Bachelor of Science Ocean and Earth Science with a Major in Environmental Sciences (BS)

Richard Hale, Advisor

Students in the Ocean and Earth Science program focus on global systems that control environmental conditions on the planet. They also learn to develop solutions to complex environmental problems by working in interdisciplinary teams. All majors in the department complete courses in the basic sciences and mathematics and core courses in Earth systems science. Students majoring in Environmental Science complete a course-based research experience including both field work and laboratory analysis. In addition, students complete a suite of specialty courses specified in

each major. A minimum grade of C or higher in all major and prerequisite courses is required for graduation.

Ocean and Earth Science with a Major in Environmental Sciences

The environmental sciences major is designed for students broadly interested in earth and ocean sciences. Students in this major gain a solid background in basic sciences (e.g., chemistry, physics, math, and biology) while also taking courses in geology, oceanography, and atmospheric sciences. The major is also designed to allow students the freedom to focus their upper-level coursework across disciplinary fields related to the natural environment they find most compelling. Students in this major will be prepared for a wide range of future scientific pursuits (including graduate studies in appropriate fields), as well as careers that apply their interdisciplinary skills to policy development and interpretation. Specific employment opportunities include work in local, state, and federal government agencies, environmental consulting firms, and non-governmental organizations (NGOs).

Requirements

Lower-Division General Education

Written Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#written)	6
Oral Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#oral)	3
Mathematics (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#math)	3
Language and Culture (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#language)	0-6
Information Literacy and Research (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#information)	3
Human Behavior (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#behavior)	3
Human Creativity (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#creativity)	3
Interpreting the Past (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#interpret)	3
Literature (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#literature)	3
Philosophy and Ethics (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#philosophy)	3
The Nature of Science (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#nature)	8
Impact of Technology (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#impact)	3

Written Communication: grade of C or better required in both courses

Mathematics: MATH 211 or MATH 205

Information Literacy and Research: met in the major by OEAS 130G

The Nature of Science: CHEM 121N & CHEM 122N, CHEM 123N & CHEM 124N

Impact of Technology: met in the major by OEAS 220T

Upper-Division General Education

- Option A. Approved Disciplinary Minor (a minimum of 12 hours determined by the department), or second degree or second major.
- Option B: Interdisciplinary Minor (specifically 12 hours, 3 of which may be in the major)
- Option C. An approved Certification Program such as teaching licensure
- Option D. Two Upper-Division Courses from outside the College of Sciences and not required by the major (6 hours)

Requirements for Graduation

Requirements for graduation include the following:

- Minimum of 120 credit hours.
- Minimum of 30 credit hours overall and 12 credit hours of upper-level courses in the major program from Old Dominion University.
- Minimum overall cumulative grade point average of C (2.00) in all courses taken.
- Minimum overall cumulative grade point average of C (2.00) in all courses taken toward the major.
- Minimum overall cumulative grade point average of C (2.00) in all courses taken toward a minor.
- Completion of ENGL 110C, ENGL 211C or ENGL 231C, and the writing intensive (W) course in the major with a grade of C or better. The W course must be taken at Old Dominion University.
- Completion of Senior Assessment.

Environmental Sciences Major

General Education		
Complete lower-division requirements		35-42
Complete upper-division requirements (minimum of 6 credit hours)		6
Environmental Sciences		
OEAS 111N	Physical Geology	4
or OEAS 112N	Historical Geology	
OEAS 130G	Research Skills and Information Literacy for the Natural Sciences	3
BIOL 121N & BIOL 122N	General Biology I and General Biology I Lab	4
BIOL 123N & BIOL 124N	General Biology II and General Biology II Lab	4
PHYS 111N	Introductory General Physics	4
or PHYS 231N	University Physics I	
PHYS 112N	Introductory General Physics	4
or PHYS 232N	University Physics II	
OEAS 220T	Introduction to Meteorology	3
BIOL 291	Ecology	3
or OEAS 320	Sedimentology and Stratigraphy	
STAT 310	Introductory Data Analysis	3
OEAS 306	Oceanography	3
OEAS 307	Research Experience in Oceanography	3
OEAS 310	Global Earth Systems	4
OEAS 406	Matlab	1
GEOG 402	Geographic Information Systems	3
Upper-Division Electives (OEAS 250N or 300-400 Level OEAS courses excluding 302 and 468W) *		17
The following courses include a structured laboratory or field requirement:		
OEAS 250N	Natural Hazards and Disasters (L)	
OEAS 303	Paleontology (L)	
OEAS 315	Minerals and Rocks (L)	
OEAS 320	Sedimentology and Stratigraphy (L; can be used as an elective only if not taken as required course above)	
OEAS 420	Hydrogeology (L)	
OEAS 440	Biological Oceanography (L)	
OEAS 452	Microbial Ecology of the Oceans (L)	
OEAS 453W	Marine Molecular Ecology (L)	
Total Credit Hours		104-111

* For these upper-division courses please pay careful attention to prerequisites that may not necessarily also be required courses in the major. A minimum of two courses

must have a structured laboratory or field requirement (indicated by L). Up to 4 credits of 200-level courses may be used to satisfy this upper-division requirement. Up to six credit hours of electives from departments outside of Ocean and Earth Sciences on an approved electives list can be used to satisfy this requirement (see the Chief Departmental Advisor for details). At least one writing-intensive "W" course must be taken within the major.

Elective Credit

Elective credit may be needed to meet the minimum requirement of 120 credit hours.

Honors Program in Ocean and Earth Science

Students admitted by the faculty to the Ocean and Earth science honors program engage in supervised individual study in areas of their interest. Honors students must complete all courses required by the department with a minimum grade point average of 3.50 and a total of at least three credits in one of the following courses:

OEAS 487	Honors Research in Ocean and Earth Sciences	1-3
OEAS 497	Special Problems and Research	1-3

Degree Program Guide

The Degree Program Guide is a suggested curriculum to complete this degree program in four years. It is just one of several plans that will work and is presented only as broad guidance to students. Each student is strongly encouraged to develop a customized plan in consultation with their academic advisor. Additional information can also be found in Degree Works.

BA or BS to MBA (Master of Business Administration) Linked Program

The linked BA/MBA or BS/MBA program is an early entry to the MBA program of study. The early-entry program is designed for well qualified non-business undergraduate ODU students to start their MBA program prior to completing their undergraduate degree. Well qualified non-business undergraduate students may take MBA-level courses as early as three semesters prior to graduation and count up to 12 graduate credits

toward their undergraduate degree. Students participating in the early-entry program must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree). Early-entry program students should carefully consider their undergraduate degree program requirements when planning their course of study. Students in the early-entry program work in close consultation with the MBA Program Office and should refer to information in the Strome College of Business section in the graduate catalog (<http://catalog.odu.edu/graduate/stromecollegeofbusiness/>) to develop an individualized plan of study based on the required coursework.

BA or BS to MPA (Master of Public Administration) Linked Program

The linked BA/MPA or BS/MPA program provides qualified Old Dominion University undergraduate students with the opportunity to earn a master's degree in public administration while taking credits in the MPA program as an undergraduate student. The program is designed for highly motivated students with the desire to immediately continue their education after the bachelor's degree. The program is especially relevant to individuals seeking to work (or currently working) in the public or non-profit sectors, but is suitable for students from any undergraduate major. Graduate courses may be taken during the fall and spring semester of the student's senior undergraduate year. Up to 12 graduate credits can count toward both the undergraduate and graduate degree and can meet upper-level General Education requirements. After receiving the undergraduate degree, a student will continue with the MPA program, taking MPA courses until completing the required 39 credit hours. Students in the linked program must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree).

Requirements for admission to the graduate program can be found in the School of Public Service section of the Graduate Catalog (<http://catalog.odu.edu/graduate/business/public-service/>). For additional information, please contact the School of Public Service in the Strome College of Business.

Bachelor of Science Ocean and Earth Science with a Major in Geology (BS)

Richard Hale, Advisor

Students in the Ocean and Earth Science program focus on global systems that control environmental conditions on the planet. They also learn to develop solutions to complex environmental problems by working in interdisciplinary teams. All majors in the department complete courses in the basic sciences and mathematics and core courses in Earth systems science. Students majoring in Geology complete a course-based research experience including both field work and laboratory analysis. In addition, students complete a suite of specialty courses specified in each major. A minimum grade of C or higher in all major and prerequisite courses is required for graduation.

Ocean and Earth Science with a Major in Geology

The geology major is designed for students with a wide range of professional goals in the sciences, engineering, business, and the arts. Students considering graduate work or employment in pure and applied fields of geology, including environmental geology, geological oceanography, hydrogeology, marine geology, geobiology, geophysics, and geochemistry, should build their backgrounds to support certification as a professional geologist (see later information). Students with a strong interest in geological applications of geographic information systems (GIS) and remote sensing tools should consider the geology major with a minor in geography; the certificate program in spatial analysis of coastal environments (see later description) also emphasizes this area of study.

Bachelor of Science Ocean and Earth Science with a Major in Marine Science Technology (BS)

Richard Hale, Advisor

Students in the Ocean and Earth Science program focus on global systems that control environmental conditions on the planet. They also learn to develop solutions to complex environmental problems by working in interdisciplinary teams. All majors in the department complete courses in the basic sciences and mathematics and core courses in Earth systems science. Students majoring in Marine Science Technology complete a course-based research experience including both field work and laboratory analysis. In addition, students complete a suite of specialty courses specified in each major. A minimum grade of C or higher in all major and prerequisite courses is required for graduation.

Ocean and Earth Science with a Major in Marine Science Technology

The marine science technology major is designed for students interested in the more practical and technical side of oceanography. Students in this major will gain practical skills in data acquisition and processing, field operations, and instrument design, assembly, operation, and maintenance. Whereas other majors in ocean and earth science emphasize more theoretical aspects of these fields, this major focuses on hands-on skills. Upon graduation, students in this major will be able to work closely with scientists, researchers, and engineers on wide ranging projects in the environmental science and technology fields. For example, these include potential job opportunities associated with Virginia's offshore wind resource development, which involve collecting and analyzing meteorological, oceanographic and environmental data, upgrading port and logistics facilities, and ensuring this development is compatible with other ocean uses.

Up to 4 credits of 200-level courses may be used to satisfy this upper-division requirement. Up to six credit hours of electives from departments outside of Ocean and Earth Sciences can be used to satisfy this requirement (see the Chief Departmental Advisor for the list of these approved electives). At least one writing-intensive "W" course must be taken within the major.

Elective Credit

Elective credit may be needed to meet the minimum requirement of 120 credit hours.

Honors Program in Ocean and Earth Science

Students admitted by the faculty to the Ocean and Earth science honors program engage in supervised individual study in areas of their interest. Honors students must complete all courses required by the department with a minimum grade point average of 3.50 and a total of at least three credits in one of the following courses:

OEAS 487	Honors Research in Ocean and Earth Sciences	1-3
OEAS 497	Special Problems and Research	1-3

Degree Program Guide

The Degree Program Guide is a suggested curriculum to complete this degree program in four years. It is just one of several plans that will work and is presented only as broad guidance to students. Each student is strongly encouraged to develop a customized plan in consultation with their academic advisor. Additional information can also be found in Degree Works.

Course	Title	Credit Hours
Freshman		
Fall		
ENGL 110C	English Composition (C or better required)	3

BA or BS to MBA (Master of Business Administration) Linked Program

The linked BA/MBA or BS/MBA program is an early entry to the MBA program of study. The early-entry program is designed for well qualified non-business undergraduate ODU students to start their MBA program prior to completing their undergraduate degree. Well qualified non-business undergraduate students may take MBA-level courses as early as three semesters prior to graduation and count up to 12 graduate credits toward their undergraduate degree. Students participating in the early-entry program must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree). Early-entry program students should carefully consider their undergraduate degree program requirements when planning their course of study. Students in the early-entry program work in close consultation with the MBA Program Office and should refer to information in the Strome College of Business section in the graduate catalog (<http://catalog.odu.edu/graduate/stromecollegeofbusiness/>) to develop an individualized plan of study based on the required coursework.

BA or BS to MPA (Master of Public Administration) Linked Program

The linked BA/MPA or BS/MPA program provides qualified Old Dominion University undergraduate students with the opportunity to earn a master's degree in public administration while taking credits in the MPA program as an undergraduate student. The program is designed for highly motivated students with the desire to immediately continue their education after the bachelor's degree. The program is especially relevant to individuals seeking to work (or currently working) in the public or non-profit sectors, but is suitable for students from any undergraduate major. Graduate courses may be taken during the fall and spring semester of the student's senior undergraduate year. Up to 12 graduate credits can count toward both the undergraduate and graduate degree and can meet upper-level General Education requirements. After receiving the undergraduate degree, a student will continue with the MPA program, taking MPA courses until completing the required 39 credit hours. Students in the linked program must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree).

Requirements for admission to the graduate program can be found in the School of Public Service section of the Graduate Catalog (<http://catalog.odu.edu/graduate/business/public-service/>). For additional information, please contact the School of Public Service in the Strome College of Business.

Bachelor of Science Ocean and Earth Science with a Major in Middle School Science Education (6-8) (BS)

Richard Hale, Advisor

Students in the Ocean and Earth Science program focus on global systems that control environmental conditions on the planet. They also learn to develop solutions to complex environmental problems by working in interdisciplinary teams. All majors in the department complete courses in the basic sciences and mathematics and core courses in Earth systems science, as well as a suite of specialty courses specified in each major. A minimum grade of C or higher in all major and prerequisite courses is required for graduation.

Ocean and Earth Science with a Major in Middle School Science Education (6-8)

The middle school science education major is designed for students preparing to teach middle school science. This program meets the requirements for teacher licensure in Virginia as established by the Virginia Board of Education licensure regulations.

Due to changing University requirements, national accreditation standards, and the Virginia Board of Education licensure regulations, the teacher preparation programs in the College of Sciences are under constant revision. Any changes resulting from these factors supersede the program requirements described in this Catalog. Students are encouraged to obtain current program information from their advisors and the Office of Clinical Experiences website at www.odu.edu/oce (<http://www.odu.edu/oce/>).

