruction will be emphasized. Equity concerns related to how to motivate students placed at risk will also be examined.

FOUN 836 Metacognition and Self-Regulated Learning (3 Credit Hours)

The course consists of critical discussion and analysis of major theories and research on metacognition and self-regulated learning. Applications to education and classroom instruction will be emphasized. Strategies to promote self-regulated learning among diverse and at-risk students will also be examined.

FOUN 840 Educational Measurement and Assessment (3 Credit Hours)

Overview of advanced educational measurement and assessment ideologies as well as methods. Students will identify, critique, construct and administer educational measures. Psychometric topics such as reliability and validity will be explored as well as advanced assessment issues such as scale construction and item response theory.

FOUN 848 Assessment and Evaluation in Content Areas (3 Credit Hours)

Lecture 3 hours, 3 credits.

FOUN 850 Sociological and Philosophical Foundations of Education (3 Credit Hours)

Students examine the relationship between education and society by reviewing a variety of theoretical perspectives and empirical studies. Topics include: social mobility and stratification; social reproduction; the dynamics of race, class, and gender in education; social capital; the student-teacher relationship; teaching as a profession; and higher education.

FOUN 867 Teaching and Research Practicum (3 Credit Hours)

Advanced graduate students in the Ph.D. Educational Psychology, Research and Evaluation program or other Ph.D. programs will have the opportunity to participate in research, consulting, an internship, or assisting in teaching research and statistics courses.

Prerequisites: FOUN 822 and FOUN 823

FOUN 869 Teaching Statistics Practicum (3 Credit Hours)

Advanced graduate students in the Ph.D. Educational Research, Evaluation and Educational Psychology concentration or other Ph.D. concentrations will have the opportunity to participate in research, consulting, internship, or assisting in teaching research methods and statistics courses.

Prerequisites: FOUN 822 and FOUN 823

FOUN 870 Formative Assessment of Student Learning (3 Credit Hours)

Educators in various leadership and instructional roles need strong skills and knowledge in contemporary assessment of student learning. This course addresses a wide range of student assessment topics which makes connections among assessment practices, self-regulated learning, motivation, feedback, and engagement at the classroom and school levels. Students will learn how to develop, build and sustain formative assessment programs.

FOUN 881 Dissertation Seminar (3 Credit Hours)

Instructor approval required. The primary goal of the course is to develop a dissertation proposal. It is intended for doctoral students who have completed all other coursework. The course covers literature reviews, proposal writing, and obtaining approval from Human Subjects committees. Outlets for disseminating the research findings will be explored.

Prerequisites: FOUN 812, FOUN 814 and FOUN 822 or FOUN 823

FOUN 895 Special Topics in Educational Psychology and Program Evaluation (3 Credit Hours)

Study of selected topics in Educational Psychology and/or Program Evaluation.

FOUN 897 Independent Study (1-3 Credit Hours)

This course will be used for independent studies with Educational Psychology and Program Evaluation faculty members.

FOUN 899 Dissertation (1-12 Credit Hours)

Dissertation credit.

FOUN 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

FR - French

FR 507 Advanced Grammar and Syntax (3 Credit Hours)

This class is designed to solidify and refine students' working knowledge of written skills in the language, with an emphasis on increasing their written sophistication. Focus is on analysis of vocabulary, grammar, and cultural nuances in the syntax to examine how language reflects the ways of life and beliefs of its speakers, contrasted with the extent of language's influence on culture. Students will refine their skills in written inter-cultural communication, paying attention to idioms and the fine points of 'cultural grammar,' communicative competence and specialized discourse to develop excellent communication skills. This course is intended to prepare students for using their knowledge of language and culture in professional settings.

FR 510 Berlin and Paris: Crucibles of European Ideas (3 Credit Hours)

This course explores the cultural movements that have characterized the German-French commonalities and differences from the early 1900s through the 1990s in cross-disciplinary discourses such as film, literature, art, politics, and economics. Cross-listed with WCS 410/WCS 510.

Prerequisites: German and French students must read and write in the target language

FR 515 Applied Phonetics (3 Credit Hours)

This class is a skills-based, laboratory class on French phonetics designed to develop students' mastery of spoken French. Students will acquire a more native-like French accent and see clear correspondences between orthography and pronunciation. By using oral texts with social and cultural themes students acquire knowledge of French pronunciation in a culturally relevant way. Students additionally investigate non-standard accents from Quebec, the south of French, and Belgium.

FR 520 Francophone Civilization (3 Credit Hours)

This seminar traces the historical narratives of French colonialism up until contemporary times, examining the roots of unrest in the Maghreb and other ex-French colonies through representative political, literary, and cinematic texts relating to today's political flashpoints in the Maghreb and West Africa as well as other former French colonies. It also approaches different aspects of France's colonial and post-colonial legacy through a historical lens as students explore texts from such revolutionary leaders as Césaire, Senghor, Memmi and others. Examination of both the revolutionary movements that propelled France's ex-colonies towards independence and France's shifting perspectives from ex-colonizer to Francophone ally.

FR 527 Studies in Seventeenth-Century French Literature (3 Credit Hours)

Following a preparatory period, the political stability of the French monarchy ushers in the golden age of classicism. Representative works from comic and dramatic theater, philosophy, poetry and the evolving novel.

FR 528 Studies in Eighteenth-Century French Literature (3 Credit Hours)

A study of the two main currents of ideas of the Age of Reason or Enlightenment; the rationalistic drive to question established authority, exemplified by the 'Encyclopedie' and leading to the Revolution of 1789; and the Rousseauistic return to nature and emotivity. Representative readings.

FR 537 Studies in Nineteenth-Century French Literature (3 Credit Hours)

A study of the post-Revolutionary (1789) literary movements: Romanticism, Realism, Naturalism, Symbolism, which opened new horizons of modern science and culture in France. Representative works.

FR 538 Studies in Twentieth-Century French Literature (3 Credit Hours)

A survey of representative works and movements in 20th century French and Francophone literature.

Prerequisites: FR 312W or permission of the instructor

FR 569 A History of French Cinema (3 Credit Hours)

This course will function as a survey of French film classics from the birth of cinema through contemporary times, and also shed light on various French cultural and literary movements as they are represented in film (Surrealism, WWII, Nouvelle Vague, decolonization).

Prerequisites: FR 312W or permission of instructor

FR 595 Topics in French (1-3 Credit Hours)

The advanced study of the selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described by academic advisors.

FR 596 Topics in French (1-3 Credit Hours)

The advanced study of the selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described by academic advisors.

FR 695 Topics in French (1-9 Credit Hours)

Advanced study of selected topics which may not be offered regularly. These courses appear in the course schedule and are more fully described in a supplement distributed to graduate program directors.

FR 696 Topics in French (1-9 Credit Hours)

Advanced study of selected topics which may not be offered regularly. These courses appear in the course schedule booklet and are more fully described in a supplement distributed to graduate program directors.

FR 697 Tutorial Work Topics in French (1-3 Credit Hours)

This course will allow an individual student to pursue a special topic or project under the guidance of a professor.

Prerequisites: Approval of project

FR 698 Tutorial Work Topics in French (1-3 Credit Hours)

This course will allow an individual student to pursue a special topic or project under the guidance of a professor.

Prerequisites: Approval of project

FR 795 (3 Credit Hours)

The advanced study of the selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described by academic advisors.

GDES - Graphic Design

GDES 697 Tutorial in Graphic Design (3 Credit Hours)

Tutorial is a self-directed learning experience where students work on a project of their devising under the supervision of a faculty member.

Prerequisites: Instructor permission required

GEOG - Geography

GEOG 500 Seminar in Geography (3 Credit Hours)

Advanced study of a specialized topic in geography. The choice of the topic may vary according to the availability of faculty expertise and student interest.

GEOG 501 Global Environmental Policy (3 Credit Hours)

This course analyzes the causes, severity, potential consequences, and proposed solutions regarding global ecological issues with special attention to the scientific debate and the political and policy process. It examines environmental policies of national governments, regional/international organizations and global conferences.

Prerequisites: GEOG 100S or GEOG 101S or GEOG 102T or POLS 100S or POLS 101S or POLS 102S or permission of the instructor

GEOG 502 Geographic Information Systems (3 Credit Hours)

A study of the conceptual basis of GIS as a tool for manipulating spatial information. The course focuses on how geographic information can be input and organized within the framework of a GIS. Students will work on a computer-based GIS to gain a greater understanding of spatial database structures and analytical operations.

Prerequisites: Junior standing, GEOG 102T, or permission of instructor

GEOG 504 Digital Techniques for Remote Sensing (3 Credit Hours)

Study of the theory and application of remote sensing, emphasizing environmental applications and aerial and satellite imagery. Covers the fundamentals of multispectral digital image processing, including sensors pre-processing, enhancement, classification, accuracy assessment, and GIS data integration.

Prerequisites: Junior standing, GEOG 102T, or permission of instructor

GEOG 505 Seminar in International Resource Management (3 Credit Hours)

Discussion of the ecological and management principles underlying international resource management and the goal of attaining a sustainable, ecologically balanced world.

GEOG 508 Cartography (3 Credit Hours)

Computer-assisted methods and techniques employed in the design, construction, and use of maps and other graphics as tools for data analysis and communication.

GEOG 509 Drone Applications Proseminar (3 Credit Hours)

Survey of the state-of-the-art geospatial applications of small Uncrewed Autonomous Systems (sUAS) mapping, surveying, and modeling. Course combines seminars spanning application sectors of research and professional practice; lectures on mission planning, operations, analysis and regulations; and hands-on practical exercises incorporating risk management, safety, ethics, and legal issues.

Prerequisites: GEOG 502 or permission of instructor

GEOG 510 Seminar in Urban Geography (3 Credit Hours)

Discussion of specific urban and metropolitan problems based on outside readings and individually selected research topics.

GEOG 511 Urban and Regional Planning (3 Credit Hours)

A study of planning concepts and principles used to guide contemporary metropolitan growth and development. Emphasis is on the application of planning tools and methods that guide the planning process from conception to execution.

GEOG 512 Cities of the World (3 Credit Hours)

An examination of cities of the world's major cultural realms with an emphasis on the urban landscape as it varies between developed and developing countries.

GEOG 517 GIS for Planning and Public Policy (3 Credit Hours)

Geographic Information Systems (GIS) and science are an essential tool for urban planners and policy makers who have special interests in places and who need this kind of knowledge for decision making. The purpose of this course is to teach students the foundations of GIS and how it is applied in urban planning and other related disciplines. The course combines lectures, discussion of readings, and hands-on exercises in the computer lab.

Prerequisites: GEOG 402 or GEOG 502 or permission of the instructor

GEOG 519 Spatial Analysis of Coastal Environments (3 Credit Hours)

The course integrates remotely sensed and field techniques for scientific investigation and practical management of coastal environmental systems. Spatial modeling of coastal processes and management tools using Geographic Information System (GIS).

Prerequisites: GEOG 300, GEOG 402 or GEOG 502, or permission of instructor

GEOG 520 Marine Geography (3 Credit Hours)

An analysis of the environmental geography and resources of the ocean, with particular emphasis on geospatial analysis of the seafloor, hydrography, climate change, fisheries, ocean pollution, maritime activity spaces and management.

Prerequisites: GEOG 502 or permission of the instructor

GEOG 522 Coastal Geography (3 Credit Hours)

An examination of the physical and human geography of the coastal zone. Considers problems of managing coastal resources with an emphasis on North America. Lectures focus on coastal patterns, processes, and problems at the global, national, and local scales. Students investigate a section of the local coastline and write a report on the physical and human geography on the basis of field study, library, and internet research.

GEOG 524 Weather, Climate, and Society (3 Credit Hours)

Weather and climate play a pivotal role in nearly every aspect of life. How does temperature relate to health outcomes? What impact does El Niño have on Peruvian farmers? How is the issue of climate change reflected in national security policy? Why? Topics also include the energy balance equation, remote sensing techniques, and climatological data acquisition and analysis. Beyond an understanding of the complex processes that dictate the flow of the atmosphere, the course analyzes the socioeconomic, political, and cultural perspectives of climate and weather. The course also provides a framework for stewardship and responsibility to the future.

Prerequisites: GEOG 100S, 101S, or permission of the instructor

GEOG 525 Internet Geographic Information Systems (3 Credit Hours)

Theoretical and practical exploration of methods, standards, and policies related to the development and utilization of geographic information systems on the Internet. Students will create and utilize distributed geospatial data and analytical systems using the WWW and the Internet to address geographical problems.

Prerequisites: GEOG 502

GEOG 532 Advanced GIS (3 Credit Hours)

The study of a series of advanced topics in the field of geographic information systems/science. Focus is placed on the development of projects/models and a survey of several advanced techniques. Students will work on a computer based GIS to implement topics from lectures.

Prerequisites: GEOG 502

GEOG 546 Geography, Gender, and Sexuality (3 Credit Hours)

This course examines gender identity and sexuality in all of their diverse forms through a lens of human geography, such as metaphors of space and place, the cultural landscape, and 'mapping territory.' Topics explored include global gender identities; 'queer space; 'locating' gender and sexuality within the arts and tourism; the gendered citizen and the nation; and political economies of gender and sexuality.

GEOG 551 Europe (3 Credit Hours)

A geographical analysis of the interrelationships among physical, cultural, economic, and political factors in Europe.

GEOG 552 Africa (3 Credit Hours)

A geographical analysis of the interrelationships among physical, cultural, economic, and political factors in Africa.

GEOG 553 Asia (3 Credit Hours)

A geographical analysis of the interrelationships among physical, cultural, economic, and political factors in Asia excluding the Middle East and the former USSR.

GEOG 554 Latin America (3 Credit Hours)

A geographical analysis of the interrelationships among physical, cultural, economic, and political factors in Latin America.

GEOG 555 The Middle East (3 Credit Hours)

A geographical analysis of the interrelationships among physical, cultural, economic, and political factors in the Middle East.

GEOG 558 Geography of Virginia (3 Credit Hours)

An analysis of Virginia's population, resources, and regional landscapes as they have been influenced by physical, cultural, historical, and economic factors.

GEOG 560 Medical Geography (3 Credit Hours)

The course covers a range of topics in medical and health geography, including spatial behaviors of infectious disease and health care access. The focus of the course is on the geographical patterns of health and disease from the population rather than individual scale. In addition to seminar style lectures and discussions, the course enables students to further investigate by learning how to conduct medical/health geography research.

GEOG 562 Advanced Spatial Analysis (3 Credit Hours)

This course introduces the essential theoretical concepts and analytical tools for analyzing spatial process, spatial autocorrelation, spatial patterns, techniques for spatial interpolation, network connectivity, big data, and landscape patterns. The course culminates with students carrying out their own spatial analysis projects. This course assumes that students understand the basic concepts in GIS with some experience in software operation of ArcGIS.

Prerequisites: GEOG 402 or GEOG 502, or permission of the instructor

GEOG 563 GIS Programming (3 Credit Hours)

This course develops students' GIS programming skills. Focus is placed on Python programming in ArcGIS and JavaScript in Web GIS development.

Prerequisites: GEOG 402 or GEOG 600

GEOG 564 Advanced Environmental Geography Seminar (3 Credit Hours)

The objective of the course is to provide students with a deeper understanding of the current concepts and debates in environmental geography. By exploring the ethical and philosophical foundations of the field, the course considers the environment's opportunities and constraints. While topics may include climate change, agricultural security, and renewable energy, the course will be driven by student-led discussions and participation. Critically thinking about complex phenomenon, the seminar will include various weekly readings, discussions, and writing assignments.

GEOG 573 Geographic Information Systems for Emergency Management (3 Credit Hours)

Students will demonstrate advanced skills and techniques using spatial data to prevent, mitigate, respond to, and recover from intentional, natural, and accidental homeland security threats and emergencies. This course demonstrates the importance of rapidly disseminating spatial information towards the prevention and response of various organizations to homeland security events. This course will provide students with the tools and experience required to collect, prepare and manage spatial data and enable students to be prepared to map and analyze the data to quickly and effectively create a coordinated response to real homeland security events.

Prerequisites: GEOG 100S, GEOG 101S, GEOG 102T, or permission of the instructor

GEOG 575 Urban Resiliency (3 Credit Hours)

This course examines the multifaceted interface of built and natural environments and their impacts on land use management at spatial and temporal scales. It evaluates the impact of population pressure on sustainability through a survey of urban areas and analyzes urban planning and management capacities to maintain resilience despite environmental and technological hazards.

Prerequisites: GEOG 100S, 101S, or equivalent or permission of the instructor

GEOG 590 Applied Cartography/GIS (1-3 Credit Hours)

Practical experience in applying the principles of cartography and geographical information systems to the design and construction of maps and other graphics.

GEOG 595 Topics in Geography (1-4 Credit Hours)

The advanced study of selected topics which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

GEOG 596 Topics in Geography (1-4 Credit Hours)

The advanced study of selected topics which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

GEOG 597 Independent Research in Geography (1-3 Credit Hours)
Independent reading and study on a topic to be selected under the direction of the instructor. Conferences and papers as appropriate.

GEOG 598 Tutorial Work in Geography (1-3 Credit Hours)
Independent research under the supervision of a faculty member.

GEOG 600 Geospatial Data Analysis (3 Credit Hours)
Course focuses on the fundamentals of geospatial data science. Students learn the key data models, structures, sources, and application of spatial analysis using GIS software, R, programming, and Earth observations.

GEOG 601 Spatial Statistics and Modeling (3 Credit Hours)
This course covers the foundations of spatial statistics and modeling. Emphasis is placed on point, linear and areal patterns, geostatistics, and model development for a variety of problems using multiple software packages.

GEOG 620 Seminar in Political Geography (3 Credit Hours)
A study of the interrelationships of political and geographic phenomena, and theories of geopolitics; examines in a seminar format the political geography both of specific topics such as the national integration of states, refugees and resources, and of particular regions of the world.

GEOG 668 Internship (1-6 Credit Hours)
Individualized practical experience.

GEOG 695 Selected Topics in Geography (1-3 Credit Hours)
Advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest.

GEOG 696 Selected Topics in Geography (1-3 Credit Hours)
Advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest.

GEOG 697 Independent Research in Geography (1-3 Credit Hours)
Independent research in geography under the supervision of a faculty member.

GEOG 720 Cultural Geography Seminar (3 Credit Hours)
This seminar examines the field of cultural geography with: 1) an emphasis on theories and concepts developed over the past twenty years in 'new' cultural geography, and 2) cultural geography's emphasis on issues such as place, power, landscape and identity.

GER - German

GER 507 Advanced Grammar and Syntax (3 Credit Hours)
This class is designed to solidify and refine students' working knowledge of written skills in the language, with an emphasis on increasing their written sophistication. Focus is on analysis of vocabulary, grammar, and cultural nuances in the syntax to examine how language reflects the ways of life and beliefs of its speakers, contrasted with the extent of language's influence on culture. Students will refine their skills in written inter-cultural communication, paying attention to idioms and the fine points of 'cultural grammar' communicative competence and specialized discourse to develop excellent communication skills. This course is intended to prepare students for using their knowledge of language and culture in professional settings.

GER 508 Conversation and Composition (3 Credit Hours)
This course is designed to further develop the mastery of spoken and written German, review grammar, build vocabulary and fine-tune the student's stylistic proficiency in German. The textbook *Anders gedacht* is an intermediate/advanced reader that covers a wide variety of historical, political and cultural events and developments in contemporary German speaking countries. The *Übungsbuch* accompanies the grammatical and thematic features of the textbook and provides further exercises. The course will be complemented by several video screenings and multi-media presentations covering a variety of aspects in contemporary German speaking culture.

GER 510 Berlin and Paris: Crucibles of European Ideas (3 Credit Hours)
This course explores the cultural movements that have characterized the German-French commonalities and differences from the early 1900s through the 1990s in cross-disciplinary discourses such as film, literature, art, politics, and economics. Cross-listed with FLET 510.
Prerequisites: German and French students must read and write in the target language

GER 520 Masterpieces of German Poetry (3 Credit Hours)
This course will delineate 800 years of German poetry, analyzing exemplary works within their cultural and historical context such as the courtly love tradition of the Middle Ages, the spirituality of the German Reformation, the (meta-)physical passions of the Baroque, the humanist ideals of Weimar Classicism, the profound longings and ultimate ironies of German Romanticism, fin de siècle symbolism and European decadence, the avant-garde of Weimar culture, the legacy of the Third Reich, and the poetics and politics of East/West Germany up to the fall of the Berlin Wall and the unification of Germany. The close readings will be complemented by videos, film clips, slides and musical samples. Readings and discussions in German.

GER 545 German Cinema I (3 Credit Hours)
The first half of the 20th century was the most creative and destructive period in German and European history. Its rich cultural achievements included Viennese psychoanalytical theory of the turn of the century, Art Nouveau, German Expressionism, and the avant garde aesthetics of the Weimar Republic. Conversely, World War I and II exposed the cultural agony and human depravity of modern civilization. This course will trace these various aspects and developments in a variety of exemplary genres. Readings and discussions in German. (Cross-listed with WCS 445/WCS 545 and COMM 444/COMM 544)

GER 546 German Cinema II (3 Credit Hours)
This course will focus on the German cinema from perspectives such as fascism and its legacy, film as historical critique, or Weimar cinema. This survey course covers major German movies in film history from the 1970's to the present. (Cross-listed with WCS 445/WCS 545 and COMM 444/COMM 544)

GER 550 German Satires and Parodies (3 Credit Hours)
A study of comical and satirical features in exemplary literary and visual texts ranging from late medieval broad sheets and moralistic narratives to postmodern parodies in literature, music, film and graphic design. Students will study a wide variety of texts and analyze them as critical reflections of their social and cultural contexts, which include the spiritual conflicts and religious challenges of the Age of Renaissance and Reformation, anti-Nazi collages, and the permanent quest for pleasure and entertainment in our present-day multi-media Spassgesellschaft (fun society). Readings and discussions in German.

GER 555 Germany 1900-1945: From High Culture to Holocaust (3 Credit Hours)
The first half of the 20th century was the most creative and destructive period in German and European history. Its rich culture achievements included Viennese psychoanalytical theory of the turn of the century, Art Nouveau, German Expressionism in painting and poetry, and the avant garde aesthetics of the Weimar Republic (film, dance, cabaret, architecture etc). They played a central part in the evolution of a modern and postmodern sensibility. Conversely, World War I and World War II exposed the cultural agony and human depravity of modern Civilization. This course will trace these various aspects and developments in a variety of exemplary verbal and visual texts, including the genres of poetry, novella, drama, painting and film. Readings and discussions in German.

GER 570 Post World War II Germany (3 Credit Hours)
The course will cover representative literary texts and cultural events of divided and united Germany, including Heinrich Böll, Günter Grass, Max Frisch, Christa Wolf, Doris Dörrie et al, as well as film, painting, popular music, the culture of memory and German Jewish relations after the Shoah.

GER 576 German-Jewish Literature and Culture (3 Credit Hours)
A survey of seminal texts by German-Jewish philosophers and writers from the Enlightenment to the present day, including Marx, Kafka, Freud, Schnitzler and Arendt. (cross-listed with WCS 476/WCS 576).

GER 578 German Drama (3 Credit Hours)

This course provides a survey of representative examples from 200 years of German drama. Texts include plays from Weimar Classicism, Young Germany, Naturalism and Symbolism, fin de siècle Vienna, German Expressionism, Weimar Modernism, Exile Literature, "Vergangenheitsbewältigung" (texts of coming to terms with the past), and post-modern experimentalism. The course will focus on issues such as mythology, psychopathology, sexual morality, epic theater, Marxist ideology, fascism and guilt, and feminist politics and aesthetics. The readings will be complemented by screenings of various film adaptations. All readings and discussions are in German.

Prerequisites: GER 311 and GER 312W

GER 595 Topics in German (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: appropriate survey course or permission of the instructor

GER 596 Topics in German (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: appropriate survey course or permission of the instructor

GER 695 Topics in German (1-9 Credit Hours)

Advanced study of selected topics which may not be offered regularly. These appear in the course schedule and are more fully described in a supplement distributed to graduate program directors.

GER 696 Topics in German (1-9 Credit Hours)

Advanced study of selected topics which may not be offered regularly. These appear in the course schedule and are more fully described in a supplement distributed to graduate program directors.

GER 697 Tutorial Work in German (3 Credit Hours)

This course will allow an individual student to pursue a special topic or project under the guidance of a professor.

Prerequisites: approval of project

GER 698 Tutorial Work in German (3 Credit Hours)

This course will allow an individual student to pursue a special topic or project under the guidance of a professor.

Prerequisites: approval of project

GRAD - Graduate

GRAD 668 Graduate Internship (0 Credit Hours)

Student participation in a professional work experience for which credit will not apply to the degree. Approval for enrollment is determined by Monarch Internship and Co-Op Office (MICO). Experience must be related to the student's major or career area of interest, include adequate supervision by a professional, and include at least an average of 8 hours per week.

Prerequisites: Good academic standing (Graduate GPA of at least 3)

GRAD 700 Professional Development (1 Credit Hour)

This course is a professional development course for graduate students that will better prepare them for success in graduate school and subsequently in their careers and the academy. It focuses on establishing a multidisciplinary community of scholars, and encouraging joint exploration of the academy and its expectations, socialization and networking, future career paths, and other relevant issues. Students will develop a professional portfolio to integrate learning, document progress along their professional development plan, and showcase their academic and professional achievements.

HADM - Healthcare Administration

HADM 600 Introduction to Health Care Systems (3 Credit Hours)

This course is designed to help students learn about essential aspects of the organization, financing and delivery of healthcare in the United States. Students will acquire an enhanced understanding of the complex US health care system. The course has a macro-level orientation; however, the material necessitates considering how the many facets of the US healthcare system affect communities, families and individuals. The US healthcare system is like an ecosystem with various sub-components that interact with each other and with broader social, economic and political forces to create a complex, dynamic and intricate system. We can change the healthcare system, but we need to consider how proposed changes will affect other components of the system and broader society as well as what resistance various stakeholders will likely put forth.

HADM 601 Policy and Politics of Health (3 Credit Hours)

Policy and Politics of Health, explores the development, implementation, and evaluation of health policies in the United States. Health policies include those that address the organization, financing, provision, and evaluation of both personal and public health services. The tension between government's role in providing for the general welfare and protecting the public's health while recognizing the privacy rights of the individual will receive considerable attention as will the provision of healthcare within the context of a federal system of government. The long-term trend toward a more expansive role for governmental institutions and the media and the differential impact of economic, cultural and social factors, interest groups, social disparities and public opinion will be addressed in some detail. Students will develop an understanding of the policy process and the most common approach to policy research. The course includes exercises that will lead to a more comprehensive understanding of the most important types of public policy in the US healthcare system and the capacity to conduct a reasoned analysis of a policy issue.

HADM 602 Organizational Management (3 Credit Hours)

A study of management theory, organizational management and behavior as related to leadership, organizational design, culture, processes, workforce strategy and change management with an emphasis on the application of theory and research to organizational management and behavior. This course provides an opportunity to explore conceptual frameworks addressing organizational behavior, development, leadership, strategy and management of change.

HADM 605 Health Law and Ethics (3 Credit Hours)

This course examines legal, regulatory and ethical issues health professionals are likely to confront. In this course, we will examine the legal principles needed to analyze regulatory and liability issues. We will study selected principles and policies under-girding health the American system of health law, including common law principles of liability and federal/state legislation regulating health professionals and operations. We will also discuss the impact of state and federal law on the operation of various health-related organizations.

HADM 606 Health Economics (3 Credit Hours)

This is an introductory health economics course designed to provide students with a basic understanding of concepts in economic theory and analysis applied to healthcare delivery in the US. Health economics offers a conceptual framework and analytic tools for assessing the inter-relationships among healthcare resources, providers, consumers and markets. In other words, we will study how scarce health-related resources are allocated along with various incentives and structural frameworks that can impact those allocations.

HADM 607 Effective Information Technology for Healthcare Organizations (3 Credit Hours)

This course provides the key concepts related to information technology within healthcare organizations. The course explores how information technologies are used as a tool to enhance performance within healthcare organizations for positive health outcomes. Topic areas include various information technologies used in the healthcare sector; methods for assessing and ensuring information technology value; laws, regulations and standards to guide the practice; achieving effectiveness through information technology; and the latest developments including business and clinical intelligence and telemedicine.

HADM 610 Financing Healthcare (3 Credit Hours)

This course covers financial management in healthcare organizations including, but not limited to, financial decision-making using accounting information, operation of business units, principles of economics and capital budgeting processes along with budgetary and financial controls. Financial performance will be analyzed along with revenue determination and profitability. General accounting foundations and terminology will be covered.

HADM 611 Operations Management and Performance Improvement (3 Credit Hours)

To achieve performance improvements in the areas of cost, clinical quality, functional outcomes and service quality, healthcare managers must focus on the design, execution and management of operations. This course covers analytical techniques to support quantitative managerial decision-making in healthcare. Building on a 'system-based' approach to the healthcare environment, analytical tools are examined to aid problem solving and decision-making in healthcare organizations.

HADM 612 Administrative Introduction (1 Credit Hour)

The administrative introduction course provides students with no previous work experience in healthcare with a supervised experience in an approved organization. The introduction will expose the student to different aspects of working in a healthcare care environment, such as working with different professionals and gaining a deeper understanding of the complex nature of healthcare.

HADM 700 Leadership (3 Credit Hours)

The emphasis of this course is on the practice of leadership. The course will equip the student with the basic managerial background, fundamentals and the theories which will be applicable at any level in management and in a leadership position. Students will be exposed to the interaction of leadership, change, communication and power as seen in the healthcare environment. This course will examine the traits of leadership, developing leadership skill, creating a vision and managing conflicts and obstacles in an organization.

HADM 701 Supply Chain Management (3 Credit Hours)

This course focuses on the preparation of healthcare administrators for supply chain management. The concentrations for the course include healthcare value analysis, contract management, purchasing, warehouse management, equipment management, product standardization, just-in-time approaches and biomedical engineering.

HADM 702 Healthcare Marketing (3 Credit Hours)

This course examines marketing principles, concepts and skills applied to healthcare organizations and healthcare networks. Students will examine marketing methodologies and principles for evaluating consumer decision making actions for healthcare services. The course will place emphasis on social media and electronic forms of marketing healthcare services. The course will culminate with the development of a strategic healthcare marketing plan.

HADM 705 Conflict Analysis & Negotiations (3 Credit Hours)

This course will provide students with advanced knowledge and skills in the theory of conflict analysis and resolution, including but not necessarily limited to: Skill development and collaborative problem solving at the individual, group, and organizational level; and conceptual and practical skills in negotiation that are essential for managers. Third-party conflict intervention, which can assume a number of forms such as fact-finding, conciliation, mediation and arbitration.

HADM 706 Healthcare Strategy (3 Credit Hours)

This course is designed to help students learn about essential aspects of strategic planning and strategic management in the context of healthcare service organizations. Students will acquire an enhanced understanding of the complex US healthcare system, apply planning concepts to formulate mission and vision statements, and formulate goals and objectives as part of a strategic plan. The course content will also address aspects of organizational leadership, along with the importance of implementation and monitoring progress to achieve continuous quality improvement and to 'close the loop' with strategic planning initiatives.

HADM 715 Administrative Residency (3 Credit Hours)

The residency provides students with an in-depth supervised experience in an approved organization. The residency will require students to complete a project related to an actual healthcare administration issue that is a focus within the organization. The purpose of the graduate Administrative Residency is to provide an opportunity for the student to apply, in a practice setting and under the direction of a Preceptor, the competencies, knowledge and skills they have acquired through their healthcare administration course work. It requires the student integrates and synthesizes knowledge and skills through the application of health administration theories and principles to the development and implementation of a special project in a selected domain of professional health administration practice.

HIED - Higher Education

HIED 708 Foundations of Higher Education (3 Credit Hours)

An examination of the historical foundations and contemporary challenges facing higher education leaders. Coursework encourages students to explore linkages between research, theory, and practice, promoting a nuanced understanding of differing perspectives on complex and evolving issues. Development of graduate-level writing is emphasized.

HIED 710 Student Affairs Administration (3 Credit Hours)

An overview of the student affairs function across diverse institutions, by connecting the history of higher education with contemporary issues facing student affairs professionals. Students will spend time exploring various student affairs functions, connecting the importance of student learning and development outside the classroom. In addition, students will explore the dynamics of student affairs organizations while identifying personal long- and short-term student affairs career goals.

Prerequisites: COUN 707

HIED 712 Strategic Planning (3 Credit Hours)

This course provides the necessary knowledge and skills for administrators to both participate in and lead a strategic planning effort. Students will explore the role of strategic planning and institutional effectiveness in the context of changes in funding and demands for accountability.

HIED 720 The Private College and University (3 Credit Hours)

The U.S. Higher Education system contains great diversity due to the inclusion of private institutions. This course will examine the structure and organization of Higher Education in the U.S. as well as differences and similarities between private and public institutions.

HIED 725 Higher Education Politics and Policy (3 Credit Hours)

This course examines policy-in-action to help students understand how policies are developed at the organizational, state, and national levels, while gaining an understanding of the interplay of public perception and policymaking that can impact university operations. Students will explore the process by which policies are made, and they will consider why some problems are escalated to the public agenda, why some solutions are adopted and others rejected, and why some policies appear to succeed while others seem to fail.

HIED 733 Professional Helping Skills in Higher Education (3 Credit Hours)

This course explores the benefits of developing student response and support skills and how they affect the day-to-day role of a student affairs professional. Students will work in small groups to acquire the knowledge, skills, and attitudes necessary to provide support, direction, and guidance to individuals and groups. Guest speakers currently working in student affairs roles will be featured.

HIED 743 Campus Internationalization (3 Credit Hours)

This course examines the four key professional practices of campus internationalization: comprehensive internationalization, international student enrollment, international student and scholar services, and education abroad. Students learn the importance of aligning internationalization on-campus through courses, curriculum, international students, and internationalization programs, all of which help to connect the institution to the changing local and global community. Guest speakers will address competencies for international educators and provide insights on functional areas in international education.

HIED 744 Global Higher Education Systems: A Comparative Approach (1-3 Credit Hours)

An examination of the development of the three primary systems of higher education in the world today: the U.S., British and European (Continental) systems. The course will also examine, as appropriate, other systems of higher education from around the world. A study abroad component is required, for which additional costs will apply.

HIED 745 Today's College Student (3 Credit Hours)

A survey of college student experiences, with an emphasis on growth and development. Coursework will encourage students to apply theory to practice.

HIED 752 The Law of Higher Education (3 Credit Hours)

An exploration of the legal issues facing higher education in the United States. Topics to be discussed include the foundations from which higher education law emerges, current case law, state and federal statutory law, and contract law, as well as risk management and liability issues. Students may have the opportunity to visit the Supreme Court and to view oral arguments. Additionally, the course will address the ethical issues faced when shaping and implementing institutional policy, curriculum, and procedures.

HIED 756 Institutional Finance and Resource Management (3 Credit Hours)

This course examines the budget process in colleges and universities, as well as the impact of budget activities on all areas of planning and operations within an institution. It will cover elements of educational finance, including budgeting and resource management, with a focus on process and environmental factors that affect how institutions operate. Students will develop and enhance their abilities to write and speak effectively about finance-related issues.

HIED 757 Learning Environment Design and Assessment (3 Credit Hours)

This course provides students with skills to design educational experiences, plan educational programs, and conduct research on a variety of teaching and learning-related questions. Participants will consider the meaning of learning and the various contextual factors that influence the learning process in higher education, as well as the application of the learning sciences to the design of learning environments. Students will focus on creating inclusive, diverse, and equitable educational environments and use their insights to improve the practices through assessment.

HIED 758 Higher Education Leadership (3 Credit Hours)

This course provides students with the basic theory, knowledge and skills needed to be an effective leader within higher education institutions. Classes are designed for those who intend to pursue careers as higher education practitioners. Course assignments will take a practical approach to applying theoretical principles and identifying students' personal leadership styles.

HIED 761 Higher Education Capstone (3 Credit Hours)

The culminating experience for the master's degree, intended to integrate and apply the knowledge gained in the degree program to complex issues regarding policy and practice in higher education. Groups of students address a real world problem currently faced by a department or unit on campus and work on comprehensive portfolios.

HIED 762 Institutional Advancement (3 Credit Hours)

An exploration of institutional advancement in the areas of institutional marketing, event management, campaign development, social media, donor identification and cultivation, planned giving, corporate partnership development, and foundation management.

HIED 763 Topical Issues in Higher Education (3 Credit Hours)

This course provides a thorough analysis and dissection of a rotating, current issue in higher education, covering a broad range of higher education administrative areas. For each issue, students will examine relevant benchmark law, contemporary issues, historical perspectives, political realities, institutional missions and cultures, ethical considerations, leadership and management approaches, and courses of action available to decision-makers.

HIED 764 College and the University Presidency (3 Credit Hours)

This course is designed to provide greater understanding of the leadership role of college and university presidents and the multiplex of issues associated with the office of the presidency at the various types of American institutions. The course will utilize case study analysis, guest presentation, and review of the literature. There will be rigorous discussion, readings, and analyses in a collegial and reciprocal learning environment.

HIED 765 Adult and Continuing Education (3 Credit Hours)

An advanced seminar emphasizing the historical, philosophical, and institutional analyses of the development and status of adult and continuing education within the higher education community.

HIED 768 Internship in Higher Education Administration (3 Credit Hours)

The University advisor and site supervisor work together with students to develop and implement a set of objectives intended to familiarize them with the operation of an administrative area within an institution of higher education, to assist them in acquiring the practical skills necessary for the operation of that office, and to develop skills that are transferable to other administrative areas.

HIED 770 External and Internal Relations for Higher Education (3 Credit Hours)

This course serves as an introduction for prospective and current administrators to the social and political context of the higher education environment and its various constituencies. It will teach them to recognize the impact of politics, socioeconomic situations, diversity, media, monetary issues, and equity issues on their leadership practices.

HIED 771 Global and Intercultural Perspectives in Higher Education (3 Credit Hours)

This course explores global and intercultural issues for higher education leaders. Students examine issues encountered by student affairs and higher education professionals from global and intercultural perspectives, including program design and evaluation, partnerships between individuals and organizations worldwide, and budgeting and staff management. The course will prepare students with knowledge and skills that can be used to promote internationally-oriented practice, professional dialogue, and research.

HIED 793 History of Higher Education (3 Credit Hours)

An examination of the history of higher education and its connection to current higher education events. The course provides an understanding of the foundations of higher education, including European influences, societal forces, and economic factors.

HIED 794 Governance, Organization, and Administration of Higher Education (3 Credit Hours)

An exploration of how organizational structures, behavior, culture, and context influence institutional governance and administration. In-class activities examine the approaches institutions use in decision-making. Through discussion of assigned readings, current events, and guest lectures, students learn how institutions govern themselves and the effects of various governance practices. Case studies, role playing, and active discussion allow students to apply theoretical perspectives to the practical workings of higher education administration.

HIED 795 Topics in Higher Education Administration (1-6 Credit Hours)

Study of selected topics in higher education administration.

Prerequisites: permission of the instructor

HIED 797 Independent Study (1-3 Credit Hours)

Independent study of special topics in higher education for master's students.

Prerequisites: Permission of the instructor

HIED 805 Contemporary Issues in Higher Education (3 Credit Hours)

Explores issues of contemporary concern among practitioner-scholars in American higher education. The course utilizes a historical perspective to establish the background for the discussion of the issues influencing higher education today. Coursework and readings provide a nuanced understanding of differing perspectives on complex issues. Research and professional practice are examined through an issues based format that challenges students to develop and support their perspectives on the issues discussed. Doctoral-level writing is emphasized.

HIED 808 Foundations of Higher Education (3 Credit Hours)

An examination of the historical foundations and contemporary challenges facing higher education leaders. Coursework encourages students to explore linkages between research, theory, and practice, promoting a nuanced understanding of differing perspectives on complex and evolving issues. Development of graduate-level writing is emphasized.

HIED 809 Proseminar in Doctoral Studies (1-3 Credit Hours)

This course is designed to be taken in three parts throughout the program. It provides information on the doctoral process to help students successfully navigate their programs. It helps doctoral students enhance their abilities to search the scholarly literature; narrow their research topics; and improve their critical reading and inquiry, critical thinking and analysis, and writing. It focuses on approaches to scholarly writing in the field, strategies for inviting and providing peer review and feedback, and skills useful in analytical reading of scholarly work.

HIED 810 Student Affairs Administration (3 Credit Hours)

An overview of the student affairs function across diverse institutions, by connecting the history of higher education with contemporary issues facing student affairs professionals. Students will spend time exploring various student affairs functions, connecting the importance of student learning and development outside the classroom. In addition, students will explore the dynamics of student affairs organizations while identifying personal long- and short-term student affairs career goals.

HIED 812 Strategic Planning (3 Credit Hours)

This course provides the necessary knowledge and skills for administrators both to participate in and lead a meaningful strategic planning effort. Students will explore the role of strategic planning and institutional effectiveness in the context of changes in funding and demands for accountability.

HIED 820 The Private College and University (3 Credit Hours)

The U.S. Higher Education system contains great diversity due to the inclusion of private institutions. This course will examine the structure and organization of Higher Education in the U.S. as well as differences and similarities between private and public institutions.

HIED 825 Higher Education Politics and Policy (3 Credit Hours)

This course examines policy-in-action to help students understand how policies are developed at the organizational, state, and national levels, while gaining an understanding of the interplay of public perception and policymaking that can impact university operations. Students will explore the process by which policies are made, and they will consider why some problems are escalated to the public agenda, why some solutions are adopted and others rejected, and why some policies appear to succeed while others seem to fail.

HIED 833 Professional Helping Skills in Higher Education (3 Credit Hours)

This course explores the benefits of developing student response and support skills and how they affect the day-to-day role of a student affairs professional. Students will work in small groups to acquire the knowledge, skills, and attitudes necessary to provide support, direction, and guidance to individuals and groups. Guest speakers currently working in student affairs roles will be featured.

HIED 843 Campus Internationalization (3 Credit Hours)

This course examines the four key professional practices of campus internationalization: comprehensive internationalization, international student enrollment, international student and scholar services, and education abroad. Students learn the importance of aligning internationalization on-campus through courses, curriculum, international students, and internationalization programs, all of which help to connect the institution to the changing local and global community. Guest speakers will address competencies for international educators and provide insights on functional areas in international education.

HIED 844 Global Higher Education Systems: A Comparative Approach (1-3 Credit Hours)

An examination of the development of the three primary systems of higher education in the world today: the U.S., British and European (Continental) systems. The course will also examine, as appropriate, other systems of higher education from around the world. A study abroad component is required, for which additional costs will apply.

HIED 845 Today's College Student (3 Credit Hours)

A survey of college student experiences, with an emphasis on growth and development. Coursework will encourage students to apply theory to practice.

HIED 852 The Law of Higher Education (3 Credit Hours)

An exploration of the legal issues facing higher education in the United States. Topics to be discussed include the foundations from which higher education law emerges, current case law, state and federal statutory law, and contract law, as well as risk management and liability issues. Students may have the opportunity to visit the Supreme Court and to view oral arguments. Additionally, the course will address the ethical issues faced when shaping and implementing institutional policy, curriculum, and procedures.

HIED 856 Institutional Finance and Resource Management (3 Credit Hours)

This course examines the budget process in colleges and universities, as well as the impact of budget activities on all areas of planning and operations within an institution. It will cover elements of educational finance, including budgeting and resource management, with a focus on process and environmental factors that affect how institutions operate. Students will develop and enhance their abilities to write and speak effectively about finance-related issues.

HIED 857 Learning Environment Design and Assessment (3 Credit Hours)

This course provides students with skills to design educational experiences, plan educational programs, and conduct research on a variety of teaching and learning-related questions. Participants will consider the meaning of learning and the various contextual factors that influence the learning process in higher education, as well as the application of the learning sciences to the design of learning environments. Students will focus on creating inclusive, diverse, and equitable educational environments and use their insights to improve the practices through assessment.

HIED 858 Higher Education Leadership (3 Credit Hours)

This course provides students with the basic theory, knowledge and skills needed to be an effective leader within higher education institutions. Classes are designed for those who intend to pursue careers as higher education practitioners. Course assignments will take a practical approach to applying theoretical principles and identifying students' personal leadership styles.

HIED 862 Institutional Advancement (3 Credit Hours)

An exploration of institutional advancement in the areas of institutional marketing, event management, campaign development, social media, donor identification and cultivation, planned giving, corporate partnership development, and foundation management.

HIED 863 Topical Issues in Higher Education (3 Credit Hours)

This course provides a thorough analysis and dissection of a rotating, current issue in higher education, covering a broad range of higher education administrative areas. For each issue, students will examine relevant benchmark law, contemporary issues, historical perspectives, political realities, institutional missions and cultures, ethical considerations, leadership and management approaches, and courses of action available to decision-makers.

HIED 864 College and the University Presidency (3 Credit Hours)

This course is designed to provide greater understanding of the leadership role of college and university presidents and the multiplex of issues associated with the office of the presidency at the various types of American institutions. The course will utilize case study analysis, guest presentation, and review of the literature. There will be rigorous discussion, readings, and analyses in a collegial and reciprocal learning environment.

HIED 865 Adult and Continuing Education (3 Credit Hours)

An advanced seminar emphasizing the historical, philosophical, and institutional analyses of the development and status of adult and continuing education within the higher education community.

HIED 868 Internship in Higher Education Administration (3 Credit Hours)

The University advisor and site supervisor work together with students to develop and implement a set of objectives intended to familiarize them with the operation of an administrative area within an institution of higher education, to assist them in acquiring the practical skills necessary for the operation of that office, and to develop skills that are transferable to other administrative areas.

HIED 870 External and Internal Relations for Higher Education (3 Credit Hours)

This course serves as an introduction for prospective and current administrators to the social and political context of the higher education environment and its various constituencies. It will teach them to recognize the impact of politics, socioeconomic situations, diversity, media, monetary issues, and equity issues on their leadership practices.

HIED 871 Global and Intercultural Perspectives in Higher Education (3 Credit Hours)

This course explores global and intercultural issues for higher education leaders. Students examine issues encountered by student affairs and higher education professionals from global and intercultural perspectives, including program design and evaluation, partnerships between individuals and organizations worldwide, and budgeting and staff management. The course will prepare students with knowledge and skills that can be used to promote internationally-oriented practice, professional dialogue, and research.

HIED 893 History of Higher Education (3 Credit Hours)

An examination of the history of higher education and its connection to current higher education events. The course provides an understanding of the foundations of higher education, including European influences, societal forces, and economic factors.

HIED 894 Governance, Organization, and Administration of Higher Education (3 Credit Hours)

An exploration of how organizational structures, behavior, culture, and context influence institutional governance and administration. In-class activities examine the approaches institutions use in decision-making. Through discussion of assigned readings, current events, and guest lectures, students learn how institutions govern themselves and the effects of various governance practices. Case studies, role playing, and active discussion allow students to apply theoretical perspectives to the practical workings of higher education administration.

HIED 895 Topics in Higher Education Administration (1-6 Credit Hours)

Study of selected topics in higher education administration.

Prerequisites: permission of the instructor

HIED 897 Independent Study (1-3 Credit Hours)

Independent study of special topics in higher education for doctoral students.

Prerequisites: Permission of the instructor

HIED 899 Dissertation (1-12 Credit Hours)

Work on dissertation under the direction of dissertation chair.

Prerequisites: Permission of faculty advisor

HIED 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

HIED 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after advancement to candidacy. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

HIST - History

HIST 595 Topics in History (1-3 Credit Hours)

The course is an advanced study of selected topics designed for small groups of qualified students to work on subjects of mutual interest which may not be offered regularly. These courses appear in the course schedule, and will be more fully described in information distributed to academic advisors.

HIST 600 Historical Theory and Practice (3 Credit Hours)

Analysis of the development of historical theories, principles and methods and their application to historical research and writing. Required of all graduate students in history.

HIST 602 Readings in Early American History (3 Credit Hours)

This course offers an introduction to the principal writings and interpretations of American history from the period of European colonization of America to the beginning of the American Revolution. Readings and discussions focus on the development of American cultures and identities and on the formation of American social, political, and economic life.

HIST 607 A People's Contest: Civil War and Reconstruction (3 Credit Hours)

An advanced course designed to familiarize students with the principal historiographical problems besetting the field of studies of the American Civil War and Reconstruction.

HIST 609 Melting Pot? Readings in Immigration History (3 Credit Hours)

This course examines the history of immigration to the U.S., focusing particularly on the late 19th and early 20th centuries. It critiques the "melting pot" metaphor through key themes, including transnationalism; the influences of class, race, gender, and nationality; working class and race relations; formal and informal economies; and popular and consumer culture.

HIST 610 Edible History: Food and Drink in the U.S. and Global History (3 Credit Hours)

This course explores the history of food and drink in the U.S. and the world as a way to examine the cultural, social, and political meanings about and consequences of producing and consuming food. This course will explore an array of topics including food as an essential element of identities and power relations, commodity chains, eating trends, and global security.

HIST 611 The Military in America (3 Credit Hours)

This course is designed to familiarize students with the principal historiographical problems besetting the field of U.S. military history from the pre-Revolutionary period to the present day.

HIST 617 The Long Civil Rights Movement (3 Credit Hours)

This course examines the historiography of the Long Civil Rights Movement, the struggle for civil rights stretching from the nineteenth century to the present day and encompassing multiple movements that sought to achieve the basic rights of citizenship for a number of different groups.

HIST 619 United States Labor and Working Class History (3 Credit Hours)

This course provides a historiographical survey of U.S. labor and working class history, focusing on the period after the Civil War. Work as a reflection of everyday life, class formation and class consciousness and the development of unions and other labor organizations are examined through a variety of different methodologies and in the contexts of citizenship and civil rights.

HIST 621 The Atlantic World and Early America (3 Credit Hours)

This course explores the Atlantic World as a place, a process, and a new field of historical inquiry. It examines the global processes of imperial, economic, and demographic expansion that drew British North America into transnational networks that spanned the Atlantic Ocean and brought European, African, and American inhabitants together.

HIST 622 The Atlantic Slave Trade (3 Credit Hours)

The course explores the trans-Atlantic slave trade from its beginnings in the 15th century to its suppression in the 19th century. It examines the historical literature on Africa, the Atlantic slave trade and the New World to provide students with a general orientation to the broad context of the Atlantic slave trade.

HIST 628 History of the U.S. Mexico Borderlands (3 Credit Hours)

This course examines the historiography of the U.S.-Mexico borderlands. Key themes include the slow, uneven and often unsuccessful integration of the region into centralizing states in Mexico and the United States; the changing nature of migration and commerce across the international boundary; and the importance of violence and social conflict in shaping the region.

HIST 635 Modern British History (3 Credit Hours)

This course focuses on the social and cultural history of nineteenth- and twentieth-century Britain. It explores broad themes of social conflict, class divisions, race and racism, and gender dynamics presented in recent historiography. Topics include politics, culture, leisure, entertainment, arts, economy, and the impact of the Empire on Britain.

HIST 636 The British Empire (3 Credit Hours)

This course explores British imperialism and colonialism in the early modern and modern periods, from the Caribbean to Australia with emphasis on the "second British empire" of the nineteenth and twentieth centuries. Key themes will include: webs of power and communication, labor, gender, race, and colony/metropole relations.

HIST 641 Individual & Society in Ancient Greece (3 Credit Hours)

This seminar delves into literary and archaeological sources to examine the development of ancient Greece in the archaic, classical and Hellenistic periods. It traces the development of Greece's vibrant culture, the struggles between Athens and Sparta, and the subsequent alliances forced by Phillip II and Alexander the Great.

HIST 642 Ancient Rome: Text and Artifact (3 Credit Hours)

Using historical texts and archaeological remains as sources, this course considers Ancient Rome from the city's mythological foundation stories to its decline in late Antiquity. It will study Roman history and historiography exploring topics including the economy, the military, women's roles, religion, art and architecture in the Republic and the Principate.

HIST 643 Religion, Culture, and Empire in Greco-Roman Palestine (3 Credit Hours)

This seminar focuses on the development of Greco-Roman Palestine, from its encounter with Hellenism to its conquest by Rome, and ultimately to its transformation into the Christian Holy Land under the patronage of Constantine and Helen.

HIST 646 Studies in Russian History (3 Credit Hours)

Research in Soviet archives in the past decade has enriched and enlarged the study of Stalin's era (1924-1953). This reading seminar samples new literature on traditional topics, such as Stalin's rise to power, methods of rule, and foreign policies, as well as scholarship in newly emerging fields. These areas include social history, gender and the family, cinema and popular culture, nationalities, patron-client relations, and the history of science.

HIST 647 Studies in Maritime History (3 Credit Hours)

The seminar explores recent maritime historiography and demonstrates how maritime history presents unique understandings of human history and also works within or redefines broader historical constructs. Students will analyze sources related to specific topics of maritime history.

HIST 648 France and the Sea (3 Credit Hours)

This course examines the complex ways in which the French viewed the Atlantic Ocean and other bodies of water and the opportunities water travel provided them from the sixteenth to the twentieth centuries. Emphasis is placed on the Atlantic as a zone of interaction and on the French global trading networks and the development of overseas empires.

HIST 655 Early Modern Europe: Religion, Reform, and Violence (3 Credit Hours)

This course examines the religious, political and civil strife as well as the ramifications of social change in sixteenth and seventeenth century Europe. Emphasis will be on religiosity and how early modern peoples understood and experienced religious life and how the "reformations" altered gender relations, sexual dynamics, everyday life, and intellectual thought in Western Europe.

HIST 657 Old Regime and French Revolution (3 Credit Hours)

This course introduces students to the interpretive methodologies of questions of "Enlightenment" and the French Revolution that drive much of the historiography in European intellectual history today.

HIST 662 North Atlantic Resources (3 Credit Hours)

This class examines how coastal societies around the North Atlantic have developed their use of fish stocks and other marine resources since the late medieval period and analyzes how and why over-fishing of nearly all major species took place and how international agreements sought to address the issue of sustainable, biological oceanic resources.

HIST 668 Internships in History (3 Credit Hours)

Students work to gain field experience with professionals in such areas as museum management, archives administration, historical editing, historical preservation, electronic records management, archaeology, or oral history. Students are supervised by graduate faculty members who assign academic reading and written work to contextualize and enhance the field experience. Individually arranged. Minimum of 120 hours.

HIST 674 Holocaust History and Memory (3 Credit Hours)

This course examines the complex history of the Holocaust, beginning with the rise of anti-Semitism in the 1930s. It will explore issues of resistance and collaboration as well as ambivalence. It will also examine aspects of postwar Holocaust denial and the memory of the Holocaust as well as its representation in the historiography to the present.

HIST 675 M.A. Exam Preparation and Research (3 Credit Hours)

This advanced seminar integrates the skills needed to pass the M.A. exam in history. Exercises include designing examination reading lists, learning the historiography of the exam fields, preparing for orals, and writing and evaluating a practice exam. This course is not open to students pursuing the thesis option.

Prerequisites: permission of the graduate program director

HIST 676 Degree Option Transition (1 Credit Hour)

This course prepares students transitioning from one degree option--examinations, portfolio, or thesis--to another.

Prerequisites: HIST 675, HIST 677, or HIST 698

HIST 677 Portfolio Option Preparation (3 Credit Hours)

This advanced seminar integrates the skills needed to construct the Portfolio Option for the M.A. in history. Exercises include conducting research and writing for a research paper, learning the historiography of a single examination field, preparing teaching materials, working on an applied history project, and preparing for the oral defense. This course is not open to students pursuing the thesis or examination option.

HIST 683 History of the Global 1960s (3 Credit Hours)

Through the work of historians around the world, this course examines the nature of events in the 1960s. It explores global commonalities and local particularities, focusing on the simultaneous and interrelated phenomena of anti-colonial struggle, youth activism, and culture of dissent. It also looks at the countervailing pressures and groups that emerged in opposition.

HIST 694 Guided Research (1-3 Credit Hours)

Instruction for students continuing with research and preparation for thesis, portfolio, or examinations.

HIST 695 Topics in History (1-3 Credit Hours)

The course is an advanced study of selected topics designed for small groups of qualified students to work on subjects of mutual interest which may not be offered regularly.

HIST 696 Tutorial in Maritime History (3 Credit Hours)

Individually arranged with appropriate professor and with permission of the graduate program director.

Prerequisites: HIST 647

HIST 697 Tutorials in History (1-3 Credit Hours)

Individually arranged with appropriate professor and with the permission of the graduate program director.

HIST 698 Thesis (3 Credit Hours)

3 credits.

HIST 699 Thesis (3-9 Credit Hours)

3-9 credits.

HIST 718 Mao's China (3 Credit Hours)

This reading seminar will focus on the changes of the Chinese society since the beginning of the 20th century. It will examine the pivotal historical events that led to the Chinese revolution, which put Mao's Communist regime in power and has changed Chinese society ever since. While studying the history chronologically, students will identify issues and factors that affect the Chinese political system and society, and examine the legacies of Mao's revolution from social and individual perspectives. The course will also focus on political formation and transformation of the government, social structure and upheavals, economic reforms, and foreign policies. (cross listed with IS 718 and IS 818)

HIST 795 Selected Topics in International Studies (1-3 Credit Hours)

The advanced historical study of selected topics in international studies.

HIST 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

HIST 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

HLSC - Health Sciences

HLSC 525 Health Aspects of Aging (3 Credit Hours)

Identifies major issues and problems in meeting health care needs of the aged. Emphasis on role of social assets and supports in determining effects of life changes on the aging process.

Prerequisites: Permission of the instructor

HLSC 530 Community Health Resources and Health Promotion (3 Credit Hours)

Designed to provide information about community health resources and health promotion theory.

Prerequisites: Permission of the instructor

HLSC 540 Finance and Budgeting in Healthcare (3 Credit Hours)

This course covers financial management functions in healthcare organizations including operating and capital budgeting processes along with budgeting and financial controls.

Prerequisites: Permission of the instructor

HLSC 545 Health Sciences Research Methods (3 Credit Hours)

This course focuses on the principles and statistical procedures used in health sciences research and its application in health care settings.

Prerequisites: STAT 130M or permission of the instructor

HLSC 550 Public and Community Health Administration (3 Credit Hours)

A review of the principles and practice of administering public and community health organizations and programs at federal, state, and local levels. Constitutional, statutory and administrative bases for organizing and conducting public/community health programs will be discussed.

Prerequisites: Permission of the instructor

HLSC 561 Managerial Epidemiology (3 Credit Hours)

This course will blend theory and application of epidemiology. This course will also provide a comprehensive introduction to epidemiology and explain how to use epidemiological concepts and tools to improve decisions about the management of health services.

Prerequisites: STAT 130M or permission of the instructor

HLSC 565 Policy and Politics of Health (3 Credit Hours)

This course will explore both health policy and the politics of health. Students will develop an understanding of the systematic and analytical framework for developing health and health care policy issues.

Prerequisites: Permission of the instructor

HLSC 575 Healthcare Marketing (3 Credit Hours)

This course provides a basic understanding of marketing in a health care setting. This course will cover the following: the history of marketing in a health care setting, health care markets, marketing techniques, and leadership skills in managing and supporting the marketing efforts.

Prerequisites: Permission of the instructor

HLSC 580 Health Ethics and the Law (3 Credit Hours)

This course provides the students with a basic knowledge of health law and examines legal issues confronting health services administrators in various health care environments.

Prerequisites: Permission of the instructor

HLSC 583 Artificial Intelligence Applications in Health (3 Credit Hours)

This course offers an exploration of how artificial intelligence (AI) is transforming healthcare delivery and improving patient outcomes. Building on foundational knowledge from AI Ethics and Policy and AI Methods and Models, students will dive deeper into the integration of AI in clinical and operational contexts. Key topics include the role of AI in diagnostics and personalized medicine and other AI implementations in healthcare.

HLSC 585 Health Informatics (3 Credit Hours)

This course focuses on healthcare informatics (information systems) and application in health care organizations. It provides an overview of health information system concepts, management, and integration of technology in healthcare organizations as applicable to the majors in Health Sciences.

Prerequisites: Permission of the instructor

HLSC 595 Topics in Public/Community Health Administration (1-3 Credit Hours)

This course provides the opportunity for the study of selected topics in public/community health under the supervision of a faculty member.

Prerequisites: Permission of the instructor

HLSC 701 Introduction to Health Services (3 Credit Hours)

Focuses on the complexities involved in providing health services to populations. Presents issues related to public health, community health, urban and rural health, healthy people/communities and health care delivery in traditional and non-traditional settings.

HLSC 702 Health Management (3 Credit Hours)

This seminar will provide students with an understanding of health care organizations and effective management. Particular attention will be given to the issues of access, cost and quality.

HLSC 705 Interprofessional Study Abroad on Global Health (1-3 Credit Hours)

This study abroad service learning course will introduce the student to the political, social, cultural, and ethical issues involved in prevention and health promotion globally. Students will travel another country and learn the incidence/prevalence, morbidity/mortality, and identified public health problems in specific regions and countries.

HLSC 706 Leadership in Complex Systems and Organizations (3 Credit Hours)

This course will focus on the leadership that comprises two types: informal and formal leadership. Competencies will include communication, knowledge of health care environment, leadership, professionalism, and business skills.

HLSC 707 Informatics and Healthcare Technology (3 Credit Hours)

This course will cover the use of data in health care as well as other informatics applications. Students will explore healthcare technology used to improve the delivery and evaluation of care.

HLSC 708 Evidence-Based Management for Quality Healthcare (3 Credit Hours)

The focus of the course is on the development of system processes to ensure quality health care. The evidence-based model will be applied to organizational systems.

HLSC 709 Multidisciplinary Approach to Health Services Research (3 Credit Hours)**HLSC 710 Research Design and Application (3 Credit Hours)**

Emphasis is on exploring the advantages/disadvantages and uses of non-experimental, quasi-experimental, and experimental designs in health-related research with application to management, education, and clinical practice.

HLSC 712 Qualitative Research Methods (3 Credit Hours)

An exploration of qualitative research methods including participant observation, ethnography and the generation of grounded theory. Individual interviews and focus group methods will be covered and historical, content analysis, phenomenological and montage approaches will also be discussed. Health related examples of published research in a variety of fields will be utilized to exemplify the methods.

HLSC 713 Measurement of Health Phenomena (3 Credit Hours)

An overview of measurement theory with emphasis on the development, testing, and refinement of norm- and criterion-referenced data collection instruments for health-related research.

HLSC 714 Theory in the Health Sciences (3 Credit Hours)

Introduces the philosophy of science by studying the nature and purposes of theory for the health sciences. Standards for evaluation of theories will be described. Selected theories and supporting research from the health services literature will be discussed and critically evaluated.

HLSC 716 Competitive Resource Design and Utilization (3 Credit Hours)

This course focuses on the competitive design and utilization of organizational and human resources. Emphasis will be placed on the strategic process to ensure that resources are applied in ways to ensure high-quality care and excellent patient outcomes. The course will cover the business models for effective financial and personnel management of healthcare organizations. Analysis of the costs and quality of care will be performed.

HLSC 746 Epidemiology (3 Credit Hours)

This course examines epidemiology as a method for viewing inborn community health problems and as a body of knowledge derived from this method. Skills in using epidemiology as a method and as knowledge to solve community health problems will be included.

HLSC 751 Developmental Neonatal Physiology (2 Credit Hours)

This course provides an in-depth examination of human genetics, embryologic development and normal physiologic functioning of developing body systems. Mechanisms involved in cell division, gametogenesis, and inheritance patterns will be addressed. Basic genetics and epigenetics will be included. The structural and functional development of fetal systems, during critical periods, will be emphasized. Abnormalities and alterations in fetal development will be explored.

HLSC 764 Health Economics (3 Credit Hours)

This course describes the application of economic tools to analyze the operation of markets for health care and insurance. Topics covered include the consumption and costs of health care in the United States, the viewpoints of players in the health care market, and an overview of both supply and demand analysis and cost effectiveness analysis. Complexities of economics unique to health care will be detailed. Further, students will employ these principles in several case studies of current and classic issues in health economics.

HLSC 768 Practicum in Global Health (2 Credit Hours)

Global health related field placement (112 hours).

HLSC 771 Foundations of Advanced Neonatal Care (3 Credit Hours)

The foundations of advanced neonatal care course provides the theoretical and practical knowledge for the neonatal nurse practitioner or physician assistant to manage the health care needs of the neonate in the newborn nursery or level II neonatal intensive care unit.

HLSC 772 Policy and Politics of Health (3 Credit Hours)

This course enables the student to develop a systematic and analytical framework for understanding health care policy issues. The policy process is covered in detail. Timely policy issues also are discussed.

HLSC 773 Pharmacology for Advanced Neonatal Care (3 Credit Hours)

This course offers scientific inquiry into the use of pharmacologic agents in the advanced nursing care of infants, including fetal, neonatal life, and early childhood. Pharmacokinetics, pharmacodynamics, drug use in pregnancy and lactation, pharmacologic agents used in disease prevention and treatment, drug monitoring and drug safety in the home are explored.

HLSC 774 Advanced Neonatal Care: High Risk Management I (3 Credit Hours)

This course develops the students' ability to manage high-risk neonates. This is the second of three sequential management courses that provide the theoretical and practical knowledge for the neonatal nurse practitioner to manage the health care needs of the neonate at the highest level of nursing practice.

HLSC 775 Advanced Neonatal Care: High Risk Management II (3 Credit Hours)

An organ systems approach is used to explore the diagnosis and management of neonates requiring surgery and advanced technologies. Additional topics will include developmental follow-up of the medically fragile infant and withdrawal of life support in the NICU.

HLSC 776 Global Health (3 Credit Hours)

This course will introduce the student to the political, social, cultural and ethical issues involved in disease prevention and health promotion globally. Specific emphasis will be on incidence/prevalence, morbidity/mortality, and identified health problems in specific regions and countries. This course will also identify international health prerogatives aimed at improving health status through education and intervention.

HLSC 778 Global Environmental Health (2-3 Credit Hours)

The goal of this course is to guide students with a public health perspective to develop skills to identify and analyze environmental health problems globally. It is designed to provide knowledge on recognizing and evaluating major environmental health issues and risk factors in developed and developing countries by using group discussions and real-life case studies.

HLSC 780 Monitoring & Evaluating Global Health Programs (2 Credit Hours)

This course familiarizes students with the basic concepts, issues, theories, approaches and models in evaluation in a global public health context. Students in this course will begin to develop technical skills to conceptualize and design evaluations of global public health programs or projects. These practices include determining which evaluation approach to use in a given context, developing an evaluation plan and appropriate evaluation questions, determining the data needed to answer the evaluation questions and establishing reporting processes to provide information to program developers.

HLSC 782 One Health, One Medicine (2 Credit Hours)

This course will teach students the applications of multidisciplinary competencies towards solving human health challenges. The course will identify all areas of global health issues that require human, veterinary and environmental applications for solutions. One Health One Medicine is an important course for all students in Health or Environmental Sciences that are called upon to integrate multidisciplinary competencies as part of their education and career experiences.

HLSC 784 Creating Sustainable Environmental Futures (3 Credit Hours)

This course examines the interrelationships between individual and societal decisions and the global environment, and analyzes the consequences these interrelationships have for public health and sustainability. The course will review food, environmental quality, climate variability, sea-level rise and public health, homes-workplaces-communities, and environmental health and sustainability in the region, the nation and around the world.

HLSC 785 Issues and Opportunities in Global Health Research (3 Credit Hours)

This course focuses on global health research with an emphasis on cultural, political and economic influences on health in various regions and provides students opportunities to engage in inter-professional teamwork to brainstorm problem-based issues and establish research proposals.

HLSC 795 Topics in Health Sciences (1-3 Credit Hours)

Designed to provide the advanced student with an opportunity to study independently or in small groups and investigate specific topics of current interest in health services or health sciences.

HLSC 798 Supervised Research (1-6 Credit Hours)

Supervised research on a specialized topic. Can be repeated.

HLSC 801 Introduction to Health Services (3 Credit Hours)

Focuses on the complexities involved in providing health services to populations. Presents issues related to public health, community health, urban and rural health, healthy people/communities and health care delivery in traditional and non-traditional settings.

HLSC 802 Health Management (3 Credit Hours)

This seminar will provide students with an understanding of health care organizations and effective management. Particular attention will be given to the issues of access, cost and quality.

HLSC 804 Methods of Program Evaluation (3 Credit Hours)

Examination of various methodologies for designing and conducting public health program evaluation and research. Experimental, quasi-experimental and non-experimental procedures will be covered. Departmental approval required.

Prerequisites: HLSC 810 or PAUP 853

HLSC 805 Interprofessional Study Abroad on Global Health (1-3 Credit Hours)

This study abroad service learning course will introduce the student to the political, social, cultural, and ethical issues involved in prevention and health promotion globally. Students will travel another country and learn the incidence/prevalence, morbidity/mortality, and identified public health problems in specific regions and countries.

HLSC 806 Leadership in Complex Systems and Organizations (3 Credit Hours)

This course will focus on the leadership that comprises two types: informal and formal leadership. Competencies will include communication, knowledge of health care environment, leadership, professionalism, and business skills.

HLSC 807 Informatics and Healthcare Technology (3 Credit Hours)

This course will cover the use of data in health care as well as other informatics applications. Students will explore healthcare technology used to improve the delivery and evaluation of care.

HLSC 808 Evidence-Based Management for Quality Healthcare (3 Credit Hours)

The focus of the course is on the development of system processes to ensure quality health care. The evidence-based model will be applied to organizational systems.

HLSC 809 Multidisciplinary Approaches to Health Services Research (3 Credit Hours)

Uses theory and research findings from areas such as Biology, Psychology, Sociology, Economics, Urban Studies, and Health Services to achieve an understanding of health services issues and problems. Emphasizes methods of analysis and of developing alternatives related to multidisciplinary perspectives.

HLSC 810 Research Design and Application (3 Credit Hours)

Emphasis is on exploring the advantages/disadvantages and uses of non-experimental, quasi-experimental, and experimental designs in health-related research with application to management, education, and clinical practice. (cross-listed with PT 810).

Prerequisites: graduate-level courses in research design and statistics or permission of the instructor

HLSC 811 Quantitative Research Methods in Health Care (3 Credit Hours)

An applied approach to the selection and application of bivariate and multivariate statistical techniques in health services research. Emphasis is placed on handling large data sets and the use of a computer for manipulation of quantitative data.

Pre- or corequisite: HLSC 710 or HLSC 810

HLSC 812 Qualitative Research Methods (3 Credit Hours)

An exploration of qualitative research methods including participant observation, ethnography and the generation of grounded theory. Individual interviews and focus group methods will be covered and historical, content analysis, phenomenological and montage approaches will also be discussed. Health related examples of published research in a variety of fields will be utilized to exemplify the methods.

HLSC 813 Health Outcomes Research (3 Credit Hours)

An overview of measurement theory with emphasis on the development, testing, and refinement of norm- and criterion-referenced data collection instruments for health-related research.

Prerequisites: graduate-level courses in research design and statistics or permission of the instructor

HLSC 814 Theory in the Health Sciences (3 Credit Hours)

Introduces the philosophy of science by studying the nature and purposes of theory for the health sciences. Standards for evaluation of theories will be described. Selected theories and supporting research from the health services literature will be discussed and critically evaluated.

HLSC 815 Decision Analysis in Health Care (3 Credit Hours)

This course teaches students the art and science of decision making. It covers expected utility theory, decision tree analysis, cost-benefit analysis, and the psychological aspects of the decision-making process in the context of health policy research.

HLSC 816 Competitive Resource Design and Utilization (3 Credit Hours)

This course focuses on the competitive design and utilization of organizational and human resources. Emphasis will be placed on the strategic process to ensure that resources are applied in ways to ensure high-quality care and excellent patient outcomes. The course will cover the business models for effective financial and personnel management of healthcare organizations. Analysis of the costs and quality of care will be performed.

HLSC 820 Health Care Delivery System (3 Credit Hours)

This course provides the student with an opportunity to analyze the American health care system. The health care system is composed of complex organizational dynamics and structures which predicate the interaction between the major components of the system: personnel who provide service; institutions in which care is provided; financing mechanisms which pay for care; and the government which attempts to regulate it. This course is designed for in-depth analysis and synthesis of all aspects of health care delivery with an emphasis on improving the delivery and access to care.

HLSC 846 Epidemiology (3 Credit Hours)

This course examines epidemiology as a method for viewing inborn community health problems and as a body of knowledge derived from this method. Skills in using epidemiology as a method and as knowledge to solve community health problems will be included.

HLSC 861 Advanced Quantitative Methods (3 Credit Hours)

This course adopts an applied approach to teaching health professions students the necessary competencies and skills in advanced quantitative methods. Topics include handling missing data, survey design and exploratory factor analysis, mediation and moderation analysis, and an introduction to confirmatory factor analysis and structural equation modeling (SEM).

Prerequisites: HLSC 811

HLSC 864 Health Economics (3 Credit Hours)

This course describes the application of economic tools to analyze the operation of markets for health care and insurance. Topics covered include the consumption and costs of health care in the United States, the viewpoints of players in the health care market, and an overview of both supply and demand analysis and cost effectiveness analysis. Complexities of economics unique to health care will be detailed. Further, students will employ these principles in several case studies of current and classic issues in health economics.

HLSC 868 Internship in Health Sciences (3 Credit Hours)

Supervised health services field experiences or health sciences laboratory experiences. A completed research project which is publishable or presentable at a professional conference is required to complete the course.

HLSC 872 Policy and Politics of Health (3 Credit Hours)

This course enables the student to develop a systematic and analytical framework for understanding health care policy issues. The policy process is covered in detail. Timely policy issues are also discussed.

HLSC 873 Planning Proposals and Developing Grants in Health Research (3 Credit Hours)

Designed as a 'hand-on' approach in effective grantsmanship, this course will guide the student from the identification of potential funding sources through proposal development. Highlights include program planning, nonprofit status, governmental/foundation corporate trends, local resources and grants administration.

HLSC 874 Administration in Health Sciences (3 Credit Hours)

This course will provide an overview of health delivery systems, organizational behavior, and theoretical foundations for managerial and executive leadership in health care facilities. Emphasis will be placed on utilizing best practices in leadership to promote motivation and quality improvement, strategic planning, information technology, and cultural awareness.

HLSC 875 Comprehensive Health Planning (3 Credit Hours)

This course emphasizes the principles and processes of program planning, including a consideration of objectives, priorities, policy choices, assessment of resources, implementation, and evaluation. The student will gain practical experience in program development by developing a planning document.

HLSC 876 Global Health (3 Credit Hours)

This course will introduce the student to the political, social, cultural and ethical issues involved in disease prevention and health promotion globally. Specific emphasis will be on incidence/prevalence, morbidity/mortality, and identified health problems in specific regions and countries. This course will also identify international health prerogatives aimed at improving health status through education and intervention.

HLSC 881 Dissertation Seminar (3 Credit Hours)

This course will assist students in developing a dissertation proposal. Steps in the research process will be reviewed as students submit drafts of their proposal for faculty and peer review. Problem formulation, integrating theoretical frameworks, preparing for human subjects review and outlining data analysis techniques for hypothesis testing will be discussed. Students will be introduced to University guidelines related to dissertations and other resources to assist them in their task.

HLSC 889 Colloquium I (1 Credit Hour)

This course is the first in a series of colloquial courses in which doctoral level students receive presentations and present research and current topics of interest in health related professions.

HLSC 890 Colloquium II (1 Credit Hour)

This course is the second in a series of colloquial courses in which doctoral level students receive presentations and present research and current topics of interest in health related professions.

HLSC 891 Colloquium III (1 Credit Hour)

This course is the third in a series of colloquial courses in which doctoral level students receive presentations and present research and current topics of interest in health related professions.

HLSC 892 Colloquium IV (1 Credit Hour)

This course is the fourth in a series of colloquial courses in which doctoral level students receive presentations and present research and current topics of interest in health related professions.

HLSC 895 Topics in Health Sciences (1-3 Credit Hours)

Designed to provide the advanced student with an opportunity to study independently or in small groups and investigate specific topics of current interest in health services.

Prerequisites: Ph.D. standing or permission of the graduate program director

HLSC 897 Independent Study (1-3 Credit Hours)

Individualized study selected by the student in collaboration with a faculty member. Area of study to be supervised and approved by a faculty member with the approval of the graduate program director.

Prerequisites: Admission to Health Services PhD program and permission of graduate program director

HLSC 898 Supervised Research (1-6 Credit Hours)

Supervised research on a specialized topic. Can be repeated.

HLSC 899 Dissertation (1-12 Credit Hours)

Available for pass/fail grading only. An approved research project written under the supervision of a faculty advisor, in which the student demonstrates the capacity to design and complete independent applied research. The completed project must be approved by the dissertation committee.

HLSC 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

HLTH - Health

HLTH 595 Topics in Health (1-3 Credit Hours)**HLTH 697 Independent Study (3 Credit Hours)**

HMS - Human Movement Sciences

HMS 697 Independent Study (1-3 Credit Hours)

Investigations in health, physical education, recreation, and sport. Problems approved in advance are investigated under the supervision of the faculty advisor.

HMS 698 Thesis (3-6 Credit Hours)

3-6 credits.

Prerequisites: permission of the advisor and committee

HMS 699 Thesis (3-6 Credit Hours)

3-6 credits.

Prerequisites: permission of the advisor and committee

HMS 795 Topics in Human Movement Sciences (1-3 Credit Hours)

Selected topic courses in Human Movement Sciences.

Prerequisites: Instructor approval

HMS 815 Introduction to Doctoral Study Seminar (3 Credit Hours)

This course explores current issues and trends in all aspects of human movement science and relates theory to practice.

HMS 816 Research Experience I (3 Credit Hours)

Determination of a research project through the review of literature. Course encompasses formulation of a topic along with the design of a research study.

HMS 817 Research Experience II (3 Credit Hours)

Supervised research implementation, data collection, and project completion of specific topic within curriculum and instruction or applied kinesiology concepts.

HMS 879 Research Residency (3 Credit Hours)

Students will work in consultation with their advisors to conduct a study related to human movement sciences as part of their research residency that will be submitted for presentation at a nationally refereed conference and/or to a refereed journal.

Prerequisites: To be taken after 9 hours of research methods and 18 hours of coursework, and prior to the comprehensive exams (or approval of advisor)

HMS 890 Doctoral Studies Seminar (3 Credit Hours)

Students will be introduced to expectations of conducting research, explore concepts associated with becoming a faculty member or practitioner with an earned doctorate, and become familiar with campus resources. Students will learn and apply concepts related to scientific writing. This course will include extensive reading of research articles, grant applications, and other scholarly work. Also, this course will investigate the need for professional development. This will include familiarizing oneself with appropriate professional organizations, exploring the benefits and challenges of collaboration, interviewing and preparing for job placements, and preparing a curricular vitae and teaching philosophy.

HMS 895 Topics in Human Movement Sciences (1-3 Credit Hours)

Selected topic courses in Human Movement Sciences.

HMS 897 Independent Study in Human Movement Sciences (3 Credit Hours)

Independent reading and study under the direction of a faculty member on a topic in the Human Movement Sciences.

HMS 898 Independent Research in Human Movement Sciences (1-9 Credit Hours)

Independent research project under the direction of a faculty member that will expose students to a broad range of research topics and research environments in the human movement sciences.

HMS 899 Dissertation (1-12 Credit Hours)

Work on pre-selected dissertation topic under the direction of dissertation chair.

Prerequisites: permission of dissertation committee chair

HMS 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of graduation.

HMS 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

HNRS - Honors

HNRS 501 Social Entrepreneurship (3 Credit Hours)

The class draws students from all disciplines to collaborate with each other, faculty and community members as they co-design project-based solutions to pertinent social issues. Topics related to social entrepreneurship vary each year. Guided by distinguished faculty, students analyze their topic through in-depth classroom and field research, readings and off-campus trips.

HPE - Health and Physical Education

HPE 502 Methods and Materials in Health Education (3 Credit Hours)

This course will enable teacher candidates to gain insight into the techniques, methodology, and philosophy of field-based health and physical education. Teacher candidates will be expected to observe and participate in the teaching of simple lessons.

HPE 504 Adapted Physical Education (3 Credit Hours)

Students will become acquainted with the practices and researching of different disabilities, the learning modes of the exceptional child, and IDEA (the law that advocates free and appropriate education). The course will also examine how to work within the ecosystem surrounding a child with disabilities. A vital component of the course will be the practical application of theory.

HPE 506 Tests and Measurement in Physical Education and Health (3 Credit Hours)

This course is designed to acquaint the student with tests and measurement in the fields of health and physical education, test construction, scoring, and methods of using results.

HPE 509 Exercise Physiology (3 Credit Hours)

An investigation into the physiological adjustments of the human organism to exercise, including systematic and biochemical molecular changes. Major areas of concern include neuromuscular, metabolic, and cardiorespiratory changes during exercise and the influence of such variables as nutrition, drugs, environment, age, sex, training and body weight.

Prerequisites: BIOL 240 or BIOL 250

HPE 515 Principles of Coaching Management (3 Credit Hours)

This course is designed to provide students with a basic knowledge of the coaching profession. Special emphasis will be placed on establishing a sound coaching philosophy, selecting a coaching style, desirable qualities of a coach, ethics and the coach, roles of the head coach, planning and organizing for games and practices, coaching pedagogy, off-season planning, final preparations for the season, and issues and problems related to coaching and recruiting athletes.

HPE 530 Nutrition and Fitness Education (3 Credit Hours)

The study of techniques for the teaching of nutrition and health-related fitness. Content to be covered includes nutrition and various aspects of fitness training appropriate for the teaching of PreK-12 physical education and health.

HPE 556 Sports Psychology (3 Credit Hours)

Study of the psychological bases of coaching strategies and methodologies. Emphasis is placed on applying knowledge in field settings.

HPE 569 Practicum Experience and Instructional Planning in Health and Physical Education (3 Credit Hours)

A clinical experience that allows the teaching candidate to teach and observe professionals in a field-based setting. Portfolio development, reflective assessment of teaching, and student assessment techniques will be emphasized. This course requires a completed ODU clearance/background check prior to entering a school or community agency. Visit: www.odu.edu/TES for clearance procedures. If students do not have the clearance by the first week of classes, they will be dropped.

Prerequisites: HPE 200 and admission into teacher education program

HPE 587 Teacher Candidate Seminar (1 Credit Hour)

Study and group discussion of problems growing out of the student teaching (teacher candidate internship) experience. Students must pass Praxis II to complete this course.

Prerequisites: acceptance into teacher education and approval of the program advisor

HPE 601 Adapted Physical Education Design and Supervision (3 Credit Hours)

This course is divided into three sections. The first section deals with learning how to administer and interpret several evaluation tools. The second section concentrates on developing computer, videotaping, and other technology skills for adapted PE. The third section focuses on overall supervision of adapted PE programs in various school and institutional environments.

HPE 607 Movement Analysis of Individual and Team Sports (3 Credit Hours)

This laboratory and methods class focuses on the skills and strategies of teaching individual sports (e.g., bowling, badminton, golf, and tennis) and team sports (e.g., football, basketball, volleyball, and softball), using a tactical approach.

HPE 609 Principles of Movement Analysis in Dance and Rhythmic Activities for Physical Education (3 Credit Hours)

The course is designed to help teachers and coaches improve their skills in analyzing movement skills in dance and rhythmic activities. Such skill analysis is necessary to effectively diagnose movement deficiencies, prescribe techniques for improving performance, and modifying activities for the adaptive program.

HPE 636 Research Problems in Health & Physical Education (3 Credit Hours)

Practice in the use of statistical and analytical techniques in solving problems in health and physical education; supervised student research.

HPE 668 Internship in Health & Physical Education (1-6 Credit Hours)

Designed to provide detailed practical experience (400 clock hours) in a health and physical education field setting.

Prerequisites: completion of 75% of graduate work

HPE 680 Problems in Health Education (3 Credit Hours)

Problems in teaching health education on the elementary and secondary level; family life education, substance use and abuse, and mental and emotional health.

HPE 695 Topics in Health & Physical Education (1-3 Credit Hours)

Selected topic courses in health and physical education.

HPE 697 Independent Study In Health & Physical Education (1-3 Credit Hours)

Investigations in health, physical education. Problems approved in advance are investigated under the supervision of the faculty advisor.

HPE 698 Thesis (3 Credit Hours)

Thesis.

HPE 699 Thesis (3 Credit Hours)

Thesis.

HPE 704 Advanced Studies in Adapted Physical Education (3 Credit Hours)

This course provides experiences of teaching adapted physical education content in lecture and gymnasium settings. Students will develop an understanding of a broad spectrum of disability related content that is applicable to physical education, and gain a deep knowledge of specific topics within disability studies. General and disability specific teaching strategies will be discussed.

HPE 718 Applied Learning and Coaching Theory (3 Credit Hours)

This course examines applied theories of learning and coaching in sport and physical education. Emphasis will be placed on understanding the differing coaching/learning theories and strategies, designing effective practice and game plans, and learning the different learning levels and styles through observing, analyzing, and critiquing skills. Current research and practice will be emphasized.

HPE 719 Planning and Administration in PE and Sport Programs (3 Credit Hours)

This course is designed to provide in-depth information about the planning and administrative aspects of sport/physical education programs. Content includes, but is not limited to, teaching/training planning, safety and injury prevention, behavioral management, field/facility maintenance, budgetary considerations, public relations, and legal and risk management procedures associated with coaching/teaching PE.

HPE 720 Curriculum Development in Physical Education (3 Credit Hours)

A course designed to acquaint the student with the basic principles and practices in curriculum development. Curriculum development methodologies for both K-12 and college curricula will be addressed.

HPE 721 Motivational Issues in Sports (3 Credit Hours)

Motivational and psychological issues relate with sport performance enhancement, athlete/student wellbeing, and clinical issues with specific populations.

HPE 740 Motor Learning and Development (3 Credit Hours)

This course covers a combination of motor development and motor learning topics. The course information and structure are designed to optimize practitioners' effectiveness in the classroom and on the field via practical application of motor behavior theories, concepts and principles. Attention is directed toward understanding the acquisition of skills from the fundamental, initial level to the sport-specific, more advanced level, toward optimal age and skill-level practices and developing appropriate motor skill assessments for infants through older adulthood. Past and current research findings are incorporated into each of the course topics.

HPE 745 Assessment/Evaluation and Technology in Sport/PE (3 Credit Hours)

This course covers assessment/evaluation theory and practices in PE/Sport. Multiple evaluation designs and techniques in different domains such as teaching/coaching, learning, and performance will be discussed along with technology applications in PE/Sport.

HPE 804 Advanced Studies in Adapted Physical Education (3 Credit Hours)

This course provides experiences of teaching adapted physical education content in lecture and gymnasium settings. Students will develop an understanding of a broad spectrum of disability related content that is applicable to physical education, and gain a deep knowledge of specific topics within disability studies. General and disability specific teaching strategies will be discussed.

HPE 805 Advanced Qualitative Research in Adapted Physical Education (3 Credit Hours)

Qualitative research seeks to make sense of, or interpret, the meaning of social phenomena in the natural setting, filtering through the multiple lens of race, social class, ethnicity, language, gender, and ability/disability. The aims of this course are twofold: (1) to highlight the contribution of qualitative inquiry to our understanding of the theory, research, and practice in adapted physical education, and (2) to provide basic skills and understanding necessary for doctoral students in adapted physical education to interpret and conduct qualitative research.

Prerequisites: FOUN 812

HPE 819 Planning and Administration in PE and Sport Programs (3 Credit Hours)

This course is designed to provide in-depth information about the planning and administrative aspects of sport/physical education programs. Content includes, but is not limited to, teaching/training planning, safety and injury prevention, behavioral management, field/facility maintenance, budgetary considerations, public relations, and legal and risk management procedures associated with coaching/teaching PE.

HPE 820 Curriculum Development in Physical Education (3 Credit Hours)

A course designed to acquaint the student with the basic principles and practices in curriculum development. Curriculum development methodologies for both K-12 and college curricula will be addressed.

HPE 840 Motor Learning and Development (3 Credit Hours)

This course covers a combination of motor development and motor learning topics. The course information and structure are designed to optimize practitioners' effectiveness in the classroom and on the field via practical application of motor behavior theories, concepts and principles. Attention is directed toward understanding the acquisition of skills from the fundamental, initial level to the sport-specific, more advanced level, toward optimal age and skill-level practices and developing appropriate motor skill assessments for infants through older adulthood. Past and current research findings are incorporated into each of the course topics.

HPE 845 Assessment/Evaluation and Technology in Sport/PE (3 Credit Hours)

This course covers assessment/evaluation theory and practices in PE/Sport. Multiple evaluation designs and techniques in different domains such as teaching/coaching, learning, and performance will be discussed along with technology applications in PE/Sport.

HPE 846 Advanced Quantitative Research in Adapted Physical Activity (3 Credit Hours)

This quantitative research method course delves into two aspects: (1) to understand the quantitative study design and evidence hierarchy as they relate to research and practices in adapted physical activity, and (2) to provide skills and understanding necessary for doctoral students in adapted physical activity to interpret and conduct quantitative research.

Prerequisites: FOUN 812

HSR - Health Services Research

HSR 706 Leadership in Complex Systems and Organizations (3 Credit Hours)

This course will focus on the leadership that comprises two types: informal and formal leadership. Competencies will include communication, knowledge of health care environment, leadership, professionalism, and business skills.

HSR 746 Epidemiology (3 Credit Hours)

This course examines epidemiology as a method for viewing inborn community health problems and as a body of knowledge derived from this method. Skills in using epidemiology as a method and as knowledge to solve community health problems will be included.

HSR 776 Global Health (3 Credit Hours)

This course will introduce the student to the political, social, cultural and ethical issues involved in disease prevention and health promotion globally. Specific emphasis will be on incidence/prevalence, morbidity/mortality, and identified health problems in specific regions and countries. This course will also identify international health prerogatives aimed at improving health status through education and intervention.

HSR 778 Global Environmental Health (2-3 Credit Hours)

The goal of this course is to guide students with a public health perspective to develop skills to identify and analyze environmental health problems globally. It is designed to provide knowledge on recognizing and evaluating major environmental health issues and risk factors in developed and developing countries by using group discussions and real-life case studies.

HSR 785 Issues and Opportunities in Global Health Research (3 Credit Hours)

This course focuses on global health research with an emphasis on cultural, political and economic influences on health in various regions and provides students opportunities to engage in inter-professional teamwork to brainstorm problem-based issues and establish research proposals.

HSR 801 Introduction to Health Services (3 Credit Hours)

Focuses on the complexities involved in providing health services to populations. Presents issues related to public health, community health, urban and rural health, healthy people/communities and health care delivery in traditional and non-traditional settings.

HSR 802 Health Management (3 Credit Hours)

This seminar will provide students with an understanding of health care organizations and effective management. Particular attention will be given to the issues of access, cost and quality.

HSR 804 Methods of Program Evaluation (3 Credit Hours)

Examination of various methodologies for designing and conducting public health program evaluation and research. Experimental, quasi-experimental and non-experimental procedures will be covered.

HSR 805 Interprofessional Study Abroad on Global Health (1-3 Credit Hours)

This study abroad service learning course will introduce the student to the political, social, cultural, and ethical issues involved in prevention and health promotion globally. Students will travel another country and learn the incidence/prevalence, morbidity/mortality, and identified public health problems in specific regions and countries.

HSR 809 Multidisciplinary Approaches to Health Services Research (3 Credit Hours)

Uses theory and research findings from areas such as Biology, Psychology, Sociology, Economics, Urban Studies, and Health Services to achieve an understanding of health services issues and problems. Emphasizes methods of analysis and of developing alternatives related to multidisciplinary perspectives.

HSR 810 Research Design and Application (3 Credit Hours)

Emphasis is on exploring the advantages/disadvantages and uses of non-experimental, quasi-experimental, and experimental designs in health-related research with application to management, education, and clinical practice.

HSR 811 Quantitative Research Methods in Health Care (3 Credit Hours)

An applied approach to the selection and application of bivariate and multivariate statistical techniques in health services research. Emphasis is placed on handling large data sets and the use of a computer for manipulation of quantitative data.

HSR 812 Qualitative Research Methods (3 Credit Hours)

An exploration of qualitative research methods including participant observation, ethnography and the generation of grounded theory. Individual interviews and focus group methods will be covered and historical, content analysis, phenomenological and montage approaches will also be discussed. Health related examples of published research in a variety of fields will be utilized to exemplify the methods.

HSR 813 Health Outcomes Research (3 Credit Hours)

An overview of measurement theory with emphasis on the development, testing, and refinement of norm- and criterion-referenced data collection instruments for health-related research.

HSR 814 Theory in the Health Sciences (3 Credit Hours)

Introduces the philosophy of science by studying the nature and purposes of theory for the health sciences. Standards for evaluation of theories will be described. Selected theories and supporting research from the health services literature will be discussed and critically evaluated.

HSR 815 Decision Analysis in Health Care (3 Credit Hours)

This course teaches students the art and science of decision making. It covers expected utility theory, decision tree analysis, cost-benefit analysis, and the psychological aspects of the decision-making process in the context of health policy research.

HSR 846 Epidemiology (3 Credit Hours)

This course examines epidemiology as a method for viewing inborn community health problems and as a body of knowledge derived from this method. Skills in using epidemiology as a method and as knowledge to solve community health problems will be included.

HSR 864 Health Economics (3 Credit Hours)

This course describes the application of economic tools to analyze the operation of healthcare and insurance markets. Topics covered include the consumption and costs of healthcare in the United States, the viewpoints of players in the healthcare market, and an overview of supply and demand and cost-effectiveness analyses. The complex economics unique to health care will be discussed in detail. Further, students will employ these principles in several case studies of current and classic issues in health economics.

HSR 872 Policy and Politics of Health (3 Credit Hours)

This course enables the student to develop a systematic and analytical framework for understanding healthcare policy issues. The policy process is covered in detail. Timely policy issues are also discussed.

HSR 873 Planning Proposals and Developing Grants in Health Research (3 Credit Hours)

Designed as a 'hand-on' approach in effective grantsmanship, this course will guide the student from the identification of potential funding sources through proposal development. Highlights include program planning, nonprofit status, governmental/foundation corporate trends, local resources and grants administration.