Admission

Students must first declare Ocean and Earth Science with a major in middle school science education with the chief departmental advisor. All students must apply for and be admitted into the approved middle school science education program. Students must meet the required criteria for admission by earning the minimum required grade point averages (GPA).

Required grade point averages (GPA)

- A cumulative GPA of 2.75 is required.
- A major/content GPA of 2.75 is required - all Ocean and Earth Science courses and all other science and mathematics content courses must be passed with a grade of C (2.0) or higher.
- A professional education GPA of 2.75 is required – all professional education courses must be passed with a grade of C- or higher.

Although students may enroll in a limited number of education courses, students must be admitted into the approved Earth science teacher preparation program prior to enrolling in any instructional strategies practicum education course. Students must also meet with an education advisor in the Office of Clinical Experiences.

Continuance

Students must maintain a cumulative GPA of 2.75, a major/content GPA of 2.75 and a professional education GPA of 2.75. Ocean, Earth and Atmospheric Sciences content courses must be passed with a grade of C (2.0) or higher. Courses in the professional education core must be completed with a grade of C- or higher for continuance. A professional education GPA of 2.75 is required for continuance. Students must take and pass the Praxis Subject Assessment, Earth and Spaces Sciences content knowledge (formerly Praxis II) prior to or while enrolled in the instructional

strategies course. All assessments must be passed prior to the start of the Teacher Candidate Internship Orientation session.

Background Clearance Requirement

Old Dominion University requires a background clearance check of candidates interested in many of the professional education programs. Professional education programs have several field experiences that are required for continuance and graduation from the program. The background clearance must be successfully completed prior to a field experience placement. Candidates will be provided a field experience placement when the background check process is completed with resolution of any issues. The process to complete the ODU clearance background check is located at: <https://www.odu.edu/clinical-experiences/placement/background-checks> (<https://www.odu.edu/clinical-experiences/placement/background-checks/>). The ODU clearance process includes: an FBI fingerprint, a child protective service/social service review, and a Virginia State Police sex offender registry review. Candidates interested in the professional education programs are advised to complete this clearance process immediately upon entry into the program since the clearance process takes a minimum of eight weeks to complete.

Virginia Board of Education Prescribed Assessments for Licensure

- Praxis Subject Assessment, Earth and Spaces Sciences content knowledge (test code: 5442) – passing score of 147 required.

To review more information on the Virginia Board of Education prescribed assessments visit the Office of Clinical Experiences website, www.odu.edu/oce (<http://www.odu.edu/oce/>).

Requirements

Lower-Division General Education

Written Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#written)	6

Impact of Technology (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#impact)	3

Written Communication: grade of C or better required in both courses

Oral Communication: met in the major by OEAS 444.

Mathematics: MATH 211 or MATH 205

Information Literacy and Research: met in the major by OEAS 130G

The Nature of Science: CHEM 121N & CHEM 122N, CHEM 123N & CHEM 124N

Impact of Technology: met in the major by OEAS 220T

Upper-Division General Education

The professional education core satisfies the Upper-Division General Education requirement.

Requirements for Graduation

Requirements for graduation include completion of ENGL 110C, ENGL 211C or ENGL 231C, and the writing intensive (W) course in the major with a grade of C or better, completion of the Senior Assessment, a minimum cumulative 2.75 GPA, in the major area, and in the professional education core, with no grade less than a C in the major and C- in the professional education core; successful completion of the Teacher Candidate Internship and a minimum of 121 credit hours, which must include both a minimum of 30 credit hours overall and 12 credit hours in upper-level courses in the major program from Old Dominion University. Note that a C (2.0) must be earned in all Ocean and Earth Science courses used to satisfy departmental requirements.

Licensure requirements also include certificate of completion in First Aid/AED/CPR, Dyslexia Awareness Training, Child Abuse and Neglect Recognition and Intervention Training, and Regulations Governing the Use of Restraint and Seclusion in Elementary and Secondary Schools, and Cultural Competence Training.

Professional Education Core Courses

STEM 103	Foundations of STEM Teaching: An Inquiry-Based Approach	2
STEM 201	Knowing and Learning in STEM Education	3
STEM 202	Classroom Interactions in STEM Education	3
STEM 401	Project Based Instruction in STEM Education	3
STEM 402	Perspectives on STEM	3
STEM 485	Apprentice Teaching	9
OEAS 468W	Research Methods in Math and Sciences	3

Bachelor of Science Ocean and Earth Science with a Major in Oceanography (BS)

Richard Hale, Advisor

Students in the Ocean and Earth Science program focus on global systems that control environmental conditions on the planet. They also learn to develop solutions to complex environmental problems by working in interdisciplinary teams. All majors in the department complete courses in the basic sciences and mathematics and core courses in Earth systems science. Students majoring in Oceanography complete a course-based research experience including both field work and laboratory analysis. In addition, students complete a suite of specialty courses specified in each major. A minimum grade of C or higher in all major and prerequisite courses is required for graduation.

Ocean and Earth Science with a Major in Oceanography

The Oceanography major is designed for students considering graduate work or employment in the pure and applied fields of oceanography. Students in the Oceanography major are strongly encouraged to minor in either biology, chemistry, or applied mathematics, according to their interest in graduate school and future career plans.

Requirements

Written Communication: grade of C or better required in both courses

Mathematics: MATH 211.

Impact of Technology: met in the major by OEAS 220T

Information Literacy and Research: met in the major by OEAS 130G

The Nature of Science: CHEM 121N & CHEM 122N, CHEM 123N & CHEM 124N

Upper-Division General Education

- Option A. Approved Disciplinary Minor (a minimum of 12 hours determined by the department), or second degree or second major.
- Option B: Interdisciplinary Minor (specifically 12 hours, 3 of which may be in the major)
- Option C. An approved Certification Program such as teaching licensure
- Option D. Two Upper-Division Courses from outside the College of Sciences and not required by the major (6 hours)

Requirements for Graduation

Requirements for graduation include the following:

- Minimum of 120 credit hours.
- Minimum of 30 credit hours overall and 12 credit hours of upper-level courses in the major program from Old Dominion University.
- Minimum overall cumulative grade point average of C (2.00) in all courses taken.
- Minimum overall cumulative grade point average of C (2.00) in all courses taken toward the major.
- Minimum overall cumulative grade point average of C (2.00) in all courses taken toward a minor.
- Completion of ENGL 110C, ENGL 211C or ENGL 231C, and the writing intensive (W) course in the major with a grade of C or better. The W course must be taken at Old Dominion University.
- Completion of Senior Assessment.

OEAS 451W	Data Collection and Analysis in Oceanography	4
Select two of the following Oceanography core courses:		6-7
OEAS 405	Physical Oceanography	
OEAS 410	Chemical Oceanography	
OEAS 425	Marine Geology	
OEAS 440	Biological Oceanography	

Upper-division electives outside Ocean and Earth Sciences

Students must take 9 credits at the 300-400 level in a science, math, or engineering discipline outside of the OES department (i.e., Chemistry, Biology, Physics, Engineering, Math, Geography, Computer Science). Select 200-level courses can be accepted with prior approval of the Chief Departmental Advisor.

Upper-division electives within Ocean and Earth Science

Students must take 9 or more credits at the 300-400 level in the OES department (excluding OEAS 302 and OEAS 468W). These can include any of the oceanography core courses (if not already taken as an elective above). Students interested in graduate school should strongly consider independent research (OEAS 487 or OEAS 497), and should consult with their academic advisor for additional information.

Total Credit Hours **114-121**

Elective Credit

Elective credit may be needed to meet the minimum requirement of 120 credit hours.

Honors Program in Ocean and Earth Science

Students admitted by the faculty to the Ocean and Earth science honors program engage in supervised individual study in areas of their interest. Honors students must complete all courses required by the department with a minimum grade point average of 3.50 and a total of at least three credits in one of the following courses:

OEAS 487	Honors Research in Ocean and Earth Sciences	1-3
OEAS 497	Special Problems and Research	1-3

Bachelor of Science Ocean and Earth Science with a Major in Secondary Earth Science Education (6-12) (BS)

Bachelor of Science—Ocean and Earth Science Major

Richard Hale, Advisor

Students in the Ocean and Earth Science program focus on global systems that control environmental conditions on the planet. They also learn to develop solutions to complex environmental problems by working in interdisciplinary teams. All majors in the department complete courses in the basic sciences and mathematics and core courses in Earth systems science, as well as a suite of specialty courses specified in each major. A minimum grade of C or higher in all major and prerequisite courses is required for graduation.

Ocean and Earth Science with a Major in Secondary Earth Science Education (6-12)

The secondary Earth science education major is designed for students preparing to teach Earth science in secondary schools. This program meets the requirements for teacher licensure in Virginia as established by the Virginia Board of Education licensure regulations.

Due to changing University requirements, national accreditation standards, and the Virginia Board of Education licensure regulations, the teacher preparation programs in the College of Sciences are under constant revision. Any changes resulting from these factors supersede the program requirements described in this Catalog. Students are encouraged to obtain current program information from their advisors and the Office of Clinical Experiences website at www.odu.edu/oce (<http://www.odu.edu/oce/>).

Admission

Students must first declare Ocean and Earth Science with a major in secondary Earth science education with the chief departmental advisor. All students must apply for and be admitted into the approved secondary Earth science education program. Students must meet the required criteria for admission by earning the minimum required grade point averages (GPA).

Required grade point averages (GPA)

- A cumulative GPA of 2.75 is required.
- A major/content GPA of 2.75 is required - all Ocean, Earth and Atmospheric Sciences courses and all other science and mathematics content courses must be passed with a grade of C (2.0) or higher.
- A professional education GPA of 2.75 is required – all professional education courses must be passed with a grade of C- or higher.

Although students may enroll in a limited number of education courses, students must be admitted into the approved Earth science teacher preparation program prior to enrolling in any instructional strategies practicum education course. Students must also meet with an education advisor in the Office of Clinical Experiences.

Continuance

Students must maintain a cumulative GPA of 2.75, a major/content GPA of 2.75 and a professional education GPA of 2.75. Ocean and Earth Science content courses must be passed with a grade of C (2.0) or higher. Courses in the professional education core must be completed with a grade of C- or higher for continuance. A professional education GPA of 2.75 is required for continuance. Students must take and pass the Praxis Subject Assessment, Earth and Spaces Sciences content knowledge (formerly Praxis II) prior to or while enrolled in the instructional strategies course. All assessments must be passed prior to the start of the Teacher Candidate Internship Orientation session.

Background Clearance Requirement

Old Dominion University requires a background clearance check of candidates interested in many of the professional education programs. Professional education programs have several field experiences that are required for continuance and graduation from the program. The background clearance must be successfully completed prior to a field experience placement. Candidates will be provided a field experience placement when the background check process is completed with resolution of any issues. The process to complete the ODU clearance background check is located at: <https://www.odu.edu/clinical-experiences/placement/background-checks> (<https://www.odu.edu/clinical-experiences/placement/background-checks/>). The ODU clearance process includes: an FBI fingerprint, a child protective service/social service review, and a Virginia State Police sex offender registry review. Candidates interested in the professional education programs are advised to complete this clearance process immediately upon entry into the program since the clearance process takes a minimum of eight weeks to complete.

Virginia Board of Education Prescribed Assessments for Licensure

- Praxis Subject Assessment, Earth and Spaces Sciences content knowledge (test code: 5572) – passing score of 154 required.

To review more information on the Virginia Board of Education prescribed assessments visit the Office of Clinical Experiences website, www.odu.edu/oce (<http://www.odu.edu/oce/>).

Requirements

Lower-Division General Education

Written Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#written)	6
Oral Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#oral)	3
Mathematics (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#math)	3
Language and Culture (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#language)	0-6
Information Literacy and Research (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#information)	3
Human Behavior (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#behavior)	3
Human Creativity (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#creativity)	3
Interpreting the Past (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#interpret)	3
Literature (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#literature)	3
Philosophy and Ethics (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#philosophy)	3
The Nature of Science (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#nature)	8
Impact of Technology (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#impact)	3

Written Communication: grade of C or better required in both courses

Oral Communication: met in the major by OEAS 444.

Mathematics: MATH 211 or MATH 205

Information Literacy and Research: met in the major by OEAS 130G

The Nature of Science: CHEM 121N & CHEM 122N, CHEM 123N & CHEM 124N

Impact of Technology: met in the major by OEAS 220T

Upper-Division General Education

The professional education core satisfies the Upper-Division General Education requirement.

Requirements for Graduation

Requirements for graduation include completion of ENGL 110C, ENGL 211C or ENGL 231C, and the writing intensive (W) course in the major with a grade of C or better, completion of the Senior Assessment, a minimum cumulative 2.75 GPA, in the major area, and in the professional education core, with no grade less than a C in the major and C- in the professional education core; successful completion of the Teacher Candidate Internship and a minimum of 120 credit hours, which must include both a minimum of 30 credit hours overall and 12 credit hours in upper-level courses in the major program from Old Dominion University. Note that a C (2.0) must be earned in all Ocean and Earth Science courses used to satisfy departmental requirements.

Licensure requirements also include certificate of completion in First Aid/AED/CPR, Dyslexia Awareness Training, Child Abuse and Neglect Recognition and Intervention Training, and Regulations Governing the Use of Restraint and Seclusion in Elementary and Secondary Schools, and Cultural Competence Training.

Professional Education Core

STEM 103	Foundations of STEM Teaching: An Inquiry-Based Approach	2
STEM 201	Knowing and Learning in STEM Education	3
STEM 202	Classroom Interactions in STEM Education	3
STEM 401	Project Based Instruction in STEM Education	3
STEM 402	Perspectives on STEM	3
STEM 485	Apprentice Teaching	9
OEAS 468W	Research Methods in Math and Sciences	3
Total Credit Hours		26

Secondary Earth Science Education Major (6-12)

General Education

Complete lower-division requirements	32-39

Complete upper-division requirements (met in the major by the professional education core)

Professional Education Core

Complete professional education core requirements	26

Earth Science Education

BIOL 121N & BIOL 122N	General Biology I and General Biology I Lab	4
STAT 310	Introductory Data Analysis	3
PHYS 111N & PHYS 112N	Introductory General Physics and Introductory General Physics	8
OEAS 111N	Physical Geology	4
OEAS 112N	Historical Geology	4
OEAS 130G	Research Skills and Information Literacy for the Natural Sciences	3
OEAS 220T	Introduction to Meteorology	3
OEAS 303	Paleontology	3
OEAS 306	Oceanography	3
OEAS 310	Global Earth Systems	4
OEAS 315	Minerals and Rocks	4
OEAS 320	Sedimentology and Stratigraphy	4
OEAS 344W	Geomorphology	3
ASTP 408	Astronomy for Teachers	3

OEAS 444	Communicating Ocean Science to Informal Audiences (satisfies oral communication requirement)	3

Total Credit Hours	114-121

Elective Credit

Elective credit may be needed to meet the minimum requirement of 120 credit hours.

Honors Program in Ocean and Earth Science

Students admitted by the faculty to the Ocean and Earth science honors program engage in supervised individual study in areas of their interest. Honors students must complete all courses required by the department with a minimum grade point average of 3.50 and a total of at least three credits in one of the following courses:

OEAS 487	Honors Research in Ocean and Earth Sciences	1-3
OEAS 497	Special Problems and Research	1-3

Degree Program Guide

The Degree Program Guide is a suggested curriculum to complete this degree program in four years. It is just one of several plans that will work and is presented only as broad guidance to students. Each student is strongly encouraged to develop a customized plan in consultation with their academic advisor. Additional information can also be found in Degree Works.

BA or BS to MBA (Master of Business Administration) Linked Program

The linked BA/MBA or BS/MBA program is an early entry to the MBA program of study. The early-entry program is designed for well qualified non-business undergraduate ODU students to start their MBA program prior to completing their undergraduate degree. Well qualified non-business undergraduate students may take MBA-level courses as early as three semesters prior to graduation and count up to 12 graduate credits toward their undergraduate degree. Students participating in the early-

entry program must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree). Early-entry program students should carefully consider their undergraduate degree program requirements when planning their course of study. Students in the early-entry program work in close consultation with the MBA Program Office and should refer to information in the Strome College of Business section in the graduate catalog (<http://catalog.odu.edu/graduate/stromecollegeofbusiness/>) to develop an individualized plan of study based on the required coursework.

BA or BS to MPA (Master of Public Administration) Linked Program

The linked BA/MPA or BS/MPA program provides qualified Old Dominion University undergraduate students with the opportunity to earn a master's degree in public administration while taking credits in the MPA program as an undergraduate student. The program is designed for highly motivated students with the desire to immediately continue their education after the bachelor's degree. The program is especially relevant to individuals seeking to work (or currently working) in the public or non-profit sectors, but is suitable for students from any undergraduate major. Graduate courses may be taken during the fall and spring semester of the student's senior undergraduate year. Up to 12 graduate credits can count toward both the undergraduate and graduate degree and can meet upper-level General Education requirements. After receiving the undergraduate degree, a student will continue with the MPA program, taking MPA courses until completing the required 39 credit hours. Students in the linked program must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree).

Requirements for admission to the graduate program can be found in the School of Public Service section of the Graduate Catalog (<http://catalog.odu.edu/graduate/business/public-service/>). For additional information, please contact the School of Public Service in the Strome College of Business.

Minor Ocean and Earth Science Minor

Juniors and seniors with declared majors in biology, biochemistry, chemistry, computer science, engineering, mathematics, or physics are eligible to enter the minor program in Ocean and Earth Science. Specific course prerequisites will be strictly enforced and students with majors in other disciplines should consult with the chief departmental advisor in the Department of Ocean and Earth Sciences before applying to the program. Applicants must have already declared a major and have a minimum GPA of 2.00. Students wishing to pursue a minor in Ocean and Earth Science may elect to emphasize any aspect of biological, chemical, physical, or geological science from course offerings available to Ocean and Earth Science majors, and must complete 12 credit hours of OEAS coursework at the 300 and/or 400 level. The following courses do not satisfy the minor requirements: OEAS 302, OEAS 402, and OEAS 426.

For completion of a minor, a student must have a C or better in each course taken for the minor including prerequisites and a minimum overall cumulative grade point average of 2.00 in all courses specified as a requirement for the minor exclusive of lower-level courses and prerequisite courses. A minimum of six hours in upper-level courses in the minor requirement must be completed through courses offered by Old Dominion University.

Certificate

Spatial Analysis of Coastal Environments Certificate

Certificate in Spatial Analysis of Coastal Environments

The certificate in spatial analysis of coastal environments provides an interdisciplinary program for students wishing to pursue careers in coastal management or research, remote sensing, or geographic information systems (GIS) applications. Rendered upon completion of the requirements, the certificate is an academic affidavit comprised of courses in geography and ocean and earth science and is administered by the two departments. Students must take courses in the areas listed below and complete them with a cumulative GPA of 3.00 or higher and no grade below a C (2.00). Students must complete a minimum of six hours in upper-level courses required for the certificate through courses offered by Old Dominion University.

The certificate is available to postgraduate professionals who meet the requirements. Students with comparable professional experience may be able to show competence in selected courses through examination.

Students seeking graduate certification should refer to the Graduate Catalog.

Requirements

Core Courses

GEOG 404	Digital Techniques for Remote Sensing	3
GEOG 462	Advanced Spatial Analysis	3

Interpretive Analysis Courses

Select two of the following:

BIOL 404	Conservation Biology and Sustainable Development	
GEOG 420	Marine Geography	
GEOG 422W	Coastal Geography	
GEOG 490	Applied Cartography/GIS *	
GEOG 495	Topics in Geography *	
OEAS 306	Oceanography	
OEAS 344W	Geomorphology	
OEAS 495	Special Topics *	

Capstone Seminar

GEOG/OEAS 419	Spatial Analysis of Coastal Environments	3

Total Credit Hours	15

* Advanced approval required

Physics

Web Site: <http://www.odu.edu/physics> (<http://www.odu.edu/physics/>)

Sebastian Kuhn, Chair

Perry Nerem, Chief Departmental Advisor

Stephen Bueltmann, Associate Departmental Advisor

The Department of Physics offers the following majors: physics, physics-professional, secondary physics education (6-12), and astrophysics. In addition, dual degrees with physics and electrical engineering and physics with the Master of Business Administration are offered.

Senior Thesis

An important feature of all majors is the Senior Thesis, which is based on individual research done under the supervision of a faculty advisor. The Senior Thesis is a capstone experience that gives a student the opportunity to apply knowledge and skills acquired in the classroom to real-life research problems in physics. This research can be done either in on-campus laboratories and facilities or at other scientific institutions in the region

where departmental faculty members perform research, such as the Thomas Jefferson National Accelerator Facility (including the Applied Research Center) or the Langley Research Center of NASA. On completion of the project, the student must prepare a written final report and make an oral presentation of the results to the department. The senior thesis can be completed in one semester, by taking PHYS 499W, or in two semesters, by taking the PHYS 489W & PHYS 490W sequence.

Advanced Placement

Advanced placement credit is awarded to students who earn qualifying scores on AP and IB subject examinations. See the equivalency charts on the ODU website at <https://www.odu.edu/academics/academic-records/score-analysis/ap-ib> (<https://www.odu.edu/academics/academic-records/score-analysis/ap-ib/>).

Advanced placement credit for courses other than PHYS 111N-PHYS 112N and PHYS 231N-PHYS 232N may be received on the basis of examinations administered by the Department of Physics. Permission to take such an examination must be obtained from the chief departmental advisor. Students may also refer to the Policy on Prior Learning Assessment Credit Options at the Undergraduate Level found in this Catalog.

Clifford L. and Lillian R. Adams Scholarship

The Department of Physics selects one or more students each year to receive the Clifford L. and Lillian R. Adams Scholarship. The recipient must be a declared physics major and may be an entering freshman, a transfer student, or a continuing student. Selection is based on a student's academic record, relevant test scores, and recommendations. The award is renewable.

Programs

Bachelor of Science Programs

- Physics (BS) (p. 757)
- Physics and Master of Business Administration (BS, MBA) (p. 770)
- Physics with a Major in Astrophysics (BS) (p. 760)
- Physics with a Major in Physics and Electrical Engineering (BS, BSEE) (p. 764)
- Physics with a Major in Physics-Professional (BS) (p. 762)
- Physics with a Major in Secondary Physics Education (6-12) (BS) (p. 767)

Minor Program

- Physics Minor (p. 760)

Bachelor of Science Physics (BS)

The Physics major is designed primarily for students preparing to do graduate study in physics and related fields or for students preparing to work professionally upon completion of the BS degree in various technical fields requiring the strongest preparation in physics.

Requirements

Lower-Division General Education

Written Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#written)	6
Oral Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#oral)	3
Mathematics (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#math)	3

The Nature of Science (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#nature)	8
Impact of Technology (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#impact)	3

Mathematics: satisfied by the major

Information Literacy and Research: CS 120G or CS 121G or OEAS 130G

Nature of Science: satisfied by the major

Upper-Division General Education

- Option A. Approved Disciplinary Minor (a minimum of 12 hours determined by the department), or second degree or second major.
- Option B: Interdisciplinary Minor (specifically 12 hours, 3 of which may be in the major)
- Option C. An approved Certification Program such as teaching licensure
- Option D. Two Upper-Division Courses from outside the College of Sciences and not required by the major (6 hours)

Requirements for Graduation

All majors for the BS degree in physics require completion of a minimum of 120 credit hours (150 credit hours for the dual degree in physics and electrical engineering and the dual degree in physics and the Master of Business Administration), which must include both a minimum of 30 credit hours overall and 12 credit hours in upper-level courses in the major program from Old Dominion University, completion of ENGL 110C, ENGL 211C or ENGL 231C, and the writing intensive (W) course in the major with a grade of C or better, and Senior Assessment. Additionally, physics majors require completion of the Physics Exit Exam with a minimum score of 20th percentile, and the astrophysics major requires completion of the Astrophysics Exit Exam with a minimum score of 20th percentile. Additional hours may be required to meet the foreign language requirement. All majors require a minimum grade of C in PHYS 261N-PHYS 262N, PHYS 231N-PHYS 232N, or PHYS 226N-PHYS 227N. Except for the secondary physics education major, physics majors require a minimum cumulative grade point average of 2.00 overall and in the major. The secondary physics education major requires a minimum 2.75 grade point average overall, in the major, and in the professional education core, with no grade less than a C- in the major and professional education core. The professional education core satisfies the upper-level general education requirement.

Total Credit Hours		117-123

* Grade of C or better required in PHYS 499W or both PHYS 489W and PHYS 490W

** At least one three-credit course must be at the 400-level.

Elective Credit

Elective credit may be needed to meet the minimum requirement of 120 credit hours.

BS Degree with Honors

Qualified students may receive the BS degree with honors (to be noted on their diplomas) by completing specified additional requirements. At the time of application for this designation, a student must have a GPA of 3.50 or higher in physics, a GPA of 3.25 or higher overall, must have completed two contract honors courses, and must have completed 60 credit hours (of which at least 54 must be in grade-point graded courses) at Old Dominion University. (Contract honors courses are specialized courses of individual study under the direct supervision of a professor. Permission to take these courses is granted jointly by the Department of Physics and the Honors College.)

Degree Program Guide

The Degree Program Guide is a suggested curriculum to complete this degree program in four years. It is just one of several plans that will work and is presented only as broad guidance to students. Each student is strongly encouraged to develop a customized plan in consultation with their academic advisor. Additional information can also be found in Degree Works.

Minor Physics Minor

Requirements

PHYS 231N-PHYS 232N or PHYS 261N-PHYS 262N or PHYS 226N-PHYS 227N must be completed as prerequisites for the minor in physics and are not included in the calculation of the grade point average for the minor. The minor in physics requires completion of all courses specified as a requirement for the minor, with an overall cumulative grade point average of 2.00 or better in these courses exclusive of 100/200 level courses and prerequisite courses.

PHYS 319	Analytical Mechanics	3
PHYS 323	Modern Physics	3
Two 300 or 400-level PHYS courses		6
Total Credit Hours		12

Students must complete a minimum of six credit hours of 300-level or 400-level PHYS courses in the minor requirement through courses offered by Old Dominion University. Up to three credits can be in Independent Study courses, with approval of the chief departmental advisor. Any substitutions must be approved in writing by the chief departmental advisor.

Bachelor of Science Physics with a Major in Astrophysics (BS)

The Bachelor of Science in physics with a major in astrophysics is designed primarily for students preparing to do graduate study in astrophysics and related fields.

Requirements

Lower-Division General Education

Written Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#written)	6
Oral Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#oral)	3
Mathematics (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#math)	3
Language and Culture (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#language)	0-6
Information Literacy and Research (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#information)	3
Human Behavior (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#behavior)	3
Human Creativity (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#creativity)	3
Interpreting the Past (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#interpret)	3
Literature (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#literature)	3

Philosophy and Ethics (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#philosophy)	3
The Nature of Science (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#nature)	8
Impact of Technology (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#impact)	3

Mathematics: Satisfied by the major

Information Literacy and Research: CS 120G or CS 121G or OEAS 130G

Nature of Science: satisfied by the major

Upper-Division General Education

- Option A. Approved Disciplinary Minor (a minimum of 12 hours determined by the department), or second degree or second major.
- Option B: Interdisciplinary Minor (specifically 12 hours, 3 of which may be in the major)
- Option C. An approved Certification Program such as teaching licensure
- Option D. Two Upper-Division Courses from outside the College of Sciences and not required by the major (6 hours)

Requirements for Graduation

All majors for the BS degree in physics require completion of a minimum of 120 credit hours (150 credit hours for the dual degree in physics and electrical engineering and the dual degree in physics and the Master of Business Administration), which must include both a minimum of 30 credit hours overall and 12 credit hours in upper-level courses in the major program from Old Dominion University, completion of ENGL 110C, ENGL 211C or ENGL 231C, and the writing intensive (W) course in the major with a grade of C or better, and Senior Assessment. Additionally, physics majors require completion of the Physics Exit Exam with a minimum score of 20th percentile, and the astrophysics major requires completion of the Astrophysics Exit Exam with a minimum score of 20th percentile. Additional hours may be required to meet the foreign language requirement. All majors require a minimum grade of C in PHYS 261N-PHYS 262N, PHYS 231N-PHYS 232N, or PHYS 226N-PHYS 227N. Except for the secondary physics education major, physics majors require a minimum cumulative grade point average of 2.00 overall and in the major. The secondary physics education major requires a minimum 2.75 grade point average overall, in the major, and in the professional education core, with no grade less than a C- in the major and professional education core. The professional education core satisfies the upper-level general education requirement.