HSR 889 Colloquium I (1 Credit Hour)

This course is the first in a series of colloquial courses in which doctoral level students receive presentations and present research and current topics of interest in health related professions.

HSR 890 Colloquium II (1 Credit Hour)

This course is the second in a series of colloquial courses in which doctoral level students receive presentations and present research and current topics of interest in health related professions.

HSR 891 Colloquium III (1 Credit Hour)

This course is the third in a series of colloquial courses in which doctoral level students receive presentations and present research and current topics of interest in health related professions.

HSR 892 Colloquium IV (1 Credit Hour)

This course is the fourth in a series of colloquial courses in which doctoral level students receive presentations and present research and current topics of interest in health related professions.

HSR 898 Supervised Research (1-6 Credit Hours)

Supervised research on a specialized topic to prepare students for dissertation study. It can be repeated.

HSR 899 Dissertation (1-12 Credit Hours)

Available for pass/fail grading only. An approved research project written under the supervision of a faculty advisor in which the student demonstrates the capacity to design and complete independent applied research. The completed project must be approved by the dissertation committee.

HUM - Humanities

HUM 595 Topics in Humanities (3 Credit Hours)

A study of selected Humanities topics to be specified in the class schedule each semester. May be repeated for credit as topics vary.

HUM 597 Tutorial Work in Humanities (1-3 Credit Hours)

Independent research on a Humanities topic to be selected under the direction of an instructor. Program director approval required.

HUM 601 Introduction to the Humanities (3 Credit Hours)

This class introduces students to the study of the humanities with a focus on the enduring questions and ideas of human history. These include questions of culture, reality, society, power, truth, communication, and mediation. Students address these questions and ideas by engaging with some of the great works of social theory from the twentieth century.

HUM 602 Critical Methods in Humanities (3 Credit Hours)

This class instructs students in various theoretical and methodological approaches for conducting research within the humanistic disciplines. Students will become familiar with literary theory, critical/cultural studies, historical methods, qualitative social scientific approaches, and visual studies, as well as the conduct of research across disciplinary boundaries.

HUM 603 Strategic Professional Development Pro-Seminar (3 Credit Hours)

This seminar will guide students pursuing academic or non-academic professions to prepare and to build a professional development strategy for various careers using their Humanities degree.

HUM 668 Internship (3 Credit Hours)

This course allows graduate students in Humanities to pursue a structured work experience in a field relevant to a student's course of study. Student will work with a supervisor at the work site and a faculty advisor in Humanities. Requirements include a formal essay connected to the experience, portfolio, and satisfactory evaluation by the supervisor. Permission of Humanities director required. Pass/fail grading only.

HUM 693 Capstone Project (3 Credit Hours)

Option for students who do not want to pursue a traditional thesis. Individual projects must be approved by the program director. The capstone project must include a scholarly paper, but the 'project' component can include creative works, art installations, film and video, interactive and born-digital works, as well as other forms of community engagement. Projects are developed with help of supervisor.

Prerequisites: HUM 601, HUM 602, HUM 603, HUM 698, HUM 704, and program director approval required

HUM 696 Topics in Humanities (3 Credit Hours)

A study of selected Humanities topics to be specified in the class schedule each semester. May be repeated for credit as topics vary.

HUM 697 Tutorial Work in Humanities (1-3 Credit Hours)

Independent research on a Humanities topic to be selected under the direction of an instructor. Program director approval required.

HUM 698 Capstone Project and Thesis Preparation Seminar (3 Credit Hours)

A graduate writing seminar dedicated to workshopping and developing and finalizing students' required long-term creative and research projects.

Prerequisites: HUM 601 and HUM 602

HUM 699 Thesis (1-6 Credit Hours)

Course requirement for thesis option.

HUM 704 Technology and the Humanities (3 Credit Hours)

A seminar providing foundations for and experience in the critical examination of technologies and their human and social impact. Topics will vary and may include AI, innovation, social media, robotics, healthcare, gaming, art, and music.

HUM 795 Topics in Humanities (3 Credit Hours)

A study of selected Humanities topics to be specified in the class schedule each semester. May be repeated for credit as topics vary.

HUM 796 Topics in Humanities (3 Credit Hours)

A study of selected Humanities topics to be specified in the class schedule each semester. May be repeated for credit as topics vary.

HUM 797 Tutorial Work in Humanities (1-3 Credit Hours)

Independent research on a Humanities topic to be selected under the direction of an instructor. Program director approval required.

HUM 895 Topics in Humanities (3 Credit Hours)

A study of selected Humanities topics to be specified in the class schedule each semester. May be repeated for credit as topics vary.

HUM 896 Topics in Humanities (3 Credit Hours)

A study of selected Humanities topics to be specified in the class schedule each semester. May be repeated for credit as topics vary.

HUM 897 Tutorial Work in Humanities (1-3 Credit Hours)

Independent research on a Humanities topic to be selected under the direction of an instructor. Program director approval required.

HUM 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

IDS - Interdisciplinary Studies

IDS 500 Study Abroad (0 Credit Hours)

IDS 596 Topics in Interdisciplinary Studies (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: IDS 300W or permission of instructor

IDT - Instructional Design and Technology

IDT 617 Foundations of Instructional Technology (3 Credit Hours)

Required introductory overview to the field of instructional technology. Topics include a history of the field, basic instructional design, generally accepted theoretical practices and major formats of instructional media. Emphasis is given to instructional technology trends as applied to various industries, including K-12, military, industry training, and others.

IDT 618 Digital Age Teaching and Learning (3 Credit Hours)

In this class, contemporary digital tools and Internet resources are used to develop instructional plans and contribute to teaching techniques. The course is designed with three components: effectively integrating technology into the delivery of the curriculum, evidence-based good teaching practices utilizing technology that spans across grades and subject levels, and the technologies that support those practices. Upon completion of this course students should be able to pass, or apply for exemption from their school district's TSIP exam.

IDT 620 Foundations of Artificial Intelligence (AI) in Education and Learning Technologies (3 Credit Hours)

This course introduces students to the foundational concepts of Artificial Intelligence (AI) as applied to education and learning design. Students will explore key AI frameworks and theories within the context of learning design, including the use of AI tools in various educational processes. Topics covered include AI-enhanced course design, AI application in instructional delivery, the role of AI in assessments and personalized feedback, AI in research and evaluation, and AI's impact on academic integrity, as well as additional ethical considerations.

IDT 621 Applications of Artificial Intelligence (AI) in Education and Learning Technologies (3 Credit Hours)

This course focuses on the practical application of AI in designing instructional strategies, activities, and materials. Students will use AI tools to brainstorm various pedagogical techniques as well as to create still images, videos, animations, audio narration, slides-based presentations, gamification, virtual environments, and personal AI learning assistants/chatbots. Through hands-on projects, students will demonstrate mastery of the instructional design process by developing AI-enhanced tools and media to solve real-world instructional problems.

IDT 630 Foundations of Human Performance Technology (3 Credit Hours)

This course will introduce students to the field of Human Performance Technology (HPT). Students will explore what HPT is, why instructional designers should know about it, how performance improvements can be measured, and most critically, how it can be applied in real environments to solve real problems. Students will gain practice in thinking systematically about performance, and they will enhance their value as instructional design professionals by being able to offer solutions to organizational needs that go beyond traditional instruction.

IDT 647 Online Learning (3 Credit Hours)

This course is an applied survey on online instruction, including relevant online learning theory and design considerations, as well as tools and principles, with an emphasis on K-12 education. Topics include theories and principles of online learning, effectively identifying, locating, evaluating, preparing, and using educational technology as instructional resources in an online environment.

IDT 725 Human Performance Assessment (3 Credit Hours)

This course focuses on the theory, design, and evaluation of measurement instruments used to assess individual knowledge, performance, and attitudes. Topics include fundamentals of measurement, reliability, validity, and instrument selection, construction, and use. Students will develop and evaluate instruments for instructional and research purposes.

Prerequisites: FOUN 722 or equivalent

IDT 730 Principles and Practices of Human Performance Technology (3 Credit Hours)

This course explores both the principles and practices of human performance technology, with roughly equal emphasis on both. Students will learn what HPT is, how it's applied in practice, and how and why instructional designers need to know about it. Particular emphasis is given to determining whether or not problems are best amenable to instructional solutions.

IDT 735 Noninstructional Interventions (3 Credit Hours)

This project-based course examines several different non-instructional interventions that can be used to promote performance improvement. Major methodologies common in the field will be explored as a class, and students will also be required to familiarize themselves with other methodologies of their choice. Emphasis will be on the following interventions: job analysis/work design, performance development, human resource development, organizational communication, organizational design and financial systems.

IDT 737 Consulting Skills for Instructional Designers (3 Credit Hours)

This project-based course is designed to develop and enhance the ability of instructional designers to work as partners and consultants to clients and superiors. The focus is on consulting skills per se, and not any particular content. All students will be required to do an individual consulting project, supervised by the instructor.

IDT 739 Needs Analysis and Assessment (3 Credit Hours)

This project-based class will focus on the process of doing a needs analysis and assessment, from start to finish. Although theoretical considerations regarding needs analyses will be explored, the emphasis is on actually conducting the analysis. Students will work in teams under the supervision of the instructor to conduct a needs analysis for an external client.

IDT 746 Foundations of Distance Education (3 Credit Hours)

An analysis of the trends, issues, and theories of distance education in education, business, and military applications. Students will examine various distance education systems, policies and lessons from different perspectives.

IDT 749 Instructional Systems Design (3 Credit Hours)

Students will gain hands-on experience applying a theoretical understanding of instructional design and development to actual projects. Students will learn and use the Instructional Systems Design Process from initial learner profile analysis to design and development through to evaluation. Students will work individually and in teams to gain experience similar to real-world instructional design situations. Students will master the fundamental practices upon which the instructional design process is based.

IDT 751 Computer-Based Multi-Media Design (3 Credit Hours)

This course covers the theory, design, and evaluation of computer-based multimedia instruction. Students will demonstrate a thorough understanding of instructional theory and design strategies for computer-based drills, tutorials, hypermedia, simulations, games, tools, open-ended learning environments, tests, and web-based instruction. Class projects will center on the design and development of instruction utilizing at least two of these methodologies.

Prerequisites: IDT 749 and IDT 849

IDT 752 Diffusion and Adoption of Instructional Technology Innovations (3 Credit Hours)

This course will explore theories, research, and strategies related to the diffusion and adoption of instructional technology innovations in education and training. The course will explore why and how individuals, groups, and organizations adopt or fail to adopt an innovation or change.

IDT 755 Theory and Design of Instructional Simulation (3 Credit Hours)

This course focuses on learning theory, design and evaluation of instructional simulations and simulators. Topics include history, instructional design, validation, and integration of instructional simulations.

IDT 756 Instructional Gaming: Theories and Practice (3 Credit Hours)

Provides both a conceptual framework and experience in the design and development of instructional games. The course introduces the student to the history, research, theory, and practice of instructional games. Topics include discussions of relevant learning theories associated with instructional gaming, analysis and design of games and current research in instructional gaming.

IDT 760 Cognition and Instructional Design (3 Credit Hours)

Students will be introduced to the theoretical frameworks that form the basis of instructional systems theory and design. Focus will be on learning theories, instructional psychology, and instructional system theory. Recent developments in cognition, learning and instruction for educators will also be considered. Topics include perspectives of behaviorism, social-historical constructivism, cognitive science, situated cognition, and cultural influences on cognition.

IDT 761 Applied Instructional Design Tools (3 Credit Hours)

Problem-based course in which students gain experience applying knowledge from IDT 749/IDT 849 to real-world instructional and instructional technology problems. Project work is individual, paired, and in teams. Students demonstrate mastery of the instructional design and development process through production of tools, technologies, media or materials that successfully resolve an instructional problem. Focus is on rapid prototyping model.

Prerequisites: IDT 749 or IDT 849

IDT 763 Instructional Design Theory (3 Credit Hours)

Students will investigate traditional and contemporary instructional design theories and models. Behavioral, cognitive, generative, problem-based learning, and constructivist theories as well as cognitive hierarchies will be examined, compared, contrasted and applied to various instructional situations.

IDT 764 Instructional Message Design (3 Credit Hours)

This course is a study of the application of perceptual and learning principles to the design of instructional media for use in educational and training applications. The focus is on the development and application of heuristics from the research literature. We will examine verbal and iconic signs as well as visual imagery, and their role in the instructional and learning processes.

IDT 773 Advanced Instructional Design Techniques (3 Credit Hours)

Exploration and application of techniques, tools and competencies characteristic of expert designers. Topics may include: instructional strategies, use of design software, program design, advanced analysis techniques, motivation design, rapid prototyping, reducing design cycle time, and designing instruction for diverse learner populations.

Prerequisites: IDT 749/IDT 849

IDT 775 Designing Online Instruction (3 Credit Hours)

An applied survey of online instruction, including relevant theory and design considerations. Topics include efficacy of online learning, design considerations when using course management systems and similar online learning technologies, research and future directions.

IDT 795 Topics in Instructional Design and Technology (1-3 Credit Hours)

Provides opportunities for master's and doctoral students to explore topics related to instructional design.

IDT 801 Instructional Design and Technology Seminar (3 Credit Hours)

Introduces new Ph.D. students to the field of instructional design and technology and provides orientation to doctoral level study. The course includes reading, critiquing and analyzing empirical research, theories, and real-world instructional problems. Potential student research agendas consistent with faculty or programmatic research foci will be explored. Academic and technological expectations will be communicated and practiced.

IDT 810 Trends and Issues in Instructional Design and Technology (3 Credit Hours)

Exploration and discussion of trends and issues of current and historical significance to instructional design. Readings will include contributions of key scholars, past and present, in instructional design and related fields. Includes analysis of trends and issues to track and predict their impact on the future of the field.

Prerequisites: 9 hours IDT coursework

IDT 825 Human Performance Assessment (3 Credit Hours)

This course focuses on the theory, design, and evaluation of measurement instruments used to assess individual knowledge, performance, and attitudes. Topics include fundamentals of measurement, reliability, validity, and instrument selection, construction, and use. Students will develop and evaluate instruments for instructional and research purposes.

Prerequisites: FOUN 722 or equivalent

IDT 830 Principles and Practices of Human Performance Technology (3 Credit Hours)

This course explores both the principles and practices of human performance technology, with roughly equal emphasis on both. Students will learn what HPT is, how it's applied in practice, and how and why instructional designers need to know about it. Particular emphasis is given to determining whether or not problems are best amenable to instructional solutions.

IDT 835 Noninstructional Interventions (3 Credit Hours)

This project-based course examines several different non-instructional interventions that can be used to promote performance improvement. Major methodologies common in the field will be explored as a class, and students will also be required to familiarize themselves with other methodologies of their choice. Emphasis will be on the following interventions: job analysis/work design, performance development, human resource development, organizational communication, organizational design and financial systems.

IDT 837 Consulting Skills for Instructional Designers (3 Credit Hours)

This project-based course is designed to develop and enhance the ability of instructional designers to work as partners and consultants to clients and superiors. The focus is on consulting skills per se, and not any particular content. All students will be required to do an individual consulting project, supervised by the instructor.

IDT 839 Needs Analysis and Assessment (3 Credit Hours)

This project-based class will focus on the process of doing a needs analysis and assessment, from start to finish. Although theoretical considerations regarding needs analyses will be explored, the emphasis is on actually conducting the analysis. Students will work in teams under the supervision of the instructor to conduct a needs analysis for an external client.

IDT 846 Foundations of Distance Education (3 Credit Hours)

An analysis of the trends, issues, and theories of distance education in education, business, and military applications. Students will examine various distance education systems, policies and lessons from different perspectives.

IDT 849 Instructional Systems Design (3 Credit Hours)

Students will gain hands-on experience applying a theoretical understanding of instructional design and development to actual projects. Students will learn and use the Instructional Systems Design Process from initial learner profile analysis to design and development through to evaluation. Students will work individually and in teams to gain experience similar to real-world instructional design situations. Students will master the fundamental practices upon which the instructional design process is based.

IDT 851 Computer-Based Multi-Media Design (3 Credit Hours)

This course covers the theory, design, and evaluation of computer-based multimedia instruction. Students will demonstrate a thorough understanding of instructional theory and design strategies for computer-based drills, tutorials, hypermedia, simulations, games, tools, open-ended learning environments, tests, and web-based instruction. Class projects will center on the design and development of instruction utilizing at least two of these methodologies.

Prerequisites: IDT 749 and IDT 849

IDT 852 Diffusion and Adoption of Instructional Technology Innovations (3 Credit Hours)

This course will explore theories, research, and strategies related to the diffusion and adoption of instructional technology innovations in education and training. The course will explore why and how individuals, groups, and organizations adopt or fail to adopt an innovation or change.

IDT 855 Theory and Design of Instructional Simulation (3 Credit Hours)

This course focuses on learning theory, design and evaluation of instructional simulations and simulators. Topics include history, instructional design, validation, and integration of instructional simulations.

IDT 856 Instructional Gaming: Theories and Practice (3 Credit Hours)

Provides both a conceptual framework and experience in the design and development of instructional games. The course introduces the student to the history, research, theory, and practice of instructional games. Topics include discussions of relevant learning theories associated with instructional gaming, analysis and design of games and current research in instructional gaming.

IDT 860 Cognition and Instructional Design (3 Credit Hours)

Students will be introduced to the theoretical frameworks that form the basis of instructional systems theory and design. Focus will be on learning theories, instructional psychology, and instructional system theory. Recent developments in cognition, learning and instruction for educators will also be considered. Topics include perspectives of behaviorism, social-historical constructivism, cognitive science, situated cognition, and cultural influences on cognition.

IDT 861 Applied Instructional Design Tools (3 Credit Hours)

Problem-based course in which students gain experience applying knowledge from IDT 749/IDT 849 to real-world instructional and instructional technology problems. Project work is individual, paired, and in teams. Students demonstrate mastery of the instructional design and development process through production of tools, technologies, media or materials that successfully resolve an instructional problem. Focus is on rapid prototyping model.

Prerequisites: IDT 749 or IDT 849

IDT 863 Instructional Design Theory (3 Credit Hours)

Students will investigate traditional and contemporary instructional design theories and models. Behavioral, cognitive, generative, problem-based learning, and constructivist theories as well as cognitive hierarchies will be examined, compared, contrasted and applied to various instructional situations.

IDT 864 Instructional Message Design (3 Credit Hours)

This course is a study of the application of perceptual and learning principles to the design of instructional media for use in educational and training applications. The focus is on the development and application of heuristics from the research literature. We will examine verbal and iconic signs as well as visual imagery, and their role in the instructional and learning processes.

IDT 873 Advanced Instructional Design Techniques (3 Credit Hours)

Exploration and application of techniques, tools and competencies characteristic of expert designers. Topics may include: instructional strategies, use of design software, program design, advanced analysis techniques, motivation design, rapid prototyping, reducing design cycle time, and designing instruction for diverse learner populations.

Prerequisites: IDT 749/IDT 849

IDT 875 Designing Online Instruction (3 Credit Hours)

An applied survey of online instruction, including relevant theory and design considerations. Topics include efficacy of online learning, design considerations when using course management systems and similar online learning technologies, research and future directions.

IDT 879 Research Residency in Instructional Design and Technology (3 Credit Hours)

An introduction to conducting instructional technology research. Students will work in consultation with their advisor to develop a proposal for a study related to instructional technology as part of their research residency that will be submitted for presentation at a nationally refereed conference or to a refereed journal.

IDT 895 Topics in Instructional Design and Technology (3 Credit Hours)

Provides opportunities for master's and doctoral students to explore topics related to instructional design.

IDT 898 Research Residency II (1-3 Credit Hours)

A mentored research project by the student's advisor. Students work independently with their advisor to complete the research residency project. This course focuses on obtaining appropriate human subjects approval, collecting and analyzing data, and preparing a manuscript suitable for presentation or publication in nationally refereed journal or conference. Course may be repeated as needed, but only 3 hours may be counted toward degree requirements.

Prerequisites: IDT 879

INBU - International Business

INBU 630 Fundamentals of International Business (1 Credit Hour)

This course covers topics from management, marketing, economics, and finance that are important to the study of international business.

INBU 631 International Business Issues (2 Credit Hours)

This 2 hour capstone course covers topics facing international firms. This course uses a combination of case studies, lectures, and simulations to highlight the cultural, organizational, and financial challenges to doing business in various regions of the world.

INBU 685 International Business and Trade (3 Credit Hours)

This course is designed for high-level executive or general managers who must use a perspective that is qualitatively different from that of the lower-level functional managers. The unique focus of this course is that it brings together two dimensions that affect managerial decisions in internationalizing and structuring their businesses: first the international context in which firms operate and then how firms design and adapt approaches to take advantage of international opportunities and mitigate their risks. At the highest levels of organizations, leaders deal with complexity, ambiguity and uncertainty. The course discusses topics and frameworks that will help you navigate this world and enables you to pursue international (strategic) developments within your own firm.

Prerequisites: Admission to the MBA program OR approval by the MBA program office

IPEH - Interprofessional Education-Health

IPEH 590 Social Determinants of Health: An Interprofessional Approach (3 Credit Hours)

The social determinants of health status and health outcomes, including structural, financial and personal influences will be examined. The utility of an interprofessional collaborative approach to health care delivery will be highlighted.

Prerequisites: Junior standing or permission of the instructor

IS - International Studies

IS 600 Research Methods in International Studies (3 Credit Hours)

Interdisciplinary quantitative techniques applicable to the study of international phenomena.

IS 601 Seminar in International Relations Theory (3 Credit Hours)

Surveys major theoretical approaches to international relations and foreign policy. A systematic introduction designed to lay a foundation for advanced graduate study.

IS 655 International History (3 Credit Hours)

Course explores how different societies in the 20th century were shaped by similar practices, ideas, and pressures. Course themes may include colonialism, the global history of World War II, the cold war ethnic distortion and the consumer revolution among others.

IS 668 Internship in International Studies (3 Credit Hours)

Individually arranged internship at local, state, national or international level.

Prerequisites: approval of the director

IS 695 Topics in International Studies (3 Credit Hours)

The advanced study of selected (titled) topics not offered on a regular basis.

IS 696 Seminar Topics in International Studies (3 Credit Hours)

The advanced study of selected topics in an interdisciplinary manner which permits small groups of qualified students to work on subjects of mutual interest. Due to their specialized nature, seminar topics may not be offered regularly.

IS 697 Independent Research in International Studies (3 Credit Hours)

Independent research on a topic from an interdisciplinary perspective. Students must receive prior approval from the faculty supervisor and the director.

Prerequisites: Director approval required

IS 698 Directed Research (3 Credit Hours)

Methodological and theoretical preparation designed to assist students in writing a thesis.

Prerequisites: approval of director or instructor

IS 699 Thesis (1-9 Credit Hours)

Writing of the thesis.

IS 701 Global Change and American Foreign Policy (3 Credit Hours)

This research seminar examines the transformation of the U.S. role in the world in the global context of the 20th Century and since September 2001.

IS 702 Approaches to Collective Security (3 Credit Hours)

This seminar explores the origins of the idea of collective security, examines the attempts to organize international security collectively and assesses possibilities and opportunities for collective security arrangements after the Cold War.

IS 703 Ethics and International Relations (3 Credit Hours)

The focus of this research seminar will be on the role of normative ideas in international relations. Students will be introduced to the growing literature on normative approaches to international relations as well as the traditional literature on the practical and philosophical problems of ethical action in the relations of states. Although a number of policy applications will be considered, the primary focus will be on the theoretical incorporation of normative ideas into our understanding of state action in the anarchic international environment

IS 704 Latin American Politics (3 Credit Hours)

This course examines Latin American politics from comparative and historical perspectives. Particular focus is placed on various manifestations of political authority in the region and the major societal challenges to state power. The course reviews and critiques alternative theoretical approaches to the study of state-societal relations in Latin America.

IS 705 The Euro-Atlantic Community (3 Credit Hours)

An examination of the Euro-Atlantic area as a partial international system since World War II; alignments and patterns within and between the members of the European "community" and the role and attitudes of the United States and leading European states to preserve and strengthen their sovereign prerogatives and influence; and the prospects for a true Euro-Atlantic community that would link the U.S. and Europe.

IS 707 Interdependence, Power, and Transnationalism (3 Credit Hours)

This course covers the fundamental concepts, ideas, and approaches to the study of interdependence and transnationalism. It seeks to expose students to the nature, role, and impact of economic, technological, strategic, and cultural interdependence. Cases of interdependence and transnationalism are explored in the post-Cold War era. Some focus is placed on how interdependence and transnationalism are impacting the power of the state.

IS 708 Asian Politics (3 Credit Hours)

This course is a graduate seminar on the domestic politics and international relations of (East) Asia focusing on both Northeast and Southeast Asia. The first half of the course examines the domestic politics of Asian countries, with a focus on mainland China, Taiwan, Japan, and South Korea. The topics include political development, state-society relations, and political economy. The second half of the course turns to foreign relations in the region, exploring various topics and different levels of analysis to understanding the regional dynamics.

IS 709 Chinese Foreign Policy (3 Credit Hours)

This seminar includes an advanced survey of theoretical approaches to the study of Chinese foreign policy and in-depth analyses of the domestic/ international environment, ideological principles, political/economic goals, military/diplomatic instruments, decision-making processes, and global/ regional consequences of Chinese foreign policy.

IS 710 Global Environmental Policy (3 Credit Hours)

This seminar examines the institutions and political actors involved in global environmental policy making with emphasis on the role of the United States. In doing so, it addresses the scientific and political debate concerning the causes, consequences, and proposed solutions of selected worldwide ecological problems, including global climate change, stratospheric ozone depletion, acid rain, and loss of biodiversity among others.

IS 711 International Migration and Refugee Movement (3 Credit Hours)

A review of current literature and empirical issues concerning transnational migration and refugees.

IS 712 The New Germany in the New Europe (3 Credit Hours)

The unification of Germany and the end of the East-West conflict have changed the context within which policy is made in Europe. What kind of Europe will emerge? What kind of hierarchies will determine direction and pace of European politics? The purpose of this course is to explore the role played by Germany in the development of post-Cold War European politics.

IS 713 Global Political Economy (3 Credit Hours)

Analysis of the forces shaping national and transnational economic institutions and their policies on a range of contemporary issues, including North-South relations.

IS 714 Law in the International System (3 Credit Hours)

An introduction to the principles of international law and to the political and institutional role of law in the relations of states.

IS 715 France and New Europe (3 Credit Hours)

Emphasis will be placed on the transformation of French-American relations from the idyllic beginnings of the American nation to the complexities of the Cold War, to the new alignments of the new Europe and the European Union.

IS 716 Theories of Comparative Sociopolitical Studies (3 Credit Hours)

The fundamental goal of the course is to provide the theoretical basis for subsequent coursework and research in the comparative and regional studies track. To achieve this goal, this seminar examines major theories and debates in comparative social and political studies based on extensive and intensive literature review.

IS 717 World Population and Development (3 Credit Hours)

This seminar discusses population processes and their connections to socioeconomic development. A nontechnical course, the goal is to introduce students to the major concerns and issues in population and current debates over the role of population in sustainable development. It will provide students with a systematic but critical review of research findings and issues in various areas of population and development.

IS 720 Research Seminar in Global Security (3 Credit Hours)

The research seminar investigates the profound changes in international security brought about by the end of the Cold War with a specific focus on the role of nuclear weapons. The primary purpose of the seminar is to promote research into the global aspects of the nuclear issue and to enhance understanding of the relationship between nuclear control and the New World Order.

IS 721 New World Order: Chaos and Coherence (3 Credit Hours)

This course explores ideas of order and how they apply to international politics over space and time. Using theories of international relations, students look at how states and other international actors shape the principles and practices on which order is built and how these actors navigate among the many challenges and disruptions that arise. Specifically, students study the international liberal order, power shifts, and technological innovations, including cyber, and the rise and demise of norms in the international system.

IS 722 Democracy and International Relations (3 Credit Hours)

An examination of the relationship between democratic politics, democratic ideals, and international relations. Subjects covered will include trends and processes of democratization and their implications for international relations, the distinctiveness of democratic states in their international behavior, the impact of the international environment on the internal politics of democratic states, and the problems of democracy in global governance.

IS 723 Advanced Statistical Techniques in International Studies (3 Credit Hours)

Introduces the use of advanced statistical techniques for the analysis of social science data. The central objective is to give students a working understanding of multivariate analysis, with a particular focus on the techniques and problems associated with multiple regression, causal analysis, and limited dependent variable maximum likelihood models.

Prerequisites: IS 600 or equivalent

IS 724 International & Comparative Political Economy (3 Credit Hours)

This class focuses on core theories of international political economy, including international trade, international finance, foreign direct investment, the role of multinational corporations, and the subfield of comparative political economy. Students are introduced to the two main paradigms of contemporary economics, Keynesianism and Hayekian monetarism. Students study labor markets and industrial relations, welfare states, the domestic regulation of finance, the politics of debt, inequality, and the role of the state.

IS 725 Politics of the Middle East (3 Credit Hours)

Explores the international relations of the Middle East from World War I to the present. Examines the origins of the Arab-Israeli and Persian Gulf Wars and their modern dimensions. Examines the role of oil, outside powers and religion.

IS 726 American Foreign Policy and World Order (3 Credit Hours)

This course deals with the adaptation of US foreign policies to the changing structure of the international system after WWII and in the Cold War, and since Reagan. It is designed to review, analyze, and discuss the global rise of the US role in the world. It will also assess the transformation of US interests since 1945, through the Cold War and since the events of September 11, 2001.

IS 728 Ghosts of French Colonization (3 Credit Hours)

An analysis of France ex-colonies as they moved from colonization and decolonization to independence. An overview of political, historical, cinematic, and literary texts with a focus on France's relationship with its ex-colonies, and its ex-colonies' struggles in a post-decolonized world up until contemporary times.

IS 731 Media & Migration (3 Credit Hours)

This class explores the complex relationships between immigration, globalization, nationalism, and media at the turn of the 21st Century. Students distinguish between different forms of migration and experiences of travel. It explores how media has depicted immigration processes and shaped public attitudes toward different immigrant groups. It also investigates how first- and second-generation immigrant populations consume and produce media that both shape and are shaped by transnational identity formations.

IS 732 National Identity in a Global Age (3 Credit Hours)

This course will focus on narratives of national identity in the age of globalization. Seminal works of cultural criticism, philosophy, and political philosophy will shed light on the complex nature of national identity construction in the contemporary world.

IS 734 U.S. Grand Strategy (3 Credit Hours)

This course offers a thorough exploration into the subject of U.S. grand strategy. It confronts debates over the definition and usefulness of grand strategy, examines variations across the history of U.S. grand strategy and among current visions for U.S. grand strategy, and analyzes subjects of core concern to U.S. grand strategy.

IS 735 International Relations of the Middle East (3 Credit Hours)

The purpose of this course is to help the student understand, evaluate and analyze key features of the international relations of the Middle East. Major issues covered include the historical background of the Middle East, primarily from World War I; Islam and Islamism; Zionism and Israel; Arab nationalism and pan-Arabism; the Arab-Israeli conflict in its historical and contemporary context; the Persian Gulf wars; global oil dynamics; the foreign policy of key regional states; the role of outside powers in the region, especially the United States; and major issues including democratization, WMD, and the Arab Spring.

Prerequisites: Instructor or Director approval

IS 738 European Politics (3 Credit Hours)

The course explores on the politics of Europe, focusing on four core themes: the political economy and the travails of the single currency, the question of immigration, legitimacy and democracy, and the changing political landscape. Students will familiarize themselves with the European Union and its institutions, as well as such themes as populism, the decline of centrist political parties and economic stagnation.

IS 740 Political Economy of Development (3 Credit Hours)

This seminar examines alternate theoretical perspectives on development. These perspectives are then employed to understand contemporary political and economic changes in the developing world, including the consolidation of democratic governance and the liberalization of domestic economics.

IS 741 Globalization and Social Change in the World System (3 Credit Hours)

This course is intended to first identify the distinguishing characteristics of globalization. It then attempts to examine its implications on a number of critical issues, including the future of democracy, income distribution and ethnic, class, and gender relations.

IS 748 Gender and Globalization (3 Credit Hours)

Studies systems of global restructuring as they impact women throughout the globe. Migration, international development, and transnational activism will be focal themes, explored across a variety of national contexts.

IS 750 France's Decolonized Legacy: Africa, Asia, the Caribbean, Quebec (3 Credit Hours)

An analysis of France's ex-colonies as they moved from colonization and decolonization to independence. An overview of political, historical, cinematic, and literary texts with a focus on France's relationship with its ex-colonies, and its ex-colonies' struggles in a post-decolonized world.

Prerequisites: Approval of instructor or director

IS 751 Ethnic Conflict in the Emerging Global Order (3 Credit Hours)

Using different case studies, this course investigates the most important internal and external factors that cause ethnic conflicts. It also examines different mechanisms that help resolve or mitigate such conflicts.

IS 752 Research Seminar in International Studies: Refugees (3 Credit Hours)

This is a graduate-level seminar focusing on the refugee movement from a global perspective. The goals are to provide a critical and realistic understanding of the refugee phenomenon and to explain why the refugees tend to follow some identifiable paths, and why they sometimes return and sometimes do not. Discussion will be centered on the causes and consequences of refugee flow, and the roles the more developed countries can play in helping solve the problem.

IS 755 Conflict and Violence in Modern Africa (3 Credit Hours)

This course will confront the theme of conflict and violence in Africa since the mid-20th century. It will explore the reasons behind the level of violent conflicts in the continent today, seek to understand their larger significance, and explore ideas for conflict resolution and prevention. (cross listed with HIST 755)

IS 760 International Cultural Studies: History, Theory and Application (3 Credit Hours)

Course analyzes culture in the context of material conditions in which it is produced, disseminated, controlled and practiced. Theoretical application of cultural studies will include developing familiarity with key foundational theories, terminologies, and critical thinking.

IS 762 Game Theory (3 Credit Hours)

Game theory uses mathematical models, empirical investigation, and simulations in an effort to explain simple and complex strategic interactions among individuals, states, groups, and species. This course teaches the tools of game theory, with a focus on applications in international relations and political science.

IS 765 Agent-Based Modeling and Simulation for International Studies (3 Credit Hours)

An introduction to complex systems theory and to the application of agent-based modeling technologies to a variety of social systems.

IS 770 Transnational Media Practices (3 Credit Hours)

Course examines the key roles played by media technologies in implementing and promoting international development programs, as well as some of the concerns these initiatives have raised in terms of media literacy, cultural sovereignty, and information access.

IS 772 Modeling Global Events (3 Credit Hours)

This course introduces modeling and simulation as a tool for expanding one's understanding of events that have shaped the global environment of the 21st century. The course will first provide a broad look at international politics through a review of select international incidents, military interventions, and homeland security issues. Second, select topics from these categories will serve as case studies to facilitate representing those events with the application of modeling, simulation, and visualization. Understanding how modeling and simulation can provide another method of analysis allows students to delve deeper into their understanding of "what happened" and to explore their conception of "what if."

Prerequisites: Approval of instructor or director

IS 790 Advanced Seminar Conflict & Cooperation (3 Credit Hours)

This course explores debates in the field of Security Studies, their relevance to creating knowledge, discourse, consensus and critique, and the development of diverse research agendas.

IS 794 Seminar in Thesis and Dissertation Preparation (3 Credit Hours)

Prepares students to research, formulate and write thesis and dissertation prospectuses.

Prerequisites: permission of the director

IS 795 Topics in International Studies (1-3 Credit Hours)

The advanced study and discussion of selected (titled) topics not offered on a regular basis.

IS 796 Selected Topics in International Studies (1-3 Credit Hours)

The advanced study of selected topics in an interdisciplinary manner which will permit small groups of qualified students to work on subjects of mutual interest. Due to their specialized nature, the course may not be offered regularly.

IS 801 Global Change and American Foreign Policy (3 Credit Hours)

This research seminar examines the transformation of the U.S. role in the world in the global context of the 20th Century and since September 2001.

IS 802 Approaches to Collective Security (3 Credit Hours)

This seminar explores the origins of the idea of collective security, examines the attempts to organize international security collectively and assesses possibilities and opportunities for collective security arrangements after the Cold War.

IS 803 Ethics and International Relations (3 Credit Hours)

The focus of this research seminar will be on the role of normative ideas in international relations. Students will be introduced to the growing literature on normative approaches to international relations as well as the traditional literature on the practical and philosophical problems of ethical action in the relations of states. Although a number of policy applications will be considered, the primary focus will be on the theoretical incorporation of normative ideas into our understanding of state action in the anarchic international environment

IS 804 Latin American Politics (3 Credit Hours)

This course examines Latin American politics from comparative and historical perspectives. Particular focus is placed on various manifestations of political authority in the region and the major societal challenges to state power. The course reviews and critiques alternative theoretical approaches to the study of state-societal relations in Latin America.

IS 805 The Euro-Atlantic Community (3 Credit Hours)

An examination of the Euro-Atlantic area as a partial international system since World War II; alignments and patterns within and between the members of the European "community" and the role and attitudes of the United States and leading European states to preserve and strengthen their sovereign prerogatives and influence; and the prospects for a true Euro-Atlantic community that would link the U.S. and Europe.

IS 807 Interdependence, Power, and Transnationalism (3 Credit Hours)

This course covers the fundamental concepts, ideas, and approaches to the study of interdependence and transnationalism. It seeks to expose students to the nature, role, and impact of economic, technological, strategic, and cultural interdependence. Cases of interdependence and transnationalism are explored in the post-Cold War era. Some focus is placed on how interdependence and transnationalism are impacting the power of the state.

IS 808 Asian Politics (3 Credit Hours)

This course is a graduate seminar on the domestic politics and international relations of (East) Asia focusing on both Northeast and Southeast Asia. The first half of the course examines the domestic politics of Asian countries, with a focus on mainland China, Taiwan, Japan, and South Korea. The topics include political development, state-society relations, and political economy. The second half of the course turns to foreign relations in the region, exploring various topics and different levels of analysis to understanding the regional dynamics.

IS 809 Chinese Foreign Policy (3 Credit Hours)

This seminar includes an advanced survey of theoretical approaches to the study of Chinese foreign policy and in-depth analyses of the domestic/international environment, ideological principles, political/economic goals, military/diplomatic instruments, decision-making processes, and global/regional consequences of Chinese foreign policy.

IS 810 Global Environmental Policy (3 Credit Hours)

This seminar examines the institutions and political actors involved in global environmental policy making with emphasis on the role of the United States. In doing so, it addresses the scientific and political debate concerning the causes, consequences, and proposed solutions of selected worldwide ecological problems, including global climate change, stratospheric ozone depletion, acid rain, and loss of biodiversity among others.

IS 811 International Migration and Refugee Movement (3 Credit Hours)

A review of current literature and empirical issues concerning transnational migration and refugees.

IS 812 The New Germany in the New Europe (3 Credit Hours)

The unification of Germany and the end of the East-West conflict have changed the context within which policy is made in Europe. What kind of Europe will emerge? What kind of hierarchies will determine direction and pace of European politics? The purpose of this course is to explore the role played by Germany in the development of post-Cold War European politics.

IS 813 Global Political Economy (3 Credit Hours)

Analysis of the forces shaping national and transnational economic institutions and their policies on a range of contemporary issues, including North-South relations.

IS 814 Law in the International System (3 Credit Hours)

An introduction to the principles of international law and to the political and institutional role of law in the relations of states.

IS 815 France and New Europe (3 Credit Hours)

Emphasis will be placed on the transformation of French-American relations from the idyllic beginnings of the American nation to the complexities of the Cold War, to the new alignments of the new Europe and the European Union.

IS 816 Theories of Comparative Sociopolitical Studies (3 Credit Hours)

The fundamental goal of the course is to provide the theoretical basis for subsequent coursework and research in the comparative and regional studies track. To achieve this goal, this seminar examines major theories and debates in comparative social and political studies based on extensive and intensive literature review.

IS 817 World Population and Development (3 Credit Hours)

This seminar discusses population processes and their connections to socioeconomic development. A nontechnical course, the goal is to introduce students to the major concerns and issues in population and current debates over the role of population in sustainable development. It will provide students with a systematic but critical review of research findings and issues in various areas of population and development.

IS 820 Research Seminar in Global Security (3 Credit Hours)

The research seminar investigates the profound changes in international security brought about by the end of the Cold War with a specific focus on the role of nuclear weapons. The primary purpose of the seminar is to promote research into the global aspects of the nuclear issue and to enhance understanding of the relationship between nuclear control and the New World Order.

IS 821 New World Order: Chaos and Coherence (3 Credit Hours)

This course explores ideas of order and how they apply to international politics over space and time. Using theories of international relations, students look at how states and other international actors shape the principles and practices on which order is built and how these actors navigate among the many challenges and disruptions that arise. Specifically, students study the international liberal order, power shifts, and technological innovations, including cyber, and the rise and demise of norms in the international system.

IS 822 Democracy and International Relations (3 Credit Hours)

An examination of the relationship between democratic politics, democratic ideals, and international relations. Subjects covered will include trends and processes of democratization and their implications for international relations, the distinctiveness of democratic states in their international behavior, the impact of the international environment on the internal politics of democratic states, and the problems of democracy in global governance.

IS 823 Advanced Statistical Techniques in International Studies (3 Credit Hours)

Introduces the use of advanced statistical techniques for the analysis of social science data. The central objective is to give students a working understanding of multivariate analysis, with a particular focus on the techniques and problems associated with multiple regression, causal analysis, and limited dependent variable maximum likelihood models.

Prerequisites: IS 600 or equivalent

IS 824 International & Comparative Political Economy (3 Credit Hours)

This class focuses on core theories of international political economy, including international trade, international finance, foreign direct investment, the role of multinational corporations, and the subfield of comparative political economy. Students are introduced to the two main paradigms of contemporary economics, Keynesianism and Hayekian monetarism. Students study labor markets and industrial relations, welfare states, the domestic regulation of finance, the politics of debt, inequality, and the role of the state.

IS 825 Politics of the Middle East (3 Credit Hours)

Explores the international relations of the Middle East from World War I to the present. Examines the origins of the Arab-Israeli and Persian Gulf Wars and their modern dimensions. Examines the role of oil, outside powers and religion.

IS 826 American Foreign Policy and World Order (3 Credit Hours)

This course deals with the adaptation of US foreign policies to the changing structure of the international system after WWII and in the Cold War, and since Reagan. It is designed to review, analyze, and discuss the global rise of the US role in the world. It will also assess the transformation of US interests since 1945, through the Cold War and since the events of September 11, 2001.

IS 828 Ghosts of French Colonization (3 Credit Hours)

An analysis of France ex-colonies as they moved from colonization and decolonization to independence. An overview of political, historical, cinematic, and literary texts with a focus on France's relationship with its ex-colonies, and its ex-colonies' struggles in a post-decolonized world up until contemporary times.

IS 831 Media & Migration (3 Credit Hours)

This class explores the complex relationships between immigration, globalization, nationalism, and media at the turn of the 21st Century. Students distinguish between different forms of migration and experiences of travel. It explores how media has depicted immigration processes and shaped public attitudes toward different immigrant groups. It also investigates how first- and second-generation immigrant populations consume and produce media that both shape and are shaped by transnational identity formations.

IS 832 National Identity in a Global Age (3 Credit Hours)

This course will focus on narratives of national identity in the age of globalization. Seminal works of cultural criticism, philosophy, and political philosophy will shed light on the complex nature of national identity construction in the contemporary world.

IS 834 U.S. Grand Strategy (3 Credit Hours)

This course offers a thorough exploration into the subject of U.S. grand strategy. It confronts debates over the definition and usefulness of grand strategy, examines variations across the history of U.S. grand strategy and among current visions for U.S. grand strategy, and analyzes subjects of core concern to U.S. grand strategy.

IS 835 International Relations of the Middle East (3 Credit Hours)

The purpose of this course is to help the student understand, evaluate and analyze key features of the international relations of the Middle East. Major issues covered include the historical background of the Middle East, primarily from World War I; Islam and Islamism; Zionism and Israel; Arab nationalism and pan-Arabism; the Arab-Israeli conflict in its historical and contemporary context; the Persian Gulf wars; global oil dynamics; the foreign policy of key regional states; the role of outside powers in the region, especially the United States; and major issues including democratization, WMD, and the Arab Spring.

Prerequisites: Instructor or Director approval

IS 838 European Politics (3 Credit Hours)

The course explores on the politics of Europe, focusing on four core themes: the political economy and the travails of the single currency, the question of immigration, legitimacy and democracy, and the changing political landscape. Students will familiarize themselves with the European Union and its institutions, as well as such themes as populism, the decline of centrist political parties and economic stagnation.

IS 840 Political Economy of Development (3 Credit Hours)

This seminar examines alternate theoretical perspectives on development. These perspectives are then employed to understand contemporary political and economic changes in the developing world, including the consolidation of democratic governance and the liberalization of domestic economics.

IS 841 Globalization and Social Change in the World System (3 Credit Hours)

This course is intended to first identify the distinguishing characteristics of globalization. It then attempts to examine its implications on a number of critical issues, including the future of democracy, income distribution and ethnic, class, and gender relations.

IS 848 Gender and Globalization (3 Credit Hours)

Studies systems of global restructuring as they impact women throughout the globe. Migration, international development, and transnational activism will be focal themes, explored across a variety of national contexts.

IS 850 France's Decolonized Legacy: Africa, Asia, the Caribbean, Quebec (3 Credit Hours)

An analysis of France's ex-colonies as they moved from colonization and decolonization to independence. An overview of political, historical, cinematic, and literary texts with a focus on France's relationship with its ex-colonies, and its ex-colonies' struggles in a post-decolonized world.

Prerequisites: Approval of instructor or director

IS 851 Ethnic Conflict in the Emerging Global Order (3 Credit Hours)

Using different case studies, this course investigates the most important internal and external factors that cause ethnic conflicts. It also examines different mechanisms that help resolve or mitigate such conflicts.

IS 852 Research Seminar in International Studies: Refugees (3 Credit Hours)

This is a graduate-level seminar focusing on the refugee movement from a global perspective. The goals are to provide a critical and realistic understanding of the refugee phenomenon and to explain why the refugees tend to follow some identifiable paths, and why they sometimes return and sometimes do not. Discussion will be centered on the causes and consequences of refugee flow, and the roles the more developed countries can play in helping solve the problem.

IS 855 Conflict and Violence in Modern Africa (3 Credit Hours)

This course will confront the theme of conflict and violence in Africa since the mid-20th century. It will explore the reasons behind the level of violent conflicts in the continent today, seek to understand their larger significance, and explore ideas for conflict resolution and prevention. (cross listed with HIST 755)

IS 860 International Cultural Studies: History, Theory and Application (3 Credit Hours)

Course analyzes culture in the context of material conditions in which it is produced, disseminated, controlled and practiced. Theoretical application of cultural studies will include developing familiarity with key foundational theories, terminologies, and critical thinking.

IS 862 Game Theory (3 Credit Hours)

Game theory uses mathematical models, empirical investigation, and simulations in an effort to explain simple and complex strategic interactions among individuals, states, groups, and species. This course teaches the tools of game theory, with a focus on applications in international relations and political science.

IS 865 Agent-Based Modeling and Simulation for International Studies (3 Credit Hours)

An introduction to complex systems theory and to the application of agent-based modeling technologies to a variety of social systems.

IS 868 Internship in International Studies (3 Credit Hours)

Internship individually arranged at local, state, or international level.

Prerequisites: approval of director

IS 870 Transnational Media Practices (3 Credit Hours)

Course examines the key roles played by media technologies in implementing and promoting international development programs, as well as some of the concerns these initiatives have raised in terms of media literacy, cultural sovereignty, and information access.

IS 872 Modeling Global Events (3 Credit Hours)

This course introduces modeling and simulation as a tool for expanding one's understanding of events that have shaped the global environment of the 21st century. The course will first provide a broad look at international politics through a review of select international incidents, military interventions, and homeland security issues. Second, select topics from these categories will serve as case studies to facilitate representing those events with the application of modeling, simulation, and visualization. Understanding how modeling and simulation can provide another method of analysis allows students to delve deeper into their understanding of "what happened" and to explore their conception of "what if."

Prerequisites: Approval of instructor or director

IS 890 Advanced Seminar Conflict & Cooperation (3 Credit Hours)

This course explores debates in the field of Security Studies, their relevance to creating knowledge, discourse, consensus and critique, and the development of diverse research agendas.

IS 894 Seminar in Thesis and Dissertation Preparation (3 Credit Hours)

Prepares students to research, formulate and write thesis and dissertation prospectuses.

Prerequisites: permission of the director

IS 895 Topics in International Studies (1-3 Credit Hours)

The advanced study and discussion of selected (titled) topics not offered on a regular basis.

IS 896 Selected Topics in International Studies (1-3 Credit Hours)

The advanced study of selected topics in an interdisciplinary manner which will permit small groups of qualified students to work on subjects of mutual interest. Due to their specialized nature, the course may not be offered regularly.

IS 897 Independent Research in International Studies (3 Credit Hours)

Independent research directed by professors. May only be taken once.

Prerequisites: approval of the director

IS 898 Directed Research (3 Credit Hours)

Methodological and theoretical preparation designed to assist students in writing a dissertation. Students may only take this once.

Prerequisites: approval of director or instructor

IS 899 Dissertation (1-9 Credit Hours)

May be repeated up to 18 credits.

IS 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

IS 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

IT - Information Technology

IT 564 Essentials of Project Management (3 Credit Hours)

This course focuses on project management concepts and methodologies. Topics include project management framework, knowledge areas, and techniques.

Prerequisites: Enrolled in a graduate program or a graduate certificate program, or waiver approved by the instructor

IT 595 Topics (1-3 Credit Hours)

IT 630 Intelligent Systems & Business Analytics (3 Credit Hours)

This course explores the intersection of intelligent systems and business analytics. Students gain insights into leveraging artificial intelligence and data analysis techniques to drive informed decision-making and solve complex business problems. Topics include descriptive analytics, predictive analytics, prescriptive analytics, AI, machine learning, and real-world case studies in various industries.

Prerequisites: Admission to the MBA program OR approval by the MBA program office/instructor

IT 634 Cloud Computing and Security (3 Credit Hours)

An introduction to key concepts and techniques of cloud computing and security. Topics include: cloud computing systems, virtualization and container technologies, cloud architecture and service platform design, cloud programming models, big data analytics, cloud performance and security.

IT 650 Database Management Systems (3 Credit Hours)

Introduction to database management systems. The topics addressed include system architecture, data models, database analysis, design and implementation, query processing, business transaction processing, and database security.

Prerequisites: IT 620 or equivalent; or permission of the department

IT 651 Business Intelligence (3 Credit Hours)

Introduction to business intelligence and its three components: data warehouse, data mining, and OLAP. Examines traditional techniques as well as emerging technologies.

Prerequisites: IT 650, or admission to a graduate program at ODU, or permission of the instructor or department

IT 652 Information and Communications Technology for Big Data (3 Credit Hours)

Introduction to emerging ICT techniques for big data analytics and big data science. Topics cover WSN, cloud computing and IoT.

Prerequisites: IT 650, or admission to a graduate program at ODU, or permission of the instructor or department

IT 660 Digitalizing Enterprises (3 Credit Hours)

Information and Communication Technologies (ICT) is a critical enabler of the digital enterprise. This class introduces cutting-edge ICT, including enterprise systems, IoT, CPS as the foundation for digitalizing enterprises for the seamless integration of enterprises and supply chain. Topics includes intra- and inter-organizational integration, supply chain collaboration and integration, and digitalization technologies.

Prerequisites: IT 650 or permission of the instructor or department or admission to a graduate program at ODU

IT 664 Project Management (3 Credit Hours)

This course provides knowledge of project management including tools and techniques to manage scope, time, cost, quality, risk, team, communications, security and procurement. Special issues in the context of information- and technology-based projects are emphasized.

IT 667 Cooperative Education (1-3 Credit Hours)

Approval for enrollment and allowable credits are determined by the department in the semester prior to enrollment. Available for pass/fail grading only.

Prerequisites: IT 620 or equivalent

IT 668 Information Systems Internship (1-3 Credit Hours)

Approval for enrollment and allowable credits are determined by the department in the semester prior to enrollment. Available for pass/fail grading only.

Prerequisites: IT 620 or equivalent

IT 672 Enterprise Architectures (3 Credit Hours)

Introduction to enterprise architectures for business organizations as well as related information architectures. Examines traditional techniques as well as emerging techniques including industrial information integration engineering.

Prerequisites: IT 650, or admission to a graduate program at ODU, or permission of the instructor or department

IT 680 Computing Aspects of Medical Informatics (3 Credit Hours)

Overview of computing aspects of medical informatics. Computational methods in scientific computing of medical informatics are covered. The basic thrust is to demonstrate the usefulness and power of computational methods in solving real-life problems in perspectives of medical informatics.

IT 695 Selected Topics in Information (1-3 Credit Hours)

3 credits.

Prerequisites: permission of the department chair and the graduate program director

IT 697 Independent Study in Information Systems (1-3 Credit Hours)

Affords students the opportunity to undertake independent study under the direction of a faculty member.

Prerequisites: IT 650 or permission of the department

IT 698 Master's Project in Information (3 Credit Hours)

3 credits.

Prerequisites: IT 650 and permission of the department

IT 699 Master's Thesis in Information Systems (1-6 Credit Hours)

1-6 credits.

Prerequisites: IT 650 and permission of the department

IT 795 Selected Topics in Management Information Systems (1-3 Credit Hours)

3 credits.

Prerequisites: permission of the department chair and the graduate program director

IT 800 Theoretical Foundation in Information Technology Research (3 Credit Hours)

A survey of research methodology in supply chain and operations management, data science, and information technology including empirical, behavioral, computational, and interdisciplinary methods and techniques in different types of problem domains.

IT 850 Enterprise Architecture and Computing Algorithms (3 Credit Hours)

This course examines the latest advances in enterprise architecture and computing. Topics include enterprise architecture design and modeling, service-oriented architecture (SOA), and integration of enterprise information and applications.

Prerequisites: IT 800

IT 890 Seminar in Business Process and Enterprise Systems (3 Credit Hours)

This course discusses how firms achieve business excellence through business process management (BPM), business process improvement (BPI), and business process reengineering (BPR) supported by IT. Topics include business process and workflow modeling, analysis, integration, monitoring and management.

Prerequisites: IT 800

IT 891 Seminar in Business Intelligence (3 Credit Hours)

The objective of this course is to provide an overview of managerial and technical issues associated with business intelligence. Topics covered include the state-of-the art data warehousing, data mining and OLAP technologies.

Prerequisites: IT 800

IT 892 Seminar in Knowledge Management (3 Credit Hours)

The course examines the latest advances in knowledge management (KM) including identifying, capturing, sharing and evaluating an enterprise's knowledge assets. The course reviews and discusses existing technologies in KM and new emerging KM technologies and practices.

Prerequisites: IT 800

IT 893 Supply Chain in E-Business Environment (3 Credit Hours)

This course examines how supply chain management and information technology integrate to support global e-commerce opportunities. Topics include the theories and practices of material flow management, omnichannel distribution and retailing, maritime, logistics, procurement, and inventory management.

Prerequisites: IT 800

IT 895 Selected Topics in Management Information Systems (1-3 Credit Hours)

3 credits.

Prerequisites: permission of the department chair and the graduate program director

IT 899 Dissertation (1-12 Credit Hours)

Ph.D. level research and writing of dissertation.

Prerequisites: IT 893; departmental approval required

IT 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

JAPN - Japanese

JAPN 522 Analyzing Japanese Conversation (3 Credit Hours)

This course examines Japanese conversation from a comparative perspective using the framework of Conversation Analysis. It explores the basic mechanisms of social interaction in English and Japanese spoken discourse with a particular focus on everyday talk.

Prerequisites: JAPN 312W or permission of the instructor

JAPN 595 Topics in Japanese (1-6 Credit Hours)

This course provides a study of selected topics in Japanese. Topics vary with the semester and the instructor. Expectations for materials covered and produced for the class vary with the level (higher-level classes will have higher expectations). Contact the Japanese Program Coordinator for details about specific topics covered in a given semester.

Prerequisites: JAPN 312W or permission of the instructor

JAPN 596 Topics in Japanese (1-6 Credit Hours)

A study of selected topics in Japanese. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: JAPN 312W or permission of the instructor

JAPN 697 Tutorial Work in Japanese (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Permission of the instructor

JST - Jewish Studies

JST 595 Topics in Jewish Studies (3 Credit Hours)

This course addresses various topics in Jewish Studies.

Prerequisites: graduate standing or permission of instructor

KIN - Kinesiology

KIN 810 Seminar in Applied Science in Kinesiology (3 Credit Hours)

An integrative seminar focusing on major issues within the field of kinesiology in which students will apply concepts related to aspects of professional practice and higher education.

Prerequisites: Admission to the Doctor of Applied Science in Kinesiology program

KIN 820 Applied Quantitative Research Methods in Kinesiology (3 Credit Hours)

Knowledge in kinesiology is built through careful analysis and interpretation of data. In this course, students will apply descriptive and inferential statistical methods to various kinds of data and interpret the results through an understanding of research methods used to collect data. This will develop students' ability to make sense of kinesiology related research literature and make informed, evidence-based decisions.

Prerequisites: Admission to the Doctor of Applied Science in Kinesiology program or permission of instructor

KIN 825 Mixed & Multi Methods in Kinesiology Research (3 Credit Hours)

This course will cover the writing and refining of research questions, collecting and analyzing qualitative and quantitative data, and choosing the appropriate mixed or multi-method design. The course will also review analyzing, interpreting, and presenting the results of a mixed or multi method design to address the research questions. Students will learn how qualitative and quantitative data can be combined to capture the perspectives of healthcare providers, patients, organizations, or other stakeholders to answer research questions.

Prerequisites: Admission to the Doctor of Applied Science in Kinesiology program or permission of instructor

KIN 890 Kinesiology Capstone (3-6 Credit Hours)

The capstone experience(s) provides students with an in-depth supervised experience with an approved mentor. The capstone experience(s) will require students to complete a project related to an actual kinesiological issue that aligns with the expertise of the mentor.

Prerequisites: Admission to the Doctor of Applied Science in Kinesiology program

KRS - Kinesiology and Rehabilitation Sciences

KRS 820 MATLAB Programming for Kinesiology and Rehabilitation (3 Credit Hours)

Developments in technology provide researchers with the ability to measure different aspects of human movement many times a second. To make sense of these large and complex datasets researchers are increasingly using engineering software, e.g., MATLAB, to manipulate, process, and analyze data. In this course, students will gain experience importing, plotting, filtering, selecting critical points, and exporting data through the creation of custom functions and scripts within the MATLAB user interface.

Prerequisites: admission to the kinesiology and rehabilitation doctoral program or permission of the instructor

KRS 825 Mixed and Multi Methods in Health Sciences Research (3 Credit Hours)

This course will cover the writing and refining of research questions, collecting and analyzing qualitative and quantitative data, and choosing the appropriate mixed or multi-method design. The course will also review analyzing, interpreting, and presenting the results of a mixed or multi method design to address the research questions. Students will learn how qualitative and quantitative data can be combined to capture the perspectives of healthcare providers, patients, organizations, or other stakeholders to answer research questions.

KRS 830 Theoretical Models in Kinesiology and Rehabilitation (3 Credit Hours)

This course will explore some of the theories that are common to kinesiology and rehabilitation research. It will include theories associated with disablement, rehabilitation, patient-centered care, motor control, and models for clinical research. These theories will be applied to clinical and research applications relevant to kinesiology and rehabilitation.

KRS 835 Critical Appraisal and Synthesis of Evidence in Kinesiology and Rehabilitation (3 Credit Hours)

This course will introduce the student to critical appraisal of all forms of research in kinesiology and rehabilitation. The purpose of this course is to further develop the student's competence in conducting and evaluating research. The student will develop the skills necessary to find, critically evaluate, and synthesize the available research in order to answer individual research questions or cultivate a line of research inquiry.

KRS 851 Motor Performance: Rhythmic/Cyclic Tasks (3 Credit Hours)

This course examines the coordination of cardiorespiratory, musculoskeletal, and neurological systems in performing rhythmic movement tasks such as walking, running, swallowing, speaking, and feeding. Students will gain experience measuring and interpreting cardiorespiratory variables, kinematics, kinetics, and energetics of rhythmic movement tasks integrated with measures of activity, participation, and clinical standardized tests.

KRS 852 Motor Performance: Discrete Tasks (3 Credit Hours)

This course will examine the coordination of musculoskeletal and neurological systems in performing discrete movement tasks such as reaching, grasping, throwing and speaking. Students will gain experience measuring and interpreting kinematics and kinetics of discrete tasks integrated with measures of activity and participation and clinical standardized tests.

KRS 855 Neurosciences of Motor Control (3 Credit Hours)

This course covers neuroscience with specific regard to the fundamental design, organization and workings of the central nervous system (CNS) in the areas of motor control. The topics cover areas related to the typical development of motor function and changes in motor control throughout the lifespan. This course also assesses motor-control problems that occur as a result of congenital conditions, acquired damage, dysfunction or disease. Pathological conditions such as (but not limited to) stroke, Parkinson's disease, cerebellar disease, and muscle and joint pathologies are examined.

KRS 856 Balance and Postural Control (3 Credit Hours)

An optimal level of balance and postural control is essential for the performance of many everyday activities. This course is specifically focused on the neural, muscular and biomechanical mechanisms underlying postural control in healthy populations of different ages. In addition, changes that can be observed in postural control following damage, dysfunction and/or disease are also covered. The implications of changes in balance control for falls will be a particular focus. Students in this course learn how to collect and interpret kinematic, kinetic and electrophysiological data associated with the neuromuscular function during posture and balance tasks.

KRS 857 Kinesiology in Rehabilitation (3 Credit Hours)

Rehabilitation aims to enhance the functional ability of individuals with impairment or disease, while areas within the field of kinesiology seek to understand changes in tissues, physiological systems, movements, and behaviors that occur through training and practice. In this course, students will study these related processes of adaptation, learning, and rehabilitation.

KRS 887 Structured Teaching Experience for Kinesiology and Rehabilitation Professions (1-3 Credit Hours)

This course is designed to provide supervised and mentored teaching experience within fields applicable to kinesiology and rehabilitation.

KRS 895 Special Topics in Kinesiology and Rehabilitation (3 Credit Hours)

The advanced study of special topics in kinesiology and rehabilitation.

KRS 898 Supervised Research (1-3 Credit Hours)

This course is designed to provide supervised and mentored research experience within specialized topics applicable to kinesiology and rehabilitation.

KRS 899 Dissertation (1-12 Credit Hours)

An approved research project written under the supervision of a faculty advisor, in which the student demonstrates the capacity to design and complete independent applied research. The completed project must be approved by the dissertation committee.

LAS - Latin American Studies

LAS 521 Human Rights in Latin America (3 Credit Hours)

This course evaluates human rights movements, mechanisms, and their impacts in Latin America. Students will examine different human rights crises to understand how these events have shaped the region and what the response to them has been. The class is less a study of the specific legal mechanisms used in human rights practice and more a study of how human rights have evolved as a discourse and political strategy in struggles for justice. It adopts a more anthropological and geographic approach to understanding human rights theory and practice. All readings and lectures in English.

LAS 530 Latin American Thinkers Changing Culture and Politics (3 Credit Hours)

In this course students will study the ideas of some important Latin American thinkers whose work has helped to shape Latin American history and society from Independence in the early 19th Century to the present. Even though special attention will be paid to some writers, works by a larger number of intellectuals will be analyzed as a way of understanding some of the central ideas in Latin American culture: "mestizaje," nationalism and popular culture, among others. All readings and lectures in English.

Prerequisites: A grade of C or better in ENGL 110C

LAS 531 Race and Culture in Brazil (3 Credit Hours)

This course will explore some of the unique contradictions shaping Brazilian reality as related to notions of race and culture by tracing the history of race relations in the ongoing transformation of Brazilian culture, examining such key examples and events as slavery and the plantation economy, popular music, Carnival, populism, racial democracy, affirmative action, and urban and rural violence. All readings and lectures in English.

LAS 595 Topics in Latin American Area Studies (3 Credit Hours)

Investigation of special topics on Latin America. All readings and lectures are in English.

Prerequisites: A grade of C or better in ENGL 110C

LIBS - Library Science

LIBS 601 STEM Education and Maker Spaces in Libraries (3 Credit Hours)

This course builds on current research and practice to strengthen candidates' conceptual understanding of design-based STEM pedagogy. Through participation in activities and discussions, students will review concepts embedded within design-based, problem-based, project-based, and inquiry instruction and learning. This course will explore a synthesized overview of trends affecting STEM education and investigate makerspaces and making activities to support inquiry-driven, community engagement in information settings. Students will gain hands-on experience with digital and physical making toolkits and design maker experiences within library spaces.

LIBS 602 Production of Instructional Materials (3 Credit Hours)

This course develops skills in preparing, evaluating, and presenting instructional materials and the use of those materials to promote higher-level thinking and enhance the learning environment. It includes elements of design, multimedia materials, and development of in-service activities. Students will participate in sandbox activities to incorporate hands-on practice of media production and dissemination.

LIBS 603 Online Resources for Teaching (3 Credit Hours)

Students will gain experience locating, evaluating, collecting, arranging, and disseminating content resources available as open educational resources to support learning and teaching. Issues surrounding open educational resources including copyright, licensing, access, and quality will be addressed. A primary focus will be on developing digital textbooks that may include websites, databases, current awareness experts, and digital field trips to support the delivery of instruction.

LIBS 608 Foundations of Libraries and Information (3 Credit Hours)

This course provides a social, cultural, and historical perspective on libraries and librarianship. Topics include the purpose, functions, and processes of library and information sciences, including the history and development of libraries, different types of libraries and information agencies, and key issues in the field to include intellectual freedom, ethics, and evolving library technologies. Students will explore different libraries and information agencies, as well as legal, ethical, and economic policies, advocacy trends and positions. They will engage in discussions, research projects, and practical assignments to develop professional skills and gain a deeper understanding of the principles that guide modern information professionals as well as of the challenges faced in library settings.

Prerequisites: Admission to the Master of Library and Information Studies Degree

LIBS 609 History of Books and Libraries (3 Credit Hours)

This course provides a historical perspective on books and libraries as social and cultural objects and spaces. Surveys the history of communication technologies from early history through current events and from stone tablets to electronic formats.

LIBS 610 Preservation Management in Libraries and Archives (3 Credit Hours)

An introduction to the principles and practice of preservation with an emphasis on the management of preservation activities. Includes physical and intellectual preservation of records and media and the history, kinds of materials and treatments, techniques and technologies, and digitization and digital records. Issues of storage, security, and disaster prevention and response will also be addressed.

LIBS 611 Community Archiving (3 Credit Hours)

All communities create historical records, and recent decades have brought a growing critical awareness of how existing social hierarchies influence the creation and maintenance of historical archives. Community archive projects locate the power to preserve and shape history, heritage, and memory in communities themselves. Through readings, discussion, and analysis, this course will introduce students to a range of issues relating to grassroots community archives, archives of community organizations, and what happens when larger institutions partner with communities and community organizations to create and maintain archives.

Prerequisites: LIBS 608

LIBS 612 Research Methods in Library and Information Studies (3 Credit Hours)

This course will introduce students to theoretical and applied research design, methodologies, and evaluation of research in library and information science (LIS). The course will include a review of existing research, allowing students to evaluate and assess the potential value of literature and research findings through critical analysis. Basic qualitative and quantitative research protocols will be learned through this class.

Pre- or corequisite: LIBS 608

LIBS 614 Information Ethics (3 Credit Hours)

Introduces the major theories and basic concepts of ethics. Historical and contemporary professional frameworks and positions will be analyzed in ethical contexts. Students will apply ethical principles to dilemmas and decision making in the information and library profession.

Prerequisites: LIBS 608

LIBS 615 Action Research for School Librarians (3 Credit Hours)

This course explores action research in a school library. Students will examine the value and characteristics of educational action research and apply these ideas toward the development of an action research project. Topics include the evaluation of published action research projects, community-based assessment, data collection and analysis, and the design and development of a project conducted in a school library setting.

LIBS 626 Web Archiving Theory, Practice, and Implications (3 Credit Hours)

An interdisciplinary introduction to web archiving fundamentals including web crawling, collection development and summarization including planning, analyzing, and sharing collections. Includes a review of ethical and legal issues, trustworthiness, preservation, security, and cultural impact of web archiving.

Prerequisites: This course is intended for computer science students with limited information studies skills, as well as information science studies students with limited computer science skills

LIBS 642 Children's Literature PREK-8 (3 Credit Hours)

Students examine, evaluate, discuss, and use literature and related materials for children and young adolescents and explore strategies for introducing and using literature with children.

Prerequisites: graduate standing

LIBS 644 Literature and Media for Young Adults (3 Credit Hours)

An exploration of the selection of literature and media for young adults (ages 12 - 18). Includes current trends and research in teens' social, physical and cultural development, teen interests and needs, and multiple literacies. Focus is on multiple formats, diverse learners, and strategies to promote reading for information, pleasure and lifelong learning.

Prerequisites: Graduate standing

LIBS 647 Reading and Literature for Adults (3 Credit Hours)

Survey of trends and selection tools in literature and reading for adult library patrons including popular fiction and non-fiction genres in multiple formats and across life stages in adulthood. Strategies will include reader's advisory, book clubs, and other programming to meet the diverse needs and interests of adult readers.

LIBS 648 Reading, Evaluating, and Selecting Graphic Novels (3 Credit Hours)

This course explores the use, selection and evaluation of literature and media that use sequential art to tell stories in a visual format: comics, webcomics, graphic novels, and more. The course will include the history of the sequential art format; an exploration of reading through a variety of graphics, text and media; and a survey of current and historical titles for all ages. Students will explore resources for selecting and evaluating materials in graphic format as well as specific applications for graphic materials in classrooms and libraries.

LIBS 649 Storytelling (3 Credit Hours)

This course introduces narrative structure and technique using a variety of different media. It explores storytelling for the purpose of informing, entertaining and/or educating in an information setting. Storytelling strategies help students gain communication skills and practice. Students will explore the and demonstrate the use of storytelling for a variety of age groups, from preschool through adults, and for special audiences.

Prerequisites: LIBS 608

LIBS 653 User Centered Design in Library and Information (3 Credit Hours)

This course introduces current and future information professionals to user-centered design in library and information studies. Students learn how to conduct research with users, gather users' requirements, and develop intuitive, user-friendly interfaces (e.g., software, mobile applications). Theories and techniques for engaging users and designing user-centered interfaces are learned and applied.

Prerequisites: LIBS 608

LIBS 654 Information Literacy Instruction (3 Credit Hours)

Students will develop expertise in the delivery of in-person and online information literacy and research instruction in library and information contexts through an exploration of various information literacy models, standards, and theories. Students will gain practical experience in planning, implementing, and assessing library instruction and digital learning objects through a variety of delivery methods.

LIBS 655 Methods and Strategies for the School Library (1-3 Credit Hours)

This course draws on research-based theory of pedagogical best practice to discuss, model, and apply practical teaching strategies and methods in the context of a school library. Topics include strategies to implement effective classroom management in the library learning environment, engage library learners and assess their performance, and build collaborative relationships with teaching peers. Students will complete 20 hours of observation in a school library and reflect on these experiences, create a personal teaching philosophy, respond to learner behaviors in a library setting, create assessments for student learning, develop and teach a lesson for k-12 learners, and deliver a PD session for teaching peers.

LIBS 656 User Services and Programming (3 Credit Hours)

An overview of the planning, evaluation, and administration of programs and services designed to meet the needs and interests of individuals and groups in libraries and other information spaces.

LIBS 657 LGBTQIA+ Issues in Public Libraries (3 Credit Hours)

The populations served by public libraries are varied and diverse, and they require resources that will address these diverse needs. Budgetary and political concerns, among other things, often restrict the ability of libraries to fulfill the needs of 'invisible populations,' or groups whose minority status is not readily or visually apparent, such as the lesbian, gay, bisexual, transgender, queer, intersex, asexual plus (LGBTQIA+) community. This course is designed to bring particular issues the LGBTQIA+ community may have in relation to public libraries to the forefront and provide students with the tools to address these issues in the field.

LIBS 658 Knowledge Resources: Planning, Selecting & Managing Collections (3 Credit Hours)

Examines the concepts and issues related to the lifecycle of recorded knowledge and information including emerging technologies and addresses the fundamentals of planning, selecting, analyzing, managing, and developing collections and technology resources for diverse communities. Topics include the philosophy, principals, and methodologies of collection development in a variety of library and information settings. Emphasis is placed on understanding the library environment and selection and acquisition of materials, inclusive of print and non-print items. Students will gain knowledge and experiences with needs assessment, planning, analyzing, and managing collections of print, digital, and technological tools. Students will also develop a targeted plan to address identified needs including a budget and presentation to stakeholders.

Pre- or corequisite: LIBS 608

LIBS 668 Internship in Libraries and Information Workplaces (1-9 Credit Hours)

This course provides a focused internship experience that supports developing the knowledge, skills, and understanding required to participate in the day-to-day operations of a library or information setting. Central to the purpose of the internship is the valuable learning experiences interns gain in an authentic setting. Topics include self-assessment and exploration of information careers in a library or information environment. Interns also gain proficiency in the identification, analysis, and resolution of issues using data-driven problem-solving techniques. They gain insights into the operation of information work places, their professional goals, and how these goals can be achieved. Interns progressively develop skills through an experiential approach documented through formative and summative evaluations, as well as in the final Impact Project. Students taking this course for school library endorsement may have additional requirements/prerequisites.

Prerequisites: LIBS 608, LIBS 658, LIBS 677, and LIBS 674

LIBS 669 Internship in School Libraries (3-6 Credit Hours)

This course provides a focused internship experience that supports the planning, development, and instruction of PK-12 learner projects in a school library setting. Central to the purpose of the internship is the valuable learning experiences interns gain in an authentic setting. Topics include self-assessment and exploration of information careers in a K-12 school environment. Interns also gain proficiency in the identification, analysis, and resolution of issues using data-driven problem-solving techniques. They gain insights into the operation of information work places, their professional goals, and how these goals can be achieved. Interns progressively develop skills through an experiential approach documented through formative and summative evaluations well as in the final Impact Project. This course is for students who are already licensed teachers or who are seeking initial licensure in school librarianship.

Prerequisites: LIBS 602, LIBS 608, LIBS 642, LIBS 644, LIBS 658, LIBS 674, LIBS 676, OR LIBS 677

LIBS 674 Library Management and Leadership (3 Credit Hours)

This course will explore the critical issues and established best practices of library management and leadership. Topics include communication, core values, strategic planning, organizational culture, human resources, assessment, fundraising, and advocacy. Students will develop the skills necessary to plan, establish, and operate a modern library at the building level.

Pre- or corequisite: LIBS 608

LIBS 676 Library Media Services and the Curriculum (3 Credit Hours)

This course focuses on library services and the curriculum of the school. Content includes techniques for curriculum design and development, information skills instruction, instructional partnerships, advocacy, assessment of learners and the library, and implementation of integrated library instruction. Students will explore the National School Library Standards and situate these within the context of learners and learning, develop collaborative instruction, and deliver a unit of instruction within a K-12 school library setting.

Prerequisites: Admittance to the MLIS with School Library Concentration
Pre- or corequisite: LIBS 608, LIBS 658, LIBS 674, LIBS 677, and LIBS 602

LIBS 677 Knowledge Organization and Access (3 Credit Hours)

This course focuses on the fundamental and uniform principles of information resource description and availability. Topics include cataloging, processing, organizing and accessing of materials. Students will develop the ability to apply and adapt the principles of classifying and cataloging and will understand how these fundamental skills fit into the broader area of technical processing and how they support the principles of services in libraries and other information environments. They will engage in discussions and practical assignments to develop applicable professional skills and prepare them for basic material organization or advanced cataloging courses.

Pre- or corequisite: LIBS 608

LIBS 679 Theory and Management of Reference and Information Retrieval (3 Credit Hours)

Students will explore database structures, search algorithms, indexing principles, and user interfaces for information search and retrieval. Current issues in the evaluation, acquisitions and management of databases and other information resources will be addressed. Includes advanced strategies for effective information search and educating and assisting users in search techniques and evaluation.

Prerequisites: LIBS 677

LIBS 680 Culturally Responsive Librarianship (3 Credit Hours)

This course provides thought-provoking background and practical suggestions for engaging with a diverse population. Participants explore their own assumptions about race, class, and culture and learn strategies for creating environments and an open dialog that are culturally inviting to all.

LIBS 681 Assessment and Evaluation in Library and Information Science (3 Credit Hours)

Students will explore assessment and evaluation related to library and information contexts with particular attention to historical and current theories and values, relevant standards, and current initiatives and measures. Students will design an evaluation of a current library service or resource that is connected to library goals and objectives with a presentation to effectively communicate data to various stakeholders.

Prerequisites: LIBS 608

LIBS 684 Advanced Library Management (3 Credit Hours)

Reviews the advanced knowledge and competencies required for the senior administration level of all types of libraries and library systems. Competencies include budgeting and analysis, project management, human resources, and the development of library reporting and advocacy materials.

Prerequisites: LIBS 674

LIBS 687 Cataloging and Classification (3 Credit Hours)

Cataloging and metadata principles introduced in LIBS 677 are further developed and applied in this course. Students will apply principles of bibliographic description, subject analysis, and classification to a variety of formats including multimedia, serials, and online resources. The course will address systems, technology and trends in cataloging and metadata environments.

Prerequisites: LIBS 677 or instructor approval

LIBS 690 Seminar in Academic Libraries (3 Credit Hours)

Academic libraries are dynamic organizations, working to meet the needs of their users and stakeholders while supporting parent higher education institutions. This course examines the functions of the academic library within the higher education environment. A wide variety of topics are covered in this survey of the field, including a focus on the historical background, current trends, and future directions in academic librarianship.

LIBS 691 Seminar in Public Libraries (3 Credit Hours)

Students will gain an understanding of public libraries in the United States and their role within their communities. Topics covered include a historical background of public libraries, overviews of current trends, and future directions in public libraries. This course also explores public services, the roles and expectations of public librarianship as a career.

LIBS 693 Seminar in Archives and Special Collections (3 Credit Hours)

An introduction to the nature of archives and special collections. The course explores the history of special collections, archives, records, and cultural memory. Aspects of the profession including ethics, values, financial and legal responsibilities are included. Students will be introduced to the basic knowledge, tools, methods and practices associated with archival work.

LIBS 694 Seminar in Social Justice in Library and Information Work (3 Credit Hours)

In this seminar course, students will explore current social justice issues through an activist framework. Historical and contemporary frameworks, positions and initiatives related to the library profession will be considered. The course will examine professional structures, documents, emerging frameworks and social actions as they relate to specific topics of social justice.

LIBS 695 Topics in Library and Information Studies (1-3 Credit Hours)

This course provides opportunities for graduate students to explore current topics, trends and issues related to libraries and information studies.

LIBS 697 Independent Study in Library Science (1-3 Credit Hours)

This course is an independent study of special topics in Library Science.

Prerequisites: Instructor approval required

LIBS 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

MAE - Mechanical and Aerospace Engineering

MAE 503 Flight Mechanics (3 Credit Hours)

Aircraft concepts including performance prediction and optimization, flight and maneuver envelopes, and steady flight performance. Additional topics: longitudinal static stability and trim; aircraft dynamics; development, separation and solution of aircraft equations of motion; natural modes; dynamic stability; sensors and actuators; and design of stability augmentation and autopilot systems.

Prerequisites: MAE 303 with a grade of C or better and MAE 340

Pre- or corequisite: MAE 436

MAE 504 Vibrations (3 Credit Hours)

Free and forced vibrations of undamped and damped, single-degree of freedom, multi-degree of freedom, and continuous systems. Exact and approximate methods to find natural frequencies.

Prerequisites: A grade of C or better in MAE 205, a grade of C or better in MAE 220; MAE 340 and MATH 312

MAE 506 Flight Vehicle Aerodynamics (3 Credit Hours)

Inviscid flow concepts including: Euler equations, stream function, velocity potential, singularities, vorticity and circulation laws. Viscous flow topics including boundary layers separation, and turbulent flow. In addition, external flows, lift and drag, thin airfoil theory, finite wing theory and airfoil design will be discussed.

Prerequisites: A grade of C or better in MAE 303; MAE 340

MAE 511 Mechanical Engineering Power Systems Theory and Design (3 Credit Hours)

Thermodynamic properties of gases and vapors relating to power generating devices, work-energy relations, combustion, and heat exchangers. Performance analyses and design concepts of gas turbines, internal combustion engines, steam power plants and heat exchanger equipment from theoretical and applied viewpoints.

Prerequisites: MAE 312 and MAE 315

MAE 512 Environmental Control (3 Credit Hours)

Engineering principles as applied to the analysis and design of systems for automatically controlling man or machine environments. Course encompasses fundamentals of heating, ventilating, air conditioning, refrigeration, cryogenics, and design of building energy systems.

Prerequisites: MAE 312 and MAE 315

MAE 513 Energy Conversion (3 Credit Hours)

Introduction of relevant kinetic theory, solid state, and thermodynamic principles; operation and analysis of thermoelectric, photovoltaic, thermionic, magnetohydrodynamic devices, fuel cell, isotopic, and solar power generators. Course seeks to define engineering limits of converter efficiency and other performance criteria.

Prerequisites: MAE 312

MAE 514 Introduction to Gas Dynamics (3 Credit Hours)

One-dimensional compressible flow considering isentropic flow, normal shocks, flow in constant area ducts with friction, flow in ducts with heating and cooling, oblique shocks, Prandtl-Meyer expansions, shock-expansion theory, flow around diamond shaped airfoils, and wind tunnel mechanics.

Prerequisites: A grade of C or better in MAE 303 and a grade of C or better in MAE 312

MAE 517 Propulsion Systems (3 Credit Hours)

Basic principles of design, operation and performance of propulsion systems - including turbojet, turboprop, turbofan, and ramjet engines. Introduction to chemical rockets, ion and plasma thrusters.

Prerequisites: Must earn a grade of C or better in MAE 303 and MAE 311

MAE 520 Aerospace Structures (3 Credit Hours)

Analysis of aircraft and space vehicle structural components. Effects of bending, torsion and shear on typical aerospace structural components, statically indeterminate beams, shear center and shear flow. Introduction to typical aerospace structures. Introduction to composite structures.

Prerequisites: MAE 332 with a grade of C or better

MAE 522 Modern Engineering Materials (3 Credit Hours)

Limitations of conventional materials; inter-relationship among materials, design and processing, material selection criteria and procedures; strengthening mechanisms in metals; superelasticity; shape memory effect, amorphous metals; structure-property relationship in polymers; polymers crystallinity; thermoplastic and thermosets; high-temperature restraint polymers; ceramics; toughening mechanisms in ceramics.

Prerequisites: MAE 201, MAE 203, and a grade of C or better in MAE 220; MAE 332

MAE 531 Mechanisms Analysis and Design (3 Credit Hours)

Basic relations necessary for analysis of plane motion mechanisms, numerical and analytical solutions for some of the basic mechanisms, methods of calculating rolling and sliding velocities and accelerations of contacting bodies, cams, and gears.

Prerequisites: A grade of C or better in MAE 205, a grade of C or better in MAE 332, and MATH 312 or MATH 285

MAE 538 Applied Analog and Digital Control (3 Credit Hours)

Computer-aided analysis and design of practical control systems.

Introduction to state-space, digital signal processing and digital control.

Laboratory sessions on aliasing, analog, system identification, and real-time control.

Prerequisites: a grade of C or better in MAE 436

MAE 540 Introduction to Finite Element Analysis (3 Credit Hours)

Basic concepts of finite-element method, method of weighted residuals, interpolation functions, numerical implementation of finite-element method, applications to engineering problems such as beam deflection, heat conduction, and plane elastic problems.

Prerequisites: MAE 340

MAE 550 Principles of Naval Architecture (3 Credit Hours)

Basic principles of naval architecture related to ship geometry, stability, strength, resistance, propulsion, vibration and motions in waves and controllability.

Prerequisites: MATH 212 with a grade of C or better

MAE 560 Introduction to Space Systems Engineering (3 Credit Hours)

Introduction to spacecraft systems starting from mission design and space environment considerations and proceeding through propulsion, altitude control, spacecraft structural design, thermal control, power and communications for spacecraft.

Prerequisites: MATH 307 and PHYS 232N

MAE 595 Topics in Mechanical and Aerospace Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in mechanical and aerospace engineering or engineering mechanics. (offered fall, spring, summer)

Prerequisites: Senior standing; Permission of the chair is required

MAE 597 Independent Study in Mechanical and Aerospace Engineering (1-3 Credit Hours)

Individual analytical, computational, and/or experimental study in an area selected by student. Supervised and approved by the advisor.

Prerequisites: Senior standing; permission of the chair is required

MAE 601 Engineering Mathematics (3 Credit Hours)

Applications of linear algebra, ordinary and partial differential equations, and complex variables to engineering problems.

MAE 602 Fluid Dynamics and Aerodynamics (3 Credit Hours)

Conservation laws for viscous and inviscid flows. Boundary conditions; analytical and numerical solution of viscous flow problems; boundary-layer theory; 2 and 3-dimensional potential flows; applications to airfoils, wings, and internal flows; introduction to turbulence.

Prerequisites: MAE 601 or MATH 691

MAE 603 Advanced Mechanics of Solids (3 Credit Hours)

Stress, strain, equilibrium for deformable solids; material behavior of elasticity, hyperelasticity, plasticity and viscoelasticity; failure criteria, fracture; thermal effect; energy methods and their applications to bars and beams for static, stability and dynamic problems.

MAE 604 Analytical Dynamics (3 Credit Hours)

Advanced kinematics with moving reference frames. Euler equations of motion. Gyroscopic theory. Principle of virtual work, D'Alembert's principle, Hamilton's principle, Lagrange's equations of motion and rigid body dynamics.

MAE 605 Advanced Classical Thermodynamics (3 Credit Hours)

Rigorous development of the macroscopic theory of thermodynamics; structural basis for equations of state and general properties of matter; phase and chemical equilibria.

Prerequisites: MAE 601 or MATH 691

MAE 607 Continuum Mechanics (3 Credit Hours)

Indicial notations and tensor calculus; strain and stress tensors, rate of deformation tensor, Eulerian and Lagrangian descriptions, conservation principles, constitutive formulations for elastic solids and viscous fluids, formulation of fluid mechanics and solid mechanics problems. Simple applications.

Pre- or corequisite: MATH 691 or MAE 601

MAE 608 Applied Mathematics for Engineers (3 Credit Hours)

Linear algebra. Vectors and matrices. Partial differential equations. Curve fittings. Applied probabilities. Statistics of distributions. Testing of hypotheses and decisions. Quality control.

MAE 620 Heat Transfer I (3 Credit Hours)

Aspects of conduction, convection and radiation heat transfer, including governing equations, boundary layer flows, analytical and numerical solutions to one-, two-, and three-dimensional problems.

Prerequisites: MAE 602

MAE 640 Modern Control Theory (3 Credit Hours)

Formulation of state space equations governing dynamics and stability of linear systems. Controllability; observability. State feedback control design. Optimal control methods. State observers and estimators.

MAE 667 Cooperative Education in Mechanical and Aerospace Engineering (1-3 Credit Hours)

Student participation for credit based on academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and the Cooperative Education program prior to the semester in which the work experience is to take place.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

MAE 668 Internship in Mechanical and Aerospace Engineering (1-3 Credit Hours)

Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career-related experience.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

MAE 669 Practicum in Mechanical and Aerospace Engineering (1-3 Credit Hours)

Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career-related experience. Student is usually already employed--this is an additional project within the organization.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

MAE 672 Design of Experiments (3 Credit Hours)

This course will focus on formal experiment design. Topics to be discussed will include review of statistics, ANOVA, multiple comparisons, residuals, modal adequacy checking, randomized complete block designs, factorial designs, 2^k factorial and fractional factorial designs, random and mixed effects in factorials, and optimization. The course will also provide an introduction to response surface methods. Laboratory exercises will use designed experiments as applied to aerospace testing, including wind tunnel testing and instrument calibration.

MAE 682 Concurrent Engineering (3 Credit Hours)

Study of principles of concurrent engineering with emphasis on the design/manufacture interface for single products; Rapid prototyping projects; Design of injection-molded and stamped parts for cost.

MAE 685 Projects Design and Manufacturing (3 Credit Hours)

Project(s) course to allow graduate students to complete a practical engineering assignment in design and manufacturing areas.

Prerequisites: Permission of the instructor

MAE 690 Mechanical and Aerospace Engineering Seminar (1 Credit Hour)

Regular tutorials on recent topics of interest in mechanical and aerospace engineering and engineering mechanics.

MAE 695 Topics in Mechanical and Aerospace Engineering (3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in mechanical and aerospace engineering or engineering mechanics.

MAE 696 Experimental Research Project (3 Credit Hours)

An independent laboratory experience in the area of either aerodynamics, structural dynamics or applied automatic control. Results will be reported in a format and quality similar to a technical conference paper.

MAE 697 Independent Study in Mechanical and Aerospace Engineering (3 Credit Hours)

Individual analytical, computational and/or experimental study in an area selected by the student. Supervised and approved by the advisor.

MAE 698 Master's Project in Mechanical and Aerospace Engineering (1-3 Credit Hours)

Individual project, investigation under the direction of the student's major professor.

MAE 699 Thesis Research in Mechanical and Aerospace Engineering (1-6 Credit Hours)

Thesis research in mechanical and aerospace engineering or engineering mechanics leading to the Master of Science degree.

Prerequisites: instructor approval required

MAE 710 Supersonic Flow (3 Credit Hours)

This course will examine governing equations for supersonic flow, including full potential equations, small disturbance theory, hodographs, and method of characteristics. It will also serve as an introduction to three-dimensional flows, compressible boundary layer flows, internal flows in nozzles and diffusers, airfoil flows, slender bodies of revolution flows, conical flows, and wing flows.

Prerequisites: MAE 514 and MAE 602

MAE 711 Hypersonic Aerodynamics (3 Credit Hours)

General consideration of hypersonic flow and similarity principles, hypersonic flow past slender bodies with sharp and blunt leading edges. Hypersonic blunt-body flow. Real gas, viscous and low density effects, and consideration of nonequilibrium phenomena in hypersonic flows.

Prerequisites: MAE 710

MAE 712 Experimental Aerodynamics (3 Credit Hours)

This course will examine techniques for static and dynamic measurement of pressure, temperature, and velocity. Experiment control and statistical treatment of data will be discussed, as will probe methods, including multi-hole pressure probes and hot-wire anemometers, and non-intrusive methods, including laser Doppler velocimetry and other optical methods. Surface and stream flow visualization and surface measurements will also be covered.

Prerequisites: MAE 602 and MAE 710

MAE 713 Turbulent Flow (3 Credit Hours)

Isotropic and homogeneous turbulence. Mixing length theories, Equilibrium turbulence models, Two-equation models (k-epsilon). Large eddy simulation. Reynold's stress transport models. Numerical simulations. Compressible and non-equilibrium turbulence effects.

Prerequisites: MAE 602 and MAE 715 or MAE 815

MAE 715 Boundary Layer Theory (3 Credit Hours)

Boundary layer equations; method of matched asymptotic expansions; body oriented coordinates, finite-difference solutions; separations, wake and jet flows; thermal and compressible boundary layers, transformations and finite-difference solutions, unsteady boundary layers. Introduction to hydrodynamic stability and turbulence.

Prerequisites: MAE 602

MAE 716 Computational Fluid Dynamics I (3 Credit Hours)

This course will cover the following topics: classification of single partial differential equations; finite difference methods; stability analysis, including convergence, consistency, and efficiency; basics of finite volume methods; model equations of hyperbolic, parabolic and elliptic type; and explicit and implicit schemes, central and upwind schemes, and weak solutions of quasi-linear hyperbolic equations.

Prerequisites: MAE 601 or MATH 691

MAE 718 Aerospace Test Facilities (3 Credit Hours)

A comprehensive examination of aerodynamic test facilities for use in subsonic, transonic, supersonic and hypersonic flow regimes. Aspects of wind tunnel design and operation will be discussed, as will flow quality and wall and support interferences. Advanced concepts including cryogenic wind tunnels, adaptive wall test sections and magnetic suspension will be examined, in addition to dynamic testing. There will be a review of flight test methods, including extraction of aerodynamic parameters from flight test data, a review of engine test facilities, and a review of ground test facilities for space structures and other space systems.

Prerequisites: Permission of the instructor

MAE 720 Heat Transfer II (3 Credit Hours)

Aspects of conduction, convection and radiation heat transfer, including governing equations, boundary layer flows, analytical and numerical solutions to one-, two- and three-dimensional problems.

Prerequisites: MAE 620

MAE 723 Nuclear Engineering (3 Credit Hours)

This course will consider nuclear power plant systems, and will introduce power reactor control kinetic behavior including safety coefficients, accumulative poisons, and temperature control parameters. It will also examine primary and secondary plant as a transient system.

MAE 730 Finite Element Analysis (3 Credit Hours)

This course provides an understanding of the finite element method (FEM) as derived from an integral formulation perspective. It demonstrates the solutions of (1-D and 2-D) continuum mechanics problems such as solid mechanics, fluid mechanics and heat transfer. It also provides insight into the theoretical formulation and numerical implementation of finite element methods.

MAE 731 Mechanics of Composite Structures (3 Credit Hours)

Stress-strain relations for a lamina; failure theories. Micro-mechanical behavior of a lamina. Constitutive relations of a laminate. Bending, buckling and vibration of laminated plates. Approximate and finite element methods of solution.

MAE 734 Theory of Vibrations (3 Credit Hours)

This course will introduce applied modal analysis, modes of vibration of discrete systems, modal coordinates, transfer functions in frequency domain, modes of vibration of continuous systems, and approximate systems response. It will also examine Finite Elements methods and nonlinear vibrations. Applications will be extended to rods, beams, plates and shells.

Prerequisites: MAE 504 and MAE 601 or MATH 691

MAE 740 Autonomous and Robotic Systems Analysis and Control (3 Credit Hours)

Kinematics, dynamics and control of complex non-linear electro-mechanical systems, particularly robotic manipulators.