Astrophysics Major

General Education

Complete lower-division requirements	30-36
Complete upper-division requirements (minimum of 6 credit hours)	6

Astrophysics

MATH 211	Calculus I	4
MATH 212	Calculus II	4
MATH 312	Calculus III	4
or MATH 285	Transfer Credit for Calculus III	
MATH 307	Ordinary Differential Equations	3

ASTP 313 Elements of Astrophysics	3
ASTP 414 Relativity and Cosmology	3
Select two of the following:	6
PHYS 413 Methods of Experimental Physics	
PHYS 453 Electromagnetism II	
PHYS 456 Intermediate Quantum Mechanics	
ASTP 495 Special Topics in Astrophysics (Exoplanets / Atmospheric Spectroscopy / Satellite Remote Sensing)	3
Total Credit Hours	117-123

* Grade of C or better required in PHYS 499W or both PHYS 489W and PHYS 490W

Elective Credit

Elective credit may be needed to meet the minimum requirement of 120 credit hours.

BS Degree with Honors

Qualified students may receive the BS degree with honors (to be noted on their diplomas) by completing specified additional requirements. At the time of application for this designation, a student must have a GPA of 3.50 or higher in physics, a GPA of 3.25 or higher overall, must have completed two contract honors courses, and must have completed 60 credit hours (of which at least 54 must be in grade-point graded courses) at Old Dominion University. (Contract honors courses are specialized courses of individual study under the direct supervision of a professor. Permission to take these courses is granted jointly by the Department of Physics and the Honors College.)

Degree Program Guide

The Degree Program Guide is a suggested curriculum to complete this degree program in four years. It is just one of several plans that will work and is presented only as broad guidance to students. Each student is strongly encouraged to develop a customized plan in consultation with their academic advisor. Additional information can also be found in Degree Works.

Bachelor of Science Physics with a Major in Physics- Professional (BS)

The Physics-Professional major is designed for students who wish to create a specialized program of study that combines a strong foundation in physics with strong preparation in another field. Such other fields include engineering, medicine, computer science, business, and communications, to name a few.

Requirements

Lower-Division General Education

Bachelor of Science Physics with a Major in Physics and Electrical Engineering (BS, BSEE)

The dual degree program in physics and electrical engineering is a five-year program. Students will receive a BS degree and a BSEE degree upon graduation. The dual degree program provides the highest level of preparation for both graduate school and positions in industry.

Requirements

Lower-Division General Education

Written Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#written)	6
Oral Communication (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#oral)	3
Mathematics (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#math)	3

The Nature of Science (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#nature)	8
Impact of Technology (http://catalog.odu.edu/undergraduate/requirements-undergraduate-degrees/#impact)	3

General education requirements for mathematics, nature of science, information literacy and research, impact of technology, and philosophy and ethics are met through the major. Additional information can be found in the Electrical and Computer Engineering section of the College of Engineering and Technology.

Upper-Division General Education

The Upper-Division General Education requirement is met by the dual degree requirements.

Requirements for Graduation

All majors for the BS degree in physics require completion of a minimum of 120 credit hours (150 credit hours for the dual degree in physics and electrical engineering and the dual degree in physics and the Master of Business Administration), which must include both a minimum of 30 credit hours overall and 12 credit hours in upper-level courses in the major program from Old Dominion University, completion of ENGL 110C, ENGL 211C or ENGL 231C, and the writing intensive (W) course in the major with a grade of C or better, and Senior Assessment. Additionally, physics majors require completion of the Physics Exit Exam with a minimum score of 20th percentile, and the astrophysics major requires completion of the Astrophysics Exit Exam with a minimum score of 20th percentile. Additional hours may be required to meet the foreign language requirement. All majors require a minimum grade of C in PHYS 261N-PHYS 262N, PHYS 231N-PHYS 232N, or PHYS 226N-PHYS 227N. Except for the secondary physics education major, physics majors require a minimum cumulative grade point average of 2.00 overall and in the major. The secondary physics education major requires a minimum 2.75 grade point average overall, in the major, and in the professional education core, with no grade less than a C- in the major and professional education core. The professional education core satisfies the upper-level general education requirement.

Dual Degree in Physics and Electrical Engineering

Students in this major must earn a minimum of 150 credit hours.

*	Does not include the University's General Education language and culture requirement. Additional hours may be required.
1	ENGN 121 satisfies both the Physics Approved Seminar requirement and the PHYS Information Literacy and Research requirement in the Physics curriculum.
2	ECE 287 satisfies the PHYS 303 requirement in the Physics curriculum.
3	PHYS 425 satisfies the Nonmajor Engineering Elective requirement in the Electrical Engineering curriculum.
4	PHYS 453 and PHYS 456 offered spring semester only.
5	Electrical Engineering students need four technical elective courses selected from one of two options: (1) four 400-level ECE technical elective courses; (2) three 400-level ECE technical elective courses and one 300-level ECE technical elective course or one approved 300- or 400-level CS/MATH/Engineering course.
6	ENMA 480 satisfies the PHYS Philosophy & Ethics requirement in the Physics curriculum.

The General Education requirements in information literacy and research, impact of technology, and philosophy and ethics are met through the Electrical Engineering major/degree. The upper-division General Education requirement is met through the completion of a second major/degree.

Electrical engineering majors must earn a grade of C or better in all 200-level ECE courses prior to taking the next course in the sequence.

Any ECE course registration issues are to be resolved with the ECE Academic Coordinator and Program Manager.

Bachelor of Science Physics with a Major in Secondary Physics Education (6-12) (BS)

The secondary physics education major is designed for students who are preparing to be high school physics teachers. This curriculum provides a solid foundation in both contemporary physics and in education pedagogy.

Physics with a Major in Secondary Physics Education (6-12)

Due to changing University requirements, national accreditation standards, and the Virginia Board of Education licensure regulations, the teacher preparation programs in the College of Sciences are under constant revision. Any changes resulting from these factors supersede the program requirements described in this Catalog. Students are encouraged to obtain current program information from their advisors and the Office of Clinical Experiences website at <https://www.odu.edu/oce> (<https://www.odu.edu/oce/>).

Admission

Students must first declare secondary physics education as their major with the physics departmental advisor. All students must apply for and be admitted into the approved secondary physics education program. Students must meet the required criteria for admission by earning the minimum required grade point averages (GPA).

Required Grade Point Averages (GPA)

- A cumulative GPA of 2.75 is required.
- A major/content GPA of 2.75 is required - all physics courses and all other science content courses must be passed with a grade of C- or higher.
- A professional education GPA of 2.75 is required – all professional education courses must be passed with a grade of C- or higher.

Although students may enroll in a limited number of education courses, students must be admitted into the approved physics teacher preparation program prior to enrolling in any instructional strategies practicum education course. Students must also meet with an education advisor in the Office of Clinical Experiences.

Continuance

Students must maintain a cumulative GPA of 2.75, a major/content GPA of 2.75 and a professional education GPA of 2.75. Physics courses must be passed with a grade of C- or higher. The remaining courses required for the major and in the professional education core must be completed with a grade of C- or higher for continuance. A professional education GPA of 2.75 is required for continuance. Students must take and pass the Praxis Subject Assessment, Physics content knowledge (formerly Praxis II) prior to or while enrolled in the instructional strategies course. All assessments must be passed prior to the start of the Teacher Candidate Internship Orientation session.

Background Clearance Requirement

Old Dominion University requires a background clearance check of candidates interested in many of the professional education programs. Professional education programs have several field experiences that are required for continuance and graduation from the program. The background clearance must be successfully completed prior to a field experience placement. Candidates will be provided a field experience placement when the background check process is completed with resolution of any issues. The process to complete the ODU clearance background check is located at: <http://www.odu.edu/success/academic/teacher-education/placement/background-checks> (<http://www.odu.edu/success/academic/teacher-education/placement/background-checks/>). The ODU clearance process includes: an FBI fingerprint, a child protective service/social service review, and a Virginia State Police sex offender registry review. Candidates interested in the professional education programs are advised to complete

this clearance process immediately upon entry into the program since the clearance process takes a minimum of eight weeks to complete.

Virginia Board of Education Prescribed Assessments for Licensure

Praxis Subject Assessment, Physics content knowledge (test code: 5266) – passing score of 145 is required.

To review more information on the Virginia Board of Education prescribed assessments visit the Office of Clinical Experiences website, www.odu.edu/oce (<http://www.odu.edu/oce/>).

Information Literacy and Research: CS 120G, CS 121G or OEAS 130G

Nature of Science: satisfied by the major

Upper-Division General Education

The professional education core satisfies the Upper-Division General Education requirement.

Requirements for Graduation

Requirements for graduation include completion of ENGL 110C, ENGL 211C or ENGL 231C, and the writing intensive (W) course in the major with a grade of C or better, completion of the Senior Assessment, completion of the Physics Exit Exam with a minimum score of 20th percentile, a minimum cumulative 2.75 GPA, in the major area, and in the professional education core, with no grade less than a C- in the major and the professional education core; successful completion of the Teacher Candidate Internship and a minimum of 120 credit hours, which must include both a minimum of 30 credit hours overall and 12 credit hours in upper-level courses in the major program from Old Dominion University.

Licensure requirements also include certificate of completion in First Aid/AED/CPR, Dyslexia Awareness Training, Child Abuse and Neglect Recognition and Intervention Training, and Regulations Governing the Use of Restraint and Seclusion in Elementary and Secondary Schools, and Cultural Competence Training.

Elective Credit

Elective credit may be needed to meet the minimum requirement of 120 credit hours.

BS Degree with Honors

Qualified students may receive the BS degree with honors (to be noted on their diplomas) by completing specified additional requirements. At the time of application for this designation, a student must have a GPA of 3.50 or higher in physics, a GPA of 3.25 or higher overall, must have completed two contract honors courses, and must have completed 60 credit hours (of which at least 54 must be in grade-point graded courses) at Old Dominion University. (Contract honors courses are specialized courses of individual study under the direct supervision of a professor. Permission to take these courses is granted jointly by the Department of Physics and the Honors College.)

Degree Program Guide

The Degree Program Guide is a suggested curriculum to complete this degree program in four years. It is just one of several plans that will work and is presented only as broad guidance to students. Each student is strongly encouraged to develop a customized plan in consultation with their academic advisor. Additional information can also be found in Degree Works.

*PHYS 120 is offered fall semester only. PHYS 309 is offered spring semester only.

Physics and Master of Business Administration (BS, MBA)

The Bachelor of Science in physics and Master of Business Administration dual degree program is a five-year program. After students have satisfactorily completed their undergraduate requirements, they complete the remaining requirements in the MBA program. Students must earn a minimum of 150 credits (120 discrete credits for the undergraduate degree and 30 discrete credits for the graduate degree).

Requirements

Lower-Division General Education

Mathematics: satisfied by the major

Information Literacy and Research: CS 120G, CS 121G, or OEAS 130G

Nature of Science: satisfied by the major

Upper-Division General Education

The upper-division general education requirement is met by the MBA coursework.

Requirements for Graduation

All majors for the BS degree in physics require completion of a minimum of 120 credit hours (150 credit hours for the dual degree in physics and electrical engineering and the dual degree in physics and the Master of Business Administration), which must include both a minimum of 30 credit hours overall and 12 credit hours in upper-level courses in the major program from Old Dominion University, completion of ENGL 110C, ENGL 211C or ENGL 231C, and the writing intensive (W) course in the major with a grade of C or better, and Senior Assessment. Additionally, physics majors require completion of the Physics Exit

Exam with a minimum score of 20th percentile, and the astrophysics major requires completion of the Astrophysics Exit Exam with a minimum score of 20th percentile. Additional hours may be required to meet the foreign language requirement. All majors require a minimum grade of C in PHYS 261N-PHYS 262N, PHYS 231N-PHYS 232N, or PHYS 226N-PHYS 227N. Except for the secondary physics education major, physics majors require a minimum cumulative grade point average of 2.00 overall and in the major. The secondary physics education major requires a minimum 2.75 grade point average overall, in the major, and in the professional education core, with no grade less than a C- in the major and professional education core. The professional education core satisfies the upper-level general education requirement.

Physics and MBA Dual Degree

Students in this major must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree).

General Education

Complete lower-division requirements 30-36

Complete upper-division requirements (satisfied by MBA coursework)

Psychology

<http://www.odu.edu/psychology> (<http://www.odu.edu/psychology/advising/>)

George Noell, Chair
Suzanne Morrow, Chief Departmental Advisor
Krystall Dunaway, Undergraduate Program Director

The BS in Psychology is designed to provide a knowledge base of current methods, content areas, and theories. It seeks to facilitate the development of intellectual skills and characteristics that enhance the student's lifelong personal and career success. The program begins with a general psychology course and includes courses in quantitative methods and experimental design. Additional coursework is selected from a broad range of available courses. Students are encouraged to pursue breadth across the areas of psychology, particularly when planning for advanced study in psychology. The department does, however, identify sets of courses particularly relevant for students interested in health, clinical, industrial/organizational, or human factors (engineering) psychology.

Psychology Awards

The Alan L. Chaikin Psychology Honors Thesis Award is given each year to a student in the Department of Psychology for the outstanding honors thesis.

The Elizabeth C. Guy Outstanding Psychology Service Award is given each year to the student selected by the faculty who has contributed significant service to the department or field of psychology. Service is primarily defined as participation in departmental, University, community, or professional organizations. However, other qualifications, such as research activity, may be considered. Eligible students must have a minimum overall grade point average of 3.0 and 18 credits in psychology at Old Dominion University.

The Elizabeth C. Guy Outstanding Psychology Academic Award is given each year to the graduating senior with the highest overall grade point average. To be eligible, a student will have completed a minimum of 60 hours at Old Dominion University by graduation. Further, the student will have completed a minimum of 18 psychology credits at Old Dominion University. In the case where two or more students meet the criteria and have identical GPAs, the student with the highest number of credit hours earned at Old Dominion University will receive the award.