MAE 741 Optimal Control Theory (3 Credit Hours)

Parameter optimization, optimization problem for dynamic systems with terminal and path constraints; optimal feedback control with and without the presence of uncertainty; nonlinear optimal control system.

Prerequisites: MAE 640

MAE 742 Multibody Dynamics: Theories and Applications (3 Credit Hours)

Basic theories are presented for formulation of equations of kinematics and dynamics of systems made of interconnected bodies. Topics include constrained motion, principle of virtual work and constrained dynamics. Examples cover robotic motion and biomechanics applications such as human locomotion.

Prerequisites: Permission of instructor

MAE 743 Kinematic Synthesis of Mechanisms (3 Credit Hours)

Classification of mechanisms; type and number synthesis, application of graph theory, expert systems for synthesis; introduction to dimensional synthesis via path and function generation; finite displacement theory including concept of poles, circlepoint, and centerpoint curves; structural error minimization using Chebychev's approximation; optimization approaches, current applications to robot manipulators, robot hands, space structures, and combustion engines.

Prerequisites: Permission of instructor

MAE 744 Atmospheric Flight Dynamics and Control (3 Credit Hours)

Principles governing the dynamics and control of vehicles in atmospheric flight. Equations of motion development and solution including inertial/gravitational/aerodynamic/propulsive loads, linear longitudinal and lateral-directional motions, and nonlinear trim and simulation. Flight control system design and analysis incorporating flying quality requirements, linear conventional/contemporary and frequency/time domain techniques for control and guidance functions, validation with nonlinear simulation, gain scheduling.

Prerequisites: MAE 403 or MAE 503 and MAE 604

MAE 745 Space Flight Dynamics and Control (3 Credit Hours)

Principles governing the dynamics and control of vehicles in space flight. Equations of motion development and solution including inertial/gravitational/aerodynamic/propulsive loads, decoupled translational and attitude motions. Orbital mechanics including elements, initial-value propagation, adjustments/transfers, Lambert boundary-value problem, perturbations, and nonlinear simulation. Attitude dynamics including torque free, gravity moment, axisymmetric/unsymmetric vehicles, and dual spinners. Flight control system design and analysis including impulsive velocities, finite burns, Lambert targeting, linear design using momentum wheels, and nonlinear phase-plane design using thrusters.

Prerequisites: MAE 604 and MAE 640

MAE 746 Advanced Control Methodologies (3 Credit Hours)

Review of multivariable dynamic math models including state space, transfer function, and matrix fractions. Multivariable design criteria including stability, performance, and robustness. Theory and application of multivariable control design techniques including LQR/LQG/LTR, H-infinity, Eigenspace Assignment and other advanced methods.

Prerequisites: MAE 640

MAE 747 Aerospace Vehicle Performance (3 Credit Hours)

This course will study the flight performance of aerospace vehicles, including a review of aerodynamic and propulsion characteristics. Range, flight and maneuver envelopes for vehicles in atmospheric flight will also be examined. It will introduce various methods of design for trajectory optimization, including launch vehicles. An open-ended, design-oriented project will be required.

Prerequisites: MAE 602 and MAE 514 or MAE 710

MAE 748 Flight Control Actuators and Sensors (3 Credit Hours)

This course will provide an overview of the governing principles and operations of actuator and sensor hardware used in aircraft and spacecraft flight control systems. Hydraulic, electro-hydraulic and electric actuators will be examined, as well as control jets and momentum wheels, accelerometers, and rate gyros. Other topics include air-data systems, inertial navigation systems and satellite navigation systems. The course will also examine dynamic model development, analysis and simulation, nonlinear hardware characteristics, and the influence on closed-loop vehicle behavior.

Prerequisites: MAE 503, MAE 538, and MAE 604

MAE 750 Nanoscale Mechanical and Structural Properties of Materials (3 Credit Hours)

Elastic and plastic properties of nanoscale materials, strain gradient dislocation plasticity, nanoindentation and nanoindentation creep, thin film mechanical and structural properties, kinetic-based investigations of hardening mechanisms in nanolayer composites.

MAE 751 Fatigue and Fracture (3 Credit Hours)

Divided into areas of fatigue and fracture; stress-controlled and strain-controlled fatigue; effect of mean stresses, notches, etc.; multiaxial stresses; variable amplitude loading; ductile and brittle fracture; linear elastic fracture mechanics; crack-tip plasticity; fracture testing; applications to fatigue life estimation. Requires permission of the instructor.

MAE 752 Mechanical Behavior of Materials (3 Credit Hours)

This course will examine the macroscopic behavior of materials with respect to elasticity, plasticity, and viscoelasticity. Other topics include yield criteria, fracture, the influence of high and low temperatures, and corrosion and radiation.

Prerequisites: Permission of instructor

MAE 753 Composite Materials (3 Credit Hours)

This course will examine reinforcements, matrices, particulate-composites, short-fiber and continuous-fiber reinforced composites. Directionally solidified composites will also be studied, including the prediction of elastic failure properties. Other topics to be covered include design considerations and experimental work.

Prerequisites: Permission of the instructor

MAE 772 Response Surface Methodology (3 Credit Hours)

An applied course in response surface methodology with aerospace applications. Empirical model building, method of least squares, second order models, model adequacy checking, canonical analysis. Method of steepest ascent, multiple response optimization. Rotatable, cuboidal and small run designs. Design optimality and efficiency metrics, robust design, restrictions on randomization. Laboratory exercises include RSM applied to wind tunnel testing and optimization.

Prerequisites: MAE 672

MAE 780 Engineering Optimization (3 Credit Hours)

Formulation and solution algorithms for Linear Programming (LP) problems. Unconstrained and constrained nonlinear programming (NLP) problems. Optimum solution for practical engineering systems.

MAE 781 Advanced Design (3 Credit Hours)

Concepts, principles and procedures related to analysis of stresses and strains in machine components. Consideration of function of parts along with factors such as forces, life required, maximum cost, weight and space restrictions, number of parts to be produced, material selection, kinematics, environmental restrictions. Finite element analysis to illustrate different aspects of stress analysis. Requires permission of the instructor.

MAE 783 Robots and Manufacturing Automation (3 Credit Hours)

This course will introduce the engineering of industrial robots used for manufacturing automation. Topics to be covered include spatial descriptions and transformations of manipulators, manipulator kinematics and inverse kinematics; manipulator velocities; static forces; and dynamics and trajectory generation. Other topics to be covered include design and on-line computer control of the manipulator.

MAE 785 Advanced Manufacturing Technology (3 Credit Hours)

Treatment of the next generation of manufacturing technology. Topics include additive manufacturing; rapid prototyping; electronic manufacturing; micro and nanofabrication; process simulation; product life cycle management; and sustainable design and manufacturing.

Prerequisites: MAE 682 or consent of instructor

MAE 788 Computational Intelligence for Engineering Design Optimization Problems (3 Credit Hours)

The concepts and algorithms of computational intelligence and their application to engineering design are discussed, including artificial neural networks, evolutionary optimization, and swarm intelligence. Both single and multi-objective optimization problems with continuous and/or discrete variables are also discussed.

MAE 789 Engineering Design with Uncertainties (3 Credit Hours)

An introduction to managing uncertainties and risk in strength design of mechanical components, including the study of the theoretical background, computational implementation, and applications of reliability-based methods for engineering analysis and design.

Prerequisites: MAE 608

MAE 794 Cellular Biomechanics (3 Credit Hours)

A broad introduction to the field of cellular biomechanics. Topics include overview of cell architecture, cytoskeleton, adhesion and molecular motors, biomolecular/biopolymer dynamics and mechanics, techniques to measure cell mechanical properties, techniques to mechanically stimulate cells, models of cell mechanical behavior, mechanobiology and mechanotransduction. Will include discussion of classic and current research articles. Course content will aim to cater to students with diverse backgrounds – students with biological science background will be exposed to physical science concepts and analysis; students with engineering/physical science background will be exposed to biological phenomena and concepts.

Prerequisites: MATH 212

MAE 795 Topics in Mechanical and Aerospace Engineering (3 Credit Hours)

Selected topics in mechanical and aerospace engineering or engineering mechanics.

MAE 797 Independent Study in Mechanical and Aerospace Engineering (3 Credit Hours)

Individual analytical, computational and/or experimental study in an area selected by the student. Supervised and approved by the advisor.

MAE 810 Supersonic Flow (3 Credit Hours)

This course will examine governing equations for supersonic flow, including full potential equations, small disturbance theory, hodographs, and method of characteristics. It will also serve as an introduction to three-dimensional flows, compressible boundary layer flows, internal flows in nozzles and diffusers, airfoil flows, slender bodies of revolution flows, conical flows, and wing flows.

Prerequisites: MAE 514 and MAE 602

MAE 811 Hypersonic Aerodynamics (3 Credit Hours)

General consideration of hypersonic flow and similarity principles, hypersonic flow past slender bodies with sharp and blunt leading edges. Hypersonic blunt-body flow. Real gas, viscous and low density effects, and consideration of nonequilibrium phenomena in hypersonic flows.

Prerequisites: MAE 710

MAE 812 Experimental Aerodynamics (3 Credit Hours)

This course will examine techniques for static and dynamic measurement of pressure, temperature, and velocity. Experiment control and statistical treatment of data will be discussed, as will probe methods, including multi-hole pressure probes and hot-wire anemometers, and non-intrusive methods, including laser Doppler velocimetry and other optical methods. Surface and stream flow visualization and surface measurements will also be covered.

Prerequisites: MAE 602 and MAE 710

MAE 813 Turbulent Flow (3 Credit Hours)

Isotropic and homogeneous turbulence. Mixing length theories, Equilibrium turbulence models, Two-equation models (k-epsilon). Large eddy simulation. Reynold's stress transport models. Numerical simulations. Compressible and non-equilibrium turbulence effects.

Prerequisites: MAE 602 and MAE 715 or MAE 815

MAE 815 Boundary Layer Theory (3 Credit Hours)

Boundary layer equations; method of matched asymptotic expansions; body oriented coordinates, finite-difference solutions; separations, wake and jet flows; thermal and compressible boundary layers, transformations and finite-difference solutions, unsteady boundary layers. Introduction to hydrodynamic stability and turbulence.

Prerequisites: MAE 602

MAE 816 Computational Fluid Dynamics I (3 Credit Hours)

This course will cover the following topics: classification of single partial differential equations; finite difference methods; stability analysis, including convergence, consistency, and efficiency; basics of finite volume methods; model equations of hyperbolic, parabolic and elliptic type; and explicit and implicit schemes, central and upwind schemes, and weak solutions of quasi-linear hyperbolic equations.

Prerequisites: MAE 601 or MATH 691

MAE 818 Aerospace Test Facilities (3 Credit Hours)

A comprehensive examination of aerodynamic test facilities for use in subsonic, transonic, supersonic and hypersonic flow regimes. Aspects of wind tunnel design and operation will be discussed, as will flow quality and wall and support interferences. Advanced concepts, including cryogenic wind tunnels, adaptive wall test sections and magnetic suspension will be examined, in addition to dynamic testing. There will be a review of flight test methods, including extraction of aerodynamic parameters from flight test data, a review of engine test facilities, and a review of ground test facilities for space structures and other space systems.

Prerequisites: Permission of the instructor

MAE 820 Heat Transfer II (3 Credit Hours)

Aspects of conduction, convection and radiation heat transfer, including governing equations, boundary layer flows, analytical and numerical solutions to one-, two- and three-dimensional problems.

Prerequisites: MAE 620

MAE 823 Nuclear Engineering (3 Credit Hours)

This course will consider nuclear power plant systems, and will introduce power reactor control kinetic behavior including safety coefficients, accumulative poisons, and temperature control parameters. It will also examine primary and secondary plant as a transient system.

MAE 830 Finite Element Analysis (3 Credit Hours)

This course provides an understanding of the finite element method (FEM) as derived from an integral formulation perspective. It demonstrates the solutions of (1-D and 2-D) continuum mechanics problems such as solid mechanics, fluid mechanics and heat transfer. It also provides insight into the theoretical formulation and numerical implementation of finite element methods.

MAE 831 Mechanics of Composite Structures (3 Credit Hours)

Stress-strain relations for a lamina; failure theories. Micro-mechanical behavior of a lamina. Constitutive relations of a laminate. Bending, buckling and vibration of laminated plates. Approximate and finite element methods of solution.

MAE 834 Theory of Vibrations (3 Credit Hours)

This course will introduce applied modal analysis, modes of vibration of discrete systems, modal coordinates, transfer functions in frequency domain, modes of vibration of continuous systems, and approximate systems response. It will also examine Finite Elements methods and nonlinear vibrations. Applications will be extended to rods, beams, plates and shells.

Prerequisites: MAE 504 and MAE 601 or MATH 691

MAE 840 Autonomous and Robotic Systems Analysis and Control (3 Credit Hours)

Kinematics, dynamics and control of complex non-linear electro-mechanical systems, particularly robotic manipulators.

MAE 841 Optimal Control Theory (3 Credit Hours)

Parameter optimization, optimization problem for dynamic systems with terminal and path constraints; optimal feedback control with and without the presence of uncertainty; nonlinear optimal control system.

Prerequisites: MAE 640

MAE 842 Multibody Dynamics: Theories and Applications (3 Credit Hours)

Basic theories are presented for formulation of equations of kinematics and dynamics of systems made of interconnected bodies. Topics include constrained motion, principle of virtual work and constrained dynamics. Examples cover robotic motion and biomechanics applications such as human locomotion.

Prerequisites: Permission of instructor

MAE 843 Kinematic Synthesis of Mechanisms (3 Credit Hours)

Classification of mechanisms; type and number synthesis, application of graph theory, expert systems for synthesis; introduction to dimensional synthesis via path and function generation; finite displacement theory including concept of poles, circlepoint, and centerpoint curves; structural error minimization using Chebychev's approximation; optimization approaches, current applications to robot manipulators, robot hands, space structures, and combustion engines.

Prerequisites: Permission of instructor

MAE 844 Atmospheric Flight Dynamics and Control (3 Credit Hours)

Principles governing the dynamics and control of vehicles in atmospheric flight. Equations of motion development and solution including inertial/gravitational/aerodynamic/propulsive loads, linear longitudinal and lateral-directional motions, and nonlinear trim and simulation. Flight control system design and analysis incorporating flying quality requirements, linear conventional/contemporary and frequency/time domain techniques for control and guidance functions, validation with nonlinear simulation, gain scheduling.

Prerequisites: MAE 403 or MAE 503 and MAE 604

MAE 845 Space Flight Dynamics and Control (3 Credit Hours)

Principles governing the dynamics and control of vehicles in space flight. Equations of motion development and solution including inertial/gravitational/aerodynamic/propulsive loads, decoupled translational and attitude motions. Orbital mechanics including elements, initial-value propagation, adjustments/transfers, Lambert boundary-value problem, perturbations, and nonlinear simulation. Attitude dynamics including torque free, gravity moment, axisymmetric/unsymmetric vehicles, and dual spinners. Flight control system design and analysis including impulsive velocities, finite burns, Lambert targeting, linear design using momentum wheels, and nonlinear phase-plane design using thrusters.

Prerequisites: MAE 604 and MAE 640

MAE 846 Advanced Control Methodologies (3 Credit Hours)

Review of multivariable dynamic math models including state space, transfer function, and matrix fractions. Multivariable design criteria including stability, performance, and robustness. Theory and application of multivariable control design techniques including LQR/LQG/LTR, H-infinity, Eigenspace Assignment and other advanced methods.

Prerequisites: MAE 640

MAE 847 Aerospace Vehicle Performance (3 Credit Hours)

This course will study the flight performance of aerospace vehicles, including a review of aerodynamic and propulsion characteristics. Range, flight and maneuver envelopes for vehicles in atmospheric flight will be examined. It will introduce various methods of design for trajectory optimization, including launch vehicles. An open-ended, design-oriented project will also be required.

Prerequisites: MAE 602 and MAE 514 or MAE 610

MAE 848 Flight Control Actuators and Sensors (3 Credit Hours)

This course will provide an overview of the governing principles and operations of actuator and sensor hardware used in aircraft and spacecraft flight control systems. Hydraulic, electro-hydraulic and electric actuators will be examined, as well as control jets and momentum wheels, accelerometers, and rate gyros. Other topics include air-data systems, inertial navigation systems and satellite navigation systems. The course will also examine dynamic model development, analysis and simulation, nonlinear hardware characteristics, and the influence on closed-loop vehicle behavior.

Prerequisites: MAE 503, MAE 538, and MAE 604

MAE 850 Nanoscale Mechanical and Structural Properties of Materials (3 Credit Hours)

Elastic and plastic properties of nanoscale materials, strain gradient dislocation plasticity, nanoindentation and nanoindentation creep, thin film mechanical and structural properties, kinetic-based investigations of hardening mechanisms in nanolayer composites.

MAE 851 Fatigue and Fracture (3 Credit Hours)

Divided into areas of fatigue and fracture; stress-controlled and strain-controlled fatigue; effect of mean stresses, notches, etc.; multiaxial stresses; variable amplitude loading; ductile and brittle fracture; linear elastic fracture mechanics; crack-tip plasticity; fracture testing; applications to fatigue life estimation. Requires permission of the instructor.

MAE 852 Mechanical Behavior of Materials (3 Credit Hours)

An examination of the macroscopic behavior of materials with respect to elasticity, plasticity, and viscoelasticity; yield criteria; fracture; influence of high and low temperatures; and corrosion and radiation.

Prerequisites: Permission of instructor

MAE 853 Composite Materials (3 Credit Hours)

This course will examine reinforcements, matrices, particulate-composites, short-fiber and continuous-fiber reinforced composites. Directionally solidified composites will also be studied, including the prediction of elastic failure properties. Other topics to be covered include design considerations and experimental work.

Prerequisites: Permission of the instructor

MAE 872 Response Surface Methodology (3 Credit Hours)

An applied course in response surface methodology with aerospace applications. Empirical model building, method of least squares, second order models, model adequacy checking, canonical analysis. Method of steepest ascent, multiple response optimization. Rotatable, cuboidal and small run designs. Design optimality and efficiency metrics, robust design, restrictions on randomization. Laboratory exercises include RSM applied to wind tunnel testing and optimization.

Prerequisites: MAE 672

MAE 880 Engineering Optimization (3 Credit Hours)

Formulation and solution algorithms for Linear Programming (LP) problems. Unconstrained and constrained nonlinear programming (NLP) problems. Optimum solution for practical engineering systems.

MAE 881 Advanced Design (3 Credit Hours)

Concepts, principles and procedures related to analysis of stresses and strains in machine components. Consideration of function of parts along with factors such as forces, life required, maximum cost, weight and space restrictions, number of parts to be produced, material selection, kinematics, environmental restrictions. Finite element analysis to illustrate different aspects of stress analysis. Requires permission of the instructor.

MAE 883 Robots and Manufacturing Automation (3 Credit Hours)

This course will introduce the engineering of industrial robots used for manufacturing automation. Topics to be covered include spatial descriptions and transformations of manipulators, manipulator kinematics and inverse kinematics; manipulator velocities; static forces; and dynamics and trajectory generation. Other topics to be covered include design and on-line computer control of the manipulator.

MAE 885 Advanced Manufacturing Technology (3 Credit Hours)

Treatment of the next generation of manufacturing technology. Topics include additive manufacturing; rapid prototyping; electronic manufacturing; micro and nanofabrication; process simulation; product life cycle management; and sustainable design and manufacturing.

Prerequisites: MAE 682 or consent of instructor

MAE 888 Computational Intelligence for Engineering Design Optimization Problems (3 Credit Hours)

The concepts and algorithms of computational intelligence and their application to engineering design are discussed, including artificial neural networks, evolutionary optimization, and swarm intelligence. Both single and multi-objective optimization problems with continuous and/or discrete variables are also discussed.

MAE 889 Engineering Design with Uncertainties (3 Credit Hours)

An introduction to managing uncertainties and risk in strength design of mechanical components, including the study of theoretical background, computational implementation, and applications of reliability-based methods for engineering analysis and design.

Prerequisites: MAE 608

MAE 894 Cellular Biomechanics (3 Credit Hours)

A broad introduction to the field of cellular biomechanics. Topics include overview of cell architecture, cytoskeleton, adhesion and molecular motors, biomolecular/biopolymer dynamics and mechanics, techniques to measure cell mechanical properties, techniques to mechanically stimulate cells, models of cell mechanical behavior, mechanobiology and mechanotransduction. Will include discussion of classic and current research articles. Course content will aim to cater to students with diverse backgrounds – students with biological science background will be exposed to physical science concepts and analysis; students with engineering/physical science background will be exposed to biological phenomena and concepts.

Prerequisites: MATH 212

MAE 895 Topics in Mechanical and Aerospace Engineering (3 Credit Hours)

Selected topics in mechanical and aerospace engineering or engineering mechanics.

MAE 897 Independent Study in Mechanical and Aerospace Engineering (3 Credit Hours)

Individual analytical, computational and/or experimental study in an area selected by the student. Supervised and approved by the advisor.

MAE 899 PhD Dissertation Research in Mechanical and Aerospace Engineering (1-9 Credit Hours)

Based on the Ph.D candidate's dissertation research in mechanical and aerospace engineering topics under the direction of the candidate's advisor.

Prerequisites: Instructor approval required

MAE 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

MAE 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

MAPD - Math Pedagogy

MAPD 601 Number and Operations for PK-8 Mathematics Specialists (3 Credit Hours)

This course will meet the requirements of students in the Master of Science in Education: PK-8 Mathematics Specialist Endorsement Program, and cannot be used for credit toward any degree offered by the Department of Mathematics and Statistics. The course introduces students to a number of topics in PK-8 mathematics and related pedagogical methods. Acknowledging that learning with understanding occurs through a process of establishing a solid knowledge base upon which to build, students will explore the many and varied ways in which PK-8 students may develop number sense. The focus will be upon the development of best practices for teaching mathematics. This requires that the student have knowledge of the content, use a variety of pedagogical approaches, and be able to select and utilize appropriate manipulatives and technological resources that will foster PK-8 student understanding.

MAPD 602 Geometry and Measurement for PK-8 Mathematics Specialists (3 Credit Hours)

This course will meet the requirements of students in the Master of Science in Education: PK-8 Mathematics Specialist Endorsement Program, and cannot be used for credit toward any degree offered by the Department of Mathematics and Statistics. The course introduces students to a number of topics in PK-8 mathematics and related pedagogical methods. Following a "concrete-to-abstract" developmental learning approach, students will explore the mathematical concepts of measurement and geometry in grades PK-8. Emphasis will be placed upon measurement and geometry content knowledge as well as the pedagogical knowledge specific to mathematics teaching and learning. Students will also learn to use appropriate technology.

MAPD 603 Rational Numbers and Proportional Reasoning for PK-8 Mathematics Specialists (3 Credit Hours)

This course will meet the requirements of students in the Master of Science in Education: PK-8 Mathematics Specialist Endorsement Program, and cannot be used for credit toward any degree offered by the Department of Mathematics and Statistics. The course introduces students to a number of topics in PK-8 mathematics and related pedagogical methods. It is designed to engage participants in constructing relational understanding between theoretical development of mathematics and students' learning of mathematics in the content strands of rational numbers and proportional reasoning. Students will learn how to select and use manipulatives to connect the concrete phase of mathematical learning to the abstract, symbolic phase. Various technologies will be integrated throughout the course as tools to enhance teaching and student understanding.

MAPD 604 Probability and Statistics for PK-8 Mathematics Specialists (3 Credit Hours)

This course will meet the requirements of students in the Master of Science in Education: PK-8 Mathematics Specialist Endorsement Program, and cannot be used for credit toward any degree offered by the Department of Mathematics and Statistics. The course introduces students to a number of topics in PK-8 mathematics and related pedagogical methods. It will focus on the content and processes that support the PK-8 students' learning of probability and statistics. Instruction will cover data collection, display, and analysis as well as the development of a fundamental understanding of probabilistic structures. These structures will be related to real world problem solving and hands-on activities. Technology will be integrated throughout the course to illustrate mathematical concepts, facilitate students exploration, and to make and test hypotheses.

MAPD 605 Algebra and Functions for PK-8 Mathematics Specialists (3 Credit Hours)

This course will meet the requirements of students in the Master of Science in Education: PK-8 Mathematics Specialist Endorsement Program and cannot be used for credit toward any degree offered by the Department of Mathematics and Statistics. The course introduces students to algebraic topics in PK-12 mathematics and related pedagogical methods. Topics will focus on making connections between arithmetic and algebra and transitioning concrete arithmetic thinking to abstract algebraic thinking. Technology will be included to enhance students' algebraic understanding and sense making.

MATH - Mathematical Sciences

MATH 500 History of Mathematics (3 Credit Hours)

Seminal ideas in geometry, arithmetic, algebra, analysis and applied mathematics (along with their mathematical representations) from antiquity, the age of exploration, the Promethean age to the present day.

Prerequisites: MATH 311W or MATH 316 or MATH 317

MATH 501 Partial Differential Equations (3 Credit Hours)

Not available to students with credit in MATH 691. Separation of variable techniques, Sturm-Liouville systems, generalized Fourier series, orthogonal functions of the trigonometric, Legendre and Bessel type boundary value problems associated with the wave equation and the heat conduction equation in various coordinate systems, applications to physics and engineering.

Prerequisites: A grade of C or better in MATH 307 and MATH 312

MATH 504 Fundamental Concepts of Geometry (3 Credit Hours)

Fundamentals of Euclidean and non-Euclidean geometry. Alternatives to Euclidean geometry are examined using a variety of mathematical techniques. Special topics such as 'Taxicab' geometry, the hyperbolic plane, the art of M.C. Escher, and the mathematics of maps may be included.

Prerequisites: MATH 311W

MATH 506 Number Theory and Discrete Mathematics (3 Credit Hours)

A survey course. Topics include the prime number theorem, congruences, Diophantine equations, continued fractions, quadratic reciprocity, combinatorics, logic, graphs, trees, algorithms, coding and linear programming.

Prerequisites: A grade of C or better in MATH 311W and MATH 316

MATH 508 Applied Numerical Methods I (3 Credit Hours)

An introduction to the numerical methods commonly used by scientists and engineers. Topics include solutions of equations of one variable, direct methods for solving linear systems, matrix factorization, stability analysis, iterative techniques, polynomial interpolation, numerical differentiation and integration, approximation theory, and initial and boundary value problems for ordinary differential equations.

Prerequisites: A grade of C or better in MATH 316; CS 150 or equivalent programming ability are also required

MATH 509 Applied Numerical Methods II (3 Credit Hours)

Topics include least squares problems, the QR factorization, the conjugate gradient method, Householder transformation and the QR method for approximating eigenvalues and singular values of a matrix. For applications, the finite difference method and the finite element method for solving partial differential equations, trigonometric interpolation and FFT as well as introductory study of optimization are discussed.

Prerequisites: A grade of C or better in MATH 508

MATH 517 Intermediate Real Analysis I (3 Credit Hours)

A rigorous course in classical real analysis. Topics include the topology of Euclidean n -space, properties of vector valued functions of several variables such as limits, continuity, differentiability and integrability, pointwise and uniform convergence of sequences and series of functions; Fourier series.

Prerequisites: A grade of C or better in MATH 317

MATH 518 Intermediate Real Analysis II (3 Credit Hours)

A rigorous course in classical real analysis. Topics include the topology of Euclidean n -space, properties of vector valued functions of several variables such as limits, continuity, differentiability and integrability, pointwise and uniform convergence of sequences and series of functions; Fourier series.

Prerequisites: A grade of C or better in MATH 517

MATH 520 Applied Mathematics I: Biomathematics (3 Credit Hours)

Exploring mathematical models in various biological contexts using both difference and differential equations: single and multiple species population growth, predator-prey and competing species (using phase plane analysis), epidemiological models of epidemics and pandemics, tumor growth, pattern formation in animals and insects.

Prerequisites: A grade of C or better in MATH 307

MATH 521 Applied Mathematics II: Mathematical Modeling (3 Credit Hours)

The philosophy and methodology of mathematical modeling, its successes and limitations. Models of climate change, atmospheric and ocean dynamics, models in other physical and biological contexts, and introduction to deterministic chaos.

Prerequisites: A grade of C or better in MATH 307, MATH 312, MATH 316 and MATH 317

MATH 522 Applied Complex Variables (3 Credit Hours)

Not available to students with credit in MATH 692. Topics include complex numbers, analytical functions and their properties, derivatives, integrals, series representations, residues and conformal mappings. Applications of the calculus of residues and mapping techniques to the solution of boundary value problems in physics and engineering.

Prerequisites: A grade of C or better in MATH 312

MATH 527 Applied Mathematics III: Elasticity (3 Credit Hours)

An introduction to the mathematical theory of linear and non-linear elastic continua. Topics include vectors, tensors, deformation, stress, nonlinear constitutive theory, exact solutions, infinitesimal theory, antiplane strain, plane strain, plane stress, extension, torsion, bending and elastic wave propagation.

Prerequisites: A grade of C or better in MATH 307 and MATH 312

MATH 528 Applied Mathematics IV: Fluid Mechanics (3 Credit Hours)

A mathematical investigation of the differential equations governing fluid flow with an emphasis on steady state incompressible flows. The Navier-Stokes equations are derived and some exact solutions are presented including the potential flow solutions. Topics therefore include classical ideal fluid flow and its complex variable representation, various approximations to the Navier-Stokes equations, boundary layer theory, and also surface and internal gravity wave motion, aspects of hydrodynamic stability theory and convection. Other topics may be introduced by the instructor.

Corequisites: MATH 501

MATH 557 Mathematics in Nature (3 Credit Hours)

A calculus and differential equations based description of many patterns observable in the natural world including wave motion in the air, oceans, rivers, and puddles; rainbows, halos and other meteorological phenomena; arrangement of leaves, petals and branches; height of trees; river meanders; animal and insect markings; mudcracks; spider webs; and others. Partial differential equations will be discussed as needed but a knowledge of ordinary differential equations will be assumed.

Prerequisites: A grade of C or better in MATH 307

MATH 596 Topics in Mathematics (1-3 Credit Hours)

Study of selected topics.

Prerequisites: permission of the instructor

MATH 598 Tutorial Work in Special Topics in Mathematics (1-3 Credit Hours)

Independent study under the direction of an instructor including library research and reports.

Prerequisites: permission of the instructor

MATH 605 Complex Variables I (3 Credit Hours)

An advanced course in complex analysis.

Prerequisites: MATH 501, MATH 518 and MATH 522

MATH 616 Computational Linear Algebra (3 Credit Hours)

Topics include singular value decomposition, sparse systems, Krylov subspace methods, large sparse eigenvalue problems and iterative methods. This course also covers applications of computational linear algebra in the areas of image compression, data processing and principal component analysis.

Prerequisites: MATH 312, MATH 316 and MATH 508

MATH 617 Measure and Integration (3 Credit Hours)

An introduction to measure theory and integration theory with special emphasis on Lebesgue measure and the Lebesgue integral including Fatou's Lemma, the Monotone Convergence Theorem and the Dominated Convergence Theorem.

Prerequisites: MATH 518

MATH 618 Applied Functional Analysis (3 Credit Hours)

Topics include orthogonal projections to subspaces, duality, the Hahn-Banach theorem and the Banach-Steinhaus theorem, L^2 spaces and convolution operators, fixed point theory, construction of Hilbert spaces, approximation procedures in Hilbert spaces, and spectral theory.

Prerequisites: MATH 617

MATH 620 Optimization Techniques (3 Credit Hours)

Theory and computational algorithms for the optimization of constrained linear and nonlinear systems or for locating the maximum of a constrained nonlinear function. Applications to problems in economics, operations research and systems theory.

Prerequisites: MATH 312 and MATH 316

MATH 622 Numerical Solutions to Differential Equations (3 Credit Hours)

An in-depth study of the numerical solution to ordinary and partial differential equations. Topics include linear multi-step methods, Runge-Kutta methods, stiff differential equations, collocation methods, and strong and weak stability analysis for ODEs. For PDEs, finite difference methods are examined.

Prerequisites: MATH 509

MATH 632 Master's Project (3 Credit Hours)

Under the guidance of a faculty member in the Department of Mathematics and Statistics, the student will undertake a significant data analysis problem in a scientific setting outside the department. A written report and/or public presentation of results will be required.

Prerequisites: permission of graduate program director

MATH 637 Tensor Calculus and Differential Geometry (3 Credit Hours)

Topics include metric spaces, bilinear and quadratic forms, tensors, point manifolds, theory of curves, geodesic differentiation, theory of surfaces, curvature of general manifolds, integrability.

Prerequisites: MATH 517

MATH 638 Mathematical Theories of Continua (3 Credit Hours)

Topics include deformation, motion, stress, conservation laws, and constitutive theories.

Prerequisites: MATH 501 and MATH 637

MATH 691 Engineering Analysis I (3 Credit Hours)

Not available to students with credit in MATH 501. Separation of variable techniques, Sturm-Liouville systems, generalized Fourier series, orthogonal functions of the trigonometric, Legendre and Bessel type, boundary value problems associated with the wave equation and the heat conduction equation in various coordinate systems, applications to physics and engineering.

MATH 692 Engineering Analysis II (3 Credit Hours)

Not available to students with credit in MATH 522. Topics include complex numbers, analytical functions and their properties, derivatives, integrals, series representations, residues and conformal mappings. Applications of the calculus of residues and mapping techniques to the solution of boundary value problems in physics and engineering.

Prerequisites: MATH 312

MATH 693 Engineering Analysis III (3 Credit Hours)

Advanced topics in the theory and application of ordinary differential equations, distributions, Green's functions, classification of partial differential equations, initial-value problems, eigenfunction expansions for boundary-value problems, selected special functions, singular perturbation theory for differential equations.

Prerequisites: MATH 501 or MATH 691

MATH 695 Seminar in Mathematics (1-3 Credit Hours)

Seminar in advanced topics.

Prerequisites: permission of the instructor

MATH 696 Topics in Mathematics (1-3 Credit Hours)

Advanced study of selected topics.

Prerequisites: permission of the instructor

MATH 697 Topics in Mathematics (1-3 Credit Hours)

Advanced study of selected topics.

MATH 698 Research (3 Credit Hours)**MATH 699 Thesis (3 Credit Hours)****MATH 702 Integral Equations (3 Credit Hours)**

Advanced material in theory and application of integral equations. Formulation of the integral equation problems, cause and effect, connection with differential equations, scattering theory, boundary values of partial differential equations, Fredholm and Volterra theory, expansions in orthogonal functions, theory of Hilbert-Schmidt singular integral equations, method of Wiener-Hopf, monotone operator theory, and direct methods.

Prerequisites: MATH 618 and MATH 693

MATH 721 Advanced Applied Numerical Methods I (3 Credit Hours)

Numerical solutions of partial differential equations and integral equations. For PDEs, the finite difference method, the finite element method and the boundary element method are studied. A priori and a posteriori error estimates are examined. For integral equations, topics include Galerkin methods, collocation methods, and the Petrov-Galerkin method.

Prerequisites: MATH 618, MATH 622 and MATH 691

MATH 722 Advanced Applied Numerical Methods II (3 Credit Hours)

Numerical solutions of partial differential equations and integral equations. For PDEs, the finite difference method, the finite element method and the boundary element method are studied. A priori and a posteriori error estimates are examined. For integral equations, topics include Galerkin methods, collocation methods, and the Petrov-Galerkin method.

Prerequisites: MATH 501, MATH 508 and MATH 509

MATH 725 Computational Fluid Dynamics (3 Credit Hours)

An introduction to the theory of finite volume methods for scalar and vector conservation laws and the Euler and Navier-Stokes equations. Topics include weak solutions, characteristics, Rankine-Hugoniot conditions, energy and entropy inequalities, Riemann solvers, and numerical methods for compressible and incompressible flows including MUSCL and total variation diminishing (TVD) schemes, essentially non-oscillatory (ENO), weighted ENO, and entropy stable scheme.

Prerequisites: MATH 501 and MATH 508

MATH 726 Discontinuous Galerkin Methods (3 Credit Hours)

An introduction to the theory of nodal discontinuous Galerkin (DG) methods for solving linear and nonlinear conservation law equations. Topics include fundamental properties of conservation laws including their ability to generate non-smooth solutions, thus leading to the notion of weak solutions and entropy inequalities, consistency and stability properties of nodal DG methods as well as their efficient implementation techniques, and application of nodal DG methods for solving both linear and nonlinear equations, such as the advection-diffusion, Burgers, and Navier-Stokes equations.

Prerequisites: MATH 725

MATH 745 Transform Methods (3 Credit Hours)

Use of integral transforms for students of applied mathematics, physics and engineering. Integral transforms studied are Laplace, Fourier, Hankel, finite Z-transforms and other special transforms.

Prerequisites: MATH 691 and MATH 692

MATH 750 Calculus of Variations (3 Credit Hours)

Maximum and minimum techniques in calculus and dynamic programming. Derivation of Euler-Lagrange equations for a variety of conditions, formulation of extremum problems with side conditions for ordinary and partial differential equations. Application to dynamics, elasticity, heat and mass transfer, energy principles and finite element techniques.

Prerequisites: MATH 691 and MATH 692

MATH 755 Introduction to Kinetic Theory and Mesoscopic Methods for Computational Mechanics I (3 Credit Hours)

The goal of this course is to provide an introduction to kinetic theory and nonequilibrium statistical mechanics, which bridges the microscopic theories and the macroscopic continuum theories of flows. Topics include the molecular dynamics of N particles, Hamiltonian equation, Liouville equation, Boltzmann equation, binary collision, linearized collision operator and its eigen theory, the H-theorem and irreversibility, calculation of the transport coefficients.

Prerequisites: MATH 501 or MATH 691 or permission of the instructor

MATH 756 Introduction to Kinetic Theory and Mesoscopic Methods for Computational Mechanics II (3 Credit Hours)

This is the second part of the study of the interaction between kinetic theory and nonequilibrium statistical mechanics. Models of Boltzmann equation and numerical techniques for hydrodynamic equations (Euler and Navier-Stokes equations) and the Boltzmann equation are studied. Topics include Non-normal and moment method, Maxwell's moment method, BGK model equation, gas mixtures and transport phenomena in mixtures, the Wang-Chang-Uhlenbeck equation, Enskog equation for dense gases, the lattice Boltzmann equation for incompressible flows, the gas-kinetic scheme for compressible flows and the Direct Simulation Monte Carlo (DSMC) method.

Prerequisites: MATH 755/MATH 855

MATH 771 Scientific Computing in Applied Mathematics (3 Credit Hours)

Numerical methods for algebraic systems, partial differential equations, integral equations, optimization, Monte Carlo method, and statistics, with emphasis on computational performance using modern programming languages such as Fortran 90 or C/C++ and modern computer architecture. Basic techniques of parallel computing using MPI (Message Passing Interface), openMP, or other distributed/multicore computing platforms. Common tools in scientific computing, such as Unix shell commands, debuggers, version control systems, scientific libraries, graphics and visualization, will also be introduced.

Prerequisites: MATH 501, MATH 508 and MATH 509

MATH 795 Seminar in Mathematics (1-3 Credit Hours)

Seminar in advanced topics.

Prerequisites: permission of the instructor

MATH 796 Topics in Mathematics (1-3 Credit Hours)

Advanced study of selected topics.

Prerequisites: permission of the instructor

MATH 797 Topics in Mathematics (1-3 Credit Hours)

Advanced study of selected topics.

Prerequisites: permission of instructor

MATH 801 Asymptotic and Perturbation Methods (3 Credit Hours)

Asymptotic and perturbation methods are developed and used to solve linear and nonlinear differential equations. Included are analyses of Duffing's Equation, Van der Pol's Equation, and Mathieu's Equation. Singular perturbation theory and the Method of Matched Asymptotic Expansions are used to solve equations with boundary layer type solutions. Asymptotic expansions of integrals using Laplace's Method, Method of Steepest Descent and Method of Stationary Phase are developed. Applications from all areas of applied mathematics are given.

Prerequisites: MATH 693

MATH 802 Integral Equations (3 Credit Hours)

Advanced material in theory and application of integral equations.

Formulation of the integral equation problems cause and effect, connection with differential equations, scattering theory, boundary values of partial differential equations, Fredholm and Volterra theory, expansions in orthogonal functions, theory of Hilbert-Schmidt singular integral equations, method of Wiener-Hopf, monotone operator theory, and direct methods.

Prerequisites: MATH 618 and MATH 693

MATH 803 Advanced Applied Mathematics I (3 Credit Hours)

Advanced techniques of mathematics applied to specific topics of physical interest. Examples could include high activation energy asymptotics applied to combustion, singular integral equations applied to fracture mechanics, or bifurcation theory applied to non-linear phenomena such as transition to turbulence, phase transitions and hydrodynamic stability.

Prerequisites: MATH 702

MATH 804 Advanced Applied Mathematics II (3 Credit Hours)

Advanced techniques of mathematics applied to specific topics of physical interest. Examples could include high activation energy asymptotics applied to combustion, singular integral equations applied to fracture mechanics, or bifurcation theory applied to non-linear phenomena such as transition to turbulence, phase transitions and hydrodynamic stability.

Prerequisites: MATH 702

MATH 821 Advanced Applied Numerical Methods I (3 Credit Hours)

Numerical solutions of partial differential equations and integral equations. For PDEs, the finite difference method, the finite element method and the boundary element method are studied. A priori and a posteriori error estimates are examined. For integral equations, topics include Galerkin methods, collocation methods, and the Petrov-Galerkin method.

Prerequisites: MATH 618, MATH 622 and MATH 691

MATH 822 Advanced Applied Numerical Methods II (3 Credit Hours)

Numerical solutions of partial differential equations and integral equations. For PDEs, the finite difference method, the finite element method and the boundary element method are studied. A priori and a posteriori error estimates are examined. For integral equations, topics include Galerkin methods, collocation methods, and the Petrov-Galerkin method.

Prerequisites: MATH 821

MATH 823 Approximation and Optimization I (3 Credit Hours)

Introductory and advanced topics representing current research in approximation and optimization techniques for various application problems. Topics include recent developments in algorithms, their analysis, and applications such as data fitting and pattern separation.

Prerequisites: permission of the graduate program director

MATH 825 Computational Fluid Dynamics (3 Credit Hours)

An introduction to the theory of finite volume methods for scalar and vector conservation laws and the Euler and Navier-Stokes equations. Topics include weak solutions, characteristics, Rankine-Hugoniot conditions, energy and entropy inequalities, Riemann solvers, and numerical methods for compressible and incompressible flows including MUSCL and total variation diminishing (TVD) schemes, essentially non-oscillatory (ENO), weighted ENO, and entropy stable scheme.

Prerequisites: MATH 501 and MATH 508

MATH 826 Discontinuous Galerkin Methods (3 Credit Hours)

An introduction to the theory of nodal discontinuous Galerkin (DG) methods for solving linear and nonlinear conservation law equations. Topics include fundamental properties of conservation laws including their ability to generate non-smooth solutions, thus leading to the notion of weak solutions and entropy inequalities, consistency and stability properties of nodal DG methods as well as their efficient implementation techniques, and application of nodal DG methods for solving both linear and nonlinear equations, such as the advection-diffusion, Burgers, and Navier-Stokes equations.

Prerequisites: MATH 725 or MATH 825

MATH 845 Transform Methods (3 Credit Hours)

Use of integral transforms for students of applied mathematics, physics and engineering. Integral transforms studied are Laplace, Fourier, Hankel, finite Z-transforms and other special transforms.

Prerequisites: MATH 691 and MATH 692

MATH 850 Calculus of Variations (3 Credit Hours)

Maximum and minimum techniques in calculus and dynamic programming. Derivation of Euler-Lagrange equations for a variety of conditions, formulation of extremum problems with side conditions for ordinary and partial differential equations. Application to dynamics, elasticity, heat and mass transfer, energy principles and finite element techniques.

Prerequisites: MATH 691 and MATH 692

MATH 855 Introduction to Kinetic Theory and Mesoscopic Methods for Computational Mechanics I (3 Credit Hours)

The goal of this course is to provide an introduction to kinetic theory and nonequilibrium statistical mechanics, which bridges the microscopic theories and the macroscopic continuum theories of flows. Topics include the molecular dynamics of N particles, Hamiltonian equation, Liouville equation, Boltzmann equation, binary collision, linearized collision operator and its eigen theory, the H-theorem and irreversibility, calculation of the transport coefficients.

Prerequisites: MATH 501 or MATH 691 or permission of the instructor

MATH 856 Introduction to Kinetic Theory and Mesoscopic Methods for Computational Mechanics II (3 Credit Hours)

This is the second part of the study of the interaction between kinetic theory and nonequilibrium statistical mechanics. Models of Boltzmann equation and numerical techniques for hydrodynamic equations (Euler and Navier-Stokes equations) and the Boltzmann equation are studied. Topics include Non-normal and moment method, Maxwell's moment method, BGK model equation, gas mixtures and transport phenomena in mixtures, the Wang-Chang-Uhlenbeck equation, Enskog equation for dense gases, the lattice Boltzmann equation for incompressible flows, the gas-kinetic scheme for compressible flows and the Direct Simulation Monte Carlo (DSMC) method.

Prerequisites: MATH 755/MATH 855

MATH 871 Scientific Computing in Applied Mathematics (3 Credit Hours)

Numerical methods for algebraic systems, partial differential equations, integral equations, optimization, Monte Carlo method, and statistics, with emphasis on computational performance using modern programming languages such as Fortran 90 or C/C++ and modern computer architecture. Basic techniques of parallel computing using MPI (Message Passing Interface), openMP, or other distributed/multicore computing platforms. Common tools in scientific computing, such as Unix shell commands, debuggers, version control systems, scientific libraries, graphics and visualization, will also be introduced.

Prerequisites: MATH 501, MATH 508 and MATH 509

MATH 895 Seminar in Mathematics (1-3 Credit Hours)

Seminar in advanced topics.

Prerequisites: permission of the instructor

MATH 896 Topics in Mathematics (1-3 Credit Hours)

Advanced study of selected topics.

Prerequisites: permission of the instructor

MATH 897 Topics in Mathematics (1-3 Credit Hours)

Advanced study of selected topics.

MATH 898 Research (1-9 Credit Hours)**MATH 899 Dissertation (1-9 Credit Hours)****MATH 999 Doctoral Graduate Credit (1 Credit Hour)**

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

MBA - Master of Business Administration

MBA 520 Spreadsheet Modeling (1 Credit Hour)

This course introduces students to the use of spreadsheet modeling to analyze and make business decisions. Course topics include spreadsheet design, data analysis for modeling, and Monte Carlo simulation. The course is web-based providing tremendous flexibility for the students. Students will need some proficiency with Excel.

Prerequisites: Admission to the MBA program OR approval by the MBA program office/instructor

MBA 610 The Problem-Solving Manager (3 Credit Hours)

The course aims to develop students' problem-solving mindset, professional brand, and communication skills. Students will be introduced to and apply various approaches to problem-solving and critical thinking; polish one's resume and professional profile in the course of career planning and preparation; and refine one's managerial communication skills across written and oral media.

Prerequisites: Admission to the MBA program OR approval by the MBA program office/instructor

MBA 695 Selected Topics for MBA Modules (1-3 Credit Hours)

The study of selected topics not offered on a regular basis.

Prerequisites: admission to the MBA program

MBA 697 Independent Study (1-3 Credit Hours)

Affords student the opportunity to undertake independent study under the direction of a faculty member.

Prerequisites: Admission to the MBA program, MBA 600, MBA 601, MBA 602, MBA 603, and MBA 604, and permission of the instructor

MBA 698 Corporate Field Project (1-3 Credit Hours)

Students will work with regional firms and non-profits to propose solutions for a real problem facing the firm.

Prerequisites: admission to the MBA program

MBA 998 Graduate Credit (1 Credit Hour)

This is a pass/fail course MBA students may take to maintain active status. All graduate students are required to be registered for at least one graduate credit hour in their semester of graduation.

MDPM - Molecular Diagnostics and Precision Medicine

MDPM 500 Principles of Molecular Diagnostics (3 Credit Hours)

Course will cover basic concepts of molecular biology including nucleic acids, chromosomes, DNA replication, transcription, and translation and the role of inherited and acquired mutations in disease. The role of clinical molecular diagnostics in detection, prognosis, theranostics, and monitoring and management of patients with inherited and infectious diseases will be explored.

MDPM 501 Molecular Diagnostics Lab (3 Credit Hours)

Course will cover basic molecular biology laboratory techniques including nucleic acid isolation, restriction enzyme digestion, polymerase chain reaction (PCR), quantitative reverse-transcription PCR, DNA sequencing, western blot, ELISA, and PCR-RFLP. This includes both hands on experience and lecture-based explanation of the science behind the techniques.

MDPM 600 Advanced Clinical Molecular Diagnostics (3 Credit Hours)

This course will cover the molecular pathology of various diseases including epigenetic disorders, metabolic disorders coagulopathies, cardiac disease, and infectious disease. It will also focus on cutting edge areas of molecular medicine and diagnostics such as pharmacogenomics, regenerative medicine and the microbiome.

MDPM 601 Advanced Molecular Diagnostics Lab (3 Credit Hours)

Course will cover advanced techniques and technologies in molecular diagnostics. Students will gain hands on experience in diagnostic methods using relative quantification of qRT-PCR, sequencing, and fragment analysis using capillary electrophoresis. Alternative techniques and emerging technologies such as next-generation sequencing will also be discussed.

MDPM 620 Human Subjects Regulations and Ethics (3 Credit Hours)

Students will be engaged and guided through a series of lectures and class discussions that emphasize regulatory and ethical considerations in the clinical molecular diagnostic laboratory, scientific research laboratory, and human subjects research environments. This class will cover issues specific for the Clinical Laboratory (CLIA regulatory environment) as well as Responsible Conduct of Research generally including: conflict of interest; policies regarding human subjects, live vertebrate animal subjects in research, and safe laboratory practices; mentor/mentee responsibilities and relationships; safe research environments (e.g., those that promote inclusion and are free of discriminatory harassment); collaborative research; peer review; data acquisition and analysis; laboratory tools (e.g., tools for analyzing data and creating or working with digital images); recordkeeping practices, including methods such as electronic laboratory notebooks; secure and ethical data use; data confidentiality, management, sharing, and ownership; research misconduct and policies for handling misconduct; responsible authorship and publication; and the scientist as a responsible member of society, contemporary ethical issues in biomedical research, and the environmental and societal impacts of scientific research.

MDPM 640 Molecular Cytology & Histology (3 Credit Hours)

This course will provide didactic training and hands on experience in methodologies associated with clinical and experimental molecular cytology and histology. This includes, immunohistochemistry, immunofluorescence, fluorescent in situ hybridization, and fluorescent chromosome analysis. Students will learn to design and implement experiments using these technologies to answer questions in molecular diagnostics.

MDPM 669 Molecular Diagnostics Pract (3 Credit Hours)

Students will perform directed laboratory research in an academic, industry, or clinical laboratory. Research project will be supervised by student's mentor. Projects must encompass the use of molecular diagnostics techniques and must be approved by an advisory committee selected by the student and approved by the program director. Upon completion of the 15 credit hours, students will present their findings in an open seminar.

MDPM 698 Molecular Diagnostics Lab (3 Credit Hours)

Students will obtain molecular diagnostic research experience in laboratories of prospective mentors. Student will be trained in research methods and procedures and will obtain a perspective on potential projects. Rotations can be completed in academic research, industry, or clinical laboratories. Work must include the use of molecular diagnostic techniques and rotations must be approved by the program director.

MDPM 720 Genomics and Bioinformatics (3 Credit Hours)

Genomics and Bioinformatics combines a didactic survey of topics important for understanding the origin, curation, advantages, and limitations of a variety of key genomic resources with hands-on training in the proper use of widely accessed web-based genome resources and common web-based bioinformatic tools.

MDTS - Medical Diagnostic and Translational Sciences

MDTS 500 Principles of Molecular Diagnostics (3 Credit Hours)

Course will cover basic concepts of molecular biology including nucleic acids, chromosomes, DNA replication, transcription, and translation and the role of inherited and acquired mutations in disease. The role of clinical molecular diagnostics in detection, prognosis, theranostics, and monitoring and management of patients with inherited and infectious diseases will be explored.

MDTS 501 Molecular Diagnostics Laboratory (3 Credit Hours)

Course will cover basic molecular biology laboratory techniques including nucleic acid isolation, restriction enzyme digestion, polymerase chain reaction (PCR), quantitative reverse-transcription PCR, DNA sequencing, western blot, ELISA, and PCR-RFLP. This includes both hands on experience and lecture-based explanation of the science behind the techniques.

Pre- or corequisite: MDTS 500 or permission of instructor

MDTS 600 Advanced Clinical Applications of Molecular Diagnostics (3 Credit Hours)

This course will cover the molecular pathology of various diseases including epigenetic disorders, metabolic disorders coagopathies, cardiac disease, and infectious disease. It will also focus on cutting edge areas of molecular medicine and diagnostics such as pharmacogenomics, regenerative medicine and the microbiome.

Prerequisites: MLRS 500, MLRS 501 or permission of instructor

MDTS 601 Advanced Molecular Diagnostics Laboratory (3 Credit Hours)

Course will cover advanced techniques and technologies in molecular diagnostics. Students will gain hands on experience in diagnostic methods using relative quantification of qRT-PCR, sequencing, and fragment analysis using capillary electrophoresis. Alternative techniques and emerging technologies such as next-generation sequencing will also be discussed.

Prerequisites: MDTS 500, MDTS 501 or permission of instructor

Pre- or corequisite: MDTS 600

MDTS 668 Clinical Laboratory Internship (3 Credit Hours)

An optional three-week supervised rotation in a hospital-based molecular diagnostic laboratory or a molecular research laboratory.

Prerequisites: MDTS 500, MDTS 501, MDTS 600, and MDTS 601 or permission of instructor

MDTS 714 Molecular Diagnostics Laboratory (2-3 Credit Hours)

Laboratory rotation with a pre-designated faculty member in which the student obtains hands-on experience. Designed for graduate students to sample different types of research models, techniques, and subject matter without the commitment of dissertation level involvement.

Prerequisites: Graduate Program Director approval required

MDTS 720 Genomic Databases: Content, Curation, and Application to Biomedical Research (3 Credit Hours)

This course combines a didactic survey of topics important for understanding the origin, curation, advantages, and limitations of a variety of key genomic resources with hands-on training in the proper use of widely accessed public genome resources and common bioinformatic tools.

Prerequisites: Graduate standing

MDTS 730 Chromosome Biology and Human Disease (3 Credit Hours)

Course goals are a comprehensive understanding of the mechanisms involved in chromosome function and how aberrations in these processes contribute to human disease. Topics include DNA repair and recombination; centromere and telomere dynamics, maintenance, and function; chromosome replication and segregation; control of cell division; dynamics of chromatin structure and function; epigenetics and gene expression; and long-range chromatin interactions and genome function.

Prerequisites: MDTS 610, MDTS 611, or approval of instructor

MDTS 740 Stem Cells: Biology and Therapy (3 Credit Hours)

Topics to be covered include history of stem cell biology, molecular definitions for stem cell identification, methods for stem cell isolations including: adult and embryonic, current technologies for induced pluripotent stem cell reprogramming, stem cells in tissue engineering and regenerative medicine, and current and future stem cell applications.

Prerequisites: MDTS 600 and MDTS 601 or equivalent

MDTS 742 Tissue Engineering (3 Credit Hours)

Topics to be covered include history of tissue engineering, development and morphogenesis, tissue structure, cells, scaffolds, regulators, and creating and evaluating a tissue engineering construct. Focus is on biomedical tissue engineering concepts as applied to creating human tissues in the laboratory for surgical repair of injured and diseased tissues and organs.

Prerequisites: Graduate standing

MDTS 750 Molecular Genetics, Gene Function and Genomics (3 Credit Hours)

The goals of this course are a comprehensive understanding of the mechanisms involved in molecular genetics and gene function and in-depth exploration of modern experimental analyses of these processes. Topics include DNA replication, repair, and recombination; transcription; epigenetic regulation of transcription; chromatin structure, histone modifications, transcription factors, and regulatory RNAs; long-range chromatin interactions and gene regulation; post-transcriptional gene regulation and translation; molecular biology based experimental analysis of gene function; and experimental genomic approaches to gene regulation and gene function.

Prerequisites: MDTS 600 and MDTS 601 or instructor approval

MDTS 805 Fundamentals of Cancer Biology (3 Credit Hours)

Course will cover molecular aspects of cancer including DNA damage, tumor viruses, cell cycle regulation, oncogenes and tumor suppressor genes and their respective roles in cancer prevention/development, genes involved in promoting or inhibiting metastasis, angiogenesis, telomeres and telomerase, regulation of both apoptosis and autophagy in normal and cancer cells, cancer stem cells, and diagnostic screening assays for therapeutic responses or resistance in cancer patients.

Prerequisites: MDTS 600 and MDTS 601 or equivalents; instructor approval also required

MDTS 810 Molecular Basis of Health and Disease (3 Credit Hours)

Emphasis is on human genetic syndromes and disorders associated with dysregulation of key signal transduction pathways that control gene expression, cell growth and protein synthesis including the Ras/MAPK pathway, tuberous sclerosis complex-mammalian target of rapamycin, PI3-kinase and others. Diagnosis, screening and treatment will be covered.

Prerequisites: MDTS 600 and MDTS 601

MDTS 814 Molecular Laboratory Rotation (2-3 Credit Hours)

Laboratory rotation with a pre-designated faculty member in which the student obtains hands-on experience. Designed for graduate students to sample different types of research models, techniques, and subject matter without the commitment of dissertation level involvement.

Prerequisites: Graduate Program Director approval required

MDTS 820 Genomic Databases: Content, Curation, and Application to Biomedical Research (3 Credit Hours)

This course combines a didactic survey of topics important for understanding the origin, curation, advantages, and limitations of a variety of key genomic resources with hands-on training in the proper use of widely accessed public genome resources and common bioinformatic tools.

Prerequisites: Graduate standing

MDTS 830 Chromosome Biology and Human Disease (3 Credit Hours)

Course goals are a comprehensive understanding of the mechanisms involved in chromosome function and how aberrations in these processes contribute to human disease. Topics include DNA repair and recombination; centromere and telomere dynamics, maintenance, and function; chromosome replication and segregation; control of cell division; dynamics of chromatin structure and function; epigenetics and gene expression; and long-range chromatin interactions and genome function.

Prerequisites: MDTS 610, MDTS 611, or approval of instructor

MDTS 840 Stem Cells: Biology and Therapy (3 Credit Hours)

Topics to be covered include history of stem cell biology, molecular definitions for stem cell identification, methods for stem cell isolations including: adult and embryonic, current technologies for induced pluripotent stem cell reprogramming, stem cells in tissue engineering and regenerative medicine, and current and future stem cell applications.

Prerequisites: MDTS 600 and MDTS 601 or equivalent

MDTS 842 Tissue Engineering (3 Credit Hours)

Topics to be covered include history of tissue engineering, development and morphogenesis, tissue structure, cells, scaffolds, regulators, and creating and evaluating a tissue engineering construct. Focus is on biomedical tissue engineering concepts as applied to creating human tissues in the laboratory for surgical repair of injured and diseased tissues and organs.

Prerequisites: Graduate standing

MDTS 850 Molecular Genetics, Gene Function and Genomics (3 Credit Hours)

The goals of this course are a comprehensive understanding of the mechanisms involved in molecular genetics and gene function and in-depth exploration of modern experimental analyses of these processes. Topics include DNA replication, repair, and recombination; transcription; epigenetic regulation of transcription; chromatin structure, histone modifications, transcription factors, and regulatory RNAs; long-range chromatin interactions and gene regulation; post-transcriptional gene regulation and translation; molecular biology based experimental analysis of gene function; and experimental genomic approaches to gene regulation and gene function.

MDTS 891 Doctoral Seminar (1-2 Credit Hours)

Students attend seminars, attend a class on giving seminars, and present a seminar on their own research.

MDTS 895 Topics in Molecular Medicine (1 Credit Hour)

Student led presentations of current topics related to molecular medicine.

Prerequisites: Instructor approval required

MDTS 898 Molecular Biology Research (1-9 Credit Hours)

Supervised doctoral research in molecular diagnostics or biomedical studies.

Prerequisites: instructor approval required

MGMT - Management

MGMT 500 Managing Organizations (3 Credit Hours)

This course introduces students to understanding employee attitudes and behaviors as well as human resource management. Topics include job performance, performance management, organizational commitment, employee retention, motivation, compensation, and employee well-being.

Prerequisites: Admission to the MBA Program or approval by the MBA Program Office/instructor

MGMT 517 Employment Law (3 Credit Hours)

An analysis of how the federal and state governments may regulate the employer-employee relationship. Topics include labor relations law, equal employment opportunity law, other current statutory employment law and common law employment issues.

MGMT 552 Negotiations and Change Management (3 Credit Hours)

This course focuses on negotiations and change. Students will develop analytical, interpersonal, and communication skills, with an emphasis placed on experiential learning through case studies, role playing, and simulations.

MGMT 563 Management Seminar Abroad (3 Credit Hours)

A study tour abroad under the direction of a faculty member including on-site visits and management lectures designed to provide insight into differences in management practices in foreign countries. Offered summers only and when available.

Prerequisites: permission of the chief departmental advisor

MGMT 565 SHRM Learning System (3 Credit Hours)

This is a course based on the SHRM (Society for Human Resource Management) Learning System® for SHRM-CP/SHRM-SCP. Comprised of comprehensive learning modules teaching the SHRM Body of Applied Skills and Knowledge™ (SHRM BASK™), and advanced online multimedia resources, these study materials streamline study time, accelerate learning and build confidence for passing the SHRM-CP/SHRM-SCP exam. The course tuition includes all books, including one year access to the SHRM online learning resources, but does not include registration for the SHRM-CP/SHRM-SCP examinations.

MGMT 595 Topics (3 Credit Hours)**MGMT 599 Selected Topics in Human Resources (3 Credit Hours)****MGMT 602 Organizational Management (3 Credit Hours)**

Examine issues and principles in the management of individuals, groups, and organizations. Topics include motivation and reward systems, groups dynamics and team building organization design and change.

MGMT 605 Leadership Dynamics (2 Credit Hours)

This course focuses on providing students with the foundations of leadership by reviewing past leadership research and integrating this into their own understanding of what makes one an effective leader. Contemporary concepts of leadership, including the role of culture and gender, will also be presented. The course will utilize self-assessments, case analysis, and leadership-related readings that will require students to think critically about what leaders do and how their own strengths and limitations influence their personal leadership development.

Prerequisites: Admission to the MBA Program

MGMT 618 Issues in Human Resource Management (3 Credit Hours)

An analysis and evaluation of current human resource practices and problems. Examines topics such as human resource planning, selection, development, and compensation.

MGMT 630 Motivation and Leadership (3 Credit Hours)

This course addresses how managers and organizations can enhance employee productivity and job satisfaction in a competitive global environment. Both the theories and practices of motivation and leadership will be examined.

MGMT 650 Managing People and Culture (3 Credit Hours)

This course focuses on providing students with the foundations of leadership by reviewing past leadership research and integrating this into their own understanding of what makes one an effective leader. Contemporary concepts of leadership, including how leaders influence through culture and emotions, will also be presented. The course will utilize self-assessments, case analysis, simulations, and leadership-related readings that will require students to think critically about what leaders do and how their own strengths and limitations influence their personal leadership development.

Prerequisites: Admission to the MBA program OR approval by the MBA program office/instructor

MGMT 668 Management Internship (1-3 Credit Hours)

This course is a practicum in management, applying theories, concepts, and management techniques in a business setting.

Prerequisites: Graduate standing and permission of the department chair

MGMT 690 Strategic Management (3 Credit Hours)

This course is the capstone course of the MBA program. It takes a distinct upper-level management perspective and aims to align all internal business functions – production, finance, accounting, marketing, etc. – with the external environment the company operates in order to ensure that organizational goals are accomplished efficiently. It also discusses how long-term value creation is affected by a firm's expansion within and beyond its current markets and industries.

Prerequisites: ACCT 645 OR ACCT 609 and ACCT 611 OR instructor or departmental approval

Pre- or corequisite: FIN 660 or FIN 613 AND OPMT 670 or OPMT 615 OR instructor or departmental approval

MGMT 695 Selected Topics in Management (1-3 Credit Hours)

Study designed for students who have one or more of the required courses waived, or for students desiring additional work in an area of particular interest in management.

Prerequisites: permission of the department chair and the graduate program director

MGMT 721 International Strategic Management (3 Credit Hours)

This course deals with various strategic options available to businesses operating in an international environment. It explores the literature and case materials on multinational companies and the theories and concepts relevant to the analysis of international strategic decisions.

Prerequisites: Permission of the instructor

MGMT 750 Business Policy and Strategy (3 Credit Hours)

A capstone integrative course on strategy formulation and implementation.

Prerequisites: permission of the graduate program director

MGMT 821 International Strategic Management (3 Credit Hours)

This course deals with various strategic options available to businesses operating in an international environment. It explores the literature and case materials on multinational companies and the theories and concepts relevant to the analysis of international strategic decisions.

Prerequisites: Permission of the instructor

MGMT 830 Strategic Human Resource Management (3 Credit Hours)

The course examines strategic issues in human resource management. The course will examine how strategies and policies in areas such as recruitment, selection, training, career development, performance management and international human resource management influence firm performance. Other topics of current research may also be included.

MGMT 835 Organization Theory (3 Credit Hours)

This course examines theories and empirical research on organizations and their environment. Topics would include organization design, structure, decision making, change and adaptation. Other topics of current research may also be included.

MGMT 836 Corporate Strategy Seminar (3 Credit Hours)

This course introduces strategic management students to the different theories, concepts, and phenomena in the field of corporate strategy.

MGMT 837 Business Strategy Seminar (3 Credit Hours)

This course introduces a variety of explanations for organizational competitive advantage as the ultimate outcome of business strategy. This course includes reading assignments, discussions and student presentations directed to developing novel research ideas.

MGMT 838 Strategic Entrepreneurship Seminar (3 Credit Hours)

This doctoral seminar will expose students to the theory and research behind new business creation and corporate entrepreneurship and it will prepare students to do rigorous and relevant research in this particular topic.

Prerequisites: MGMT 835

MGMT 890 Advanced Topics in Strategy (3 Credit Hours)

This course critically evaluates the classical debates and viewpoints within strategic management research. In addition the course would cover the emerging theoretical and methodological areas in strategic management research. Finally, the course would review in depth the research on contemporary issues in strategy. The objective of the course is to enable students to become independent scholars in the area of strategic management.

MGMT 891 Strategic Entrepreneurship Seminar (3 Credit Hours)

This doctoral seminar will expose students to the theory and research behind strategic entrepreneurship and prepare them to do rigorous and relevant research in this field of study.

Prerequisites: MGMT 835

MGMT 896 Selected Topics in Management (1-3 Credit Hours)

Advanced study in selected topics in management planning, strategy and policy under the direction of one or more faculty in the Management Department.

MGMT 899 Dissertation (1-9 Credit Hours)

Ph.D.-level research and writing of dissertation.

MGMT 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

MHPE - Medical and Health Professions Education

MHPE 606 Mixed Methods Research Design (3 Credit Hours)

Learners will explore general qualitative/quantitative research methods used in medical and health professions education research. The course will include investigation of quantitative and qualitative research approaches, sampling techniques, validity, and ethical considerations. The goal of the course is acquisition of skills needed to understand, plan, manage, analyze, and interpret studies where data is mixed (qualitative and quantitative).

MHPE 608 Contexts of Teaching and Learning (3 Credit Hours)

The goal of the course is to provide students with a strong background for designing educational experiences, planning educational programs, and conducting research on a variety of teaching and learning-related questions. Application of principles to medical and health professions education is expected. The course is designed to help participants consider the meaning of learning and the various contextual factors that influence the learning process in higher education. This course explores the application of science in the design of learning environments. Students evaluate the contexts of educational environments and use insights to improve practices, as well as the technologies higher education institutions use to document and assess learning.

MHPE 609 Designing Educational Experiences (3 Credit Hours)

This course prepares students with theoretic foundations and best practices to plan, apply, design, and evaluate appropriate instructional methods to enhance learner achievement. Application of principles to Medical & Health Professions Education is expected. Learners will analyze a wide range of instructional methods and then design an array of formative and summative assessments utilizing evidence-based assessment instruments and techniques.

MHPE 613 Community Partnerships in Health Professions Education (3 Credit Hours)

This course is designed to prepare health professions educators and administrators to embrace and model a commitment to service through effective community engagement practices. During this course, students will explore, analyze, and discuss partnership frameworks with diverse stakeholders including state and federal agencies, nonprofit organizations, businesses, and other educational institutions, and will apply philosophies and techniques for effective cross-sector collaboration.

MHPE 614 Organization and Management (3 Credit Hours)

Learners will research and understand higher education organizational structures and issues of oversight and will develop an understanding of how colleges and universities are governed. Who are the key decision makers at these institutions? What roles do various constituents such as the board members, presidents, deans, faculty and staff, and students play? Learners will explore how organizational structures, culture, context, and characteristics influence institutional governance and decision making. Learners will become knowledgeable about the history of and current trends in the management and operations of higher education institutions with a focus on academic health centers. This course will make use of current research literature, debate, and discussion of current events as a means to better understand higher education organization and management.

MHPE 615 Current Issues in Higher Education (3 Credit Hours)

Learners will explore issues of contemporary concern among higher education practitioners, faculty, and administrators. The course utilizes a historical perspective to establish the background for the discussion of the issues influencing higher education today. Topics related to academic and student affairs in academic health centers will be identified and examined. Coursework and readings provide a nuanced understanding of differing perspectives on complex issues. Learners will utilize higher education research to examine issues, identify pros and cons, and challenge assumptions. Doctoral-level writing is emphasized.

MHPE 669 Practicum (3 Credit Hours)

The practicum provides students with an in-depth supervised opportunity to apply knowledge and skills gained in the MHPE core teaching courses. This virtual practicum requires students to work individually to develop all aspects of an online course. Students will engage through media creation, planning for diverse course audiences, and peer review.

MHPE 690 Capstone (1 Credit Hour)

The capstone experience provides the learner the opportunity to present a program portfolio demonstrating achievement of all program goals and student learning outcomes.

MHPE 702 Program Evaluation (3 Credit Hours)

Program evaluation is a relatively young discipline in the formal sense of systematically collecting data for the purpose of informing decision-making. Program evaluation builds on many other disciplines to include social sciences, education, and statistics. In this course, we will explore the philosophical and theoretical roots of evaluation and the bridge between those roots and evaluation practice. In particular, we will discuss the meaning of program evaluation and its historical roots; philosophical and theoretical orientations that provide guidance for thinking about evaluation; examine program evaluation approaches specific to health professions education; and finally, we will cover the specifics of planning, implementing, and managing the evaluation process.

MHPE 704 Simulation in Healthcare (3 Credit Hours)

This course will examine the use of medical modeling and simulation as instructional and assessment tools of the modern health professions educator. Participants will explore the key features of simulation-based healthcare education that lead to effective learning, evaluate the range of simulation methodologies, and critically review current research and trends in simulation-based education and assessment. Participants will apply learning with a systematic instructional design process to develop a practical simulation-based teaching and/or assessment project by the end of the course.

MHPE 705 Applied Statistics (3 Credit Hours)

Learners will gain an understanding of the statistical tests used in medical and health professions education research. The focus is on understanding why a particular test is used, and how to interpret and apply results obtained from each test. Utilizing SPSS statistical analysis software, learners will perform all statistical procedures related to descriptive statistics and inferential statistics such as t-tests, analysis of variance, correlation, regression, and chi-square. Visual representation of data will also be covered.

MHPE 715 Educational Scholarship Method (3 Credit Hours)

Within the context of Boyer's four models of scholarship, this course provides the knowledge necessary to understand the purposes and processes of research using an expanded definition of scholarship that goes beyond the scholarship of discovery (research) to include the scholarship of integration, the scholarship of application, and the scholarship of teaching. The course will also introduce students to quantitative and qualitative design approaches, examine foundational issues of research from both quantitative and qualitative perspectives, and build skills for interpreting and evaluating research including criteria for evaluating empirical studies, particularly in the social sciences and in education.

MHPE 720 Exploring Paradigms in Higher Education (3 Credit Hours)

Learners will reflect upon and articulate an understanding of representation of individuals (primarily students and faculty) from all backgrounds in institutions of higher education. The discourse that has shaped education (knowledge making) in the United States and its impact on higher education paradigms will be explored. Learners will research and determine ways to address issues impacting quality of education and will develop effective teaching strategies illustrating best practices in establishing ideal learning environments. Historical and dynamic, 'real-time' literature and media will be explored and further enriched through our active participation.

MHPE 725 Business of Simulation (3 Credit Hours)

Today's simulation centers are analogous to small businesses, in that they involve small teams leveraging limited resources to support the mission critical needs of clients (students, faculty, residents, practicing clinicians, etc.). Like small businesses, it is critical for simulation leaders to understand and manage both immediate and long term resource requirements and planning considerations be they funding, staff, equipment, or space related. This course explores the core business principles required to help leaders both better manage their center and develop or hone their business model for both internal and external opportunities.

MHPE 803 Teaching Anatomy (3 Credit Hours)

Teaching anatomy.

MHPE 804 Educational Scholarship Seminar (1 Credit Hour)

The goals of the educational scholarship seminar are to explore opportunities for educational scholarship within medical and health professions education and to provide you with the tools to connect foundational research skills with your research interest in order to successfully complete a contemporary scholarly project. Proposal writing, literature review, and manuscript publication are core topics. The course will be repeated for a total of three credits.

MHPE 806 Mixed Method Research Design (3 Credit Hours)

Learners will explore general qualitative/quantitative research methods used in medical and health professions education research. The course will include investigation of quantitative and qualitative research approaches, sampling techniques, validity, and ethical considerations. The goal of the course is acquisition of skills needed to understand, plan, manage, analyze, and interpret studies where data is mixed (qualitative and quantitative).

MHPE 807 Advanced Research Methods (3 Credit Hours)

This course equips students with skills necessary to conduct doctoral research concentrating on major methodological and analytic traditions, building on the context of educational research established in introductory courses. Both quantitative and qualitative methodologies are included, including topics on ANOVA, Regression, and Coding with a special focus on analysis, interpretation, and presentation of findings.

MHPE 808 Contexts of Teaching and Learning (3 Credit Hours)

The goal of the course is to provide students with a strong background for designing educational experiences, planning educational programs, and conducting research on a variety of teaching and learning-related questions. Application of principles to medical and health professions education is expected. The course is designed to help participants consider the meaning of learning and the various contextual factors that influence the learning process in higher education. This course explores the application of science in the design of learning environments. Students evaluate the contexts of educational environments and use insights to improve practices, as well as the technologies higher education institutions use to document and assess learning.

MHPE 809 Designing Educational Experiences (3 Credit Hours)

This course prepares students with theoretic foundations and best practices to plan, apply, design, and evaluate appropriate instructional methods to enhance learner achievement. Application of principles to Medical & Health Professions Education is expected. Learners will analyze a wide range of instructional methods and then design an array of formative and summative assessments utilizing evidence-based assessment instruments and techniques.

MHPE 810 Practicum (3 Credit Hours)

The practicum provides students with an in-depth supervised opportunity to apply knowledge and skills gained in the MHPE core teaching courses. This virtual practicum requires students to work individually to develop all aspects of an online course. Students will engage through media creation, planning for diverse course audiences, and peer review.

MHPE 813 Community Partnerships in Health Professions Education (3 Credit Hours)

This course is designed to prepare health professions educators and administrators to embrace and model a commitment to service through effective community engagement practices. During this course, students will explore, analyze, and discuss partnership frameworks with diverse stakeholders including state and federal agencies, nonprofit organizations, businesses, and other educational institutions, and will apply philosophies and techniques for effective cross-sector collaboration.

MHPE 814 Organization and Management (3 Credit Hours)

Learners will research and understand higher education organizational structures and issues of oversight and will develop an understanding of how colleges and universities are governed. Who are the key decision makers at these institutions? What roles do various constituents such as the board members, presidents, deans, faculty and staff, and students play? Learners will explore how organizational structures, culture, context, and characteristics influence institutional governance and decision making. Learners will become knowledgeable about the history of and current trends in the management and operations of higher education institutions with a focus on academic health centers. This course will make use of current research literature, debate, and discussion of current events as a means to better understand higher education organization and management.

MHPE 815 Current Issues in Higher Education (3 Credit Hours)

Learners will explore issues of contemporary concern among higher education practitioners, faculty, and administrators. The course utilizes a historical perspective to establish the background for the discussion of the issues influencing higher education today. Topics related to academic and student affairs in academic health centers will be identified and examined. Coursework and readings provide a nuanced understanding of differing perspectives on complex issues. Learners will utilize higher education research to examine issues, identify pros and cons, and challenge assumptions. Doctoral-level writing is emphasized.

MHPE 820 Diversity in Higher Education (3 Credit Hours)

Learners will reflect upon and articulate an understanding of representation of individuals (primarily students and faculty) from diverse backgrounds in institutions of higher education. The social, legal, and political discourse that has shaped education (knowledge making) in the United States and its impact on diversity in higher education will be explored. Learners will research and determine ways to address issues such as equity, bias, and access to high quality education and develop effective teaching strategies illustrating best practices in establishing ideal learning environments. Historical (seminal texts dating back early as 1900) and dynamic, 'real-time' literature and media will be explored and further enriched through our active participation. Therefore, you are advised to follow the course through Blackboard (particularly Course Materials and Discussion Board) as assignments, requirements, and information may be updated.

MHPE 825 Data-based Decision Making (3 Credit Hours)

Learners will gain a perspective on institutional research and data-driven decision making by exploring real-world institutional problems. The goal of the course is to help the learner acquire skills in asking data-driven questions, collecting and preparing data, mining data for patterns, developing institutional knowledge, and creating real predictive models.

MHPE 830 Candidacy Seminar (3 Credit Hours)

This course is designed to thoroughly evaluate the learner's knowledge of medical and health professions education and their concentration using combined written and oral evaluation strategies. Students must complete the Comprehensive exam and write and present a preliminary dissertation research proposal. Learners must successfully complete this course before moving on to complete their Dissertation research. Completion of all MHPE doctoral coursework is required prior to enrollment.

MHPE 835 Independent Study (3 Credit Hours)

Independent study.

MHPE 869 Practicum (3 Credit Hours)

The practicum provides students with an in-depth supervised opportunity to apply knowledge and skills gained in the MHPE core teaching courses. This virtual practicum requires students to work individually to develop all aspects of an online course. Students will engage through media creation, planning for diverse course audiences, and peer review.

MHPE 900 Research (2-6 Credit Hours)

Work on dissertation under the direction of the dissertation chair. Students will work with Dissertation Chairs to allocate MHPE 900 credit and may graduate in any semester they are ready for dissertation defense. Completion of all MHPE830 Candidacy Seminar is required prior to enrollment in MHPE 900 and 905. Students who do not fulfill all dissertation requirements prior to the date designated in the Student Handbook will continuously enroll in MHPE 905 Research Continuance (1 credit) each term until which time the dissertation is successfully defended.

MHPE 905 Research Continuance (1-2 Credit Hours)

Work on dissertation under the direction of the dissertation chair. Students will work with Dissertation Chairs to allocate MHPE 900 credit and may graduate in any semester they are ready for dissertation defense. Completion of all MHPE830 Candidacy Seminar is required prior to enrollment in MHPE 900 and 905. Students who do not fulfill all dissertation requirements prior to the date designated in the Student Handbook will continuously enroll in MHPE 905 Research Continuance (1 credit) each term until which time the dissertation is successfully defended.

MKTG - Marketing

MKTG 603 Marketing Management (3 Credit Hours)

Fundamentals of marketing (including market research, product design, distribution, pricing and promotion of goods, services, people, places and ideas) with case analyses to clarify applications.

MKTG 621 Managerial Problems in Marketing Strategy (3 Credit Hours)

Lecture, case analysis and discussion of marketing from the business executive's viewpoint. Recent developments in marketing and related disciplines and their application in management. Readings, case analysis, discussion.

Prerequisites: MKTG 603 or MKTG 608 or instructor permission

MKTG 625 Marketing Research Methods and Analysis (3 Credit Hours)

This course examines the various methods of marketing research design, while covering experimental methods, sampling procedures, measurement techniques, and other methodological problems. The student is introduced to data analysis and statistical modeling programs.

Prerequisites: MKTG 603 or MKTG 608 and BNAL 606 or instructor permission

MKTG 628 Marketing of Services (3 Credit Hours)

This course examines the application of marketing principles and techniques to service organizations. Topics covered include the nature of services, distribution, and promotion considerations. Class discussion revolves around a textbook, cases, and outside readings. Students take part in a major group project which will involve the development of a marketing plan for a service organization.

Prerequisites: MKTG 603 or MKTG 608 or instructor permission

MKTG 630 Ethics and Marketing Decision-Making (3 Credit Hours)

Marketers, probably more than other professionals, often are faced with decisions involving an ethical issue. This course has the following objectives: 1) to examine the ethical decision-making process of marketing professionals, 2) to examine the major ethical issues confronting marketers, 3) to provide frameworks to help resolve the ethical dimensions of marketing decisions, and 4) to provide experience in making marketing decisions that involve ethical dilemmas through the use of case studies.

Prerequisites: MKTG 603 or MKTG 608 or instructor permission

MKTG 640 Global Marketing Management (3 Credit Hours)

Examines the global environment of business and its potential effects on marketing principles and practices. The course will include the effect of culture on marketing mix strategies.

Prerequisites: MKTG 603 or MKTG 608 or instructor permission

MKTG 650 Marketing on the Internet (3 Credit Hours)

Course examines the application of marketing theories to the internet.

Topics include internet marketing strategy, electronic commerce, web page development, and the impact of the internet in the international marketplace.

Prerequisites: MKTG 603 or MKTG 608 or instructor permission

MKTG 660 Advertising and Integrated Marketing Communications (3 Credit Hours)

Introduces students to the concepts of integrated marketing communications (IMC). Students will learn how to formulate a firm's marketing communication strategy from an integrated perspective, become familiar with the various tools used in IMC programs, and develop necessary skills to develop an IMC plan for a business. Topics covered in the course include the role of the IMC in the marketing process, the IMC plan development process, the components of IMC media planning and budgeting for IMC, creative strategies, and assessment of the effectiveness of an IMC campaign.

Prerequisites: MKTG 603 or MKTG 608 or instructor permission

MKTG 668 Marketing Internship (1-3 Credit Hours)

Internship in the field of marketing, applying theories, concepts, and marketing tools in a business environment.

Prerequisites: MKTG 603 or MKTG 608, graduate standing, and instructor permission

MKTG 680 Marketing and Customer Value Management (3 Credit Hours)

This course introduces students to the fundamental concepts and management issues associated with marketing and customer value management. The focus will be translating marketing analyses and marketing research into marketing strategy and market strategy implementation elements. Cases will be used to highlight applications and develop analytical, critical-thinking, and communications skills to prepare students for marketing decision-making.

Prerequisites: Admission to the MBA program OR approval by the MBA program office/instructor

MKTG 696 Selected Topics in Marketing (1-3 Credit Hours)

Study designed for students who have had one or more of the required courses waived, or for students desiring additional work in a marketing area of particular interest.

Prerequisites: permission of the graduate program director

MKTG 801 Seminar in Marketing Theory: History and Current Topics (3 Credit Hours)

This course focuses on theory development in marketing from the 1940s to the latest publications in marketing journals. The topics covered include philosophy of science, truth in research, the development of marketing theory and practice, and the current direction in marketing theory and research opportunities.

Prerequisites: MKTG 603

MKTG 802 Seminar in Marketing Concepts and Issues (3 Credit Hours)

This course examines the current academic research trends in the different functional areas of the marketing discipline. Topics covered include promotional theory, pricing theory, distribution theory, product theory, marketing strategy theory, marketing ethics, and multinational marketing.

MKTG 803 Seminar in Consumer Behavior (3 Credit Hours)

The purpose of this course is to provide a comprehensive and up-to-date understanding of the major research work carried out in consumer behavior. It examines major psychological constructs and phenomena related to consumer behavior and introduces students to various research approaches to consumer behavior issues.

Prerequisites: MKTG 603

MKTG 813 Fundamentals of Survey Research (3 Credit Hours)

This course focuses on the fundamental issues associated with survey research as found in the marketing/management disciplines. The topics covered are experimental and quasi-experimental designs, analysis of data from experimental designs, questionnaire design and refinement, and scale development.

Prerequisites: BNAL 711/BNAL 811

MKTG 814 Seminar in Advanced Marketing Methodology (3 Credit Hours)

This course examines the design, analysis, and implementation of marketing research methods along with advanced statistical techniques. This is an integrative capstone course for the marketing research doctoral sequence of courses. The focus is on ensuring that the marketing academic understands all aspects of data analysis and design issues.

Prerequisites: BNAL 711, BNAL 712 and MKTG 813

MKTG 826 Seminar in International Marketing Problems (3 Credit Hours)

An analysis of planning, organization, and control functions of multinational marketing operations and how marketing procedures need to be developed/adapted for effective pursuit of business opportunities in other countries.

Prerequisites: MKTG 603

MKTG 827 Seminar in Marketing Planning and Strategy (3 Credit Hours)

Focus on contemporary marketing practice and provides opportunity to acquire a comprehensive understanding of the marketing planning process and the need for development of sound marketing strategy. Marketing goals, strategies, and tactics are examined in detail.

Prerequisites: MKTG 603

MKTG 895 Selected Topics in Marketing (3 Credit Hours)

Designed to provide the advanced student with an opportunity to study independently or in small groups and investigate specific topics of current interest in the field of marketing.

Prerequisites: Ph.D. standing and permission of the chair and coordinator

MKTG 899 Dissertation Research (1-12 Credit Hours)

1-12 credits per semester with limitation of 24 credits.

Prerequisites: advanced standing in Ph.D. program

MKTG 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

MLAS - Laboratory Animal Science

MLAS 602 Laboratory Animal Husbandry, Care, & Ethics (3 Credit Hours)

This course will discuss husbandry practices, proper nutrition and enrichment requirements for different species; environmental parameters, such as proper housing, temperatures, humidity and lighting. Humane handling, restraint and overall well-being of laboratory animals will also be covered.

MLAS 603 Journal Club (1 Credit Hour)

This course will review the selected publications in related fields such as animal models in research, new technologies, etc.

MLAS 604 Diseases of Lab Animals I (3 Credit Hours)

This course will cover the biology, husbandry, diseases, pathology, treatments and main research uses of main laboratory animal species.

MLAS 606 Anesthesia & Surgery (2 Credit Hours)

This course will review techniques and procedures used in surgery and anesthesia, including instruments and equipment preparation and identification, handling of instruments and supplies during surgery, anesthesia induction and monitoring, post-surgical care, clean up and surgical record keeping.

MLAS 608 Internship (2 Credit Hours)

During this course, students will have hands-on experience on various aspects and techniques and on multiple laboratory animal species. This course is for one week (40 hours) on the EVMS campus in Norfolk, Virginia.

MLAS 613 Comparative Anatomy & Physiology (4 Credit Hours)

This course will cover anatomy and physiology of laboratory animals including study of body systems such as skeletal, muscular, circulatory, digestive, nervous, respiratory, reproductive and special sense organs and principles of diseases.

MLAS 614 Applied Biostatistics and Research Design (3 Credit Hours)

This course will cover the fundamentals of research design, including the use of literature search, the formulation of testable hypotheses, selection of the appropriate methodology and statistics to evaluate these hypotheses and the generation and interpretation of experimental outcomes. Students will learn to critique published studies, as well as to create and evaluate their own studies and protocols.

MLAS 705 Diseases of Lab Animals II (3 Credit Hours)

This course will cover the biology, husbandry, diseases, pathology, treatments and main research uses of main laboratory animal species.

MLAS 709 Biotech & Diagnostic Tech (3 Credit Hours)

This course will cover various topics such as molecular analysis and detection systems including ELISA, PCR and real time PCR, basics of cell culture, laboratory blood, urine processing and basics of imaging techniques such as ultrasound, etc.

MLAS 711 Facility Management (3 Credit Hours)

This course provides both technical and Non-technical skills necessary for the successful laboratory animal facility managers such as; understanding of facility equipment, personnel management and scheduling, supply procurement, space allocation, animal production management, communication with researchers and senior management, conflict resolution, hiring and firing, critical thinking, problem solving, negotiation, finance/budgeting, and vendor management skills.

MLAS 712 Graduate Seminar (2 Credit Hours)

During this course students will be assigned to one topic of interest which will be presented to the whole group. Students will review the recent publications in their assigned topic and with recommendation and suggestions of their selected expert mentors, will prepare and present their presentation.

MLAS 715 Laboratory Animal Behavior and Behavioral Management (1 Credit Hour)

This course will provide students with behavioral biology of species commonly used in laboratories. The course will also cover behavioral management, including enrichment and positive reinforcement training and will introduce students to some behavioral tests utilized to model human behavior.

MLAS 716 Cryopreservation (1 Credit Hour)

Cell freezing is now a well-established laboratory activity in both clinical and research facilities. This course is designed to teach technically complex process of cryopreservation by explaining the procedure of cryopreservation (freezing) of cells.

MLS - Medical Laboratory Science

MLS 503 Management in the Clinical Setting (3 Credit Hours)

A course concerned with organization and management in the clinical setting including personnel supervision, planning, equipment justification, quality assurance, data processing, budgeting, fiscal techniques, marketing, regulatory agencies, educational methodologies, current issues, as well as legal and ethical considerations.

MLS 520 Blood Collection Techniques (2 Credit Hours)

Laboratory methods in the procurement of blood by capillary, venipuncture and arterial draws, analytical variables, special phlebotomy tests, isolation techniques, safety, forensic, molecular, legal and ethical implications, pediatric, geriatric, and compromised patient concerns. All students must submit to venipuncture by fellow students.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor (must be fully declared into degree program); C or better in BIOL 250 and BIOL 251 or equivalent (BIOL 240 and 241) or permission of the instructor

MLS 540 Statistical Applications and Data Analysis in the Clinical Laboratory (3 Credit Hours)

Topics include review of basic statistics used in the laboratory; use of statistics for quality control, reference range determination, method comparisons, test utility assessment, techniques for searching the literature and assessing quality and applicability of published studies; and data organization and retrieval via queries. Students will perform projects, preferably using actual laboratory data, that relate to lecture topics.

Prerequisites: STAT 130M or equivalent; Limited to graduate students with permission from the instructor and/or MLS Program Director

MLS 568 Phlebotomy Internship (2 Credit Hours)

A 120-hour clinical internship for those desiring to qualify for the ASCP certification exam in phlebotomy.

Prerequisites: C or better in MLS 520

MLS 595 Special Topics in Medical Laboratory Science (1-3 Credit Hours)

The advanced study of selected topics within the medical field.

Prerequisites: Limited to Medical Laboratory Science or Medical Laboratory Science Degree Completion majors (intended or declared) or permission of the instructor/program director

MLS 597 Directed Study in Medical Laboratory Science (1-3 Credit Hours)

Supervised experience in medical laboratory science specialties, allowing students to pursue areas of interest under faculty direction.

Prerequisites: Limited to Medical Laboratory Science or Medical Laboratory Science Degree Completion majors (intended or declared) or permission of the instructor/program director

MPAS - Physician Assistant

MPAS 601 Introduction to the PA Profession (3 Credit Hours)

The purpose of this course is to provide the student with a future provider's perspective of the Physician Assistant (PA) profession and the U.S. health care system. The history, education and professional characteristics of the Physician Assistant profession are explored. The course is designed to engaged students in the formation of a professional identity and prepare them for a lifetime of professional wellness.

MPAS 602 Business of Medicine (1 Credit Hour)

The purpose of this course is to provide the student with a future provider's perspective of the U.S. health care system. The history, education and professional characteristics of the health care system and members of the healthcare system are explored. This course also provides students with a basic understanding of the tenets and history of public health and how clinicians interact with the Public Health Systems.

MPAS 603 Introduction to Medical Diagnostics (0.5 Credit Hours)

This course will introduce the fundamentals and foundational skills of clinical ultrasonography.

MPAS 604 Legal & Ethical Issues in Medicine (2 Credit Hours)

The history, role, practice scope, and professional policies of the physician assistant in health care are explored. This course also presents an interactive and strategic examination of the evolving American health care system, the issues and controversies relative to health care reforms, and the growing impact of managed care.

MPAS 615 Anatomy for Health Professions (5 Credit Hours)

A study and exploration of the human cadaver through lecture, lab dissection and pro-section.

MPAS 619 Physiology and Pathophysiology (4 Credit Hours)

The purpose of this course is to provide advanced coverage of human pathophysiology through the analysis of diseased and other abnormal physiological conditions.

MPAS 620 Foundations of IPE (0.5 Credit Hours)

Introduce interprofessional roles in health care in order to enable effective collaboration for a safe, effective, and value-driven healthcare delivery system by emphasizing teams of professionals working together in order to benefit patients and improving health outcomes.

MPAS 623 Medical Diagnostics I (3 Credit Hours)

This course introduces and assesses clinical competency of specified skills, diagnostic modalities, and interventions related to professional responsibilities and practices in patient care.

MPAS 624 Patient Counseling & Education (2 Credit Hours)

This course builds on knowledge gained in clinical science courses by providing the student with the skills necessary to educate patients about their disease processes, help patients become a partner in their own health care, and guide the patient toward health promoting behavior.

MPAS 625 Clinical Assessment & Reasoning I (3 Credit Hours)

Introduces the beginning practitioner to the skills of listening, communicating, data collecting and documenting patient encounters.

MPAS 628 Clinical Pharmacology I (3 Credit Hours)

Preparation for appropriate administration/prescription of medicines is accomplished through a study of drug classifications, pharmacodynamic actions, and rationale for therapeutic use of prescription and non-prescription medications.

MPAS 639 Introduction to Clinical Medicine I (5 Credit Hours)

This course is designed to lay the foundation for patient care through a comprehensive understanding of illness. This 3-course series in the medical sciences and related technologies addresses care of the adult, adolescent and pediatric patient beginning with common acute self-limited illnesses and progressing to more complex, well-defined chronic disorders.

MPAS 640 Practicum for IPE (0.5 Credit Hours)

Work in Interprofessional Teams to help address the needs of the individual patient and the community in patients who may have significant health disparities.