The Michael Greenspan/ODU Psychology Study Abroad Award is given each year to a selected psychology major to study psychology at one of ODU's partner institutions in the United Kingdom. Students interested in this opportunity should contact the ODU Office of Study Abroad.

Advanced Placement

The Department of Psychology offers course credit for PSYC 201S and PSYC 203S through testing procedures or a qualifying score on AP and IB subject examinations. See the equivalency charts on the ODU website at <https://www.odu.edu/academics/academic-records/score-analysis/ap-ib> (<https://www.odu.edu/academics/academic-records/score-analysis/ap-ib/>). Students may also earn credit for some courses via prior learning assessment options. Interested students should visit the Undergraduate Program office MGB 246 for more information or refer to the section on Prior Learning Assessment Credit Options at the Undergraduate Level in this Catalog.

Programs

Bachelor of Science Program

- Psychology (BS) (p. 772)

Minor Program

- Psychology Minor (p. 775)

Certificate Program

- Human Factors Certificate (p. 775)

Bachelor of Science Psychology (BS)

A student who intends to major in psychology must attend a Major Declaration Session in the Department of Psychology. Freshmen with 0-30 Earned Hours need to meet with an advisor from the College of Sciences advising team for pre-registration advising for their first academic year. Once students have earned 30 hours with an overall GPA of 2.0 or higher and a psychology GPA of 2.0 or higher, and completed MATH 102M or MATH 103M (or a higher math), PSYC 201S, and both composition courses, earning a C or better in each, they will need to attend a Major Declaration Session.

For further information about the major and advising schedules, visit/call MGB 246 (757 683-4441), refer to the bulletin board across from MGB 246, email psychadvising@odu.edu, or visit the Psychology Department advising web page at <http://www.odu.edu/psychology/advising>. (<http://www.odu.edu/psychology/advising/>)

Goals for the Psychology Major

1. Students will be able to define, interpret, and apply major concepts, theories, and findings in psychology.
2. Students will be able to compute, analyze, and interpret quantitative and qualitative psychological data.
3. Students will be able to recognize, analyze, and design experimental and non-experimental research in psychology.
4. Students will be able to interpret and produce scientific writing in psychology using standard APA format.
5. Students will be able to identify, recognize, and apply principles of ethics and respect for individual, social, and cultural differences.
6. Students will be able to apply discipline information to decisions about careers in psychology and related fields.

A grade of C (2.0) or better is required in all courses meeting the Written Communication requirement.

Mathematics: MATH 102M/MATH 103M or higher with a grade of C (2.0) or better is required.

Upper-Division General Education

- Option A: Approved Disciplinary Minor (a minimum of 12 hours determined by the department) or second degree or second major.
- Option B: Interdisciplinary Minor (specifically 12 hours, 3 of which may be in the major)
- Option C: An approved Certification Program such as teaching licensure
- Option D: Two Upper-Division Courses from outside the College of Sciences and not required by the major (6 hours)

Requirements for Graduation

Requirements for graduation include the following:

- Minimum of 120 credit hours.
- Minimum of 30 credit hours overall and 12 credit hours of upper-level courses in the major program from Old Dominion University.
- Minimum overall cumulative grade point average of C (2.00) in all courses taken.
- Minimum overall cumulative grade point average of C (2.00) in all courses taken toward the major.
- Minimum overall cumulative grade point average of C (2.00) in all courses taken toward a minor.
- Completion of ENGL 110C, ENGL 211C or ENGL 231C, and the writing intensive (W) course in the major with a grade of C or better. The W course must be taken at Old Dominion University.
- Completion of Senior Assessment.

Psychology Major

A grade of C (2.0) or better is required in all psychology courses. Students must achieve an overall grade point average of 2.0, including all psychology courses. No 200-level psychology courses outside PSYC 201S can count toward the major in psychology.

General Education

Complete lower-division requirements	41-47
Complete upper-division requirements (minimum of 6 credit hours)	6

Psychology

PSYC 201S	Introduction to Psychology	3
PSYC 317	Quantitative Methods	4
PSYC 318W	Research Methods in Psychology	4

Areas

Students must select one course from each of the following four Areas:

Area 1: Biological Bases and Cognition		3
PSYC 410	Human Cognition	
PSYC 413	Sensation and Perception	
PSYC 424	Physiological Psychology	
Area 2: Personality and Social Processes		3
PSYC 304	Social Psychology	
PSYC 408	Theories of Personality	
PSYC 420	Cross-Cultural Psychology	
Area 3: Developmental Changes		3
PSYC 322	The Psychology of Adolescence	
PSYC 351	Child Psychology	
PSYC 353	The Psychology of Adulthood and Aging	
Area 4: Applied Psychology		3
PSYC 303	Industrial/Organizational Psychology	
PSYC 306	Health Psychology	
PSYC 344	Human Factors	
PSYC 405	Psychopathology	

Total Credit Hours

85-91

Elective Credit

General elective credit will be needed to meet the minimum requirement of 120 credit hours. No 200-level psychology courses outside of PSYC 201S (<https://catalog.odu.edu/search/?P=PSYC%20201S>) can count toward the major in psychology. Students with 200-level psychology courses can use these hours as general elective credit.

Additional Requirements and Information

Psychology Assessment

The Psychology Assessment is sent to students via email during their graduating semester approximately one month prior to graduation. Students must complete the assessment in the time frame (typically two weeks) provided in the email. Students must have applied for graduation in order to receive the assessment. The department will make all reasonable efforts to assure that students have ample opportunity to complete the assessment. However, any student who applies for graduation after the deadline set by the Office of the Registrar must email psychadvising@odu.edu to request the link to complete the assessment within an indicated time frame.

Honors Program in Psychology

Qualified undergraduate psychology majors have the opportunity to participate in the Honors Program in Psychology (program chair: Dr. Mary Still). Students who complete the program and also meet the University's standards for graduation with honors (see description in this Catalog) may earn the designation of departmental honors on their diplomas. This program is a two- to three-course sequence that involves working on a research project under the supervision of a psychology faculty member.

Interested students should discuss their interests with a psychology faculty member who agrees to serve as the research supervisor for PSYC 497. In PSYC 497 (see prerequisites under course listing), the potential Honors student gains research experience and develops an Honors Project proposal. At the end of PSYC 497, the student submits the proposal and application for admission to the Honors Program in Psychology and, pending approval of the program chair, enrolls in PSYC 487.

In this course, the student finalizes the proposal, presents it to the Psychology Honors Program committee, secures research ethics approval, begins the thesis research, and, if the research and thesis paper are completed, may present to the Psychology Honors Program committee for approval.

Students whose projects require more than one semester to complete may enroll in PSYC 488.

Eligibility for the Honors Program in Psychology includes:

- Completion of PSYC 317 and PSYC 318W
- At least 23 hours earned in psychology
- A 3.50 GPA in the psychology major (with no grades of "Incomplete")
- A 3.25 cumulative GPA
- Completion of PSYC 497 with an Honors Project Proposal ready for submission to the Honors Program chair

Students can enroll in PSYC 487 when the submitted application and project proposal have been approved by the Honors Committee chair.

Degree Program Guide

The Degree Program Guide is a suggested curriculum to complete this degree program in four years. It is just one of several plans that will work and is presented only as broad guidance to students. Each student is strongly encouraged to develop a customized plan in consultation with their academic advisor. Additional information can also be found in Degree Works.

This sample schedule assumes that the Language and Culture requirements have been met by high school language courses (see Lower-Division General

Education Requirements – Language and Culture section of this Catalog). If not, then language credits must be taken as electives.

 ** A minor is recommended for completion of upper-division general education but is not required.

BA or BS to MBA (Master of Business Administration) Linked Program

The linked BA/MBA or BS/MBA program is an early entry to the MBA program of study. The early-entry program is designed for well qualified non-business undergraduate ODU students to start their MBA program prior to completing their undergraduate degree. Well qualified non-business undergraduate students may take MBA-level courses as early as three semesters prior to graduation and count up to 12 graduate credits toward their undergraduate degree. Students participating in the early-entry program must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree). Early-entry program students should carefully consider their undergraduate degree program requirements when planning their course of study. Students in the early-entry program work in close consultation with the MBA Program Office and should refer to information in the Strome College of Business section in the graduate catalog (<http://catalog.odu.edu/graduate/stromecollegeofbusiness/>) to develop an individualized plan of study based on the required coursework.

BA or BS to MPA (Master of Public Administration) Linked Program

The linked BA/MPA or BS/MPA program provides qualified Old Dominion University undergraduate students with the opportunity to earn a master's degree in public administration while taking credits in the MPA program as an undergraduate student. The program is designed for highly motivated students with the desire to immediately continue their education after the bachelor's degree. The program is especially relevant to individuals seeking to work (or currently working) in the public or non-profit sectors, but is suitable for students from any undergraduate major. Graduate courses may be taken during the fall and spring semester of the student's senior undergraduate year. Up to 12 graduate credits can count toward both the undergraduate and graduate degree and can meet upper-level General Education requirements. After receiving the undergraduate degree, a student will continue with the MPA program, taking MPA courses until completing the required 39 credit hours. Students in the linked program must earn a minimum of 150 credit hours (120 discrete credit hours for the undergraduate degree and 30 discrete credit hours for the graduate degree).

Requirements for admission to the graduate program can be found in the School of Public Service section of the Graduate Catalog (<http://catalog.odu.edu/graduate/business/public-service/>). For additional information, please contact the School of Public Service in the Strome College of Business.

Minor

Psychology Minor

Requirements

PSYC 201S must be completed as a prerequisite for the minor in psychology and is not included in the calculation of the grade point average for the minor. The minor in psychology requires at least one course from each of the four Areas. Refer to the section for the major in psychology on required psychology courses for a listing of the courses in each area. PSYC 201S is a prerequisite for most 300- and 400-level psychology courses. Additional prerequisite courses may also be required. A student must earn a minimum overall cumulative grade point average of 2.00 in all psychology courses taken exclusive of 200-level courses and prerequisite courses. A minimum of six hours in the minor must be taken through courses offered by Old Dominion University. Courses in the minor may not be taken on a Pass/Fail basis.

Certificate

Human Factors Certificate

The Undergraduate Certificate in Human Factors will introduce students to how psychology is applied to the design of technical systems (e.g., developing user-friendly interface displays). Students will be introduced to the ways humans think about and perceive their surroundings. Students will be educated in fundamental principles (i.e., predictability, consistency) from human factors and human-computer interaction research fields. Students will also learn to apply theory to the design of technology using a human-centered process across various application domains (e.g., transportation and cybersecurity). Graduates will be able to assist with the design or redesign of technology to improve the usability of digital systems for example, website pages or mobile application displays.

Course requirements are as follows.

PSYC 307	Institutionalization of Human-Centered Computing	3
PSYC 344	Human Factors	3
PSYC 410	Human Cognition	3
PSYC 413	Sensation and Perception	3
Total Credit Hours		12

For completion of the certificate, students must have a minimum cumulative grade point average of 2.00 in all courses specified as a requirement for the certificate and complete a minimum of six hours in upper-level courses required for the certificate through courses offered by Old Dominion University.

School of Supply Chain, Logistics, and Maritime Operations

Holly Handley, Dean (Interim)

Kuntal Bhattacharyya, Director - School of Supply Chain, Logistics, and Maritime Operations (SSCLMO)

ODU's School of Supply Chain, Logistics and Maritime Operations is uniquely positioned at the crossroads of digital transformation in the maritime industry of Coastal Virginia to support the Commonwealth of Virginia's efforts towards upskilling and developing the blue economy in the region and beyond. The school addresses the growing demand for a skilled workforce in the supply chain and logistics sector by offering a truly interdisciplinary approach to supply chain and maritime education which cross pollinates diverse career pathways in industry 4.0, maritime and military logistics, port and ship operations, cybersecurity, data science, and supply chain informatics/analytics, among others.

Maritime Institute

Ricardo Ungo, Director

The institute provides a focal point for educational services and research programming that is responsive to the port and shipping-related needs of Hampton Roads, Virginia, and other port and shipping-related facilities in the world. Serving as a positive link with port-related business and public administration communities, the institute provides a catalyst for the delivery of education, training, research, and service programs in both the credit and non-credit arenas. The Maritime Institute also serves as a hub for applied education, training, and research related to the development and management of transportation and storage systems, with ports serving as centers of internationally complex activities. Courses are available at the undergraduate and graduate levels and are listed in this Catalog and the Graduate Catalog. Professional, executive-level seminars, workshops, and short courses will also be offered.

Continuing Education

Web Site: <http://www.odu.edu/cepd> (<http://www.odu.edu/cepd/>)

Renee R. Felts, Associate Vice President, Continuing Education
Robert Doherty, Director, Continuing Education

Continuing Education is focused on delivering practical, applied knowledge through its non-credit and credit-bearing courses, certificates and certification preparatory classes. Staff interact with each of the academic colleges to utilize the existing courses in an interdisciplinary fashion, frequently at the request of the military, businesses and various industry sectors.

Mission

To meet the evolving needs of our local, regional and global community via online and face-to-face offerings. We help students, professionals and lifelong learners move ahead and stay ahead.

Vision

Continuing Education will seek to add value to University programs by engaging with students, faculty, and alumni to help achieve their personal and professional goals.

Bachelor of Science in Interdisciplinary Studies with a Major in Leadership

Continuing Education coordinates with the College of Arts and Letters to offer a Bachelor of Science in Interdisciplinary Studies with a major in Leadership. For detailed information on the degree program, please refer to the College of Arts and Letters Interdisciplinary Studies (<http://catalog.odu.edu/undergraduate/collegeofartsletters/interdisciplinarystudies/>) section of this Catalog.

Prior Learning Assessment

The Prior Learning Assessment unit awards Credit for Prior Learning (CPL) and offers students the opportunity to have their prior learning assessed and applied for academic credit. Visit odu.edu/prior-learning-assessment (<https://www.odu.edu/prior-learning-assessment/>) for more information.

Center for Professional Development

The primary mission of the Center for Professional Development (CPD) is to develop interdisciplinary certificate programs targeted for specific groups of professionals. The CPD will work across the ODU campus, including all academic colleges as well as ODUGlobal, in developing new multidisciplinary certificates. An undergraduate certificate program in Professional Leadership is administered by the Center and the Continuing Education unit.