MPAS 643 Medical Diagnostics II (3 Credit Hours)

This course introduces and assesses clinical competency of specified skills, diagnostic modalities, and interventions related to professional responsibilities and practices in patient care.

MPAS 644 Introduction to Epidemiology and Evidence-Based Medicine (2 Credit Hours)

Introduces population epidemiology and decision-making theory, followed by an introduction to and application of the principles of evidence-based medicine to patient care.

MPAS 645 Clinical Assessment & Reasoning II (4 Credit Hours)

This course introduces the use of examination techniques and equipment used during a patient-centered physical examination and emphasizes the relationship of the exam to the history to aid in developing competency and clinical judgment in clinical assessment. It also promotes a working knowledge base for integrating information into decision-making, diagnosis hypothesis, clinical reasoning, and data resolution skills through cooperative learning strategies and selected clinical topics.

MPAS 648 Clinical Pharmacology II (3 Credit Hours)

Preparation for appropriate administration/prescription of medicines is accomplished through a study of drug classifications, pharmacodynamic actions, and rationale for therapeutic use of prescription and non-prescription medications.

MPAS 649 Introduction to Clinical Medicine II (5 Credit Hours)

Designed to lay the foundation for patient care through a comprehensive understanding of illness, this 3-course series in the medical sciences and related technologies addresses care of the adult, adolescent and pediatric patient beginning with common acute self-limited illnesses and progressing to more complex, well-defined chronic disorders.

MPAS 663 Medical Diagnostics III (2 Credit Hours)

This course introduces and assesses clinical competency of specified skills, diagnostic modalities, and interventions related to professional responsibilities and practices in patient care.

MPAS 664 Psychosocial Elements of Wellness (2 Credit Hours)

The societal determinants of health, illness and disease are explored as a continuum of community care, a promotion of cultural sensitivity, and enrichment of the clinician-patient relationship.

MPAS 665 Clinical Assessment & Reasoning III (5 Credit Hours)

This course integrates the patient-centered history-taking and physical examination skills presented in Clinical Assessment and Reasoning I and II and emphasizes differential formulation in the context of problem-focused encounters. A systematic approach is used in studying the comprehensive and problem-oriented clinical assessment of various patient populations within simulated cases.

MPAS 688 Clinical Pharmacology III (2 Credit Hours)

Preparation for appropriate administration/prescription of medicines is accomplished through a study of drug classifications, pharmacodynamic actions, and rationale for therapeutic use of prescription and non-prescription medications.

MPAS 689 Introduction to Clinical Medicine III (5 Credit Hours)

Designed to lay the foundation for patient care through a comprehensive understanding of illness, this 3-course series in the medical sciences and related technologies addresses care of the adult, adolescent and pediatric patient beginning with common acute self-limited illnesses and progressing to more complex, well-defined chronic disorders.

MPAS 694 Directed Medical Studies (1 Credit Hour)

Directed medical studies.

MPAS 701 Introduction to Clinical Practice (0 Credit Hours)

This seminar course provides an introduction to the clinical phase of the program. In lecture and lab sessions, students will examine documentation, billing and coding, use of technology in clinical practice, and have an opportunity to revisit suturing and clinical skills.

MPAS 702 Interprofessional Practice (1 Credit Hour)

Observation and application of interprofessional concepts within interprofessional health care teams in clinical practice to enable effective collaboration for a safe, effective, and value-driven healthcare delivery system by emphasizing teams of professionals working together in order to benefit patients and improving health outcomes. The course extends through the Clinical Year.

MPAS 710 SCPE in Family Medicine (3 Credit Hours)

The supervised clinical practice experience (SCPE) in Family Medicine is designed to prepare a student to function in an ambulatory setting in a role appropriate to a primary care physician assistant (PA).

MPAS 720 SCPE in Pediatric Medicine (3 Credit Hours)

The supervised clinical practice experience (SCPE) in Pediatric Medicine is designed to prepare a student to function in an ambulatory setting in a role appropriate to a primary care physician assistant (PA).

MPAS 730 SCPE in General Internal Medicine (3 Credit Hours)

The supervised clinical practice experience (SCPE) in Internal Medicine is designed to prepare a student to function in an Internal Medicine setting in a role appropriate to a primary care physician assistant (PA).

MPAS 740 SCPE in Emergency Medicine (3 Credit Hours)

The supervised clinical practice experience (SCPE) experience in Emergency Medicine is designed to prepare a student to function in an ambulatory setting in a role appropriate to a physician assistant (PA) practicing in Emergency Medicine.

MPAS 750 SCPE in General Surgery (3 Credit Hours)

The supervised clinical practice experience (SCPE) experience in Surgery is designed to prepare a student to function in an ambulatory or inpatient setting in a role appropriate to a physician assistant (PA) practicing in surgery.

MPAS 760 SCPE in Womens Health (3 Credit Hours)

The supervised clinical practice experience (SCPE) in Women's Health is designed to prepare a student to function in an outpatient and/or inpatient setting in a role appropriate to a physician assistant (PA) practicing in women's health.

MPAS 770 SCPE in Psychiatry & Behavioral Health (3 Credit Hours)

The supervised clinical practice experience (SCPE) in Psychiatry and Behavioral Health is designed to prepare a student to function in various clinical settings and gain exposure to behavioral health.

MPAS 780 SCPE in Elective I (3 Credit Hours)

This may consist of one 5-week elective in a chosen area of medicine.

MPAS 785 SCPE in Elective II (3 Credit Hours)

This may consist of one 5-week elective in a chosen area of medicine.

MPAS 794 Senior Seminar (5 Credit Hours)

The purpose of this course is to prepare the student for transition to a practicing PA through lectures, small group activities and oral presentations. Students will be required to participate in comprehensive board review sessions designed for certification. At the conclusion of the course, students will be required to pass a summative evaluation designed to assess overall performance and preparation for clinical practice.

MPH - Master of Public Health

MPH 600 Introduction to Public Health (1 Credit Hour)

This course provides an introduction to the multidisciplinary field of public health. Students will learn the history, core functions and roles of the U.S. public health system through grounding in the 12 foundational public health knowledge areas.

MPH 610 Introduction to Public Health (1 Credit Hour)

This introductory readings course provides students with an overview of the public health sector from a local, national, and global perspective. The history of public health and recent events leading to a complete transformation of service delivery are two of the topics presented.

MPH 611 Social and Behavioral Sciences for Public Health (3 Credit Hours)

This is a social and behavioral sciences core course for the MPH program. Psychological, social, and cultural concepts and models relevant to health and disease in society are reviewed and critiqued. Students will learn about different theoretical perspectives and how to apply appropriate social and behavioral models to public health programs. Students will learn how to select and apply appropriate social and behavioral models to the design of public health interventions and policies. The course will also cover existing social inequalities in health status related to race/ethnicity, social class, and gender, and the critical intersection between social risk factors, behavioral risk factors, and the development and implementation of public health interventions. Social ecological models that influence population health at multiple levels are emphasized.

MPH 612 Statistical Reasoning for Public Health (3 Credit Hours)

This course is designed for student majoring in public health and health-related disciplines. The course introduces basic concepts in biostatistics and fundamental methods in statistical analysis. Although formulae and computational elements will be incorporated into the lecture, the course is designed to teach students how to make informed decisions from a given set of data collected from a health research study. This process includes exploring data, reviewing all the underlying statistical assumptions, summarizing and analyzing the data using common descriptive and inferential statistical methods, and finally reporting and interpreting the statistical results. Students will utilize statistical software to perform data analysis and answer research questions. The overall goal of this course is to assist students to develop a process for critical statistical thinking that is important in many areas of scientific research.

MPH 613 Environment, Society, and Health (3 Credit Hours)

This course provides an introduction to 21st century environmental health science. In addition to covering some of the traditional environmental factors affecting the health of individuals and communities in the region, the nation, and around the world, the class familiarizes students with a broad range of contemporary and emerging environmental health challenges and issues. In addition, through a series of guest presentations by experienced practitioners in the field, the course introduces students to the “real world” of environmental health practice.

MPH 615 Systems Thinking and Health Management (3 Credit Hours)

Students will learn the practice of systems thinking, which includes the ability to integrate multiple perspectives and synthesize them into a framework or model that encompasses the various ways in which a system might react to policy choices.

MPH 616 Research Methods in Public Health (3 Credit Hours)

This is a foundational course in research methods that will provide an overview of the basic principles of research design, methods, measurements, data collection and data management in the field of public health. Students will learn the differences between quantitative, qualitative and mixed methods approaches to public health research, as well as how to formulate and evaluate research questions. The overall goal of this course is to provide practical, step-by-step guidance to the research process under the scientific method framework.

Prerequisites: MPH 612 and HLSC 746

MPH 622 Environmental Health Law, Justice and Governance (3 Credit Hours)

This course surveys the basic legal concepts affecting environmental health services and program enforcement and administration. It is designed to provide a fundamental background of environmental and public health law for public health officers and other environmental health workers to fulfill their respective roles more successfully. Workplace occupational health and safety will not be addressed in depth in this course.

Pre- or corequisite: MPH 613

MPH 630 Health Communication and Social Marketing for Public Health (3 Credit Hours)

This course aims to provide students with a critical understanding of how social marketing offers a useful approach to address a variety of public health problems. It will emphasize social marketing within a broader strategic health communication framework. Students will learn how social marketing and strategic health communication can be applied effectively to address public health issues and how to design effective health communication programs.

Pre- or corequisite: MPH 611

MPH 632 Environmental and Occupational Health Risk Assessment (3 Credit Hours)

This course is an introduction to risk assessment, as applied to environmental and workplace hazards. It examines the fundamental concepts of risk. Students will learn the United States Environmental Protection Agency (USEPA) standard and advanced methodology for quantitative risk assessment including hazard identification, exposure assessment, dose-response modeling, risk characterization, and risk communication. Utilization of qualitative assessment methods and ecological risk assessment are also explored.

Pre- or corequisite: MPH 613

MPH 640 Health Disparities and Social Justice (3 Credit Hours)

This course provides an introduction to the topic of global health disparities through an in-depth examination and discussion of the relationship between social injustice and inequitable health outcomes. Students will be introduced to the social and environmental determinants of health disparities and the pathways and mechanisms leading to inequitable health outcomes in vulnerable groups, as well as strategies for addressing these determinants to improve health.

Pre- or corequisite: MPH 611

MPH 643 Principles of Toxicology (3 Credit Hours)

An introduction to the fundamentals of toxicology with emphasis on the interaction of environmental and industrial chemicals with humans are studied. Exposure, dose response, kinetics and distribution of toxicants, metabolism of toxic agents, factors that affect toxicity and introductory chemical carcinogenesis are discussed.

MPH 651 Health Promotion Theory and Practice (3 Credit Hours)

This course provides students with a comprehensive overview of the practical and theoretical principles and skills needed to plan, implement, and evaluate health promotion programs in a variety of settings. The course will help students apply constructs from theories to understand the determinants of health behaviors and emphasizes the importance of addressing health behavior change at the individual, interpersonal, organizational, community and societal levels of the social ecological model.

Pre- or corequisite: MPH 611

MPH 661 Program Planning and Evaluation (3 Credit Hours)

This course provides public health graduate students with a comprehensive overview of the practical and theoretical principles and skills needed to plan, implement, and evaluate health programs in a variety of settings.

Pre- or corequisite: MPH 611

MPH 669 Applied Practice Experience (1-3 Credit Hours)

This course provides students with an opportunity to engage in public health practice in the community or in a working environment. Applied practice experience (APE) is based on applied learning, problem-based and competency-linked activities. Students gain competence in public health practice relevant to the concentration area selected. The applied learning will require students to complete a project related to an actual public health issue that is a focus within a specific organization.

Pre- or corequisite: Approval of Practicum Director and/or Program Director

MPH 670 Applied Mixed-Methods Research in Health Promotion (3 Credit Hours)

Examines multicultural consideration across health promotion and public health domains, and developing a culturally sensitive and effective plan for health behavior change using mixed-methods research.

MPH 688 Grant Writing for Public Health Practice (3 Credit Hours)

This course covers issues and problems concerned with the development of grants and contracts as they relate to the health professions. The course focuses on the multiple roles of funding agencies and the importance of matching the interests of the grant seeker with the corresponding funding agency

MPH 689 Integrative Learning Experience (1-3 Credit Hours)

This is the culminating course for the MPH program. Students demonstrate an ability to integrate and synthesize foundational and concentration-specific competencies from their MPH program coursework. Students complete assignments that address timely public health issues culminating in high quality written products and an e-portfolio that demonstrate the analysis, synthesis and intersection of course work and concurrent practicum experiences. Students from all tracks are required to complete this course prior to graduation.

MPH 712 Applied Biostatistics (3 Credit Hours)

This course presents modern methods for analyzing data from epidemiologic and public health studies using the latest statistical methods. Emphasis will also be placed on technical and statistical report writing.

Pre- or corequisite: Satisfactory academic performance with B or above in MPH 746, MPH 612 and MPH 616 or approval from instructor or program director

MPH 713 Applied Statistical Programming (3 Credit Hours)

This course covers programming and computing techniques using contemporary statistical packages. Emphasis is placed on practical issues relating to organizing, modifying, and preparing data for analysis.

Pre- or corequisite: Satisfactory academic performance with B or above in MPH 746, MPH 612 and MPH 616 or approval from instructor or program director

MPH 716 Application of Epidemiological Methods (3 Credit Hours)

The course aims to prepare students with hands-on experience in producing common epidemiological measures while critically evaluating the quality of data and the design of epidemiological investigations.

Pre- or corequisite: Satisfactory academic performance with B or above in MPH 746, MPH 612 and MPH 616 or approval from instructor or program director

MPH 717 Epidemiology of Infectious Diseases: (3 Credit Hours)

This course focuses on the epidemiology of infectious diseases from a public health perspective. It applies traditional and contemporary epidemiological methods used to deal with infectious diseases.

Pre- or corequisite: Satisfactory academic performance with B or above in MPH 746, MPH 612 and MPH 616 or approval from instructor or program director

MPH 746 Epidemiology (3 Credit Hours)

This course examines epidemiology as a method for viewing inborn community health problems and as a body of knowledge derived from this method. Skills in using epidemiology as a method and as knowledge to solve community health problems will be included.

MPH 761 Advanced Quantitative Methods (3 Credit Hours)

This course adopts an applied approach to teaching health professions students the necessary competencies and skills in advanced quantitative methods. Topics include handling missing data, survey design and exploratory factor analysis, mediation and moderation analysis, and an introduction to confirmatory factor analysis and structural equation modeling (SEM).

Pre- or corequisite: MPH 612 and MPH 746

MPH 776 Global Health (3 Credit Hours)

This course will introduce the student to the political, social, cultural and ethical issues involved in disease prevention and health promotion globally. Specific emphasis will be on incidence/prevalence, morbidity/mortality, and identified health problems in specific regions and countries. This course will also identify international health prerogatives aimed at improving health status through education and intervention.

MPH 778 Global Environmental Health (3 Credit Hours)

The goal of this course is to guide students with a public health perspective to develop skills to identify and analyze environmental health problems globally. It is designed to provide knowledge on recognizing and evaluating major environmental health issues and risk factors in developed and developing countries by using group discussions and real-life case studies.

Pre- or corequisite: MPH 613

MPH 784 Creating Sustainable Environmental Futures (3 Credit Hours)

This course examines the interrelationships between individual and societal decisions and the global environment, and analyzes the consequences these interrelationships have for public health and sustainability. The course is organized into four in-depth modules: (1) toxic substances and environmental disasters, (2) food, sustainability, environmental quality and health, (3) climate, sea-level rise and public health, and (4) communities, sustainability and health. Students engage in an extensive examination of each area, analyze the public health implications, and consider various strategies for improving individual and population health, and enhancing sustainability, in the local area, the region, the nation and around the world.

MPHO - Master of Public Health

MPHO 600 Introduction to Public Health Practice (1 Credit Hour)

This course provides an introduction to the multidisciplinary field of public health. Students will learn the history, core functions, and roles of the US public health system through grounding in the 12 foundational public health knowledge areas.

MPHO 605 Introduction to Biostatistics for Public Health (3 Credit Hours)

This course introduces fundamental concepts in biostatistics. Students will learn how to analyze and interpret numeric data using statistical tools to investigate and evaluate public health issues.

MPHO 608 Environment and Public Health (3 Credit Hours)

This course provides an introduction to 21st century environmental health science and practice. In addition to covering foundational environmental issues affecting people's health, the class familiarizes students with contemporary environmental health challenges such as climate change, sea level rise, antibiotic resistance, food and sustainability, plastics and environmental health, disaster preparedness, lead poisoning, radiation safety and health, environmental justice, cultural competence, and environmental risk communication.

MPHO 610 Introduction to Public Health Practice (1 Credit Hour)

This introductory readings course provides students with an overview of the public health sector from a local, national, and global perspective. The history of public health and recent events leading to a complete transformation of service delivery are two of the topics presented.

MPHO 611 Social and Behavioral Sciences for Public Health (3 Credit Hours)

This course reviews and critiques psychological, social, and cultural concepts and models relevant to health and disease in society. Students will learn how to select and apply appropriate social and behavioral models to the design of public health interventions and policies. Existing social inequalities in health status related to race, social class, and gender will be explored, as will the intersection between risk factors and the development/implementation of public health interventions.

MPHO 612 Statistical Reasoning for Public Health (3 Credit Hours)

This course is an introduction to the use of statistics in the health field with emphasis on descriptive statistics, estimation, linear regression and contingency tables.

MPHO 613 Principles of Environmental Health Science (3 Credit Hours)

This course is an introduction to the chemical, physical and biological factors affecting human health and disease with emphasis on the skills to detect environmental factors in health problems and to determine methods of control to prevent disease and maximize environmental quality.

MPHO 614 Principles of Epidemiology (3 Credit Hours)

This course will introduce the principles and basic methods of epidemiology for applications in public health. These include measures of disease frequency and association, study design, sources of errors in epidemiological studies, validity and reliability of diagnostic and screening tests, causation, and outbreak investigations.

MPHO 616 Research Methods in Public Health (3 Credit Hours)

Public health professionals require skills to identify problems that face population groups, and to delineate ways to solve them. Often this necessitates conducting small- or large-scale investigations on their own, or as a member of a project team. The goal of this course is to provide practical, step-by-step guidance to the research process in public health.

MPHO 620 Health Management and Systems Thinking (3 Credit Hours)

In this course, students will review the structure and functions of American and international healthcare systems, public health practice, and managerial responsibilities. Additionally, this course will introduce students to the practice of systems thinking in public health and the influence of systems thinking on public health policy.

MPHO 622 Environmental Health Law, Justice and Governance (3 Credit Hours)

This course surveys the basic legal concepts affecting environmental health services and program enforcement & administration. It is designed to provide a fundamental background of environmental and public health law for public health officers and other environmental health workers to fulfill their respective roles more successfully.

MPHO 626 Effective Information Technology for Healthcare Organizations (3 Credit Hours)

This course provided the key concepts related to information technology within healthcare organizations. Students will learn how information technology is used as a tool to improve performance within health care organizations for positive health outcomes.

MPHO 627 Data Visualization (3 Credit Hours)

This course is intended to be a step-by-step introduction to the world of visual analytics and is designed for the beginner and intermediate uses of data visualization. The course will help students to understand and apply important concepts and techniques in data visualization, moving from simple to complex situations and combine them in interactive dashboards. Topics to be covered include data connection, different graphs and charts, quick table calculations, designing interactive dashboards, mapping, unions and joints.

MPHO 630 Health Communication and Social Marketing for Public Health (3 Credit Hours)

This course examines social marketing concepts and tools for influencing health behavior change. Students learn how to design, implement, and evaluate strategies for social marketing campaigns.

MPHO 631 Statistical Software for Public Health (3 Credit Hours)

This course is a collection of modules that introduce students to selected statistical software that are used widely in many areas of public health and research. The course will familiarize students with the primary features of statistical software, as well as database management, basic programming skills and tools, and some simple statistical procedures.

MPHO 632 Environmental and Occupational Health Risk Assessment (3 Credit Hours)

This course is an introduction to risk assessment, as applied to environmental and workplace hazards. It examines the fundamental concepts of risk. Students will learn the United States Environmental Protection Agency (USEPA) standard and advanced methodology for quantitative risk assessment including hazard identification, exposure assessment, dose-response modeling, risk characterization, and risk communication. Utilization of qualitative assessment methods and ecological risk assessment are also explored.

MPHO 633 Financing Healthcare (3 Credit Hours)

Students will examine financial evaluation of the health care industry, the source of funds, and the effects of changing patient policies. Other topics of interest will be financial strategies, budgets and capital outlay.

MPHO 634 Health Law and Ethics (3 Credit Hours)

This course examines legal, regulatory and ethical issues health professionals are likely to confront. In this course, we will examine the legal principles needed to analyze regulatory and liability issues. We will study selected principles and policies under-girding health, the American system of health law, including common law principles of liability and federal/state legislation regulating health professionals and operations. We will also discuss the impact of state and federal law on the operation of various health-related organizations.

MPHO 635 Healthcare Marketing (3 Credit Hours)

This course examines marketing principles, concepts and skills applied to health care organizations and health care networks. Students will examine marketing methodologies and principles for evaluating consumer decision making actions for health care services. The course will place emphasis on social media and electronic forms of marketing health care services. The course will culminate with the development of a strategic health care marketing plan.

MPHO 640 Health Disparities and Social Justice (3 Credit Hours)

This course provides an introduction to the topic of global health disparities through an in-depth examination and discussion of the relationship between social injustice and inequitable health outcomes. Students will be introduced to the behavioral, social and environmental determinants of health disparities and the pathways and mechanisms leading to inequitable health outcomes in vulnerable groups, as well as strategies for addressing these determinants to improve health.

MPHO 643 Principles of Toxicology (3 Credit Hours)

This course is an introduction to the basic principles of toxicology, and the interactions between toxic agents and living systems. The course consists of a study of general principles, dose response, toxin recognition and evaluation, chemicals, the human environment, and ecological toxicology.

MPHO 651 Health Promotion Theory and Practice (3 Credit Hours)

This course provides public health promotion graduate students with a comprehensive overview of the practical and theoretical principles and skills needed to plan, implement, and evaluate health promotion programs in a variety of settings. The course will help students apply constructs from theories to understand the determinants of health behaviors and emphasizes the importance of addressing health behavior change at the individual, interpersonal, organizational, community and societal levels of the social ecological model.

MPHO 660 Healthcare Informatics (3 Credit Hours)

This course examines the availability, use of interpretation of data obtained from traditional and new data systems used for population health monitoring. Included are public health surveillance systems, vital statistics, hospital discharge data, Health Plan Employer Data and Set (HEDIS), immunization information, school health data, 1996 Health Insurance Portability and Accountability Act (HIPAA), and regulatory agency data related to health.

MPHO 661 Program Planning and Evaluation (3 Credit Hours)

This course provides public and community health graduate students with a comprehensive overview of the practical and theoretical principles and skills needed to plan, implement, and evaluate health programs in a variety of settings.

MPHO 669 Applied Practice Experience (3 Credit Hours)

In this course, students build on their earlier practice activities (i.e., Practice Labs) and undertake an extensive, hands-on activity at a field-based practice site. The Practice Labs, which are completed prior to taking this course, are designed to meet foundational and track competencies as well as prepare students for an on-site work experience.

MPHO 670 Cultural Issues in Health Promotion and Education (3 Credit Hours)

This course provides an introduction for multicultural communication for health promotion and disease management. Topics to be covered include how to work collaboratively in diverse groups with an understanding of health behaviors, values, and health benefits.

MPHO 673 Policy and Politics of Health (3 Credit Hours)

This course enables the student to develop systematic and analytical frameworks for understanding health and healthcare policy issues. It will introduce the policy process, background research necessary for policy implementation, and implementation strategies.

MPHO 680 Global Health Issues (3 Credit Hours)

An examination of the political, social, cultural, and ethical issues for disease prevention and health promotion in developing countries. Students will learn to identify international health prerogatives aimed at improving health status through education and intervention.

MPHO 686 Legal Aspects of Health Services (3 Credit Hours)

This course examines the legal requirements affecting the health care industry, including a survey of the basic concepts and content in the major areas of health law, an explanation and identification of sources of legal authority, and a familiarity with legal language.

MPHO 688 Grant Writing for Public Health Practice (3 Credit Hours)

This course covers issues and problems concerned with the development of grants and contracts as they relate to the health professions. The course focuses on the multiple roles of funding agencies and the importance of matching the interests of the grant seeker with the corresponding funding agency.

MPHO 689 Integrative Learning Experience (3 Credit Hours)

This is the culminating course for the MPH program. Students demonstrate an ability to integrate and synthesize foundational and concentration-specific competencies from their MPH program coursework. Students complete assignments that address timely public health issues culminating in high quality written products and an e-portfolio that demonstrate the analysis, synthesis and intersection of course work and concurrent practicum experiences. Students from all tracks are required to complete this course prior to graduation.

MPHO 690 Leadership (3 Credit Hours)

The emphasis of this course is on the practice of leadership. The course will equip the student with the basic managerial background, fundamentals and theories which will be applicable at any level in management and in leadership positions. Students will be exposed to the interaction of leadership, change, communication and power as seen in the healthcare environment. This course will examine the traits of leading, developing leadership skill, creating a vision, managing conflicts and obstacles in an organization.

MPHO 695 Topics in Public Health (1-3 Credit Hours)

Topics in Public Health.

MPHO 701 Introduction to Healthcare Analytics (3 Credit Hours)

Participants will learn cutting edge strategies for implementing change and achieving high performance in their work environments from recognized healthcare delivery experts.

MPHO 702 Biostatistics II (3 Credit Hours)

This course is a continuation of MPHO 612: Statistical Reasoning for Public Health. This course is designed to train students on regression methods commonly employed in healthcare research. The primary objective of the course is to provide students with the skills necessary to carry out regression analysis and interpret them. The course emphasizes basic and advanced treatment of experimental data and use of analytical frameworks to solve real world problems. While there are some theory and formula derivations, the lectures and homework will focus on more technical aspects and conceptual understanding of fundamental statistical models. SAS will be used to manipulate data into an analyzable form, fit regression models, and perform model diagnostics.

MPHO 703 Programming Tools and Techniques in Data Management (3 Credit Hours)

This course is designed to train students in basic and advanced statistical programming languages R, SAS, and SQL together with techniques and tools necessary for data management and data mining. It will provide you with the skills in the data management process for analytics including data acquisition, cleaning, debugging, and decision making tools through case studies and projects.

MPHO 704 Predictive Data Analysis (3 Credit Hours)

This course introduces the techniques of predictive analytics in the context of a healthcare environment. The aim is to provide students with the highly demanded skills in data analytics and data mining by training them on how to move from data collection to data analysis and how to use data as the basis to predict future outcomes. Topics to be covered include formulating a hypothesis, examining data structure, selecting data, determining and designing appropriate statistical models, evaluating the models and interpreting the results.

MPHO 705 Data Mining and Machine Learning (3 Credit Hours)

This course covers healthcare analytics using data mining and machine learning techniques. Statistical software, R, will be implemented for data exploration and visualization, classification, clustering and time series analysis. Decision trees, nearest neighbor algorithm, artificial neural networks and support vector machine methods will be introduced. Case studies and real-world data will be utilized to leverage data mining and machine learning outcomes.

MPHO 706 Categorical Data Analysis (3 Credit Hours)

This course is designed to prepare the graduate students, health professionals, or fellows to apply statistical methods for analyzing categorical data relevant to healthcare analytics and public health research. The topics to be covered in this course include statistical models (e.g., logistic regression models and loglinear models) for categorical responses. Another emphasis of this course is to demonstrate the statistical methods of categorical data analysis based on real-world data using R and SAS software packages.

MPHO 707 Survival Analysis (3 Credit Hours)

This course is designed to prepare the graduate students, health professionals, or fellows to apply basic methods of statistical analysis for survival (a.k.a. time-to-event) data relevant to clinical and public health research. The major topics to be covered include the Kaplan-Meier product-limit estimation, log-rank and related tests, the Cox regression model, parametric model, power and sample size justification, competing risk analysis, and recurrent event analysis. Interpretation of subsequent analysis results will be stressed. Concepts will be explored through critical review of the biomedical and public health literature, class exercises, two exams, and a data analysis project. Computations will be illustrated using the statistical software package SAS. The course is intended for graduate students and health professionals who will be actively involved in the analysis and interpretation of biomedical research or public health studies generating time-to-event data.

MPHO 710 Implementing Change (3 Credit Hours)

This course gives students the opportunity to learn innovative strategies for implementing change and achieving high performance in their work environments.

MPHO 711 Epidemiology Methods I (3 Credit Hours)

The focus of the course is on an in-depth understanding of epidemiologic concepts and methods learned in a previous introductory course. Including: study designs, measures of disease frequency, measures of association and impact, the role of chance, threats to validity (selection bias, information bias, confounding, interaction), dealing with threats to validity (randomization, restriction, matching, stratification, adjustment, regression, quality assurance and quality control), communicating and disseminating information that pertains to epidemiologic investigations. Students will apply learned concepts and methods through in class exercises, problem sets, and projects.

MPHO 712 Applied Biostatistics (3 Credit Hours)

This course presents modern methods for analyzing data from epidemiologic and public health studies using the latest statistical methods. Emphasis is placed on practical, applied theories/concepts, aspects of methods for the analysis of diverse types of data including from observational studies, and the use of a computer for quantitative data management. Emphasis will also be placed on technical and statistical report writing.

MPHO 713 Applied Statistical Programming (3 Credit Hours)

This course covers programming and computing techniques using contemporary statistical packages. Emphasis is placed on practical issues relating to organizing, modifying, and preparing data for analysis.

MPHO 715 Current Issues in Epidemiology (3 Credit Hours)

Discussions with experts experienced in the diverse applications of epidemiology in current research and practice. Emphasis on emerging infectious diseases, environmental and occupational health, chronic diseases and community intervention trials. Lectures, discussions, class presentations and development of research project.

MPHO 716 Application of Epidemiological Methods (3 Credit Hours)

The course aims to prepare graduate students with hands-on experience in producing common epidemiological measures while critically evaluating the quality of data and the design of epidemiological investigations.

MPHO 717 Epidemiology of Infectious Diseases (3 Credit Hours)

This course focuses on the epidemiology of infectious diseases from a public health perspective. It applies traditional and contemporary epidemiological methods used to deal with infectious diseases.

MPHO 718 Epidemiologic Methods II (3 Credit Hours)

This course provides an intermediate discussion of public health surveillance and an introduction of survival analysis approaches. Key content will include a review of the updated guidelines for evaluating public health surveillance systems, information systems, types of surveillance, and special topics in surveillance [e.g., syndromic surveillance, geographic information systems (GIS), and global health surveillance systems]. Additional topics using SAS will include nonparametric survival function estimation, estimating parametric regression and Cox regression models, and competing risks. Individual and group learning activities include journal reviews and syntheses, case studies, SAS dataset analyses and reports, and a comprehensive final exam.

MPHO 721 Healthcare Strategy (3 Credit Hours)

This course is designed to help students learn about essential aspects of strategic planning and strategic management in the context of healthcare service organizations. Students will acquire an enhanced understanding of the complex U.S. healthcare system, apply planning concepts to formulate mission and vision statements, and formulate goals and objectives as part of a strategic plan. The course content will also address aspects of organizational leadership, along with the importance of implementation and monitoring progress to achieve continuous quality improvement and to 'close the loop' with strategic planning initiatives.

MPHO 723 Policy and Politics of Health (3 Credit Hours)

This course is an introduction to policy process, frameworks for understanding health policy issues, background research necessary for policy implementation and implementation strategies.

MPHO 727 Organizational Management (3 Credit Hours)

This course examines issues and principles in the management of individuals, groups and organizations. Topics includes motivation and rewards systems, group dynamics and organizational design and change.

MPHO 733 Financing Healthcare (3 Credit Hours)

Students examine financial evaluation of the healthcare industry, the source of funds and effects of changing patient policies. Other topics of interest will be financial strategies, budgets and capital outlay.

MPHO 736 Conflict Analysis and Negotiations (3 Credit Hours)

This course will provide students with advanced knowledge and skills in the theory of conflict analysis and resolution and negotiations, including but not necessarily limited to: skill development and collaborative problem solving at the individual, group, and organizational level; conceptual and practical skills in negotiation that are essential for managers; and third-party conflict intervention, which can assume several forms such as fact-finding, conciliation, mediation, and arbitration.

MPHO 737 Infectious and Chronic Disease Epidemiology (3 Credit Hours)

This 3-credit hour course is offered to Epidemiology Track students as a required course and to Masters of Public Health students in the remaining tracks as an elective course. This course is focused on substantive areas in epidemiology with an emphasis on 'infectious disease epidemiology' and 'chronic disease epidemiology'. The course gives the introductory scientific and biomedical theories of modern public health problems and explores mechanisms and models of the major categories of disease.

MPHO 750 Community Practicum (3 Credit Hours)

This course is an opportunity to apply knowledge and skills gained in academic courses in a working environment or community setting under the supervision of a preceptor. This course requires a written report to the preceptor and the course director as well as oral presentation.

MPHO 772 International Health Exchange Program (3 Credit Hours)

This course exposes students to important issues in international public health and is unique in that it involves the analysis of health problems in the broad social, cultural, economic and political contexts that generate and sustain them.

MPHO 776 Global Health (3 Credit Hours)

This course introduces students to the political, social, cultural, environmental, and ethical issues globally involved in disease prevention and health promotion. Specific emphasis is on incidence/prevalence, morbidity/mortality, and identified health problems in specific regions and countries. This course also identifies global health prerogatives aimed at improving health status through education and intervention.

MPHO 778 Global Environmental Health (3 Credit Hours)

The goal of this course is to guide students with a public health perspective to develop skills to identify and analyze environmental health problems globally. It is designed to provide knowledge on recognizing and evaluating major environmental health issues and risk factors in developed and developing countries by using group discussions and real-life case studies.

MPHO 779 Intro to Research Methods (3 Credit Hours)

The goal of this course is to provide practical, step-by-step guidance in the research process. The organizing framework used is the scientific method, which is applied to current health initiatives. Students develop a unique research design proposal.

MPHO 784 Creating Sustainable Environmental Futures (3 Credit Hours)

This second-year MPH course examines the interrelationships between individual and societal decisions and the global environment, and the consequences these interrelationships have for public health. Students engage in an in-depth examination of key environmental health issues, analyze the public health implications, and consider various strategies for improving individual and population health, and enhancing sustainability, in the local area, the region, the nation and around the world.

MPHO 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

MSA - Surgical Assisting

MSA 602 Medical Terminology (2 Credit Hours)

The medical terminology class is an intense, three-week course taught at the beginning of the surgical assisting student's first year. The course employs a body systems-oriented, word-analysis approach to learning medical terminology. The goal of the class is to prepare students for the terminology they might encounter in their subsequent coursework, in their clinical rotations and ultimately in their roles as healthcare professionals.

MSA 603 Surgical Microbiology with Lab (3 Credit Hours)

Surgical Microbiology reviews the infectious processes and organisms, immune responses, risks to operating-room patients and personnel and universal precautions.

MSA 604 Advanced Topics of Surgical Assisting I (1 Credit Hour)

Advanced Topics of Surgical Assisting is a monthly journal club that investigates topics addressed in the core curriculum classes as well as current issues impacting the surgical assisting profession. Course readings will be provided by program faculty and surgical assistant professional organizations.

MSA 605 Advanced Topics of Surgical Assisting II (1 Credit Hour)

Advanced Topics of Surgical Assisting is a monthly journal club that investigates topics addressed in the core curriculum classes as well as current issues impacting the surgical assisting profession. Course readings will be provided by program faculty and surgical assistant professional organizations.

MSA 606 Operative Practices (2 Credit Hours)

Lecture series is a seminar course that explores the details of topics such as attitude and etiquette in the OR, casting and splinting, stress management, ethics, surgical technique, OR conduct and patient interaction, back-table setup and the SA, trauma, sterile technique, gowning and gloving review. The seminars are conducted by program alumni and other medical professionals.

MSA 607 Surgical Rounds (3 Credit Hours)

Surgical Rounds is a hands-on clinical training experience lead by surgical residents to complement the student's didactic experience through active participation as part of a surgical team to develop the critical clinical skills needed for a surgical assistant.

MSA 608 Clinical Anatomy for Health Professions (5 Credit Hours)

Gross Anatomy is a regional study of anatomy related to surgical procedures with cadaver lab. It also includes review of physiology relevant to survey and an introduction to basic embryology, histology and pathology.

MSA 610 Advanced Surgical Pharmacology (2 Credit Hours)

Advanced Pharmacology is a biophysical science based course which examines drugs used in surgery and emergency drugs, reviewing anaphylactic and toxicity reactions. The course also addresses anesthesia methods and agents and their methods of administration, describing how the surgical procedure may be affected by the agents used.

MSA 611 Minimally Invasive Surgery (4 Credit Hours)

This course is designed to give the surgical assistant student a broad look into minimally invasive surgery while introducing the techniques involved. Numerous subspecialties, how minimally invasive techniques are utilized, and the history of these techniques will be discussed. Students will engage in hands-on learning to help facilitate the learning curve once they are in their clinical year.

MSA 612 Surgical Physiology (4 Credit Hours)

Surgical Physiology is a course provided by the biophysiology and applied surgical pathology for the advancement of knowledge application in the surgical environment designed for Surgical Assistant students. Topics including cell injury, inflammation and wound healing are covered.

MSA 613 Principles of Surgical Assisting I Lecture (2 Credit Hours)

Principles of Surgical Assisting is a two-part course that teaches fundamental skills: Placement of monitoring devices, review of bladder catheterization, surgical positioning, application of tourniquets, prepping and draping, operative instrumentation, visualization techniques, hemostasis, suturing and knot tying techniques, dressings and drainage systems, post-operative pain control methods and the use of special equipment.

MSA 614 Principles of Surgical Assisting I Lab (2 Credit Hours)

Principles of Surgical Assisting is a two-part course that teaches fundamental skills: Placement of monitoring devices, review of bladder catheterization, surgical positioning, application of tourniquets, prepping and draping, operative instrumentation, visualization techniques, hemostasis, suturing and knot tying techniques, dressings and drainage systems, post-operative pain control methods and the use of special equipment.

MSA 615 Principles of Surgical Assisting II Lecture (2 Credit Hours)

Principles of Surgical Assisting is a two-part course that teaches fundamental skills: Placement of monitoring devices, review of bladder catheterization, surgical positioning, application of tourniquets, prepping and draping, operative instrumentation, visualization techniques, hemostasis, suturing and knot tying techniques, dressings and drainage systems, post-operative pain control methods and the use of special equipment.

MSA 616 Principles of Surgical Assisting II Lab (2 Credit Hours)

Principles of Surgical Assisting is a two-part course that teaches fundamental skills: Placement of monitoring devices, review of bladder catheterization, surgical positioning, application of tourniquets, prepping and draping, operative instrumentation, visualization techniques, hemostasis, suturing and knot tying techniques, dressings and drainage systems, post-operative pain control methods and the use of special equipment.

MSA 617 Clinical Reasoning for Surgical Assisting (1 Credit Hour)

Principles of Surgical Assisting is a two-part course that teaches fundamental skills: Placement of monitoring devices, review of bladder catheterization, surgical positioning, application of tourniquets, prepping and draping, operative instrumentation, visualization techniques, hemostasis, suturing and knot tying techniques, dressings and drainage systems, post-operative pain control methods and the use of special equipment.

MSA 618 Trauma (2 Credit Hours)

Expose the surgical assistant student to the specialty dedicated to the care of the individual who has been injured, whatever the mechanism.

MSA 619 Business of Surgical Assisting Services (3 Credit Hours)

This course presents an in-depth overview of the business of surgical assisting. Students are exposed to all aspects of the surgical assisting business to help them make informed career decisions.

MSA 620 Medical Ethics of Surgical Assisting (2 Credit Hours)

This course explores a variety of ethical and legal issues facing healthcare professionals and the Surgical Assisting profession.

MSA 621 Capstone Project (3 Credit Hours)

This is an applied science and practice application course. Students develop an educational resource product in their area of surgical specialty concentration for contribution to the program's resource library.

MSA 622 Leadership in Healthcare (1 Credit Hour)

Leadership in healthcare.

MSA 623 Guided Study (3 Credit Hours)

This course is designed to allow the student to explore a specified surgical topic under the direct supervision of the faculty member.

MSA 700 General Surgery (3 Credit Hours)**MSA 701 General Surgery (3 Credit Hours)****MSA 702 General Surgery (3 Credit Hours)****MSA 703 Orthopedic Surgery (3 Credit Hours)****MSA 704 Orthopedic Surgery (3 Credit Hours)****MSA 705 Orthopedic Surgery (3 Credit Hours)****MSA 706 Plastic Surgery (3 Credit Hours)****MSA 707 Plastic Surgery (3 Credit Hours)****MSA 708 Plastic Surgery (3 Credit Hours)****MSA 709 Vascular Surgery (3 Credit Hours)****MSA 710 Vascular Surgery (3 Credit Hours)****MSA 711 Vascular Surgery (3 Credit Hours)****MSA 712 OB/GYN (3 Credit Hours)****MSA 713 OB/GYN (3 Credit Hours)****MSA 714 OB/GYN (3 Credit Hours)****MSA 715 ENT (3 Credit Hours)****MSA 716 ENT (3 Credit Hours)****MSA 717 ENT (3 Credit Hours)****MSA 718 Cardiac Surgery (3 Credit Hours)****MSA 719 Cardiac Surgery (3 Credit Hours)****MSA 720 Cardiac Surgery (3 Credit Hours)****MSA 721 Surgical Elective (3 Credit Hours)****MSA 722 Surgical Elective (3 Credit Hours)****MSA 723 Surgical Elective (3 Credit Hours)****MSA 724 Pediatric Surgery (3 Credit Hours)****MSA 725 Pediatric Surgery (3 Credit Hours)****MSA 726 Pediatric Surgery (3 Credit Hours)****MSA 727 Robotics (3 Credit Hours)****MSA 728 Robotics (3 Credit Hours)****MSA 730 Neurosurgery (3 Credit Hours)****MSA 731 Neurosurgery (3 Credit Hours)****MSA 732 Neurosurgery (3 Credit Hours)**

MSCM - Maritime and Supply Chain Management

MSCM 530 Strategic Sourcing and Purchasing Management (3 Credit Hours)

An overview of the strategic sourcing of materials and services in the organization and its role in the supply chain. Topics include sourcing decisions, price/cost analysis, quality issues, purchasing, supplier selection, legal and ethical issues, third party logistics, freight forwarding, and acquisition of services and capital assets.

MSCM 568 Distribution Center and Material Handling Management (3 Credit Hours)

This course is designed to investigate the strategic role of distribution center and material management in the supply chain. Course content includes the analysis of distribution center operations through the study of design, system selection, and layout configuration as well as the evaluation of material handling and inventory management options.

Prerequisites: OPMT 303

MSCM 595 Topics in Maritime and Supply Chain Management (3 Credit Hours)

A study of selected topics within maritime and supply chain management designed to provide an in-depth exploration of current issues.

Prerequisites: Permission of the instructor

MSCM 610 International Shipping and Supply Chain Management (3 Credit Hours)

Examines international freight transportation and terms for movement of international trade; focuses on improving supply chain relationships in the movement of international trade/directing the flow of information, materials and products. (cross-listed with PORT 610)

MSCM 615 Maritime Security and Risk Analysis (3 Credit Hours)

An overview of international and U.S initiatives to ensure the security of vessels, cargo, people, and infrastructure within the maritime domain. In addition to the impacts of regulatory requirements on maritime commerce, the course also addresses maritime threats to the international economy (including maritime piracy and maritime terrorism), maritime coalitions , and state-of-the-art techniques and tools for safeguarding oceanborne commerce. (cross-listed with PORT 615)

MSCM 616 Reverse Logistics and Sustainable Operations (3 Credit Hours)

This course explores the theoretical foundations of global supply chain partnerships and reverse logistics systems, and examines the practices, risks, and opportunities found in today's systems. Fundamental tools and techniques are used to provide insights and solutions on how to best organize, manage, and optimize such systems to achieve sustainable performance. (cross-listed with PORT 616)

MSCM 617 Transportation Management (3 Credit Hours)

The course includes a review of the key elements of transportation such as: modes of transportation, transportation economics, and transportation technology and regulations. The relationships between intermediaries, carriers and shippers are discussed, as well as company roles and operations within the transportation field, transportation sourcing and management, and transportation risk management.

MSCM 630 Strategic Sourcing and Supply Management (3 Credit Hours)

An overview of the strategic sourcing of materials and services in the organization and its role in the supply chain. Emphasis is placed on effectively managing the supply management process. Topics include the analysis of sourcing decisions, price/cost analysis, purchasing, supplier selection and relationship management, legal and ethical issues, third party logistics, freight forwarding, and acquisition of services and capital assets.

MSCM 641 Supply Chain Management and Logistics (3 Credit Hours)

Supply chain management integrates all activities associated with the flows of materials, information, and funds. Examples include strategic sourcing, order processing, warehousing, inventory management, transportation and logistics, and the costs and information systems supporting these activities.

MSCM 648 Distribution Center Management (3 Credit Hours)

This course investigates the strategic role of distribution centers in the supply chain. Course content includes the analysis of distribution center operations through the study of design, system selection, and layout configuration as well as the evaluation of material handling and inventory management alternatives. Tactical, operational and strategic planning options are also discussed.

MSIM - Modeling and Simulation

MSIM 506 Introduction to Distributed Simulation (3 Credit Hours)

An introduction to distributed simulation. Topics include motivation for using distributed simulation, distributed simulation architectures, time management issues, and distributed simulation approaches. Current standards for distributed simulation are presented.

Prerequisites: ECE 348

MSIM 508 Introduction to Game Development (3 Credit Hours)

An introductory course focused on game development theory and modern practices with emphasis on educational game development. Topics include game architecture, computer graphics theory, user interaction, audio, high level shading language, animation, physics, and artificial intelligence. The developed games can run on a variety of computer, mobile, and gaming platforms.

Prerequisites: CS 361 or ECE 348 or instructor approval

MSIM 510 Model Engineering (3 Credit Hours)

The goal of this course is to develop understanding of the various modeling paradigms appropriate for capturing system behavior and conducting digital computer simulation of many types of systems. The techniques and concepts discussed typically include UML, concept graphs, Bayesian nets, Markov models, Petri nets, system dynamics, Bond graphs, etc. Students will report on a particular technique and team to implement a chosen system model. (cross-listed with ECE 510)

MSIM 516 Cyber Defense Fundamentals (3 Credit Hours)

This course focuses on cybersecurity theory, information protection and assurance, and computer systems and networks security. The objectives are to understand the basic security models and concepts, learn fundamental knowledge and tools for building, analyzing, and attacking modern security systems, and gain hands-on experience in cryptographic algorithms, security fundamental principles, and Internet security protocol and standards. Cross-listed with ECE 516.

MSIM 519 Cyber Physical Systems Security (3 Credit Hours)

Cyber Physical Systems (CPS) integrate computing, networking, and physical processes. The objectives of this course are to learn the basic concepts, technologies and applications of CPS, understand the fundamental CPS security challenges and national security impact, and gain hands-on experience in CPS infrastructures, critical vulnerabilities, and practical countermeasures. Cross-listed with ECE 519.

MSIM 541 Computer Graphics and Visualization (3 Credit Hours)

The course provides a practical treatment of computer graphics and visualization with emphasis on modeling and simulation applications. It covers digital image and signal processing basics such as sampling and discrete Fourier transform, computer graphics fundamentals, visualization principles, and software architecture for visualization in modeling and simulation. Written communication and information literacy skills are stressed in this course. (Cross listed with ECE 506.)(Offered fall).

Prerequisites: a grade of C or better in CS 361, or ECE 348, or MSIM 603

MSIM 551 Analysis for Modeling and Simulation (3 Credit Hours)

An introduction to analysis techniques appropriate to the conduct of modeling and simulation studies. Topics include input modeling, random number generation, output analysis, variance reduction techniques, and experimental design. In addition, techniques for verification & validation are introduced. Course concepts are applied to real systems and data.

Prerequisites: ECE 306; STAT 330 or ECE 304

MSIM 562 Introduction to Medical Image Analysis (3 Credit Hours)

Introduction to basic concepts in medical image analysis. Medical image registration, segmentation, feature extraction, and classification are discussed. Basic psychophysics, fundamental ROC analysis and FROC methodologies are covered. Cross-listed with ECE 462/ECE 562.

MSIM 563 Design and Modeling of Autonomous Robotic Systems (3 Credit Hours)

Course focuses on autonomous robotics systems with emphasis on using modeling and simulation (M&S) for system level design and testing. Fundamental concepts associated with autonomous robotic systems are discussed. Course topics include: robotic control, architectures, and sensors as well as more advanced concepts such as error propagation, localization, mapping and autonomy. Design strategies that leverage M&S to accelerate the development and testing of sophisticated autonomous robotic algorithms for individual or teams of robots are covered.

Prerequisites: CS 150 or ENGN 150 or ENGN 122

MSIM 570 Foundations of Cyber Security (3 Credit Hours)

Course provides an overview of theory, tools and practice of cyber security and information assurance through prevention, detection and modeling of cyber attacks and recovery from such attacks. Techniques for security modeling, attack modeling, risk analysis and cost-benefit analysis are described to manage the security of cyber systems. Fundamental principles of cyber security and their applications for protecting software and information assets of individual computers and large networked systems are explored. Anatomy of some sample attacks designed to compromise confidentiality, integrity and availability of cyber systems are discussed.

Prerequisites: CS 150 or ENGN 150 or ENGN 122

MSIM 574 Transportation Data Analytics (3 Credit Hours)

This course presents the basic techniques for transportation data analytics. It will discuss statistical modeling, prominent algorithms, and visualization approaches to analyze both small- and large-scale data sets generated from transportation systems. Practices of using different data for various real-world traffic/transportation applications and decision making will also be discussed.

Prerequisites: STAT 330 or ECE 304

MSIM 580 Introduction to Artificial Intelligence (3 Credit Hours)

Introduction to concepts, principles, challenges, and research in major areas of artificial intelligence. Areas of discussion include: natural language and vision processing, machine learning, machine logic and reasoning, robotics, expert and mundane systems. Laboratory work required.

Prerequisites: Instructor approval

MSIM 595 Topics in Modeling and Simulation Engineering (3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in modeling and simulation engineering.

MSIM 596 Topics in Modeling and Simulation Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on the recent developments in modeling and simulation engineering.

Prerequisites: permission of the instructor

MSIM 597 Independent Study in Modeling and Simulation Engineering (3 Credit Hours)

Individual analytical, computational, and/or experimental study in an area selected by the student. Supervised and approved by the advisor.

MSIM 601 Introduction to Modeling and Simulation (3 Credit Hours)

Modeling and simulation (M&S) discipline surveyed at an overview level of detail. Basic terminology, modeling methods, and simulation paradigms are introduced. Applications of M&S in various disciplines are discussed. The course provides a general conceptual framework for those interested in using M&S and for further studies in M&S. Not open to MSVE degree seeking students.

Prerequisites: graduate standing; undergraduate exposure to calculus and probability & statistics

MSIM 602 Simulation Fundamentals (3 Credit Hours)

An introduction to the modeling and simulation discipline. Introduction to discrete event simulation (DES) including simulation methodology, input data modeling, output data analysis, and an overview of DES tools. Introduction to continuous simulation (CS) including simulation methodology, differential equation models, numerical solution techniques, and an overview of CS tools.

Prerequisites: graduate standing; undergraduate preparation in calculus and probability & statistics; and computer literacy

MSIM 603 Simulation Design (3 Credit Hours)

Course develops the computer software skills necessary for the design and development of simulation software. Topics covered include software architectures, software engineering, software design, object-oriented programming, abstract data types and classes, data structures, algorithms, and testing and debugging techniques. Software design and development of simulation systems (discrete-event, continuous, and Monte Carlo) are emphasized.

Prerequisites: MSIM 602 and an introductory computer programming course

MSIM 607 Machine Learning I (3 Credit Hours)

Course provides a practical treatment of design, analysis, implementation and applications of algorithms. Topics include multiple learning models: linear models, neural networks, support vector machines, instance-based learning, Bayesian learning, genetic algorithms, ensemble learning, reinforcement learning, unsupervised learning, etc. (Cross listed with ECE 607)

MSIM 660 System Architecture and Modeling (3 Credit Hours)

Students will learn the essential aspects of the system architecture paradigm through environment and analysis of multiple architecture framework and enterprise engineering, such as IDEFO, TOGAF, DODAF and OPM. Emphasis on system modeling and enterprise engineering. (Cross listed with ENMA 660)

MSIM 667 Cooperative Education (1-3 Credit Hours)

Student participation for credit based on academic relevance of the work experience, criteria, and evaluation procedures. Available for pass/fail grading only. May be repeated for credit.

MSIM 668 Internship (1-3 Credit Hours)

Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career-related experience.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

MSIM 669 Practicum (1-3 Credit Hours)

Academic requirements will be established by the graduate program director and will vary with the amount of credit desired. Allows students an opportunity to gain short-duration career related experience. Student is usually employed—this is an additional project beyond the duties of the student's employment.

MSIM 670 Cyber Systems Engineering (3 Credit Hours)

This course provides an overview of functioning of cyber systems including how a computer interacts with the outside world. The composition of critical infrastructure and functioning of different engineered systems that form critical infrastructure are discussed. Mutual dependence and interactions between cyber systems and other engineered systems and the resulting security risks are also explored. (Cross-listed with ENMA 670.)

MSIM 673 Threat Modeling and Risk Analysis (3 Credit Hours)

This course discusses how to develop cyber threat models using attack graphs/trees, STRIDE, Universal Modeling Language (UML), attack graphs/trees and common of risk analysis tools. Course also discusses the need for quantitative security analysis and formal validation of security models and basic principles of formal model validation. (Cross-listed with ENMA 673.)

MSIM 695 Topics in Modeling and Simulation (3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in modeling and simulation.

MSIM 697 Independent Study in Modeling and Simulation (3 Credit Hours)

Individual study selected by the student. Supervised and approved by a faculty member with the approval of the graduate program director.

Prerequisites: permission of instructor or graduate program director

MSIM 699 Thesis (1-6 Credit Hours)

Research leading to the Master of Science thesis.

Prerequisites: permission of instructor and graduate program director

MSIM 702 Systemic Decision Making (3 Credit Hours)

As machine age problems have given way to systems age messes, the underlying complexity associated with understanding these situations has increased exponentially. Accordingly, the methods we use to address these situations must evolve as well. This course will introduce students to a method for thinking holistically about problems and messes conceptually founded in systems theory. This paradigm, known as systemic thinking, will be contrasted with traditional systematic thinking, and practical guidelines for the deployment of a systemic thinking approach will be provided. This paradigm will increase the student's ability to make rational decisions in complex environments. (Cross listed with ENMA 702).

MSIM 703 Optimization Methods (3 Credit Hours)

Covers advanced methods in Operations Research and Optimization. Focus will be on developing models and their applications in different domains including manufacturing and service. Modern optimization tools will be used to implement models for case studies, projects and research papers. The knowledge of programming and spreadsheets is expected. Contact instructor for more details. (Cross-listed with ENMA 703).

MSIM 711 Finite Element Analysis (3 Credit Hours)

The purpose of the course is to provide an understanding of the finite element method (FEM) as derived from an integral formulation perspective. The course will demonstrate the solutions of (1-D and 2-D) continuum mechanics problems such as solid mechanics, fluid mechanics and heat transfer.

Prerequisites: permission of the instructor

MSIM 715 High Performance Computing Simulation and Data Analytics (3 Credit Hours)

Introduction to modern high performance computing platforms including top supercomputers and accelerators. Discussion of parallel architectures, performance, programming models, and software development issues. Case studies of scientific and engineering simulations will be explored. Students will have an opportunity to work on parallelization of problems from their research areas. Project presentations are required.

MSIM 722 Cluster Parallel Computing (3 Credit Hours)

This course provides detailed numerical step-by-step procedures to exploit parallel and sparse computation under MPI (Message Passing Interface) computer environments. Large-scale engineering/science applications are emphasized. Simultaneous linear equations are discussed.

MSIM 725 Principles of Combat Modeling and Simulation (3 Credit Hours)

Principles of combat modeling and simulation. Introduction including history, basic definitions, and best practice. Algorithms for modeling movement, sensing effects and behavior. Overview of modern combat models. Interoperability and integration into operational environments.

Prerequisites: MSIM 603

MSIM 730 Simulation Formalisms (3 Credit Hours)

The focus of the course is on identification and investigation of mathematical and logical structures that form the foundation for computational simulation. Topics include: foundations of simulation theory in logic, discrete mathematics, and computability; simulation formalisms, including DEVS; interoperability protocols; and computational complexity.

MSIM 741 Principles of Visualization (3 Credit Hours)

Well-designed graphical media capitalizes on human facilities for processing visual information and thereby improves comprehension, memory, inference, and decision making. This course teaches techniques and algorithms for creating effective visualizations based on principles and techniques from graphic design, visual art, perceptual psychology and cognitive science. Both users and developers of visualization tools and systems will benefit from this course.

MSIM 742 Synthetic Environments (3 Credit Hours)

The course covers the theory and techniques for building effective and efficient synthetic environments for modeling and simulation applications. Topics include physics, artificial intelligence, virtual reality, and advanced modeling and rendering. The emphasis is on producing visually realistic synthetic environments based on effective approximations of physics and other related principles.

Prerequisites: MSIM 541 or equivalent

MSIM 751 Advanced Analysis for Modeling and Simulation (3 Credit Hours)

An introduction to stochastic dependence and Bayesian analysis techniques for conducting modeling and simulation studies. Topics include: measures of dependence, common multivariate distributions, sampling from multivariate distributions, elementary time series models and Bayesian statistics.

Prerequisites: MSIM 451 or MSIM 551

MSIM 762 Applied Medical Image Analysis (3 Credit Hours)

Course explores hands-on exposure to state-of-the-art algorithms in medical image analysis, which builds on open-source software (Insight Segmentation and Registration Toolkit - ITK), as well as the principles of medical image acquisition in the modalities of clinical interest. Medical imaging modalities - X-rays, CT, and MRI/ITK image pipeline; image enhancement, feature detection; segmentation - basic techniques, feature-based classification and clustering, graph cuts, active contour and surface models; surface and volume meshing; registration - transformations, similarity criteria; shape and appearance models are all explored and discussed in this course.

Prerequisites: Knowledge of C++ and object-oriented programming

MSIM 772 Modeling Global Events (3 Credit Hours)

Modeling Global Events introduces modeling and simulation as a tool for expanding our understanding of events that have shaped the global environment of the 21st century. Students will review real-world case studies and then analyze these case studies via system dynamics, agent-based, social network, and game theory modeling paradigms. This course is designed to develop empirical research skills, conceptual modeling expertise, and model construction. Students will understand how to analyze, verify, and validate a model.

MSIM 774 Transportation Network Flow Models (3 Credit Hours)

This course provides a rigorous introduction to transportation network modeling, with special emphasis on network equilibrium problems. Topics include: elementary graph theory, shortest path problem nonlinear optimization, optimization of univariate functions, deterministic and stochastic user equilibrium. (Cross-listed with CEE 774).

MSIM 775 Transportation Network Algorithms (3 Credit Hours)

Fundamental models and algorithms in optimization, stochastic modeling and parallel computing will be discussed and illustrated with transportation applications. (Cross-listed with CEE 775)

MSIM 776 Simulation Modeling in Transportation Networks (3 Credit Hours)

Principles of simulation modeling, microscopic, mesoscopic, and macroscopic traffic simulation models. Course explores driver behavior in networks, calibration and validation of traffic simulation models, and use of traffic simulation software. (Cross-listed with CEE 776)

MSIM 780 Machine Learning II (3 Credit Hours)

Advanced topics in machine learning and pattern recognition systems. Data reduction techniques including principle component analysis, independent component analysis and manifold learning. Introduction to sparse coding and deep learning for data representation and feature extraction. (Cross-listed with ECE 780)

Prerequisites: MSIM 607 or equivalent

MSIM 795 Topics in Modeling and Simulation (3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in modeling and simulation.

MSIM 797 Independent Study in Modeling and Simulation (3 Credit Hours)

Individual study selected by the student. Supervised and approved by a faculty member with the approval of the graduate program director.

Prerequisites: permission of instructor or graduate program director

MSIM 802 Systemic Decision Making (3 Credit Hours)

As machine age problems have given way to systems age messes, the underlying complexity associated with understanding these situations has increased exponentially. Accordingly, the methods we use to address these situations must evolve as well. This course will introduce students to a method for thinking holistically about problems and messes conceptually founded in systems theory. This paradigm, known as systemic thinking, will be contrasted with traditional systematic thinking, and practical guidelines for the deployment of a systemic thinking approach will be provided. This paradigm will increase the student's ability to make rational decisions in complex environments. (Cross listed with ENMA 802).

MSIM 803 Optimization Methods (3 Credit Hours)

Covers advanced methods in Operations Research and Optimization. Focus will be on developing models and their applications in different domains including manufacturing and service. Modern optimization tools will be used to implement models for case studies, projects and research papers. The knowledge of programming and spreadsheets is expected. Contact instructor for more details. (Cross-listed with ENMA 803).

MSIM 811 Finite Element Analysis (3 Credit Hours)

The purpose of the course is to provide an understanding of the finite element method (FEM) as derived from an integral formulation perspective. The course will demonstrate the solutions of (1-D and 2-D) continuum mechanics problems such as solid mechanics, fluid mechanics and heat transfer.

Prerequisites: permission of the instructor

MSIM 815 High Performance Computing Simulation and Data Analytics (3 Credit Hours)

Introduction to modern high performance computing platforms including top supercomputers and accelerators. Discussion of parallel architectures, performance, programming models, and software development issues. Case studies of scientific and engineering simulations will be explored. Students will have an opportunity to work on parallelization of problems from their research areas. Project presentations are required.

MSIM 822 Cluster Parallel Computing (3 Credit Hours)

This course provides detailed numerical step-by-step procedures to exploit parallel and sparse computation under MPI (Message Passing Interface) computer environments. Large-scale engineering/science applications are emphasized. Simultaneous linear equations are discussed.

MSIM 825 Principles of Combat Modeling and Simulation (3 Credit Hours)

Principles of combat modeling and simulation. Introduction including history, basic definitions, and best practice. Algorithms for modeling movement, sensing effects and behavior. Overview of modern combat models. Interoperability and integration into operational environments.

Prerequisites: MSIM 603

MSIM 830 Simulation Formalisms (3 Credit Hours)

The focus of the course is on identification and investigation of mathematical and logical structures that form the foundation for computational simulation. Topics include: foundations of simulation theory in logic, discrete mathematics, and computability; simulation formalisms, including DEVS; interoperability protocols; and computational complexity.

MSIM 841 Principles of Visualization (3 Credit Hours)

Well-designed graphical media capitalizes on human facilities for processing visual information and thereby improves comprehension, memory, inference, and decision making. This course teaches techniques and algorithms for creating effective visualizations based on principles and techniques from graphic design, visual art, perceptual psychology and cognitive science. Both users and developers of visualization tools and systems will benefit from this course.

MSIM 842 Synthetic Environments (3 Credit Hours)

The course covers the theory and techniques for building effective and efficient synthetic environments for modeling and simulation applications. Topics include physics, artificial intelligence, virtual reality, and advanced modeling and rendering. The emphasis is on producing visually realistic synthetic environments based on effective approximations of physics and other related principles.

Prerequisites: MSIM 541 or equivalent

MSIM 851 Advanced Analysis for Modeling and Simulation (3 Credit Hours)

An introduction to stochastic dependence and Bayesian analysis techniques for conducting modeling and simulation studies. Topics include: measures of dependence, common multivariate distributions, sampling from multivariate distributions, elementary time series models and Bayesian statistics.

Prerequisites: MSIM 451 or MSIM 551

MSIM 862 Applied Medical Image Analysis (3 Credit Hours)

Course explores hands-on exposure to state-of-the-art algorithms in medical image analysis, which builds on open-source software (Insight Segmentation and Registration Toolkit - ITK), as well as the principles of medical image acquisition in the modalities of clinical interest. Medical imaging modalities - X-rays, CT, and MRI/ITK image pipeline; image enhancement, feature detection; segmentation - basic techniques, feature-based classification and clustering, graph cuts, active contour and surface models; surface and volume meshing; registration - transformations, similarity criteria; shape and appearance models are all explored and discussed in this course.

MSIM 872 Modeling Global Events (3 Credit Hours)

Modeling Global Events introduces modeling and simulation as a tool for expanding our understanding of events that have shaped the global environment of the 21st century. Students will review real-world case studies and then analyze these case studies via system dynamics, agent-based, social network, and game theory modeling paradigms. This course is designed to develop empirical research skills, conceptual modeling expertise, and model construction. Students will understand how to analyze, verify, and validate a model.

MSIM 874 Transportation Network Flow Models (3 Credit Hours)

This course provides a rigorous introduction to transportation network modeling, with special emphasis on network equilibrium problems. Topics include: elementary graph theory, shortest path problem nonlinear optimization, optimization of univariate functions, deterministic and stochastic user equilibrium. (Cross-listed with CEE 874).

MSIM 875 Transportation Network Algorithms (3 Credit Hours)

Fundamental models and algorithms in optimization, stochastic modeling and parallel computing will be discussed and illustrated with transportation applications. (Cross-listed with CEE 875)

MSIM 876 Simulation Modeling in Transportation Networks (3 Credit Hours)

Principles of simulation modeling, microscopic, mesoscopic, and macroscopic traffic simulation models. Course explores driver behavior in networks, calibration and validation of traffic simulation models, and use of traffic simulation software. (Cross-listed with CEE 876)

MSIM 880 Machine Learning II (3 Credit Hours)

Advanced topics in machine learning and pattern recognition systems. Data reduction techniques including principle component analysis, independent component analysis and manifold learning. Introduction to sparse coding and deep learning for data representation and feature extraction. (Cross-listed with ECE 880)

Prerequisites: MSIM 607 or equivalent

MSIM 892 Doctor of Engineering Project (1-9 Credit Hours)

Directed individual study applying advanced level technical knowledge to identify, formulate and solve a complex, novel problem in Modeling and Simulation.

MSIM 895 Topics in Modeling and Simulation (3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in modeling and simulation.

MSIM 897 Independent Study in Modeling and Simulation (1-3 Credit Hours)

Individual study selected by the student. Supervised and approved by a faculty member with the approval of the graduate program director.

Prerequisites: permission of the instructor or graduate program director

MSIM 898 Research in Modeling and Simulation (1-12 Credit Hours)

Supervised research prior to passing Ph.D. candidacy exam.

Prerequisites: permission of the instructor and graduate program director

MSIM 899 Dissertation (1-12 Credit Hours)

Directed research for the doctoral dissertation.

Prerequisites: permission of the instructor and graduate program director

MSIM 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

MSIM 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

MUSA - Music, Applied

MUSA 651 Advanced Applied Music (3 Credit Hours)

Graduate level applied performance level lesson.

Prerequisites: MUSC 452 or equivalent and permission of faculty; audition required

MUSA 652 Advanced Applied Music (3 Credit Hours)

Graduate level applied performance lesson. Completion of this level includes successful performance of a one-hour public recital.

Prerequisites: MUSC 651 or permission of the instructor; audition required

MUSC - Music

MUSC 510 Psychology of Music (3 Credit Hours)

This course is designed to assist students in enhancing their understanding of the aesthetic response to music in various settings. Students will learn to integrate their understanding of musical aptitude as it relates to human growth and development. In addition, students will study the psychological implication of personality types as they develop, implement, and assess their pedagogical approach.

MUSC 522 Form and Analysis (2 Credit Hours)

Aural analysis study and analysis of the principal traditional musical forms. Stylistic and harmonic analysis as it related to score study will be discussed.

MUSC 526 Marching Band Techniques and Arranging (2 Credit Hours)

Students will learn how to chart and arrange music for the marching band. In addition, basic vocal arranging techniques will be discussed. Students will be required to observe different styles of school marching bands.

MUSC 540 Scoring for Film (3 Credit Hours)

This is a hands-on course in the art of film composition. Students will analyze iconic film scores from Bernard Herrmann to John Powell, exploring music's narrative impact, gain insight into the modern composer's workflow and diverse skill sets, and apply the techniques learned in practical projects, transitioning from sketch to demo using a DAW. The course culminates in a recording session for the final project. This projects allows students to practice film spotting, thematic writing, sketch to demo production, arranging and music preparation for a live recording experience. Students elevate their skills in writing music that uniquely supports and enhances visual storytelling.

Prerequisites: MUSC 222 and MUSC 335T

MUSC 545 Applied Music Pedagogy (1 Credit Hour)

Teaching techniques, literature in the performing area. Seminar deals with resource materials. Laboratory: observation and teaching under supervision.

Prerequisites: senior standing, music major, or permission of the department

MUSC 560 History of Jazz (3 Credit Hours)

This course will study the historical development of jazz as an American art form. The emotion and meaning of this style will be investigated as well as the historical and contemporary aesthetic response. Emphasis will include the defining role of African American artists. The influence of jazz on the development of contemporary American music will be discussed. A research paper will be required.

MUSC 561 History of Recorded Music (3 Credit Hours)

The course covers how music has co-evolved with technology, the entertainment business, and cultural trends. The main theme is how recording technology has evolved, and with it, the music making and music listening experiences. Students will expand their musical vocabulary through the study of numerous musical genres, listening to and discussing the essential elements of impactful records, and learning about key artists, composers, producers, engineers, and other music professionals (both past and present). Students will gain a better understanding of the role music plays in the entertainment industry, including with film, TV, games, social media, live events, and more.

Prerequisites: ENGL 110C

MUSC 562 Hip-Hop Music and Culture (3 Credit Hours)

Hip-hop, from local roots to global dominance, has sparked extensive journalistic and academic exploration primarily focused on its social and cultural impacts. This course delves into the historical factors shaping hip-hop's origin and evolution, examines its global success and translation both musically and linguistically, and engages in contemplation regarding the essence and direction of hip-hop. No prior musical experience or knowledge of music notation is required, but students will develop a basic set of skills for discussing the structure and function of hip-hop songs.

Prerequisites: Graduate standing in music or permission of the instructor

MUSC 566 Music of the 20th Century to the Present (3 Credit Hours)

A study of the techniques and styles in music in the twentieth and twenty first century (offered spring).

Prerequisites: Graduate standing in music or permission of the instructor

MUSC 571 Musicians' Health: Music and Medicine (3 Credit Hours)

This course is designed to assist music students to enhance their understanding of musicians' health issues in order to prepare them to achieve their desired performance potential.

Prerequisites: Graduate standing or permission of the Graduate Program Director

MUSC 591 Music History from the Ancient to Baroque Era (3 Credit Hours)

Study of music history (specific topics vary) including historical perspective in relation to style and development of music, and the function of music in society and culture. Topics will be from the Ancient through the Baroque era (offered fall semester).

Prerequisites: Graduate standing in music or permission of the instructor

MUSC 592 Music History from the Classical through Modern Era (3 Credit Hours)

Study of music history (specific topics vary) including historical perspective in relation to style and development of music, and the function of music in society and culture. Topics will be from the Classical through Modern era.

Prerequisites: Graduate standing in music or permission of the instructor

MUSC 594 Music in the Romantic Era (3 Credit Hours)

A study of music history from the late works of Beethoven to Mahler and Strauss. A discussion of musical style within the context of cultural history. (offered spring, even years)

Prerequisites: Graduate standing in music or permission of the instructor

MUSC 595 Topics in Music (1-3 Credit Hours)

These courses will appear in the course schedule. Course descriptions and prerequisites for each course may be found in information distributed to all academic advisors.

MUSC 596 Topics in Music (1-3 Credit Hours)

These courses will appear in the course schedule. Course descriptions and prerequisites for each course may be found in information distributed to all academic advisors.

MUSC 600 Introduction to Graduate Research (1 Credit Hour)

This course should be taken among the first courses in the Master of Music Education program. Introduces graduate students to basic skills in Music Education research, including bibliographic searches, on-line searches, computer data analysis, and conventions of scholarly writing for reporting findings.

Prerequisites: Admission to the Master of Music Education program or instructor's permission

Pre- or corequisite: MUSC 630

MUSC 602 Analytical Techniques (3 Credit Hours)

Examines techniques and concepts applied to compositions of the eighteenth, nineteenth, and twentieth centuries as well as modern music, through analysis of contrapuntal and harmonic textures, form, and performance practice.

Prerequisites: Baccalaureate degree in music or permission of department chair and instructor

MUSC 603 Principles of Music Education (3 Credit Hours)

Methods, techniques, principles, and tools of music education, with reference to various types of school situations.

Prerequisites: Admission to the Master of Music Education program or instructor's permission

MUSC 604 Foundations of Music Education (3 Credit Hours)

This course involves the study of the philosophical, psychological and historical foundations of music related to curriculum development.

Prerequisites: Admission to the Master of Music Education program or instructor's permission

MUSC 605 Literature of the Wind Ensemble (3 Credit Hours)

The course centers upon the study of the performance, review and analysis of music for the Symphonic Band and Wind Ensemble. Suited especially to the needs of directors of secondary school and other nonprofessional wind ensembles.

Prerequisites: Baccalaureate degree in music or permission of the instructor

MUSC 606 Choral Music Literature (3 Credit Hours)

Survey of choral literature and practical performance practices from the Renaissance to the present.

Prerequisites: Baccalaureate degree in music or permission of the department chair and instructor

MUSC 607 Orff Schulwerk Level I (3 Credit Hours)

This course is a study of basic Orff Schulwerk techniques. Level I pedagogy includes instruction in the use of pentatonic scale, ostinato, elemental forms, improvisation, basic body movement and basic soprano recorder skills.

Prerequisites: undergraduate degree in music or music education

MUSC 608 Orff Schulwerk Level II (3 Credit Hours)

Introduction of Alto recorder occurs in Level II. Also included is an in-depth study of Orff Schulwerk Vol. III in which the student will be instructed in the use of I, IV, V harmony. Body movement and extensive study of folk dance are included.

Prerequisites: MUSC 607 and proficiency on the soprano recorder

MUSC 609 Literature of the Orchestra (3 Credit Hours)

This course is a survey of standard repertoire written for string and symphony orchestra, including score analysis and study of historical context and performance practice. Selected educational repertoire will also be explored in relation to similar counterparts in the standard repertoire. Suited for music educators and developing conductors.

Prerequisites: undergraduate degree in music or permission of the instructor

MUSC 610 Orff Schulwerk Level III (3 Credit Hours)

This course will build upon the skills and concepts introduced in Orff Schulwerk Levels I and II. Recorder technique will be expanded upon as well as eurhythmics and special topics.

Prerequisites: MUSC 607 and MUSC 608

MUSC 611 Current Trends in Elementary and Secondary Music (3 Credit Hours)

Designed for public school music teachers. This course involves the study of current methodology, its practice and uses in the elementary and secondary general/vocal/instrumental music program.

Prerequisites: Admission to the Master of Music Education program or instructor's permission

MUSC 612 Organization and Administration of Instrumental Music (3 Credit Hours)

The course involves the study of effective organization and implementation techniques for elementary and secondary instrumental ensembles; includes particular problems in the administration of high school instrumental groups.

Prerequisites: Baccalaureate degree in music or permission of instructor

MUSC 613 Workshop in Music Education (1 Credit Hour)

This course centers upon the development of performance and instructional skills in various aspects of music education. May be repeated twice with different emphases.

Prerequisites: Baccalaureate degree in music or permission of the department chair and instructor

MUSC 614 Workshop in Instrumental Music (1 Credit Hour)

The course centers upon the development of performance and instrumental skills in various aspects of instrumental music. May be repeated twice with different emphases.

Prerequisites: Baccalaureate degree in music or permission of the department chair and instructor

MUSC 615 Workshop in Choral Music (1 Credit Hour)

This course centers upon the development of conducting techniques, performance and instructional skills in various aspects of choral music. May be repeated twice with different emphases.

Prerequisites: Baccalaureate degree in music or permission of the department chair and instructor

MUSC 616 Advanced Conducting Seminar (3 Credit Hours)

Involves conducting techniques as applied to various mixed ensembles. Emphasizes the technical considerations common to all phases of choral and instrumental conducting with special concern for school problems.

Prerequisites: Baccalaureate degree in music or permission of instructor or department chair

MUSC 630 Research in Music Education (3 Credit Hours)

Types of research, selection of problems, location of educational information, collection and classification of data, organization, presentation and interpretation of materials in the area of music education.

Prerequisites: Admission to the Master of Music Education program or instructor's permission

Pre- or corequisite: MUSC 600

MUSC 635 Technology in the Music Classroom (3 Credit Hours)

This course supports music educators in their goal of producing engaging educational experiences for their students. Topics include essential audio skills, basic video production, the entertainment business, music composition for various contexts, music apps, and more. Students learn through practical projects, receiving detailed feedback on their work. The technological tools would be put within the context of culture, current musical and business trends, and creative pedagogy.

Prerequisites: Undergraduate degree in music or permission of the instructor

MUSC 636 Techniques of Jazz Education in the Secondary School (3 Credit Hours)

This course will deal with rehearsal techniques for the Jazz Ensemble, including articulation, style, phrasing, literature, and improvisational techniques. In addition, Jazz history and literature will be discussed in detail.

Prerequisites: undergraduate degree in music or permission of the instructor

MUSC 639 Vocal/Choral Arranging (3 Credit Hours)

Course is designed to develop the skills necessary to arrange a piece of vocal music for ensembles of various sizes and makeup. Techniques will be discussed and shown in class and students will complete written assignments to implement these techniques.

Prerequisites: passing the Theory Placement Test; undergraduate degree in music or permission of the instructor

MUSC 680 Performing Ensembles (1 Credit Hour)

Students are expected to help with sectional rehearsals and do in-depth score study on all music being performed.

Prerequisites: permission of the instructor and audition

MUSC 692 Portfolio (3 Credit Hours)

This course is designed to guide the student who is completing the Pedagogical Concentration in developing a professional teaching portfolio. It would typically be taken during the last semester of the degree program. The portfolio will be completed in digital format suitable for professional use. It will include information in the following areas: professional foundations, scholarship, performance, applied pedagogy and other professional data pertinent to the focus of the student.

Prerequisites: Admission to the Master of Music Education program or instructor's permission

MUSC 695 Topics in Music (1-3 Credit Hours)

These courses will appear in the course schedule. Course descriptions and prerequisites for each course may be found in information distributed to all academic advisors.

Prerequisites: undergraduate degree in music or permission of the instructor

MUSC 696 Topics in Music (1-3 Credit Hours)

These courses will appear in the course schedule. Course descriptions and prerequisites for each course may be found in information distributed to all academic advisors.

Prerequisites: undergraduate degree in music or permission of the instructor

MUSC 697 Independent Study (1-3 Credit Hours)

Designed for individualized study. Independent study projects will be related to music education and done under the supervision of a certified faculty member.

Prerequisites: permission of the graduate program director

MUSC 698 Thesis Research (3 Credit Hours)

Application of research procedures in music education, culminating in student study of selected topics.

Prerequisites: MUSC 600, MUSC 630, and permission of the graduate program director

MUSC 699 Thesis (3 Credit Hours)

Completion of thesis for the Master of Music Education degree.

Prerequisites: MUSC 698

MUSC 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

MUSC 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

NMED - Nuclear Medicine Technology

NMED 695 Topics in Nuclear Medicing Technology (1-3 Credit Hours)

Special topic related to the field of nuclear medicine technology and molecular imaging.

NMED 697 Directed Study in Nuclear Medicine Technology (1-3 Credit Hours)

Directed study in a topic or area relevant to nuclear medicine or nuclear medicine technology.

NMED 698 Research (3 Credit Hours)

Research on a topic or project related to nuclear medicine or nuclear medicine technology.

NMED 699 Thesis (3 Credit Hours)

Thesis on a topic in nuclear medicine/molecular imaging or nuclear medicine technology.

NURA - Nurse Anesthesia

NURA 745 Applied Chemistry and Physics for Nurse Anesthetists (2 Credit Hours)

This course is a review of the principles of organic chemistry, biochemistry, and physics. It is designed as a foundation for the students' understanding of pharmacology, physiology, and the anesthesia gas machine. This course will also provide an introduction to the chemical structure-activity relationships, metabolism and mechanism of action of selected agents.

NURA 753 Advanced Pharmacology for Nurse Anesthesia Practice (3 Credit Hours)

This is a course in advanced anesthesia pharmacotherapeutics that builds on prior knowledge of drug classification, actions, interactions and adverse drug reactions. The major focus of the course is synthesizing principles learned in Advanced Pharmacology for Nursing Practice and applying them to anesthetic pharmaceuticals. Emphasis is placed on the critical thinking process used to choose and prescribe drugs in the management of anesthetic. Core concepts include applied pharmacodynamics, pharmacokinetics, volatile agent delivery systems, theories of anesthetic action and the interactions between patient medication and anesthetic agents. This course consists of three hours of lecture/discussion/in-class clinical module work per week.

NURA 760 Evidence Based Seminar for Anesthesia Practice (1 Credit Hour)

This course helps prepare advanced practice nurses with an opportunity to assess clinical and scientific evidence through appraisal of the literature. The course explores the philosophical underpinnings for nursing knowledge and evidence in nursing practice.

NURA 761 Evidenced-Based Seminar for Anesthesia Practice I (1 Credit Hour)

This course is the first in a series of five seminar courses that helps prepare advanced practice nurses with an opportunity to assess clinical and scientific evidence through appraisal of the literature. The course explores the philosophical underpinnings for nursing knowledge and evidence in nursing practice.

Pre- or corequisite: NURA 752, NURA 754, and NURS 801

NURA 762 Evidenced-Based Seminar for Anesthesia Practice II (1 Credit Hour)

This course is the second in a series of five seminar courses that helps prepare advanced practice nurses with an opportunity to assess clinical and scientific evidence through appraisal of the literature. The course is designed to build on the understanding gained in NURA 761 and to expand the advanced practice nursing student's understanding of research methods, design, and statistics.

Prerequisites: NURA 761

NURA 797 Independent Study (1-10 Credit Hours)

Independent study in nurse anesthesia under the guidance of a faculty.

Prerequisites: admission to the nurse anesthesia program

NURA 836 Advanced Physiology and Pathophysiology for Nurse Anesthesia I (3 Credit Hours)

This course addresses normal and abnormal physiological functioning of body systems building on undergraduate anatomy and physiology. Structure and functions of the systems will be examined at the cellular, subcellular, genetic, and biochemical level. The goal is to provide an in-depth understanding of the dysfunction of body systems in a diseased state as well as comprehension of the normal function to maintain homeostasis. Systems to be addressed include: cellular and molecular physiology, immune system, nervous system, skeletal muscle system, and the cardiovascular system.

NURA 837 Advanced Physiology and Pathophysiology for Nurse Anesthesia II (3 Credit Hours)

This course addresses normal and abnormal physiological functioning of body systems building on undergraduate anatomy and physiology. Structure and functions of the systems will be examined at the cellular, subcellular, genetic, and biochemical level. The goal is to provide an in-depth understanding of the dysfunction of body systems in a diseased state as well as comprehension of the normal function to maintain homeostasis. Systems to be addressed include: respiratory system, digestive/hepatic system, endocrine system, and neoplasia mechanisms and treatments.

Prerequisites: NURA 836

NURA 838 Professional Aspects for Anesthesia (1 Credit Hour)

A study of the unique goals, distinctive content, and special problems of health/anesthesia care and education in this country. Includes such areas as management, organization, legal aspects, professional adjustments, ethics, psychology, and history.

NURA 841 Principles of Anesthesia Practice I (4 Credit Hours)

This course integrates scientific concepts with basic principles of anesthesia practice and prepares the student for their new role in the safe and effective delivery of anesthesia. Emphasis is on vital anesthesia monitoring and delivery systems. Airway management and general anesthesia techniques will also be discussed. Simulation is incorporated into the learning process to reinforce principles introduced in class.

Prerequisites: NURA 745

NURA 842 Principles of Anesthesia Practice II (4 Credit Hours)

This course formulates a basic level of cognitive, affective, and psychomotor expertise for the preoperative, intraoperative, and postoperative anesthesia periods. Students will analyze and apply basic physiological principles in preparation for the anesthesia management of patients undergoing complex surgical procedures. Human simulation is incorporated into the learning process to reinforce principles introduced in class.

NURA 843 Principles of Anesthesia Practice III (4 Credit Hours)

This course is the third course in a series of three and is intended to further the foundation for safe and effective delivery of anesthesia. It is designed to prepare the student for the decision making necessary for the complex issues of anesthesia in clinical practice. Students will apply knowledge of pathophysiological conditions to formulate safe plans of care for patients undergoing complex surgical procedures. Human Simulation is incorporated into the learning process to reinforce principles introduced in class.

NURA 844 Principles of Anesthesia Practice IV (1 Credit Hour)

This course is the fourth in an increasingly more complex eight-course series intended to accompany NURA 842. It is designed to review basic sciences and equipment, instrumentation and technology related to clinical practice.

Pre- or corequisite: NURA 843

NURA 845 Principles of Anesthesia Practice V (1 Credit Hour)

This course is the fifth in an increasingly more complex eight-course series intended to accompany NURA 843. It is designed to review basic sciences and equipment, instrumentation and technology related to clinical practice. This course also incorporates preoperative, intraoperative, and postoperative care of patients.

Pre- or corequisite: NURA 844

NURA 846 Principles of Anesthesia Practice VI (1 Credit Hour)

This course is the sixth in an increasingly more complex eight-course series intended to accompany NURA 844. This course is designed to review anesthesia concepts and begin the preparation to take the National Certification Exam.

Pre- or corequisite: NURA 845

NURA 847 Principles of Anesthesia Practice VII (1 Credit Hour)

This course is the seventh in an increasingly more complex eight-course series intended to accompany NURA 845. This course is designed to review anesthesia concepts and continue the preparation to take the National Certification Exam

Pre- or corequisite: NURA 846

NURA 848 Principles of Anesthesia Practice VIII (1 Credit Hour)

This course is the final in an increasingly more complex eight-course series intended to accompany NURA 846. This course is designed to review anesthesia concepts and examine student readiness of the National Certification Exam.

Pre- or corequisite: NURA 847

NURA 853 Nurse Anesthesia Practicum: Orientation for Clinical Anesthesia (2 Credit Hours)

This introductory-level course is designed to integrate didactic knowledge with basic practical application. The student will apply knowledge concerning preoperative assessment, care plan development, induction sequence, basic airway management, function and usage of anesthesia equipment, pharmacology dosing and mathematics for anesthesia. Course content is based on the American Association of Nurse Anesthetists Standards for Nurse Anesthesia Practice and the American Association of Colleges of Nursing DNP Essentials.

Prerequisites: Successful completion of all first, second and third semester courses in the Nurse Anesthesia program

NURA 854 Nurse Anesthesia Practicum I (3 Credit Hours)

This introductory-level course is designed to integrate didactic knowledge with basic practical application to the art and science of nurse anesthesia. It is designed to cultivate the novice student nurse anesthetist in selected clinical settings under direct supervision of qualified clinical preceptors. The student will be immersed in the anesthesia clinical environment for this course. Course content is based on the American Association of Nurse Anesthetists Standards for Nurse Anesthesia Practice and the American Association of Colleges of Nursing DNP Essentials.

Prerequisites: NURA 853

NURA 855 Nurse Anesthesia Practicum II (4 Credit Hours)

This clinical course is the second in an increasingly more complex six-course series and continues the integration of didactic knowledge and practical application to the art and science of nurse anesthesia. It is designed to cultivate the advanced beginner student nurse anesthetist in selected clinical settings under close direction of qualified clinical preceptors. The student will be immersed in the anesthesia clinical environment for this course. Course content is based on the American Association of Nurse Anesthetists Standards for Nurse Anesthesia Practice and the American Association of Colleges of Nursing DNP Essentials.

Prerequisites: NURA 854

NURA 856 Nurse Anesthesia Practicum III (4 Credit Hours)

This clinical course is the third in an increasingly more complex six-course series and continues the integration of didactic knowledge and practical application to the art and science of nurse anesthesia. It is designed to cultivate the competent student nurse anesthetist in a variety of clinical settings under the guidance of qualified clinical preceptors. The student will be immersed in the anesthesia clinical environment for this course. Course content is based on the American Association of Nurse Anesthetists Standards for Nurse Anesthesia Practice and the American Association of Colleges of Nursing DNP Essentials.

Prerequisites: NURA 855

NURA 857 Nurse Anesthesia Practicum IV (4 Credit Hours)

This clinical course is the fourth in an increasingly more complex six-course series and continues the integration of didactic knowledge and practical application to the art and science of nurse anesthesia. It is designed to cultivate the proficient student nurse anesthetist in a variety of clinical settings under the guidance of qualified clinical preceptors. The student will be immersed in the anesthesia clinical environment for this course. Course content is based on the American Association of Nurse Anesthetists Standards for Nurse Anesthesia Practice and the American Association of Colleges of Nursing DNP Essentials.

Prerequisites: NURA 856

NURA 858 Nurse Anesthesia Practicum V (4 Credit Hours)

This clinical course is the fifth of six in an increasingly more complex six-course series, and continues the integration of didactic knowledge and practical application to the art and science of nurse anesthesia. It is designed to cultivate the proficient student nurse anesthetist in a variety of clinical settings in collaboration with qualified clinical preceptors. The student will be immersed in the anesthesia clinical environment for this course. Course content is based on the American Association of Nurse Anesthetists Standards for Nurse Anesthesia Practice and the American Association of Colleges of Nursing DNP Essentials.

Prerequisites: NURA 857

NURA 859 Nurse Anesthesia Practicum VI (3 Credit Hours)

This clinical course is the final in an increasingly more complex six-course series and continues the integration of didactic knowledge and practical application to the art and science of nurse anesthesia. It is designed to cultivate the proficient student nurse anesthetist in a variety of clinical settings in collaboration with qualified clinical preceptors. The student will be immersed in the anesthesia clinical environment for this course. Course content is based on the American Association of Nurse Anesthetists Standards for Nurse Anesthesia Practice and the American Association of Colleges of Nursing DNP Essentials.

Prerequisites: NURA 858

NURA 863 Evidenced-Based Seminar for Anesthesia Practice III (1 Credit Hour)

This course is the third in a series of five seminar courses designed to enhance the nurse anesthesia student's understanding of research methods, design and analysis. A journal club format is used to evaluate anesthesia care for optimum outcomes using published research studies.

Prerequisites: NURA 762

NURA 864 Evidenced-Based Seminar for Anesthesia Practice IV (1 Credit Hour)

This course is the fourth in a series of five seminar courses designed to enhance the nurse anesthesia student's understanding of research methods, design and analysis. A journal club format is used to evaluate anesthesia care for optimum outcomes using published research studies.

Prerequisites: NURA 863

NURA 865 Evidenced Based Seminar for Anesthesia Practice V (1 Credit Hour)

This course is the fifth in a series of five seminar courses designed to enhance the nurse anesthesia student's understanding of research methods, design and analysis. A journal club format is used to evaluate anesthesia care for optimum outcomes using published research studies.

Prerequisites: NURA 864

NURA 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

NURS - Nursing

NURS 530 Principles of Practice: Contemporary Issues in Nursing Care of the Older Adult (2 Credit Hours)

This course focuses on the nursing needs of the well gerontological client. Emphasis is on the multi-complex needs of the older adult.

NURS 595 Topics in Nursing (1-3 Credit Hours)

The study of selected topics that may not be offered regularly. Special topics will appear in the schedule of classes each semester.

Prerequisites: Permission of the instructor

NURS 650 Shenandoah University Midwifery Courses (19 Credit Hours)

This course provides for the award of credit for selected courses taken at Shenandoah University in fulfillment of Midwifery program requirements: NM 610, NM 620, NMLB 630, NM 640, NMLB 651, NM 652, and NM 660.

NURS 651 Shenandoah University Psychiatric Mental Health Courses (27 Credit Hours)

This course provides for the award of credit for selected courses taken at Shenandoah University in fulfillment of the Psychiatric Mental Health Nurse Practitioner program requirements: NP 525, PMH 635, PMH 680, PMH 640, PMH 685, PMH 660, HP 576, PMH 695.

NURS 654 Assessment and Evaluation in Nursing Education (3 Credit Hours)

This course concentrates on strategies to measure and improve nursing student performance in the classroom, as well as enhance course and program effectiveness. Emphasis is on the selection of instruments, data collection methods and reporting procedures to guide assessment and evaluation processes that are appropriate for what is being examined.

Prerequisites: NURS 634, NURS 636, NURS 644, NURS 645, and NURS 649

NURS 676 Professional, Ethical and Legal Concepts of Nursing Education (3 Credit Hours)

This course is designed to prepare students for the role of educator in higher education environments. Emphasis is on the identification of functions, rights, and responsibilities of nursing faculty in relation to students, colleagues, administrators, the institution, community, and profession.

NURS 699 Thesis/Research Project (1-3 Credit Hours)

Thesis/research project completion. Variable credit to be determined by research advisor. May be repeated as needed.

Prerequisites: NURS 611, NURS 640

NURS 700 Interprofessional Study Abroad on Global Health (1-3 Credit Hours)

This study abroad service learning course will introduce the student to the political, social, cultural, and ethical issues involved in prevention and health promotion globally. Students will travel to another country and learn the incidence/prevalence, morbidity/mortality, and identified public health problems in specific regions and countries.

NURS 705 Primary Care Approaches for Children (3 Credit Hours)

This course focuses upon primary health care problems in the pediatric population. Emphasis is placed upon assessment and management of healthy and ill children.

Prerequisites: NURS 770, NURS 771, NURS 761

NURS 707 Informatics and Healthcare Technology (3 Credit Hours)

This course will cover the use of data in health care as well as other informatics applications. Students will explore healthcare technology used to improve the delivery and evaluation of care.

NURS 709 Evidence-Based Research for Nursing Practice (3 Credit Hours)

This course focuses on the development of advanced nursing knowledge related to the utilization of evidence-based research for best practice. Emphasis is placed on the evaluation and application of research and evidence for use in advanced practice including models, concepts, and theories as a supporting framework for research.

NURS 713 Telehealth for Providers (1 Credit Hour)

This course is designed to provide the student involved in healthcare or healthcare supportive roles with knowledge and skills to become actively involved in the implementation and delivery of telehealth services.

NURS 714 Competitive Resource Design and Utilization (3 Credit Hours)

This course focuses on the competitive design and utilization of organizational and human resources. Emphasis will be placed on the strategic process to ensure that resources are applied in ways to ensure high-quality care and excellent patient outcomes. The course will cover the business models for effective financial and personnel management of healthcare organizations. Analysis of the costs and quality of care will be performed.

NURS 717 Strategic Leadership Practicum (3 Credit Hours)

This practicum course emphasizes the advanced practice nurse's role in strategic planning and program development. Students enrolled in this advanced practice course will participate in clinical practice experiences in a chosen focus area. This course is designed to provide students with experiences in applying the knowledge acquired in Strategic Leadership.

Pre- or corequisite: NURS 740 or permission of instructor

NURS 718 Practicum Immersion for Novice Nurse Executives (3 Credit Hours)

This practicum course serves as a bridge between the roles of nurse administrators and nurse executives. Targeted practicum experiences will enable the nurse administrator to examine the role of the nurse executive related to implementation of change, meeting strategic initiatives, program evaluation, and outcome management in a chosen focus area. Application of futuristic and visionary theory to health care system trends is explored to provide optimal strategic positioning in the future healthcare market.

NURS 719 Family and Community Primary Care Assessment (1 Credit Hour)

This course provides students with the opportunity to develop advanced practice skills for assessing families and family members across the life span and throughout generations. This course will focus on theoretical, research and practice foundations used to develop strategies to maximize safe, comprehensive, and holistic care given by the advanced practice nurse.

NURS 720 Instructional Delivery Methods & Learner Assessment (3 Credit Hours)

The enhancement of nursing education through an array of instructional delivery methods based on reports of best practices, research findings, instructional-related theories, and learning-related theories is examined. Emphasis is on identifying ways to blend traditional teaching strategies for classroom and clinical instruction with technology-based instruction utilizing a variety of resources and models.

Pre- or corequisite: NURS 734 or permission of instructor

NURS 721 Aging in the 21st Century (3 Credit Hours)

This course explains the history of the specialty of geriatrics, the social impact, health maintenance goals and physical changes associated with aging. The role of interprofessional teams in meeting the needs of the aging population will be explored.

NURS 722 Psychiatric Assessment and Differential Diagnosis (1 Credit Hour)

This didactic course will introduce students to the process of history-taking and assessment of psychiatric mental health problems in the diagnosis of children through older adults and the process of using data from the patient's history and assessment to formulate a differential diagnosis. Cultural, genetic, religious, behavioral, educational, physical, and laboratory data will be utilized in the formulation of differential diagnoses.

NURS 723 Psychotherapeutic Approaches & Treatment Modalities (3 Credit Hours)

This course provides the history and current methods of psychotherapy as well as current methods of diagnosis of mental health disorders and differential diagnosis. Knowledge will be applied across the lifespan including: adult, child, adolescent, older adults and special populations.

Prerequisites: Admission to the Psych Mental Health MSN, DNP or certificate concentration

NURS 725 Psychopharmacology and Neurobiology (3 Credit Hours)

This course will examine the psychopharmacology of medications used to treat mental health disorders. It will also examine basic neurobiology and evaluate the intrinsic and extrinsic factors associated with the development of mental health disorders.

Prerequisites: Admission to PMH MSN, DNP or certificate concentration

NURS 726 Managing Psychiatric Disorders Across the Lifespan (3 Credit Hours)

This course provides the opportunity to gain knowledge of the management of mental health conditions across the lifespan, including child, adolescent, adult and older adult. Disparities across populations will be a component of the course. Culturally-centered, collaborative care will be emphasized in the preventive care and management of mental health disorders.

Prerequisites: Admission to PMH MSN, DNP or certificate

NURS 727 Psychiatric Mental Health Nurse Practitioner Practicum I (4 Credit Hours)

This course provides the opportunity for students to work in various psychiatric mental health environments focusing on a diverse population. The course will offer the opportunity to work with clinical mentors in their own communities. The time in these settings will allow students to begin their diagnosis and selection of appropriate treatment strategies, including medications and therapy, for individuals, families and groups with a wide variety of psychiatric mental health concerns.

Prerequisites: NURS 723, NURS 725, NURS 761, NURS 770, and NURS 771

Pre- or corequisite: NURS 726

NURS 728 Psychiatric Mental Health Nurse Practitioner Practicum II (5 Credit Hours)

This course provides the opportunity for students to build on previous clinical course work in various psychiatric mental health environments focusing on a diverse population. The time in these settings will allow students to enhance their diagnosis and selection of appropriate treatment strategies for individuals (child, adolescent, adult and older adult), families, and groups with a wide variety of psychiatric mental health concerns. This course requires 280 clinical hours.

Prerequisites: NURS 727

NURS 730 Nursing Curricular Design and Program Evaluation (3 Credit Hours)

This course focuses on factors impacting the development of nursing curricula including theory, professional practice trends, education standards, accreditation guidelines and institutional policy/procedure. Components of curricula are evaluated, and strategies for program evaluation are explored.

NURS 734 Educator Internship: Classroom Instruction (3 Credit Hours)

This internship course is designed to provide the student with experience facilitating classroom instruction in an entry level nursing program.

NURS 736 Managing Psychiatric Disorders in Specific Populations: The Adult/Geriatric Patient (4 Credit Hours)

This course provides the opportunity to gain knowledge of the management of mental health conditions with the adult and geriatric patient populations. Disparities across the two populations will be a component of the course. Culturally centered, collaborative care will be emphasized in the preventive care and management of mental health disorders. Appropriate care in a variety of treatment settings (inpatient, intensive outpatient, outpatient, forensic, long-term care) will be examined as well as legal ramifications for the PMHNP in treating this patient population.

NURS 738 Clinical Nurse Specialist I: Introduction to Practice (2 Credit Hours)

This course provides the graduate student with knowledge of core concepts that provide the foundation for Clinical Nurse Specialist practice.

NURS 739 Clinical Nurse Specialist Practicum I: Role Socialization (4 Credit Hours)

This course is designed to acquaint the student with the role of the Clinical Nurse Specialist in the practice environment.

NURS 751 Developmental Neonatal Physiology (2 Credit Hours)

This course provides an in-depth examination of human genetics, embryologic development and normal physiologic functioning of developing body systems. Mechanisms involved in cell division, gametogenesis, and inheritance patterns will be addressed. Basic genetics and epigenetics will be included. The structural and functional development of fetal systems, during critical periods, will be emphasized. Abnormalities and alterations in fetal development will be explored.

NURS 756 Clinical Nurse Specialist II: Transition to Practice (3 Credit Hours)

This course provides the graduate student with knowledge necessary for developing Clinical Nurse Specialist practice and leadership skills.

Pre- or corequisite: NURS 757

NURS 757 Clinical Nurse Specialist Practicum II: Role Transition (5 Credit Hours)

This clinical course focuses on Clinical Nurse Specialist practice. Concepts presented in the didactic component (NURS 756) will be actualized in the clinical setting.

Pre- or corequisite: NURS 756

NURS 758 Clinical Nurse Specialist Practicum III: Role Synthesis (3 Credit Hours)

This capstone course focuses on synthesis and application of key concepts related to the Clinical Nurse Specialist practice.

Prerequisites: NURS 738, NURS 739, NURS 756, and NURS 757

NURS 760 Advanced Family Nursing I Practicum (3 Credit Hours)

This course provides the opportunity to practice clinical decision-making and primary care assessment skills within a primary care setting. Collaborative strategies will be emphasized in the position of health promotion/maintenance strategies and the management of common health problems.

NURS 761 Pharmacology for Advanced Practice Nursing (3 Credit Hours)

This course will develop and enhance the advanced practice nurse's knowledge of pharmacological management of the patient. Expanded knowledge and application of advanced pharmacologic concepts across the lifespan will build upon previous elemental concepts in pharmacology and pharmacotherapeutics obtained in undergraduate education and clinical practice.

Prerequisites: Admission to the MSN or DNP program is required

NURS 762 Advanced Family Nursing I: Management of Acute Illnesses (3 Credit Hours)

Focus is on acute health problems in the primary care setting, including assessment and management. Inclusion of geriatric content relating to acute illnesses will be added.

Prerequisites: NURS 761, NURS 770, and NURS 771

NURS 764 Advanced Family Nursing II Practicum (4 Credit Hours)

This course provides the opportunity to practice clinical decision-making and primary care assessment skills within a primary care setting. Collaborative strategies will be emphasized related to health promotion/maintenance and the management of common health problems for patients.

Prerequisites: NURS 761, NURS 770, and NURS 771

NURS 765 Advanced Family Nursing II: Management of Chronic Illnesses (3 Credit Hours)

The focus of this course is on the accurate diagnosis and management of chronic health problems within the primary care setting for the family nurse practitioner (FNP).

Prerequisites: NURS 761, NURS 763, NURS 770, and NURS 771

NURS 766 Primary Care Approaches for Women (3 Credit Hours)

This course will explore current clinical concepts related to the care of healthy and pregnant women. Roles and responsibilities of the family nurse practitioner in these sub-specialties will also be discussed.

NURS 767 Advanced Family Nursing III Practicum (3-4 Credit Hours)

This course provides the opportunity to practice clinical decision-making and primary care assessment skills within a primary care setting. Collaborative strategies will be emphasized related to health promotion/maintenance and the management of common health problems for patients.

Prerequisites: NURS 761, NURS 760, NURS 770, NURS 771, NURS 762, and NURS 764

NURS 770 Pathophysiology for Advanced Nursing Practice (3 Credit Hours)

This course explains the pathophysiology of disease as a basis for advanced practice and assessment for prevention and management of health conditions.

Prerequisites: Admission to the MSN or DNP program is required to enroll in this course

NURS 771 Physical Assessment for Advanced Nursing Practice (3 Credit Hours)

Emphasis is on advanced history taking, physical assessment and interviewing skills for advanced practice nursing. Advanced practice students will participate in lab sessions with experiential activities allowing for the development of physical assessment skills across the lifespan.

Prerequisites: Admission to either the MSN or DNP program is required to enroll in this course

NURS 772 Foundations of Advanced Neonatal Care (3 Credit Hours)

The foundations of advanced neonatal care course provides the theoretical and practical knowledge for the neonatal nurse practitioner or physician assistant to manage the health care needs of the neonate in the newborn nursery or level II neonatal intensive care unit.

Prerequisites: NURS 768, NURS 770 and NURS 771

NURS 773 Pharmacology for Advanced Neonatal Care (3 Credit Hours)

The course offers scientific inquiry into the use of pharmacologic agents in the advanced nursing care of infants, including fetal, neonatal life, and early childhood. Pharmacokinetics, pharmacodynamics, drug use in pregnancy and lactation, pharmacologic agents used in disease prevention and treatment, drug monitoring and drug safety in the home are explored.

Pre- or corequisite: NURS 761

NURS 774 Advanced Neonatal Care: High Risk Management I (3 Credit Hours)

This course develops the students' ability to manage high-risk neonates. This is the second of three sequential management courses that provide the theoretical and practical knowledge for the neonatal nurse practitioner to manage the health care needs of the neonate at the highest level of nursing practice.

Prerequisites: NURS 772

NURS 775 Advanced Neonatal Care: High Risk Management II (3 Credit Hours)

This course develops the students' ability to manage high-risk neonates. This is the third and final sequential management course that provides the theoretical and practical knowledge for the neonatal nurse practitioner, or physician assistant, to manage the health care needs of the neonate at the highest level of nursing practice.

Prerequisites: NURS 774

NURS 776 Advance Neonatal Nursing Practicum I (3 Credit Hours)

The development of foundational skills associated with the physical assessment and management of the neonate is the focus of this practicum experience.

Pre- or corequisite: NURS 768, NURS 770 and NURS 771

NURS 778 Advanced Neonatal Nursing: Practicum II (4 Credit Hours)

The focus of this course is the accurate diagnosis and management of high risk neonatal clinical problems.

Prerequisites: NURS 776

Pre- or corequisite: NURS 774

NURS 779 Seminar in Pediatrics: Management of Chronic and Complex Neonatal Clinical Problems (2 Credit Hours)

This course utilizes a journal club approach and is designed to acquaint the advance practice neonatal nurse with issues associated with the management of chronic and complex clinical problems. Emphasis is on the identification of clinical conditions requiring timely referral for diagnosis and treatment. Topics will include, but are not limited to, genetics and congenital conditions, palliative/end-of-life care and complications of prematurity.

NURS 781 Advanced Pediatric Nursing: Practicum I Primary Care (3 Credit Hours)

This course provides the opportunity to practice clinical decision-making and primary care assessment skills within a primary care setting. Collaborative strategies will be emphasized related to health promotion/maintenance and the management of common health problems for pediatric patients and their families.

NURS 782 The Growth and Development of Children in the 21st Century (3 Credit Hours)

Physical, cognitive, psychosocial, psychosexual, and social-moral growth and development milestones from infancy through adolescence will be explored from a nursing perspective. Emphasis is on the assessment and management of the child within the context of environmental, cultural, and social factors affecting growth and development.

Prerequisites: NURS 771

NURS 783 Management of Acute Pediatric Conditions I (3 Credit Hours)

An organ systems approach is used to explore the diagnosis and management of childhood disorders. The actions of the PNP and PEDS CNS and the needs of the child are considered across the continuum of care from urgent/primary care to acute care.

Prerequisites: NURS 770, NURS 771, NURS 761

Corequisites: NURS 784

NURS 784 Advanced Pediatric Nursing: Practicum II (4 Credit Hours)

This course provides the opportunity to practice clinical decision-making and primary care assessment skills within a primary care setting. Collaborative strategies will be emphasized related to health promotion/maintenance and the management of common health problems for pediatric patients and their families.

NURS 785 Seminar in Pediatrics: Management of Chronic and Complex Clinical Conditions (3 Credit Hours)

This course explores issues associated with the management of chronic and complex clinical conditions for children. Emphasis is on the identification of clinical conditions requiring timely referral for diagnosis and treatment. Topics will include, but are not limited to genetics, palliative/end-of-life care, and psychiatric/mental issues.

Pre- or corequisite: NURS 783 and NURS 784

NURS 786 Management of Acute/Critical Pediatric Conditions II (3 Credit Hours)

An organ systems approach is used to explore the diagnosis and management of childhood disorders. The actions of the PNP and the needs of the child are considered across the continuum of care from urgent/primary care to acute / critical care.

Corequisites: NURS 788

NURS 788 Advanced Pediatric Nursing: Practicum III (3 Credit Hours)

This course provides the opportunity to practice clinical decision-making and primary care assessment skills in various clinical settings. Collaborative strategies will be emphasized related to health promotion/maintenance and the management of common health problems for pediatric patients and their families.

NURS 789 Advanced Neonatal Nursing Practicum III (4 Credit Hours)

The focus of this course is on the accurate diagnosis and management of high risk neonatal clinical problems.

Prerequisites: NURS 776; NURS 778

Pre- or corequisite: NURS 775

NURS 795 Topics (3 Credit Hours)

Designed to provide the advanced student with an opportunity to investigate specific topics of current interest in the health services.

Prerequisites: Ph.D. standing or permission of the instructor

NURS 797 Independent Study (1-3 Credit Hours)

This course is for students completing an independent study or independent clinical hours.

NURS 798 Independent Clinical Study (1-3 Credit Hours)

This course focuses on clinical and/or research-related competencies of graduate nursing students. Students enroll on an as-needed basis as determined by the instructor or student.

Prerequisites: Enrollment in the graduate nursing program and permission of the instructor

NURS 800 Integrative Concepts for Advanced Nursing Practice Roles (3 Credit Hours)

This course focuses on four integrative concepts including leadership, advocacy, practice, and translational research. Issues related to planning and providing care related to disparity and issues for vulnerable and underserved populations will be highlighted. The role of epidemiology will be explored.

NURS 801 Roles and Responsibilities for Transforming Practice (3 Credit Hours)

This course focuses on role expectations for advanced practice nurses; the intersection of models of leadership, advocacy, practice and translational research will be emphasized. Personal strategic planning of the students will be addressed as it applies to disparity issues and vulnerable and underserved populations.

NURS 802 The Business of Advanced Nursing Practice (3 Credit Hours)

This course will explore the business dimensions of practice including legal, safety, quality and financial. The course will focus on SWOT analysis, developing business plans and community assessments.

NURS 803 Leadership and Interprofessional Practice in Healthcare (3 Credit Hours)

This is an interprofessional course that explores organizational and structural opportunities and barriers within healthcare organizations through interprofessional collaboration and teamwork. Ethical issues will be explored. The focus is on the role of the healthcare provider as a leader of their profession within healthcare and on healthcare teams. Emphasis is on meeting the needs of underserved populations.

Prerequisites: NURS 801

NURS 805 Application of Practice-Based Research Methods (2 Credit Hours)

This course focuses on the research process used to conduct practice-based research. It prepares advanced practice nurses to develop, implement, and evaluate programs that focus on improving healthcare outcomes.

NURS 806 Proposal Development and Database Management (4 Credit Hours)

This research course is designed to provide the Advanced Practice Nurse and Nurse Executive student with knowledge and skills regarding the design and methodology used to conduct a practice focused research study. Focus will be on human subjects protection, statistical analysis and database management.

Prerequisites: NURS 805

NURS 807 Informatics and Healthcare Technology (3 Credit Hours)

This course will cover the use of data in health care as well as other informatics applications. Students will explore healthcare technology used to improve the delivery and evaluation of care.

NURS 809 Advocacy for Healthcare Public Policy for Advanced Practice (3 Credit Hours)

This course will prepare the DNP to assume a leadership role in developing, implementing, and advocating for health care policy that results in quality, accessible, comprehensive health care for vulnerable populations.

NURS 810 Leadership in Complex Systems and Organizations (3 Credit Hours)

This course will focus on the leadership that comprises two types: informal and formal leadership. Competencies will include communication, knowledge of health care environment, leadership, professionalism, and business skills.

NURS 812 Evidence-Based Management for Quality Healthcare (3 Credit Hours)

The focus of the course is on the development of systems processes to ensure quality healthcare. The evidence-based model will be applied to organizational systems.

NURS 814 Competitive Resource Design and Utilization (3 Credit Hours)

This course focuses on the competitive design and utilization of organizational and human resources. Emphasis will be placed on the strategic process to ensure that resources are applied in ways to ensure high-quality care and excellent patient outcomes. The course will cover the business models for effective financial and personnel management of healthcare organizations. Analysis of the costs of care and quality of care will be performed.

NURS 816 DNP Executive Practicum I (2-5 Credit Hours)

This practicum focuses on the application of nurse executive leadership skills in the practice environment. Focus will be on the role of the nurse executive and evidence-based research.

Corequisites: NURS 805

NURS 817 DNP Executive Practicum II (2-5 Credit Hours)

This experience focuses on the application of executive leadership skills in nursing. Focus will be on the role of the nurse executive and evidence-based research.

Corequisites: NURS 806

NURS 818 DNP Executive Practicum III (3-5 Credit Hours)

This practicum focuses on the application of executive leadership skills in the practice environment. Focus will be on the role of the nurse executive, evidence-based research and the use of healthcare technology.

NURS 819 DNP Executive Practicum IV (3-5 Credit Hours)

An examination of the application of executive leadership skills in the practice environment. Focus will be on the role of the nurse executive, evidence-based research, and practice dissemination.

NURS 865 DNP Clinical Practicum I (1-2 Credit Hours)

This course is designed to provide the Advanced Practice Nurse with the knowledge and skills to practice at an advanced level in a practice-based setting. Focus will be on enhanced clinical skills and evidence-based research.

Corequisites: NURS 805

NURS 866 DNP Clinical Practicum II (1-2 Credit Hours)

This course is designed to provide the Advanced Practice Nurse with the knowledge and skills to practice at an advanced level in a practice-based setting. Focus will be on evidence-based practice, teamwork, evidence-based research, and advanced clinical diagnostics.

Corequisites: NURS 806

NURS 867 DNP Clinical Practicum III (1-3 Credit Hours)

This course is designed to provide the Advanced Practice Nurse with the knowledge and skills to practice as an expert clinician, a program evaluator, and a team leader within a practice-based setting focusing on evidence-based practice. Healthcare technology will be explored.

NURS 868 DNP Clinical Practicum IV (1-3 Credit Hours)

This course is designed to provide the Advanced Practice Nurse with the knowledge and skills to practice as an expert clinician, a program evaluator, a team leader, and a change agent with emphasis on translational and evidence-based research.

Corequisites: NURS 890

NURS 890 DNP Nursing Capstone (3 Credit Hours)

This capstone course is designed to facilitate the ability of the advanced practice nurse to synthesize, translate, and disseminate practice-focused research findings and apply them to practice settings.

NURS 895 Topics (1-3 Credit Hours)

Designed to provide the advanced doctoral student with an opportunity to investigate specific topics of current interest in the health services.

Prerequisites: DNP standing or permission of the instructor

NURS 897 Independent Study (1-3 Credit Hours)

This course focuses on research-related competencies of graduate nursing students. Students enroll on an as-needed basis as determined by the instructor.

Prerequisites: Enrollment in the graduate nursing DNP program and permission of instructor

NURS 898 Independent Clinical Study (1-3 Credit Hours)

This course focuses on clinical and/or research-related competencies of DNP graduate nursing students. Students enroll on an as-needed basis as determined by the instructor.

Prerequisites: Enrollment in the graduate nursing program and permission of instructor

NURS 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

NURS 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

OCCT - Occupational Therapy

OCCT 721 Foundations of Occupational Therapy Practice (2 Credit Hours)

Students examine the historical and philosophical foundations that have shaped the profession of occupational therapy, its domain, values, and theories, and the foundations of practice with individuals, groups, and populations. Students explore the value of occupation and the role of occupational therapy in promoting health and wellness.

OCCT 749 Occupations I (6 Credit Hours)

Students analyze the domains and dimensions of occupations, occupational performance skills and patterns, and the structures, functions, and processes of the body and body systems. Students conduct biomechanical assessments and identify essential performance for health and function.

Prerequisites: Admission into the Doctor of Occupational Therapy Program

OCCT 750 Occupations II (4 Credit Hours)

Students analyze the domains and dimensions of occupations, occupational performance skills and patterns, and the structures, functions, and processes of the body and body systems. Students will examine the structures and function of the central, autonomic and peripheral nervous systems and apply neuroscience principles to clinical conditions that disrupt human engagement and performance.

Prerequisites: OCCT 749

OCCT 751 Occupations III (3 Credit Hours)

Students analyze the domains and dimensions of occupations, occupational performance skills and patterns, and the structures, functions, and processes of the body and body systems. Students examine human development and occupational patterns across the lifespan and the cultures that enable individuals, groups and populations to optimally participate in occupations that promote health.

Prerequisites: OCCT 750

OCCT 752 Occupation, Health and Wellness Across the Lifespan (3 Credit Hours)

Students examine human development, occupational patterns, and cultural influences across the lifespan that enable individuals, groups and populations to optimally participate in occupations that promote health. Students apply critical reasoning to consider the impact of disorders on participation and health.

Prerequisites: OCCT 721 and OCCT 749

OCCT 753 Pediatric Habilitation and Rehabilitation: Theory and Practice (6 Credit Hours)

Students examine occupations and the evaluation and treatment of physical, developmental, psychosocial, and mental health disorders of children and youth. Students design evaluation and intervention plans for clients receiving services in hospital, developmental, and school settings.

Prerequisites: OCCT 750, OCCT 752, OCCT 754, and OCCT 756

OCCT 754 Professional Reasoning and the Occupational Therapy Process (3 Credit Hours)

Students utilize professional and clinical reasoning to apply the occupational therapy process in client care. Students analyze information that supports team collaboration, clinical decision making, effective client care, and service reporting.

Prerequisites: OCCT 721 and OCCT 749

OCCT 755 Evaluation of Occupational Performance (3 Credit Hours)

Students explore the evaluation process in occupational therapy practice including observation, interviewing, assessment administration and interpretation, decision making, and reporting. Tests and measurement theory, psychometrics, methods, procedures, and test interpretation are examined.

Prerequisites: OCCT 750, OCCT 752, OCCT 754, and OCCT 756

OCCT 756 Professional Identity and Ethical Formation (3 Credit Hours)

Students integrate foundational concepts to promote professionalism, ethical reasoning, therapeutic use of self, and lifelong competent and interprofessional practice. Students examine professional identity and the role of professional relationships in occupational therapy practice.

Prerequisites: OCCT 721 and OCCT 749

OCCT 768 Fieldwork I Pediatrics (1 Credit Hour)

Immersed in a setting that serves the needs of children and youth, students develop a summary of a client's occupational history and experiences, patterns of daily living, interests, values, needs, and relevant environments and contexts, and examine client-centered outcomes.

Prerequisites: OCCT 750, OCCT 752, OCCT 754, and OCCT 756

OCCT 821 Elements of Research I: Theories of Inquiry and Scholarly Literature (3 Credit Hours)

Students develop knowledge of the application of statistics for the healthcare professional. Students utilize descriptive statistics, normality, parametric and non-parametric hypothesis testing and simple linear regression to evaluate research and form clinical decisions.

Prerequisites: OCCT 721 and OCCT 749

OCCT 822 Elements of Research II: Using Evidence to Inform Practice (3 Credit Hours)

Students apply knowledge of practice and research to design effective intervention to meet clients' needs. Students design clinical questions related to diagnosis, prognosis, and intervention, and critically appraise the research literature on a topic of interest to the practice community.

Prerequisites: OCCT 821

OCCT 841 Education and Learning in Healthcare and Academic Settings (2 Credit Hours)

Students explore teaching and learning theory, threshold concepts, and signature pedagogy in occupational therapy academic and fieldwork education. Activity analysis and learning strategies to promote health literacy, performance, engagement, and behavioral change are examined.

Prerequisites: OCCT 751, OCCT 752, OCCT 754, and OCCT 756

OCCT 843 Leadership and Advocacy (2 Credit Hours)

Students will examine approaches to professional development and strategic planning and examine their leadership competencies. They will discuss roles and responsibilities and develop a professional leadership and business plan.

Prerequisites: OCCT 751, OCCT 752, OCCT 754, and OCCT 756

OCCT 845 Health Care Policy and Program Management (2 Credit Hours)

Factors, forces, and dynamics of the healthcare system and service delivery environment are examined, and students compare the interrelationships of health policy, healthcare, and practice. Students conduct an epidemiological analysis of a challenging healthcare issue.

Prerequisites: OCCT 751, OCCT 752, OCCT 754, and OCCT 756

OCCT 847 Therapeutic Relationships and Client Communication (2 Credit Hours)

Students examine the elements of developing and maintaining relationships, communicating with clients and members of the team, and resolving interpersonal challenges in the roles of practitioner, practice scholar, and leader/advocate.

Prerequisites: OCCT 751, OCCT 752, OCCT 754, and OCCT 756

OCCT 848 Fieldwork I Adults (1 Credit Hour)

Students conduct an occupation-based assessment of a client in a clinical or community-based setting that serves the needs of adults with disabilities. Students examine occupational performance and its impact on participation and health and wellness in individuals and groups.

Prerequisites: OCCT 751, OCCT 754, and OCCT 755

OCCT 850 Adult Rehabilitation: Theory and Practice (6 Credit Hours)

Students examine occupations and the evaluation and treatment of physical, psychosocial, and mental health disorders of adults. Students design evaluation and intervention plans for clients receiving services in acute and sub-acute care, inpatient and outpatient rehabilitation, and community-based settings.

Prerequisites: OCCT 751, OCCT 753, and OCCT 755

OCCT 851 Productive Aging and Rehabilitation: Theory and Practice (3 Credit Hours)

Students examine the aging process and the evaluation and treatment of physical, developmental, psychosocial, and mental health disorders of older adults. Students design evaluation and intervention plans for clients receiving services in home, community, and skilled nursing settings.

Prerequisites: OCCT 751 and OCCT 850

OCCT 852 Evaluation and Intervention of the Upper Extremity (3 Credit Hours)

Interventions to optimize functional use of the hand and arm are analyzed. Emphasis on physical agent modalities, orthotics fabrication and application, shoulder, arm, and hand rehabilitation methods, and prosthetics and robotics is explored.

Prerequisites: OCCT 751, OCCT 754, and OCCT 755

OCCT 853 Mental Health Promotion and Recovery: Theory and Practice (6 Credit Hours)

Students examine the influence of psychosocial factors on occupational performance and participation in individuals, groups, and populations. Use of self as a therapeutic agent and group process skills are emphasized.

Prerequisites: OCCT 747 and OCCT 755

OCCT 854 Technology and Environment Adaptation (3 Credit Hours)

Students examine the role of technology in the occupational therapy process from evaluation to intervention planning and implementation. The regulation and ethics of technology use in therapy are considered and students explore the array of technological resources available for patient care.

Pre- or corequisite: OCCT 751 and OCCT 755

OCCT 855 Occupational Adaptation in the Community (2 Credit Hours)

Students apply professional reasoning and activity analysis to meet clients' occupational needs. Students analyze, grade, modify, and adapt occupations and activities to support occupational performance and participation.

Pre- or corequisite: OCCT 751, OCCT 850, OCCT 852, and OCCT 854

OCCT 856 Interprofessional Telehealth (1 Credit Hour)

Students interact with other health professionals to make patient care decisions in the virtual environment. Students examine the process and technologies required to provide interdisciplinary telehealth care, explore the legal, regulatory and reimbursement issues in telehealth care, and deliver healthcare via videoconferencing.

OCCT 857 Fieldwork I Psychosocial (1 Credit Hour)

Students conduct evaluations and design a group-based intervention in a clinical or community-based setting that serves the needs of adults with disabilities. Students examine occupational performance and its impact on participation and health and wellness in individuals and groups.

Prerequisites: OCCT 751, OCCT 754, and OCCT 755

OCCT 858 Elements of Research III: Critical Analysis of Occupational Therapy Practice (3 Credit Hours)

Students analyze the external and internal criticisms of the profession and examine the evidence addressing practice. Students examine the body of evidence addressing an intervention of interest and complete a systematic review of the evidence.

Prerequisites: OCCT 822

OCCT 859 Elements of Research IV: Scholarship of Practice Approaches and Design (2 Credit Hours)

Students explore research approaches and design and participate in grant writing and a mentored research project with a faculty member that links theory and practice, facilitates understanding of complex real-world issues, and facilitates knowledge translation.

Prerequisites: OCCT 858

OCCT 868 Fieldwork II A (6 Credit Hours)

In this twelve-week full-time course, students are provided supervised field experiences applying the occupational therapy process with individuals, groups and/or populations with occupational performance and participation needs.

Prerequisites: OCCT 721, OCCT 749, OCCT 750, OCCT 751, OCCT 752, OCCT 753, OCCT 754, OCCT 755, OCCT 756, OCCT 768, OCCT 821, OCCT 822, OCCT 841, OCCT 843, OCCT 845, OCCT 847, OCCT 848, OCCT 850, OCCT 851, OCCT 852, OCCT 853, OCCT 854, OCCT 855, OCCT 856, OCCT 857, OCCT 858, OCCT 859, and OCCT 890

OCCT 869 Fieldwork II B (6 Credit Hours)

In this twelve-week full-time course, students are provided supervised field experiences applying the occupational therapy process with individuals, groups and/or populations with occupational performance and participation needs.

Prerequisites: OCCT 868

OCCT 870 Community and Population Health (1 Credit Hour)

Students examine the role of occupation in health promotion, health education, and prevention of illness. Key concepts of population health, social determinates of health, health promotion, and health behavior will be applied to develop community and population-based approaches.

Pre- or corequisite: OCCT 868

OCCT 871 Professional Development Planning (2 Credit Hours)

Students examine their knowledge, skills and professional competencies and establish a resume and professional development plan. Students examine the value of supervision and mentorship relationships.

Pre- or corequisite: OCCT 869

OCCT 890 Practice-Scholar Seminar I (1 Credit Hour)

Students examine the formation of their identity as an occupation-based practice scholar and ethical leader and explore challenges in service delivery systems of significance to occupational therapy's value and role in health and wellness promotion.

Prerequisites: OCCT 756, OCCT 843, and OCCT 847

OCCT 891 Practice-Scholar Seminar II (1 Credit Hour)

Students examine innovative approaches to service delivery and discuss their formative capstone experience and their potential role as a practitioner, practice scholar, and leader/advocate in health management and promotion.

Prerequisites: OCCT 890

OCCT 892 Practice-Scholar Seminar III (1 Credit Hour)

Students examine their capacity for leadership and advocacy for the role of occupation in achieving health and wellbeing of individuals, groups, and populations. Students reflect on their own plans for leadership and advocacy in their upcoming capstone project.

Pre- or corequisite: OCCT 891

OCCT 893 Doctoral Capstone (7 Credit Hours)

The doctoral capstone project is a 14-week full-time experiential course designed to develop students' skills role related focus areas. Students implement an individually mentored, increasingly self-directed capstone project as the culminating learning activity of the doctoral program.

Prerequisites: OCCT 869 and OCCT 892

OCCT 894 Practice Scholar Symposium (2 Credit Hours)

The synthesis of knowledge gained throughout the didactic curriculum, service-learning and field experiences, and in-depth scholarly capstone experience and project is demonstrated through the completion and presentation of a scholarly product.

Prerequisites: OCCT 869 and OCCT 892

OEAS - Ocean and Earth Sciences

OEAS 502 Field Experiences in Oceanography for Teachers (3 Credit Hours)

Field and laboratory experiences in oceanography including hands-on experience using equipment and methods suitable for middle and secondary education professionals. Course will provide understanding of oceanic processes using simple field and laboratory experiments. Not available for credit for OES majors and minors.

Prerequisites: background in K-12 Education

OEAS 503 Aquatic Pollution (3 Credit Hours)

This course will present basic ecological principles relevant to water pollution and ecotoxicology. Topics will include runoff, eutrophication, water and sewage treatment, industrial waste, oil pollution, pesticides, and plastics in the sea. Case studies provide focal points for consideration of issues in making decisions and setting policy. This is a writing intensive course.

OEAS 505 Physical Oceanography (3 Credit Hours)

Physics of the ocean: properties of seawater and their distribution; water mass formation; mass and energy flows; waves; tides; models; estuarine and coastal processes. An elective for science and engineering majors.

Prerequisites: C or better in MATH 211 and either PHYS 232N or two semesters of hydraulics

OEAS 506 Matlab (1 Credit Hour)

This course is designed to introduce students to Matlab programming and to develop skills utilizing this program for data analysis.

Prerequisites: Junior standing or permission of instructor

OEAS 510 Chemical Oceanography (3 Credit Hours)

Chemical composition of the ocean and the chemical, biological, geological and physical processes controlling it.

OEAS 512 Global Environmental Change (3 Credit Hours)

An examination of the development of the earth as a habitable planet, from its origin to human impacts on global biogeochemical cycles on land, and in the oceans and atmosphere.

OEAS 513 Environmental Geochemistry (3 Credit Hours)

This course examines geochemical processes at and near the Earth's surface, focusing on the concentration, speciation and reactivity of elements in soils, waters, sediments and the atmosphere. The course examines both the thermodynamic and kinetic controls on these processes, and the role of biology as a mediator (or facilitator) of these processes. Anthropogenic impacts on natural geochemical processes are also examined.

OEAS 515 Waves and Tides (3 Credit Hours)

Causes, nature, measurement and analysis of water waves and tides.

Mathematical and graphical application to wave and tide problems.

Prerequisites: C or better in MATH 212 and PHYS 232N or permission of the instructor

OEAS 516 Electronics and Oceanographic Instrumentation (3 Credit Hours)

The course will consist of brief lectures and hands-on laboratory exercises, in which students will learn to build, use, and debug electronic devices relevant to ocean and earth science applications. Topics covered will include circuit theory, power supplies and budgets, transducers and amplifiers, computerized data acquisition, instrument control, signal conditioning and resolution.

OEAS 518 Limnology: Biogeochemistry of Lakes (3 Credit Hours)

Chemical cycling in lakes and reservoirs, and interactions with biological and physical processes; quantitative modeling of lake geochemistry.

OEAS 519 Spatial Analysis of Coastal Environments (3 Credit Hours)

The course integrates remotely sensed and field techniques for scientific investigation and practical management of coastal environmental systems. Spatial modeling of coastal processes and management tools using geographic information system (GIS).

Prerequisites: GEOG 300, GEOG 402 or GEOG 502, or permission of instructor

OEAS 520 Hydrogeology (3 Credit Hours)

Topics covered will include the occurrence and movement of surface and subsurface water, the nature and distribution of permeable rocks and strata, field techniques used in ground-water studies, and the flow of ground-water to wells.

OEAS 526 Concepts in Oceanography for Teachers (3 Credit Hours)

This web-based course will provide a practical introduction to oceanography for earth science teachers. It is particularly aimed at current science teachers attempting to become certified in earth science education. Topics will include discussions of geological, biological, physical and chemical oceanography. Not available for credit for OES majors and minors.

OEAS 530 Introduction to Geophysics (3 Credit Hours)

Introduction to the physics of the earth, including plate tectonics, volcanism, earthquakes and seismology, gravity, the earth's magnetic field, geophysical remote sensing, and mantle convection.

OEAS 534 Geodynamics (3 Credit Hours)

A qualitative and quantitative description of physical processes in the Earth and environmental sciences. Topics include stress and strain, plate elasticity and flexure, heat flow, fluid mechanics, material rheology, and groundwater flow. Emphasis will be placed on developing an understanding of Earth dynamics using real-world examples, including numerical exercises.

Prerequisites: MATH 211, MATH 212, PHYS 231N, and PHYS 232N or equivalents

OEAS 540 Biological Oceanography (4 Credit Hours)

Marine organisms and their relationship to physical and chemical processes in the ocean. Laboratory study of local marine organisms, marine ecosystem and sampling techniques. Includes identification, data analysis and field trips.

OEAS 551 Data Collection and Analysis in Oceanography (4 Credit Hours)

This course introduces students to the basic oceanographic instruments used to obtain and analyze information by investigating different locations in the Chesapeake Bay. Data obtained with these instruments will be processed and analyzed using the data analysis techniques discussed in class. The data will then be used to answer a particular question related to the temporal and spatial variability in a natural system.

Prerequisites: College level statistics (at least one semester)

OEAS 553 Marine Molecular Ecology (4 Credit Hours)

This course will explore the ecology of marine organisms using molecular techniques and data. Molecular ecology covers a wide variety of sub-disciplines, including genetics, physiology, ecology, and evolution. The course will explore basic theory in population genetics, ecology, and evolution and cover nucleic acid techniques and their applications.

OEAS 566 Introduction to Mitigation and Adaptation (3 Credit Hours)

Students will be introduced to the science underpinning mitigation of human-induced changes in the Earth system, including but not limited to climate change and sea level rise, and adaptation to the impacts of these changes. The course will cover the environmental hazards and the opportunities and limitations for conservation, mitigation and adaptation. Cross listed with BIOL 566.

OEAS 567 Sustainability Leadership (3 Credit Hours)

In this class, students will discover what makes a leader for sustainability. They will consider a range of global and local crises from a leadership point of view in the context of sustainability science, which addresses the development of communities in a rapidly changing social, economic, and environmental system-of-systems environment. The course will be based on taking a problem-motivated and solution-focused approach to the challenges considered. The course includes a service learning project focusing on a leadership experience in solving a real-world environmental problem.

Prerequisites: BIOL 566 or OEAS 566

OEAS 570 Proxy Reconstruction of Late Cenozoic Climate: Calibrations and Applications (3 Credit Hours)

This course will examine recent developments in paleo-proxy calibration and their application in reconstructing Late Cenozoic climate history. Students will read several papers covering the theoretical basis and empirical evidence supporting some of the most common proxies used in paleoclimatology/paleoceanography each week. Each week will begin with a lecture on the topic, followed by an in-depth discussion. Students will be required to present two of the weekly topics and lead the class discussion.

OEAS 595 Special Topics (1-4 Credit Hours)

Lectures, field and laboratory studies. An investigation of a selected problem in physical, geological, chemical, or biological oceanography.

Prerequisites: permission of the instructor

OEAS 603 Geobiology (3 Credit Hours)

Geobiology and the associated field of biosedimentology reflect the interdisciplinary approach to environmental problems, questions related to Earth history, and the exploration of extraterrestrial worlds. The course elaborates our understanding of geobiology and biosedimentology by conducting a study on benthic cyanobacteria and their influences on sedimentary processes in marine environments. Study area is Fisherman's Island, located close to Norfolk, VA. The course includes aspects of astrobiology (the "sister of geobiology"), and discusses the evolution of life on Earth.

OEAS 604 Introduction to Physical Oceanography (3 Credit Hours)

Introduction to descriptive and dynamical physical oceanography. Properties of sea water; distribution of temperature, salinity and density; water, salt, and heat budgets; techniques for describing the ocean; circulation and water masses of the world's oceans and coastal waters.

OEAS 605 Introduction to Ocean Modeling and Prediction (3 Credit Hours)

Instructor approval required. Introduction to concepts and theories of numerical ocean models and their applications in physical oceanography, computational fluid dynamics, environmental problems and ocean forecast systems.

Prerequisites: OEAS 505 or OEAS 604

OEAS 606 Experimental Procedures in Physical Oceanography (3 Credit Hours)

Provides basic knowledge for conducting field experiments in physical oceanography. Fundamentals of experimental design and sampling theory. Standard methods of data reduction, analysis, and reporting.

OEAS 607 Introduction to Python for Data Analysis (1 Credit Hour)

The goal of this class is to introduce students to the Python programming language, and to equip them with basic coding, data management and version control skills that will allow them to get more research done in less time and with less pain (computationally-speaking).

OEAS 610 Advanced Chemical Oceanography (3 Credit Hours)

Chemical properties of seawater; chemical composition of the ocean including major and trace elements, dissolved gases, micronutrient elements, and organic compounds; processes controlling this composition.

OEAS 611 Chemical Oceanography Laboratory (3 Credit Hours)

Basic analytical chemistry of seawater; field work in chemical oceanography.

OEAS 613 Geochemistry of Marine Sediments (3 Credit Hours)

An introduction to the geochemistry of marine sediments, with an emphasis on nutrient (C,N,P,S) and trace element cycling in marine sediments.

Prerequisites: OEAS 610 and OEAS 612

OEAS 614 Estuarine and Coastal Biogeochemical Cycles (3 Credit Hours)

Chemical dynamics within water and sediments of estuaries, salt marshes, and the continental shelf; river-sea, air-sea, and sediment-water interactions; modeling techniques.

Prerequisites: OEAS 610

OEAS 620 Advanced Geological Sciences (3 Credit Hours)

Survey of marine and terrestrial geology and geophysics; plate tectonics and basin formation; marine sediments and sediment dynamics; marine depositional environments and depositional systems; marine stratigraphy dynamics and the formation of marine basins.

OEAS 622 Wetland & Coastal Hydrogeology (3 Credit Hours)

Techniques used to calculate components of water budgets and groundwater fluxes in coastal systems, including wetlands, tidal rivers, estuaries, and shelf waters. Hydrologic criteria used to delineate wetlands. Many lab exercises will require field work in local wetlands and coastal systems.

OEAS 625 Marine Sedimentary Environments (3 Credit Hours)

Attributes of marine sediments; main sedimentary facies zones in marine and coastal environments (deep sea, shelf, tidal flats, lagoons, barrier islands); modern depositional systems versus ancient depositional systems; reefs (brachiopoda, corals, sponges, foraminifers, etc); traces and trace fossils.

Prerequisites: OEAS 620

OEAS 630 Dynamical Oceanography I (3 Credit Hours)

Dynamics of rotating, stratified fluids, geostrophic adjustment, potential vorticity, Ekman layers, gravity waves, and large scale ocean circulation.

Prerequisites: OEAS 604

OEAS 640 Advanced Biological Oceanography (4 Credit Hours)

Marine organisms and their interactions with the physical and chemical environments of the sea; primary production, population ecology, nutrition, reproduction, and marine biogeography; related laboratory exercises.

OEAS 651 Introduction to Physics of Estuaries (3 Credit Hours)

This course considers the physical oceanography of estuaries. In particular, it explores how circulation and mixing in estuaries are influenced by atmospheric forcing, tidal forcing, coastal influences and bathymetric variability. Topics to be treated include classification of estuaries, typical steady dynamical balances, transport of salt and other quantities, mixing, and time-space scales of variability.

Prerequisites: OEAS 604

OEAS 658 Participatory and Agent-Based Modeling, Simulation, and Visualization (3 Credit Hours)

Many societal challenges are "wicked problems," i.e., social or cultural problems that are difficult or impossible to solve. The class will introduce the students to the theory of wicked problems, engage them in transdisciplinary approaches to address such problems using collaborative strategies such as participatory modeling combined with conceptual and agent-based models. Scenario-based simulations and visualizations will be used to explore possible futures and to create foresight related to wicked problems.

Prerequisites: OEAS 566/BIOL 566 or permission of the instructors

OEAS 667 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. May be repeated for credit. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

OEAS 669 Internship in Oceanography (1-3 Credit Hours)

1-3 credits.

Prerequisites: permission of the department

OEAS 695 Special Topics in Oceanography (1-3 Credit Hours)

An advanced investigation in a selected problem in physical, geological, chemical, or biological oceanography under the direction of the faculty of the Department of Ocean, Earth and Atmospheric Sciences.

OEAS 696 Selected Topics (1-3 Credit Hours)

An advanced investigation in a selected problem in physical, geological, chemical, or biological oceanography under the direction of the faculty of the Department of Ocean, Earth and Atmospheric Sciences.

Prerequisites: permission of the instructor

OEAS 698 Research (1-9 Credit Hours)

Any semester; hours to be arranged; variable credit. 1-9 credits per semester. M.S.-level research.

OEAS 699 Thesis (1-9 Credit Hours)

Any semester; hours to be arranged; variable credit. 1-9 credits per semester. M.S.-level work primarily devoted to the writing of the thesis.

OEAS 701 Scientific Computing for Environmental Sciences (3 Credit Hours)

This course is designed for incoming graduate students in environmental science disciplines (e.g. oceanography, geography, ecology, geology, biology, etc.) to introduce modern computing software, programming tools and best practices that are broadly applicable to carrying out research in the environmental sciences. Material covered will include an introduction to Unix, programming using commonly used open-source languages (Python and R), version control and data backup, and data visualization tools for environmental data and making maps. Students will also be introduced to high performance computing and tools for analyzing 'big data' on remote clusters. This course is not discipline specific and is designed to be accessible to any students who want to work with environmental data.

OEAS 704 Time Series in Oceanography (3 Credit Hours)

A study of the basic techniques used to model and analyze time series of oceanographic data. These include temporal spatial and frequency/wave number domain techniques.

Prerequisites: calculus

OEAS 705 Advanced Environmental Data Science (3 Credit Hours)

This is an advanced computational analysis course designed to introduce students to data management and analysis methods commonly used in data science applications. The data analysis portion of the course will be primarily based on machine learning methods. The course will also give an overview of a selection of scientific databases which host freely available oceanographic data and output from numerical model simulations. This course is not discipline specific and will be useful for any students who want to work with data efficiently and gain experience in data management, proper techniques in developing analytical pipelines and applying machine learning to their research.

Prerequisites: Permission of instructor

OEAS 708 Simulation Techniques for Ocean Circulation (3 Credit Hours)

Emphasis is on the construction of working ocean models, both vorticity-stream function and primitive equation models analyzed, mostly finite difference techniques, implicit and explicit schemes, staggered grids, discussion of ocean general circulation models.

Prerequisites: OEAS 730, and knowledge of a computer program language (FORTRAN preferred)

OEAS 711 Regional Oceanography (3 Credit Hours)

The regional oceanography of the major ocean basins, marginal seas, and coastal oceans. Seasonal and interannual variability. Heat and salt cycles.

Prerequisites: OEAS 604

OEAS 730 Dynamical Oceanography II (3 Credit Hours)

Dynamics of rotating stratified fluids. Inertial waves, equatorial dynamics, coastal dynamics, dynamic instability.

OEAS 733 Marine Microbiology (3 Credit Hours)

The course covers the distribution, abundance, and biogeochemical activities of microorganisms in the oceans, with emphasis on prokaryotic microbes and viruses. Symbioses with higher organisms, and applied aspects of marine microbiology, including biofouling and corrosion, invasive species, and marine biotechnology are also addressed.

OEAS 735 Paleoclimatology (3 Credit Hours)

This course focuses on the causes (forcings) of climate change; natural response time of the climate system; interactions and feedbacks; and the geologic record in climate change.

OEAS 741 Fisheries Population Dynamics (4 Credit Hours)

An introduction to the major questions in the management of marine fisheries: abundance, estimation, distribution, recruitment and optimum yield. Topics are presented within the context of fisheries management, marine productivity and population ecology, all of which shape the direction of the primary literature.

OEAS 755 Mathematical Modeling of Marine Ecosystems (3 Credit Hours)

This course is focused on the theory and techniques of mathematical model development for marine ecosystems. The course is designed to provide an understanding of how to parameterize interaction among components of marine food webs and interaction of food web components with physical environments.

OEAS 764 Coastal Sedimentology (3 Credit Hours)

Sedimentary processes in different coastal zones will be described: carbonate, evaporitic, and clastic depositional systems. We will conduct a small research project along the coast of Virginia. Field trip required.

OEAS 765 Marine Biogeochemistry (3 Credit Hours)

This class will focus on biologically mediated elemental cycling in aquatic systems. Assimilatory and dissimilatory biological processes involving auto- and heterotrophic organisms frequently mediate elemental cycling of these elements. Inorganic compounds and dissolved and particulate organic material will be discussed in terms of their biological reactivity and turnover times in aquatic systems and their contribution to elemental cycling on a variety of temporal and spatial scales. Also included is the issue of how community structure and function alter biogeochemical cycles.

OEAS 770 Aquatic Photosynthesis (4 Credit Hours)

This course examines the physics, chemistry, biology and ecology of photosynthesis by aquatic organisms. Topics include light harvesting, energy transfer, carbon metabolism and biosynthesis and their ecological consequences.

OEAS 772 Aquatic Optics (4 Credit Hours)

The course covers the physics of light transmission through the aquatic medium as affected by scattering and absorption, the optical properties of seawater, suspended particles of living cells, underwater vision and ocean color.

OEAS 791 Seminar (1 Credit Hour)

Techniques for presenting scientific data at professional meetings and seminars. Practical experience and feedback from discussions with visiting speakers.

OEAS 795 Advanced Topics in Oceanography (1-4 Credit Hours)

An advanced investigation of a selected problem in physical, geological, chemical, or biological oceanography under the direction of the faculty of the Department of Ocean, Earth and Atmospheric Sciences.

OEAS 801 Scientific Computing for Environmental Sciences (3 Credit Hours)

This course is designed for incoming graduate students in environmental science disciplines (e.g. oceanography, geography, ecology, geology, biology, etc.) to introduce modern computing software, programming tools and best practices that are broadly applicable to carrying out research in the environmental sciences. Material covered will include an introduction to Unix, programming using commonly used open-source languages (Python and R), version control and data backup, and data visualization tools for environmental data and making maps. Students will also be introduced to high performance computing and tools for analyzing 'big data' on remote clusters. This course is not discipline specific and is designed to be accessible to any students who want to work with environmental data.

OEAS 804 Time Series in Oceanography (3 Credit Hours)

A study of the basic techniques used to model and analyze time series of oceanographic data. These include temporal spatial and frequency/wave number domain techniques.

Prerequisites: calculus

OEAS 805 Advanced Environmental Data Science (3 Credit Hours)

This is an advanced computational analysis course designed to introduce students to data management and analysis methods commonly used in data science applications. The data analysis portion of the course will be primarily based on machine learning methods. The course will also give an overview of a selection of scientific databases which host freely available oceanographic data and output from numerical model simulations. This course is not discipline specific and will be useful for any students who want to work with data efficiently and gain experience in data management, proper techniques in developing analytical pipelines and applying machine learning to their research.

Prerequisites: Permission of instructor

OEAS 808 Simulation Techniques for Ocean Circulation (3 Credit Hours)

Emphasis is on the construction of working ocean models, both vorticity-stream function and primitive equation models analyzed, mostly finite difference techniques, implicit and explicit schemes, staggered grids, discussion of ocean general circulation models.

Prerequisites: OEAS 730, and knowledge of a computer program language (FORTRAN preferred)

OEAS 811 Regional Oceanography (3 Credit Hours)

The regional oceanography of the major ocean basins, marginal seas, and coastal oceans. Seasonal and interannual variability. Heat and salt cycles.

Prerequisites: OEAS 604

OEAS 830 Dynamical Oceanography II (3 Credit Hours)

Dynamics of rotating stratified fluids. Inertial waves, equatorial dynamics, coastal dynamics, dynamic instability.

OEAS 833 Marine Microbiology (3 Credit Hours)

The course covers the distribution, abundance, and biogeochemical activities of microorganisms in the oceans, with emphasis on prokaryotic microbes and viruses. Symbioses with higher organisms, and applied aspects of marine microbiology, including biofouling and corrosion, invasive species, and marine biotechnology are also addressed.

OEAS 840 Plankton Dynamics (3 Credit Hours)

This course emphasizes the ecology of heterotrophic plankton from bacteria to protists, from metazoan invertebrate plankton to fish larvae. Students will explore the role of plankton groups and species in the context of pelagic ecosystems. Planktonic processes are not only relevant for the ocean ecosystem but also for fisheries, aquaculture, environmental and human health, and global climate. The course consists of lectures, discussion groups on selected reading material, and laboratory demonstrations.

OEAS 841 Fisheries Population Dynamics (4 Credit Hours)

An introduction to the major questions in the management of marine fisheries: abundance, estimation, distribution, recruitment and optimum yield. Topics are presented within the context of fisheries management, marine productivity and population ecology, all of which shape the direction of the primary literature.

OEAS 855 Mathematical Modeling of Marine Ecosystems (3 Credit Hours)

This course is focused on the theory and techniques of mathematical model development for marine ecosystems. The course is designed to provide an understanding of how to parameterize interaction among components of marine food webs and interaction of food web components with physical environments.

OEAS 864 Coastal Sedimentology (3 Credit Hours)

Sedimentary processes in different coastal zones will be described: carbonate, evaporitic, and clastic depositional systems. We will conduct a small research project along the coast of Virginia. Field trip required.

OEAS 865 Marine Biogeochemistry (3 Credit Hours)

This class will focus on biologically mediated elemental cycling in aquatic systems. Assimilatory and dissimilatory biological processes involving auto- and heterotrophic organisms frequently mediate elemental cycling of these elements. Inorganic compounds and dissolved and particulate organic material will be discussed in terms of their biological reactivity and turnover times in aquatic systems and their contribution to elemental cycling on a variety of temporal and spatial scales. Also included is the issue of how community structure and function alter biogeochemical cycles.

OEAS 870 Aquatic Photosynthesis (4 Credit Hours)

This course examines the physics, chemistry, biology and ecology of photosynthesis by aquatic organisms. Topics include light harvesting, energy transfer, carbon metabolism and biosynthesis and their ecological consequences.

OEAS 872 Aquatic Optics (4 Credit Hours)

The course covers the physics of light transmission through the aquatic medium as affected by scattering and absorption, the optical properties of seawater, suspended particles of living cells, underwater vision and ocean color.

OEAS 891 Seminar (1 Credit Hour)

Techniques for presenting scientific data at professional meetings and seminars. Practical experience and feedback from discussions with visiting speakers.

OEAS 895 Advanced Topics in Oceanography (1-4 Credit Hours)

An advanced investigation of a selected problem in physical, geological, chemical, or biological oceanography under the direction of the faculty of the Department of Ocean and Earth Sciences.

OEAS 898 Doctoral Research (1-9 Credit Hours)

Any semester; hours to be arranged; variable credit, 1-9 credits per semester. Ph.D.-level research.

OEAS 899 Dissertation (1-9 Credit Hours)

Any semester; hours to be arranged; variable credit, 1-9 credits per semester. Ph.D.-level work primarily devoted to the writing of the dissertation.

OPMT - Operations Management

OPMT 670 Operations and Supply Chain Management (3 Credit Hours)

This course provides a comprehensive understanding of operations and supply chain management. Students learn how to optimize processes, manage inventory, coordinate logistics, and improve overall efficiency in delivering goods and services. Topics include the management of operations and the efficient flow of goods and services in a supply chain, operations and supply chain management strategy, process analysis, facility layout, capacity management, inventory management, and sustainable supply chain practices.

Prerequisites: Admission to the MBA program OR approval by the MBA program office

OPMT 695 Selected Topics in Operations Management (3 Credit Hours)

Study of selected topics in operations management.

Prerequisites: permission of the department chair and the graduate program director

OPMT 697 Independent Study in Operations Management (3 Credit Hours)

Affords students the opportunity to undertake independent study under the direction of a faculty member.

Prerequisites: OPMT 611

OPMT 795 Topics (3 Credit Hours)

Study of selected topics.

OPMT 895 Topics (3 Credit Hours)

Study of selected topics.

PADM - Public Administration

PADM 634 Regional Planning (3 Credit Hours)

The course analyzes the origins of regional planning agencies, current organizational structures, financing and functional activities. The focus is on the application of the systems approach to metropolitan planning issues. This latter objective is achieved through participation in exercises dealing with economics, transportation and land-use allocation modeling.

PADM 651 Administrative Theory I: The Context of Public Administration (3 Credit Hours)

Introduction to the profession of public administration; the evolution and development of the field, the role of organizations in contemporary American government, and the roles of politics and administration. The course also provides an introduction to the necessary skills for successful graduate study.

PADM 652 Administrative Theory II: The Process of Public Administration (3 Credit Hours)

Introduction to management in the public sector. Topics include: organizing public agencies, managing people and work groups, introduction to organizational systems (human resources, budget, and information systems), and effective leadership and decision-making processes.

PADM 653 Wicked Problems in Public Administration (3 Credit Hours)

This course deals with some of the many complex, intractable, or "wicked" problems that public and non-profit sector professionals will struggle with during the course of their careers. In the context of public administration, a wicked problem is a set of conditions and circumstances that seems to defy resolution or even amelioration because of the incredibly complex nature of the situation.

PADM 668 Internship/Field Experience (1-6 Credit Hours)

Required of all students without previous experience in government service. Supervised work experience in a public agency. A written report will be required.

PADM 671 Public Budgeting and Financial Management (3 Credit Hours)

The purpose of this course is to examine the institutions, principles, and techniques of national, state, and local budgeting processes and financial administration. The course explores the allocation as well as the re-distributive role of government and the market. While applying information technology, students will analyze the practices and fundamental concepts of government budgeting, financial management, and public finance, with an emphasis on revenue, expenditure, capital budgeting and debt structures.

PADM 695 Advanced Topics (1-3 Credit Hours)

Topics vary each semester.

PADM 696 Directed Readings (1-3 Credit Hours)

Specifically planned readings for the graduate student who wishes to pursue special interests outside the scope of formal studies. Supervised on an individual basis.

PADM 698 Directed Research (1-6 Credit Hours)

Supervised research on a specific program. A written report will be required.

PADM 699 Thesis (3-6 Credit Hours)

An approved research project, written under the supervision of a faculty committee, in which the student demonstrates the capacity to design and complete independent scholarly investigation. The completed project must be approved by the thesis committee.

PADM 701 Public Policy and Evaluation (3 Credit Hours)

Exploration of key theories and approaches to public policy. This course covers all phases of the policy process, from formulation to evaluation, with particular focus upon the substance, political dynamics, and evolution of public policy.

PADM 704 Methods of Public Program Evaluation (3 Credit Hours)

Examination of various methodologies for designing and conducting program evaluation and research. Experimental, quasi-experimental and nonexperimental procedures will be covered. (Cross listed with PPCM 704)

Prerequisites: PADM 753/PADM 853

PADM 708 Urban and Regional Economic Development (3 Credit Hours)

This course examines the theory and practice of urban and regional economic development. The tools, institutions, and analytical techniques of urban and regional economic development are examined in light of relevant public policy issues.

PADM 711 Tools of Government (3 Credit Hours)

Analysis of the range of administrative tools and strategies for the delivery of government services. Emphasizes new administrative alternatives under conditions of constant change.

PADM 712 Emergency Management and Policy (3 Credit Hours)

Explores policy and regulatory issues of emergency management; intergovernmental responsibilities and relationships among local, state and federal agencies in an "all hazards" approach to preparing and responding to manmade and natural disasters. Examines challenges faced by local, state, and federal managers during a large scale disaster.

PADM 713 Fundraising for Nonprofit Organizations (3 Credit Hours)

This course introduces students to fundraising principles of nonprofit organizations with an emphasis on different types of philanthropy, fundraising theories and practices, and motivations of givers. They will develop skills in creative problem solving for fundraising practice while learning to analyze and evaluate the fundraising process and methods. Additionally, students will develop the ability to synthesize and integrate current information and emerging ideas into a fundraising strategy and to think critically and analytically about a variety of fundraising perspectives.

PADM 714 Public-Private Partnerships (3 Credit Hours)

An in-depth analysis of the forces behind the privatization movement. Examines the context of privatization, the theoretical and empirical arguments on both sides of the debate, and the different forms of privatization practiced in the U.S. The course draws on a wide range of disciplines in a quest for an understanding of the privatization phenomenon-political science, public administration, public policy, sociology, economics, management, and others. (Cross listed with PPCM 714)

PADM 715 Management and Governance of Nonprofit Organizations (3 Credit Hours)

Successful nonprofit organizations require substantial capability in key areas of management such as developing a strong board of directors, recruiting and motivating talented staff and volunteers, creating a strategic plan, and wisely managing fiscal and human resources. The course is built around understanding nonprofit governance structures, relationships, and responsibilities as well as unique management issues associated with them. This course addresses these topics from theoretical and practitioner perspectives.

PADM 716 Introduction to Nonprofit Sector (3 Credit Hours)

This course offers a broad introduction to the study and practice of the nonprofit sector. The course explores the history, scope, and significance of the nonprofit sector as it relates to philanthropy, voluntary action, civil society, and civic engagement.

PADM 717 Nonprofit Financial Management (3 Credit Hours)

This course provides students with the knowledge to become effective financial managers by giving them practical applications of theory and skill-building in fiscal and accounting processes of nonprofit organizations.

PADM 718 Public Sector Contract Administration (3 Credit Hours)

Examines the actions that must be taken following the award of a contract, including assurance of required outcomes, assurance of compliance, proper contract launch, proper contract close-out, and documentation and carrying forward lessons learned. Connections to steps that must be taken in the other two phases of the procurement process are noted. (Course is cross listed with PPCM 718)

PADM 719 Leadership (3 Credit Hours)

Examines leadership through theoretical and practice-based frameworks. Offers analytical and intellectual examination and reflection on core issues in the practice of leadership. These objectives will be achieved through open discussion, honest self-assessment, experiential exercises, and observation of real-life leadership practice. (Cross listed with PPCM 719)

PADM 720 Public Human Resources Management (3 Credit Hours)

Examines the basic framework of the public personnel system beginning with the legal requirements imposed by federal and state laws and regulations. General considerations of policy and procedures development, the organization of the public personnel system, the adoption of the personnel ordinance, the determination of various levels of employee status and the coverage of the personnel system are included.

PADM 721 Transportation Policy (3 Credit Hours)

Lecture, 3 hours; 3 credits. This course focuses on surface transportation policy and planning, and highways and roads in particular. Topics include local, state and federal policies, public involvement in transportation planning, transportation and highway finance, privatization and public-private partnerships, critical issues and policy questions.

PADM 723 Ethics in Public Administration (3 Credit Hours)

This course reviews the theory and application of ethics in the public sector, identifying public values and how they apply in the administration of government. It reviews sources of values employed in public sector decision-making, and reviews how values in public administration are managed and applied. Systems of professional ethics are reviewed in the context of public professions. Case studies and best practices are examined to help the student understand the application of administrative ethics in public management.

PADM 724 Administration of Human Services (3 Credit Hours)

Analysis of human services involving direct client/agency interaction. Problems of discretion and control are examined as alternative service delivery strategies which can deal with these problems.

PADM 725 Government, Society, and Business (3 Credit Hours)

This course studies the interdependencies and interactions among three broad entities - business, government, and society - in the delivery of public services, paying special attention to their implications for public policy.

Prerequisites: six completed hours of graduate work in MBA or MPA program

PADM 726 Introduction to Public Procurement (3 Credit Hours)

This course provides an overview of procurement and contract management as a core function in public sector organizations. The course introduces the student to how properly-aligned, best practice acquisitions can support public entities' strategic goals. Challenges and opportunities for all stakeholders are addressed. Special attention is given to ongoing changes in public procurement. (Cross listed with PPCM 726)

PADM 727 Public Procurement and Project Management (3 Credit Hours)

Course covers each phase of the public procurement project cycle, with an emphasis on tools and techniques to manage a public procurement project. (Cross listed with PPCM 727)

PADM 728 Public Sector Contract Planning and Formation (3 Credit Hours)

This course provides insight into why and how public sector contracts should be planned and formed properly. A strong emphasis is placed on the strategic role that procurement can play in public sector organizations and how procurement planning and source selection, in particular, fit into that role. (Cross listed with PPCM 728.)

PADM 731 Public Sector Procurement Law and Ethics (3 Credit Hours)

This course surveys the laws and ethics applicable to public sector procurement and contract management. A theoretical and problem-based, interdisciplinary approach is used to address the major legal and ethical issues that arise when public sector organizations plan, form, and administer contracts. Attention is given to the role of professionalization in socializing appropriate ethics. (Cross listed with PPCM 731)

PADM 734 Negotiation and Dispute Resolution (3 Credit Hours)

The course provides conceptual and practical skills in negotiations. It examines the underlying cultural, legal, and organizational issues and problems that affect managing human resources in the workplace. (Cross listed with PPCM 734)

PADM 735 History of Race and Government Institutions (3 Credit Hours)

U.S. history is examined through a racial lens in the context of public administration: policies, laws, and court actions at the federal, state, and local levels. Three historical eras will be examined from colonial days to the present: Pre-Civil War Slavery, Jim Crow Segregation, and Mass Incarceration/ Colorblind Racism. Two transitional periods will also be covered: Post-Civil War Reconstruction and the Civil Rights Movement.

PADM 736 Diversity, Equity, & Inclusion: A Public Administration and Public Policy Perspective (3 Credit Hours)

Across every economic and social indicator, there are disparities that are based on race, gender, and culture. In the U.S., some of the disparities have been created by explicit and intentional discrimination that was incorporated into the U.S. Constitution and various federal, state, and local laws. Other disparities grew out of unconscious or unintended impacts of federal, state, and local laws, policies, and practices. This course will examine these issues within the context of public administration, developing an awareness of inequities and the skills to dismantle discriminatory policies and practices.

PADM 739 Cultural Competency (3 Credit Hours)

This course focuses on the growing challenges and opportunities created by our interconnected world and the knowledge and abilities necessary to lead through situations in which there are misunderstandings or conflicts rooted in differences. The course explores the structure and dynamics of all forms of diversity in public, non-profit, and governmental organizations, the resulting implications for organizational health, and the critical role of cultural-competent leadership.

PADM 740 Community Participation and Civic Engagement (3 Credit Hours)

This course examines the importance of social, economic, cultural, religious, and civic organizations in building or restoring communities. The course focuses on the revitalization, restoration, or upgrading of communities, cities, and localities or neighborhoods within or adjacent to cities, by the residents themselves. Viewed through the lens of social capital theory, the course further explores examples of short- and long-term change accomplished by community members on their own, within organizations, or in partnership with government officials.

PADM 745 Managing Development and Change in Organizations (3 Credit Hours)

Examination of the theory and practice of organization development. Participants will take the role of change agent and public manager and apply a range of organization development techniques to public agency situations while giving attention to the particular cultural, political, legal and organizational characteristics of public organizations.

PADM 746 Capstone Seminar in Public Administration (3 Credit Hours)

Presents an integrated approach to the field of public administration, and examines the political, administrative, and social implications of administrative choices. The emphasis of the course will be a case approach to public administration and public management.

Prerequisites: Completion of 30 hours in the MPA program or permission of instructor

Pre- or corequisite: PADM 651, PADM 671, and PADM 701

PADM 750 Performance Measurement and Management (3 Credit Hours)

This course focuses on performance-based management approaches in public and non-profit settings. It addresses the performance measurement and management process, the identification of appropriate performance measures, and the implementation of a performance measurement system, as well as managing for performance.

PADM 752 Introduction to Data Analysis (3 Credit Hours)

An introduction to statistics for students in Public Administration and related fields. Emphasis is placed on the quantitative analysis of demographics and factors affecting public administrators in the field.

PADM 753 Research Methods in Public Administration (3 Credit Hours)

This course examines various methods for designing and conducting research, collecting and organizing data, and disseminating results. Information technology and applications to practical management problems and public research topics are emphasized.

PADM 760 Collaboration in Public Administration (3 Credit Hours)

An examination of the fundamental concepts of collaborative governance in the field of public administration and public policy. Emphasis is placed on the government and/or nonprofit management and process of collaborative problem solving and policy implementation in cross-sector and intra-sector environments.

PADM 772 Public Financial Management (3 Credit Hours)

Examination of public sector financial principles, practices, and processes. A public manager's perspective of the decision making and practices of managing public funds. Introduction to governmental accounting practices. Emphasis on analyzing financial statements for decision making. Extensive use of Excel spreadsheet. Exploration of public financial management research and the link between public financial management practices and public fiscal and monetary policies.

PADM 780 Local Government Management (3 Credit Hours)

This course provides students with the professional knowledge, skills, and abilities to engage successfully with local governments from the following perspectives: as a generalist public administrator, as a local government specialist, and as a citizen, non-profit leader, or businessperson. In addition, this course provides students with the theoretical and policy context within which local governments operate. Students will master that knowledge by researching how local governments use those concepts in every day administration.

PADM 781 Intergovernmental Management (3 Credit Hours)

Analysis of relationships among federal, state, and local governmental units in the delivery of governmental programs. Focus on intergovernmental issues in urban metropolitan regions. (Cross listed with PPCM 781)

PADM 785 Social Marketing in the Public Sector (3 Credit Hours)

The course is an examination of the principles, practices, and use of Social Marketing - the use of techniques to influence a target audience to voluntarily accept, reject, modify, or abandon a behavior for the benefit of individuals, groups, or society as a whole - in the public sector. In addition, the course will familiarize students with current and potential uses of Social Marketing to accomplish public sector goals.

PADM 800 Colloquium - Public Administration and Policy (1 Credit Hour)

This course introduces students to the field, the academy, the School of Public Service faculty, and university resources; it also sets program expectations for students. Topics include: research process, developing a research agenda, critical analysis of literature, professional development, comprehensive exams process, and academic v. nonacademic careers.

PADM 801 Policy Theory (3 Credit Hours)

This course provides an overview of theories of public policy. It provides a solid foundation for knowledge in this area. Students will be introduced to the leading theories, frameworks, and models that help describe and explain the policy process. The course examines the historical heritages of the policy sciences and the bases upon which public policy discussions take place at all stages of the policy process.

PADM 802 Public Administration I (3 Credit Hours)

The course reviews the history of administrative theory and the broad topics of administrative theory. The course is intended to address the impact that organizational structure and political/social environment have on administration. This course will not cover every theory, model, or framework relevant to public administration. However, this course is intended to provide the doctoral student with the theoretical foundations of public administration and understanding of their historical context in the field.

PADM 803 Public Administration II (3 Credit Hours)

This course is a continuation of PADM 802 and is intended to provide a framework for doctoral students to develop their understanding of public and nonprofit management organizational practices in the American context. The course is not exclusively directed to any one level of government, but includes national, state, and local management and organizational behavior. The course provides material on the concepts and perspectives on managerial rationale, responsibilities, decision making, and approaches to administration.

Prerequisites: PADM 802

PADM 804 Multi-Sector Administration (3 Credit Hours)

The course explores public administration from Neoliberalism and beyond to focus on the development of multi-sector administration, where multi-sector is defined as policy action across governments, nonprofit organizations, for-profit organizations, and/or grass-roots groups and individuals. The course is expected to cover the methods, challenges, and consequences of multi-sector administration. This course will also address the management and evaluation of multi-sector relationships. This is not an introduction to organizational structure or theory.

PADM 805 Research Design (3 Credit Hours)

The course examines advanced research design and evaluation methods used in public administration and management research. Experimental, quasi-experimental, and nonexperimental procedures in the context of urban settings will be emphasized. Includes usage of various statistical software.

PADM 806 Multivariate Analysis in Public Administration (3 Credit Hours)

This course explores the proper use, calculation, and interpretation of multivariate statistics as commonly found in the literature in public administration. The course will prepare students to choose the appropriate statistical tools, generate testable hypotheses, correctly apply the statistical tool, analyze the results, and present and interpret the results of those tests in a manner appropriate for public administration in the field.

Prerequisites: FOUN 722

PADM 808 Urban and Regional Economic Development (3 Credit Hours)

This course examines the theory and practice of urban and regional economic development. The tools, institutions, and analytical techniques of urban and regional economic development are examined in light of relevant public policy issues.

PADM 810 Policy and Program Evaluation (3 Credit Hours)

Examination of various methodologies for designing and conducting public policy and program evaluation and research. Experimental, quasi-experimental and non-experimental procedures will be covered.

PADM 811 Tools of Government (3 Credit Hours)

Analysis of the range of administrative tools and strategies for the delivery of government services. Emphasizes new administrative alternatives under conditions of constant change.

PADM 812 Emergency Management and Policy (3 Credit Hours)

Explores policy and regulatory issues of emergency management; intergovernmental responsibilities and relationships among local, state and federal agencies in an "all hazards" approach to preparing and responding to manmade and natural disasters. Examines challenges faced by local, state, and federal managers during a large scale disaster.

PADM 813 Fundraising for Nonprofit Organizations (3 Credit Hours)

This course introduces students to fundraising principles of nonprofit organizations with an emphasis on different types of philanthropy, fundraising theories and practices, and motivations of givers. They will develop skills in creative problem solving for fundraising practice while learning to analyze and evaluate the fundraising process and methods. Additionally, students will develop the ability to synthesize and integrate current information and emerging ideas into a fundraising strategy and to think critically and analytically about a variety of fundraising perspectives.

PADM 814 Public-Private Partnerships (3 Credit Hours)

An in-depth analysis of the forces behind the privatization movement. Examines the context of privatization, the theoretical and empirical arguments on both sides of the debate, and the different forms of privatization practiced in the U.S. The course draws on a wide range of disciplines in a quest for an understanding of the privatization phenomenon-political science, public administration, public policy, sociology, economics, management, and others.

PADM 815 Management and Governance of Nonprofit Organizations (3 Credit Hours)

Successful nonprofit organizations require substantial capability in key areas of management such as developing a strong board of directors, recruiting and motivating talented staff and volunteers, creating a strategic plan, and wisely managing fiscal and human resources. The course is built around understanding nonprofit governance structures, relationships, and responsibilities as well as unique management issues associated with them. This course addresses these topics from theoretical and practitioner perspectives.

PADM 816 Introduction to Nonprofit Sector (3 Credit Hours)

This course offers a broad introduction to the study and practice of the nonprofit sector. The course explores the history, scope, and significance of the nonprofit sector as it relates to philanthropy, voluntary action, civil society, and civic engagement.

PADM 817 Nonprofit Financial Management and Fund Raising (3 Credit Hours)

Lecture 3 hours; 3 credits. This course provides students with the knowledge to become effective financial managers by giving them practical applications of theory and skill-building in fiscal processes and fundraising of nonprofit organizations.

PADM 818 Public Sector Contract Administration (3 Credit Hours)

Examines leadership through theoretical and practice-based frameworks. Offers analytical and intellectual examination and reflection on core issues in the practice of leadership. These objectives will be achieved through open discussion, honest self-assessment, experiential exercises, and observation of real-life leadership practice.

PADM 819 Leadership (3 Credit Hours)

Examines leadership through theoretical and practice-based frameworks. Offers analytical and intellectual examination and reflection on core issues in the practice of leadership. These objectives will be achieved through open discussion, honest self-assessment, experiential exercises, and observation of real-life leadership practice.

PADM 820 Public Human Resources Management (3 Credit Hours)

Examines the basic framework of the public personnel system beginning with the legal requirements imposed by federal and state laws and regulations. General considerations of policy and procedures development, the organization of the public personnel system, the adoption of the personnel ordinance, the determination of various levels of employee status and the coverage of the personnel system are included.

PADM 823 Ethics in Public Administration (3 Credit Hours)

This course reviews the theory and application of ethics in the public sector, identifying public values and how they apply in the administration of government. It reviews sources of values employed in public sector decision-making, and reviews how values in public administration are managed and applied. Systems of professional ethics are reviewed in the context of public professions. Case studies and best practices are examined to help the student understand the application of administrative ethics in public management.

PADM 824 Administration of Human Services (3 Credit Hours)

Analysis of human services involving direct client/agency interaction. Problems of discretion and control are examined as alternative service delivery strategies which can deal with these problems.

PADM 825 Government, Society and Business (3 Credit Hours)

An overview of business-government society interactions, with special attention to the influence of public policy and corporate strategy on corporate social responsibility. An important theme is the ethical component of management decision making.

PADM 826 Introduction to Public Procurement (3 Credit Hours)

This course provides an overview of procurement and contract management as a core function in public sector organizations. The course introduces the student to how properly-aligned, best practice acquisitions can support public entities' strategic goals. Challenges and opportunities for all stakeholders are addressed. Special attention is given to ongoing changes in public procurement.

PADM 827 Public Procurement and Project Management (3 Credit Hours)

Course covers each phase of the public procurement project cycle, with an emphasis on tools and techniques to manage a public procurement project.

PADM 828 Public Sector Contract Planning and Formation (3 Credit Hours)

This course provides insight into why and how public sector contracts should be planned and formed properly. A strong emphasis is placed on the strategic role that procurement can play in public sector organizations and how procurement planning and source selection, in particular, fit into that role.

PADM 831 Public Sector Procurement Law and Ethics (3 Credit Hours)

This course surveys the laws and ethics applicable to public sector procurement and contract management. A theoretical and problem-based, interdisciplinary approach is used to address the major legal and ethical issues that arise when public sector organizations plan, form, and administer contracts. Attention is given to the role of professionalization in socializing appropriate ethics.

PADM 834 Negotiation and Dispute Resolution (3 Credit Hours)

The course provides conceptual and practical skills in negotiations. It examines the underlying cultural, legal, and organizational issues and problems that affect managing human resources in the workplace.

PADM 835 History of Race and Government Institutions (3 Credit Hours)

U.S. history is examined through a racial lens in the context of public administration: policies, laws, and court actions at the federal, state, and local levels. Three historical eras will be examined from colonial days to the present: Pre-Civil War Slavery, Jim Crow Segregation, and Mass Incarceration/ Colorblind Racism. Two transitional periods will also be covered: Post-Civil War Reconstruction and the Civil Rights Movement.

PADM 836 Diversity, Equity, & Inclusion: A Public Administration and Public Policy Perspective (3 Credit Hours)

Across every economic and social indicator, there are disparities that are based on race, gender, and culture. In the U.S., some of the disparities have been created by explicit and intentional discrimination that was incorporated into the U.S. Constitution and various federal, state, and local laws. Other disparities grew out of unconscious or unintended impacts of federal, state, and local laws, policies, and practices. This course will examine these issues within the context of public administration, developing an awareness of inequities and the skills to dismantle discriminatory policies and practices.

PADM 839 Cultural Competency (3 Credit Hours)

This course focuses on the growing challenges and opportunities created by our interconnected world and the knowledge and abilities necessary to lead through situations in which there are misunderstandings or conflicts rooted in differences. The course explores the structure and dynamics of all forms of diversity in public, non-profit, and governmental organizations, the resulting implications for organizational health, and the critical role of cultural-competent leadership.

PADM 840 Community Participation and Civic Engagement (3 Credit Hours)

This course examines the importance of social, economic, cultural, religious, and civic organizations in building or restoring communities. The course focuses on the revitalization, restoration, or upgrading of communities, cities, and localities or neighborhoods within or adjacent to cities, by the residents themselves. Viewed through the lens of social capital theory, the course further explores examples of short- and long-term change accomplished by community members on their own, within organizations, or in partnership with government officials.

PADM 845 Managing Development and Change in Organizations (3 Credit Hours)**PADM 850 Performance Measurement and Management (3 Credit Hours)**

This course focuses on performance-based management approaches in public and non-profit settings. It addresses the performance measurement and management process, the identification of appropriate performance measures, and the implementation of a performance measurement system, as well as managing for performance.

PADM 860 Collaboration in Public Administration (3 Credit Hours)

An examination of the fundamental concepts of collaborative governance in the field of public administration and public policy. Emphasis is placed on the government and/or nonprofit management and process of collaborative problem solving and policy implementation in cross-sector and intra-sector environments.

PADM 872 Public Financial Management (3 Credit Hours)

Examination of public sector financial principles, practices, and processes. A public manager's perspective of the decision making and practices of managing public funds. Introduction to governmental accounting practices. Emphasis on analyzing financial statements for decision making. Extensive use of Excel spreadsheet. Exploration of public financial management research and the link between public financial management practices and public fiscal and monetary policies.

PADM 880 Local Government Management (3 Credit Hours)

This course provides students with the professional knowledge, skills, and abilities to engage successfully with local governments from the following perspectives: as a generalist public administrator, as a local government specialist, and as a citizen, non-profit leader, or businessperson. In addition, this course provides students with the theoretical and policy context within which local governments operate. Students will master that knowledge by researching how local governments use those concepts in every day administration.

PADM 881 Intergovernmental Relations (3 Credit Hours)

Analysis of relationship among federal, state, and local governmental units in the delivery of governmental programs. Focus on intergovernmental issues in urban metropolitan regions.

PADM 885 Social Marketing in the Public Sector (3 Credit Hours)

Analysis of relationships among federal, state, and local governmental units in the delivery of governmental programs. Focus on intergovernmental issues in urban metropolitan regions.

PADM 895 Advanced Topics (3 Credit Hours)

Advanced topics in public administration.

PADM 898 Directed Research (3 Credit Hours)

Supervised research on a specific problem. A written report is required.

PADM 899 Dissertation (1-12 Credit Hours)

An approved research project, written under the supervision of a faculty advisor, in which the student demonstrates the capacity of design and completes independent applied research. The completed project must be approved by the dissertation committee.

PADM 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

PADM 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

PATH - Pathology

PATH 500 Introduction to Anatomical Laboratories (1 Credit Hour)

This course serves as an introduction to laboratory environments commonly seen in the practice of Pathology and fulfills training requirements necessary for continued study in the Pathologists' Assistant Program. Training will address bloodborne pathogen safety, laboratory safety and handling of biohazardous materials and waste. Proper use of Personal Protective Equipment (PPE) and laboratory regulations of the College of American Pathologists (CAP), OSHA and the Joint Commission will also be addressed. Training in human subjects' research regulations and requirements (via CITI training) will also be a component of this course. As a requirement for completion of this course, students will attain a two-year certification (by the American Heart Association) in Basic Life Support for Healthcare Providers (BLS-P). This course will also serve as an introduction to the functional, operational and administrative aspects of laboratories including the Surgical Pathology Laboratory at Sentara Norfolk General Hospital, the EVMS Biorepository and LifeNet Health.

PATH 501 Medical Ethics (2 Credit Hours)

This is a hybrid course having both an online component and face-to-face classroom discussions. The course was developed by Edx Inc., in collaboration with the faculty of Georgetown University, Kennedy Institute of Ethics. The course content and videos are equivalent to the (PHLX101-03X) course offered at Georgetown University. The in-house utilization of the course has supplemental features that include periodic interactive face-to-face classroom discussions on selected topics and themes. These discussions, conducted either as Blackboard postings or as classroom exchanges, personalize the course content. The course presents five major themes of bioethics and each of the five major themes is highlighted by a classroom discussion on the topic. Each week, a new unit will become available to the students either online or Blackboard. Presented in this course are the following themes: Autonomy, Bioethics and the human body, Bioethics as it pertains to the beginning and end of life and bioethics that have a global impact.

PATH 502 Educational Methodologies (2 Credit Hours)

This is an online component course that introduces the student to a variety of learning and teaching methods for health professionals. The course emphasizes the integration of knowledge and experience in preparing the student to function effectively in clinical clerkships. It covers a broad range of topics designed to improve learning skills, teaching, interactions with supervisors, residents, how to interact effectively with preceptors, how to become an effective preceptor to students and residents. Core themes include orienting the student learner, defining and applying feedback, application and analysis of effective questioning to promote knowledge and comprehension, strategies used in clinical educational encounters, role modeling, entrustment and behavioral elements of professionalism in the clinical setting.

PATH 503 Essential Physiology & Anatomy (5 Credit Hours)

This is a comprehensive introductory course to integrative organ system physiology and homeostatic regulatory mechanisms. Interrelationships of structure and function are reinforced throughout the course. The flow of the course is intended to interphase closely with the topic material being taught concurrently in Histology (PATH 513). The anatomy primer portion of the course introduces interactive learning exercises, videos and diagrams that expose the student to the major structural features that they will encounter in Anatomical Foundations (PATH 504).

PATH 504 Anatomical Foundations (5 Credit Hours)

The course is divided into 4 modular units of learning. The sequence is: back & upper extremities; head and neck; thorax & abdomen; pelvis & lower extremity. This course affords the student a coherent, sequential approach to the dissection and study of human anatomy at the gross level with applied clinical relationships for PA, SA & PathA students. The general objective is for the experience of dissection to lead to a 3-D visual concept of the human body in order to relate this to future professional settings. This 3-D dissection experience is extrapolated to all the other bodies in the anatomy lab providing the student with the anatomical basis for understanding and appreciating the variations and complexities of the human body. Students should be able to demonstrate to each other all the different normal structures and any pathological structures detailed in the student learning objectives for specific lectures. Students should be able to integrate materials in a particular module to talk about clinical/surgical functions. These objectives are evaluated by clinical scenario types of questions on exams.

PATH 506 Microbiology (2 Credit Hours)

This course will cover Medical Bacteriology and includes an introduction to bacteria biology including structure, growth, genetics, pathogenesis, mechanism-of-action of antimicrobial drugs and the fundamentals of disease prevention. Specific bacteria pathogens along with the human diseases they cause will be discussed. Emphasis will be on optimum methods of obtaining samples for culture and identification. Essential concepts related to life cycles, pathogenicity and aseptic technique will be introduced. One lecture each will introduce basic concepts in medical virology, medical mycology and medical parasitology.

PATH 507 Neuroanatomy (2 Credit Hours)

This course is a comprehensive introduction to integrative nervous system anatomy and physiology. Interrelationships of structure and function are reinforced throughout the course, including neurological cases. The flow of the course is intended to interphase closely with the topic material being taught concurrently in Mechanism of Disease (PATH 516) and Pathophysiology (PATH 510). The Neuroanatomy course introduces interactive learning exercises based on interactive lectures, clinical cases and material demonstrations using videos, materials and diagrams that expose the student to the major structural and functional features.

PATH 508 Medical Photography (2 Credit Hours)

This course applies the basic foundations of digital photography to medical photo documentation techniques. Students will learn principles of light, optics, exposure, metering, lighting, special filters, annotation and archiving of images both at the macro and microscopic level. Learning methodologies include lectures and application in a practicum setting.

PATH 509 Autopsy & Surgical Path Techniques (3 Credit Hours)

This course is a combination of lectures and laboratory sessions. Students will be taught established surgical pathology and autopsy techniques. Autopsy techniques will include evisceration and dissection methods. Historical context and legal considerations will also be introduced. Surgical pathology topics will include general dictation and grossing techniques as well as specific organ/system methods, as well as the AJCC Cancer Staging Manual criteria and CAP protocols. There will be a review of laboratory operations, coding and laboratory safety as it applies to the Pathologists' Assistant. The laboratory portion of the course will include fixed, porcine organ/tissue grossing, frozen sections and dictation exercises. Students will be oriented to the facilities of Sentara Norfolk General Hospital Surgical Pathology and the Tidewater District Office of the Virginia Medical Examiner's Office.

PATH 510 Pathophysiology (4 Credit Hours)

This course is a didactic presentation of human pathophysiology designed for Health Professions students. A clear understanding of the etiology, pathogenesis, pathophysiology and morphologic changes of disease serves as an essential basis for the understanding and competent practice in all areas of medicine. Students in this course will: Develop a background and vocabulary in pathophysiology; acquire an understanding of general physiologic/pathophysiologic processes such as inflammation, repair, neoplasia and senescence; survey pathophysiologic processes and morphologic changes which manifest in organ systems and establish a basis for the understanding of disease; exercise an approach to clinical problems which evaluates symptoms, signs and findings with a knowledge of pathophysiology to formulate a diagnosis with due consideration of differential diagnoses.

PATH 511 Organ System Pathology (4 Credit Hours)

This course is a comprehensive introduction to integrative organ system pathology, and will include interrelationships of structure and function are reinforced throughout the course. The flow of the course is intended to interphase with topic material being taught concurrently in Autopsy and Surgical Pathology Techniques (PATH 509). The course introduces an interactive learning experience that exposes the student to all the major organ system pathology as is presented in Robbins Pathology and will provide the student with a strong background for fulfilling the competency requirements for a career as a Pathologists' Assistant.

PATH 512 Histotechnology I (2 Credit Hours)

This course focuses on the laboratory skills required to function in a clinical or research histology facility including specimen acquisition and fixation, tissue processing, embedding, sectioning and staining. Paraffin-based techniques with H&E/special stains are introduced. The student is expected to gain experience in cryomicrotomy and is introduced to a variety of immunohistochemical techniques. Chemical and environmental safety issues are covered in depth and emphasized. Proper record-keeping practices including quality control and quality assurance requirements are also reinforced. Responsible lab management procedures are emphasized including essential inventory control concerns, as well as instrumentation, care, quality assurance and maintenance.

PATH 513 Histology Health Professions (2 Credit Hours)

This course provides students with an understanding of the normal architecture of cells and an opportunity to gain appreciation of how cellular components specialize to form primary tissues and how these tissues give rise to organs and organ systems. The course allows for the evaluation of the structure-function relationships in normal cells, tissues and organs. Students will acquire morphological pattern recognition and cell/tissue/organ identification skills at the light microscopic level and to a lesser extent at the electron microscope level through a lecture-lab combination, systems-based approach. Students will be introduced to proper use of a light microscope and essentials of microscopy. Utilizing light microscopes in a laboratory setting and on-line tutorials to recognize the morphology of structures, students will relate these structures to their function. This course is a critical prerequisite to Pathology and Pathophysiology.

PATH 514 Medical Terminology (2 Credit Hours)

This is an interactive online and temporally guided self-paced course conducted using Quizlet. The course provides the student with an extensive vocabulary building set of exercises in medical terminology. The course is constructed with multiple sets of self-educational exercises that instruct the student in: General rules governing medical nomenclature, general rules pertaining to plurality and pronunciation, common medical terms and conditions, prefixes and suffixes of medical terms, covering AAPA suggested list of medical terms derived from Robbins Pathology textbook. The individual study sets are designed to cover each individual chapter of Robbins Pathology textbook. The students are introduced to CPT coding for surgical pathology used by the American Medical Association.

PATH 515 Embryology (2 Credit Hours)

This course is a comprehensive introduction to human embryology with application to pathology. The course is intended to interface with the topics taught concurrently in Anatomical Foundations (PATH 504).

PATH 516 General Mechanisms of Disease (3 Credit Hours)

The General Mechanisms of Disease module serves as a transition from the foundational modules to the organ systems modules. It focuses on the general mechanisms of disease, introducing students to microbiology and infectious disease, principles for discriminating healthy from unhealthy conditions and predicting clinical manifestations. The course consists of face-to-face lectures by basic science faculty focusing on major principles and their biomedical applications. Exams are used to assess foundational knowledge and facilitate knowledge integration and are designed to facilitate student review and self-assessment. The PathA student will complete approximately 60 contact hours. The course will have three major non-comprehensive multiple choice exams each covering approximately 6 to 8 hours of lecture content. The course will assess topic-specific foundational knowledge and facilitate disease knowledge integration.

PATH 600 Clinical Rotations (8 Credit Hours)

This course is the first of three consecutive courses comprising the Supervised Clinical Practice (SCP) component of the EVMS Pathologists' Assistant Program. This course consists of immersive clinical experiences in the various disciplines where Pathologists' Assistants may serve. Students will function under the direct supervision and guidance of site preceptors (Pathologists, Pathologists' Assistants, or other appropriate laboratory professionals). These rotations will include experience in Surgical Pathology, Medical Autopsy Pathology, Forensic Autopsy Pathology, Laboratory Management and Bio-Banking/Biorepository Sciences. The settings for these experiences will include district offices of the Virginia Medical Examiner's Office, military and Veterans Administration hospitals, community hospitals, larger private hospital complexes, academic medical centers and the EVMS Biorepository. Students will apply the knowledge and the skills developed in previous didactical courses to develop skills necessary for clinical practice. This course will introduce the student to the demands of the working environment and expectations of a practicing Pathologists' Assistant.

PATH 601 Certificate Completion Program (2 Credit Hours)

A new self-paced online certificate program, University of Pathology Informatics (UPI) leverages case-based learning to develop critical knowledge of informatics concepts. UPI is a joint effort between the American Society for Clinical Pathology (ASCP) and the Association for Pathology Informatics (API) focusing on the four laboratory informatics competencies: Information Fundamentals, Information Systems, Workflow & Processes and Governance & Management. This certificate program consists of 20 custom courses; 12 core and eight elective courses are required to earn the certificate. UPI utilizes a case-based approach, where you will act as the project leader in developing a pathology informatics needs assessment for a laboratory.

PATH 602 Special Topics: Pediatric Pathology (2 Credit Hours)

This is an online course that introduces the student to a variety of commonly encountered pediatric pathology cases. The course emphasizes the integration of knowledge obtained from prior pathology courses and prepares the student to function effectively in clinical clerkships where pediatric samples are encountered. It covers a broad range of topics designed to improve knowledge specific to pediatric cases and samples. Following successful completion of this course the student should be able to interact with pathologists and residents specialized in the field of pediatric pathology to carry out the function of a Pathologists' Assistant.