Please refer to the course listings in this Catalog for Center for Professional Development (CPD) courses.

Programs

Certificate Program(s)

- Cultural Competency Leadership Certificate (p. 781)
- Digital Forensics Certificate (p. 781)
- Professional Leadership Certificate (p. 782)

Non-Credit Continuing Education Programs

Hospitality Management Programs

XHSP 3000- Hospitality Management Certificate- The Hospitality Management Certificate is broken down into 3 Courses that each contain 4 Modules and last 4 weeks. The courses include Sales & Marketing, Hotel Operations, and Personnel & Financial Management. The content includes an explanation of both the management and operational functions of lodging operations, an overview of the history and challenges of the lodging

industry, identifies traits and behaviors of successful lodging leaders, gives a strong base for revenue management, labor and operational budgeting, safety and security, and an exploration of the future of the industry.

Health Science Programs

XCMA 2000- Certified Medical Assistant- Our program includes three in-demand healthcare certifications: Clinical Medical Assistant, EKG Technician and Phlebotomy Technician. The program combines convenient online course with in-person clinical experience supervised by health professionals. In as little as five months, students are prepared to sit for nationally recognized exams through the National Health Career Association.

XMBC 3000- Medical Billing and Coding- This program includes two in-demand healthcare certifications: Certified Professional Biller (CPB) and Certified Professional Coder (CPC). Throughout the 30-week online course, students will learn about health insurance, billing principles, medical terminology, medical records, and professional coding services for medical providers, along with job preparation guidance. The program is taught by industry experts from the credentialing body, AAPC, and includes textbooks, practice exams, certification exams, real-world practice software, and career services.

XHLC 2060- Dental Assistant- The Dental Assistant program enables learners to embark on a career in dental healthcare by providing the essential knowledge and skills needed to prepare for the Registered Dental Assistant (RDA) certification examination. Included in this course is the Registered Dental Assistant (RDA) certification.

XHLC 2080- Sterile Processing Technician- The Sterile Processing Technician program equips you for employment in surgical environments across a range of settings, including hospitals, surgical centers, clinics, and other medical facilities. Included in this course is the Certified Registered Central Services Technician (CRCST) certification.

XHLC 2090- Behavior Technician and the Medical Office- The Behavior Technician and Medical Office dual-certification training course offers a comprehensive curriculum that encompasses both front office skills and expertise in working within the behavioral health field. Included in this program are the Registered Behavior Technician (RBT) and Certified Medical Administrative Assistant (CMAA) certifications.

XHLC 2100- Behavior Technician Specialist- The Behavior Technician Specialist certification enables you to conduct individual patient sessions and provide behavior analysis services, all supervised by a licensed Board Certified Behavior Analyst (BCBA). Included in this course is the Registered Behavior Technician (RBT) certification.

XHLC 2110- Allied Healthcare Professional- The Allied Healthcare Professional program serves as a gateway into the healthcare sector, integrating the expertise of pharmacy technician, electronic health records management, billing and coding, and medical office administration. Included in this program are the CMAA (Certified Medical Administrative Assistant), CEHRS (Certified Electronic Health Records Specialist, CPhT (Certified Pharmacy Technician Certification), and MCBC (Medical Coder & Biller Certification) certifications.

XHLC 2120- Electronic Health Records Specialist- The Electronic Health Records Specialist program prepares individuals for healthcare careers by offering thorough training in the management of electronic health records. Included in this course is the CEHRS (Certified Electronic Health Records Specialist) certification.

XHLC 2150- Health Unit Coordinator- The Health Unit Coordinator program equips individuals to excel in coordinating healthcare units, imparting the essential skills and knowledge needed for efficient administration within healthcare environments. Included in this program are the Certified Health Unit Coordinator (CHUC) and Certified Electronic Health Records Specialist (CEHRS) certifications.

XHLC 2180- Medical Front Office Administration Specialist- The Medical Front Office Administrative Specialist program offers an ideal introduction to the front office setting within the healthcare

industry. Included in this course is the Certified Medical Administrative Assistant (CMAA) certification.

XHLC 2190- Medical Front Office and Electronic Health Records-

The Medical Front Office and Electronic Health Records program prepares individuals for proficient management of patient data, essential handling of health records, medical office procedures, and other critical aspects of healthcare roles. Included in this program are the Certified Medical Administrative Assistant (CMAA) and Certified Electronic Health Records Specialist (CEHRS) certifications.

XHLC 2200- Medication Care Coordinator-

The Medication Care Coordinator program readies participants to offer outstanding assistance within a pharmacy context, emphasizing the importance of seamless service and optimal patient engagement. Included in this program are the Certified Pharmacy Technician (CPhT) and Certified Medical Administrative Assistant (CMAA) certifications.

XHLC 2210- Medical Front Office Assistant and Administration

Specialist- The Medical Front Office Assistant and Administrative Specialist program unveils the pathway for individuals to embark on a promising journey within the administrative realm of the healthcare industry, focusing on the critical roles at the front office. Included in this program are the Medical Coder and Biller Certification (MCBC) and Certified Medical Administrative Assistant (CMAA) certifications.

XHLC 2230- Pharmacy Technician Professional (ASHP/ACPE)-

The Pharmacy Technician Professional program provides practical skills crucial for employment in pharmacies, including the management of medication orders and customer assistance, all within this ASHP/ACPE Accredited curriculum.

XHLC 2240- Pharmacy Technician Specialist-

The Pharmacy Technician Specialist program imparts essential skills in managing medications and providing support in pharmacy environments, equipping students with the expertise needed for professional success. Included in this course is the Certified Pharmacy Technician (CPhT) certification.

XHLC 2250- NASM Personal Trainer & Nutrition Coach-

The NASM Personal Trainer and Nutrition Coach program prepares participants for a fulfilling journey into the growing fields of fitness and nutrition, setting the stage for a rewarding career in health and wellness. Included in this program are the Certified Personal Trainer (CPT) and Certified Nutrition Coach (CNC) certifications.

XHLC 2260- Mental Health Support Specialist-

The Mental Health Support Specialist program offers specialized training to assist psychiatrists, therapists, and clients in the care and management of mental health and substance use disorders, contributing valuable skills to support healing and recovery processes. Included in this course is the Mental Health Technician Certified (MHTC) certification.

XHLC 2270- Mental Health Support Professional-

The Mental Health Support Professional program delivers a thorough education designed to jump start a career in the mental health field, with a special focus on the utilization and management of electronic health records to enhance patient care. Included in this program are the Mental Health Technician Certified (MHTC) and Certified Electronic Health Records Specialist (CEHRS) certifications.

Registered Play Therapy

The Registered Play Therapy Program provides professionals and students in the community with the opportunity to learn more about play therapy or to receive the training necessary to become a Registered Play Therapist (RPT). The Play Therapy program is offered as a series of eight (8) weekend workshops worth 19 continuing education hours each (16 contact CE's and 3 non-contact CE's). Individuals can attend one or all of the workshops. Old Dominion University is approved by the Association for Play Therapy to offer continuing education specific to play therapy (APT Approved Provider #08-234).

The Registered Play Therapy workshops are aligned with the guidelines established by the *Association for Play Therapy* and pertain to five main areas:

- Play Therapy History
- Play Therapy Seminal or Historically Significant Theories
- Play Therapy Skills and Methods
- Play Therapy Special Topics
- Cultural & Social Diversity

XPCL 4000-Workshop #1: Principles of Play Therapy-

This workshop will provide information about the rationale, philosophy, history, and theoretical underpinnings specific to the application of play therapy with various populations and in different settings. Basic facilitation skills, specific goals, and the role of the play therapist will be explored and practiced in relation to specific theories and in terms of general process of play therapy.

XPCL 4010-Workshop #2: Expressive Arts in Play Therapy-

The therapeutic power of selected games, structured activities and expressive arts will be explored as they pertain to play therapy. Techniques specific to art, drama, children's literature, puppets, and music will be illuminated as ideal mediums through which children and adolescents express and heal themselves through the process of play therapy. Basic techniques and strategies for incorporating such tools and techniques will be described, demonstrated, and practiced.

XPCL 4005-Workshop #3: Games, Activities, and Narrative Techniques in Play Therapy-

The therapeutic power of selected games, structured activities, and narrative techniques will be explored as they pertain to play therapy. Basic techniques and strategies for incorporating such tools and techniques will be described, demonstrated, and practiced.

XPCL 4015- Workshop #4: Systematic Interventions: Family Play

Therapy and Filial Therapy- Fundamental, theoretical, and philosophical concepts related to systems theory and utilizing play therapy techniques in family counseling will be presented. Basic skills and methods to incorporate in family play therapy will be described, demonstrated, and practiced. In addition, methods will be covered illustrating how to implement filial therapy for parents to become healthy agents in their children's lives.

XPCL 4030- Workshop #5: Group Play Therapy: Play Therapy Skills

and Methods in Group Work- Theoretical and philosophical concepts of Group Play Therapy with children, adolescents, and adults will be discussed. Group logistics, process, conflict resolution, and group facilitation skills will be described. Basic skills and methods to incorporate in group play therapy will be described, demonstrated, and practiced. In addition, multicultural and ethical considerations in group play therapy will be addressed.

XPCL 4025- Workshop #6: Play Therapy and Creative Interventions

with Adolescents, Teens, and Adults- Research has indicated that play therapy is an effective treatment modality with people of all ages. This workshop will explore the process of play therapy and creative interventions when working with adolescents and adults. Basic skills and methods to incorporate in play therapy with adolescents and adults will be described, demonstrated, and practiced. Multicultural considerations and societal influences that specifically pertain to this population will also be addressed.

XPCL 4020- Workshop #7: Utilizing Sandtray in Play Therapy-

Through experiential sand tray exercises and didactic methods, information about the rationale, history, and general application of sand tray in play therapy will be illustrated. Basic facilitation skills, theoretical constructs, and strategies for processing sand tray will be discussed, demonstrated, and practiced.

XPCL 4045- Workshop #8: Addressing Trauma, Grief, and Loss

Through Play Therapy- This workshop will investigate specific issues faced by children, adolescents, and families affected by difficult environmental and systematic situations. The implications of trauma, grief, and loss as a result of abuse, crisis, death and divorce will be reviewed as they pertain to the process. The process of play, techniques, treatment plans and consultation procedures will also be explored. Skills and methods to

incorporate play therapy techniques to address trauma, grief, and loss will be described, demonstrated, and practiced.

Business/Executive Development Programs

Executive Certificate in Financial Planning

XEDC 1511- General Financial Planning Principles, Professional

Conduct, and Regulation- This course examines basic financial planning concepts for developing client relationships; gathering, analyzing, and evaluating financial documents, statements, and other information; developing and communicating relevant recommendations to clients; implementing recommendations through the use of a financial planning team; and monitoring the financial plan on a periodic basis, all within CFP Board professional and regulatory standards. Students will develop a pragmatic perspective of the field of financial planning as they learn to analyze personal financial statements, understand time value of money concepts, explore education funding techniques, advise clients regarding the management of debt, apply behavioral finance concepts, gain an understanding of federal and state regulatory requirements, learn the ethical environment of financial planning and integrate the legal and economic aspects of financial planning within a practice.

XEDC 1512- Risk Management, Insurance, and Employee Benefits

Planning- This course explores fundamental insurance, annuity, and employee benefit concepts and products. Students will gain knowledge of the principles of risk and insurance; learn how to analyze and evaluate risk exposures; and understand the concepts of personal and business insurance for life, health, disability, long-term care and property insurance. Students will also develop perspectives regarding the integration of social insurance (e.g. Medicare, workers compensation) within the framework of financial planning. Equity-based compensation, non-qualified deferred compensation and other employee benefits will also be presented and discussed.

XEDC 1513- Investment Planning- This course examines the characteristics, uses and taxation of investment vehicles: stocks, bonds, cash and cash equivalents, promissory notes, guaranteed investment contracts, real estate, and alternative investments. Students will also develop an understanding of the various types of risk: systematic and unsystematic, purchasing power, interest rate, business, and financial risk. Students are introduced to quantitative investment concepts, measures of investment returns, bond and stock valuation concepts, investment theory, portfolio development and analysis, investment strategies, asset allocation, and asset pricing models.

XEDC 1514- Tax Planning- This course focuses on income tax fundamentals and calculations, tax accounting, characteristics and income taxation of business entities, basis, depreciation, and cost recovery concepts. The impact of the alternative minimum tax (AMT), passive activity, at-risk rules, charitable contributions and charitable deductions on a client's financial plan is also studied. Students will gain an understanding of the tax consequences of like-kind exchanges and the disposition of property and will learn how the loss of a spouse through death or divorce affects a client's tax status.

XEDC 1515- Retirement Savings and Income Planning- Students will be exposed to retirement needs analyses, types and characteristics of retirement plans, qualified plan rules and options, and provisions of tax-advantaged plans. The effects of ERISA on retirement plans is examined and the impact of Social Security on a client's retirement plan is also discussed. Students will gain an understanding of plan distribution options, rules, alternatives, and taxation, and will also explore key factors affecting plan selection for businesses and investment considerations for retirement plans.

XEDC 1516- Estate Planning- This course analyzes the various techniques and strategies used in developing estate plans based on client criteria and needs. Property titling, property transfer at death, gifting strategies, and sources of estate liquidity are discussed. Students will also gain insight on wills, probate, and the types, uses and taxation of trusts during estate planning.

XEDC 1517- Capstone: Financial Plan Development Course- Students participate in a case analysis and evaluation in which the following major areas of financial planning are integrated:

- General Financial Planning Principles, Professional Conduct, and Regulation
- Risk Management, Insurance, and Employee Benefits Planning
- Investment Planning
- Income Tax Planning
- Retirement Savings and Income Planning
- Estate Planning

SHRM Learning System

XEDC 1165- SHRM Learning System- The SHRM Learning System for SHRM-CP and SHRM-SCP includes five modules covering the comprehensive SHRM Body of Competency and Knowledge™ (SHRM BoCK™) so you'll learn everything you need for the SHRM-CP or SHRM-SCP exam. Study with learning modules that provide an in-depth exploration of the knowledge domains and behavioral competencies tested on the SHRM exams. SHRM Certified Professional (SHRM-CP™) and SHRM Senior Certified Professional (SHRM-SCP™) are the new standard for all HR professionals around the globe, as it is among the first HR certification that is focused on the practical, real-life information HR professionals need to excel in their careers today, including behavioral competencies, knowledge and skills.

XEDC 1164- SHRM Essentials- The perfect course for managers who need to know basic HR concepts BEFORE disciplinary action is required and HR has to get involved. This program provides a broad overview of the human resource function. Key topic areas include: Essentials of HR Management, Employment Law, Effective Recruitment, Basics of Compensation, and Orienting and Training your employees.

Paralegal Certificate Program

XLGL 3010- Paralegal Certificate Program- This face-to-face offering is taught by an esteemed faculty of judges and attorneys. Students learn legal processes, court structure, interviewing, investigation, document preparation, file maintenance, correspondence, research, writing and analysis, as well as substantive topics of law, such as Tort Law, Contract Law and Civil Procedures. Students will be trained in online legal research with individual subscriptions to LexisNexis and Westlaw.

XLGL 3020- Paralegal Certificate Program, Self-Paced- The self-paced version of our Paralegal Certificate program is designed for students to study when convenient for them and can be done completely online. Students will be assigned their own attorney/judge liaison and learn legal processes, court structure, interviewing, investigation, document preparation, file maintenance, correspondence, research, writing and analysis, as well as substantive topics of law, such as Tort Law, Contract Law and Civil Procedures. Students will be trained in online legal research with individual subscriptions to LexisNexis and Westlaw.

Project Management and Lean Six Sigma Certificates

XLSS 5010- Lean Six Sigma Green Belt Certification- This program focuses on managing quality projects utilizing the fundamentals of Lean and Six Sigma methodologies. Lean topics include the concepts of the elimination of waste and reduction of cycle time in organizational processes. Six Sigma principles consist of problem solving techniques, data collection and analysis, reduction of process variation, process capability and control, and continual improvement.

XLSS 5040- Lean Six Sigma Black Belt Certification- Build upon the process improvement skills acquired during the Green Belt certification with our industry-leading Lean Six Sigma Black Belt certification. In just seven sessions over the course of two to three months, you'll master the tools to mentor Green Belts and other team members using real-world process improvement methods. Black belts leverage the tools and concepts in their lean six sigma "toolbox" to successfully lead projects that deliver meaningful results to the organization.

XITS 4100- Project Management Essentials- Project Management Essentials equips participants with the crucial skills needed to manage and direct projects successfully across various industries, ensuring effective

leadership and organizational outcomes. This offering includes the following certification(s): Certified Associate in Project Management (CAPM)

XIPJ 5000- PMP Exam Preparation- Old Dominion University's Project Management Professional (PMP)® Exam Preparation course prepares you for the PMP® exam offered through the Project Management Institute (PMI®). The PMP® credential has become the most recognized certification in Project Management in the world and is considered the gold standard of PM qualifications. Recognized and demanded by organizations worldwide, the PMP® validates your competence to perform in the role of a project manager, leading and directing projects and teams. To earn your PMP® credential, you must meet the experience and education requirements, and pass the PMP® examination.

Professional Development Programs

XGEN 2060- Au Pair Career Development Strategies for Personal & Professional Success- This Au Pair weekend class will help you develop a successful plan for your personal and career goals. Become more aware of who you are and what you want in your life and career. This class will help you become more aware, competitive and employable in any part of the world by developing key soft skills.

Digital Career Programs

Cybersecurity

XCYS 2500- Cybersecurity Fundamentals- This course is designed to introduce participants to the critical field of cybersecurity, emphasizing the skills and knowledge needed to navigate the evolving threat landscape. It adopts a workshop format to ensure a comprehensive learning experience, incorporating a mix of lectures, case studies, and hands-on labs. The course aims to prepare learners for the ISACA Cybersecurity Fundamentals Certificate Exam by covering a wide range of topics, from cybersecurity principles and privacy to risk management and security architecture.

XCYS-3000 Cybersecurity Audit- The Cybersecurity Audit Certificate equips audit and assurance professionals with the necessary expertise to thrive in assessing cybersecurity processes, policies, and tools. It aids in fortifying organizational infrastructure against cyber threats. Additionally, this certificate offers IT risk professionals insights into cyber-related risks and strategies for mitigating them.

XCYS 3010- Cybersecurity Bootcamp- The Cybersecurity Bootcamp is a 24-week part-time program designed to prepare participants for careers in the fast-growing field of cybersecurity. It includes courses on fundamentals, advanced networking and cryptography, security operations and incident response, and certification preparation for the CompTIA Security+ exam. The program emphasizes hands-on learning through labs, projects, and a real-world capstone project, ensuring practical skills in areas like penetration testing, incident response, and secure network design. Participants receive unlimited career support, including resume assistance, interview preparation, and salary negotiation coaching. Graduates can pursue diverse roles in industries such as finance, healthcare, and technology with competitive salaries and job stability.

Digital Marketing Bootcamp

XDGM 2020- Digital Marketing Bootcamp- The Digital Marketing Bootcamp is a part-time Career Bootcamp that teaches the essential skills necessary to launch a digital marketing career. Learners will start with the fundamentals and progress through a variety of strategies and topics to solve complex marketing challenges within the evolving tech space.

Software Development Bootcamp

XSWD 2010- Software Development Bootcamp- 24 Week Part-Time- Over the course of 24 weeks, you will learn how to build, test, and deploy software applications using JavaScript on the client- (front-end) and server-side (back-end) of an application. Starting with fundamentals, you will quickly move into more complex programming concepts that are solidified through challenges, such as: pair programming, weekly projects, lab exercises, and code reviews. The projects that you create throughout the program will be used to build your portfolio, which will serve as a showcase of your work and be a valuable asset in your post-bootcamp job hunt. You will also receive time with a professional career mentor through one-on-

one coaching sessions and bi-weekly workshops. In the final four weeks, you will work with a client and your classmates on a team to develop a real product. This is what we call your “capstone project”. At the end of the program, you will demonstrate your capstone project to an audience of hiring partners and tech community members at our Demo Day. This bootcamp part-time bootcamp is typically held during the weekday evenings and weekends.

Data Analytics Bootcamp

XDAB 2010- Data Science and Analytics Bootcamp, Extended Class-

The Data Analytics Bootcamp is a part-time, flex, mentor-led, Career Bootcamp that covers a variety of tools used to drive and guide complex, big data-oriented decisions. Learners will become experts in analysis, cleaning, mining, synthesis, and decision-making in order to influence key decisions with an increasingly complex business environment.

UX/UI Design Bootcamp

XUIX 2010- UX/UI Design Bootcamp- The process for creating the outward facing appearance of a website or application is referred to as user interface (UI) design, while the process of gathering research and using data to inform design decisions is referred to as user experience (UX) design. In this program, you will learn both. Starting with the fundamentals, you will quickly advance through topics of increasing complexity, applying creative problem-solving skills to design, and iterating on your designs based on research. You will learn how to defend your designs with data using performance metrics that you create. Lastly, you will leave this program knowing how to clearly implement every step of the design process, from concept to full-scale design prototypes.

General IT Related Programs

XITS 3400- AWS Cloud Foundations- AWS Academy Cloud Foundations is intended for students who seek an overall understanding of cloud computing concepts, independent of specific technical roles. It provides a detailed overview of cloud concepts, AWS core services, security, architecture, pricing, and support.

XITS 3410- AWS Solutions Architect- AWS Academy Solutions Architect is focused on the design of cost and performance optimized solutions. This is an ideal starting point for candidates with AWS Cloud or strong on-premises IT experience.

XITS 4000- IT Systems Support Specialist- Our online, asynchronous program is designed to equip you with the necessary skills and knowledge to become an IT Support Specialist. The program comprises multiple modules that cover essential topics such as technical support, hardware and operating systems, software, programming and databases, networking and storage, cybersecurity essentials, and cloud computing.

XITS 4020- Microsoft Office Specialist- The Microsoft Office Specialist program provides essential computer skills, along with training in business communication, etiquette, and problem-solving, covering a broad range of topics necessary for proficiency in the modern workplace. This offering includes the following certification(s): Microsoft Office Specialist (MOS)

XITS 4040- Red Hat Linux System Administrator I- The first of two courses covering the core system administration tasks needed to manage Red Hat Enterprise Linux servers Red Hat System Administration I is designed for IT professionals without previous Linux system administration experience. The course provides students with Linux administration competence by focusing on core administration tasks. This course also provides a foundation for students who plan to become full-time Linux system administrators by introducing key command-line concepts and enterprise-level tools. This course is the first of a two-course series that takes a computer professional without Linux system administration knowledge to become a fully capable Linux administrator.

XITS 4050- Red Hat Linux System Administrator II- Red Hat System Administration II is the second part of the RHCSA training track for IT professionals who have already attended Red Hat System Administration I. The course goes deeper into core Linux system administration skills in storage configuration and management, installation and deployment of Red Hat Enterprise Linux, management of security features such as SELinux,

control of recurring system tasks, management of the boot process and troubleshooting, basic system tuning, and command-line automation and productivity. This course assumes that students have attended Red Hat System Administration I.

XITS 4070- Cybersecurity Analyst (CySA+)- The Cybersecurity Analyst program prepares participants for a profession in cybersecurity, with a focus on defensive tactics designed to protect organizations against emerging threats and vulnerabilities. This offering includes the following certification(s): CompTIA CySA+

XITS 4080- Ethical Hacker (PenTest+)- The Ethical Hacker program prepares participants for a cybersecurity career, focusing on offensive tactics designed to proactively defend organizations from potential threats and ensure their digital assets remain secure. This offering includes the following certification(s): CompTIA PenTest+

XITS 4160- IT Helpdesk Administrator- The IT Help Desk Administrator program serves as an ideal entry point into the IT field, concentrating on the development and upkeep of network systems for businesses and organizations, preparing participants for critical support roles. This offering includes the following certification(s): CompTIA Network+, CompTIA A+

XITS 4210- CompTIA Security+ Preparation- The new CompTIA Security+ (SY0-701) represents the latest and greatest in cybersecurity, covering the most in-demand skills related to current threats, automation, zero trust, IoT, risk – and more. Once certified, you’ll understand the core skills needed to succeed on the job – and employers will notice too. The Security+ exam verifies you have the knowledge and skills required to: Assess the security posture of an enterprise environment and recommend and implement appropriate security solutions. Monitor and secure hybrid environments, including cloud, mobile, Internet of Things (IoT), and operational technology. Operate with an awareness of applicable regulations and policies, including principles of governance, risk, and compliance. Identify, analyze, and respond to security events and incidents. CompTIA Security+ is compliant with ISO 17024 standards and approved by the U.S. DoD to meet Directive 8140.03M requirements.

XCLO-2000 Cloud Fundamentals- The Cloud Fundamentals Certificate program is designed to help students learn essential cloud computing principles, covering concepts, governance, security, and service support. Explore how the cloud facilitates remote connection of critical services and data, enabling businesses globally to pursue digital transformation and enhance agility.

XDAT-2000 Data Science Fundamentals

With the Data Science Fundamentals Certificate, you'll showcase your comprehension of vital data analysis principles and techniques for leveraging data in guiding strategic business choices. You'll be able to articulate data attributes, classifications, applications, and frameworks, delineate various data management systems, and discuss fundamental principles and protocols of data governance.

XITA-2000 IT Audit Fundamentals- The IT Audit Fundamentals Certificate establishes a groundwork of knowledge and expertise essential for a successful career as an IT auditor. It encompasses fundamental audit principles, effective control utilization for conducting objective audits, and the hands-on application of audit principles in real-world scenarios.

XITR-2000 IT Risk Fundamentals- The IT Risk Fundamentals Certificate is designed for individuals seeking to gain insight into risk and information and technology (I&T)-related risk. It can be used as a pathway to the CRISC® certification.

XNET-2000 Networks and Infrastructure Fundamentals- Through the Networks and Infrastructure Fundamentals Certificate, you'll bolster and validate your comprehension of network architecture, infrastructure, and components, along with mastering the foundational terminology of networking.

XISA-5000 Certified Information Systems Auditor® (CISA®)- Certified Information Systems Auditor® (CISA®) is globally recognized as the gold standard for auditing, monitoring, and evaluating IT and business systems. Earning a CISA certification demonstrates your expertise and ability to

apply a risk-based approach to audit engagements. Registration includes Online Course, Review Manual, Certification Exam, QAE Database, and Student Membership.

XISM-5000 Certified Information Security Manager® (CISM®)- Certified Information Security Manager® (CISM®) validates your capacity to evaluate risks, establish robust governance, and proactively handle incidents. It emphasizes emerging technologies like AI and blockchain, ensuring your skillset aligns with evolving security challenges and industry standards. By addressing critical issues such as data breaches and ransomware attacks, CISM keeps IT professionals ahead of the curve.

XRIS-5000 Certified in Risk and Information Systems Control® (CRISC®)- The Certified in Risk and Information Systems Control® (CRISC®) certification will elevate your proficiency in Risk Management. By delving into a proactive strategy rooted in Agile methodology, you'll acquire the skills to bolster your company's resilience, provide value to stakeholders, and streamline Risk Management practices throughout the organization.

Certificate
Cultural Competency Leadership
Certificate

This certificate equips students with the knowledge, skills, and tools to drive meaningful organizational change, empowering leaders to foster a more effective and adaptable workplace culture that supports long-term success. Through a comprehensive curriculum, students will develop strategic leadership capabilities, enhance their decision-making skills, and learn best practices for managing change in dynamic environments. This certificate stacks upon the Professional Leadership certificate, and completely integrates into the IDS Leadership Major.

Requirements

Required Courses:		
COMM 351	Interpersonal Communication in Organizations	3
CPD/PAS 409	Leadership and Cultural Competence	3
CPD 415	Women in Leadership	3
CRJS 448	Women, Sex Discrimination and the Law	3
Total Credit Hours		12

An overall grade point average of 2.0 or above in all courses specified as a requirement for the certificate is required for the award of the certificate. Students must complete a minimum of six hours in upper-level courses required for the certificate through courses offered by Old Dominion University.