PATH 603 Clinical Rotations (8 Credit Hours)

This course is the second of three consecutive courses comprising the Supervised Clinical Practice (SCP) component of the EVMS Pathologists' Assistant Program. This course also consists of immersive clinical experiences in the various disciplines where Pathologists' Assistants may serve. Students will function under the direct supervision and guidance of site preceptors (Pathologists, Pathologists' Assistants, or other appropriate laboratory professionals). These rotations will include experience in Surgical Pathology, Medical Autopsy Pathology, Forensic Autopsy Pathology, Laboratory Management and Bio-Banking/Biorepository Sciences. The settings for these experiences will include district offices of Virginia Medical Examiner's Office, military and Veterans Administration hospitals, community hospitals, larger private hospital complexes, academic medical centers and the EVMS Biorepository. Students will continue to develop skills for clinical practice, an emphasis will be placed in functioning with greater autonomy and efficiency. They will expand their repertoire of specimen types and perform duties of progressively increasing complexity. Learning objectives addressed in prior courses or clinical rotations will be reinforced and emphasized. This course will prepare the student to meet the demands of the working environment and expectations of a practicing Pathologists' Assistant.

PATH 604 Lab Management Certificate (2 Credit Hours)

This course uses the Lab Management University (LMU) self-paced online certificate program that improves competencies in laboratory management. It will teach the student practical, day-to-day skills needed to function successfully in a laboratory environment. All core concepts of laboratory management are introduced. The Fundamentals Certificate of Completion in Laboratory Management is awarded on completion of 25 courses across six core competencies: Leadership, Personnel Management, Operations, Financial Management, Informatics and Compliance. Students select and complete 25 courses under the Fundamentals program at their own pace, receiving their Certificate of Completion in Laboratory Management upon successful completion.

PATH 605 Gross Anatomy Teaching Assistant (1 Credit Hour)

The students will participate in ongoing educational activity in the Gross Anatomy course for first year medical students or physician assistants and surgical assistants. It is anticipated that the PathA teaching assistant rotation (60 contact hours; approx. 8 weeks) will facilitate the learning experience of students currently enrolled in the course. Activities that the teaching assistant will conduct include dissection of cadavers for prosection presentation, photo documentation of dissection specimens of sufficient quality to be used for educational purposes. Conduct processing, dictation, and photo documentation of collected specimens of various pathologies encountered in the cadavers. The teaching assistants will participate in setting up formative quizzes, assisting in setting up of laboratory practical exams, opening of the calvarium and removal of brains and evaluations of student presentations.

PATH 606 Special Topics: Neuropathology (1 Credit Hour)

This is an online course that introduces the student to a variety of commonly encountered neuropathology cases. The course emphasizes the integration of knowledge obtained from prior pathology courses and prepares the student to function effectively in clinical clerkships where neuropathology samples are encountered. It covers a broad range of topics designed to improve knowledge specific to neuropathology cases and samples. Following successful completion of this course the student should be able to interact with pathologists and residents specialized in the field of neuropathology to carry out the function of a Pathologists' Assistant.

PATH 607 Clinical Rotations (4 Credit Hours)

This course is the final course of the Supervised Clinical Practice (SCP) component of the EVMS Pathologists' Assistant Program. This course consists of immersive clinical experiences in the various disciplines where Pathologists' Assistants may serve. Students will function under the direct supervision and guidance of site preceptors (Pathologists, Pathologists' Assistants, or other appropriate laboratory professionals). These rotations will include experience in Surgical Pathology, Medical Autopsy Pathology, Forensic Autopsy Pathology, Laboratory Management and Bio-Banking/Biorepository Sciences. The settings for these experiences will include district offices of Virginia Medical Examiner's Office, military and Veterans Administration hospitals, community hospitals, larger private hospital complexes, academic medical centers and the EVMS Biorepository. In this course, students will emphasize and refine the skills and abilities required of a practicing Pathologists' Assistant and will be capable of working with indirect supervision and with the independence expected of a PathA program graduate. Upon completion of this course, students will be fully competent in all essential duties of a PathA.

PATH 608 ASCP Certification Exam Prep (4 Credit Hours)

This seminar course is designed as a comprehensive review, study guide and self-evaluation tool with the goal of preparation for the American Society for Clinical Pathology Board of Certification (ASCP-BOC) Pathologists' Assistant certification examination. Students will have access to pre-course and post-course practice examinations and interactive study materials. Appropriate reference texts will be available as well as other review materials. This course will make use of the seminar format with students synthesizing material from multiple courses and disciplines into presentations to be shared with the class. The course will begin with a pre-course practice test to evaluate individual strengths and weaknesses in preparation of review for the ASCP-BOC Pathologists' Assistant Examination. Students will then be assigned seminar topics and will work in groups of two or three, to synthesize material and create presentations. Multiple disciplines (anatomy, pathology, histology, embryology, surgical pathology techniques, etc.) shall be included in the generation of review presentations and presentations will provide the foundation for seminars led by the assigned group. A post-course practice examination will allow the student to track their progress and identify any remaining points of weakness.

PATH 609 Graduate Seminar (2 Credit Hours)

This is a capstone research project designed to introduce the student to multiple elements of an original research project. The student will be responsible for selecting a topic in the discipline of Pathology to be worked up as a case-study finding or original research finding. The student will be responsible for the selection of the topic of interest, conducting literature search, compilation and analysis of the data material and writing of the findings in the form of an abstract and/or manuscript. Although not required, the reported findings should be of sufficient originality and scientific merit that it could be suitable for peer-review publication or presentation at a scientific meeting. The student will be responsible for writing and editing the final abstract, manuscript or report under the guidance of the Program Director. If the findings are submitted for publication, the student will be responsible for addressing reviewer comments and re-submission for publication with assistance from the Program Director. The course presents several major themes and opportunities of instructional methods related to research techniques and methods in health profession education. This course will allow the student to receive instructional and scientific guidance from the Program Director for initiating and completing a case-study report or other approved research project of interest. The culmination of the project will require that the student present the findings in an open seminar setting either in-house or at an approved scientific meeting to enhance the learning experience. The students will have the opportunity to participate in multiple discussions from the audience during their presentation.

PAUP - Public Administration and Urban Policy

PAUP 890 Dissertation Seminar (3 Credit Hours)

A multidisciplinary seminar that focuses on the design, implementation, and evaluation of urban programs under real-life conditions in the field. Students and faculty work with urban decision makers utilizing problem-solving skills and analysis.

PAUP 895 Advanced Topics (3 Credit Hours)

Advanced topics in public administration.

PAUP 898 Directed Research (1-6 Credit Hours)

Supervised research on a specific problem. A written report is required.

PAUP 899 Dissertation (1-12 Credit Hours)

An approved research project, written under the supervision of a faculty advisor, in which the student demonstrates the capacity of design and completes independent applied research. The completed project must be approved by the dissertation committee.

PE - Physical Education

PE 597 Topics in Health and Physical Education (1-3 Credit Hours)

This course provides an opportunity for in-depth study of selected topics in health and physical education.

Prerequisites: approval of program advisor

PHIL - Philosophy

PHIL 500 Philosophy and Video Games (3 Credit Hours)

An examination of the metaphysical, aesthetic, and ethical philosophical issues that accompany the creation, play, and critique of video games. Students will learn and analyze theories about what games are. They will think about and discuss the aesthetic qualities of video games and critically engage with attempts to fit video games into the larger art world. Students will engage with moral issues that arise from creating and consuming video games with morally problematic content. Finally, students will learn how to think critically about and interpret larger philosophical problems raised by video games and their themes.

Prerequisites: Junior standing and a grade of C or better in PHIL 110P or ENMA 480, or instructor permission

PHIL 501 Responsible Innovation and Inclusive Design (3 Credit Hours)

Provides training in inclusive and social-critical technology development and product design methodologies intended to directly transfer to use in industrial and organizational settings. The course's work-based learning is grounded in foundational work in philosophy of technology. Topics covered include SCOT (social construction of technology), ANT (actor-network theory), VSD (value-sensitive design), CBPR (community-based participatory research), and postphenomenological methodologies.

Prerequisites: ENGL 211C, ENGL 221C, or ENGL 231C and 3 credit-hours in PHIL or REL

PHIL 502 Gender and Philosophy (3 Credit Hours)

A philosophical survey of approaches to understanding gender and gender differences. The course will also serve as an introduction to feminist philosophy, with a particular emphasis on feminist ethics.

PHIL 504 Existentialism and Phenomenology (3 Credit Hours)

This course is an examination of the writings of some of the major philosophers in the Existentialist and Phenomenology movements of the 19th and 20th centuries.

Prerequisites: ENGL 211C and six credit hours in PHIL or REL, or permission of the instructor

PHIL 505 American Pragmatist Philosophy (3 Credit Hours)

This course is an examination of the writings of some of the major American philosophers in the Pragmatist tradition.

Prerequisites: ENGL 211C and six credit hours in PHIL or REL, or permission of the instructor

PHIL 506 Language and Thought: History of Analytic Philosophy (3 Credit Hours)

This course is a study of the history of the Analytic tradition in philosophy up through the 20th century.

Prerequisites: ENGL 211C and six credit hours in PHIL or REL, or permission of the instructor

PHIL 508 20th Century and Contemporary French Philosophy (3 Credit Hours)

This course explores French philosophy from the 20th century to today, examining how geopolitical events, technological change, and social movements have shaped and been shaped by key currents in French philosophical thought. Themes could include technology, biopolitics, deconstruction, feminism, May 1968, secularism, existentialism, postmodernism, and psychoanalysis, with a focus on whether there is a distinct 'French' approach to these topics.

PHIL 510 Social and Political Philosophy (3 Credit Hours)

A philosophical analysis of the relation between man, society, and the state, studying about a dozen philosophers since Plato on such topics as justice, authority, law, freedom, and civil rights.

PHIL 511 Post-Modernism and Post-Structuralism (3 Credit Hours)

This course is an examination of intellectual currents in postmodernism and post-structuralism as they pertain to central questions in social and political thought.

PHIL 512 Philosophy of Law (3 Credit Hours)

An examination of the nature of law and philosophical issues concerning the law.

PHIL 514 Feminist Philosophy (3 Credit Hours)

This course addresses feminist philosophy as a distinctive field of philosophy, offering a pluralist survey of both analytic and Continental approaches to feminist epistemology, ontology, phenomenology, ethics, and politics. Importantly, students will develop an intersectional lens of analysis to consider the lived reality and politics of gender, race, sexuality, disability, and other entwining marginalized identities.

PHIL 525 Kant and Hume (3 Credit Hours)

This course is an examination of the philosophical writings of Hume and Kant and their influence.

PHIL 530 Marx and Hegel (3 Credit Hours)

This course is an examination of the philosophical writings of Hegel and Marx and their influence

PHIL 532 Nietzsche and Life Affirmation (3 Credit Hours)

This course is an examination of Nietzsche's attempt to provide a life-affirming philosophy after laying waste to many traditional Western efforts to find life meaningful.

PHIL 534 Contemporary Theory of Knowledge (3 Credit Hours)

This course provides students with a problem-oriented, critical, and comparative understanding of problems in contemporary epistemology. Topics include skepticism and responses thereto, analyses of knowledge, the externalist versus internalist debate, foundationalism and coherentism, and social approaches to knowledge including contextualism and feminism.

PHIL 535 Philosophy of Psychology (3 Credit Hours)

An examination of various ways in which the mind has been understood in philosophy and in psychology and of the methods that have been used in the study of the mind.

PHIL 540 Philosophy of Science (3 Credit Hours)

A study of the concepts and philosophical problems in the sciences: scientific reasoning, confirmation, explanation, laws, meaning, theories, revolutions, progress, and values.

PHIL 542 Studies in Applied Ethics (3 Credit Hours)

An intensive examination of ethical issues in a particular field or profession; an emphasis on ethical theory underlying practical decisions.

PHIL 546 Artificial Intelligence (AI) Ethics and Policy (3 Credit Hours)

This course explores whether and how ethical AI is possible by examining moral standards as they apply to the various dimensions of AI development and use. It reviews the major ethical theories and discusses how principles such as transparency, privacy, safety, non-discrimination, and sustainability should govern the creation and use of AI technologies. Moreover, it considers how these principles could serve as the ethical framework for the social and policy structures that regulate and shape the future development of these technologies.

PHIL 547 Philosophy of Information (3 Credit Hours)

An in-depth study of the core topics of philosophy of information, including the nature of information across its primary forms (e.g. semantic, physical, biological, economic), personal and social impacts of information and information transfers, formulation of information as data, theory-ladenness of data, problematics of data analytics, and inferential validity of prior data. Project-based assessment is structured to provide individualized work-based learning.

Prerequisites: ENGL 211C, ENGL 221C, or ENGL 231C and 3 credit-hours in PHIL or REL

PHIL 551 Native American Philosophies (3 Credit Hours)

This course will provide students with an introduction to Native American philosophies with a focus on issues of identity, genocide, personhood, gender, sovereignty, and decolonization. Topics will be approached through a consideration of Native American philosophical methodologies and Native views regarding metaphysics, epistemology, and ethics. (Cross-listed with REL 551)

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

PHIL 582 Chinese Religion and Philosophy (3 Credit Hours)

A study of Chinese thought emphasizing Early and Classical Confucianism and Taoism, Chinese Buddhism, and NeoConfucianism. Modern currents of Chinese thought are also discussed.

PHIL 585 Japanese Religion and Philosophy (3 Credit Hours)

A study of the religious and philosophical traditions of Japan. Emphasis will be given to Shintoism, Buddhism, and Neo-Confucianism and their contemporary status and influence in Japanese culture.

PHIL 591 Seminar in Philosophy (3 Credit Hours)

Intensive examination of the thought of one major philosopher or philosophical movement.

PHIL 595 Topics in Philosophy (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

PHIL 596 Topics in Philosophy (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

PHIL 597 Tutorial Work in Special Topics in Philosophy (1-3 Credit Hours)

Independent reading and study of a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

PHIL 598 Tutorial Work in Special Topics in Philosophy (1-3 Credit Hours)

Independent reading and study of a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

PHIL 610 Studies in the Philosophy of Art (3 Credit Hours)

An evaluation of the field of art in relation to the rest of human culture, emphasizing the various approaches that may be used.

Prerequisites: One 500-level Philosophy course with a grade of B or higher (or equivalent)

PHIL 695 Topics in Philosophy (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work in subjects of mutual interest that, due to their specialized nature, may not be offered regularly.

Prerequisites: One 500-level Philosophy course with a grade of B or higher (or equivalent)

PHIL 697 Tutorial Work in Special Topics in Philosophy (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: approval of the department chair and one 500-level Philosophy course with a grade of “B” or higher (or equivalent)

PHIL 698 Tutorial Work in Special Topics in Philosophy (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: approval of the department chair and one 500-level Philosophy course with a grade of “B” or higher (or equivalent)

PHIL 704 Technology and the Humanities (3 Credit Hours)

A seminar providing foundations for and experience in the critical examination of technologies and their human and social impact. Topics will vary and may include AI, innovation, social media, robotics, healthcare, gaming, art, and music.

PHIL 707 Ethics in Public Health Practice (1-3 Credit Hours)

An investigation of ethical issues in public health policy, practice, and research. Students will develop a capacity for reasoned judgments in these matters by understanding and applying basic moral concepts, theories, and ideals.

Prerequisites: open to all graduate students in relevant fields

PHIL 710 International Rights (3 Credit Hours)

A philosophical study of rights applicable to the international arena. Theories from the early Modern European period to the present day will be treated. Coverage includes international law, the rights of nations, and human rights.

Prerequisites: approval of instructor

PHIL 795 Topics in Philosophy (3 Credit Hours)

The advanced study of special topics that may not be offered regularly.

PHIL 797 Tutorial in Philosophy (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: approval of the department chair

PHIL 804 Technology and the Humanities (3 Credit Hours)

A seminar providing foundations for and experience in the critical examination of technologies and their human and social impact. Topics will vary and may include AI, innovation, social media, robotics, healthcare, gaming, art, and music.

PHIL 807 Ethics in Public Health Practice (1-3 Credit Hours)

An investigation of ethical issues in public health policy, practice, and research. Students will develop a capacity for reasoned judgments in these matters by understanding and applying basic moral concepts, theories, and ideals.

Prerequisites: Open to all graduate students in relevant fields

PHIL 810 International Rights (3 Credit Hours)

A philosophical study of rights applicable to the international arena. Theories from the early Modern European period to the present day will be treated. Coverage includes international law, the rights of nations, and human rights.

Prerequisites: approval of instructor

PHIL 895 Topics in Philosophy (3 Credit Hours)

The advanced study of special topics that may not be offered regularly.

PHIL 897 Tutorial in Philosophy (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: approval of the department chair

PHYS - Physics

PHYS 503 Electronic Instrumentation (3 Credit Hours)**PHYS 513 Methods of Experimental Physics (3 Credit Hours)**

Experiments in classical and modern physics, designed to develop skills in the collection, analysis, and interpretation of experimental data.

PHYS 515 Introduction to Nuclear Particle Physics (3 Credit Hours)

An introduction to the structure of the atomic nucleus, natural and artificial radioactivity, nuclear decay processes and stability of nuclei, nuclear reactions, properties of nuclear forces, and nuclear models. Also, particle phenomenology, experimental techniques and the standard model. Topics include the spectra of leptons, mesons, and baryons; strong, weak, and electromagnetic interactions.

PHYS 516 Introduction to Solid State Physics (3 Credit Hours)

Introduction to solid state physics and materials science, with emphasis placed on the applications of each topic to experimental and analytical techniques. Topics include crystallography, thermal and vibrational properties of crystals and semiconductors, metals and the band theory of solids, superconductivity and the magnetic properties of materials.

PHYS 517 Introduction to Particle Accelerator Physics (3 Credit Hours)

Fundamentals of relativistic particle dynamics including particle acceleration; weak and strong focusing; linear beam optics and particle transfer matrices; linear and non-linear synchrotron motion; introduction to the statistical descriptions of particle beams; and radiation production by accelerated relativistic particles. Examples relevant to betatrons, cyclotrons, synchrotrons, and linear accelerators will be given.

Prerequisites: PHYS 319 or MAE 205, and PHYS 425 or ECE 323

PHYS 520 Introductory Computational Physics (3 Credit Hours)

Introduction to computationally based problem solving in physics with an emphasis on understanding and applying various numerical algorithms to different types of physics problems. Topics will include numerical integration (quadrature), numerical solution of ordinary differential equations, Runge-Kutta and Numerov methods, polynomial approximations, numerical linear algebra, and Monte-Carlo methods. These computational methods will be applied to problems in classical and quantum mechanics, as well as electromagnetic theory.

Prerequisites: CS 150, CS 151 or CS 153; PHYS 319; PHYS 323; and MATH 212

PHYS 525 Electromagnetism I (3 Credit Hours)

A study of the classical theory and phenomena of electricity and magnetism. Topics include the calculation of electric and magnetic fields, magnetic and dielectric properties of matter, and an introduction to Maxwell's equations. The course contains a mandatory recitation section.

PHYS 551 Theoretical Mechanics (3 Credit Hours)

A mathematical study of the concepts of mechanics. Vector calculus methods are used. Topics include mechanics of a system of particles, Lagrangian mechanics, Hamilton's canonical equations, and motion of a rigid body.

PHYS 552 Introduction to Quantum Mechanics (3 Credit Hours)

Introduction to the physical and mathematical structure of quantum theory. Dirac notation, Spin systems, EPR paradox and Bell's inequality. The Schrödinger equation is introduced for simple systems. Quantization of bound states, scattering, and tunneling are introduced for the 1-dimensional square-wave potential. In three dimensions, angular momentum and the harmonic oscillator are developed. The course contains a mandatory recitation section.

Prerequisites: PHYS 319 and PHYS 323

PHYS 553 Electromagnetism II (3 Credit Hours)

A course in electrodynamics developed from Maxwell's Equations. Topics include Maxwell's Equations, Conservation Laws, Electromagnetic Waves, Potentials and Fields, Radiation, and the interplay of electrodynamics and special relativity. The course contains a mandatory recitation section.

PHYS 554 Thermal and Statistical Physics (3 Credit Hours)

A study of the fundamental concepts of thermodynamics, kinetic theory, and statistical mechanics. Topics include the thermodynamics of simple systems, kinetic theory of gases, statistical mechanics of gases and an introduction to quantum statistics.

PHYS 556 Intermediate Quantum Mechanics (3 Credit Hours)

Techniques for solving the Schrödinger equation in one, two, and three dimensions. Solution of the Hydrogen atom, variational techniques, perturbation theory and scattering. The Pauli exclusion principle. Optional topics include atoms in an electromagnetic field (Stark effect, Zeeman effect), spontaneous and stimulated emission, hydrogen molecular ion and helium ground states, Bloch waves and elementary theory of solids.

PHYS 595 Special Topics in Physics (1-3 Credit Hours)

In-depth study of a selected topic in physics at the graduate level. May include a laboratory or computational component.

Prerequisites: Permission of the instructor

PHYS 597 Special Problems and Research (1-3 Credit Hours)

These courses afford the student an opportunity to pursue individual study and research.

Prerequisites: permission of the instructor

PHYS 601 Mathematical Methods of Physics I (3 Credit Hours)

Basic mathematical methods with applications: vector analysis, linear algebra, series and series of functions, Hilbert spaces, complex variable theory.

PHYS 602 Mathematical Methods of Physics II (1 Credit Hour)

Continuation of PHYS 601. Basic mathematical methods with applications: integral transforms, ordinary differential equations and partial differential equations.

Prerequisites: PHYS 601

PHYS 603 Classical Mechanics (3 Credit Hours)

Particle in a central-force field. Dynamics in a rotating reference frame. Lagrangian and Hamiltonian formulations. Small oscillations. Kinematics and dynamics of a rigid body. Canonical transformation, Hamilton-Jacobi theory.

PHYS 604 Classical Electrodynamics I (3 Credit Hours)

Electrostatics: Gauss' Law and Poisson and Laplace equations. Methods for the solution of boundary-value problems with rectangular, cylindrical, and spherical symmetry. Expansion in multipoles. Dielectrics. Magnetostatics and Faraday's law.

PHYS 621 Quantum Mechanics I (3 Credit Hours)

Mathematical foundations of Hilbert spaces. Background on Hamiltonian mechanics and electro-magnetism. Postulates of Quantum Mechanics, measurements and Schrödinger equation. Simple systems. Schrödinger Equation in 1-3 dimensions and solutions for specific systems. Symmetries and angular momentum. Time-independent perturbation theory.

PHYS 695 Selected Topics in Pure and Applied Physics (1-3 Credit Hours)

These courses afford the student an opportunity to pursue individual study.

Prerequisites: permission of the instructor

PHYS 696 Special Topics in Accelerator Physics (3 Credit Hours)

Special topics related to particle accelerators and their applications. Departmental approval required.

PHYS 698 Research (1-9 Credit Hours)

M.S. level research supervised by the student's thesis advisor.

PHYS 699 Thesis (1-9 Credit Hours)

M.S. level research supervised by the student's thesis advisor.

PHYS 704 Classical Electrodynamics II (3 Credit Hours)

Electrodynamics: Maxwell equations, plane electromagnetic waves and wave propagation, waveguides, radiating systems, special theory of relativity, including the dynamics of relativistic particles and electromagnetic fields.

Prerequisites: PHYS 604

PHYS 707 Statistical Mechanics (3 Credit Hours)

Review of thermodynamics. Classical statistical mechanics and applications. The virial expansion. Quantum statistical mechanics and the micro-canonical, canonical, and grand-canonical ensembles. The Fermi and Bose gases, and applications. Special topics in statistical mechanics.

Prerequisites: PHYS 603

PHYS 711 Computational Physics (3 Credit Hours)

Studies of high level computer languages. Computational techniques used in physics. Numerical techniques for differential and integral problems. Algebraic processing languages. Introduction to scientific visualization techniques.

PHYS 721 Quantum Mechanics II (3 Credit Hours)

Further development of quantum mechanics. Multi-particle states, bosons and fermions. Classical Limit. Variational principle, time-dependent perturbation theory and scattering. Path integral formulation. Symmetry and groups, addition of angular moments. Examples from solid state, atomic, nuclear, and particle physics.

Prerequisites: PHYS 621

PHYS 722 Nuclear and Particle Physics I (3 Credit Hours)

Nuclear forces, models of nuclear structure and reactions, hadron and lepton scattering, introduction to constituent quark model and hadron spectroscopy.

Prerequisites: PHYS 621

PHYS 723 Nuclear and Particle Physics II (3 Credit Hours)

Discrete and continuous symmetries and application to particle physics, SU(2) and SU(3) symmetries and static properties of hadrons. Klein-Gordon and Dirac equations, quantum electrodynamics and Feynman rules, strong and weak interactions, Standard Model and physics beyond the Standard Model.

Prerequisites: PHYS 722 or PHYS 822

PHYS 724 Condensed Matter Physics I (3 Credit Hours)

Electronic and lattice properties of solids, band structures of metals, semiconductors and insulators, dynamics of electron and phonons, electromagnetic and optical properties of metals and doped semiconductors, phenomenology of superconductivity and magnetism, and selected experimental methods of solid state physics.

Prerequisites: PHYS 621, and PHYS 721 or PHYS 821

PHYS 727 Atomic Physics (3 Credit Hours)

Irreducible tensor methods. Radiative excitation and ionization processes. Atom-atom scattering. Time-evolution of atomic observables in external fields. Multiple channel quantum defect theory and complex atomic and molecular spectra.

Prerequisites: permission of the instructor

PHYS 754 Accelerator Physics (3 Credit Hours)

Overview of the underlying physics of modern particle accelerators. Beam acceleration, coupled and uncoupled beam transport, nonlinear dynamics, collective effects, phase space cooling, and free-electron lasers will be covered. Depending on the instructor, additional topics of current interest such as coherent synchrotron radiation, wakefields and impedances, and novel methods of acceleration will be discussed.

PHYS 755 Experimental and Computational Techniques in Accelerator Physics (3 Credit Hours)

Overview of the tools and techniques used in the design of particle accelerators and the measurement of their components. The course is targeted for both physicists and engineers, and its intent is to provide them with a common language and understanding. The course consists of 6 modules of 2 weeks each. Each module will be a combination of assigned readings, lectures, computer-based design, and hand-on measurements. Typical topics to be addressed in the 6 modules are: beamline design, electromagnetic cavity design, magnets, beam instrumentation, engineering principles for superconducting rf accelerators, machine learning.

PHYS 759 Classical Mechanics and Electromagnetism in Accelerator Physics (3 Credit Hours)

Further developments in classical mechanics and electromagnetism and their application to accelerator physics: Lagrangian and Hamiltonian formulation of equations of motion, canonical transformations, adiabatic invariants, linear and nonlinear resonances. Louisville's theorem, solutions of Maxwell's equation in cavities and waveguides, wakefields, radiation and retarded potentials, and synchrotron radiation.

Prerequisites: PHYS 601, PHYS 603, and PHYS 704 or PHYS 804

PHYS 760 Low Temperature Physics (3 Credit Hours)

Properties and behavior of materials and systems at low temperature with emphasis on particle accelerator and microwave applications. Macroscopic quantum phenomena in condensates. Superfluidity, electrodynamic properties of superconductors.

Prerequisites: PHYS 825

PHYS 765 Design and Operating Principles of Particle Accelerators (3 Credit Hours)

This course will introduce design and general operating principles for particle accelerators, including acceleration methods for particles and beams. Topics will include the evolution and descriptions of particle beams under acceleration, physics of accelerated particle beams, as well as the effects of space charge, high-order modes (HOMs), and other collective effects. Aspects of both normal conducting (RF) and superconducting (SRF) particle beam acceleration will be covered.

Prerequisites: PHYS 603, PHYS 604, and PHYS 754 or PHYS 854

PHYS 790 Introduction to the Processes of Quantum Chromodynamics (3 Credit Hours)

An introduction to basic Quantum Chromodynamics (QCD) methods in hadron-scattering experiments. Focus will be placed on perturbative methods and partonic interpretations of specific processes. The course will begin with a general overview of QCD, and specific processes will be studied in detail to illustrate the general features of partonic physics and their QCD interpretations. The course will close with a summary of questions of current research interest.

Prerequisites: PHYS 871

PHYS 791 Seminar I (1 Credit Hour)

This seminar is designed to enhance both written and oral communication skills as applied to physics. Topics include effective display of data, preparation of scientific reports and preparation and delivery of scientific talks.

PHYS 795 Special Topics in Physics (1-3 Credit Hours)

Thorough coverage of areas selected to meet special needs and interests.

Prerequisites: Permission of the instructor

PHYS 796 Special Topics in Accelerator Physics (3 Credit Hours)

Special topics related to particle accelerators and their applications.

Prerequisites: Department approval required

PHYS 797 Research (1-6 Credit Hours)**PHYS 804 Classical Electrodynamics II (3 Credit Hours)**

Electrodynamics: Maxwell equations, plane electromagnetic waves and wave propagation, waveguides, radiating systems, special theory of relativity, including the dynamics of relativistic particles and electromagnetic fields.

Prerequisites: PHYS 604

PHYS 807 Statistical Mechanics (3 Credit Hours)

Review of thermodynamics. Classical statistical mechanics and applications. The virial expansion. Quantum statistical mechanics and the micro-canonical, canonical, and grand-canonical ensembles. The Fermi and Bose gases, and applications. Special topics in statistical mechanics.

Prerequisites: PHYS 603

PHYS 811 Computational Physics (3 Credit Hours)

Studies of high level computer languages. Computational techniques used in physics. Numerical techniques for differential and integral problems. Algebraic processing languages. Introduction to scientific visualization techniques.

PHYS 821 Quantum Mechanics II (3 Credit Hours)

Further development of quantum mechanics. Multi-particle states, bosons and fermions. Classical Limit. Variational principle, time-dependent perturbation theory and scattering. Path integral formulation. Symmetry and groups, addition of angular moments. Examples from solid state, atomic, nuclear and particle physics.

Prerequisites: PHYS 621

PHYS 822 Nuclear and Particle Physics I (3 Credit Hours)

Nuclear forces, models of nuclear structure and reactions, hadron and lepton scattering, introduction to constituent quark model and hadron spectroscopy.

Prerequisites: PHYS 621

PHYS 823 Nuclear and Particle Physics II (3 Credit Hours)

Discrete and continuous symmetries and application to particle physics, SU(2) and SU(3) symmetries and static properties of hadrons. Klein-Gordon and Dirac equations, quantum electrodynamics and Feynman rules, strong and weak interactions. Standard Model and physics beyond the Standard Model.

Prerequisites: PHYS 722 or PHYS 822

PHYS 824 Condensed Matter Physics I (3 Credit Hours)

Electronic and lattice properties of solids, band structures of metals, semiconductors and insulators, dynamics of electron and phonons, electromagnetic and optical properties of metals and doped semiconductors, phenomenology of superconductivity and magnetism, and selected experimental methods of solid state physics.

Prerequisites: PHYS 621, and PHYS 721 or PHYS 821

PHYS 825 Condensed Matter Physics II (3 Credit Hours)

Many body and collective effects in condensed matter, including phase transitions, Bose and Fermi quantum liquids, superfluidity, superconductivity and magnetism, and properties of mesoscopic and low-dimensional systems.

Prerequisites: PHYS 707 or PHYS 807, and PHYS 724 or PHYS 824

PHYS 827 Atomic Physics (3 Credit Hours)

Irreducible tensor methods. Radiative excitation and ionization processes. Atom-atom scattering. Time-evolution of atomic observables in external fields. Multiple channel quantum defect theory and complex atomic and molecular spectra.

Prerequisites: permission of the instructor

PHYS 842 Advanced Quantum Mechanics (3 Credit Hours)

Introduction to relativistic quantum mechanics; symmetries in relativistic wave equations; solutions to relativistic wave equations for bound states and scattering processes; classical field theory and role of symmetries in construction of conserved currents; introduction to second quantization of fields.

Prerequisites: PHYS 704 or PHYS 804, PHYS 721 or PHYS 821

PHYS 854 Accelerator Physics (3 Credit Hours)

Overview of the underlying physics of modern particle accelerators. Beam acceleration, coupled and uncoupled beam transport, nonlinear dynamics, collective effects, phase space cooling, and free-electron lasers will be covered. Depending on the instructor, additional topics of current interest such as coherent synchrotron radiation, wakefields and impedances, and novel methods of acceleration will be discussed.

PHYS 855 Experimental and Computational Techniques in Accelerator Physics (3 Credit Hours)

Overview of the tools and techniques used in the design of particle accelerators and the measurement of their components. The course is targeted for both physicists and engineers, and its intent is to provide them with a common language and understanding. The course consists of 6 modules of 2 weeks each. Each module will be a combination of assigned readings, lectures, computer-based design, and hand-on measurements. Typical topics to be addressed in the 6 modules are: beamline design, electromagnetic cavity design, magnets, beam instrumentation, engineering principles for superconducting rf accelerators, machine learning.

PHYS 857 Plasma Physics (3 Credit Hours)

Motion of charged particles in electromagnetic fields. Coulomb collisions and transport processes. Collisional Boltzmann equation. Generation of various forms of plasma in the laboratory. Basic plasma diagnostic methods including plasma and laser spectroscopy, measurements of electron and ion density and energy distribution.

Prerequisites: PHYS 603, PHYS 604, PHYS 704/PHYS 804, PHYS 727/PHYS 827 or permission of the instructor

PHYS 859 Classical Mechanics and Electromagnetism in Accelerator Physics (3 Credit Hours)

Further development in classical mechanics and electromagnetism and their application to accelerator physics: Lagrangian and Hamiltonian formulation of equations of motion, canonical transformations, adiabatic invariants, linear and nonlinear resonances. Louisville's theorem, solutions of Maxwell's equation in cavities and waveguides, wakefields, radiation and retarded potentials, and synchrotron radiation.

Prerequisites: PHYS 601, PHYS 603, and PHYS 704 or PHYS 804

PHYS 860 Low Temperature Physics (3 Credit Hours)

Properties and behavior of materials and systems at low temperature with emphasis on particle accelerator and microwave applications. Macroscopic quantum phenomena in condensates. Superfluidity, electrodynamic properties of superconductors.

Prerequisites: PHYS 825

PHYS 861 Nuclear Physics (3 Credit Hours)

The Yukawa potential in classical and quantum mechanics. One- and two-meson exchange amplitudes. Pion-exchange interactions: one- and two-pion exchange two-nucleon potentials, and two-pion exchange three-nucleon potentials. Electromagnetic interactions. Nucleon-nucleon scattering. Realistic models of two- and three-nucleon potentials. Relativistic corrections to the nuclear Hamiltonian. Electro-weak currents of nucleons and nuclei.

Prerequisites: PHYS 621 and either PHYS 721 or PHYS 821

PHYS 865 Design and Operating Principles of Particle Accelerators (3 Credit Hours)

This course will introduce design and general operating principles for particle accelerators, including acceleration methods for particles and beams. Topics will include the evolution and descriptions of particle beams under acceleration, physics of accelerated particle beams, as well as the effects of space charge, high-order modes (HOMs), and other collective effects. Aspects of both normal conducting (RF) and superconducting (SRF) particle beam acceleration will be covered.

Prerequisites: PHYS 603, PHYS 604, and PHYS 754 or PHYS 854

PHYS 871 Introduction to Quantum Field Theory I (3 Credit Hours)

Quantization of the Klein-Gordon field, interactions in quantum field theory and Feynman diagrams, quantization of the Dirac field, quantization of the electromagnetic field, quantum electrodynamics, renormalization, quantum chromodynamics and asymptotic freedom.

Prerequisites: PHYS 842

PHYS 872 Introduction to Quantum Field Theory II (3 Credit Hours)

Further development of topics in quantum field theory. The course addresses renormalization, non-abelian gauge theories, and advanced calculation techniques.

Prerequisites: PHYS 871

PHYS 890 Introduction to the Processes of Quantum Chromodynamics (3 Credit Hours)

An introduction to basic Quantum Chromodynamics (QCD) methods in hadron-scattering experiments. Focus will be placed on perturbative methods and partonic interpretations of specific processes. The course will begin with a general overview of QCD, and specific processes will be studied in detail to illustrate the general features of partonic physics and their QCD interpretations. The course will close with a summary of questions of current research interest.

Pre- or corequisite: PHYS 871

PHYS 891 Seminar I (1 Credit Hour)

This seminar is designed to enhance both written and oral communication skills as applied to physics. Topics include effective display of data, preparation of scientific reports and preparation and delivery of scientific talks.

PHYS 892 Seminar II (1 Credit Hour)

A continuation of PHYS 891 at an advanced level. This seminar is designed to enhance both written and oral communication skills as applied to physics. Topics include effective display of data, preparation of scientific reports and preparation and delivery of scientific talks.

PHYS 895 Special Topics in Physics (1-3 Credit Hours)

Thorough coverage of areas selected to meet special needs and interests.

Prerequisites: Permission of the instructor

PHYS 896 Special Topics in Accelerator Physics (3 Credit Hours)

Special topics related to particle accelerators and their applications.

Prerequisites: Departmental approval required

PHYS 898 Doctoral Research (1-12 Credit Hours)**PHYS 899 Dissertation (1-9 Credit Hours)**

POLS - Political Science

POLS 501 Global Environmental Policy (3 Credit Hours)

This course analyzes the causes, severity, potential consequences, and proposed solutions regarding global ecological issues with special attention to the scientific debate and the political and policy process. It examines environmental policies of national governments, regional/international organizations, and global conferences.

Prerequisites: GEOG 100S or GEOG 101S or GEOG 102T or POLS 100S or POLS 102S

POLS 503 American Constitutional Law: First Amendment (3 Credit Hours)

The course explores the development of conflicting judicial and legal theories arising from Supreme Court enforcement of the First Amendment's protection of speech and religious freedoms. Supreme Court opinions, along with the underlying theories that inform its decisions and rationales, are the focus of the assignments and class discussion.

POLS 510 African American Politics (3 Credit Hours)

This course examines the political development of Black people in the United States by focusing on the relationship and processes of the American political system. The political dynamics of Black political thought, the Civil Rights Movement, and Black protest politics are also analyzed.

POLS 512 Politics of the Civil Rights Movement (3 Credit Hours)

Examines the political activities which resulted in the passage of the nation's second Civil Rights policy, the 1960 and 1964 Civil Rights Acts, the 1965 Voting Rights Act and the 1968 Fair Housing Act. The course analyzes the underpinnings, leadership, and political strategies of the Civil Rights Movement.

POLS 514 Politics of Education (3 Credit Hours)

The question of power, often ignored by education policy analysts and researchers, is a principal focus of this seminar. Issues ranging from the role of education in political socialization and the politics of affirmative action and equal opportunity are examined.

POLS 515 Women and Politics in America (3 Credit Hours)

Examines women's place in political theory and the practice of politics in the United States. A major focus is to trace the development of women's political rights, the impact of public policy on the lives of American women and to see how women influence and participate in the political process.

POLS 520 Southern Politics (3 Credit Hours)

This seminar focuses on the politics of the American South from the 1940s to the present. Emphasis is on introducing students to contrasting explanations and analysis about the politics of the American South.

POLS 521 International Law (3 Credit Hours)

Surveys major areas of public international law (e.g., laws of warfare, law of the sea, conflict resolution, etc.). Emphasizes the relationship between international law and international politics.

POLS 524 International Organization (3 Credit Hours)

Course provides a basis for understanding the role and importance of international organizations in contemporary international relations. Focuses on development and history of global organizations, with particular emphasis on the United Nations, and regional and functional organizations.

POLS 534 Political Participation in the United States (3 Credit Hours)

An examination of current theories and research on political behavior, conventional and unconventional modes of political participation, and the impact of participation on the political system.

POLS 535 Chinese Politics (3 Credit Hours)

A study of origins of the Chinese revolution; development and functions of the Chinese Communist Party; government institutions; the defense establishment; evolution of foreign policy; and post-Mao political and economic reforms.

POLS 537 International Relations in East Asia (3 Credit Hours)

A study of contemporary issues (political, economic, and strategic) in the East Asia area; the interactions of China, Japan, the United States, and the former Soviet republics in East Asia.

POLS 538 Law in Literature and Film (3 Credit Hours)

Students will study law as seen through the lens of fiction. Assignments draw heavily from classic and contemporary novels, short stories, plays, films, and perhaps television. As these artistic representations of law in action are explored, short theoretical readings help focus on questions of philosophy, politics, and justice. The course also explores the relationship between fiction and reality through appellate opinions and contemporary literature on the American legal system. The goal is to come to a better understanding of the potential blessings, dangers, and limitations of law.

POLS 539 International Relations of African States (3 Credit Hours)

This course aims to expose students to an examination of the workings of international politics from the viewpoint of Africans and African states. International relations have tended to look at the world from the viewpoint of its most powerful states. Yet, most the world's states - notably in Africa - are weak but have great potential global impact.

POLS 542 Twentieth Century Dictatorships (3 Credit Hours)

A study of the Fascist, Nazi, Stalin and Mao regimes and the forces that brought them to power and sustained them, including a study of the impact of their policies on their people and neighboring states.

POLS 555 The Politics of Climate Change (3 Credit Hours)

An examination of the science of climate change and how United States political actors have responded to this global environmental challenge.

POLS 566 Politics of the Middle East (3 Credit Hours)

An analysis of the political processes throughout the region and in selected nations of the Middle East. Topics to be discussed include inter-Arab relations, the Arab-Israeli conflict, the Iran-Iraq rivalry and foreign power involvement in the Middle East.

POLS 595 Topics in Political Science (1-3 Credit Hours)

The advanced study of selected topics which, due to their specialized nature, may not be offered regularly.

POLS 596 Topics in Political Science (1-3 Credit Hours)

The advanced study of selected topics which, due to their specialized nature, may not be offered regularly.

POLS 597 Independent Research in Political Science (1-3 Credit Hours)

Independent research in political science under the supervision of a faculty member.

POLS 602 Seminar in American Foreign Policy (3 Credit Hours)

The formulation and conduct of U.S. foreign policy under changing domestic and external circumstances. Models of decision making; interrelationships of economic, political, and military factors; major trends in contemporary American foreign policy making.

POLS 623 Foreign Policy Analysis (3 Credit Hours)

Comparative study of foreign policy behavior. Internal and external factors in formation and implementation of foreign policy. Examination and application of foreign policy models.

POLS 624 National Security Policy (3 Credit Hours)

Examines U.S. national security policy, strategy and the use of force, the formulation and execution of policy, the international dimension of national security, and contemporary issues in national security.

POLS 626 Seminar in Politics of Russia and the Soviet Successor States (3 Credit Hours)

Power and authority in Russia and the other successor states of the former Soviet Union. Although focusing on Russia, the course embraces the contemporary internal politics of the states in the space between Germany and Japan/China including Central Asia and the Caucasus. Emphasizes research methodology and strategies.

POLS 631 Seminar in Chinese Politics (3 Credit Hours)

An advanced survey and research on contemporary Chinese politics, political and economic reforms; intellectuals and politics; China's experience of socialist revolution and economic construction; and foreign policy.

POLS 650 Interdependence, Power and Transnationalism (3 Credit Hours)

This course covers the fundamental concepts, ideas, and approaches to the study of interdependence and transnationalism. It seeks to expose students to the nature, role, and impact of economic, technological, strategic, and cultural interdependence. Cases of interdependence and transnationalism are explored in the post-Cold War era. Some focus is placed on how interdependence and transnationalism are impacting the power of the state.

Prerequisites: Permission of director or instructor

POLS 665 International Political Economy (3 Credit Hours)

Analysis of the forces shaping national and transnational economic institutions and their policies on a range of contemporary issues, including North-South relations.

POLS 695 Selected Topics in Political Science (1-3 Credit Hours)

The advanced study of selected topics which, due to their specialized nature, may not be offered regularly.

POLS 696 Selected Topics in Political Science (1-3 Credit Hours)

The advanced study of selected topics which, due to their specialized nature, may not be offered regularly.

POLS 697 Independent Research in Political Science (1-3 Credit Hours)

Independent research in political science under the supervision of a faculty member.

PORT - Maritime, Ports and Logistics Management

PORT 610 International Shipping and Supply Chain Management (3 Credit Hours)

Examines international freight transportation and terms for movement of international trade; focuses on improving supply chain relationships in the movement of international trade/directing the flow of information, materials and products. (cross-listed with MSCM 610)

PORT 611 International Maritime Transport (3 Credit Hours)

Examines the international business of shipping, commercial processes, maritime-related organizations, shipbuilding and repair, ship types and fleets, and commodity movement.

Prerequisites: an undergraduate course in the international field such as MGMT 361, MGMT 462, or a similar graduate course

PORT 612 Port Operations and Management (3 Credit Hours)

Covers role, functions, and types of international terminals and ports, including design and operation of general and specialized cargo handling facilities and offshore systems, port authorities, operational structures, and labor.

Prerequisites: a graduate course in management such as MGMT 602 and a course in operations management

PORT 613 International Maritime and Admiralty Law (3 Credit Hours)

International law of the sea, maritime jurisdiction, regulation of shipping, carriage of goods, marine insurance, salvage, marine environmental law, safety at sea, and the Oil Pollution Act of 1990 are covered, along with other maritime laws.

Prerequisites: a basic law course

PORT 614 Port Planning and Economics (3 Credit Hours)

Port planning and competition, ports and ocean container shipping, port impacts, port users in theory, port operator costing and pricing, port carriers and shippers, government and maritime institutions, dockworkers, port environment and port performance evaluation.

Prerequisites: a course in microeconomics such as ECON 604

PORT 615 Maritime Security and Risk Analysis (3 Credit Hours)

An overview of international and U.S. initiatives to ensure the security of vessels, cargo, people, and infrastructure within the maritime domain. In addition to the impacts of regulatory requirements on maritime commerce, the course also addresses maritime threats to the international economy (including maritime piracy and maritime terrorism), maritime coalitions, and state-of-the-art techniques and tools for safeguarding oceanborne commerce. (cross-listed with MSCM 615)

PORT 616 Reverse Logistics and Sustainable Operations (3 Credit Hours)

This course explores the theoretical foundations of global supply chain partnerships and reverse logistics systems, and examines the practices, risks, and opportunities found in today's systems. Fundamental tools and techniques are used to provide insights and solutions on how to best organize, manage, and optimize such systems to achieve sustainable performance. (cross-listed with MSCM 616)

Pre- or corequisite: MSCM 641 or PORT 611 or PORT 612 or instructor's permission

PORT 617 Transportation Management (3 Credit Hours)

The course includes a review of the key elements of transportation such as: modes of transportation, transportation economics, and transportation technology and regulations. The relationships between intermediaries, carriers and shippers are discussed, as well as company roles and operations within the transportation field, transportation sourcing and management, and transportation risk management.

PORT 618 Shipbuilding and Ship Repair Business Management (3 Credit Hours)

Examines the shipbuilding and ship repair industry from the perspective of industry economics, industry financial management and repair operations and acquisition processes. Provides industry professionals with business management practices that shape the industry.

PORT 619 Marine Insurance (3 Credit Hours)

Examines the rise of Lloyd's and the London Insurance Market, the current maritime insurance market, principles of insurance and law, Hull Insurance Law, cargo insurance, general average and salvage insurance.

PORT 641 Supply Chain Management and Logistics (3 Credit Hours)

This course examines supply chain management, the integration of all activities associated with the flow of materials and information from product start to customers' receipt. Examples include order processing, warehousing, inventory management, transportation and logistics, and the costs and information systems supporting these activities. Particular attention will be paid to global logistics systems supporting port and maritime activities. Supply chain relationships can be improved through effective integration of management and via such technologies as the World Wide Web, electronic data exchange, and enterprise resource planning (ERP). (cross-listed with MSCM 641)

PORT 668 Directed Research/Port Internship (1-3 Credit Hours)

Practical field experience in international maritime, ports and logistics related challenges through supervised investigation and analysis of a problem or a working internship within the port-related arena.

Prerequisites: PORT 611, PORT 612, PORT 613, and PORT 614

PORT 695 Selected Topics in Maritime and Port Management (3 Credit Hours)

The advanced study of selected topics not offered on a regular basis.

Prerequisites: PORT 611 or PORT 612

PORT 697 Independent Study (3 Credit Hours)

Designed to provide the opportunity for independent study under the guidance of a member of the faculty.

PPCM - Public Procurement and Contract Management

PPCM 704 Methods of Public Program Evaluation (3 Credit Hours)

Examination of various methodologies for designing and conducting program evaluation and research. Experimental, quasi-experimental and nonexperimental procedures will be covered. (Cross listed with PADM 704).

PPCM 714 Public-Private Partnerships (3 Credit Hours)

An in-depth analysis of the forces behind the privatization movement. Examines the context of privatization, the theoretical and empirical arguments on both sides of the debate, and the different forms of privatization practiced in the U.S. The course draws on a wide range of disciplines in a quest for an understanding of the privatization phenomenon-political science, public administration, public policy, sociology, economics, management, and others. (Cross listed with PADM 714).

PPCM 718 Public Sector Contract Administration (3 Credit Hours)

Examines the actions that must be taken following the award of a contract, including assurance of required outcomes, assurance of compliance, proper contract launch, proper contract close-out, and documentation and carrying forward lessons learned. Connections to steps that must be taken in the other two phases of the procurement process are noted. (Course is cross listed with PADM 718.)

PPCM 719 Leadership (3 Credit Hours)

Examines leadership through theoretical and practice-based frameworks. Offers analytical and intellectual examination and reflection on core issues in the practice of leadership. These objectives will be achieved through open discussion, honest self-assessment, experiential exercises, and observation of real-life leadership practice. (Cross listed with PADM 719)

PPCM 726 Introduction to Public Procurement (3 Credit Hours)

This course provides an overview of procurement and contract management as a core function in public sector organizations. The course introduces the student to how properly-aligned, best practice acquisitions can support public entities' strategic goals. Challenges and opportunities for all stakeholders are addressed. Special attention is given to ongoing changes in public procurement. (Cross listed with PADM 726)

PPCM 727 Public Procurement and Project Management (3 Credit Hours)

Course covers each phase of the public procurement project cycle, with an emphasis on tools and techniques to manage a public procurement project. (Cross listed with PADM 727)

PPCM 728 Public Sector Contract Planning and Formation (3 Credit Hours)

This course provides insight into why and how public sector contracts should be planned and formed properly. A strong emphasis is placed on the strategic role that procurement can play in public sector organizations and how procurement planning and source selection, in particular, fit into that role. (Cross listed with PADM 728)

PPCM 731 Public Sector Procurement Law and Ethics (3 Credit Hours)

This course surveys the laws and ethics applicable to public sector procurement and contract management. A theoretical and problem-based, interdisciplinary approach is used to address the major legal and ethical issues that arise when public sector organizations plan, form, and administer contracts. Attention is given to the role of professionalization in socializing appropriate ethics. (Cross listed with PADM 731)

PPCM 734 Negotiation and Dispute Resolution (3 Credit Hours)

The course provides conceptual and practical skills in negotiations. It examines the underlying cultural, legal, and organizational issues and problems that affect managing human resources in the workplace. (Cross listed with PADM 734)

PPCM 772 Public Financial Management (3 Credit Hours)

Examination of public sector financial principles, practices, and processes. A public manager's perspective of the decision making and practices of managing public funds. Introduction to governmental accounting practices. Emphasis on analyzing financial statements for decision making. Extensive use of Excel spreadsheet. Exploration of public financial management research and the link between public financial management practices and public fiscal and monetary policies.

PPCM 781 Intergovernmental Management (3 Credit Hours)

Analysis of relationships among federal, state, and local governmental units in the delivery of governmental programs. Focus on intergovernmental issues in urban metropolitan regions. (Cross listed with PADM 781)

PRTS – Parks, Recreation and Tourism Studies

PRTS 636 Research Problems in Park, Recreation and Tourism Studies (3 Credit Hours)

Practice in the use of statistical and analytical techniques in solving problems in Park, Recreation and Tourism Studies; supervised student research.

PRTS 650 Contemporary Issues in Park, Recreation and Tourism Studies (3 Credit Hours)

This course is designed to increase the student's ability to critically analyze and discuss the contemporary issues and trends in parks, recreation and tourism. This course will require students to describe, evaluate, and critique the current research in the field; evaluate the future trajectory of park, recreation and tourism studies; and assess both personal and professional philosophies to elucidate his/her role as an advanced-level practitioner in parks, recreation or tourism industry.

PRTS 668 Internship in Park, Recreation and Tourism Studies (1-6 Credit Hours)

Designed to provide detailed practical experience (400 clock hours) in a park, recreation or tourism field setting.

Prerequisites: completion of 75% of graduate work

PRTS 695 Topics in Park, Recreation and Tourism Studies (1-3 Credit Hours)

Selected topic courses in Park, Recreation and Tourism Studies

PRTS 697 Independent Study in Park, Recreation and Tourism Studies (1-3 Credit Hours)

Investigations in park, recreation, and tourism studies. Problems approved in advance are investigated under the supervision of the faculty advisor.

PRTS 698 Thesis Research in Park, Recreation and Tourism Studies (3-6 Credit Hours)

Students work independently with a faculty member to conduct research for their thesis on a topic related to Park, Recreation, and Tourism Studies.

Prerequisites: Permission of the advisor and committee

PRTS 699 Thesis in Park, Recreation and Tourism Studies (3-6 Credit Hours)

Students work independently with a faculty member to complete their thesis on a topic related to Park, Recreation and Tourism Studies.

Prerequisites: permission of the advisor and committee

PRTS 710 Tourist Behavior and Consumption (3 Credit Hours)

This course explores the complexities and evolution of tourism consumer behavior from a multidisciplinary perspective. Choosing, buying and consuming tourism/travel products and services includes a range of psycho-social processes, individual and environmental influences, motivations, and meanings that researchers and managers of national parks and tourism destinations should take into account when evaluating the tourism experience. This course provides an overview of such processes and influences and explains the basic and advanced concepts and theories that underlie tourist decision-making and behavior.

PRTS 720 Advanced Leisure Theories and their Applications (3 Credit Hours)

The course examines the concepts, theories and philosophies related to outdoor recreation, travel and tourism, and community recreation. Discussion will focus on the application of social science theories to the study of leisure, parks, recreation and tourism.

PRTS 730 Park Management for Professionals (3 Credit Hours)

This course targets research related to outdoor recreation in parks and open spaces. Empirical studies investigating sense of place, motivations for outdoor recreation, carrying capacity, crowding, recreation opportunity spectrum, and other sensitive issues will be covered. The course will also provide a historical overview of social sciences in outdoor recreation, and the principles guiding park management.

PRTS 740 Recreation Management for Administrators (3 Credit Hours)

This course provides preparation for upper-level recreation administration. National standards for managerial, administrative and executive decision-making for parks and recreation professionals will be discussed, in addition to practical knowledge and current real-world skills necessary in today's changing park and recreation environment. The course is designed to prepare professionals to sit for the Certified Park and Recreation Professionals (CPRP) or Certified Park and Recreation Executive (CPRE) exam.

PRTS 760 Advanced Sustainable Tourism Management (3 Credit Hours)

This course examines the planning, development and management of the tourism industry with regard to economic, social, cultural and environmental sustainability. Current theory and research in the field of sustainable tourism will also be explored in order for students to develop a critical perspective on sustainable tourism development.

PRTS 770 Grant Writing for Parks and Recreation (3 Credit Hours)

Grant writing is an essential skill for the park and recreation professional. This course examines the grant writing process. This includes, but is not limited to, The Office of Research, the ODU Research Foundation, budgeting, human subjects, and partnerships. Students will be expected to submit a grant application by the end of the course.

PRTS 780 Youth Development in Recreation (3 Credit Hours)

The Positive Youth Development (PYD) movement has been greatly influenced by sport and recreation. With the recent increase of diabetes, obesity, sedentary lifestyles, and risky behaviors among youth, sport and recreation professionals are charged to help alleviate these societal issues. More specifically, practitioners need to target the socio-emotional needs of our youth through the sport and recreation experience. By using class lectures, technology, video, and self-directed research, students will explore research, theory, practice, and techniques of structuring positive experiences for youth. This course includes the examination of theories on youth development, behavior management, motivation, resiliency, and social skills as they relate to the sport and recreation experience.

PRTS 810 Tourist Behavior and Consumption (3 Credit Hours)

This course explores the complexities and evolution of tourism consumer behavior from a multidisciplinary perspective. Choosing, buying and consuming tourism/travel products and services includes a range of psycho-social processes, individual and environmental influences, motivations, and meanings that researchers and managers of national parks and tourism destinations should take into account when evaluating the tourism experience. This course provides an overview of such processes and influences and explains the basic and advanced concepts and theories that underlie tourist decision-making and behavior.

PRTS 820 Advanced Leisure Theories and their Applications (3 Credit Hours)

The course examines the concepts, theories and philosophies related to outdoor recreation, travel and tourism, and community recreation. Discussion will focus on the application of social science theories to the study of leisure, parks, recreation and tourism.

PRTS 830 Park Management for Professionals (3 Credit Hours)

This course targets the pursued and needed research of outdoor recreation in parks and open space. Empirical studies investigating areas such as: sense of place, motivations for outdoor recreation, carrying capacity, crowding, recreation opportunity spectrum, and other sensitive issues will be covered. The course will also include an historical overview of social sciences in outdoor recreation. The course will also cover principles to guide park management.

PRTS 840 Recreation Management for Administrators (3 Credit Hours)

This course provides preparation for upper-level recreation administration. National standards for managerial, administrative and executive decision-making for parks and recreation professionals will be discussed, in addition to practical knowledge and current real-world skills necessary in today's changing park and recreation environment. The course is designed to prepare professionals to sit for the Certified Park and Recreation Professionals (CPRP) or Certified Park and Recreation Executive (CPRE) exam.

PRTS 860 Advanced Sustainable Tourism Management (3 Credit Hours)

This course examines the planning, development and management of the tourism industry with regard to economic, social, cultural and environmental sustainability. Current theory and research in the field of sustainable tourism will also be explored in order for students to develop a critical perspective on sustainable tourism development.

PRTS 880 Youth Development in Recreation (3 Credit Hours)

The Positive Youth Development (PYD) movement has been greatly influenced by sport and recreation. With the recent increase of diabetes, obesity, sedentary lifestyles, and risky behaviors among youth, sport and recreation professionals are charged to help alleviate these societal issues. More specifically, practitioners need to target the socio-emotional needs of our youth through the sport and recreation experience. By using class lectures, technology, video, and self-directed research, students will explore research, theory, practice, and techniques of structuring positive experiences for youth. This course includes the examination of theories on youth development, behavior management, motivation, resiliency, and social skills as they relate to the sport and recreation experience.

PSYC - Psychology

PSYC 651 Developmental Psychology (3 Credit Hours)

This course covers topics related to the physical, cognitive, social and emotional aspects of growth, from conception to death. It focuses on human growth and development, but other organisms are also considered.

PSYC 661 Psychopathology (3 Credit Hours)

The course provides a conceptual basis for the study of abnormal behavior. Students conduct an in-depth review of the literature related to the classification, etiology, and treatment of mental disorders.

PSYC 662 Human-Computer Interface Design (3 Credit Hours)

Course introduces students to the fundamental principles of human-computer interaction. Exposes students to basic psychological concepts and shows how they are used to create effective interface designs. Covers both theoretical and practical aspects of interface design.

Prerequisites: graduate standing and permission of the instructor

PSYC 664 Personality Assessment (3 Credit Hours)

This course covers history of personality theory and assessment and psychometrics, and introduces tools and techniques aimed at understanding individual differences in personality and assessment of major psychopathology.

Prerequisites: Student must be a clinical Ph.D. degree student or receive permission of the instructor

PSYC 667 Practicum in Psychology (2-5 Credit Hours)

Students will receive supervised training in an applied setting in the area of clinical or industrial psychology.

Prerequisites: 15 graduate course hours (including PSYC 663) and permission of the instructor

PSYC 696 Topics in Psychology (3 Credit Hours)**PSYC 697 Selected Topics in Psychology (1-4 Credit Hours)**

This course provides opportunities for advanced investigations of selected topics in psychology. May be taken by students beyond the first year of graduate study who wish to pursue topics not covered by regularly scheduled courses.

Prerequisites: permission of the instructor and graduate program director

PSYC 698 Research in Psychology (3 Credit Hours)

Individual project under guidance of a research advisor. Required for students choosing thesis option. Limited to a total of 3 hours of credit.

PSYC 699 Thesis (1-3 Credit Hours)

Individual project under guidance of a research advisor. Required for students choosing thesis option.

Prerequisites: PSYC 698

PSYC 705 Health Disparities and Inequities (3 Credit Hours)

This course will cover differences in health among marginalized populations. This course will take an interdisciplinary approach to understand what factors may contribute to health disparities and inequities among these populations. This course will also discuss ways to address health inequities at the policy level as well as through clinical interventions and health promotion.

PSYC 713 Research Methods in Psychology (3 Credit Hours)

This course will cover research design and methodology. Topics may include experimental, quasi-experimental, single subject and survey research; validity; reliability; confounds; measurement; sampling; inductive inference. Additionally, this course will cover Responsible Conduct of Research, including completion of CITI course, protection of human subjects, University Human Subjects Committee and IRB, APA Style, paper structure, references, tables, figures, etc., research proposal writing, including searching for sources, writing, oral presentation, data collection and management issues (e.g., Qualtrics, SONA, data cleaning). Students are required to complete a Research Proposal with Introduction and Methods and Data Analysis Plan and give an oral presentation of research proposal.

PSYC 722 Occupational Health Psychology (3 Credit Hours)

This course examines multidisciplinary research and theories on issues related to individual and organizational well-being and health. Occupational health psychology (OHP) emphasizes the promotion of wellness and the prevention of injuries and illnesses in the workplace. Through lectures/presentations, discussions, and research activities, students will learn about OHP theory and practice.

Prerequisites: PSYC 763/863 and PSYC 850

PSYC 727 Analysis of Variance and Experimental Design (4 Credit Hours)

Review of the basic descriptive and inferential statistical procedures with a heavy emphasis on fundamental and advanced analysis of variance techniques. Topics include contrasts, factorial designs, within-subject and mixed designs, and analysis of covariance. Course materials are covered in the context of classical experimental and quasi-experimental design.

Prerequisites: admission into the psychology M.S. or Ph.D. program or permission of the instructor

PSYC 728 Regression and Correlational Design (4 Credit Hours)

Course covers correlation with heavy emphasis on regression analysis in the context of the general linear model. Topics include partial correlations, categorical and continuous interactions, non-linear regression, and multivariate statistics. Course materials are covered in the context of correlational designs and survey research.

Prerequisites: Admission into the psychology M.S. or Ph.D. program or permission of the instructor and PSYC 727/PSYC 827 or equivalent

PSYC 731 Human Cognition (3 Credit Hours)

An investigation of the ways in which people process and retain information, make decisions, and solve problems. Current models of structures and processes of human memory and cognition are discussed with particular emphasis on neurocognitive evidence of the brain mechanisms involved in cognition.

Prerequisites: admission into the psychology M.S. or Ph.D. program or permission of the instructor

PSYC 735 Health Psychology (3 Credit Hours)

This course focuses on contemporary theory and research topics in health psychology. The course examines psychological and behavioral issues affecting health maintenance, coping with life-threatening illnesses and chronic diseases, and health promotion. The course uses the biopsychosocial (mind-body) model as an organizing framework, emphasizing the dynamic interactions among biological, social, personality, and behavioral factors jointly in influencing people's health. The course is conducted as a seminar.

PSYC 736 Multilevel Models: HLM (3 Credit Hours)

Social science data frequently have a hierarchical or multilevel structure as a consequence of sampling designs or repeated measures. The purpose of the course is to introduce students to the basic principles and applications of hierarchical linear modeling in social science research. Topics covered include an introduction to multilevel analyses, random intercept models, random slope models, hypotheses testing, hierarchical models for limited dependent variables, model fitting, three-level models, and repeated-measures applications.

Prerequisites: PSYC 728 or PSYC 828 or equivalent

PSYC 740 Quasi-Experimental Methods (3 Credit Hours)

Quasi-experimental methods is a course to teach techniques for research designs not conducive to randomized-control trials. The philosophy of these techniques, issues of validity, and analyses are discussed. Comparisons with randomized-control trials as well as means to strengthen quasi-methodologies for better general causal inferences are presented.

PSYC 741 Sensation and Perception (3 Credit Hours)

A survey of human sensation and perception emphasizing historical contributions, recent theoretical and methodological developments, and empirical findings.

PSYC 744 Program Evaluation (3 Credit Hours)

This course is designed to introduce students to the field of program evaluation as well as to give students practical experience conducting a program evaluation. Students will get experience creating and conducting qualitative and quantitative assessments. A course goal is to work in small groups to conduct a program evaluation.

Prerequisites: PSYC 727/PSYC 827 and PSYC 728/PSYC 828 (or current enrollment)

PSYC 745 Applied Psychometrics (3 Credit Hours)

This course introduces classical test theory, including definitions and equations for test reliability, standard error of measurement, and related statistics. Additional topics include scaling, item statistics useful in test constructions, norms commonly used in educational and psychological testing, test validity and exploratory factor analysis. If time permits, Item Response (IRT) and Generalizability Theory are introduced.

Prerequisites: PSYC 728 or PSYC 828 or equivalent

PSYC 746 Structural Equation Modeling (3 Credit Hours)

This course covers the topics of linear structural equation modeling and focuses on estimation, measurement models, confirmatory and hierarchical factor analysis, structural equations, longitudinal models, multisample analyses, and mean structures.

Prerequisites: PSYC 745 or PSYC 845 or equivalent

PSYC 747 Multivariate Methods for the Social/Behavioral Sciences (3 Credit Hours)

The course is focused on methods and techniques for analyzing multivariate data. Emphasis includes both conceptual and computational aspects of the most commonly used analytical tools when experimental units have multiple measures. A goal of the course is to avoid the extremes of "plug n chug" analyses on the one hand and theorems and proofs on the other to provide generalizable working knowledge of multivariate statistics. Featured techniques are MANOVA, MANCOVA, profile analysis, discriminant analysis, canonical correlation, principal components analysis, and exploratory factor analysis.

Prerequisites: PSYC 728 or PSYC 828 or equivalent

PSYC 748 Categorical Methods for the Social/Behavioral Sciences (3 Credit Hours)

The purpose of this course is to review the linear regression model and move into categorical methods. Featured methods are inference using proportions and odds ratios, multi-way contingency tables, logistic regression, and loglinear models. The generalized linear model is also introduced.

Prerequisites: PSYC 727/PSYC 827 or PSYC 728/PSYC 828

PSYC 749 Social and Affective Bases of Behavior (3 Credit Hours)

This course discusses the behavior of the human as a member of a group and the experience and expression of emotion. Topics include attitude theory and change, interpersonal attraction, stereotypes, discrimination, social cognition, social affect, aggression, theories of emotion and emotion regulation.

PSYC 750 Organizational Psychology (3 Credit Hours)

This course provides an overview of organizational behavior and theory. Topics include leadership, motivation, teams, social processes at work, workplace relationships, organization structure and environments, and organizational development and change.

PSYC 763 Personnel Psychology (3 Credit Hours)

This course provides an overview of personnel psychology. Topics include reliability and validity, job analysis, performance criteria, performance appraisal, employee recruitment, employee selection, and training and development.

PSYC 770 Human Factors Psychology (3 Credit Hours)

The application and evaluation of psychological principles and research relating human behavior to the design of tools, technology, and the work environment. Theory, methods, and application are emphasized.

Prerequisites: PSYC 731/PSYC 831 and PSYC 741/PSYC 841 or equivalents or permission of the instructor

PSYC 771 Ergonomics (3 Credit Hours)

Basic overview and application of anthropometry, biomechanics, functional anatomy, mechanics, and human physiology for the design of industrial tools, equipment, and workstations.

PSYC 776 Human-Computer Interaction (3 Credit Hours)

Review of the physical, cognitive, and performance capabilities and limitations of humans as they interact with modern computer systems. Emphasis is placed on the tools, techniques and procedures for the assessment and effective design of computer hardware, software and displays of information.

PSYC 780 Ethics, Professional Standards, and Responsible Conduct (3 Credit Hours)

Ethical principles, APA codes, laws, policies and approaches to ethical decision making will be applied to case studies involving dilemmas and issues in several areas of the professional activities of psychologists. Students will prepare an ethical and/or professional issue paper and a self-reflection on acculturation into professional ethics and standards.

PSYC 781 Advanced Ergonomics (3 Credit Hours)

Basic overview of the application of anthropometry, biomechanics, ergonomics, cognition and perception within workplace environments. Particular focus on the analysis and prevention of accidents at work. Course requires considerable practice in technical writing.

PSYC 792 Advanced Seminar in Physiological Psychology (3 Credit Hours)

Students will investigate the biological underpinnings of behavior and explore what is currently known about their role in movement, emotions, mental illness, sexual behavior, memory, states of consciousness, sensory perception, thought and language, and several neuro-psychiatric disorders. Through active learning exercises, i.e., class discussion, reports, critiques, oral presentations, and a final research paper or proposal, students will apply and demonstrate their acquired knowledge and critical thinking skills to the biological basis of human behavior.

PSYC 795 Topics in Psychology I (1-4 Credit Hours)**PSYC 796 Topics in Psychology II (1-4 Credit Hours)****PSYC 801 Empirically-Supported Therapies (3 Credit Hours)**

Empirically-Supported Therapies is designed to foster the integration of clinical science and the practice of psychotherapy. Course objectives include learning how to identify, evaluate, and implement empirically supported interventions for various psychological disorders.

PSYC 805 Health Disparities and Inequities (3 Credit Hours)

This course will cover differences in health among marginalized populations. This course will take an interdisciplinary approach to understand what factors may contribute to health disparities and inequities among these populations. This course will also discuss ways to address health inequities at the policy level as well as through clinical interventions and health promotion.

PSYC 810 Seminar in Professional Aspects of Industrial/Organizational Psychology (3 Credit Hours)

Topics covered include standards of professional behavior of I/O psychologists, the governance of psychology, I/O psychology professional associations, and professional opportunities for I/O psychologists.

Prerequisites: admission into the I/O Ph.D. program

PSYC 813 Research Methods in Psychology (3 Credit Hours)

This course will cover research design and methodology. Topics may include experimental, quasi-experimental, single subject and survey research; validity; reliability; confounds; measurement; sampling; inductive inference. Additionally, this course will cover Responsible Conduct of Research, including completion of CITI course, protection of human subjects, University Human Subjects Committee and IRB, APA Style, paper structure, references, tables, figures, etc., research proposal writing, including searching for sources, writing, oral presentation, data collection and management issues (e.g., Qualtrics, SONA, data cleaning). Students are required to complete a Research Proposal with Introduction and Methods and Data Analysis Plan and give an oral presentation of research proposal.

PSYC 815 Teaching Psychology (1 Credit Hour)

Seminar on the pedagogy of teaching as applied to the discipline of psychology. Topics include syllabus preparation, lecture and discussion methods, assessment and grading, and teaching portfolio development.

PSYC 822 Occupational Health Psychology (3 Credit Hours)

This course examines multidisciplinary research and theories on issues related to individual and organizational well-being and health. Occupational health psychology (OHP) emphasizes the promotion of wellness and the prevention of injuries and illnesses in the workplace. Through lectures/presentations, discussions, and research activities, students will learn about OHP theory and practice.

Prerequisites: PSYC 763/PSYC 863 and PSYC 850

PSYC 827 Analysis of Variance and Experimental Design (4 Credit Hours)

Review of the basic descriptive and inferential statistical procedures with a heavy emphasis on fundamental and advanced analysis of variance techniques. Topics include contrasts, factorial designs, within-subject and mixed designs, and analysis of covariance. Course materials are covered in the context of classical experimental and quasi-experimental design.

Prerequisites: admission into the psychology M.S. or Ph.D. program or permission of the instructor

PSYC 828 Regression and Correlational Design (4 Credit Hours)

Course covers correlation with heavy emphasis on regression analysis in the context of the general linear model. Topics include partial correlations, categorical and continuous interactions, non-linear regression, and multivariate statistics. Course materials are covered in the context of correlational designs and survey research.

Prerequisites: Admission into the psychology M.S. or Ph.D. program or permission of the instructor and PSYC 727/PSYC 827 or equivalent

PSYC 831 Human Cognition (3 Credit Hours)

An investigation of the ways in which people process and retain information, make decisions, and solve problems. Current models of structures and processes of human memory and cognition are discussed with particular emphasis on neurocognitive evidence of the brain mechanisms involved in cognition.

Prerequisites: admission into the psychology M.S. or Ph.D. program or permission of the instructor

PSYC 833 Grant and Manuscript Writing (3 Credit Hours)

The course is designed: (1) to teach students to write article-length scholarly manuscripts in APA format of publishable quality, and (2) to teach students the critical components of grant applications. By the end of this course, each student will have prepared a manuscript that is ready for submission to a peer-reviewed journal and have completed sections of a federal grant application.

Prerequisites: admission to the doctoral program in psychology and completion of master's thesis, or permission of instructor

PSYC 835 Health Psychology (3 Credit Hours)

This course focuses on contemporary theory and research topics in health psychology. The course examines psychological and behavioral issues affecting health maintenance, coping with life-threatening illnesses and chronic diseases, and health promotion. The course uses the biopsychosocial (mind-body) model as an organizing framework, emphasizing the dynamic interactions among biological, social, personality, and behavioral factors jointly in influencing people's health. The course is conducted as a seminar.

PSYC 836 Multilevel Models: HLM (3 Credit Hours)

Social science data frequently have a hierarchical or multilevel structure as a consequence of sampling designs or repeated measures. The purpose of the course is to introduce students to the basic principles and applications of hierarchical linear modeling in social science research. Topics covered include an introduction to multilevel analyses, random intercept models, random slope models, hypotheses testing, hierarchical models for limited dependent variables, model fitting, three-level models, and repeated-measures applications.

Prerequisites: PSYC 728 or PSYC 828 or equivalent

PSYC 837 Longitudinal Data Analysis (3 Credit Hours)

This course will introduce students to the theory and practice of longitudinal data analysis. It will examine a number of approaches for modeling change (in continuous outcomes) and event occurrence (broadly defined, in categorical or ordinal outcomes), including a careful treatment of the metric of time as well as missing data. Students will learn to develop, implement, interpret, and report research involving longitudinal data analyses. The use of statistical software is also illustrated.

Prerequisites: PSYC 728 or PSYC 828 and PSYC 736 or PSYC 836

PSYC 840 Quasi-Experimental Methods (3 Credit Hours)

Quasi-experimental methods is a course to teach techniques for research designs not conducive to randomized-control trials. The philosophy of these techniques, issues of validity, and analyses are discussed. Comparisons with randomized-control trials as well as means to strengthen quasi-methodologies for better general causal inferences are presented.

PSYC 841 Sensation and Perception (3 Credit Hours)

A survey of human sensation and perception emphasizing historical contributions, recent theoretical and methodological developments, and empirical findings.

PSYC 844 Program Evaluation (3 Credit Hours)

This course is designed to introduce students to the field of program evaluation as well as to give students practical experience conducting a program evaluation. Students will get experience creating and conducting qualitative and quantitative assessments. A course goal is to work in small groups to conduct a program evaluation.

Prerequisites: PSYC 727/PSYC 827 and PSYC 728/PSYC 828 (or current enrollment)

PSYC 845 Applied Psychometrics (3 Credit Hours)

This course introduces classical test theory, including definitions and equations for test reliability, standard error of measurement, and related statistics. Additional topics include scaling, item statistics useful in test construction, norms commonly used in educational and psychological testing, test validity, and exploratory factor analysis. If time permits, Item Response Theory (IRT) and Generalizability Theory are introduced.

Prerequisites: PSYC 728 or PSYC 828 or equivalent

PSYC 846 Structural Equation Modeling (3 Credit Hours)

This course covers the topics of linear structural equation modeling and focuses on estimation, measurement models, confirmatory and hierarchical factor analysis, structural equations, longitudinal models, multisample analyses, and mean structures.

Prerequisites: PSYC 745 or PSYC 845 or equivalent

PSYC 847 Multivariate Methods for the Social/Behavioral Sciences (3 Credit Hours)

The course is focused on methods and techniques for analyzing multivariate data. Emphasis includes both conceptual and computational aspects of the most commonly used analytical tools when experimental units have multiple measures. A goal of the course is to avoid the extremes of "plug n chug" analyses on the one hand and theorems and proofs on the other to provide generalizable working knowledge of multivariate statistics. Featured techniques are MANOVA, MANCOVA, profile analysis, discriminant analysis, canonical correlation, principal components analysis, and exploratory factor analysis.

Prerequisites: PSYC 728 or PSYC 828 or equivalent

PSYC 848 Categorical Methods for the Social/Behavioral Sciences (3 Credit Hours)

The purpose of this course is to review the linear regression model and move into categorical methods. Featured methods are inference using proportions and odds ratios, multi-way contingency tables, logistic regression, and loglinear models. The generalized linear model is also introduced.

Prerequisites: PSYC 727/PSYC 827 or PSYC 728/PSYC 828

PSYC 849 Social and Affective Bases of Behavior (3 Credit Hours)

This course discusses the behavior of the human as a member of a group and the experience and expression of emotion. Topics include attitude theory and change, interpersonal attraction, stereotypes, discrimination, social cognition, social affect, aggression, theories of emotion and emotion regulation.

PSYC 850 Organizational Psychology (3 Credit Hours)

This course provides an overview of organizational behavior and theory. Topics include leadership, motivation, teams, social processes at work, workplace relationships, organization structure and environments, and organizational development and change.

PSYC 851 Organizational Leadership (3 Credit Hours)

This course concerns the study of leadership and its effects on organizational behavior and effectiveness as well as employee well-being and health. Emphasis will be placed on classic and contemporary leadership theory and research.

Prerequisites: PSYC 750/PSYC 850 or permission of the instructor

PSYC 853 Job Attitudes and Motivation (3 Credit Hours)

The course focuses on the major concepts, issues, principles, and findings of job attitudes and motivation at the workplace. The student who successfully completes this course should be able to apply knowledge and skills to workplace issues regarding job attitudes and motivation, as well as stimulate ideas for future research projects.

PSYC 854 Organizational Development and Change (3 Credit Hours)

This seminar discusses models and theories of organizational change and interventions that are commonly used to foster organizational development and effectiveness. Students participate in an organizational consulting project to apply lessons learned in the classroom.

Prerequisites: PSYC 851 and PSYC 853 or permission of the instructor

PSYC 858 ODU Clinical and Ethical Issues (1 Credit Hour)

Weekly seminars address professional and ethical issues in the practice of clinical psychology.

PSYC 863 Personnel Psychology (3 Credit Hours)

This course provides an overview of personnel psychology. Topics include reliability and validity, job analysis, performance criteria, performance appraisal, employee recruitment, employee selection, and training and development.

PSYC 864 Human Resource Development (3 Credit Hours)

This course covers research findings, methodologies, and evaluation designs for the training and development of personnel in organizations. Specific topics include needs assessment, learning principles and system design.

Prerequisites: PSYC 763/PSYC 863 or permission of the instructor

PSYC 865 Psychology of Personnel Selection (3 Credit Hours)

This course covers the topics of recruitment, job performance, interviews, internet-based testing, and psychological constructs for use in employee selection (e.g., intelligence, personality).

Prerequisites: PSYC 763/PSYC 863 or permission of the instructor

PSYC 867 Human Performance Assessment (3 Credit Hours)

This course covers the job analysis and performance appraisal/management (PA/MA). Specific topics include job analysis methods; use of job analysis results for various HR functions; performance assessment/appraisal methods; multi-source feedback; employee reactions to and use of PA/MA information; rater cognitive processes and affect; rater goals, bias, and accuracy; and organizational practical and legal issues surrounding job analysis and PA/PM.

Prerequisites: PSYC 763/PSYC 863 or permission of the instructor

PSYC 868 Internship (1 Credit Hour)

The course is designed to provide individual students with advanced on-the-job professional experience. Internship assignments must be approved by the student's program of study. Direct supervision is given by an experienced professional at the internship setting.

PSYC 870 Human Factors Psychology (3 Credit Hours)

The application and evaluation of psychological principles and research relating human behavior to the design of tools, technology, and the work environment. Theory, methods, and application are emphasized.

Prerequisites: PSYC 731/PSYC 831 and PSYC 741/PSYC 841 or equivalents or permission of the instructor

PSYC 871 Ergonomics (3 Credit Hours)

Basic overview and application of anthropometry, biomechanics, functional anatomy, mechanics, and human physiology for the design of industrial tools, equipment, and workstations.

PSYC 872 Methods, Measures, Techniques, and Tools in Human Factors (3 Credit Hours)

Experiential survey of methods, measures, techniques, and prototyping tools available for human factors investigations in laboratory and field settings. The design and execution of experimental investigations utilizing the measures and tools are emphasized.

PSYC 873 ODU Biological Bases of Behavior (3 Credit Hours)**PSYC 876 Human-Computer Interaction (3 Credit Hours)**

Review of the physical, cognitive, and performance capabilities and limitations of humans as they interact with modern computer systems. Emphasis is placed on the tools, techniques and procedures for the assessment and effective design of computer hardware, software and displays of information.

PSYC 877 Theories, Models and Simulations in Human Factors (3 Credit Hours)

Survey of the historical and philosophical bases for the use of theories, models, and simulations in human factors applications with a critical evaluation of existing theories, mathematical and cognitive models, and simulations in terms of actual and potential contributions to the field.

PSYC 878 Advanced Cognition and Information Processing (3 Credit Hours)

Historical survey of human information processing literature, detailed review of recent developments in cognitive psychology, and examination of the purposes, role and scope of cognitive engineering.

PSYC 879 Careers (3 Credit Hours)

This course covers the developmental processes, facilitators, and barriers individuals encounter in their work lives. It provides a theoretical foundation in the careers literature and introduces contemporary research in the area. Work-family conflict, mentoring, organizational socialization, and career success are among the topics covered.

Prerequisites: PSYC 750/PSYC 850 and PSYC 851 or permission of instructor

PSYC 880 Ethics, Professional Standards, and Responsible Conduct (3 Credit Hours)

Ethical principles, APA codes, laws, policies and approaches to ethical decision making will be applied to case studies involving dilemmas and issues in several areas of the professional activities of psychologists. Students will prepare an ethical and/or professional issue paper and a self-reflection on acculturation into professional ethics and standards.

PSYC 881 Advanced Ergonomics (3 Credit Hours)

Basic overview of the application of anthropometry, biomechanics, ergonomics, cognition and perception within workplace environments. Particular focus on the analysis and prevention of accidents at work. Course requires considerable practice in technical writing.

PSYC 882 Attention and Human Performance (3 Credit Hours)

Survey of theories of attention, factors that influence human performance, and human performance assessment in human-machine systems. Topics include dual-task performance, vigilance, workload, arousal, fatigue, stress, human error, psychophysiology, and neuroergonomics.

Prerequisites: PSYC 870

PSYC 883 Research in Clinical Psychology (1-4 Credit Hours)

Individual project under guidance of a research advisor.

PSYC 890 ODU Internship in Clinical/Community Psychology (4 Credit Hours)

Must be enrolled in psychology doctorate program.

Prerequisites: Permission of the clinical director

PSYC 891 Industrial/Organizational Internship (1 Credit Hour)

Internship in Industrial/Organizational Psychology.

PSYC 892 Advanced Seminar in Physiological Psychology (3 Credit Hours)

Students will investigate the biological underpinnings of behavior and explore what is currently known about their role in movement, emotions, mental illness, sexual behavior, memory, states of consciousness, sensory perception, thought and language, and several neuro-psychiatric disorders. Through active learning exercises, i.e., class discussion, reports, critiques, oral presentations, and a final research paper or proposal, students will apply and demonstrate their acquired knowledge and critical thinking skills to the biological basis of human behavior.

PSYC 894 ODU Clinical Dissertation (1-6 Credit Hours)

1-6 credits each semester for variable credit.

PSYC 895 Topics in Psychology I (1-4 Credit Hours)

PSYC 896 Topics in Psychology II (1-4 Credit Hours)

PSYC 897 Individual Study (Readings) (1-4 Credit Hours)

PSYC 898 Research (3 Credit Hours)

PSYC 899 Dissertation (1-9 Credit Hours)

Directed research in preparation for the dissertation.

PSYC 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

PSYC 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

PT - Physical Therapy

PT 621 Introduction to Physical Therapy (2 Credit Hours)

An introductory course where students will develop physical therapy clinical skills. Content focuses on patient handling techniques including positioning and draping, bed mobility and transfer training, wheelchair management and gait training with the use of assistive devices. Basic medical terminology, communication, proper body mechanics and safety are also introduced.

PT 627 Theory and Practice I (4 Credit Hours)

This is the first course in a series that covers physical therapy interventions. The focus is on therapeutic exercise to address an individual's impairments, functional deficits, and well-being. Students will learn where different types of exercises fit into the healing and recovery timeline.

PT 628 Theory and Practice II (4 Credit Hours)

This course covers the theory, clinical techniques, and the evidence behind using common physical agents in physical therapy, including massage, electrotherapy, thermal and non-thermal modalities. The course also addresses theories of pain management and management of wounds and burns. The format of the class will combine lecture with an extensive laboratory component.

PT 630 Mechanical Properties of Human Tissues in Rehabilitation (1 Credit Hour)

This one-credit course surrounds the basic structure and function of loose and dense connective tissues, bone, articular cartilage, muscle and nerve. It will address how these tissues function under normal and pathological conditions and the implications for physical therapy. The course will also prepare the student to read and interpret the medical and scientific literature relative to histology and clinical practice.

PT 634 Clinical Sciences I (3 Credit Hours)

The first class in a series of lectures designed to acquaint the student with the clinical areas related to pathological conditions frequently encountered in physical therapy practice. The course develops an understanding of health models, disease processes and highlights common pathologies by body system central to the care of the patient.

PT 635 Clinical Sciences II (3 Credit Hours)

This course is designed to acquaint the student with medical aspects and pathological conditions associated with musculoskeletal disorders and surgical procedures involving the musculoskeletal system with a subunit related to cancer.

PT 638 Exercise Physiology (2 Credit Hours)

This course provides an overview of human physiology as it relates to exercise and the clinical practice of physical therapy. Energy systems and cardiopulmonary physiology will be covered, including electrocardiogram interpretation, as well as resistance training and weight loss.

PT 640 Patient Evaluation I (3 Credit Hours)

A beginning course in patient examination skills which focuses on history/interviewing skills, vital signs, range of motion, surface anatomy palpation, reflex testing, sensation testing, edema testing, and manual muscle testing.

PT 641 Patient Evaluation II (3 Credit Hours)

This course builds upon PT 640 with the focus on gait, posture, and musculoskeletal examination/evaluation. Emphasis will be on examination tests and measures, orthopedic special tests, beginning differential diagnosis, and linking evaluation to intervention choices.

PT 655 Clinical Problem Solving I (3 Credit Hours)

This course integrates material from first-year courses using case scenario role playing, short case vignettes, and standardized patients to facilitate clinical skill competencies and clinical decision making. Also covered are professional topics such as interprofessional collaboration competencies (IPEC), direct access, the ICF model, documentation, and emergency procedures.

Prerequisites: PT 621; must be enrolled in the DPT Program

PT 656 Clinical Problem Solving II (3 Credit Hours)

This course is one in the series of clinical problem-solving courses. It focuses on simulated patient experiences and discussion in orthopedic physical therapy. The course will emphasize critical thinking, problem solving and differential diagnosis as well as development and progression of plans of care for orthopedic patients.

PT 665 Biomechanics/Kinesiology I (3 Credit Hours)

This course will review the musculoskeletal system with emphasis on normal movement of the spine and extremities and the coordinated muscle activity necessary to produce that movement. Students will learn manual muscle testing techniques. The course will also introduce basic concepts such as types of muscle contractions, torque production, and joint reaction forces.

PT 666 Biomechanics/Kinesiology II (2 Credit Hours)

Students will learn to assess the measurement of motion and forces in normal human movement. Trigonometry will be employed in the problem-solving section of the course as the student assesses forces, vectors and loads.

PT 669 Clinical Experience I (4 Credit Hours)

This first full-time clinical education experience begins at the end of the first academic year of the program and is designed to permit progressive responsibility in patient evaluation and treatment based upon material learned in classes during the first year. Each student is required to provide one in-service presentation during the clinical learning experience.

PT 695 Topics in Physical Therapy (1-3 Credit Hours)

Advanced study of selected topics.

PT 792 Neuroscience I (3 Credit Hours)

Neuroscience I is the first in a series of courses that provide the student with an understanding of integrated neuroanatomy and neurophysiology. Emphasis will be placed upon basic neurophysiologic principles at the cellular level.

Prerequisites: BIOL 889

PT 793 Neuroscience II (3 Credit Hours)

Neuroscience II is the second course in the sequence. From the foundation of Neuroscience I, the course will build to the progressively higher order of structural functional relationships that control behavior.

Prerequisites: PT 792 and BIOL 889

PT 810 Scientific Inquiry I (3 Credit Hours)

This is the first in a series of courses that prepare the graduate to critically analyze and use scientific literature to improve clinical decision-making and practice. This course introduces the terminology and strategies of evidence-based practice applied to physical therapy. It emphasizes the basic concepts such as research design, measurement principles and basic statistics.

PT 822 Scientific Inquiry II (2 Credit Hours)

This course is a continuation of the graduate's preparation to practice critical analysis skills related to scientific literature. Its emphasis is placed on creating the components of research reports and concepts associated with judging the quality and value of research. Students will complete a systematic review of the literature.

PT 826 Theory and Practice III (4 Credit Hours)

This is third in a series of four courses in which the student will develop entry-level professional analytical skills in the area of evaluation and treatment with emphasis in the area of orthopedics. This course will expand on the knowledge from spring semester and summer clinical experiences. Teaching methods will include lecture, lab experiences, patient case studies, and demonstrations.

PT 827 Theory and Practice IV (4 Credit Hours)

This is the fourth in a series of Theory and Practice courses designed to prepare the student to achieve entry-level skills in analysis and management in acute care, the adult client with neurologic dysfunction, and rehabilitation following limb amputation. The course integrates the theoretical aspects of neurologic physical therapy with the development of cognitive and psychomotor clinical skills. Practice laboratories, demonstrations, use of audiovisual aids, lectures, laboratory assignments and projects are used to facilitate learning.

PT 836 Clinical Sciences III (3 Credit Hours)

This course is designed to emphasize modules in pharmacology, management of chronic pain, functional capacity evaluations, work conditioning, clinical electrophysiology and imaging.

PT 837 Clinical Sciences IV (3 Credit Hours)

The fourth clinical science course is designed to provide the learner with the foundation to apply clinical science knowledge about an underlying injury or disease to design and implement the appropriate physical therapy care plan for pathologies seen in physical therapy practice. This course focuses on pathologies seen in the acute care environment, pathologies of the nervous system and limb amputations.

PT 842 Patient Evaluation III (3 Credit Hours)

This course allows students to learn and develop the clinical tools and decision-making skills necessary in the evaluation of patients across the continuum of care with special attention paid to patients with various neurological dysfunctions, medically complex patients in the acute care setting and patients with amputations.

PT 857 Clinical Problem Solving III (3 Credit Hours)

The course uses simulated patient experiences, case studies and discussion around topics in orthopedic physical therapy. The course will emphasize critical thinking, problem solving and differential diagnosis, as well as the development and progression of plans of care for the orthopedic patient.

PT 858 Clinical Problem Solving IV (3 Credit Hours)

This is the fourth clinical problem-solving course. It focuses on simulated patient experiences, case studies and discussion of interventions for people with neurologic dysfunction (pediatric and adult), spinal cord injury, and care of patients with medically complex conditions in acute care and intensive care units (ICU).

PT 870 Pediatric Rehabilitation (3 Credit Hours)

This course is designed to prepare the student to achieve entry-level skills in pathology, analysis and management of the pediatric client with neurologic dysfunction. The course integrates the theoretical aspects of neurologic physical therapy with the development of cognitive and psychomotor clinical skills. Practice laboratories, demonstrations, use of audiovisual aids, lectures, laboratory assignments and projects are used to facilitate learning.

PT 875 Clinical Experience II (6 Credit Hours)

This second full-time clinical education experience occurs between the second and third academic years of the program and is designed to permit progressive responsibility in patient evaluation and treatment based upon material learned in classes during the first and second years.

PT 876 Clinical Experience III (7 Credit Hours)

This third full-time clinical education experience occurs following the final academic semester of the program and is designed to promote the development of an autonomous professional through the synthesis and application of clinical problem solving and clinical reasoning skills. Students will achieve entry-level clinical and administrative practice skills.

PT 880 Psychosocial Aspects of Patient Care (2 Credit Hours)

This course focuses upon the emotional and psychological elements associated with illness and disease. Students will learn the various societal and personal views of sickness and chronic illness as well as the coping mechanism employed by individuals and families when facing disease and terminal illness.

PT 881 Inter-Professional Case Management for Special Populations (3 Credit Hours)

This hybrid course facilitates interprofessional health promotion development between graduate-level health professions students in addition to PT management of special populations. Health promotion topics include abuse/mandated reporting, adolescent and LGBTQ health promotion, social and environmental issues, spirituality, death and dying, and supportive environments.

PT 882 Practice Management (3 Credit Hours)

This course is designed to provide the physical therapy student with a review of the principles and practices of managing and administering physical therapy in various clinical settings. The course stresses the principles of management administration in patient care in clinical environments.

PT 883 Professional Issues in Physical Therapy (2 Credit Hours)

This course is for the identification, analysis, and discussion of issues currently facing the physical therapy profession. The issues focus on the ethical questions as well as the role relationships of physical therapists in the greater health care delivery system of the United States.

PT 884 Clinical Teaching and Professional Communication (3 Credit Hours)

This course is designed to meet the needs for patient instruction, education within the classroom and clinic, and peer continuing education. The focus of the course is on clear communication in the teaching/learning process.

PT 890 Differential Diagnosis Seminar (3 Credit Hours)

The focus of this seminar will be on the integration of the foundational and clinical sciences to analyze and solve patient-based clinical problems to arrive at a diagnosis. Students will be expected to explain their reasoning and defend their decisions.