Certificate
Digital Forensics Certificate

The undergraduate certificate in Digital Forensics will prepare students for careers as digital forensic analysts. Students will gain experience practicing the forensics process as outlined by the National Institute of Science and Technology. This process includes collecting and examining digital evidence using forensic tools, analyzing evidence collected, and reporting the findings of an analysis to an audience. Students will also gain knowledge of the technological, legal, and social context surrounding the practice of digital forensics. For example, students will be introduced to some of the common types of cybercrimes where analyzing digital evidence is important. They will also learn the legal basis for searching and seizing digital artifacts, and techniques for interviewing individuals in connection to cybercrimes.

Requirements

Required Courses (6 credits)		
CYSE 404	Law and Digital Forensics	3
CYSE 407	Digital Forensics	3

Electives		
Select two of the following:		6
CYSE 301	Cybersecurity Techniques and Operations	
CRJS 340	White-Collar Crime	
CYSE/CRJS 409	Crime and Computer Applications	
Total Credit Hours		12

An overall grade point average of 2.0 or above in all courses specified as a requirement for the certificate is required for the award of the certificate. Students must complete a minimum of six hours in upper-level courses required for the certificate through courses offered by Old Dominion University.

Certificate

Professional Leadership Certificate

Robert Doherty, Coordinator

The certificate in Professional Leadership is designed to provide students with key concepts related to leadership in work and/or experiential settings. The curriculum focuses on educating students about specific aspects of leadership, including ethics, law and trends in leadership. Students will also gain critical thinking and analytical skills related to decision-making. Courses in the certificate address key areas of leadership to those aspiring to leadership roles in current or future work positions. Coursework provides opportunities for students to formalize their leadership strategies within ethical and legal realms, and to understand the value of critical thinking in leadership roles.

Requirements

Required Courses		
CPD 400	Foundations of Leadership	3
CPD 410	Leadership Ethics	3
CPD 412	Leadership and Law	3
CPD 417	Digital Leadership	3
or CYSE 417	Digital Leadership	
Total Credit Hours		12

An overall grade point average of 2.0 or above in all courses specified as a requirement for the certificate is required for the award of the certificate. Students must complete a minimum of six hours in upper-level courses required for the certificate through courses offered by Old Dominion University.

Graduate School

Web Site: <http://www.odu.edu/graduateschool> (<http://www.odu.edu/graduateschool/>)

Marisol P. Perez, Ph.D., Dean

TBD, Associate Dean

TBD, Director for Administration & Academic Services

Liz Smith, Director of Interdisciplinary Initiatives

Patricia Schiaffini-Vedani, Director of International Collaborations

2102 Monarch Hall, 757-683-4885

Laura Ray, Director, English Language Center

1108 Dragas Hall, 757-683-4424

Overview

One mission of the Old Dominion University Graduate School is to serve graduate students and graduate programs in an interdisciplinary framework that coordinates and optimizes available resources and enhances the visibility and value of graduate education across the region and world. The purpose of the Graduate School is to advocate for graduate students and graduate programs in a centralized manner so that policies and practices are consistently developed and applied across the academic colleges and schools. The work includes ongoing support for the university's forward-focused vision.

A second mission is to expand international collaborations via prestigious scholarships for undergraduates and graduate students, and support faculty who seek international teaching collaborations. Further, the English Language Center provides support for international recruiting, an intensive English language program for pre-matriculated students, an academic pathway program for conditionally admitted students (the Monarch English Transition Program), coursework for ODU students with interest in teaching multilingual students, and short-term contract programs focused on language and culture.

For more information regarding graduate programs or services, contact the Graduate School at 757-683-4885 or graduateschool@odu.edu.

Patricia and Douglas Perry Honors College

Web Site: <http://www.odu.edu/honors> (<http://www.odu.edu/honors/>)

Zaryab Iqbal, Ph.D., Dean

The Patricia and Douglas Perry Honors College offers a program where admitted high achieving incoming, currently enrolled, and transfer students enjoy the opportunity to personalize and co-design their honors experience at Old Dominion. Throughout their Honors College experience, students are encouraged to participate in experiential learning opportunities such as undergraduate research, internships and/or study abroad as a part of their honors education. Honors College students have the opportunity to apply for research apprenticeships and develop a credit-earning civic learning project in consultation with the Dean of the Honors College. Contract courses are available for Honors College students to deepen their knowledge and individualize course content for courses on the 300/400 level that are three credits or more. In their senior year, Honors College students participate in a three-credit senior honors colloquium, departmental capstone course, or honors thesis, which provides them with the opportunity to hone their research skills and assess their academic strengths in preparation for graduate school, international scholarship opportunities, and future employment. Throughout their time in the Honors College, students will create and maintain an E-Portfolio, which will be showcased in their senior year prior to graduation.

The online application for admission into the Honors College is available on the Honors College website: <https://www.odu.edu/honors/apply> (<https://www.odu.edu/honors/apply/>). All students must submit a minimum of one letter of recommendation attesting to the applicant's scholastic ability from an instructor; however, students may submit more letters of recommendation, and they are invited to submit a portfolio showcasing their accomplishments.

Being an Honors College graduate is a prestigious accomplishment, one that is viewed favorably by graduate schools and potential employers everywhere. Additional benefits include:

- Honors College students can apply to live in Honors Housing. Applications for Honors Housing must be made directly to the Office of Housing and Residence Life. The Office of Housing and Residence Life prioritizes requests based on the date BOTH the application and housing deposit are received.
- Honors College students have the ability to schedule an appointment with the Dean of the Honors College for personalized letters of recommendation.
- Honors College students enjoy faculty privileges at the library.
- Tuition scholarships for HNRS courses, including study abroad.
- All Honors College students may register for classes on the first day of the registration period.
- Exclusive scholarship opportunities, including the John and Kate Broderick Opportunity Scholarship: <https://www.odu.edu/honors/scholarship> (<https://www.odu.edu/honors/scholarship/>).
- Honors College students can apply for travel grants to offset the costs of travel to a national or international conference at which they are presenting.
- Honors College students may apply for up to \$500 to offset the costs of equipment and supplies for the completion of research related to a research apprenticeship, honors contract course, or a senior honors thesis/project.
- Upon completion of the requirements of the Honors College, students are awarded a certificate, a medal, and a silver tassel.

Competition for acceptance into the Honors College is keen. The criteria used to select the limited number of first-year students admitted annually include high school grade point average and curriculum, Scholastic Aptitude Test scores, letters of recommendation, and a written personal statement.

The minimum admission requirements for continuing and transfer students are as follows: a 3.5 college grade point average, the ability to complete at

least 48 additional credit hours at Old Dominion University, and letters of recommendation from college faculty members. Honors College students must maintain at least a 3.25 cumulative grade point average.

Honors College Requirements

Honors General Education and Honors Contract Course Requirements

Four honors courses *	
Capstone Requirement (select one in addition to the ePortfolio**):	
Capstone Course (Colloquium, Thesis, or Departmental Capstone Course)	
HNRS 499	Senior Honors Thesis
Experiential Learning Component (select one in addition to HNRS 387):	
HNRS 387	Honors Civic Learning Project
Honors College options for: Study Abroad, Teacher Preparation, Practicum, or Internship may be developed to fulfill the experiential learning component requirements.	
Undergraduate Research: Complete two of the following	
Approved Undergraduate Research Course	
HNRS 226	Undergraduate Research Apprenticeship
Out of Class Educational Poster or Oral Presentation	
Successful application for and completion of an Undergraduate Research Grant Project	
Publication of an article in a research journal	
HNRS 201	Monarch Think Tank I
HNRS 301	Monarch Think Tank II
HNRS 497	Honors Independent Study
HNRS 498	Honors Independent Study
Campus Events ***	

- * Either honors general education or honors contract.
- ** An ePortfolio is a digital collection of student work developed across varied contexts (classes, internships, social activities, etc.) over time. As students progress through a course of study at ODU, an ePortfolio can serve as a repository for their work. As a result, when the need arises for students to reflect on and display their experiences, they may draw on the archived material, crafting a showcase portfolio for potential employers and faculty writing recommendations. Due to its digital nature, an ePortfolio allows students to create and share multi-media elements, such as videos, audio files, animation, and so forth. Honors College students will create and maintain an ePortfolio showcasing work in and out of class while in the Honors College, which will be reviewed each semester. The Honors College provides workshops, as well as individualized support to assist students in the development of the ePortfolio.
- *** Honors College students are required to attend one campus event per semester for up to 8 semesters.

Undergraduate Research Program

Under the leadership of the Perry Honors College, the undergraduate research program includes an annual symposium, undergraduate research courses, a journal, a recognition program for faculty mentors and student researchers, as well as a robust grant program. The Undergraduate Research Program promotes, supports, and funds the involvement of undergraduate students in the active research community at Old Dominion University. It provides undergraduates with hands-on experience working with faculty on a wide variety of research projects. Faculty mentors help students to acquire research skills early in their undergraduate careers. Later in their academic careers, students use and develop these skills through research-oriented course work, collaborative and faculty-sponsored research, and their own independent research projects, which can be potentially funded through Old

Dominion's Undergraduate Research and Creativity Grant Program. The Undergraduate Research Symposium and Undergraduate Research Journal provide students with the opportunity to present and publish their work under the supervision of the University's distinguished faculty. Additional information regarding undergraduate research opportunities is available on the Undergraduate Research Program's website: <https://www.odu.edu/honors/research> (<https://www.odu.edu/honors/research/>).

Contract Honors Courses

Students with a grade point average of at least 3.25 may transform any upper-division course into an Honors course on an individual basis. With the advice and consent of the instructor, students take one or more courses that can be converted into Honors. No grade below B is accepted for Honors designation. In addition, contract honors courses may be used to meet requirements for departmental honors. Interested students should contact the Honors College for additional information.

The Perry Honors College (PHC) and Batten College of Engineering & Technology Engineering Honors Program (EHP)

A partnership between the Perry Honors College and the Batten College of Engineering and Technology, the Engineering Honors Program (PHC/EHP) offers a program for select incoming freshmen, current ODU students, and transfer students. The program has been designed for students who intend to make a difference in the world and who would enjoy the opportunity to ready themselves for future leadership positions in the field of engineering.

Throughout their PHC/EHP experience, students will have the opportunity to network with industry leaders, and they are encouraged to participate in undergraduate research, as well as experiential learning (such as engineering competitions, community engagement, internships, and study abroad). In their freshman year, PHC/EHP students may elect to live in the Honors Engineering living learning community, and they will enjoy an honors engineering course that focuses on hands-on learning in engineering labs and Engineering Makerspace & Invention Center. In their sophomore and junior years, PHC/EHP students will extend their learning beyond the classroom by participating in research apprenticeships and by developing a one-credit civic learning project in consultation with the Dean of the Honors College. In their sophomore and junior years, Contract courses (courses that are not labeled as honors but that the instructor can adapt to an honors student to make it an honors course) are available for PHC/EHP students to deepen their knowledge of course material for courses on the 300/400 level that are three credits or more. In their senior year, PHC/EHP students can request a faculty member to generate a senior elective honors three-credit contract course where student will hone their research skills and assess their academic strengths in preparation for graduate school and future employment.

The online application for admission into the Engineering Honors Program is available on the Perry Honors College website: <https://www.odu.edu/honors/apply> (<https://www.odu.edu/honors/apply/>). All students must submit a resume, an essay describing how engineers might help to solve a contemporary real-world problem, and one letter of recommendation from an instructor attesting to the applicant's scholastic ability in an area relevant to engineering and their potential as a future leader in the field of engineering. As applications are reviewed holistically, students are encouraged to submit a portfolio showcasing their accomplishments in leadership, research, or in activities related to the field of engineering; a LinkedIn page with pictures and videos of projects and experiences is an optional solution to organize such portfolio

Eligibility

First-year Students

- Application and acceptance into ODU
- Application to the PHC/EHP
- 3.5 unweighted High School GPA in math and science courses

- Students must have an intended major in the Batten College of Engineering and Technology and placement in Calculus I (MATH 211) or higher before the start of their first semester.

Transfer Students

- Application and acceptance into ODU
- Application to the PHC/EHP
- 3.5 cumulative GPA and 3.5 in math and science courses, including completion of Calculus I (MATH 211) before joining ODU.

Current ODU Students:

- Application to the PHC/EHP
- 3.5 cumulative GPA (ODU) and 3.5 GPA (ODU) in math and science courses, including completion of Calculus I (MATH 211) with a minimum grade of C.

Benefits

- A stipend of \$250 per semester for up to eight semesters as an undergraduate student
- PHC/EHP students can apply to live in the Honors Engineering Living Learning Community. Applications for the LLC must be made directly to the Office of Housing and Residence Life. The Office of Housing and Residence Life prioritizes requests based on the date BOTH the application and housing deposit are received. Students will have preference to select single rooms.
- PHC/EHP students can schedule an appointment with the Dean of the Honors College and the Dean's Office of the College of Engineering and Technology for personalized letters of recommendation.
- PHC/EHP students enjoy faculty privileges at the library.
- Honors advising services that focus on opportunities and helping the student develop a portfolio of accomplishment at Old Dominion.
- Tuition scholarships for HNRS courses, including HNRS 396 (honors study abroad).
- PHC/EHP students may register for classes on the first day of the registration period following their first semester at Old Dominion.
- PHC/EHP students have exclusive scholarship opportunities, including the John and Kate Broderick Opportunity Scholarship: <https://www.odu.edu/honors/scholarship> (<https://www.odu.edu/honors/scholarship/>).
- PHC/EHP students can apply for travel grants to offset the costs of travel to a national or international conference at which they are presenting.
- PHC/EHP students may apply to the Honors College for up to \$500 to offset the costs of equipment and supplies for the completion of research related to a research apprenticeship, honors contract course, or a senior honors thesis/project.
- Reserved study time in a studio at the Engineering Systems Building.
- Special access to the Engineering Makerspace & Invention Center activities.
- Early acceptance in the linked undergraduate – graduate programs in engineering.
- Special funding for projects and entrepreneurial activities.
- Mentoring program with faculty and opportunities to mentor other engineering students.
- Upon completion of the requirements of the Perry