PT 891 Seminar in Scientific Inquiry (3 Credit Hours)

This course is designed to facilitate critical inquiry, clinical reasoning, cultural respect, and reflective thinking through formulation of a systematic review or case report on a patient from one of the student's full-time clinical experiences. Emphasis in this course is placed upon integrating the best research evidence with clinical experience and patient values to support decisions that affect patient outcomes and quality of life with application to management, education, and clinical practice.

PT 892 Seminar in Inter-Professional Practice (1 Credit Hour)

The purpose of this course is to challenge the student to interact with other health professionals in making patient care decisions.

PT 893 Research Topics (2 Credit Hours)

Research topics.

PT 895 Topics in Physical Therapy I (1 Credit Hour)

This course will expose interprofessional students to current trends in health promotion and illness prevention. Topics will include: Healthy People 2020 objectives, age specific clinical guidelines for health promotion and illness prevention, theories on behavior and motivation, sociocultural issues, and screening for a variety of health problems. Measures for promoting and maintaining health throughout the lifespan will be explored with attention to current research from the literature.

PT 896 Topics in Physical Therapy II (1 Credit Hour)

Students will pick from a variety of clinical specialty practice, service learning or research topics to explore in a small group setting.

PUBH - Public Health

PUBH 525 Health Aspects of Aging (3 Credit Hours)

Identifies major issues and problems in meeting health care needs of the aged. Emphasis on role of social assets and supports in determining effects of life changes on the aging process.

Prerequisites: Permission of the instructor or program director

PUBH 530 Community Health Resources and Health Promotion (3 Credit Hours)

Designed to provide information about community health resources. This course will focus on health administration and public health applications.

Prerequisites: Permission of the instructor or program director

PUBH 540 Finance and Budgeting in Healthcare (3 Credit Hours)

This course covers financial management functions in healthcare organizations including operating and capital budgeting processes along with budgeting and financial controls.

Prerequisites: Permission of the instructor or program director

PUBH 545 Health Services Research Methods (3 Credit Hours)

This course focuses on health services research and its assessment abilities and application in health care and public health. Topics include the use of EXCEL, SAS, and SPSS to analyze data. An exploration of the issues and challenges of health services research for health related organizations and other organizations. Statistical procedures and practices will also be conducted.

Prerequisites: Permission of the instructor or program director

PUBH 550 Public and Community Health Administration (3 Credit Hours)

A review of the principles and practice of administering public and community health organizations and programs at federal, state, and local levels. Constitutional, statutory and administrative bases for organizing and conducting public/community health programs will be discussed.

Prerequisites: Permission of the instructor or program director

PUBH 561 Managerial Epidemiology (3 Credit Hours)

This course will blend theory and application of epidemiology. This course will also provide a comprehensive introduction to epidemiology and explain how to use epidemiological concepts and tools to improve decisions about the management of health services.

Prerequisites: Permission of the instructor or program director

PUBH 565 Policy and Politics of Health (3 Credit Hours)

This course will explore both health policy and the politics of health. Students will develop an understanding of the systematic and analytical framework for developing health and health care policy issues.

Prerequisites: Permission of the instructor or program director

PUBH 575 Healthcare Marketing (3 Credit Hours)

This course provides a basic understanding of marketing in a health care setting. It will cover the following: the history of marketing in a health care setting, health care markets, marketing techniques, and leadership skills in managing and supporting the marketing efforts.

Prerequisites: Permission of the instructor or program director

PUBH 580 Health Ethics and the Law (3 Credit Hours)

This course provides the students with a basic knowledge of health law and examines legal issues confronting health services administrators in various health care environments.

Prerequisites: Permission of the instructor or program director

PUBH 595 Topics in Public Health (1-3 Credit Hours)

This course provides the opportunity for the study of selected topics in public/community health or health administration, including informatics, under the supervision of a faculty member.

Prerequisites: Permission of the instructor or program director

PUBH 600 Environment, Society and Health (3 Credit Hours)

Introduces students to 21st century environmental health issues and challenges, and examines how they affect health in the region, nation and world. Topics include: air/water quality, food safety and food-borne illness, antibiotic resistance, emergency preparedness and response, sea level rise, vulnerable populations, radiation safety and health, pediatric environmental health, tick-borne illness, hazardous substances, environmental health policy and practice, and environmental risk communication.

PUBH 602 Environmental Health Law, Justice and Governance (3 Credit Hours)

An overview of environmental health law and governance at the local, state, federal and international levels. Students examine the environmental health policy-making process and how laws, regulations and treaties are made and implemented. Students also will be familiarized with U.S. environmental public health statutes, key institutions and agencies, current controversies, issues of environmental justice, and major international treaties related to environmental health.

Prerequisites: PUBH 600 and PUBH 610

PUBH 610 Introduction to Public Health Practice (1 Credit Hour)

Provides an introduction to the multidisciplinary field of public health by examining the history, structure and functions of the public health system. Course is organized around the three core functions of public health: assessment, policy development and assurance while focusing on elements of the basic public health disciplines.

PUBH 611 Social and Behavioral Sciences for Public Health (3 Credit Hours)

Students will learn about different theoretical perspectives and how to apply appropriate social and behavioral models to public health programs. Topics discussed include social inequalities in health status related to culture, race, social class, gender, and the critical intersection between social risk factors, behavioral risk factors, and the development and implementation of public health interventions.

PUBH 622 Research Methods in Public Health (3 Credit Hours)

This is a course in research methods that will provide an overview of the basic principles of research design, methods, measurement, data collection and data management in the field of public health. Students will learn the differences between quantitative, qualitative and mixed-methods approaches to public health research, as well as how to formulate and evaluate research questions.

PUBH 624 Systems Thinking and Health Management (3 Credit Hours)

Students will learn the practice of systems thinking, which includes the ability to integrate multiple perspectives and synthesize them into a framework or model that encompasses the various ways in which a system might react to policy choices.

PUBH 632 Environmental and Occupational Health Risk Assessment (3 Credit Hours)

This course is an introduction to quantitative and qualitative risk analysis and examines the fundamental aspects of risk, focusing on environmental, occupational, and public health risk. Hazard identification, exposure assessment, dose-response evaluation, risk characterization, and risk communication are emphasized.

PUBH 640 Health Disparities and Social Justice (3 Credit Hours)

This course provides an introduction to the topic of global health disparities through an in-depth examination and discussion of the relationship between social injustice and inequitable health outcomes. Students will be introduced to the social and environmental determinants of health disparities and the pathways and mechanisms leading to inequitable health outcomes in vulnerable groups, as well as strategies for addressing these determinants to improve health.

PUBH 643 Principles of Toxicology (3 Credit Hours)

An introduction to the fundamentals of toxicology with emphasis on the interaction of environmental and industrial chemicals with humans are studied. Exposure, dose response, kinetics and distribution of toxicants, metabolism of toxic agents, factors that affect toxicity and introductory chemical carcinogenesis are discussed.

PUBH 690 Integrative Learning Experience (3 Credit Hours)

This course provides a culminating learning experience in the MPH curriculum, which gives students the opportunity to demonstrate integration of foundational and concentration competencies and to apply the knowledge and skills achieved in their study of public health. The learning outcome is the demonstrated mastery, via course assignments, of core public health and discipline- or concentration-specific competencies.

PUBH 746 Principles of Epidemiology (3 Credit Hours)

This course covers basic epidemiologic methods and research study design such as case-control and cohort studies, randomized trials, risk estimation, and causal inferences. Content also covers the use of epidemiology in public health practice, links to health policy, and the factors and associations determining the distribution of disease in the population.

PUBH 778 Global Environmental Health (3 Credit Hours)

The goal of this course is to guide students with a public health perspective to develop skills to identify and analyze environmental health problems globally. It is designed to provide knowledge on recognizing and evaluating major environmental health issues and risk factors in developed and developing countries by using group discussions and real-life case studies.

PUBH 784 Creating Sustainable Environmental Futures (3 Credit Hours)

This course examines the interrelationships between individual and societal decisions and the global environment, and analyzes the consequences these interrelationships have for public health and sustainability. The course will review food, environmental quality, climate variability, sea-level rise and public health, homes-workplaces-communities, environmental health and sustainability, in the region, the nation and around the world

RCS - Reproductive Clinical Science

RCS 700 Biochemistry and Molecular Cell Biology (2 Credit Hours)

This course presents the basic principles of cellular structure and function, which are the infrastructure for understanding clinical endocrinology and embryo metabolism. This 4-module course examines the structure of biological components and their roles in biochemical processes - metabolism, molecular feedback through hormones, signal transduction, cellular physiology and molecular biology. Case study discussion boards and current journal article discussions connect the basic science content to IVF.

RCS 701 Introduction IVF, Laboratory Tech and Skills Development (3 Credit Hours)

Laboratory science and technology are at the foundation of the Clinical Embryology Laboratory, and ART success rates are largely dependent on the quality of the laboratory environment and the knowledge and skill of laboratory personnel. This course covers the basic laboratory skills and techniques used in the IVF and andrology laboratories. A required, on-campus component includes hands-on training and skills evaluation.

RCS 702 Molecular Biology & Genetics (3 Credit Hours)

This course includes an introduction to molecular biology with an emphasis on the structure and function of both DNA and RNA and their roles in protein synthesis. Aspects of gene structure-function and regulation will also be discussed in this course, including a section on mitochondrial DNA. Research in this area includes the use of molecular techniques, which will be illustrated. This course also provides instruction in the fundamentals of human cytogenetics with discussions of chromosomal structure and cell division, as well as both genetic and epigenetic mechanisms of inheritance and different types of mutations and aneuploidies. This course will also introduce basic molecular biological techniques that are used in current molecular biological research including DNA, RNA isolation and analysis, protein isolation and analysis, genetic engineering, cloning and sequencing, gene expression analysis, PCR and quantitative real-time RCR.

RCS 703 Female Reproductive Endocrinology & Infertility (3 Credit Hours)

This course provides an introduction to endocrinology, female reproductive anatomy and the latest information in basic reproductive physiology of the female at all life stages, including puberty, mid-reproductive life and menopause. Chronic reproductive abnormalities will be discussed in detail using the current literature, including hypothalamic amenorrhea, polycystic ovarian syndrome and premature menopause. The role of gonadotropin hormone therapy in ovulation induction and controlled ovarian stimulation along with complications, such as ovarian hyperstimulation and multiple births, will also be discussed. The use of agonists and antagonists in ART and stimulation protocols for difficult cases, such as the poor responder and hyper-responder, will be covered, along with donor egg and surrogacy and ethics.

RCS 704 Current Topics in IVF - Journal Club (1 Credit Hour)

This course is a journal club format designed to give basic instruction for reading the literature as students prepare to take courses in the following semesters that depend on journal articles as a supplement to or the sole source of reading. Another purpose for this course is to introduce current topics in IVF prior to thesis topic selection in the second semester. The students will work in groups to present papers selected by the program faculty. The online meeting format will be used to present and record the sessions; these sessions can be attended synchronously or asynchronously. Discussion boards will also be used to review and critique the presentations.

RCS 705 IVF Technology (3 Credit Hours)

In vitro fertilization has given its name to the field of reproductive medicine. This course presents a historic overview of the field of IVF and all current techniques and regulatory issues including: how to collect, recover, assess, prepare, fertilize and maintain gametes and embryos; the basic protocols for IVF, ICSI, GIFT, ZIFT, TET and ET; the types of culture media and culture systems used in IVF; how to design and maintain a quality IVF laboratory; the principles and application of Quality Assurance (QC, proficiency testing) and laboratory safety (security, fire, electrical, patient issues, staff issues); the operation and maintenance of common lab equipment, recordkeeping, personnel issues and standards of good practice; how to troubleshoot problems that may arise in the IVF lab; and topical subjects, such as derivation of embryo stem cells from blastocysts and cloning. Assigned asynchronous discussions with faculty and students connect students with current topics allowing them to present their own experiences and to review the current literature for changes in the field.

RCS 706 Gametes and Embryos (3 Credit Hours)

The objective of this course is to present the recent understanding of the development of gametes and embryos to connect the participants with the molecular principles behind IVF laboratory practice. Using the historic and current literature, this course covers the molecular aspects of the origin of germ cells, oogenesis, spermatogenesis, meiosis, fertilization and preimplantation, development, implantation of embryos, gamete pathology and aging. The students are taught how to evaluate a current journal article and write a research paper to discuss their findings.

RCS 707 Research Methods and Capstone/Thesis: Project and Statistics (2 Credit Hours)

Statistics and research study design are essential tools in any scientific endeavor. Developing a thesis research study design and understanding the background literature needed to create a capstone review or practice improvement project requires a rudimentary knowledge of basic statistics. In this course, students will receive training in biostatistics, which is the study of statistics used in medical and basic biological research. Students will: learn the fundamental principles of biostatistics, study applications of biostatistics in clinical medicine, participate in statistical problem-solving and learn the fundamental components of a research study design.

RCS 708 Advanced IVF, Laboratory Tech and Skills Development (2 Credit Hours)

Laboratory science and technology are at the foundation of the Clinical Embryology Laboratory, and ART success rates are largely dependent on the quality of the laboratory environment and the knowledge and skill of laboratory personnel. This course covers advanced laboratory skills and techniques used in the IVF and andrology laboratories. A required, on-campus component includes hands-on training and skills evaluation.

RCS 709 Research Methods Capstone/Thesis: Project Proposal (1 Credit Hour)

The master's project must be an original project of scholarship or research on a relevant topic in reproductive biology or medicine resulting in a paper. Students select either the review, QC/QI or research track. In all cases, an EVMS and possibly local advisers are selected to help determine the proper approach to the project. Depending on the track selected, a detailed capstone research or QC/QI study design is developed. To aid in capstone writing, a section of the courses have been developed to give the students an outline of the steps for writing their project. Basic elements of the capstone project for the three different tracks are covered: development of a thesis statement, data commentary, introduction, background, discussion and conclusion; specific to the research thesis, materials/methods and results. A major concern in publication today is plagiarism; this topic is also covered in detail. All students in this program are required to take IRB, bloodborne pathogens and HIPAA for research training during this course.

RCS 710 Genetics of Reproduction and Infertility (3 Credit Hours)

Many aspects of medicine, including reproductive medicine, are beginning to revolve around underlying genetic causes or predispositions. This course covers many important areas of genetics including: the basis of sex determination with functional anomalies of the reproductive system, the origin of aneuploidy and other chromosomal abnormalities in oocytes, sperm and embryos, the epidemiology and genetic basis of pregnancy wastage, the current status of preimplantation/prenatal genetic diagnosis and its applications and the molecular techniques that are available for PGD and prenatal diagnosis. Current journal article critiques and PGD design projects are used to connect with recent developments in the field.

RCS 711 Research Methods Capstone/Thesis: Master's Project (1 Credit Hour)

The master's project must be an original project of scholarship or research on a relevant topic in reproductive biology or medicine resulting in a paper. Students select either the review, QC/QI or research track. In all cases, an EVMS and possibly local advisers are selected to help determine the proper approach to the project. Depending on the track selected, a detailed capstone research or QC/QI study design is developed. To aid in capstone writing, a section of the courses have been developed to give the students an outline of the steps for writing their project. Basic elements of the capstone project for the three different tracks are covered: development of a thesis statement, data commentary, introduction, background, discussion and conclusion; specific to the research thesis, materials/methods and results. A major concern in publication today is plagiarism; this topic is also covered in detail. All students in this program are required to take IRB, bloodborne pathogens and HIPAA for research training during this course.

RCS 712 Male Reproductive Function and Dysfunction (3 Credit Hours)

The emphasis of this course will be on the physiology and pathology of the male reproductive system in the context of evaluations for male infertility. Knowledge of reproductive function by reviewing recent discoveries about the physiology and dysfunction of the male reproductive system will be presented using current articles and techniques. Relevant areas include: normal and abnormal spermatogenesis, reviewing slides prepared from testicular biopsies, basic semen analysis, standard tests of sperm function using microscopy and specialized functional and "non-functional" sperm evaluating assays. Also covered are disorders like testicular cancer, benign and malignant prostate and genetic causes of male infertility, male contraception and gender pre-selection using sperm. Additionally, students will be challenged with the evaluation of case studies in andrology.

RCS 713 Research Methods Capstone/Thesis: Scientific Writing (3 Credit Hours)

The master's project must be an original project of scholarship or research on a relevant topic in reproductive biology or medicine resulting in a paper. Students select either the review, QC/QI or research track. In all cases, an EVMS and possibly local advisers are selected to help determine the proper approach to the project. Depending on the track selected, a detailed capstone research or QC/QI study design is developed. To aid in capstone writing, a section of the courses have been developed to give the students an outline of the steps for writing their project. Basic elements of the capstone project for the three different tracks are covered: development of a thesis statement, data commentary, introduction, background, discussion and conclusion; specific to the research thesis, materials/methods and results. A major concern in publication today is plagiarism; this topic is also covered in detail. All students in this program are required to take IRB, bloodborne pathogens and HIPAA for research training during this course.

RCS 714 Cryopreservation (2 Credit Hours)

The goals of cryopreservation are to preserve viable gametes, embryos, tissues and even whole organs for future fertility options and to enable augmented pregnancy rates for IVF. In this course, the biological effects of cooling and freezing will be covered in detail. Additionally, the discussion will include the following: principles of cryopreservation using conventional, equilibrium cooling methods, vitrification as an alternative to conventional freeze-thawing, applications and adaptations of low temperature banking for different cell and tissue type as well as safeguards for quality assurance. Assigned asynchronous discussion groups between faculty and students are used to have students present their own experience in the lab or to review current literature to discuss recent changes in techniques.

RCS 715 Ethics, Society, & ART (1 Credit Hour)

The objective of this course is to provide the student with a historical background of various traditional beliefs about reproduction, as well as the comments of moral theologians, ethicists, philosophers, sociologists and others about these same beliefs. The student will gain considerable understanding to be prepared to discuss these sensitive subjects with patients. Specifically, the course will provide a limited amount of background material but will refer the student to original sources, as well as to selected commentaries. At the practical level, the student will be presented with clinical case histories and will be expected to discuss the pros and cons of each case and offer a realistic resolution to the ethical or moral dilemma. Grades in this course will be determined by the students' evaluation of these case studies and a take-home exam.

RCS 716 Scientific Writing (1 Credit Hour)

Students who do not successfully complete the thesis requirement will be required to enroll in this extended writing course until it is completed. This course can only be repeated a select number of times.

RCS 768 IVF Clinical Internship (3 Credit Hours)

During the second year of the program, those entering with no or limited experience will be placed in internships at various clinics and at the EVMS training facility. These experiences will give students additional hands-on skills in andrology and embryology that will broaden their knowledge in best practices in the field of IVF.

RCS 801 Advanced Statistics (3 Credit Hours)

Advanced Statistics explores the use of statistics in basic and clinical science research. Learn what types, when and how to use different analysis tools for qualitative and quantitative statistics and quality assurance calculations. Particular attention will be focused on clinical and laboratory applications as well as basic science research.

RCS 802 Assisted Reproduction Evidence-Based Practice Journal Club (1 Credit Hour)

Using the best evidence from literature, learn how to interpret and formulate best practices in IVF. This course will utilize the principles of evidence-based medical practice and adapt them to the clinical IVF environment.

RCS 803 Comparative Anatomy and Physiology of Reproduction (3 Credit Hours)

Knowing which type of animal models and how they may be used in research is an essential component of interpreting and applying study outcomes to humans. This course will illustrate the uses and limitations of these animal models in the study of human reproduction.

RCS 804 Experimental Design (3 Credit Hours)

Essential skills for a researcher are how to design a study and how to apply advanced experimental modeling techniques. These are both combined here, leading to best practices development in experimental design.

RCS 805 Advanced Topics IVF (1 Credit Hour)

Using the literature, students will present current topic areas in IVF, laboratory and clinical research. How to conduct research in this area will also be covered in this course.

RCS 806 Developmental Biology (3 Credit Hours)

Study the origin and development of form and patterns in organisms. Recent investigations and recent research methodology on the processes of growth and differentiation are stressed.

RCS 809 Toxicology and Infertility (3 Credit Hours)

Environmental factors influence fertility during development, gametogenesis, fertilization and embryogenesis. This course explores the current technology, theories and research surrounding toxins and fertility.

RCS 810 Research Literature Review (3 Credit Hours)

During this course, students learn the best techniques for reviewing the literature, summarizing previous data and writing a review of a topic area. Students will produce their own topic literature review by the end of this course.

RCS 811 Male Infertility Research Literature (1 Credit Hour)

Using the literature, students will present current topic areas in male infertility, treatment and research. How to conduct research in this area will also be covered in this course.

RCS 812 Clinical Laboratory Management (3 Credit Hours)

All aspects of the management of a clinical lab will be presented in this course. Students will develop new protocols, write risk management reports, develop QC guidelines and design and justify the design of an IVF facility as a portfolio project.

RCS 814 Genetics and Art (1 Credit Hour)

Using literature, students will present current topics in ART and genetics. How to conduct research in this area will also be covered in this course.

RCS 815 Dissertation Research Proposal Development (4 Credit Hours)

This course gives students an opportunity to structure their research projects and write a proposal for their dissertation.

RCS 816 Dissertation Research (1-7 Credit Hours)

The objective of this course is to follow the dissertation research plan and track progress of dissertation research.

RCS 819 The Business of IVF (1 Credit Hour)

Management of the IVF facility from the business perspective is the main goal of this course. Students will construct an analysis of a laboratory business plan and propose phased changes to make improvements.

RCS 898 Dissertation Research (1-7 Credit Hours)

The objective of this course is to follow the dissertation research plan and track progress of dissertation research.

READ - Reading

READ 612 Action Research in Reading (3 Credit Hours)

This course will introduce students to action research, a form of self-reflective, systematic inquiry by educators of their own practice. Students will learn about research methods, design, and implementation, and they will develop action research proposals based on a line of structured inquiry emanating from events occurring within their own classrooms. Teachers will study student learning related to their own teaching, a process which allows them to learn about their own instructional practices and to continue monitoring improved student learning. Conducting action research provides educators with an avenue to reflect on their own teaching practices with the aid of empirical data and engage in self-directed learning with the ultimate goal of improving student learning. Must have completed 15 Graduate credit hours in reading coursework.

READ 614 Foundations of Literacy Learning (3 Credit Hours)

Surveys theories and historical trends leading up to present day literacy instruction. Participants will learn how to incorporate application of current research to the methods and philosophies of teaching reading and writing. An integrated language model suggests that reading, writing, and thinking be viewed as interrelated, critical processes for exploring and responding to the world. Offers students an opportunity to acquire foundational knowledge of materials, instructional strategies, and assessment tools that support literacy and engaging learners

READ 618 Approaches to Teaching Literature and Writing K-12 (3 Credit Hours)

Explores the theory and practice of teaching literature, including young adult and children's literature, and writing. Considers some of the characteristics of writing processes, the role of the teacher in structuring and responding to student writing, the role of the teacher in literary text selection, the relationships between writing and literacy understanding, and the authentic assessment of K-12 students' reading, writing and learning.

READ 619 Word Study, Phonics, and Linguistics (3 Credit Hours)

Provides an overview of the field of linguistics, the scientific study of language and word study, an approach to spelling instruction that relies on an understanding of English orthography that incorporates instruction in phonics, spelling and vocabulary. Students will learn to recognize characteristics of readers and writers at different levels of development. The course provides multiple opportunities for hands-on practice and application.

READ 620 Multicultural Children's Literature and Literacy (3 Credit Hours)

Provides for the examination, evaluation, and use of multicultural library materials and resources for elementary and middle school children.

READ 622 Culturally Responsive Literacy for All Learners (3 Credit Hours)

Explores curriculum, instructions, materials and issues related to teaching literacy and language to diverse learners regardless of their ethnic, cultural, linguistic, cognitive, religious, gender, backgrounds, etc.

READ 625 Issues and Trends in Literacy Education (3 Credit Hours)

This course provides an opportunity for students to explore the critical trends and issues being debated within the field of Literacy Education. This course will provide students with an in-depth understanding of significant issues, trends, and practices in reading instruction at the K-12 level. The course is designed to deal with questions and problems of the type facing teachers, supervisors, and administrators. In addition to providing students with a deeper understanding of current trends and the latest literacy research, this course will also help students to critique ideas and issues surrounding informed instruction within literacy education.

READ 627 School-Wide Assessment and Professional Development (3 Credit Hours)

This course focuses on the literacy coach's roles and responsibilities in conducting school-wide, needs-based assessments and planning professional development to align with assessments. Multiple perspectives and approaches to considering, piloting, and administering needs-based surveys and analyzing data for schools and school divisions are explored and practiced. Using results, data-based professional development planning is studied and practiced. Through interactive online instruction, lecture, projects, and reflective participation based upon the International Reading Association's Standards and The Virginia Standards of Learning, a professional knowledge base will be developed. This course provides experiences on a variety of levels to further the development of the literacy coach within ODU's Educator as Professional Framework.

READ 628 New Literacies, Digital Technologies, and Learning (3 Credit Hours)

This course is designed to provide a context in which in-service teachers can explore a range of "new" literacies and consider their relationships to school-based literacy education. Participants will explore these new literacies, specifically the socially immersive experiences of youth and their new media practices. These participating educators will examine the role of multimodality in literacy learning across the curriculum with an emphasis on how to bridge the digital literacies of students' private lives with the traditional print practices valued in school. Teachers will gain insight into and understanding of how young people's participation in a shifting media landscape can help shape and form learning and literacy in the 21st Century classroom.

READ 637 Problems in Reading Education (3 Credit Hours)

Presents an overview of current reading research and its application to instruction. Provides study and practice in the use of quantitative or qualitative techniques, including analytical processes, in solving problems in reading education.

Prerequisites: FOUN 612 and 15 hours in Reading Education

READ 680 Literacy Across the Curriculum (3 Credit Hours)

This class has an emphasis on advanced techniques in literacy for classroom teachers who are not reading specialists. Students will develop an understanding of literacy across the curriculum, including a wide variety of instructional strategies and an understanding of the complex nature of literacy within the disciplines. Lecture, demonstrations, development of materials/planning approaches, and practice in the techniques of literacy instruction for K-12 classroom teachers and library media specialists are provided.

Prerequisites: Graduate standing

READ 683 Diagnostic Teaching of Reading in the Classroom (3 Credit Hours)

Provides classroom teachers with strategies/techniques to employ to ongoing diagnosis and remediation through the use of informal and standardized tests to select appropriate instructional strategies for pupils' existing reading capabilities.

READ 685 Organizing and Supervising Reading Program Development (3 Credit Hours)

Presents an overview of the total school reading program (K-12), and not only prepares the prospective reading supervisor to make decisions pertaining to the procurement of materials for the program but also explores modes for integrating reading into the general curriculum.

Prerequisites: 9 graduate hours in reading

READ 686 Advanced Language Development and Reading (3 Credit Hours)

Explores current theories of cognitive development and their relationship to language development and reading as bases for evaluating methods and materials of teaching reading and the related communicative arts: spelling, writing, and speaking.

Prerequisites: Graduate standing

READ 689 Survey of Reading Instruction (3 Credit Hours)

Surveys the linguistic, psychological, sociological, philosophical, and historical foundations of current reading pedagogy.

Prerequisites: graduate standing

READ 693 Practicum in Reading (3 Credit Hours)

Hours to be arranged. This course provides graduate teachers with opportunities to practice and further refine their understandings of the reading process in clinical and classroom settings. Teachers provide both individual and group reading lessons with students from the local community. Advanced diagnostic tests of learning processes and intellectual capacity are covered. These advanced diagnostic techniques are in addition to those covered in the initial diagnostic reading course.

Prerequisites: 15 hours in graduate reading to include READ 683 and permission of the instructor

READ 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

REL - Religious Studies

REL 503 Gender and Sexuality in Islam (3 Credit Hours)

This course explores the shifting constructions of gender and sexuality in Muslim communities from the early period until the present, considering feminism, patriarchy, gender identity, masculinity, femininity, homosexuality, heteronormativity, and transgender people.

REL 551 Native American Philosophies (3 Credit Hours)

This course will provide students with an introduction to Native American philosophies with a focus on issues of identity, genocide, personhood, gender, sovereignty, and decolonization. Topics will be approached through a consideration of Native American philosophical methodologies and Native views regarding metaphysics, epistemology, and ethics. (Cross-listed with PHIL 551)

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

REL 583 Tibet, Happiness, and this Precious Life (3 Credit Hours)

Throughout this course, students will examine Tibetan texts and artifacts that address the meaning of happiness and the human condition. The course covers the indigenous religion Bön; the four main Tibetan Buddhist traditions (Nyingma, Sakya, Kagyu, and Geluk), Islam in Tibet, and contemporary social issues, such as gender, identity politics, and the use of social media.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of the instructor

REL 595 Topics in Religious Studies (3 Credit Hours)

The advanced study of selected topics designed to permit qualified students to work on subjects that, because of their specialized nature, may not be taught regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: 3 hours in PHIL or permission of the instructor

REL 596 Topics in Religious Studies (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

REL 597 Tutorial Work in Religious Studies (1-3 Credit Hours)

Independent reading and study of a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

REL 598 Tutorial Work in Religious Studies (1-3 Credit Hours)

Independent reading and study of a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

REL 697 Tutorial Work in Religious Studies (1-3 Credit Hours)

Independent reading and study of a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

REL 698 Tutorial Work in Religious Studies (1-3 Credit Hours)

Independent reading and study of a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

SCLM - Supply Chain, Logistics, and Maritime Operations

SCLM 515 Maritime and Supply Chain Safety and Security (3 Credit Hours)

This course examines methods to anticipate threats and mitigation strategies for securing the supply chain and increasing its resilience. It provides an overview of international and U.S. initiatives to ensure the security of logistics assets, cargo, people, and infrastructure within the maritime and supply chain domain. The course also addresses threats to the international trade (including maritime piracy, terrorism, cyber threats), and state-of-the-art techniques and tools for protecting the industry against cyberattacks, as well as roles and responsibilities of the supply chain actors.

SCLM 519 Maritime and Supply Chain Risk and Insurance (3 Credit Hours)

This course examines the risks associated with supply chain operations, including aspects of identification, analysis, assessment, response, and control of the risks associated with the transportation and storage of goods. It covers risk assessment as a function of threats, vulnerabilities, and consequences for operational performance for all modes of transportation. Topics include Lloyd's and the London Insurance Market, principles of insurance and law, international liability conventions, institute clauses, exclusions, cargo policies, particular and general average, and salvage insurance.

SCLM 542 Supply Chain and Maritime Intelligence (3 Credit Hours)

This course examines the performance metrics of the supply chain, including item tracking and visibility of the whole chain, including control tower approaches. It covers the importance of supply chain information collection, real-time data sharing and basic analytics tools to evaluate and improve the degree of execution of the supply chain and generating insights. Topics include monitoring supply chain processes, end-to-end visibility, collaborative supply chain networks, data integration, and data visualization.

SCLM 550 Supply Chain 4.0 Technologies and Innovations (3 Credit Hours)

This course examines the role of technology within the supply chain and how these technologies can be used to improve supply chain performance. Topics include AI, blockchain and smart contracts, IoT and digital twins, Large Language models (LLM), automation and robotics, digital supply chain transformation, machine learning in supply chain, anti-hacking technologies, autonomous vehicles, and additive manufacturing, among others.

SCLM 561 Warehousing, Distribution and Material Management (3 Credit Hours)

This course is designed to investigate the strategic role of warehouses, distribution centers and material management in domestic and global supply chains. Course content includes the analysis of distribution center operations through the study of warehouse design and layout, material handling systems and equipment, distribution network design, warehouse processes, order-picking strategies, inventory control, and safety.

SCLM 572 Vessel Fleet Operations (3 Credit Hours)

Examines the operations of freight shipping organizations involved in the transport of cargo by ship. Key topics are vessel fleets and ship space; shipping markets, operations, costs, investment, insurance, claims, and regulation; and ship types, cargoes, safety, flagging, pollution, and chartering, purchase and scrapping.

Prerequisites: SCLM 370

SCLM 573 Inland Waterways and Dredging Operations (3 Credit Hours)

This course is designed to explore and analyze the current condition of inland waterways and the maintenance of the navigational channels. It will include topics such as: the importance of marine highways, current waterways infrastructure (dams, locks and canals), barge types, the environmental benefits as well as its current legislation and policy. Also, it will cover dredging processes, types of equipment and stages of dredging projects with emphasis on the maintenance of navigation channels, disposal sites, and beneficial use of dredge materials.

SCLM 574 Shipbuilding and Ship Repair Logistics (3 Credit Hours)

Examines the shipbuilding and ship repair industry from the perspective of industry economics, technology, project management and supply and procurement processes. It covers principal ship dimensions, typical types of ship repairs, the preparation for a routine docking period with emphasis on the materials logistics, and the shipbuilding logistics process.

SCLM 581 Freight Brokerage and 3PL Services (3 Credit Hours)

This course covers the basics of Freight Brokering including types of freight and the types of niche markets available, import/export compliance and regulations, Broker-Carrier and Broker-Shipper Agreements, determination of freight shipment rates, load tracking, and carrier relations. Also, it covers the role of the 3PLs in freight brokerage plus inventory management, consolidation, order fulfillment and warehousing.

SCLM 586 Cruise Ship Operations (3 Credit Hours)

Overview cruise ship markets and tourism, and cruise ship types and cruise ship lines. Basic cruise operations including sales, supplies, safety and security, itineraries and ports of call, terminal operations and personnel management. Detailed understanding of the relevant issues surrounding the cruise ship terminal operations and sustainability of cruise line services.

SCLM 630 Strategic Sourcing and Procurement (3 Credit Hours)

An overview of the strategic sourcing of materials and services in the organization and its role in the supply chain. Topics include supply management, sourcing analytics, price/cost analysis, quality issues, supplier evaluation and selection, global supply risk and ethical and sustainable dimensions of global sourcing. This course also covers supply and procurement negotiations. It examines conceptual and practical skills in negotiations.

SCLM 641 Supply Chain Management and Logistics (3 Credit Hours)

This course explores strategic, tactical, and operational aspects of global supply chain and logistics management. Topics include end-to-end planning, international logistics, SCOR model application, and multimodal transportation processes. Emphasis is on analytics-driven, data-informed decision-making across global supply chains. The course also covers international trade entry strategies, payment, documentation, insurance, and customs processes.

SCLM 690 Supply Chain, Logistics, and Maritime Capstone (3 Credit Hours)

This capstone course covers best practices in global supply chain management, focusing on models, methods, and tools for effective planning, organization, and governance. Students examine end-to-end fulfillment strategies in a global environment with attention to environmental, ethical, and cultural factors. Topics include a semester-long project incorporating aspects of logistics, maritime operations, and the impact of Industry 4.0 on supply chains.

SEPS - STEM Education and Professional Studies

SEPS 500 Instructional Systems Development (3 Credit Hours)

Students learn how to design and develop classroom instructional materials including career and technical education and training curricula and programs for youths and adults. Skills in this area include the selection and use of materials, including media and computers and evaluation of pupil performance. Training specialist students learn to develop instructional materials using the instructional systems design process. Career and technical education students learn to plan instruction, to implement competency-based and standards-based education, and to modify and use the Virginia career and technical education curriculum guides.

SEPS 501 Foundations of Career and Technical Education (3 Credit Hours)

This course is designed to teach career and technical education majors to plan, develop, and administer a comprehensive program of career and technical education for high school students and adults. Students also develop an understanding of the historical and sociological foundations underlying the role, development and organization of public education in the United States.

SEPS 502 Instructional Methods in Occupational Studies (3 Credit Hours)

Designed to develop a student's ability to use basic instructional techniques and methods applicable to career and technical education, and adults in business, government, and industrial organizations. It involves videotaped micro-teaching demonstrations.

SEPS 503 Methods in Career and Technical Education (3 Credit Hours)

A practical study and application of recommended methods of teaching career and technical education to high school students. Video-taped micro-teaching demonstrations are included. The course should be taken the semester prior to student teaching.

SEPS 508 Advanced Classroom Issues and Practices in Career and Technical Education (3 Credit Hours)

An overview of classroom issues and practices for prospective career and technical teachers. The course covers classroom management and safety, communication processes, reading in the content area and child abuse and neglect recognition and intervention. Students learn the legal requirements and alternative teaching strategies for serving students with special needs. Students visit schools for a 30-hour student observation. PRAXIS II completion is a course requirement.

Prerequisites: junior standing and passing scores on PRAXIS I or State Board of Education-approved SAT or ACT scores

SEPS 509 Fashion Forecasting Market Trip (3 Credit Hours)

This is the study of planning and conducting a fashion buying trip to one of the major fashion markets in the United States like the Las Vegas Magic Trade Show. The students envision themselves as buyers in action and learn how trend forecasting and creative presentations help market fashion products and services to trade customers and consumers.

SEPS 510 The Foreign Fashion Market Trip (3 Credit Hours)

Students plan and conduct a fashion buying trip to a foreign market in Europe or Asia, and learn how to buy merchandise in the global marketplace. The course requires students to go on the trip as well as attend the pre- and post-trip classes.

Prerequisites: SEPS 208

SEPS 511 Fashion Show Production (3 Credit Hours)

Students plan and produce a fashion show. They examine each behind-the-scenes step from concept to execution as they organize and stage a show that is profitable, entertaining, and aesthetically pleasing.

SEPS 523 Visual Merchandising and Display (3 Credit Hours)

This course is designed to introduce students to the best practices and effective strategies in visual merchandising. It will provide the basic framework with which prospective merchandisers plan and construct visual displays that enhance the selling of merchandise and ideas.

Prerequisites: permission of the instructor

SEPS 524 Fashion, Textiles, and Construction Analysis (3 Credit Hours)

This course explores information related to new technological advances in the textile/apparel industry and determines consumer preferences and concepts of fashion product quality. It includes the development of standards for judging qualities of merchandise. Fabrics are examined to determine the value they provide to the apparel and accessories customer.

Prerequisites: permission of the instructor

SEPS 531 Web-Based Organization for Fashion (3 Credit Hours)

This course provides the basic communications foundations needed to conceive, plan, develop, implement, and maintain a Web-based organization for fashion. Upon completion, students will understand what is required to plan, launch and maintain a successful online venture, limited only by the willingness of the student to explore these technological advances.

SEPS 535 International Retailing (3 Credit Hours)

This course examines globalization and the development of an integrated global economy. Primary emphasis is placed on the strategies for successful global business expansion for retailers in international markets.

SEPS 540 Fashion Global Sourcing/Supply Chain Management (3 Credit Hours)

This course examines the role of global sourcing in the strategic positioning of retailers in the global economy. Emphasis is placed on economic, political, logistical, and ethical factors affecting world trade and global sourcing decisions.

SEPS 550 Assessment, Evaluation and Improvement (3 Credit Hours)

This course prepares training and educational professionals to plan for and conduct assessments to use in planning instructional programs, evaluate individual learning, monitor student progress, measure program effectiveness and efficiency, and evaluate the return on investments of training courses and programs.

SEPS 584 Student Teaching Mentored (6-12 Credit Hours)

Classroom placement in school systems for students to apply content and methodologies. The student is mentored by a school mentor and university faculty. This course is for newly hired teachers on provisional contracts.

Prerequisites: completion of the approved teacher education program in the major area, departmental approval, and permission of the director of teacher education services; passing scores on PRAXIS I or State Board of Education-approved SAT or ACT scores and passing scores on the appropriate PRAXIS II content examination required

SEPS 586 Middle School Student Teaching for Technical Education (6 Credit Hours)

Classroom placement for student teaching in a middle school technology laboratory. Students apply content and methodology under the supervision of a cooperating teacher and university faculty member. Available for pass/fail grading only.

Prerequisites: SEPS 408, SPED 313, TLED 408 and SEPS 450; or SEPS 508, 596, STEM 730, SEPS 788, TLED 608, READ 680 for graduate students; passing scores on PRAXIS I or State Board of Education-approved SAT or ACT scores and passing scores on the appropriate PRAXIS II content examination are required

SEPS 595 Topics in Occupational Education (1-3 Credit Hours)

The department offers selected topics designed to permit small groups of qualified students to work in subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of the instructor

SEPS 596 Topics in Career and Technical Education (1-3 Credit Hours)

The department offers selected topics designed to permit small groups of qualified students to work in subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of the instructor

SEPS 597 Independent Study in Occupational Education (1-6 Credit Hours)

Independent study.

Prerequisites: permission of the instructor

SEPS 636 Problems in Occupational and Technical Studies (3 Credit Hours)

Taken the last semester of graduate work. Practice in the use of statistical and analytical techniques in solving problems in occupational and technical studies related to secondary, community college, and training environments.

Prerequisites: FOUN 612

SEPS 695 Topics in Occupational Education (1-3 Credit Hours)

The department offers selected topics designed to permit groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

SEPS 696 Topics in Occupational Education (1-3 Credit Hours)

The department offers selected topics designed to permit groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

SEPS 697 Independent Study in Occupational Education (1-3 Credit Hours)

Individual study under the supervision of a graduate faculty member.

Prerequisites: permission of the instructor

SEPS 698 Thesis in Occupational Education (3-6 Credit Hours)

Research and writing of the master's thesis and scheduled conferences with the candidate's advisor.

Prerequisites: permission of the advisor

SEPS 740 Readings in Occupational and Technical Studies (3 Credit Hours)

A guided review of the literature to determine the history, development, and issues of occupational and technical education, including specialization in technology education, career and technical education specialties, and human resources training.

SEPS 750 Trends and Issues in Training: Modeling and Simulation (3 Credit Hours)

This course is designed to explore the issues and trends in developing and implementing technology-based training with emphasis on modeling and simulation.

SEPS 760 Trends and Issues in Occupational Education (3 Credit Hours)

This course prepares training and educational professionals to plan for and conduct assessments to use in planning research findings and issues related to tech prep and other articulated programs being established in secondary schools, community colleges, and four-year institutions.

Prerequisites: junior standing

SEPS 761 Foundations of Adult Education and Training (3 Credit Hours)

This course is a study of adult education and training in many settings including the community college, business, industry, labor, government, the military, and social service agencies of many types. An attempt will be made to assess the important trends or directions such activities are taking, including the needs of non-traditional learners and education and labor.

SEPS 762 Administration and Management of Education and Training Programs (3 Credit Hours)

This course deals with organizational policy, human and financial resources, facilities, and the planning process as applied to occupational education and adult training programs.

SEPS 765 Trends and Issues of Economic and Workforce Development (3 Credit Hours)

An analysis of economic trends and issues that lead to workforce development decisions. Focus is on planning for educational and training programs to meet workforce needs dictated by local and regional economic issues. This course is designed for community college and school system personnel.

Prerequisites: student must be accepted into doctoral program or have permission of the instructor

SEPS 785 Curriculum Development in Occupational Education and Training (3 Credit Hours)

A course designed to prepare students to design and develop curriculum for occupational education and training courses and programs. Included is a focus on articulation between secondary and post-secondary curriculum.

SEPS 787 Career and Technical Education Curriculum (3 Credit Hours)

Learn the various curriculum options taught in secondary schools under the auspices of career and technical education. Work from an administrative standpoint to learn the mission and goals of the various subject areas and plan to direct such efforts.

SEPS 788 Instructional Strategies for Innovation in Training and Occupational Education (3 Credit Hours)

Learning and teaching styles are considered as a basis for developing instructional strategies to maximize occupational and technical education at all levels, including secondary, the community college, and senior institutions. Relevant learning theories and knowledge of self, learner, and the environment are blended to enhance the participants' instructional strategies.

SEPS 789 Instructional Technology in Education and Training (3 Credit Hours)

A course that provides insights about trends, issues, and the applications of instructional technologies as they may be applied to education and training environments. Topics include selected technical processes and electronic media to solve practical problems in educations and training.

SEPS 790 Practicum in Occupational Education (3 Credit Hours)

Individually prescribed instruction under the supervision of a graduate faculty member. Study intended to professionally fulfill development of graduate candidates.

Prerequisites: permission of the graduate program director

SEPS 795 Topics in Occupational Education (1-3 Credit Hours)

The department offers selected topics designed to permit groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

SEPS 797 Independent Study in Occupational Education (1-6 Credit Hours)

Individual study under the supervision of a graduate faculty member.

Prerequisites: Permission of the instructor

SEPS 809 Pro Seminar for Workforce and Organizational Development (1 Credit Hour)

This course is designed for students in the PhD in Education, Workforce and Organizational Development program that have completed both summer institutes. Focus will be on preparing for the comprehensive exam and finalizing the dissertation proposal. Course will be held during the second week of our Summer Institute on campus. It runs three hours per day for five days.

Pre- or corequisite: SEPS 835 and SEPS 840

SEPS 835 Research Design for Occupational and Technical Studies (3 Credit Hours)

Analyses of current research and needs in occupational and technical studies. Students analyze the literature and develop a research focus for future graduate studies.

SEPS 840 Readings in Occupational and Technical Studies (3 Credit Hours)

A guided review of the literature to determine the history, development, and issues of occupational and technical education, including specialization in technology education, career and technical education specialties, and human resources training.

SEPS 850 Trends and Issues in Training: Modeling and Simulation (3 Credit Hours)

This course is designed to explore the issues and trends in developing and implementing technology-based training with emphasis on modeling and simulation.

SEPS 860 Trends and Issues in Occupational Education (3 Credit Hours)

Trends in philosophy, workforce needs, curriculum and teaching procedures in occupational and technical education. Analysis of research findings and issues related to tech prep and other articulated programs being established in secondary schools, community colleges, and four-year institutions.

SEPS 861 Foundations of Adult Education and Training (3 Credit Hours)

This course is a study of adult education and training in many settings including the community college, business, industry, labor, government, the military, and social service agencies of many types. An attempt will be made to assess the important trends or directions such activities are taking, including the needs of non-traditional learners and education and labor.

SEPS 862 Administration and Management of Education and Training Programs (3 Credit Hours)

This course deals with organizational policy, human and financial resources, facilities, and the planning process as applied to occupational education and adult training programs.

SEPS 865 Trends and Issues of Economic and Workforce Development (3 Credit Hours)

An analysis of economic trends and issues that lead to workforce development decisions. Focus is on planning for educational and training programs to meet workforce needs dictated by local and regional economic issues. This course is designed for community college and school system personnel.

Prerequisites: student must be accepted into doctoral program or have permission of the instructor

SEPS 868 Internship (3 Credit Hours)

Supervised assignment to an agency operating an occupational education or training program.

Prerequisites: permission of the instructor

SEPS 885 Curriculum Development in Occupational Education and Training (3 Credit Hours)

A course designed to prepare students to design and develop curriculum for occupational education and training courses and programs. Included is a focus on articulation between secondary and post-secondary curriculum.

SEPS 887 Career and Technical Education Curriculum (3 Credit Hours)

Learn the various curriculum options taught in secondary schools under the auspices of career and technical education. Work from an administrative standpoint to learn the mission and goals of the various subject areas and plan to direct such efforts.

SEPS 888 Instructional Strategies for Innovation in Training and Occupational Education (3 Credit Hours)

Learning and teaching styles are considered as a basis for developing instructional strategies to maximize occupational and technical education at all levels, including secondary, the community college, and senior institutions. Relevant learning theories and knowledge of self, learner, and the environment are blended to enhance the participants' instructional strategies.

SEPS 889 Instructional Technology in Education and Training (3 Credit Hours)

A course that provides insights about trends, issues, and the applications of instructional technologies as they may be applied to education and training environments. Topics include selected technical processes and electronic media to solve practical problems in educations and training.

SEPS 890 Practicum in Occupational Education (3 Credit Hours)

Individually prescribed instruction under the supervision of a graduate faculty member. Study intended to professionally fulfill development of graduate candidates.

Prerequisites: permission of the graduate program director

SEPS 895 Topics in Occupational Education (1-3 Credit Hours)

The department offers selected topics designed to permit groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

SEPS 897 Independent Study in Occupational Education (1-6 Credit Hours)

Individual study under the supervision of a graduate faculty member.

Prerequisites: Permission of the instructor

SEPS 899 Dissertation in Occupational Education (1-12 Credit Hours)

Work on pre-selected dissertation topics under the direction of dissertation committee chair.

Prerequisites: permission of dissertation committee chair

SEPS 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

SEPS 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

SMGT - Sport Management

SMGT 515 Principles of Coaching Management (3 Credit Hours)

This course is designed to provide students with a basic knowledge of the coaching profession. Special emphasis will be placed on establishing a sound coaching philosophy, selecting a coaching style, desirable qualities of a coach, ethics and the coach, roles of the head coach, planning and organizing for games and practices, coaching pedagogy, off-season planning, final preparations for the season, and issues and problems related to coaching and recruiting athletes.

SMGT 556 Sport Psychology (3 Credit Hours)

Study of the psychological bases of coaching strategies and methodologies. Emphasis is placed on applying knowledge in field settings.

SMGT 560 Sport and Social Justice (3 Credit Hours)

The class is a comprehensive survey of the historical interrelationship between sports and civil rights movements in the United States, emphasizing the African American experience. Through popular and academic text and documentary films, we will examine the role that sport has played in raising consciousness about racial issues, and how participation and spectatorship influence attitudes about race.

SMGT 580 Introduction to Sport Analytics (3 Credit Hours)

This course will examine the theory, development, and application of analytics in sport. Students will learn about the application of analytics in sport for purposes of evaluating player performance, team management, market segmentation, pricing, and other areas in sport industry operations. Analytics includes the inclusive use of data, statistical and quantitative analysis, explanatory and predictive models, and fact-based decision making. Sport Management program.

Prerequisites: Must be a degree-seeking student admitted into the M.S

SMGT 595 Topics in Sport Management (3 Credit Hours)

This course provides an opportunity for in-depth study of selected topics in sport management.

Pre- or corequisite: Permission from the instructor

SMGT 636 Research Problems in Sport Management (3 Credit Hours)

Practice in the use of statistical and analytical techniques in solving problems in sport management; supervised student research.

Prerequisites: HMS 635 or FOUN 612; taken in the last semester of graduate work

SMGT 652 Facility Management for Sport, Recreation and Entertainment (3 Credit Hours)

This course examines the principles of facility operation for sport, recreation, and entertainment events. It will provide students with an understanding of the unique challenges and opportunities commonly faced by facility managers and how to effectively manage a sport facility. Students will analyze current research related to planning, funding, and operating facilities for sport, recreation, and entertainment. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 653 Sponsorship and Event Planning (3 Credit Hours)

This course examines the theory and practice of securing sponsorships and planning events. Students will analyze partnerships created between sport events and corporate sponsors. In addition, students will gain experience in planning and implementing a sport or leisure event. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 668 Internship in Sport Management (6 Credit Hours)

Designed to provide detailed practical experience (400 clock hours) in a sport management field setting. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 695 Topics in Sport Management (1-3 Credit Hours)

Selected topic courses in Sport Management. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 697 Independent Study in Sports Management (1-3 Credit Hours)

Individualized instruction to include research, specialized studies, or other scholarly writing. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 698 Thesis Research in Sport Management (3-6 Credit Hours)

Students work independently with a faculty member to conduct research for their thesis on a topic related to sport management.

Prerequisites: Permission of the advisor and committee

SMGT 699 Thesis in Sport Management (3-6 Credit Hours)

Students work independently with a faculty member to complete their thesis on a topic related to sport management.

Prerequisites: Permission of the advisor and committee

SMGT 738 Sport Finance (3 Credit Hours)

This course is designed to examine the principles and practices of financial management in diverse sport service settings. This course will explore the basic concepts of financial planning and analysis required to effectively manage a successful sport operation. The concepts covered in this course include finance, economics, accounting, and general business practices. The course is intended to offer a broad perspective of sport finance along with the basic skills associated with fiscal planning and management. Students will gain an understanding of the core principles associated with the financial management of sport enterprises. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 746 Strategic Marketing in Sport (3 Credit Hours)

This course will familiarize the student with theoretical and practical aspects of sport marketing including the dynamic nature of sport and the importance of branding. Through lecture and case-study analysis, the course will provide students with an understanding of the importance of marketing and consumer behavior theory and fundamentals specific to strategic marketing in the sport industry. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 750 Ethics in Sport Management (3 Credit Hours)

This course is designed to provide students with an understanding of ethics and morals and how they apply in sport management settings. Teleological and deontological theories of ethics are examined with special application made to sport environments. Models of moral development, ethical decision making, and codes of ethics are emphasized. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 755 Social Issues in Sport (3 Credit Hours)

The course will examine the nature and scope of sport from sociological, historical, economic, and philosophical perspectives. Special emphasis will be placed on studying selected issues and topics that impact sport managers and their understanding of the role that sport plays in society. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 760 Sport Law (3 Credit Hours)

This course will examine the theory and practice of sport law as it relates to the management and supervision of sport and recreation facilities, programs, participants, spectators and events. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 775 Management and Leadership in Sport (3 Credit Hours)

This course will examine various management principles as they apply to sport settings. Special emphasis will be placed on studying leadership theories, human resource management, strategic planning, decision making, problem-solving, and employee motivation. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 785 Sport Entrepreneurship (3 Credit Hours)

This course will introduce students to various aspects of sport entrepreneurship ranging from development of an idea for a sport business to the formulation of a comprehensive sport business plan. Sport Management program.

Prerequisites: Must be a degree-seeking student admitted into the M.S

SMGT 790 Applied Sport Analytics (3 Credit Hours)

In this capstone course, students in the Sport Analytics concentration gain an opportunity to demonstrate their analytical expertise by creating a professional portfolio. Drawing on insights from previous coursework, they will carry out independent data analyses on significant topics in the sport industry and share their findings with peers and the wider sport analytics community.

Prerequisites: Must be a degree-seeking student admitted into the MS Sport Management program

SMGT 795 Topics in Sport Management (1-3 Credit Hours)

Selected topic courses in sport management. Sport Management program.

Prerequisites: Must be a degree seeking student admitted into the M.S

SMGT 838 Sport Finance (3 Credit Hours)

This course is designed to examine the principles and practices of financial management in diverse sport service settings. This course will explore the basic concepts of financial planning and analysis required to effectively manage a successful sport operation. The concepts covered in this course include finance, economics, accounting, and general business practices. The course is intended to offer a broad perspective of sport finance along with the basic skills associated with fiscal planning and management. Students will gain an understanding of the core principles associated with the financial management of sport enterprises.

Prerequisites: Must be a degree seeking student admitted into the Human Movement Sciences doctoral program

SMGT 846 Strategic Marketing in Sport (3 Credit Hours)

This course will familiarize the student with theoretical and practical aspects of sport marketing, including the dynamic nature of sport and the importance of branding. Through lecture and case-study analysis, the course will provide students with an understanding of the importance of marketing and consumer behavior theory and fundamentals specific to strategic marketing in the sport industry.

Prerequisites: Must be a degree seeking student admitted into the Human Movement Sciences doctoral program

SMGT 850 Ethics in Sport Management (3 Credit Hours)

This course is designed to provide students with an understanding of ethics and morals and how they apply in sport management settings. Teleological and deontological theories of ethics are examined with special application made to sport environments. Models of moral development, ethical decision making, and codes of ethics are emphasized.

Prerequisites: Must be a degree seeking student admitted into the Human Movement Sciences doctoral program

SMGT 855 Social Issues in Sport (3 Credit Hours)

The course will examine the nature and scope of sport from sociological, historical, economic, and philosophical perspectives. Special emphasis will be placed on studying selected issues and topics that impact sport managers and their understanding of the role that sport plays in society.

Prerequisites: Must be a degree seeking student admitted into the Human Movement Sciences doctoral program

SMGT 860 Sport Law (3 Credit Hours)

This course will examine the theory and practice of sport law as it relates to the management and supervision of sport and recreation facilities, programs, participants, spectators and events.

Prerequisites: Must be a degree seeking student admitted into the Human Movement Sciences doctoral program

SMGT 875 Management and Leadership in Sport (3 Credit Hours)

This course will examine various management principles as they apply to sport settings. Special emphasis will be placed on studying leadership theories, human resource management, strategic planning, decision making, problem-solving, and employee motivation.

Prerequisites: Must be a degree seeking student admitted into the Human Movement Sciences doctoral program

SMGT 885 Sport Entrepreneurship (3 Credit Hours)

This course will introduce students to various aspects of sport entrepreneurship ranging from development of an idea for a sport business to the formulation of a comprehensive sport business plan.

Prerequisites: Must be a degree seeking student admitted into the Human Movement Sciences doctoral program

SMGT 890 Applied Sport Analytics (3 Credit Hours)

In this capstone course, students in the Sport Analytics concentration gain an opportunity to demonstrate their analytical expertise by creating a professional portfolio. Drawing on insights from previous coursework, they will carry out independent data analyses on significant topics in the sport industry and share their findings with peers and the wider sport analytics community.

Prerequisites: Must be a degree seeking student admitted into the Human Movement Sciences doctoral program

SMGT 895 Topics in Sport Management (1-3 Credit Hours)

Selected topic courses in sport management.

Prerequisites: Must be a degree seeking student admitted into the Human Movement Sciences doctoral program

SOC - Sociology

SOC 500 War and Gender (3 Credit Hours)

In this course students grapple with issues concerning war, gender roles, and gender inequality. The course addresses gender roles in war throughout history, globally and across cultures. However, the United States military and military involvement in the 20th and 21st century will remain the primary focus areas. Discussions include how social norms and ideals of masculinity and femininity shape, and in turn are shaped by, images and realities of war, including gendered aspects of nationalism and just war theories. The military involvement of men, women (and children) in war and in peacetime, as participants and observers, perpetrators and victims, supporters and opponents of war is also discussed.

SOC 502 Sociology of Child Welfare (3 Credit Hours)

A sociological analysis of the field of child welfare. Topics include social inequality as it applies to children as a group in the U.S. and globally; understanding violence against children within the global context of children's rights; examining data on the degree to which policies, programs and research in the field fail to protect children and why; prevalence, causes and consequences of child sexual, physical and emotional abuse and neglect; evaluation of programs like 'family preservation' and placement in 'substitute' care, i.e. foster care, adoption, institutionalization; changes that would protect and advance the interests and rights of children at the parent-child, agency and societal level.

SOC 505 Social Change and Social Movements (3 Credit Hours)

Analysis of the nature and causes of social change, major social movements, and their impact upon contemporary society.

SOC 521 Deviant Behavior (3 Credit Hours)

A study of various definitions and forms of deviant behavior, theoretical explanations of causes of deviant behavior and the impact of deviant behavior on society and the individual.

SOC 523 Women, Health and Healing (3 Credit Hours)

An examination of women's experiences with health and illness and women's roles in the health-care system as patients and care providers from a feminist sociological perspective.

SOC 526 Minority Group Relations (3 Credit Hours)

The study of the process of and responses to the oppression of racial, religious, ethnic, and national minorities in a variety of countries within a historical and comparative perspective. Special emphasis given to American minorities and especially African Americans.

SOC 527 Gender-Based Violence (3 Credit Hours)

This course takes an expansive and intersectional approach to studying various forms of gender-based violence, from the interpersonal to the systemic, institutional, and cultural. Prevalence, risk factors, theoretical explanations, and legal remedies related to topics such as intimate partner violence, sexual assault on college campuses, gender-based violence in the military, sexual violence against undocumented immigrants, commercial sexual exploitation, and racism and reproductive health will be examined.

SOC 540 Health, Illness, and Society (3 Credit Hours)

The study of health, illness and society. After exploring how health is conceptualized by the prevailing allopathic medical model, an emergent alternative or "integrative" health perspective is examined with a focus on how wellbeing may be understood.

SOC 541 Drugs and Society (3 Credit Hours)

Topics include changes in the legal status of drugs, cross-cultural and historical variations in the control and use of drugs, and social epidemiology of drug use in contemporary society.

SOC 595 Topics in Sociology (3 Credit Hours)

The advanced study of selected topics designed to permit qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

SOC 596 Topics in Sociology (3 Credit Hours)

The advanced study of selected topics designed to permit students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

SOC 597 Tutorial Work in Special Topics in Sociology (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

SOC 598 Tutorial Work in Special Topics in Sociology (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

SOC 610 Applied Social Research Methods (3 Credit Hours)

The application of social science methods to practical problems. The topics of research design, measurement, scaling, sampling, data collection, and research organization are taught with reference to issues of reliability, validity and ethical concerns.

SOC 615 Perspectives on Racial Inequality (3 Credit Hours)

This course explores racial inequality in the United States. The course is organized by the question: "Why, in 21st Century United States, are there still different social outcomes for the descendants of American slaves and descendants of European immigrants?" Students are given a selection of materials from a variety of perspectives attempting to answer the question.

SOC 620 Proseminar in Sociological Theory (3 Credit Hours)

An examination of classical and contemporary sociological theories about the relations between the individual and society; the ways theory shapes and informs the study of social issues; and the relationship among theory, research and practice.

SOC 627 Violence Against Women (3 Credit Hours)

This course examines the many ways in which violence against women functions as an agent of social control. Violence is viewed on a continuum in order to determine how a variety of acts contribute to the subordination of women. Specific types of violence are explored including: wife assault, rape, incest, sexual harassment and pornography.

SOC 630 Applied Social Statistics (3 Credit Hours)

This course is a graduate-level introduction to social statistics as they may be applied to various practical problems. Students will learn the appropriate use of various statistical procedures through discussion and application.

Prerequisites: SOC 610

SOC 640 Sociological Application of Computer and Data Analysis (3 Credit Hours)

This course is a graduate-level introduction to the use of the computer in problems of data management and analysis. Students will use existing software packages (e.g. SPSS, SAS) to build specified data files and carry out various statistical procedures.

Prerequisites: SOC 610

SOC 650 Research Seminar (3 Credit Hours)

This seminar integrates the skills needed to complete a master's thesis. Exercises include formulating research questions, developing a research design, and writing a publishable paper. Students practice these skills assignments in class and by completing their thesis proposal.

Prerequisites: SOC 610, SOC 620 or CRJS 620, SOC 630, and SOC 640

SOC 668 Internship (3 Credit Hours)

Students gain first-hand experience in professional settings which are deemed appropriate given their academic background and career objectives. Students will be required to complete a research project which corresponds to their specific internship placement.

Prerequisites: Permission of the instructor

SOC 695 Topics of Sociology (3 Credit Hours)

Topics vary each semester.

SOC 696 Topics of Sociology (3 Credit Hours)

Topics vary each semester.

SOC 697 Independent Study in Special Topics in Sociology (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Approval of the department chair

SOC 698 Independent Study in Special Topics in Sociology (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Approval of the department chair

SOC 699 Thesis (3-9 Credit Hours)

Credit hours to continue thesis work.

SOC 795 Topics in Sociology (3 Credit Hours)

Topics vary by semester.

Prerequisites: Six hours of graduate credit

SOC 797 Independent Study in Sociology (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor.

Prerequisites: Approval of department chair and 6 hours of graduate credit

SOC 895 Topics in Sociology (3 Credit Hours)

Topics vary by semester.

Prerequisites: Six hours of graduate credit

SOC 897 Independent Study in Sociology (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor.

Prerequisites: Approval of department chair and 6 hours of graduate credit

SOC 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

SOC 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

SPAN - Spanish

SPAN 507 Advanced Grammar and Syntax (3 Credit Hours)

This class is designed to solidify and refine students' working knowledge of written skills in the language, with an emphasis on increasing their written sophistication. Focus is on analysis of vocabulary, grammar, and cultural nuances in the syntax to examine how language reflects the ways of life and beliefs of its speakers, contrasted with the extent of language's influence on culture. Students will refine their skills in written inter-cultural communication, paying attention to idioms and the fine points of 'cultural grammar,' communicative competence and specialized discourse to develop excellent communication skills. This course is intended to prepare students for using their knowledge of language and culture in professional settings.

Prerequisites: 9 hours of 300-level Spanish courses

SPAN 510 Spanish Applied Linguistics (3 Credit Hours)

This course provides an introduction to Spanish linguistics and establishes the basis for the application of linguistic principles, including an introduction to the description and organization of data dealing with phonology (how sound patterns form words), discussion on topics in morphology (word formation and verbal inflection) and the description and organization of data dealing with syntax (how words combine to form phrases and sentences). In addition, the course analyzes the regional variations of Spanish (dialectology), and applying linguistics concepts, students contrast and compare the regional categories of Spanish use world-wide. It will provide students with a level of knowledge to make connections between the structure of Spanish and relevant issues in contemporary Hispanic linguistics, such as second language learning, language variation, bilingualism, and Spanish in the United States.

SPAN 515 Spanish Phonetics (3 Credit Hours)

This class is an introduction to the descriptive analysis of Spanish sounds and provides a comprehensive presentation of phonetics concepts as well as the comparisons drawn between the sounds of Spanish and those of English from a theoretical perspective. Students will gain a solid understanding of the sound system and strengthening of their pronunciation of Spanish from engaging, culturally driven activities taken from real-life modern Spanish sources, as well as enhancing awareness through aural comprehension of the nuances of the different dialects from speakers across the Spanish-speaking world.

SPAN 547 Drama of the Spanish Golden Age (3 Credit Hours)

A study of selected works of the major playwrights of the Golden Age: Lope de Vega, Calderon de la Barca, Tirso de Molina, Ruiz de Alarcon.

SPAN 548 Contemporary Spanish Drama (3 Credit Hours)

Through reading and analysis of the most representative texts of Spanish drama of the last decades, this course intends to introduce students to contemporary theater production in relation to the social, political and cultural trends that dominate in Spain today. Readings will allow students to gain a deeper understanding of the debates predominating within Spanish society and of possible correlations linking Spanish and European culture today.

SPAN 549 Contemporary Spanish-American Drama (3 Credit Hours)

A study of contemporary Spanish-American drama through the reading of representative authors.

SPAN 553 Border Culture and Literature (3 Credit Hours)

Students study a variety of current cultural texts from the U.S. and Mexico to explore the multiplicity of images that surround and define the highly contested and increasingly important area of the U.S.-Mexico border. Discussions are grounded in an ideological analysis with the goal of developing a description of the historical and social parameters and strategies that are utilized in the critical revision of the Borderlands. Specifically, this course focuses on questions dealing with subaltern identities, for example women, indigenous groups, immigrants, and the poor.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 569 Hispanic Film (3 Credit Hours)

A topical study of the major works of Spanish and Latin American film from Bunuel to the present. The course will explore many issues, including those related to gender, race, symbolism, and class struggle. (cross listed with COMM 443/COMM 543)

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 571 Hispanic Women Authors (3 Credit Hours)

A study of fictional and non-fictional works by Spanish, Spanish-American, and U.S. Latina writers from the 16th to the 20th century. The course analyzes gender identity and roles and the interaction of gender, race, and class in literary representations of courtship and marriage, spirituality, nationalism, colonialism, and multiculturalism. (cross-listed with WCS 471/WCS 571)

SPAN 573 Contemporary Latina Literature: From Borders to Crossroads (3 Credit Hours)

The course focuses on poetry, prose fiction and theater written by Chicana, Puerto Rican, Cuban-American, and Dominican-American women authors in the last twenty years. Attention will also be paid to the very influential theoretical work written by Chicanas.

SPAN 595 Topics in Spanish (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

SPAN 596 Topics in Spanish (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

SPAN 602 Intensive Spanish for Teachers: Language and Culture (3 Credit Hours)

This course is designed for Spanish teachers interested in keeping up with cultural developments in the Spanish-speaking world and in maintaining/improving linguistic performance. Emphasis will be placed on authentic materials from newspapers, magazines, film and video, and the Internet.

SPAN 668 Internship in Spanish (3 Credit Hours)

Individualized practical experience. Students gain first-hand experience in settings that are appropriate given their academic background and career objectives.

Prerequisites: Departmental approval required

SPAN 695 Topics in Spanish (1-9 Credit Hours)

Advanced study of selected topics which may not be offered regularly. These courses appear in the course schedule.

SPAN 696 Topics in Spanish (1-9 Credit Hours)

Advanced study of selected topics which may not be offered regularly. These courses appear in the course schedule.

SPAN 697 Tutorial Work in Special Topics in Spanish (1-3 Credit Hours)

The independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: approval of the department chair

SPAN 698 Tutorial Work in Special Topics in Spanish (3 Credit Hours)

The independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: approval of the department chair

SPED - Special Education

SPED 500 Foundations of Special Education: Legal Aspects and Characteristics (3 Credit Hours)

The course provides an introduction and overview of the field of special education from the perspective that it is a subsection of general education and that the field is in transition by virtue of philosophical, legislative, and programmatic changes. Legal aspects, regulatory requirements, and critical analyses of research are addressed. The course includes a broad overview of the characteristics, identification, instructional needs, and accommodation necessary for creating appropriate educational and vocational environments for students with disabilities.

Prerequisites: junior standing

SPED 502 Instructional Design I: Learner Characteristics and Assessment (3 Credit Hours)

The intent of this course is to provide pre-service and in-service teachers with: (a) knowledge of the characteristics of K-12 students with learning differences who are accessing either the general curriculum or the adapted curriculum, and (b) the ability to develop knowledge and skill in the selection, administration, scoring and interpretation of standardized/norm-referenced and criterion-referenced assessments for exceptional learners. Administering formal and informal assessment tools for the development of an IEP are emphasized. The use of assessment data to improve evidence-based instruction and student performance is discussed.

Prerequisites: a grade of C- or higher in SPED 400 or a grade of B- or higher in SPED 500

SPED 504 Characteristics and Medical Aspects of Disabling Conditions (3 Credit Hours)

This course reviews medical conditions present among individuals with disabilities and implications for classroom instruction.

SPED 506 Students with Diverse Learning Needs in the General Education Classroom (3 Credit Hours)

This course introduces general education teachers to the legal aspects and educational needs of at-risk students and those with disabilities. Emphasis is on characteristics of children with special needs and procedures for effective academic, behavioral, and social integration of these children in the general education classroom.

Prerequisites: junior standing

SPED 511 Classroom and Behavioral Management Techniques for Students with Diverse Needs (3 Credit Hours)

This course addresses classroom management techniques and individual interventions based upon behavioral, cognitive, affective, social, and ecological theory and practice. The course focuses on the field of applied behavior analysis, including best practices in the areas of data collection, program selection, program implementation, and data analysis. Positive behavior management, supports, and functional behavioral assessment for students with diverse learning needs will be emphasized.

Pre- or corequisite: a grade of C- or higher in SPED 400 or a grade of B- or higher in SPED 500

SPED 515 Instructional Design II: Curricular Procedures and Individualized Education Planning (3 Credit Hours)

The intent of this course is to provide preservice and in-service teachers with: (a) knowledge of research-based instruction for PreK-12 students with disabilities and those who are gifted; (b) knowledge and skill in using data collection to make decisions about student progress, instruction, program, accommodations and teaching methodology for exceptional learners, and (c) knowledge and skill in planning, developing and implementing individual educational plans and group instruction for diverse exceptional learners who are accessing the general education curriculum and the standards of learning or the adapted education curriculum and the aligned or essentialized standards of learning.

Prerequisites: a grade of C- or higher in SPED 400 and SPED 402 or a grade of B- or higher in SPED 500 and SPED 502, and passing scores on Praxis Core Academic Skills for Educator Tests or equivalent as prescribed by the Virginia Board of Education

SPED 517 Collaboration and Transitions (3 Credit Hours)

This course addresses the complex issues surrounding families and children with disabilities and transitions across the lifespan, as well as effective collaboration with families and professionals to support inclusion and/or effective early intervention services, educational services, and transition services for students at-risk and students with disabilities. Emphasis is on successful professional collaboration and effective relationships in educational, transition, and family settings.

Pre- or corequisite: SPED 400/SPED 500

SPED 518 Instructional Strategies to Meet Diverse Learning Needs in Math (3 Credit Hours)

This course covers instructional strategies necessary to teach mathematics to students with diverse learning needs in elementary and secondary settings. Students will study and apply pedagogy-based research on how learning takes place and strategies for differentiating instruction for the unique needs of diverse learners. Students will address and apply effective research-based methodology and evaluation standards.

SPED 528 Instructional Strategies for Students Accessing the Adapted Curriculum (3 Credit Hours)

This course addresses the characteristics and instructional strategies of students accessing the adapted curriculum. Emphasis is on assessment, program development, academic, and functional skills instruction. This course addresses the needs of individuals with severe and/or profound multiple disabilities. 45 Hour Practicum.

SPED 532 Characteristics of Students with Visual Impairments (3 Credit Hours)

This course provides an overview of the characteristics of and services to persons with visual impairments, including the impact of visual impairment on infants' and children's growth and development, child and adolescent emotional and social development, and family interaction patterns. Considers the educational, conceptual, psycho-social, and physical implications of a visual impairment.

Prerequisites: SPED 400/SPED 500

SPED 533 Braille Code (3 Credit Hours)

This course provides instruction in the development, use, and application of the Braille literary code and its implications for educational/literacy programs for students with visual disabilities. Students will develop the skills to read and write contracted and uncontracted Braille, while acquiring instructional methodologies for teaching children who are blind to read and write. Sources of Braille materials for educational purposes are identified.

Pre- or corequisite: SPED 400/SPED 500 and SPED 432/SPED 532

SPED 534 Medical and Educational Implications of Visual Impairments (3 Credit Hours)

Provides an introduction to anatomy and physiology of the visual system and the educational implications of visual pathology. Topics include anatomy of the human eye, normal visual development, pathology of the eye, examination procedures for the identification of visual pathology, and the effects of pathology on visual learning and development. Practicum of 25 hours required.

Pre- or corequisite: SPED 400/SPED 500 and SPED 432/SPED 532

SPED 535 Orientation and Mobility (2 Credit Hours)

Provides the foundation for understanding the components and essence of orientation and mobility. Establishes how the need for independent travel in the blind population created the field of O&M. Explores the philosophy and history of orientation and mobility including cane instruction, dog guides and methods of travel. Addresses techniques in developing orientation skills and basic mobility instruction. Motor and concept skill development are emphasized. Practicum of 45 hours required.

Pre- or corequisite: SPED 400/SPED 500 and SPED 432/SPED 532

SPED 536 Curriculum and Assessment of Students with Visual Impairments (3 Credit Hours)

Provides students with knowledge and understanding of the educational assessment of students with visual impairments and additional disabilities including deaf-blindness. Students will practice assessing and planning educational programs for students with visual impairments. Addresses assessment of technology for students with visual impairments. Examines determination of learning needs and appropriate learning media, relationship of assessment, IEP development, and placement. Practicum requires a minimum of 25 hours.

Pre- or corequisite: SPED 400/SPED 500 and SPED 432/SPED 532

SPED 537 Assistive Technology for People with Sensory Impairments (3 Credit Hours)

This course is designed for professionals and/or students interested in serving the visually impaired/blind population or hearing impaired/deaf population. It is designed to heighten the awareness of participants to specific technology and resources available to enhance and improve the ability of individuals with visual and hearing impairments to succeed in school, daily living activities and employment. Knowledge and awareness components of this course will be delivered via distance education.

Pre- or corequisite: SPED 400 or SPED 500 and SPED 432 or SPED 532

SPED 540 Assistive Technology for Diverse Students (3 Credit Hours)

This course provides lectures for pre-service and in-service teachers, and related service providers of special populations in use of assistive technology (AT) devices and services, and augmentative and alternative communication (AAC) systems for instructional programs and computer applications. Study will involve compliance with federal and state laws, and national and state educational standards related to providing assistive technology to students with diverse learning needs.

SPED 541 Teaching Students with Severe Physical and Sensorimotor Disabilities (3 Credit Hours)

This course reviews techniques for working with students who have severe physical and sensorimotor disabilities. Course emphasis is on proper positioning and handling for students with atypical motor/muscle development who function at developmental levels between birth and five years. Practicum of 45 hours required.

SPED 560 Teaching Preschoolers With Diverse Abilities (3 Credit Hours)

This course prepares students to create high quality learning environments for preschool children (ages 2-5 years) who have diverse strengths and needs. Students will learn how to access curricula and materials, plan for and provide evidence-based instruction, collect data for progress monitoring, and provide adaptations to the environment to support the development of children with and without disabilities. Programming that addresses multiple areas of development, such as social-emotional, communication, motor, and cognition, will be discussed, and students will complete a 10-hour preschool observation.

SPED 561 Developmental Assessment of Young Children with Diverse Abilities (3 Credit Hours)

This course prepares students to use recommended practices for assessing the development of young children with diverse abilities, ages birth to 5 years, in home and inclusive/classroom-based settings. Course content and discussions address the knowledge and skills needed by early intervention, early childhood, and early childhood special educators when gathering developmental information to determine a child's eligibility, plan intervention and educational activities, and monitor progress across time. Practicum of 45 hours required.

SPED 567 Family-Centered Practices in Early Childhood Intervention (3 Credit Hours)

This course prepares professionals to partner with families of infants and toddlers (ages birth-three) with developmental delays and disabilities in early intervention programs. Emphasis is placed on the use of family-centered practices that support caregiver and child learning during visits in homes and other community settings. Strategies for collaborating with team members (including the family), writing Individualized Family Service Plans (IFSPs), and providing effective services that facilitate child development during natural family routines and activities will be discussed.

SPED 569 Communication/Language Development/Intervention for Students with Significant Disabilities (3 Credit Hours)

This course examines symbolic and non-symbolic communication/language development and acquisition. Emphasis is on routine-based communication training, communication/language facilitation strategies, augmentative communication systems, and informal/functional communication/language assessment procedures for students in early childhood special education, students with autism, and students with multiple disabilities.

SPED 583 Field Experience Seminar in Special Education (1 Credit Hour)

Explores issues, problems, concerns and processes related to teaching and entering the profession of teaching. Passing scores on the Virginia Communication and Literacy Assessment (VCLA), Praxis II: Elementary Education Content Test, and Virginia Reading Assessment (VRA)/ Reading for Virginia Educators (RVE) will be required by the end of the course.

Prerequisites: SPED 313, SPED 400/SPED 500 and SPED 402/SPED 502

SPED 586 Teacher Candidate Internship for Special Endorsement (3 Credit Hours)

Seven weeks will be completed at the elementary level and seven weeks will be completed at the middle/secondary level.

Prerequisites: admission to ODU Teacher Education Program; completion of the approved teacher education program in the specific endorsement area; departmental approval

SPED 595 Topics in Special Education (1-3 Credit Hours)

This course offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest in the special education field.

Prerequisites: SPED 400/SPED 500

SPED 601 English Learners and the Special Education Process (3 Credit Hours)

This course will provide students with information regarding the characteristics of English learners with disabilities, the special education law, and the legal requirements for assessment, evaluation, eligibility determination, and program planning. Progress monitoring, annual reviews, and reevaluation of English learners with disability or suspected of a disability also will be reviewed. The role of parents and community will be examined.

Prerequisites: Permission of the instructor

SPED 602 Principles of Language Learning and Assessment of English Learners with Disabilities (3 Credit Hours)

This course will provide students with knowledge and skills related to first and second language acquisition, language assessment, response to intervention, program planning, data collection and analysis, and the effective use of interpreters. Special attention is focused upon factors that affect second language acquisition, typical and atypical language development, differentiation for English learners with disabilities, and the bilingual brain.

Prerequisites: SPED 601

SPED 603 Language, Literature Content for English Learners With Disabilities in Inclusive Settings (3 Credit Hours)

This course examines language as the key to learning and the integration of speaking, listening, reading and writing to English learners' (EL) literacy development with a focus on ELs with disabilities. Students will learn phonological and orthographic features of words, factors that influence reading comprehension, how to differentiate instruction, how to teach sentence and paragraph writing, and how to develop academic vocabulary in ELs with disabilities.

Prerequisites: SPED 602

SPED 604 Instructional Strategies for English Learners with Disabilities (3 Credit Hours)

This course details current evidence-based practices to teach English learners with disabilities. Students will learn principles of effective evidence-based instructional strategies and guidelines for selecting them, including the use of technology to teach English learners with disabilities.

Prerequisites: SPED 603

SPED 610 Characteristics of Students Accessing the General Curriculum (3 Credit Hours)

The intent of this course is to provide pre-service and currently licensed teachers with (a) knowledge of the characteristics of students with disabilities who are accessing the general curriculum, K-12, including, but not limited to learning disabilities, emotional disabilities, and intellectual disabilities; (b) the ability to recognize etiologies, underlying factors, and contributing conditions that impact student learning, and (c) the cultural impact of disabling conditions.

SPED 611 Instructional Strategies for Students Accessing the General Education Curriculum (3 Credit Hours)

This course emphasizes effective research-based instructional strategies for teaching students with mild/moderate disabilities in grades K-12 who are accessing the general education curriculum. Practicum of 45 hours in middle/secondary-level setting is required.

SPED 613 Human Growth and Development (3 Credit Hours)

This course is designed to give a thorough overview of human development from birth through adolescence and to develop an understanding of what impact physical, social, emotional, and intellectual development may have on the student, the learning environment, and instructional decisions. This course provides an advanced overview of current research and theory in human growth and development and their applications to the classroom. Throughout the course, issues of diversity as it applies to economic, social, racial, ethnic, and religious characteristics will be explored; developmental issues related to giftedness or disability and the impact of family disruptions, child abuse, and substance abuse will be addressed within the context of each topic.

SPED 615 Advanced Classroom and Behavior Management Techniques for Students with Diverse Needs (3 Credit Hours)

This course addresses classroom management techniques and individual interventions based upon behavioral, cognitive, affective, social, and ecological theory and practice. The course focuses on the field of applied behavior analysis, including best practices in the areas of data collection, program selection, program implementation, and data analysis. Positive behavior management, supports, and functional behavioral assessment for students with diverse learning needs will be emphasized.

SPED 618 Advanced Instructional Design I: Learner Characteristics and Assessment (3 Credit Hours)

The intent of this course is to provide pre-service and in-service teachers with: (a) knowledge of the characteristics of K-12 students with learning differences who are accessing either the general curriculum or the adapted curriculum and (b) the ability to develop knowledge and skill in the selection, administration, scoring and interpretation of standardized/norm-referenced and criterion-referenced assessments for exceptional learners. Administering formal and informal assessment tools for the development of an IEP are emphasized. The use of assessment data to improve evidence-based instruction and student performance is discussed. Practicum of 45 hours required.

SPED 620 Advanced Foundations of Special Education: Legal Aspects and Characteristics (3 Credit Hours)

The course provides an introduction and overview of the field of special education from the perspective that it is a subsection of general education and that the field is in transition by virtue of philosophical, legislative, and programmatic changes. Legal aspects, regulatory requirements, and critical analyses of research are addressed. The course includes a broad overview of the characteristics, identification, instructional needs, and accommodation necessary for creating appropriate educational and vocational environments for students with disabilities.

SPED 621 Effective Interventions for Children and Youth with Challenging Behavior (3 Credit Hours)

Students with challenging behavior pose a tremendous challenge to school personnel. Along with the growing incidence of behavior problems, there has been a dramatic increase in the number of research-supported interventions. Emphasis is on assessment of the structural and functional properties of problem behavior to facilitate development of interventions that match the nature and severity of the problem behavior. The course focuses on gaining knowledge of the likely source(s) of challenging behavior, including various strategies to document the environmental determinants of the behavior, establishment of school-wide, classroom-level, and student-specific intervention programs and ways to document the outcome of those interventions. Attention is given to adult- as well as peer-mediated intervention options for problem behavior reduction/replacement among children and youth from diverse backgrounds and across categories of exceptionality. Practicum of 45 hours required.

SPED 622 Advanced Collaboration and Transitions (3 Credit Hours)

This course addresses the complex issues surrounding families and children with disabilities and transitions across the lifespan, as well as effective collaboration with families and professionals to support inclusion and/or effective early intervention services, educational services, and transition services for students at-risk and students with disabilities. Emphasis is on successful professional collaboration and effective relationships in educational, transition, and family settings.

SPED 623 Adv Instructional Design II: Curriculum Procedures and Individualized Education Planning (3 Credit Hours)

The intent of this course is to provide preservice and in-service teachers with: (a) knowledge of research-based instruction for PreK-12 students with disabilities and those who are gifted; (b) knowledge and skill in using data collection to make decisions about student progress, instruction, program, accommodations and teaching methodology for exceptional learners, and (c) knowledge and skill in planning, developing and implementing individual educational plans and group instruction for diverse exceptional learners who are accessing the general education curriculum and the standards of learning or the adapted education curriculum and the aligned or essentialized standards of learning. Practicum of 45 hours required.

SPED 625 Characteristics of Students with Autism Spectrum Disorders (3 Credit Hours)

This course includes a review of characteristics, etiology, prevalence, and perspectives of students with autism spectrum disorders.

SPED 626 Advanced Procedures in Reading and Writing for Students with Diverse Learning Needs (3 Credit Hours)

This course provides the professional educator with a variety of educational procedures for students with disabilities in reading and writing, including diagnostic assessment, causal nature of the disability, and evidence-based instructional strategies. Application of evidence-based practices for assessing and teaching students with disabilities who have severe deficits in reading and writing is emphasized.

SPED 627 Instructional Strategies for Students with Autism Spectrum Disorders (3 Credit Hours)

This course includes a review of intervention strategies for students with autism spectrum disorders. Practicum of 45 hours required.

SPED 628 Instructional Strategies for Students Accessing the Adapted Curriculum (3 Credit Hours)

This course addresses the characteristics and instructional strategies of students accessing the adapted curriculum. Emphasis is on assessment, program development, academic, and functional skills instruction. This course addresses the needs of individuals with severe and/or profound multiple disabilities. Practicum of 45 hours required.

Prerequisites: SPED 400/SPED 500, SPED 411/SPED 511, and passing scores on Praxis Core Academic Skills for Educator Tests or equivalent as prescribed by the Virginia Board of Education

SPED 630 Teaching Preschoolers with Disabilities (3 Credit Hours)

This course is designed to prepare students in curricula, materials and methods of instruction for preschool-aged (2 to 6 years) children with special needs. Programming for self-help, social, language, motor, and cognitive development are addressed. Data collection, program organization, and classroom planning are also covered. Practicum of 45 hours required.

Prerequisites: SPED 400/SPED 500 and passing scores on Praxis Core Academic Skills for Educator Tests or equivalent as prescribed by the Virginia Board of Education

SPED 631 Developmental Assessment of Young Children with Diverse Abilities (3 Credit Hours)

This course prepares students to use recommended practices for assessing the development of young children with diverse abilities, ages birth to 5 years, in home and inclusive/classroom-based settings. Course content and discussions address the knowledge and skills needed by early intervention, early childhood, and early childhood special educators when gathering developmental information to determine a child's eligibility, plan intervention and educational activities, and monitor progress across time. Practicum of 45 hours required.

SPED 633 Teaching Students with Severe Physical and Sensorimotor Disabilities (3 Credit Hours)

This course reviews techniques for working with students who have severe physical and sensorimotor disabilities. Emphasis is on proper positioning and handling for students with atypical motor/muscle development who function at developmental levels between birth and five years. Practicum of 45 hours required.

Prerequisites: SPED 400/SPED 500 and passing scores on Praxis Core Academic Skills for Educator Tests or equivalent as prescribed by the Virginia Board of Education

SPED 636 Cortical and Cerebral Visual Impairment (3 Credit Hours)

This class will provide an overview of cortical visual impairment (CVI) including causes, visual characteristics, assessments, and interventions for students with CVI.

Prerequisites: SPED 400 or SPED 500 and SPED 432 or SPED 532

SPED 637 Infant/Family Intervention and Teamwork (3 Credit Hours)

This course prepares professionals from cross-discipline backgrounds to serve families with children who are at-risk and disabled from birth through age three. Emphasis is placed on the development of the individualized family service plan (IFSP), procedures, materials and curriculum for this population. A family-centered approach is stressed. Practicum of 45 hours required.

Prerequisites: SPED 400/SPED 500, SPED 630, and passing scores on Praxis Core Academic Skills for Educator Tests or equivalent as prescribed by the Virginia Board of Education

SPED 638 Teaching Methods for Students with Visual Impairments (3 Credit Hours)

This course emphasizes methods of teaching compensatory skills, the core curriculum, and technology for use by students who are blind and visually impaired. It addresses curriculum development, adaptations, and teaching methodology for individuals with visual impairments. In addition, it provides information on adaptations within various educational programs and adaptation of general education classroom materials and procedures for use with blind and low vision children and youth.

Prerequisites: passing scores on Praxis Core Academic Skills for Educator Tests or equivalent as prescribed by the Virginia Board of Education

Pre- or corequisite: SPED 400/SPED 500 and SPED 432/SPED 532

SPED 639 Braille Reading and Writing (3 Credit Hours)

Provides instruction on transcription of advanced braille codes, including: mathematics (UEB and Nemeth) music, foreign language, and other specialized codes. Introduces techniques for teaching skills in each code. Explores technology tools used to create braille and tactile materials in addition to other assistive technologies used for instruction in STEM content. Practicum requires a minimum of 15 hours.

Prerequisites: SPED 433/SPED 533 and passing scores on Praxis Core Academic Skills for Educator Tests or equivalent as prescribed by the Virginia Board of Education

Pre- or corequisite: SPED 400/SPED 500 and SPED 432/SPED 532

SPED 640 Applied Behavior Analysis: Concepts and Principles (3 Credit Hours)

This course focuses on the concepts and principles of applied behavior analysis; identification of factors that increase or decrease the probability of behavior under specific circumstances.

Prerequisites: Permission of the instructor

SPED 641 Applied Behavior Analysis: Empirical Bases (3 Credit Hours)

Applications of single-case experimental research designs to the analysis of behavior with emphasis on measurement, visual display of data, and interpretation of results.

Pre- or corequisite: SPED 640 or permission of the instructor

SPED 642 Ethics and Professional Conduct for Behavior Analysts (3 Credit Hours)

This course provides a basis in Virginia Behavior Analyst Licensure law, the Behavior Analyst Certification Board's Ethics Code for Behavior Analysts, disciplinary systems, and professional conduct consistent with the practice of applied behavior analysis.

Prerequisites: SPED 640 or permission of the instructor

SPED 643 Applied Behavior Analysis: Assessments and Interventions (3 Credit Hours)

Identification and assessment of problem behavior and socially-appropriate behaviors, implementation of function-based intervention plans, and design of environments to prevent and address problem behavior.

Prerequisites: SPED 640 or permission of the instructor

SPED 644 Applied Behavior Analysis: Applications (3 Credit Hours)

Application of concepts and principles of behavior analysis to a wide range of populations, settings, and behaviors within the context of more sophisticated clinical and professional issues and environments.

Prerequisites: SPED 640, SPED 641, and SPED 643 or consent of the instructor

Pre- or corequisite: SPED 643

SPED 645 Applied Behavior Analysis: Verbal Behavior (3 Credit Hours)

B.F. Skinner's analysis of verbal behavior and the design, development, and implementation of curriculum, language and communication interventions for individuals with language delays.

Prerequisites: SPED 643 or permission of the instructor

SPED 646 Applied Behavior Analysis: Personnel Supervision and Management (3 Credit Hours)

Application of behavior analytic principles and procedures to personnel supervision and management as well as implementation of evidence-based practices to provide effective supervision to enhance personnel performance across a variety of organizational settings.

Prerequisites: Admission to the Applied Behavior Analysis Certificate Program; completion of SPED 640 and SPED 641

SPED 668 Advanced Teacher Candidate Internship for Special Endorsement (9 Credit Hours)

This course provides supervised classroom experiences in settings serving students with disabilities. Enrolled students work collaboratively with classroom teachers to create and implement instructional plans targeting diverse learning needs. Total internship requirement is comprised of 7.5 weeks at the elementary level and 7.5 weeks at the middle/secondary level.

Prerequisites: Admission to ODU Teacher Education Program; completion of the approved teacher education program in the specific endorsement area; departmental approval; passing scores on Praxis Core Academic Skills for Educator Tests (or equivalent as prescribed by the Virginia Board of Education); passing scores on Virginia Communication and Literacy Assessment (VCLA) and the Reading for Virginia Educators (RVE- General Curriculum only); and the endorsement program exit exam

SPED 669 Directed Field Internship Special Education, PreK-12 (3 Credit Hours)

The course provides supervised involvement in a practicum setting where the student and the instructor work together closely to develop curricula and gain expertise in teaching specific topics of importance to special educators. 50 hours per credit.

SPED 670 Transition and Community-Based Instruction (3 Credit Hours)

This course provides an overview of the role of special educators in preparing students with severe disabilities for post-secondary vocational, residential, educational, community, and recreational settings. Emphasis is placed on developing appropriate curricula, involving students and their families in planning, implementing and evaluating transition programs, and helping students to access the services needed to be successful in adult life.

Prerequisites: SPED 400/SPED 500

SPED 671 Positive Behavior Supports (3 Credit Hours)

This course is designed specifically for teachers and other professionals working with individuals who have moderate to severe disabilities, including autism, or with young children who have disabilities. It is required for endorsement in Adapted Curriculum and Early Childhood Special Education. The primary focus is upon the concepts and skills needed (a) to design, implement, and evaluate individualized behavior support programs which derive from functional behavioral assessment, (b) to use effective teaching strategies to build relevant replacement skills, (c) to facilitate generalization and maintenance of skills, (d) to incorporate prevention strategies, (e) to improve the aspects of the student's environment that relate to the problem behavior, and (d) to incorporate, as appropriate, individually designed crisis intervention procedures

Prerequisites: SPED 400/SPED 500 and passing scores on the Praxis Core Academic Skills for Education Tests

SPED 672 IEP, Assessment & Program Planning for Adapted Curriculum (3 Credit Hours)

This course is designed to develop knowledge and skills about best special education practice in assessment and evaluation for students with severe disabilities, and IEP and educational program planning for those preparing to teach K-12 students with disabilities in the adapted curriculum. Field experience required.

Prerequisites: SPED 400 or SPED 500 and passing scores on the Praxis Core Academic Skills for Education Tests

SPED 673 Communication and Severe Disabilities (3 Credit Hours)

This course introduces professionals to augmentative and alternative communication (AAC) for individuals with severe speech and language impairments. It addresses the knowledge and skills that are needed to assess the potential AAC user, to make team decisions, to develop and implement instruction, and to evaluate the effects of instruction. The course is also aimed at motivating, building, and expanding communication, choice-making, and social interaction.

Prerequisites: SPED 400/SPED 500

SPED 674 Characteristics of Students with Severe Disabilities (3 Credit Hours)

Examines the academic, social, medical and behavioral characteristics of individuals with severe disabilities such as intellectual disability, autism, traumatic brain injury, and severe/multiple cognitive, physical and/or sensory disabilities. Focuses on etiology, contributing factors, impact on life and family, the challenges of identifying students with disabilities, and the need for intensive instruction, accommodations, and support.

Prerequisites: SPED 400/SPED 500

SPED 675 Foundations of Language and Literacy for Diverse Learners (3 Credit Hours)

This course provides an understanding of the development of emergent and early literacy in developmentally-typical learners and learners with complex language and learning needs, as well as the inter-relationship of language and literacy development. Emphasis will be placed on identifying effective research-based strategies for promoting and enhancing emergent literacy and early reading and writing skills for children and youth with language and intellectual disabilities and English language learners with disabilities. Field experience is required: course participants must identify an appropriate target student and engage in observation and assessment activities with that student and his/her family during the first half of the course. Final product includes the development of a literacy development plan for the student.

Prerequisites: SPED 400/SPED 500 and passing scores on the Praxis Core Academic Skills for Education Tests

SPED 676 Curriculum and Methods-Severe Disabilities (3 Credit Hours)

This course focuses on current best practices in curriculum and methods for students with severe disabilities, including specific strategies for teaching students with severe disabilities, general strategies for working with heterogeneous groups of students in inclusive settings, and methods for adapting the general education curriculum to include students with severe disabilities.

Prerequisites: SPED 400/SPED 500 and passing scores on the Praxis Core Academic Skills for Education Tests

SPED 677 Consultation and Collaboration (3 Credit Hours)

This course provides professionals in special education, regular education, and related fields with knowledge and communications skills necessary for collaborative consultation and technical assistance to other educators and service providers.

Prerequisites: SPED 400/SPED 500

SPED 678 Individualized Supports and Specialized Care of Students with Significant Disabilities (3 Credit Hours)

Provides an understanding of the unique physical, sensory, communication, and health and medical needs of students with significant disabilities, how these needs impact the educational program, how special education and related services are delivered, and how to design academic, functional and behavioral instruction and adaptations to meet those needs.

Prerequisites: SPED 400/SPED 500

SPED 686 Teacher Candidate Internship for Special Endorsement (3 Credit Hours)

Seven weeks will be completed at the elementary level and seven weeks will be completed at the middle/secondary level.

Prerequisites: admission to ODU Teacher Education Program; completion of the approved teacher education program in the specific endorsement area; departmental approval

SPED 695 Topics in Special Education (3 Credit Hours)

This course offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest in the special education field.

Prerequisites: Permission of Instructor

SPED 697 Independent Study (3 Credit Hours)

Independent study of special topics in special education for graduate students.

Prerequisites: Permission of Instructor

SPED 698 Research Project (1 Credit Hour)

This capstone seminar is one of the culminating assessments for the master's degree in education with a major in advanced special education. Students will design, develop, and deliver an evidence-based professional development program that is aligned with their concentrations. As a culminating activity, this project will reflect the synthesis of coursework, research, and practical experience as these program aspects relate to the needs of school divisions and the education of students from diverse backgrounds.

SPED 701 Historical and Contemporary Research in Special Education (3 Credit Hours)

This course covers contemporary and historical topics related to problem issues in special education. This is a course of study that will enable participants to examine various topics in special education and research a position on an issue.

SPED 702 Cognitive Processes and Learning Strategies for Students with Special Needs (3 Credit Hours)

The intent of this course is to provide an overview of research and critical issues relative to the cognitive and affective development of individuals with disabilities. Research-based interventions that address deficits of cognitive processes will be discussed and specific learning strategies will be presented.

SPED 707 Advanced Instructional Procedures in Special Education (3 Credit Hours)

This course provides students with advanced skills in educational planning, development, and implementation for students with learning problems.

Techniques focus on inclusive and self-contained classroom arrangements.

Prerequisites: graduate standing

SPED 720 Curriculum and Instruction: Research Into Practice (3 Credit Hours)

This course provides an overview of research methods employed in the field of special education. Current trends related to curriculum and instruction in general and special education will be investigated. Strategies and procedures for identifying learner characteristics and application of that knowledge will be included. Implementation of quality curricular modifications and/or instructional accommodations for students with diverse needs in a variety of educational settings and evaluation of instruction will be addressed.

Prerequisites: SPED 400/SPED 500 or SPED 701/SPED 801

SPED 730 Single Subject Research (3 Credit Hours)

Single Subject Research.

SPED 740 Concepts and Principles in Behavior Analysis (3 Credit Hours)

This course focuses on the basic concepts and principles of behavior analysis and the identification of factors that increase or decrease the probability of behavior under specific circumstances.

Prerequisites: Admission to ODU Applied Behavior Analysis Certificate program

SPED 741 Research Methods in Behavior Analysis (3 Credit Hours)

Applications of single-case experimental research designs to the analysis of behavior, with emphasis on measurement, visual display of data, and interpretation, intervention and plan evaluation, and research ethics.

Prerequisites: Admission to Applied Behavior Analysis Certificate Program and completion of SPED 740 or consent of the instructor

SPED 742 Ethics in Behavior Analysis (3 Credit Hours)

This course provides a basis in Virginia Behavior Analyst Licensure law, the Behavior Analyst Certification Board's Ethical and Professional Issues including ethics codes and requirements, the BACB's code-enforcement mechanisms, and professionalism relevant to the delivery of behavior-analytic services.

Prerequisites: Admission to the Old Dominion University Applied Behavior Analysis Program and completion of SPED 740 or consent of the instructor

SPED 743 Assessments and Interventions I: Positive Behavior Support (3 Credit Hours)

This course focuses on the identification and assessment of problem behavior and socially appropriate behaviors, the development, implementation, and evaluation of function-based intervention plans, and the design of environments to prevent and address problem behavior.

Prerequisites: Admission to the Applied Behavior Analysis Certificate Program; successful completion of SPED 740 and SPED 741 or consent of the instructor

SPED 744 Theory and Philosophy in Behavior Analysis (3 Credit Hours)

This course focuses on the underlying theoretical and philosophical foundations of behavior analysis. A special emphasis will be placed on radical, contextual, and methodological behaviorism and their historical roots. Applications to behavior-analytic problem solving and case conceptualization in applied settings will be discussed.

Prerequisites: Admission to ODU Applied Behavior Analysis Certificate program and completion of SPED 740 or consent of the instructor

SPED 745 Assessments and Interventions II: Verbal Behavior (3 Credit Hours)

This course focuses on B. F. Skinner's analysis of verbal behavior, assessment of verbal behavior, and the development, implementation, and evaluation of interventions to enhance the communicative repertoire of individuals with complex communication needs.

Prerequisites: Admission to Old Dominion University Applied Behavior Analysis graduate program; successful completion of SPED 740, SPED 741, and SPED 743, or permission of instructor

SPED 746 Organizational Behavior Management (3 Credit Hours)

Application of behavior-analytic principles and procedures to personnel supervision and management as well as implementation of evidence-based practices to provide effective supervision and to enhance personnel performance across a variety of organizational settings.

Prerequisites: Admission to ODU Applied Behavior Analysis Certificate Program and completion of SPED 740 and SPED 741 or consent of instructor

SPED 769 Supervised Fieldwork in Applied Behavior Analysis (3 Credit Hours)

Supervised fieldwork experiences that apply University-approved coursework to instruction of children, youth, and their families in the natural environment. As stated in the BCBA Experience Standards, the purpose of supervised fieldwork experiences is to improve and maintain the behavior analytic, professional, and ethical repertoires of the supervisee and facilitate the delivery of high quality services to clients. Students can enroll in supervised fieldwork hours concurrently with the ODU ABA certificate approved sequence coursework.

Prerequisites: Admission to the ODU ABA certificate program and permission of advisor

SPED 797 Independent Study (3 Credit Hours)

Independent study of special topics in special education for advanced graduate, or doctoral students.

Prerequisites: Permission of Instructor

SPED 801 Historical and Contemporary Research in Special Education (3 Credit Hours)

This course covers contemporary and historical topics related to problem issues in special education. This is a course of study that will enable participants to examine various topics in special education and research a position on an issue.

SPED 802 Cognitive Processes and Learning Strategies for Students with Special Needs (3 Credit Hours)

The intent of this course is to provide an overview of research and critical issues relative to the cognitive and affective development of individuals with disabilities. Research-based interventions that address deficits of cognitive processes will be discussed and specific learning strategies will be presented.

SPED 803 Scholarly Writing for Doctoral Students (3 Credit Hours)

This course targets the knowledge and skills required to successfully engage in scholarly writing. Specific course topics include, the use of the American Psychological Association Publication Manual (APA) to guide the basic elements of style (i.e., creating and writing from an outline, manuscript organization, sentence and paragraph construction, marks of punctuation, use of quotations, use of references, bias free language, editing and revising, proofreading, revising drafts, and resubmission), and the development of professional writing skills, such as drafting, writing, editing, revising, responding to reviews, interpreting and synthesizing professional journal articles.

SPED 807 Advanced Instructional Procedures in Special Education (3 Credit Hours)

This course provides students with advanced skills in educational planning, development, and implementation for students with learning problems.

Techniques focus on inclusive and self-contained classroom arrangements.

Prerequisites: graduate standing

SPED 815 Alternative Strategies for Elementary Students: Prevention and Intervention (3 Credit Hours)

The intent of this course is to provide pre-service and in-service teachers with the knowledge and skill to collaborate with other professionals to identify and remediate students who are at-risk for school problems due to academic challenges and/or behavior, and to effectively support students with identified mild disabilities in general education classrooms. The course focuses on developing proactive pre-referral interventions and working with general educators to develop and implement effective interventions, accommodations, modifications and supports for students with mild difficulties in general education classes.

Prerequisites: SPED 400/SPED 500, SPED 415/SPED 515, and passing scores on Praxis I or equivalent as prescribed by the Virginia Board of Education

SPED 820 Curriculum and Instruction: Research Into Practice (3 Credit Hours)

This course provides an overview of research methods employed in the field of special education. Current trends related to curriculum and instruction in general and special education will be investigated. Strategies and procedures for identifying learner characteristics and application of that knowledge will be included. Implementation of quality curricular modifications and/or instructional accommodations for students with diverse needs in a variety of educational settings and evaluation of instruction will be addressed.

Prerequisites: SPED 400/SPED 500 or SPED 701/SPED 801

SPED 821 Critical Issues I: Readings in Special Education and Professional Writing (3 Credit Hours)

The intent of this course is to provide doctoral candidates the opportunity to further advance their research and professional writing skills and critically evaluate the quality and empirical evidence of critical and timely topics in special education by conducting systematic literature reviews and meta-analysis of published studies. The course stresses APA writing guidelines and style, conducting literature searches, and writing a product that is suitable for publication.

SPED 822 Critical Issues II: Research and Professional Writing (3 Credit Hours)

This course provides doctoral candidates an opportunity to (a) become familiar with reading, analyzing, synthesizing, and writing research related to their personal professional interests to contribute to the literature, (b) acquire skills related to developing original research, and (c) develop proposals, presentations, and other scholarly skills necessary for promotion and tenure in higher education and professional institutions. Emphasis is placed on the critical analysis of research and synthesis of the literature that identifies research gaps, and the design of a prospective study or dissertation proposal to examine the topic of interest.

Prerequisites: SPED 821

SPED 830 Single Subject Research (3 Credit Hours)

Single Subject Research.

SPED 868 Internship: Research in Special Education (3 Credit Hours)

This course provides doctoral students the opportunity to design and conduct an independent pilot research study in their area of interest under the guidance of a faculty member while refining their research skills. The successful completion of a 3-credit internship is required to fulfill the research competency of the program.

Prerequisites: SPED 830 and FOUN 812

SPED 893 Professional Seminar: Teaching, Research, and Service (3 Credit Hours)

This course prepares doctoral candidates to meet professional standards in teaching, research and service in special education in higher education institutions. Teaching includes an understanding of adult learning and the design, delivery, evaluation of content, and use of technology in college teaching. Research includes recognizing and critically discussing scholarly work, systematically planning and preparing for research, and developing research proposals. Service includes identifying professional organizations and agencies and creating integrated professional development programs. The course is designed to build skills necessary for advancement in higher education and professional institutions.

Prerequisites: SPED 821 and SPED 822

SPED 897 Independent Study: Teaching in Special Education (3 Credit Hours)

This course provides doctoral students the opportunity to teach an undergraduate or graduate-level course in special education using various delivery formats such as in-person, synchronous online, or asynchronous online while gaining experiences in teaching at the university level. The successful completion of this course is required to fulfill the teaching competency of the program.

Prerequisites: Co-teaching the course under the supervision of a faculty member; Permission of instructor

SPED 899 Dissertation (1-12 Credit Hours)

Dissertation.

Prerequisites: Successful defense of prospectus and admission to candidacy

SPED 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

SPED 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

STAT - Statistics

STAT 505 Introduction to Data Handling (3 Credit Hours)

This course will introduce SAS and R, two of the most widely used statistical software packages. This course will cover the basic skills needed for using computer packages to perform a variety of statistical analyses. Topics include data import/export, manipulation, descriptive statistics and visualization, advanced data handling, and the use of statistical computer packages for categorical data analysis, regression analysis, hypothesis testing, and more.

Prerequisites: A grade of C or better in STAT 130M or equivalent, and a grade of C or better in MATH 316 or equivalent, or permission of the instructor

STAT 531 Theory of Statistics (3 Credit Hours)

Topics include point and interval estimation, tests of hypotheses, introduction to linear models, likelihood techniques, and regression and correlation analysis.

Prerequisites: A grade of C or better in STAT 331 or permission of the instructor

STAT 532 Sampling Theory (3 Credit Hours)

Sampling from finite populations is discussed. Topics such as simple random sampling, stratified random sampling and ratio and regression estimation are included. Also discussed are aspects of systematic sampling, cluster sampling, and multi-stage sampling.

Prerequisites: A grade of C or better in STAT 431/STAT 531

STAT 535 Design and Analysis of Experiments (3 Credit Hours)

Topics include introduction to design of experiments, analysis of variance with a single factor, power and OC curves, and two factors with interactions, random effects models, randomized blocks, Latin square and related designs, introduction to factorial and 2k factorial designs. Statistical software will be used to analyze real life data.

Prerequisites: STAT 431/STAT 531 or STAT 437/STAT 537

Pre- or corequisite: STAT 405/STAT 505

STAT 537 Applied Regression and Time Series Analysis (3 Credit Hours)

Topics include introduction to regression and model building, simple linear regression, multiple regression, logistic regression, and simple time series, residual analysis, selection of variables, model adequacy checking, regression on dummy variables, analysis of covariance, regression analysis of time series data, and applications of these techniques to real life data using statistical software.

Prerequisites: A grade of C or better in STAT 531

Pre- or corequisite: STAT 405 or STAT 505

STAT 540 Clinical Trials (3 Credit Hours)

This course will introduce basic statistical concepts and methods used in clinical trials. Topics include phase-I trial designs including 3+3 and CRM dose-finding designs; phase-II trial designs including Gehan's two-stage and Simon's two-stage designs; phase-III trial designs including parallel, group allocation, cross-over, and factorial designs; randomization; sample size and power calculation; adaptive trials; and monitoring of trials for safety and efficacy.

Prerequisites: A grade of C or better in STAT 431 or STAT 531

STAT 542 Environmental Statistics (3 Credit Hours)

Topics include nonlinear and generalized linear models, quantitative risk assessment, analysis of stimulus-response and spatially correlated data, methods of combining data from several independent studies. Regression settings are emphasized where one or more predictor variables are used to make inferences on an outcome variable of interest. Applications include modeling growth inhibition of organisms exposed to environmental toxins, spatial associations of like species, risk estimation, and spatial prediction. SAS is used extensively in the course.

Prerequisites: A grade of C or better in STAT 431 or STAT 531; STAT 437 or STAT 537 recommended

STAT 547 Analysis of Longitudinal Data (3 Credit Hours)

This course introduces statistical methods for analyzing multivariate and longitudinal data. Topics include multivariate normal distribution, covariance modeling, multivariate linear models, principal components, analysis of continuous response repeated measures, and models for discrete longitudinal data. Emphasis will be on the applications to the biological and health sciences and the use of the statistical software.

Prerequisites: A grade of C or better in STAT 431 or STAT 531

Pre- or corequisite: STAT 405 OR STAT 505

STAT 549 Nonparametric Statistics (3 Credit Hours)

Topics include statistical functionals, bootstrap and jackknife techniques, elements of U-statistics, nonparametric tests (including permutation and rank tests), time-to-event analysis, nonparametric density estimation, nonparametric smoothing, regression analysis, and inference. R and/or Python software will be used for computations.

Prerequisites: A grade of C or better in STAT 330 or STAT 331 or departmental permission

STAT 550 Categorical Data Analysis (3 Credit Hours)

Topics include types of categorical data, relative risk and odds ratio measures for 2 x 2 tables, the chi-square and Mantel-Haenszel tests, Fisher's exact test, analysis of sets of 2 x 2 tables using Cochran-Mantel-Haenszel methodology, analysis of I x J and sets of I x J tables for both nominal and ordinal data, logistic regression including the logit and probit models. Emphasis will be on the application of these statistical tools to data related to the health and social sciences. Interpretation of computer output will be stressed.

Prerequisites: A grade of C or better in STAT 431 or STAT 531

Pre- or corequisite: STAT 405 or STAT 505

STAT 597 Topics in Statistics (1-3 Credit Hours)

The advanced study of selected topics.

Prerequisites: permission of the instructor

STAT 603 Probability Models for Data Science and Analytics (3 Credit Hours)

This course will serve as an introduction for modeling data using probability and statistical methods. Topics include basic concepts of probability, Bayes theorem, frequently-occurring discrete and continuous probability distributions, as well as how to simulate data from these distributions. Basic properties of the probability distributions will be discussed, which will provide an insight into the use of these distributions in data science. R and/or Python will be the computation software used in class. This course is open only for students enrolled in the M.S. degree program in Data Science and Analytics.

Prerequisites: STAT 330 or equivalent or permission of the instructor

STAT 604 Statistical Tools for Data Science and Analytics (3 Credit Hours)

This course will cover statistical tools for data exploration. Topics taught include descriptive statistics, correlation, confidence intervals, linear and logistic regressions, t-test for one and two samples, and analysis of variance. For analyzing categorical data, students will study contingency tables, odds ratios for measuring association, and chi-square tests for testing independence. The course will also introduce principal components and clustering methods to analyze multivariate data. R and/or Python software for computing various statistics for real data analysis will be used. This course is open only for students enrolled in the M.S. degree program in Data Science and Analytics.

Prerequisites: STAT 603 or equivalent or permission of the instructor

STAT 613 Applied Statistical Methods I (3 Credit Hours)

Intended for graduate students in all academic disciplines; not available for credit to graduate students in the Department of Mathematics and Statistics. Topics include descriptive statistics, probability computations, estimation, hypothesis testing, linear regression, analysis of variance and categorical data analysis. Emphasis will be on statistical analysis of data arising in a research setting. The rationale for selecting methods to address research questions will be emphasized. Examples will be given from the health sciences, social sciences, engineering, education and other application areas.

Prerequisites: A grade of C or better in STAT 130M or STAT 330 or MATH 211 or permission of the instructor

STAT 625 Probability Theory for Data Science (3 Credit Hours)

An introduction to probability. Topics include axiomatic foundations of probability, conditional probability, Bayes formula, random variables, density and mass functions, stochastic independence, expectation, moment generating functions, transformations, common families of distributions, multiple random variables, covariance and correlation, multivariate distributions, convergence concepts, law of large numbers, limit theorems.

Prerequisites: A grade of C+ or better in STAT 531

STAT 626 Statistical Theory for Data Science (3 Credit Hours)

An introduction to statistical inference. Principles of data reduction, sufficiency, completeness, ancillary, likelihood principle, point estimation, method of moments, maximum likelihood and Bayes estimation, Cramer-Rao inequality, hypothesis testing, likelihood ratio tests, Bayesian tests, most powerful tests, Neyman-Pearson Lemma, interval estimates, pivotal quantities, asymptotic evaluations, consistency and asymptotic relative efficiency.

Prerequisites: A grade of C+ or better in STAT 625

STAT 630 Time Series Models (3 Credit Hours)

This course examines the principles and concepts of time series and forecasting. Study includes theory, methods, and model parameter estimation taking into account correlation and autocorrelation structures with data applications from pollution, economics, seasonal trends, and the stock market. Notions of autoregressive, moving, average, stationary and nonstationary ARIMA models will be discussed. The multivariate version and state-space models will also be introduced. Simulation of time series data will be discussed in depth.

Prerequisites: STAT 626, STAT 505, and STAT 537

STAT 632 Master's Project (3 Credit Hours)

Under the guidance of a faculty member in the Department of Mathematics and Statistics, the student will undertake a significant data analysis problem in a scientific setting outside the department. A written report and/or public presentation of results will be required.

Prerequisites: permission of graduate program director

STAT 635 Statistical Consulting (3 Credit Hours)

This course is intended to teach statistical consulting techniques to graduate students in statistics. Students are expected to work on statistical consulting problems brought by faculty and graduate students in various fields.

Prerequisites: STAT 626

STAT 637 Advanced Regression and Time Series (3 Credit Hours)

Topics include theory of least squares regression, multiple linear regression (including its matrix formulation), transformations and weighting, diagnostics for leverage and influence, polynomial and indicator regression model, multi-collinearity, variable selection and model building, validation of regression models, introduction to nonlinear regression, robust regression, regression for time series data, and applications of these techniques using statistical software.

Prerequisites: STAT 437/STAT 537

Pre- or corequisite: STAT 405/STAT 505

STAT 638 Advanced Design and Analysis of Experiments (3 Credit Hours)

Topics include blocking and confounding in factorial designs, power, balanced incomplete block designs, fractional factorial designs, factors with mixed levels, response surface methods and designs, Latin and Graeco-Latin square designs, optimality criterion, examples of optimal designs, experiments with random factors, nested and split-plot designs, analysis of covariance, robust designs. Statistical software will be used to analyze real life data.

Prerequisites: STAT 435/STAT 535 or STAT 437/STAT 537 or STAT 637

STAT 640 Survival Analysis (3 Credit Hours)

This course introduces basic concepts and methods for analyzing survival time data obtained from following individuals until occurrence of an event or their loss to follow-up. Topics include survival and hazard functions, censoring, Kaplan-Meier estimation, log-rank and related tests, Cox proportional hazards model, and the extended Cox model for time-varying covariates, and parametric models. Both SAS and R software will be used to analyze survival data.

Prerequisites: STAT 626

STAT 660 Advanced Programming in R (3 Credit Hours)

This course is intended to develop the ability to perform statistical computing using R statistical software. The course will cover programming topics (vectorization, data input and output, data manipulation, and building R packages), statistical and computational methods (visualization, optimization, simulation, and resampling), and direct integration and dynamic reporting using R markdown. Additionally, this course will include the use of high-performance computing resources at Old Dominion University. This is a finishing course for statisticians and professionals willing to pursue a career in statistical programming and simulation.

Prerequisites: A grade of C or better in STAT 505 and two of STAT 535, STAT 537, STAT 547 and STAT 550

STAT 667 Cooperative Education (1-3 Credit Hours)

Student participation for credit based on academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and the cooperative education program prior to the semester in which the work experience is to take place.

STAT 697 Topics in Statistics (1-3 Credit Hours)

Advanced study of selected topics.

Prerequisites: permission of the instructor

STAT 725 Linear Statistical Models (3 Credit Hours)

Topics include the multivariate normal distribution, distributions of quadratic forms, the general linear model, estimability, the Gauss-Markov theorem and general linear hypotheses, analysis of variance (ANOVA) and covariance (ANCOVA) with special attention to unbalanced data, and analysis of mixed effects and variance components models including repeated measures and split-plot designs.

Prerequisites: STAT 626

STAT 727 Advanced Statistical Inference I (3 Credit Hours)

Topics to be covered include introduction to measure theoretic probability, properties of group and exponential families, sufficiency, unbiasedness, equivariance, properties of estimators, large sample theory, maximum likelihood estimation, EM algorithm, information inequality, asymptotic optimality.

Prerequisites: A grade of C+ or higher in MATH 517 and STAT 626

STAT 728 Advanced Statistical Inference II (3 Credit Hours)

Topics to be covered include convergence concepts, limit theorems, large sample theory, asymptotic distributions, decision theory, minimax, admissibility, Bayes estimates, generalized Neyman-Pearson Lemma, uniformly most powerful tests, unbiased tests, invariant tests, and Bayesian tests.

Prerequisites: A grade of C+ or higher in STAT 727 or STAT 827

STAT 730 Multivariate Statistics (3 Credit Hours)

Topics include the multivariate normal distribution, graphical display of multivariate data and tests for normality, Hotelling's T², multivariate analysis of variance (MANOVA) and regression, profile analysis, growth curve models, canonical correlation analysis, principal components, factor models, clustering, and discriminant analysis. All methods are implemented using the SAS statistical software.

Prerequisites: STAT 537 or STAT 725/STAT 825

STAT 740 Advanced Clinical Trials (3 Credit Hours)

This course will discuss sequential and adaptive designs for clinical trials; the statistical properties and challenges these designs engender; and the advantages and disadvantages of utilizing sequential and adaptive designs compared to a standard, fixed-sample design.

Prerequisites: STAT 440 or STAT 540

STAT 747 Advanced Analysis of Longitudinal Data (3 Credit Hours)

Topics include general linear models, weighted least squares (WLS), maximum likelihood (ML), restricted maximum likelihood (REML) methods of estimation, analysis of continuous response repeated measures data, parametric models for covariance structure, generalized estimating equations (GEE) for discrete longitudinal data, marginal, random effects, and transition models. Limitations of existing approaches will be discussed. Emphasis will be on the application of these tools to data related to the biological and health sciences. Methods will be implemented using statistical software.

Prerequisites: STAT 447/STAT 547

STAT 749 Advanced Nonparametric Statistics (3 Credit Hours)

Topics include multivariate nonparametric tests, multivariate nonparametric density estimation, kernel regression and reproducing kernel Hilbert spaces, generalized additive models, multivariate adaptive regression splines, nonparametric model selection, projection pursuit regression, and Bayesian nonparametric methods, including mixture models, Dirichlet process, and stick-breaking construction. Examples of R and/or Python package usage will be provided.

Prerequisites: STAT 449/STAT 549

STAT 750 Advanced Categorical Data Analysis (3 Credit Hours)

This course will cover statistical models and methods appropriate for analyzing categorical responses, contingency tables, Pearson Chi-square test, Fisher's Exact test, Mantel-Haenszel test, Cochran-Armitage trend test, independence and conditional independence, Simpson's paradox, generalized linear models, logistic and Poisson regression models, matched paired studies, McNemar test, conditional logistic regression model and random effects logistic model for data from matched paired studies, models for multinomial data.

Prerequisites: STAT 450/STAT 550

STAT 795 Seminar in Statistics (1-3 Credit Hours)

Seminar.

Prerequisites: permission of the instructor

STAT 797 Topics in Statistics (1-3 Credit Hours)

Advanced study of selected topics.

Prerequisites: Permission of the instructor

STAT 825 Linear Statistical Models (3 Credit Hours)

Topics include the multivariate normal distribution, distributions of quadratic forms, the general linear model, estimability, the Gauss-Markov theorem and general linear hypotheses, analysis of variance (ANOVA) and covariance (ANCOVA) with special attention to unbalanced data, and analysis of mixed effects and variance components models including repeated measures and split-plot designs.

Prerequisites: STAT 626

STAT 827 Advanced Statistical Inference I (3 Credit Hours)

Topics to be covered include introduction to measure theoretic probability, properties of group and exponential families, sufficiency, unbiasedness, equivariance, properties of estimators, large sample theory, maximum likelihood estimation, EM algorithm, information inequality, asymptotic optimality.

Prerequisites: A grade of C+ or higher in MATH 517 and STAT 626

STAT 828 Advanced Statistical Inference II (3 Credit Hours)

Topics to be covered include convergence concepts, limit theorems, large sample theory, asymptotic distributions, decision theory, minimax, admissibility, Bayes estimates, generalized Neyman-Pearson Lemma, uniformly most powerful tests, unbiased tests, invariant tests, and Bayesian tests.

Prerequisites: A grade of C+ or higher in STAT 727 or STAT 827

STAT 830 Multivariate Statistics (3 Credit Hours)

Topics include the multivariate normal distribution, graphical display of multivariate data and tests for normality, Hotelling's T², multivariate analysis of variance (MANOVA) and regression, profile analysis, growth curve models, canonical correlation analysis, principal components, factor models, clustering, and discriminant analysis. All methods are implemented using the SAS statistical software.

Prerequisites: STAT 537 or STAT 725/STAT 825

STAT 840 Advanced Clinical Trials (3 Credit Hours)

This course will discuss sequential and adaptive designs for clinical trials; the statistical properties and challenges these designs engender; and the advantages and disadvantages of utilizing sequential and adaptive designs compared to a standard, fixed-sample design.

Prerequisites: STAT 440/STAT 540

STAT 847 Advanced Analysis of Longitudinal Data (3 Credit Hours)

Topics include general linear models, weighted least squares (WLS), maximum likelihood (ML), restricted maximum likelihood (REML) methods of estimation, analysis of continuous response repeated measures data, parametric models for covariance structure, generalized estimating equations (GEE) for discrete longitudinal data, marginal, random effects, and transition models. Limitations of existing approaches will be discussed. Emphasis will be on the application of these tools to data related to the biological and health sciences. Methods will be implemented using statistical software.

Prerequisites: STAT 447/STAT 547

STAT 849 Advanced Nonparametric Statistics (3 Credit Hours)

Topics include multivariate nonparametric tests, multivariate nonparametric density estimation, kernel regression and reproducing kernel Hilbert spaces, generalized additive models, multivariate adaptive regression splines, nonparametric model selection, projection pursuit regression, and Bayesian nonparametric methods, including mixture models, Dirichlet process, and stick-breaking construction. Examples of R and/or Python package usage will be provided.

Prerequisites: STAT 449/STAT 549

STAT 850 Advanced Categorical Data Analysis (3 Credit Hours)

This course will cover statistical models and methods appropriate for analyzing categorical responses, contingency tables, Pearson Chi-square test, Fisher's Exact test, Mantel-Haenszel test, Cochran-Armitage trend test, independence and conditional independence, Simpson's paradox, generalized linear models, logistic and Poisson regression models, matched paired studies, McNemar test, conditional logistic regression model and random effects logistic model for data from matched paired studies, models for multinomial data.

Prerequisites: STAT 450/STAT 550

STAT 895 Seminar in Statistics (1-3 Credit Hours)

Seminar.

Prerequisites: permission of the instructor

STAT 897 Topics in Statistics (1-3 Credit Hours)**STAT 898 Research (1-9 Credit Hours)****STAT 899 Dissertation (1-9 Credit Hours)****STAT 999 Doctoral Graduate Credit (1 Credit Hour)**

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

STEM - Science, Technology, Engineering, and Mathematics Education

STEM 533 Developing Instructional Strategies PreK-6: Mathematics (3 Credit Hours)

Following a theory into practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote children's development of attitudes, behaviors, and concepts in mathematics in grades PreK-6 in support of NCTM national instructional standards and the Virginia Standards of Learning.

Prerequisites: TLED 617

STEM 534 Developing Instructional Strategies PreK-6: Science (3 Credit Hours)

Following a theory into practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote children's development of attitudes, behaviors, and concepts in science in grades PreK-6 in support of AAAS national instructional standards and the Virginia Standards of Learning.

STEM 595 Topics (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

STEM 655 Culturally Responsive Classroom (3 Credit Hours)

This course will focus on the following elements of effective teaching practice: understanding discipline specific content and methods, employing best-practice strategies to teach discipline specific skills and concepts, assessing student learning, legal and safety issues, use of technology, issues of diversity, engagement with the community, and strategies for continuing to grow as a teacher and learner.

STEM 720 STEM Educational Foundations (3 Credit Hours)

A multidisciplinary course designed to provide insights about the fundamental concepts and basis for STEM education programs. Standards for the school subjects of science, technology, engineering education and mathematics literacy will be reviewed. Connections between these subjects will be explored.

STEM 721 Science, Technology, Engineering, and Mathematics Connection and Integration (3 Credit Hours)

A course designed to teach how to plan integrated STEM curriculum and instructional materials. A review of projects that have undertaken STEM integration will be made. Students will learn how to map STEM content and then design STEM integrated curriculum and instructional materials.

Prerequisites: STEM 720 or STEM 820

STEM 730 Introduction to Technology (3 Credit Hours)

Order and structure the discipline of technology by identifying and analyzing the component parts and examining technical means as critical variables in the affairs of humankind. Based on the Standards for Technological Literacy.

STEM 731 Technical Systems (3 Credit Hours)

Analyze the technical concepts common and unique to the technical systems of technology.

STEM 732 Program Development for Technology Education (3 Credit Hours)

Plan and develop effective program in technology related activities. Focus is on identification and development of resources, activities, and materials for classroom programs.

STEM 795 Topics (1-3 Credit Hours)

Topics.

STEM 820 STEM Educational Foundations (3 Credit Hours)

A multidisciplinary course designed to provide insights about the fundamental concepts and basis for STEM education programs. Standards for the school subjects of science, technology, engineering education and mathematics literacy will be reviewed. Connections between these subjects will be explored.

STEM 821 Science, Technology, Engineering, and Mathematics Connection and Integration (3 Credit Hours)

A course designed to teach how to plan integrated STEM curriculum and instructional materials. A review of projects that have undertaken STEM integration will be made. Students will learn how to map STEM content and then design STEM integrated curriculum and instructional materials.

Prerequisites: STEM 720 or STEM 820

STEM 830 Introduction to Technology (3 Credit Hours)

Order and structure the discipline of technology by identifying and analyzing the component parts and examining technical means as critical variables in the affairs of humankind. Based on the Standards for Technological Literacy.

STEM 831 Technical Systems (3 Credit Hours)

Analyze the technical concepts common and unique to the technical systems of technology.

STEM 832 Program Development for Technology Education (3 Credit Hours)

Plan and develop effective program in technology related activities. Focus is on identification and development of resources, activities, and materials for classroom programs.

STEM 895 Topics (3 Credit Hours)

Topics.

TAX - Taxation

TAX 650 Tax Strategies for Business Decisions (3 Credit Hours)

An intensive course in taxation. Focuses on the choice of business entity by covering taxation of corporations (both C and S corporations), partnerships and sole proprietor-ships. The course emphasizes research skills and professional ethics.

TAX 651 Taxation of Corporations I (3 Credit Hours)

Covers federal income taxation of corporations and shareholders. Includes organizing a corporation; establishing capital structure; determining tax liability; dividends and other non-liquidating distributions; stock redemptions; and liquidations.

Prerequisites: ACCT 521 or equivalent

TAX 652 Taxation of Partners and Partnerships (3 Credit Hours)

Taxation of partners and partnerships: formation, termination, distributions and liquidations, and sales of partnership interests. Limited partnerships in conjunction with their use as tax shelters, and the multifaceted attributes of family partnerships.

Prerequisites: ACCT 521 or equivalent

TAX 653 Taxation of Estates and Gifts (3 Credit Hours)

Examines transfers under federal estate and gift tax laws. Includes property owned by the decedent; retained life estates; transfers taking effect at death; transfers with retained powers; concurrent property interest; powers of appointment; valuation problems; expenses, debts, and taxes; charitable bequests; marital deduction; taxable inter vivos gifts; gift splitting and credits; consideration of Chapter 14 and asset freezing techniques; and transfer taxation of life insurance.

Prerequisites: ACCT 521 or equivalent

TAX 654 Income Taxation of Estates, Trusts & Beneficiaries (3 Credit Hours)

Examines simple, complex, and revocable trusts; trusts accumulation distributions; income in respect of decedents; trust accounting income; distributable net income; terminations; excess deductions; basis rules; and the decedent's final income tax return.

Prerequisites: TAX 653

TAX 655 Taxation of Corporations II (3 Credit Hours)

Analyzes the different types of taxable and tax-free acquisitions and reorganizations. Includes determining tax consequences for corporations and shareholders involved in an acquisition or reorganization and analyzing necessary requirements for a tax-free corporate division (spin-off). Covers aspects of filing consolidated federal income tax returns.

Prerequisites: TAX 651

TAX 656 Taxation of Deferred Compensation (3 Credit Hours)

Discusses federal income taxation of deferred compensation plans with emphasis on qualified retirement plans. Reviews plan qualification requirements, reporting and disclosure requirements, and distribution rules. Includes discussion of specific types of plans such as Sec. 401(K) and ESOPs.

Prerequisites: TAX 651

TAX 657 State and Local Taxation (3 Credit Hours)

Examines state levying of individual income, corporate income, property, sales, and excise taxes.

Prerequisites: ACCT 521 or equivalent

TAX 658 Tax Aspects of International Business (3 Credit Hours)

Taxation of foreign persons conducting business in the U.S. including FIRPTA, source of income rules, and residency requirements; taxation of U.S. individuals and businesses doing business abroad including FSCs, CFCs, FHP Co's and possessions corporations.

Prerequisites: ACCT 521 or equivalent

TAX 660 Taxation of Property Transactions (3 Credit Hours)

Covers determination of realized and recognized gains and losses and their tax treatment on property dispositions. Includes consequences of property transactions, such as depreciation, depletion, basis and capital gains problems.

Prerequisites: ACCT 521 or equivalent

TAX 661 Taxation of the Small Business Corporation (3 Credit Hours)

Covers federal income taxation of S corporations including election eligibility; termination of status; treatment of income and deduction items; distributions; and basis of stock and debt. Also discusses compensation arrangements in closely held corporations; fiscal year issues; personal service corporations; the advantages of C corporations versus S corporations; corporation liquidation and redemption rules; and the S corporations' built-in gains tax.

Prerequisites: ACCT 521 or equivalent

TAX 662 Tax Procedure and Practice (3 Credit Hours)

Discusses procedures for dealing with the IRS. Includes sources of IRS policy; processing returns; auditing returns; rulings and determination letters; assessments and collections; and interest and civil penalties.

Prerequisites: ACCT 521 or equivalent

TAX 695 Selected Topics in Taxation (3 Credit Hours)

Examines the unique rules applicable to federal taxation of farmers and ranchers. Also, covers the basics on the new Limited Liability Company and Virginia law on LLCs. Topics may vary each year.

Prerequisites: ACCT 521 or equivalent and approval of the chair and graduate program director of the School of Accountancy

TAX 697 Independent Study (3 Credit Hours)

Individually supervised research projects in selected tax areas. Approval of supervising professor as to topic and evaluation of project required at time of registration.

Prerequisites: ACCT 521 or equivalent and approval of instructor

THEA - Theatre

THEA 542 Principles of Directing (3 Credit Hours)

An examination and practical application of principles of stage direction as influenced by play script, acting talent, set and lighting design, and the technical facilities of production organizations.

THEA 543 Acting Three (3 Credit Hours)

An advanced scene study class exploring issues of style and period pertinent to portraying characters on stage.

Prerequisites: THEA 152, THEA 252 or permission of instructor

THEA 545 Experimental Theatre (3 Credit Hours)

An in-depth study of avant-garde theatre scripts and performance techniques from 1900 to the present.

Prerequisites: THEA 230 or permission of instructor

THEA 549 Script and Performance Analysis (3 Credit Hours)

Approaches script and performance analysis by examining the separate elements of action, character, language, music, spectacle or "mise en scene" in order to discover play spine and style as a basis for staging the play. Also examines the method of "scoring a role" or finding character motivations in relation to overall play spine.

THEA 552 Acting Four (3 Credit Hours)

An advanced scene study class exploring issues of style and period pertinent to portraying characters on stage.

THEA 571 International Film History (3 Credit Hours)

An examination of world cinema as a technology, a business, an institution, and an art form from its inception to the present. Emphasis is on the narrative fiction film, its technological and aesthetic development, economic organization, and socio-cultural context. Representative classic and contemporary works will be screened and analyzed.

THEA 579 American Film History (3 Credit Hours)

An examination of American motion pictures as an art form, a business and an institution from its inception to the present. Primary attention is accorded to the narrative fiction film, its aesthetic and technological development, economic organization and social impact. This course highlights the many connections between film history and American culture.

THEA 580 The Video Documentary II (3 Credit Hours)

A production/studio course designed to complement the work developed in Theatre 380: The Video Documentary I. Discussion/presentation topics range from production field work to post-production editing. The final third of the semester will be devoted to compiling the rough footage in post production.

THEA 586 Advanced Filmmaking (3 Credit Hours)

This course offers students an opportunity to collaborate on a faculty led project beyond the scope of typical classroom projects. Students will execute an assigned duty for the duration of the semester.

THEA 595 Topics in Theatre (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described by academic advisors.

THEA 596 Topics in Theatre (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described by academic advisors.

THEA 597 Tutorial Work in Special Topics in Theatre (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

THEA 598 Tutorial Work in Special Topics in Theatre (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

THEA 697 Tutorial Work in Special Topics in Theatre (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: graduate standing and approval of the department chair

THEA 698 Tutorial Work in Special Topics in Theatre (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: graduate standing and approval of the department chair

TLCI - Teaching & Learning - Curriculum & Instruction

TLCI 668 Internship in Curriculum and Instruction (3 Credit Hours)

Designed in consultation with advisor to provide in-depth experience in a school or community setting in which to enact a guided project on a topic of interest.

TLCI 700 Social/Emotional Aspects of Child Development (3 Credit Hours)

The emphasis of this course is on the theoretical approaches to the social/emotional development of the child that include the psychodynamic, humanistic, cognitive, behavioral, and social learning models as applied to responsive practices that promote the healthy emotional wellbeing of children.

TLCI 702 Historical and Contemporary Perspectives on Education (3 Credit Hours)

The present educational system, its social impact and future implications are viewed in historical, philosophical, and sociological perspectives. Special attention is given to technology, research, multicultural education/equity and leadership.

TLCI 703 Theoretical Perspectives in Curriculum and Instruction (3 Credit Hours)

This course introduces a range of theoretical perspectives and epistemologies in the field of curriculum and instruction. Students will gain strategies for critical reading, scholarly writing, and identify areas for prospective inquiry.

TLCI 704 Instruction Theories and Models (3 Credit Hours)

Students will investigate a range of instructional theories and design theories in terms of learning domains and pedagogical approaches to the teaching/learning process in a variety of educational settings. Students will utilize a systematic design process grounded in theories and research to propose/develop instruction for specific learning goals related to their own professional situations.

TLCI 705 Critical Issues in Curriculum Research (3 Credit Hours)

Explores the relationship between the historical, philosophical, and sociopolitical influence on curriculum development and evaluation. Historical and cultural approaches to designing and implementing curricular models, curriculum reform, and understanding the politics of conceptualizing the curriculum process are highlighted. Major issues concerning educational curriculum reform are addressed and reviewed.

Prerequisites: graduate standing

TLCI 722 Curriculum Seminar in Content Areas (3 Credit Hours)

Investigates the role and nature of the curriculum for particular subject-matter specialties - e.g., math, social studies, science, English, school librarianship, reading, etc. Objectives are tailored to specific content areas.

Prerequisites: graduate standing

TLCI 726 Advanced Supervision of Reading Programs (3 Credit Hours)

Explores various models of supervision and relates them to the administration and supervision of reading programs. Also prepares the prospective administrator/supervisor to make decisions relative to the methods and materials used to teach reading.

TLCI 727 Advanced Practicum in Reading (3 Credit Hours)

This course is designed for teachers having completed the initial reading practicum. Its focus is on the refinement and further exploration of ways to work with students experiencing reading difficulties. Both group and individual tutoring experiences will be provided. Ways will be explored to encourage involvement in existing educational programs and schools.

TLCI 728 Contemporary Issues in Literacy Research (3 Credit Hours)

Directed study of current topics of interest to students involved in literacy research. Topics to include emergent literacy assessment, adult literacy programs, and other areas of investigation. Students will be required to prepare a scholarly paper reporting results for publication.

Prerequisites: M.S.Ed. in Reading Education

TLCI 731 Instructional Technology Trends in Curriculum and Instruction (3 Credit Hours)

Examines selected issues and trends involving the use of technology in curriculum and instruction. Students develop a critical awareness of contemporary technology, an understanding of current research regarding the successful implementation of technology in curriculum and instruction, and strategies for using new technology in the future.

TLCI 735 Participatory Research: Theory and Methods (3 Credit Hours)

This course will explore theoretical and methodological orientations towards conducting research with youth and adults. Students will focus on ethical, political, and pedagogical considerations that arise in employing participatory practices, explore methods for listening and representing participant voice, and consider implications for policy and practice

TLCI 736 Reconceptualizing Theory and Practice for Work with Children and Families (3 Credit Hours)

This graduate seminar explores post-structural theories as they relate to understandings about young children, families, and education. The focus is on intersections of race, class, gender, and age as potential constructs of how thought and action are organized and the political, historical, and economic contexts that contribute to such discourses. Students will consider theory, research and practices in readings, discussions and class assignments.

TLCI 740 Contemporary Perspectives in Early Literacy (3 Credit Hours)

This graduate seminar explores perspectives on early literacy that draw from sociocultural, postmodern, and post-structural theories. Viewing literacy as a social practice, students will explore children's literacy with an emphasis on children's agency and their roles as active producers of meaning. Students will be asked to critically examine early literacy research and practice to contribute to rich understandings of diverse learning needs across social, economic, and multilingual contexts.

TLCI 741 Change Issues in Curriculum and Instruction (3 Credit Hours)

Explores questions and issues related to the evolving nature of curriculum and instruction and the design of the contemporary curriculum. Through readings and projects, students will examine new discoveries in research and technology, the effect of these and other changes on education, and the challenges of life-long learning as an influence on change.

Prerequisites: graduate standing

TLCI 788 Seminar in the Multicultural Environment (3 Credit Hours)

Explores topics related to the cultural characteristics of ethnically diverse populations and how these diverse populations and characteristics interact with social, political and economic institutions and the dominant culture to create the contemporary environment.

TLCI 795 Topics in Education (1-3 Credit Hours)

Provides opportunities for doctoral students to explore topics related to curriculum, instructional strategies, and evaluation.

TLCI 797 Independent Study (1-3 Credit Hours)

Hours to be arranged. Provides opportunities for the doctoral student to do independent research in an area of his/her particular interests and needs.

TLCI 800 Social/Emotional Aspects of Child Development (3 Credit Hours)

The emphasis of this course is on the theoretical approaches to the social/emotional development of the child that include the psychodynamic, humanistic, cognitive, behavioral, and social learning models as applied to responsive practices that promote the healthy emotional wellbeing of children.

TLCI 802 Historical and Contemporary Perspectives on Education (3 Credit Hours)

The present educational system, its social impact and future implications are viewed in historical, philosophical, and sociological perspectives. Special attention is given to technology, research, multicultural education/equity and leadership.

TLCI 803 Theoretical Perspectives in Curriculum and Instruction (3 Credit Hours)

This course introduces a range of theoretical perspectives and epistemologies in the field of curriculum and instruction. Students will gain strategies for critical reading, scholarly writing, and identify areas for prospective inquiry.

TLCI 804 Instruction Theories and Models (3 Credit Hours)

Students will investigate a range of instructional theories and design theories in terms of learning domains and pedagogical approaches to the teaching/learning process in a variety of educational settings. Students will utilize a systematic design process grounded in theories and research to propose/develop instruction for specific learning goals related to their own professional situations.

TLCI 805 Critical Issues in Curriculum Research (3 Credit Hours)

Explores the relationship between the historical, philosophical, and sociopolitical influence on curriculum development and evaluation. Historical and cultural approaches to designing and implementing curricular models, curriculum reform, and understanding the politics of conceptualizing the curriculum process are highlighted. Major issues concerning educational curriculum reform are addressed and reviewed.

Prerequisites: graduate standing

TLCI 808 Critical Sociocultural Theories of Learning (3 Credit Hours)

This course will establish a theoretical lens by which students will understand learning as socially and culturally constituted and apply this foundation to literacy acquisition and learning.

Prerequisites: Admission to the Curriculum and Instruction doctoral program

TLCI 809 Youth Ideology, Culture and Education (3 Credit Hours)

This course will draw on sociocultural perspectives to provide an empirical, historical, and theoretical examination of issues that impact youth in societies characterized by structural inequalities. These inequalities may be based on class, race, ethnicity, and sexual/gendered relations of dominance and subordination. Exploration through various texts from several academic disciplines will enable course participants to analyze the intersection of education, social change, and youth development in the contexts of self-discovery, identity, culture, belonging, citizenship, participation, and activism.

TLCI 814 Qualitative Research Design in Education (3 Credit Hours)

This course concentrates on the theoretical underpinnings of qualitative research, methodology and methods including identification of ways to collect and analyze qualitative data; examination of ethical issues; development of proposals; and writing up studies.

TLCI 815 Advanced Qualitative Research (3 Credit Hours)

This advanced qualitative course is an introduction to emerging research approaches and alternative data collection methods and analyses in education, counseling and other related disciplines. Content addressed includes visual and audio research, historical movements in qualitative research, critical theory, feminism, queer theory, ethnomethodology, autoethnography, content analysis, and mixed methods research.

Prerequisites: TLCI 814

TLCI 817 Mixed Methods Research in Education (3 Credit Hours)

This course will provide an overview of mixed methods research, with an emphasis on its application in education. The course will begin with a discussion of the history and philosophy of mixed methods research, and will maintain a focus on the epistemological underpinnings of both mixed methods designs and their component parts. Consideration will be given to a number of research traditions that can be subsumed under the general headings of 'quantitative' and 'qualitative' methods, including surveys, in-depth qualitative interviewing, ethnography, and social network analysis. Methods for collecting, analyzing, integrating, and reporting data from multiple sources will be discussed. The course will have an applied focus and will include lectures, presentations of applied mixed methods research by guest experts, applied and methodological readings, and student presentations.

Prerequisites: FOUN 812 and TLCI 814

TLCI 828 Contemporary Issues in Literacy Research (3 Credit Hours)

Directed study of current topics of interest to students involved in literacy research. Topics to include emergent literacy assessment, adult literacy programs, and other areas of investigation. Students will be required to prepare a scholarly paper reporting results for publication.

Prerequisites: M.S.Ed. in Reading Education

TLCI 830 Contemporary Research and Critical Issues in STEM Education (3 Credit Hours)

This course is designed to provide disciplinary and interdisciplinary overviews of STEM issues and trends that will help graduate students construct their own theoretical foundations and practical understanding of STEM education. In the course, students will discuss a wide range of current issues, movements, and research-supported practices in STEM education in K-16 classrooms as well as informal education settings. Students will learn about the research paradigms guiding STEM education research with a critical analysis of those most utilized across contemporary STEM education research fields.

TLCI 831 Instructional Technology Trends in Curriculum and Instruction (3 Credit Hours)

Examines selected issues and trends involving the use of technology in curriculum and instruction. Students develop a critical awareness of contemporary technology, an understanding of current research regarding the successful implementation of technology in curriculum and instruction, and strategies for using new technology in the future.

TLCI 835 Participatory Research: Theory and Methods (3 Credit Hours)

This course will explore theoretical and methodological orientations towards conducting research with youth and adults. Students will focus on ethical, political, and pedagogical considerations that arise in employing participatory practices, explore methods for listening and representing participant voice, and consider implications for policy and practice

TLCI 836 Reconceptualizing Theory and Practice for Work with Children and Families (3 Credit Hours)

This graduate seminar explores post-structural theories as they relate to understandings about young children, families, and education. The focus is on intersections of race, class, gender, and age as potential constructs of how thought and action are organized and the political, historical, and economic contexts that contribute to such discourses. Students will consider theory, research and practices in readings, discussions and class assignments.

TLCI 840 Contemporary Perspectives in Early Literacy (3 Credit Hours)

This graduate seminar explores perspectives on early literacy that draw from sociocultural, postmodern, and post-structural theories. Viewing literacy as a social practice, students will explore children's literacy with an emphasis on children's agency and their roles as active producers of meaning. Students will be asked to critically examine early literacy research and practice to contribute to rich understandings of diverse learning needs across social, economic, and multilingual contexts.

Pre- or corequisite: TLCI 740

TLCI 845 Concepts and Contexts in School Librarianship (3 Credit Hours)

Will introduce candidates to the broad landscape of school librarianship and its relationship to the greater library and information profession. Includes a critical examination of benchmarks and key concepts tied to literacies, information science, and technical innovation.

TLCI 861 Ethnographic Research and Narrative & Historical Research Methods and Design (3 Credit Hours)

In this advanced qualitative research course, students will focus on ethnographic methods such as ethnography, ethnomethodology, and autoethnomethodology. Students will also learn about participatory research methods. The course will examine narrative and historical research approaches including biography and autobiography.

Prerequisites: TLCI 815

TLCI 862 Critical and Indigenous Research Methods and Design (3 Credit Hours)

In this advanced qualitative methods course, students will explore readings related to critical and indigenous research, methodologies and paradigms as well as engage in activities to decolonize traditional research approaches with specific groups. This course refers to indigenous peoples as individuals and groups belonging to developing or underdeveloped regions nationally or internationally.

Prerequisites: TLCI 815

TLCI 863 Emerging Qualitative Research Methods (3 Credit Hours)

This advanced qualitative research course examines emerging and lesser known qualitative research methods such as self-study, portraiture, arts-based research, photovoice, rhizomatic analysis and critical policy analysis.

Prerequisites: TLCI 815

TLCI 864 Case Study, Grounded Theory, & Phenomenological Research Methods & Design (3 Credit Hours)

This advanced qualitative research course examines the intricacies of case study methods. It also delves into the various qualitative research methods surrounding experience and theory formation such as Grounded Theory, Phenomenology, Heuristic Inquiry and Consensual Qualitative Research.

Prerequisites: TLCI 815

TLCI 865 Independent Qualitative Research (3 Credit Hours)

This capstone course involves the student developing and completing an original qualitative research project independent from the dissertation.

Prerequisites: TLCI 815

TLCI 868 Internship: Early Childhood (3 Credit Hours)

Independent research study allows the student to explore a topic of interest under the close supervision of a faculty member. The coursework may include directed readings, applied independent investigations - collaboration with a faculty member with a research project or carrying out an independent research project - and other activities deemed appropriate including grant proposal writing or programmatic evaluation work. Regardless of the nature of the experience, the work must culminate in a formal paper suitable for inclusion in a published research manuscript.

TLCI 875 Research and Practice in Teacher Education (3 Credit Hours)

This course provides experiences that examine the theoretical and practical foundations of research and practice in teacher education. The course explores various facets of field- and university-based teacher education practices, which include but are not limited to school-university partnerships, mentor teaching and supervision of teacher candidates, and teaching education coursework. Students also consider the development of teacher educator identity, the benefits of collaborative inquiry, and research methods used to investigate teacher education learning and practice.

TLCI 876 Grant Writing (3 Credit Hours)

This course provides students with an applied introduction to proposal and grant writing. Doctoral students who successfully complete the course will be prepared to seek external funding to support their continuing graduate studies and to support their future success as academics.

TLCI 888 Seminar in the Multicultural Environment (3 Credit Hours)

Explores topics related to the cultural characteristics of ethnically diverse populations and how these diverse populations and characteristics interact with social, political and economic institutions and the dominant culture to create the contemporary environment.

TLCI 890 Seminar in Academic Writing (3 Credit Hours)

This course provides a guide through the process of academic writing, following practices for manuscript publication and dissertation writing. Peer feedback and individualized writing are hallmarks of the course. This course provides students with the knowledge and skills to become better academic writers through practice of successful strategies and habits related to the writing process as well as examinations of exemplars.

TLCI 895 Topics in Education (1-3 Credit Hours)

Provides opportunities for doctoral students to explore topics related to curriculum, instructional strategies, and evaluation.

TLCI 897 Independent Study (1-3 Credit Hours)

Hours to be arranged. Provides opportunities for the doctoral student to do independent research in an area of his/her particular interests and needs.

TLCI 899 Dissertation (1-12 Credit Hours)

Preparation of dissertation.

Prerequisites: graduate standing, successful completion of candidacy exam and permission of the instructor

TLCI 999 Doctoral Graduate Credit (1 Credit Hour)

This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.

TLED - Teaching & Learning-Education

TLED 532 Developing Instructional Strategies PreK-6: Language Arts (3 Credit Hours)

Following a theory into practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote children's development of attitudes, behaviors, and concepts in language arts in grades PreK-6 in support of NCTE national instructional standards and the Virginia Standards of Learning.

Prerequisites: a grade of C or higher in TLED 617 and TLED 468/TLED 568

TLED 535 Developing Instructional Strategies PreK-6: Social Studies (3 Credit Hours)

Following a theory into practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote children's development of attitudes, behaviors, and concepts in social studies in grades PreK-6 in support of NCSS national instructional standards and the Virginia Standards of Learning.

Prerequisites: TLED 617

TLED 551 Developing Instructional Strategies for Teaching in the Middle/High School: English (3 Credit Hours)

Following a theory/research-into-practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote the development of attitudes, behaviors, and concepts in English, grades 6-12, informed by national instructional standards and the Virginia Standards of Learning; 35 hours of teaching practicum required.

Prerequisites: TLED 608 or TLED 636, IDT 618, a criminal background check, acceptance into teacher education, no grade less than C- in content area and professional education core, minimum major and overall GPA of at least 3.0

Corequisites: TLED 583

TLED 552 Developing Instructional Strategies for Teaching in Middle/High School: Math and Science (3 Credit Hours)

This science and mathematics course will provide methods for teaching diverse learners through culturally sustaining pedagogy, inquiry-oriented, and problem solving strategies using technology and engineering design principles. Students in this course take a required practicum (35 hours) in a secondary science or mathematics classroom to complete assigned content-focused activities.

Prerequisites: TLED 608 or TLED 636, and IDT 618

Corequisites: TLED 583

TLED 555 Developing Instructional Strategies for Teaching in the Middle/High School: Social Studies (3 Credit Hours)

Following a theory/research-into-practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote the development of attitudes, behaviors, and concepts in social studies, grades 6-12, informed by national instructional standards and the Virginia Standards of Learning; 35 hours of teaching practicum required.

Prerequisites: TLED 608 or TLED 636, IDT 618, a criminal background check, acceptance into teacher education, no grade less than C- in content area and professional education core, minimum major and overall GPA of at least 3.0

Corequisites: TLED 583

TLED 568 Language Acquisition and Reading for Students with Diverse Learning Needs (3 Credit Hours)

This course provides an overview of normal language development and language disorders which impact the acquisition of language based curriculum skills such as listening, speaking, reading, and written expression. Emphasis is on instructional techniques to assist students with diverse learning needs to achieve reading and comprehension skills. Effective reading strategies and curricula for individuals with disabilities will also be reviewed.

TLED 574 Foundations and Contemporary Issues in Early Childhood Education (3 Credit Hours)

This course addresses current issues related to children and families in early childhood settings. Contemporary research on pedagogical and formative assessment practices related to the education of young children will be discussed through critical exploration. This course will also have an associated 40 hour practicum (20 hours in an infant or toddler classroom and 20 hours in a preschool age classroom).

TLED 578 Integrating Instruction Across the Curriculum PreK-6 (3 Credit Hours)

Following a theory into practice philosophy and building on the instructional strategies for specific disciplines, students explore, develop, and use advanced instructional materials, technologies, and activities to promote interdisciplinary and multidisciplinary instruction across the curriculum in grades PreK-6 in support of national standards and the Virginia Standards of Learning. The field experience component (40 hours) includes participation in preK-3 and 4th-6th grade classrooms in an accredited public or non-public school, per program requirement.

Prerequisites: TLED 301 or TLED 290, passing scores on PRAXIS Core or met equivalent scores as established by VA Board of Education, a criminal background check, acceptance into teacher education, no grade less than C in content area and professional education core, minimum major overall GPA of at least 3.0 and at least two of the following: TLED 532, TLED 535, STEM 533, and STEM 534

TLED 579 Classroom Management and Practice PreK-3; PreK-6 (3 Credit Hours)

Course prepares prospective PreK-3 and PreK-6 teachers to provide instruction and management addressing the intellectual, physical, emotional and social needs of PreK-6 learners founded in empirically based practice. The field based component (70 hours) includes participation in PreK-3 and 4th-6th grade classrooms in an accredited public or non-public school. Students in the PreK-3 program are required to complete 35 hours in the Children's Learning and Research Center. Attendance at seminars and debriefing sessions is required.

Prerequisites: TLED 301, passing scores on Praxis Core or met equivalent scores as established by VA Board of Education, a criminal background check, acceptance into teacher education, no grade less than C in content area and professional education core, minimum major and overall GPA of at least 2.8 and at least two of the following courses: TLED 432 or TLED 532, TLED 435 or TLED 535, TLED 478 or TLED 578, STEM 433 or STEM 533, STEM 434 or STEM 534

TLED 580 Multicultural Young Adult Literature in Schools (3 Credit Hours)

This course will explore the reading and teaching of diverse young adult literature. Topics addressed include ideas about adolescents and their learning practices; characteristics of young adult literature and literary criticism; analysis of texts from a range of young adult genres; methods for teaching young adult literature; and lesson and unit design.

TLED 583 Seminar in Teacher Education (1 Credit Hour)

This course explores issues, problems, concerns, and processes related to teaching and entering the profession of teaching. Passing score on Elementary Education Multiple Subjects Assessment in licensure content area, and where appropriate passing scores on Reading for Virginia Educators are required to pass this course.

Prerequisites: admitted to approved teacher education program

TLED 586 Student Teaching for Special Endorsement (3-6 Credit Hours)

Internship in school. Available for pass/fail grading only.

Prerequisites: Collegiate Professional Certificate and/or completion of an approved program in teacher education, passing scores on the Praxis Core examination or equivalent SAT or ACT scores as established by VA Board of Education, passing scores on the appropriate Praxis II content examination, passing score on the Virginia Communication and Literacy Assessment, departmental approval, permission of the director of teacher education services, meet grade requirement in the specific content area and professional education core, minimum major and overall GPA of at least 3.0, and a criminal background check

TLED 595 Topics in Education (1-4 Credit Hours)

Explores contemporary problems and trends in education. Emphasis is placed upon topics related to curriculum, instructional strategies, and evaluation.

Prerequisites: graduate standing

TLED 596 Topics in Education (1-3 Credit Hours)

Cannot be applied to a Master of Science in Education degree in the Department of Teaching and Learning. Explores contemporary problems and trends in education. Emphasis is placed upon topics related to curriculum, instructional strategies, and evaluation.

Prerequisites: graduate standing

TLED 597 Independent Study (1-3 Credit Hours)

Hours to be arranged. Allows the student to engage in independent study of issues and trends in education. Emphasis is placed upon topics related to curriculum, instructional strategies, and evaluation.

Prerequisites: graduate standing

TLED 608 Foundations of Education and Instructional Assessment (3 Credit Hours)

Provides students with an understanding of historical, philosophical, economic, and sociological issues in American education, their effect on student achievement, and the impact of social change on existing institutions. Includes the development of instruction based on assessment data including the use, construction, interpretation, and analysis of valid assessments. A 30-hour observation/participation experience is required in an appropriate prek-6, 6-8, or 6-12 grade level.

Prerequisites: graduate standing

TLED 614 Arts in Education (3 Credit Hours)

This course is designed to provide students with a range of approaches for thinking about the arts in education, with specific emphasis on the visual arts. It assumes that life in the 21st century calls for competencies that are critical, flexible, collaborative, and relational and forwards artistic thinking as complementary to this need. In addition to course readings that explore cognitive, developmental, cultural, and social dimensions of art and learning, students will be asked to participate in activities associated with making and viewing art, as well as consider implications for designing K-12 curriculum.

TLED 615 Teaching in the Middle School (4 Credit Hours)

Focusing on middle school teaching, this course examines the organization, curriculum, instructional strategies, classroom management techniques, and teaching methods for working with young adolescents. Also covered are middle school guidance, exploratories, scheduling, and parent-school relations. A 30-hour practicum in a middle school is required.

Prerequisites: Graduate standing

TLED 618 Assessment and Evaluation in PK-12 Schools (3 Credit Hours)

This course will prepare teachers for the appropriate use of formative and summative assessment and evaluation principles in support of students' learning and development. Students will learn to analyze assessment data to evaluate reliability and validity, interpret student performance, and make instructional decisions.

TLED 620 Education and Public Policy (3 Credit Hours)

This course is designed to provide students with an understanding of the political nature of education and its implications for teaching and learning. Students will be expected to critically consider the development and implementation of formal policies designed to improve education in U.S. schools. To do so, students will consider historical and contemporary trends in educational theory and research to situate current policies and practices in our nation's schools, with a clear focus on understanding the range and scope of policy dilemmas in the public pre-K-12 sector of education.

TLED 621 Foundations and History of Education (3 Credit Hours)

This seminar explores foundational ideas of democratic education. While focusing on the contexts and conditions of contemporary education, it traces the roots of educational theory and philosophy from the formation of the common school to the policy reforms of the 21st century. This look at the present through the past provides insight into the interactions between social, economic, political, ideological, and environmental factors and its impact on the purposes of education, school curriculum and ideas of measurement and evaluation. Students will be expected to consider the implications of/ for democratic education, historically and presently, as it relates to issues of race, class, gender, and multiculturalism.

TLED 623 Introduction to the Contemporary Student (3 Credit Hours)

The course is designed to explore contemporary youth as learners with multiple dimensions of identity, including cultural and linguistic diversity. Topics explored include physical, social, emotional, language and conceptual development; digital and print production and consumption; and the selection, development, and use of appropriate curricula, methodologies, and materials for the contemporary student. The course includes a practicum experience (20 hours) as well.

TLED 626 Teaching Language, Culture, and Society in Elementary Education (3 Credit Hours)

This course will provide methods for teaching diverse learners through culturally sustaining pedagogy, effective methods for designing instructional strategies and materials for teaching social studies and language arts in the elementary grades. Students in this course take a corequisite practicum (40 hours) in elementary classrooms to complete assigned activities designed to further practical development.

TLED 627 Classroom Management, Discipline, and Practice (3 Credit Hours)

This course prepares prospective PreK-3 and PreK-6 teachers to provide instruction and management addressing the intellectual, physical, emotional and social needs of PreK-6 learners founded in empirically based practice. The field based component (40 hours) includes participation in PreK-3 and 4th-6th grade classrooms in an accredited public or non-public school setting.

TLED 628 Middle Level Philosophy, School Organization and the Young Adolescent (3 Credit Hours)

This course focuses on theories and principles of adolescent development and learning in family, school, and community contexts. Candidates examine adolescents from biological, psychological, cognitive, and social perspectives. This includes how adolescents learn and what motivates them to learn, and how schools contribute to adolescents' growth by teaching in ways that "fit" their developmental and cultural needs.

TLED 630 Develop and Enhancing Literacy with Culturally and Linguistically Diverse Learner Across Content Areas (3 Credit Hours)

This course focuses on the development and implementation of strategies that will accommodate how language and cultural differences affect communication and learning; knowledge of the impact of language-based curriculum skills such as listening, speaking, reading, and writing; instructional techniques needed to assist individuals identified as culturally, linguistically, and academically diverse in achieving reading and comprehension skills; comprehension strategies; and an understanding of reading across the disciplines.

TLED 631 Classroom Based Inquiry (3 Credit Hours)

This course is designed to integrate the research on effective teaching and learning with theory and practice through the lens of democratic education. As an introductory survey course, the focus will be on developing the competencies related to the critical consumption of research literature in order to further the teacher candidates' understanding of the physical, social, emotional, speech and language and intellectual development of children.

TLED 632 Multicultural Education (3 Credit Hours)

This course will explore critical multicultural education situated within culturally sustaining pedagogical practices to explore issues related to race, ethnicity, class, gender, sexuality, religion, power, and language use; however, this course is not about a celebration of difference, but is designed to enable students to investigate how socially constructed categories such as social class, race, gender, sexual orientation, and disability are used to privilege some and marginalize others.

TLED 633 Middle Level Instruction and Assessment (3 Credit Hours)

This course will provide opportunities to examine the theoretical and practical applications of data-driven decision making, assessments, and curriculum planning for middle level educators. Students will consider adolescent development as well as student behaviors to analyze standards and effectively plan instruction and assessment. Further, students will apply principles of culturally sustaining pedagogy to middle school instruction and assessment planning and practices.

TLED 636 Problems in Education (3 Credit Hours)

This course focuses on historical, philosophical, and sociological foundations underlying the role, development, and organization of public education in the United States. Attention is given to the legal status of teachers and students, including federal and state laws and regulations; school as an organization and culture; and contemporary issues and current trends in education, including the impact of technology on education. The role of the teacher is highlighted in this course, including professionalism, ethical standards, and personal integrity as well as Virginia's Guidelines for Uniform Performance Standards and Evaluation Criteria for Teachers. A 30-hour observation/participation experience is required in an appropriate grade level classroom.

TLED 638 Researching Teaching in Elementary and Secondary Grades (3 Credit Hours)

In this course, students will learn the processes of reflective inquiry and conduct informal inquiries of the teaching and learning dynamic in preK-12 school settings. Activities include explorations of professional biography school and classroom culture and practice, student demographics, curriculum, and other critical components of teaching and learning.

Prerequisites: graduate standing

TLED 639 Seminar in Education (3 Credit Hours)

Hours to be arranged. Explores in depth a variety of current topics, trends and concerns in K-12 education.

Prerequisites: 15 graduate hours in education, including all core courses

TLED 640 The Management of Learning and Instruction (3 Credit Hours)

This course explores classroom and behavior management techniques including teacher-student relationships, rules and procedures, and disciplinary interventions. Emphasis is placed on building a diverse repertoire of approaches to classroom management at the individual and classroom level. Candidates will develop a classroom management plan that includes techniques for engaging families.

TLED 643 Introduction to the Contemporary Student (3 Credit Hours)

The course is designed to be an exploration of contemporary youth as learners situated in/by many identities, including those aspects of self related to cultural and linguistic diversity. Among the subjects to be explored are: physical, social, emotional, language and conceptual development; digital and print production and consumption; and the selection, development, and use of appropriate curricula, methodologies, and materials for the contemporary student.

TLED 646 Classroom Based Inquiry (3 Credit Hours)

This course is designed to integrate the research on effective teaching and learning with theory and practice through the lens of democratic education. As an introductory survey course, the focus will be on developing the competencies related to the critical consumption of research literature in order to further the candidates' understanding of the physical, social, emotional, speech and language and intellectual development of children. Diverse approaches based upon culturally responsive behavioral, cognitive, affective, social, and ecological theory and practice will be utilized in guiding the learning experience of the course.

TLED 647 Education and Public Policy (3 Credit Hours)

This course is designed to provide students with an understanding of the political nature of education and its implications for teaching and learning. Students will be expected to critically consider the development and implementation of formal policies designed to improve education in US schools. To do so, students will consider historical and contemporary trends in educational theory and research to situate current policies and practices in our nation's schools, with a clear focus on understanding the range and scope of policy dilemmas in the public pre-K–12 sector of education.

TLED 650 Mathematics Specialists as Teacher Leaders (3 Credit Hours)

The critical characteristics and responsibilities of Mathematics Specialists as teacher leaders will be explored. Structuring professional learning for classroom teachers through peer coaching, mentoring, observations, conferencing and relational group learning will be explored for developing teacher leadership capacity.

TLED 651 Teaching Mathematics for All Using Culturally Responsive Approaches (3 Credit Hours)

Adapting the mathematics teaching and learning practices to accommodate diverse populations will be explored. The essential knowledge and understanding needed by mathematics specialists to support classroom teachers to effectively utilize culturally responsive pedagogies to differentiate instruction and support all learners.

TLED 653 Participatory Action Research for Mathematics Specialists (3 Credit Hours)

Participatory Action Research is introduced to conduct community, school, or classroom-based research for improving mathematics learning and teaching.

TLED 654 Practicum for Mathematics Specialists (3 Credit Hours)

This course requires candidates to complete a 150-hour practicum that is designed to provide opportunities and learning experiences to refine and reinforce mathematical and leadership skills, understandings, and dispositions for optimal performance as a Mathematics Specialist.

Pre- or corequisite: TLED 650

TLED 658 Mathematical Assessment for Data Driven Decisions (3 Credit Hours)

Selected key differences between assessment for and of learning will be examined. Students will design quality assessment systems that provide numerical and descriptive information about student learning and explore ways to use these data to drive instructional decisions for improved learning.

TLED 666 Internship/Student Teaching and Seminar (9 Credit Hours)

Five days per week for 14 weeks. Available for pass/fail grading only. Provides practice in teaching in grades 6-8 and in analyzing teaching approaches and behaviors. Examines instructional problems and concerns. **Prerequisites:** completion of an approved program in teacher education, 6-8, passing scores on PRAXIS I or equivalent SAT or ACT scores as established by VA State Board of Education, passing scores on the appropriate PRAXIS II content examination, departmental approval, permission of the director of teacher education services, no grade less than C- in content area and professional education core, minimum major and overall GPA of at least 2.75

TLED 667 Internship/Student Teaching and Seminar in PreK-3 (3 Credit Hours)

This course provides practice in teaching in grades PK-3 and in analyzing teaching approaches and behaviors. It examines instructional problems and concerns. Each semester the candidate must maintain continuance and a 3.0 GPA to enroll in each teacher candidate internship semester for a total of 9 semester credit hours. Available for pass/fail grading only.

Prerequisites: admission to the approved teacher education program; completion of all undergraduate content courses, professional education courses, and all Virginia Department of Education licensure assessments for admission into the ECE graduate program; no grade less than C in content area and professional education core; minimum major and overall GPA of at least 2.8; and permission of the department

TLED 668 Internship/Student Teaching and Seminar (9 Credit Hours)

Five days per week for 14 weeks. Available for pass/fail grading only. Provides practice in teaching in grades PK-6 and in analyzing teaching approaches and behaviors. Examines instructional problems and concerns.

Prerequisites: completion of an approved program in teacher education PreK-6, passing scores on PRAXIS I or equivalent SAT or ACT scores as established by VA State Board of Education, passing scores on the appropriate PRAXIS II content examination, departmental approval, permission of the director of teacher education services, no grade less than C- in content area and professional education core, minimum major and overall GPA of at least 2.75

TLED 669 Internship/Student Teaching and Seminar (3-9 Credit Hours)

Five days per week for 6-14 weeks. Available for pass/fail grading only. Provides practice in teaching and in analyzing teaching approaches and behaviors. Examines instructional problems and concerns.

Prerequisites: Completion of an approved program in teacher education, passing scores on the appropriate licensure assessments, departmental approval, permission of the director of teacher education services, no grade less than C- in content area and professional education core, minimum major and overall GPA of at least 2.75, GPA of 3.0 required for graduate programs

TLED 670 Assessment and Evaluation (3 Credit Hours)

Students will design a three-chapter research proposal and study the appropriate statistical references. Evaluation methodologies leading to this research are explored (portfolio/rubrics). Instructional technology and its classroom applications are interwoven into research and evaluation.

TLED 671 Practitioner Inquiry in Elementary and Secondary Grades (3 Credit Hours)

In this course, students will explore research methods and forms of data collection and analysis associated with practitioner inquiry, including self-study and action research. Students will be required to design a research proposal using practitioner inquiry research methods.

TLED 672 Integrating Children's Lit, Language Arts & Social Studies Across Early Child Curriculum (3 Credit Hours)

This course emphasizes the development of K-6 students' multiple and multimodal literacies and the promotion of active literacy and social studies explorations within the early and elementary classroom and aligned with the Virginia Standards of Learning. The course will focus on the five domains of social studies education and children's holistic literacy development. Multiple perspectives and approaches to planning, teaching, and assessing literacy and social studies in the early and elementary classroom are explored and practiced. This course includes a 35-hour practicum experience in an early or elementary classroom.

TLED 673 Integrating Science and Mathematics Across the Early Childhood and Elementary Curriculum (3 Credit Hours)

This course emphasizes the development of young children's inquiry and problem-solving skills and content learning through inquiry-based science and problem-based mathematics explorations. Multiple perspectives and approaches to planning, teaching, and assessing science and mathematics in the early childhood and elementary grades classroom are explored and practiced. This course includes a 35-hour practicum experience in an early or elementary classroom.

TLED 676 Teaching Diverse Learners in Elementary & Secondary Schools (3 Credit Hours)

The course will emphasize evidence-based instructional practices and strategies to teach students with diverse interests, abilities, and prior knowledge. This course examines the impact of students' varied home support mechanisms and resources on the academic skills among students in contemporary schools. Additionally, the course will focus on instructional strategies that are varied and accessible from many perspectives; emphasis is given to methods of instruction that have evidence to support resulting improved student outcomes.

TLED 677 Learning and Development Across Historical and Contemporary Educational Environments (3 Credit Hours)

This course explores foundational ideas of democratic education in light of contemporary understandings of how children and youth construct knowledge. While focusing on the contexts and conditions of contemporary education, it traces the roots of educational theory and philosophy from the formation of the common school to the policy reforms of the 21st century. This understanding is coupled with the major theories of children's learning and development as well as all aspects of their physical, social, emotional, and intellectual development from birth through adolescence. The course requires that students learn the concepts and terminology associated with each theory and be able to use them in analyzing, interpreting, promoting, and evaluating children's growth and learning in the classroom.

TLED 679 Advanced Classroom Management and Practicum in PreK-6 (3 Credit Hours)

This course will examine advanced methods for educators to use in order to make their classroom teaching and management more efficient and effective. This will include supervised involvement of the student in a practicum setting where the student, instructor and classroom teacher work together closely to develop knowledge and gain expertise in teaching children in a positive and effective learning environment. A weekly seminar is required.

TLED 680 Teacher Candidate Internship – MAT Program (5 Credit Hours)

Field-based internship. Provides practice in teaching and in analyzing teaching approaches and behaviors. Examines instructional problems and concerns. This experience is a crucial part of a teacher candidate's preparation to becoming a Professional Educator.

Prerequisites: Completion of an approved program in teacher education, passing scores on the appropriate licensure assessments, departmental approval, permission of the director of teacher education services, no grade less than C- in content area and professional education core, minimum major and overall GPA of at least 2.75

TLED 681 Critical Pedagogy in Early Childhood (3 Credit Hours)

Building from early childhood traditions that recognize the importance of children's participation in learning, students will employ critical perspectives of early childhood to develop awareness of paradigmatic changes in thinking about young children by considering the heterogeneous nature of childhood. Students will examine and critically reflect on models of the learner and curriculum contexts in early education through an inter-disciplinary focus that views childhood as a complex web of interdependence. This course will provide students with an understanding of how cultural texts and representation practices shape curricular and pedagogical decisions as well as resources for planning curriculum and instruction from constructivist paradigms.

Prerequisites: Departmental approval required

TLED 687 Pedagogy Principles & Models of Instruction (3 Credit Hours)

Students will investigate and analyze a range of pedagogical approaches from the objectivist, constructivist and social family of learning models including major psychological and philosophical approaches. Students will assess the syntax of instructional models that can be applied across a variety of content areas and demonstrate their understanding of various teaching models through the development of lesson plans in their content area.

TLED 690 The Child and the Family (3 Credit Hours)

This course will examine children in the context of the families in which they live. Family systems theory provides the basis for study, and students do an in-depth examination of their own families of origin. The stages of the family life cycle are taught; principles of healthy family functioning are emphasized to promote healthy growth for children.

TLED 695 Topics in Education (1-3 Credit Hours)

Provides opportunities for graduate students to explore current topics, trends and issues related to curriculum, instructional strategies, and evaluation.

Prerequisites: Graduate standing

TLED 697 Independent Study (1-4 Credit Hours)

Hours to be arranged. Provides opportunities for the master's student to do independent research in an area of his/her particular interests and needs.

Prerequisites: graduate standing

TLED 699 Thesis (3-6 Credit Hours)

Master's-level research and thesis in topics related to curriculum, instructional strategies, and evaluation in educational settings.

Prerequisites: graduate standing and permission of the instructor

TLED 701 Teacher as Leader (3 Credit Hours)

This course prepares elementary and secondary teachers to become facilitators of change in schools and communities. They will explore various leader roles in the K-12 context, including exemplary and critically minded practitioner, curriculum decision-maker, researcher, advocate, and facilitator of job-embedded professional development

TLED 702 Coaching and Mentoring (3 Credit Hours)

This course prepares teachers to be effective coaches of teacher candidates and inservice teachers in K-12 settings. They will develop understandings of student-centered, evidence-based models of coaching and mentoring, and acquire specific knowledge and skills of effective coaching and mentoring.

TLED 703 Curriculum Leadership (3 Credit Hours)

This course prepares teachers to enact dynamic curriculum leadership. They will explore curriculum as a design for learning, a set of school experiences based on goals and values, that take into account diverse learners and other stakeholders, including families and communities.

TLED 704 Collaboration and Advocacy (3 Credit Hours)

The purpose of this course is to develop teacher leaders' skills in facilitation, collaboration, and advocacy at the school, division, and community levels. Emphasis is placed on engaging with diverse stakeholders through culturally responsive means to foster student academic achievement.

TLED 724 Curriculum Development Principles and Practices in Elementary Schools (3 Credit Hours)

This course will engage students in the on-going debates about the development and shaping of curricula with an emphasis on how these forces play out in elementary schools. The course requires students to investigate the scope and components of curriculum planning, development, and delivery. Students are first expected to develop an understanding of the many forms of dynamic tension at play in curriculum debates, and, subsequently, they are required to develop an understanding of specific ways in which teachers and curriculum leaders can shape the instructional process, and select and use curriculum materials.

TLED 725 Curriculum Development Principles and Practices in Secondary Schools (3 Credit Hours)

This course will engage students in the on-going debates about the development and shaping of curricula with an emphasis on how these forces play out in secondary schools. The course requires students to investigate the scope and components of curriculum planning, development, and delivery. Students are first expected to develop an understanding of the many forms of dynamic tension at play in curriculum debates, and, subsequently, they are required to develop an understanding of specific ways in which teachers and curriculum leaders can shape the instructional process, and select and use curriculum materials.

TLED 734 Problems of Teaching in the Elementary Grades (3 Credit Hours)

This course addresses the prevailing issues and trends affecting elementary education in the United States. An understanding of contemporary issues that influence education will assist students in utilizing a critical lens to address those issues in their classrooms. This course provides an opportunity to examine and explore significant theorists, researchers and readings considered foundational as well as contemporary related to sociocultural and political issues within the field of elementary education.

TLED 735 Problems of Teaching in the Secondary Grades (3 Credit Hours)

This course addresses the prevailing issues and trends affecting secondary education in the United States. An understanding of contemporary issues that influence education will assist students in utilizing a critical lens to address those issues in their classrooms. This course provides an opportunity to examine and explore significant theorists, researchers and readings considered foundational as well as contemporary related to sociocultural and political issues within the field of secondary education.

TLED 744 Diversity and Equity in Elementary Education (3 Credit Hours)

This course focuses on factors of diversity and social justice that effect decisions elementary teachers must make regarding design and implementation of curriculum, teaching strategies, and materials in order to provide equity and excellence for all learners in the elementary grades.

TLED 745 Diversity and Equity in Secondary Education (3 Credit Hours)

This course focuses on factors of diversity and social justice that effect decisions secondary teachers must make regarding design and implementation of curriculum, teaching strategies, and materials in order to provide equity and excellence for all learners in the secondary grades.

TLED 775 English Language Learners in the PK-12 Classroom (3 Credit Hours)

The course is designed to infuse the teachers' competencies related to meeting the instructional needs of English language learners. The course will explore the language, culture, instruction, assessment, and professionalism in order to understand and teach linguistically diverse learners effectively.

TLED 998 Master's Graduate Credit (1 Credit Hour)

This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

UNIV - University

UNIV 507 Design Thinking (3 Credit Hours)

Design thinking is a human-centered approach to innovation that uses design methods and tools to integrate the needs of people and organizations, the opportunities of technology, and the requirements for personal, organizational, and business success. The design thinking course introduces students to a robust process for understanding problems, ideation, innovation, and entrepreneurship. This course is facilitated using workshops where students will work in project teams in a design thinking innovation challenge.

WCS - World Cultural Studies

WCS 510 Berlin-Paris: Crucibles of European Ideas (3 Credit Hours)

This course explores the cultural movements that have characterized German-French commonalities and differences from the early 1900s through the 1990s in cross-disciplinary discourses such as film, literature, art, politics, and economics.

WCS 521 The Question of Memory in World Cultures (3 Credit Hours)

This class explores how societies across the world choose to remember people and events through culture. Students will consider 'official' manifestations – government-sponsored or public memorials and art – as well as general and popular culture such as museums, literature, film, TV, music, etc. The class will interrogate not only what is chosen to be memorialized but how it is memorialized, and how public memory of events is shaped by such choices. Students will consider what decisions are made at the local and national level, how those decisions are made, and what consultations or processes are considered necessary or desirable when deciding public memorials and artwork.

Prerequisites: Graduate standing

WCS 545 German Cinema I (3 Credit Hours)

The first half of the 20th century was the most creative and destructive period in German and European history. Its rich cultural achievements included Viennese psychoanalytical theory of the turn of the century, Art Nouveau, German Expressionism, and the avant garde aesthetics of the Weimar Republic. Conversely, World War I and II exposed the cultural agony and human depravity of modern civilization. This course will trace these various aspects and developments in a variety of exemplary genres. Readings and discussions in German. (Cross-listed with GER 445/GER 545 and COMM 444/COMM 544)

WCS 571 Hispanic Women Authors (3 Credit Hours)

A study of fictional and non-fictional works by Spanish, Spanish-American, and U.S. Latina writers from the 16th to the 20th century. The course analyzes gender identity and roles and the interaction of gender, race, and class in literary representations of courtship and marriage, spirituality, nationalism, colonialism, and multiculturalism.

WCS 576 German-Jewish Literature and Culture (3 Credit Hours)

A survey of seminal texts by German-Jewish philosophers and writers from the Enlightenment to the present day, including Marx, Kafka, Freud, Schnitzler and Arendt.

WCS 595 Topics in World Cultural Studies (1-3 Credit Hours)

This course invites students to discover approaches to global problems and concerns through an analysis of cultural expressions from around the world. Students will consider the ways in which literary and artistic expression (literature, film, visual art, music) draw from and impact broader social and political contexts.

WCS 596 Topics in World Cultural Studies (1-3 Credit Hours)

This course invites students to discover approaches to global problems and concerns through an analysis of cultural expressions from around the world. Students will consider the ways in which literary and artistic expression (literature, film, visual art, music) draw from and impact broader social and political contexts.

WGS - Women's and Gender Studies

WGS 500 History of U.S. Women's Activism (3 Credit Hours)

This course historicizes U.S. women's social, political, and rhetorical activism over the last 200 years, tracing their entry into and shaping force upon public life. The course examines the development of women's activism in the nineteenth century, the twentieth-century women's (or feminist) movement, and its current status, particularly in relation to postfeminism and a 'third' wave.

Prerequisites: WGS 201S

WGS 501 Women: A Global Perspective (3 Credit Hours)

An analysis of the global forces that impact women's lives throughout the world. Particular emphasis is placed on the status of women in the developing world, international institutions that protect women's rights, and efforts to promote gender equality worldwide.

Prerequisites: WGS 201S and a grade of C or better in ENGL 211C or ENGL 231C

WGS 502 Feminisms and Sexualities (3 Credit Hours)

This course will examine feminist approaches to the subject of sexuality in the twentieth and twenty-first centuries. The course examines theorizations of sexuality, such as radical, critical race, and transnational feminisms, queer theory, and trans studies. Key questions will be: how have feminists theorized sexualities? What does sexuality have to do with feminist studies or practices? How do other identities, such as race and class, inform sexuality?

Prerequisites: WGS 201S, WGS 390T, or instructor approval

WGS 505 Gender and Media (3 Credit Hours)

This course examines media-based sites of knowledge production using a feminist approach, in order to imagine new and more complex ways to think about media rhetorics; celebrity culture; digital media; and the politics of representation. Key questions will be: What roles do media play in shaping social movements? What are the promises and pitfalls of activist interventions in the realm of commercial culture? In what ways might we complicate narratives of co-optation or selling out? The course explores these questions using an intersectional lens attentive to the complex interconnections of race, class, gender, and sexuality. Case studies will include national, international, and transnational media events.

Prerequisites: WGS 201S, WGS 390T, or instructor approval

WGS 506 Gender, Fashion & the Body (3 Credit Hours)

This interdisciplinary class explores the body as a canvas for both history and the future of our concept of individualism. Students will have the opportunity to reflect not only on their own understanding of the body but also that of the body across a variety of experiences. Students will complete auto-ethnographic essays and a course paper on the body relating to her/his/their academic research interests.

Prerequisites: WGS 201S

WGS 510 Sexing the Body (3 Credit Hours)

This course will explore the spectrum of what it means when we consider humans to exist in a gendered and sexed world. Students will critique their own preconceived notions of sex, probe issues of equality and social justice, and discuss what these questions mean both in the United States and globally. The course will culminate with a restructuring of how we understand the ways in which we define sex, sexuality, and sexual practice, taking into consideration how our own identities are impacted by culture and society.

Prerequisites: WGS 201S

WGS 515 Migration and Refugee Studies (3 Credit Hours)

This course explores the international context of refugees and migrants from a humanitarian perspective. Global conditions that lead to forced migration are analyzed to inform a larger understanding of human displacement. The course works directly with refugee resettlement organizations at the national and local levels.

WGS 560 Feminist and Queer Theory (3 Credit Hours)

This course will examine feminist and queer theories, specifically intersectional, transnational, and radical perspectives. It explores how feminist and queer scholars approach research, writing, and knowledge production, and applies these insights to students' own interests. The course analyzes how feminist and queer scholars have written about storytelling, the body, and desire, and links these discussions to how to produce positive social change in our world. This course is fundamentally interdisciplinary; students are encouraged to make connections between the course materials, their research interests, and other fields of study. This is a writing intensive course.

Prerequisites: WGS 201S or WGS 302W and a grade of C or better in ENGL 211C or ENGL 231C

WGS 570 Feminist Research Methods (3 Credit Hours)

This course explores the ethics, practice, and multiple forms of conducting feminist research. Narrative research methods are practiced through hands-on oral herstory assignments. Throughout the course, the process of knowledge construction is interrogated from a feminist perspective.

WGS 595 Topics in Women's, Gender, and Sexuality Studies (3 Credit Hours)

Advanced seminars on selected topics. The subject matter is usually be interdisciplinary and aligns with faculty teaching and research strengths.

WGS 596 Topics in Women's, Gender, and Sexuality Studies (3 Credit Hours)

Advanced seminars on selected topics. The subject matter is usually interdisciplinary and aligns with faculty teaching and research strengths.

Prerequisites: WGS 201S or instructor approval

WGS 597 Independent Study (1-6 Credit Hours)

Independent study of an interdisciplinary topic in Women's, Gender, and Sexuality Studies, or a reading plus internship project to be selected under the direction of a faculty member. Conferences and papers as appropriate.

Prerequisites: WGS 201S and approval of instructor and chair of the department

WGS 598 Independent Study (1-6 Credit Hours)

Independent study of an interdisciplinary topic in Women's, Gender, and Sexuality Studies, or a reading plus internship project to be selected under the direction of a faculty member. Conferences and papers as appropriate.

Prerequisites: WGS 201S and approval of instructor and chair of department

WGS 668 Internship (3-6 Credit Hours)

Course provides an opportunity to gain experience working in organizations and government agencies. Students' work should engage with women's issues at the local, regional, national, and/or global levels. Students must work for at least 50 hours per course credit.

Prerequisites: Graduate standing and instructor approval required

WGS 695 Topics in Women's, Gender, and Sexuality Studies (3 Credit Hours)

The advanced study of selected topics which permit small groups of qualified students to work on subjects of mutual interest under the direction of an instructor. Courses may not be offered regularly; when offered courses appear in the course schedule and are more fully described in information distributed to advisors.

WGS 696 Topics in Women's, Gender, and Sexuality Studies (1-3 Credit Hours)

The advanced study of topics which permit small groups of qualified students to work on subjects of mutual interest under the direction of an instructor. Courses may not be offered regularly; when offered, courses appear in the course schedule and are more fully described in information distributed to advisors.

WGS 697 Independent Study (1-3 Credit Hours)

Independent study of an interdisciplinary women's studies topics to be selected under the direction of a women's studies faculty member. Conferences and papers as appropriate.

Prerequisites: Graduate standing

WGS 698 Independent Study (3 Credit Hours)

Independent study of an interdisciplinary women's studies topics to be selected under the direction of a women's studies faculty member. Conferences and papers as appropriate.

Prerequisites: Graduate standing

WGS 715 Advanced Migration and Refugee Studies (3 Credit Hours)

This seminar course explores the international context of refugees and migrants from a humanitarian perspective. Global conditions that lead to forced migration are analyzed to inform a larger understanding of human displacement. Through analysis at the community, national, and international levels, participants will gain both in-depth content on this contemporary human rights topic and tools for application in a number of fields.

WGS 795 Topics in Women's, Gender, and Sexuality Studies (3 Credit Hours)

The advanced study of selected topics that permit small groups of qualified students to work on subjects of mutual interest under the direction of an instructor. Courses may not be offered regularly; when offered courses appear in the course schedule and are more fully described in information distributed to advisors.

Prerequisites: Instructor approval

WGS 797 Independent Study (1-3 Credit Hours)

Independent study of an interdisciplinary women's studies topic to be selected under the direction of a women's studies faculty member. Conferences and papers as appropriate.

Prerequisites: Graduate standing

WGS 815 Advanced Migration and Refugee Studies (3 Credit Hours)

This seminar course explores the international context of refugees and migrants from a humanitarian perspective. Global conditions that lead to forced migration are analyzed to inform a larger understanding of human displacement. Through analysis at the community, national, and international levels, participants will gain both in-depth content on this contemporary human rights topic and tools for application in a number of fields.

WGS 895 Topics in Women's, Gender, and Sexuality Studies (3 Credit Hours)

The advanced study of selected topics that permit small groups of qualified students to work on subjects of mutual interest under the direction of an instructor. Courses may not be offered regularly; when offered, courses appear in the course schedule and are more fully described in information distributed to advisors.

WGS 897 Independent Study (1-3 Credit Hours)

Independent study of an interdisciplinary women's and gender studies topic to be selected under the direction of a women's and gender studies faculty member. Conferences and papers as appropriate.

Prerequisites: Doctoral standing

WLC - World Languages Cultures

WLC 595 Topics in World Languages & Cultures (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: Permission of the instructor
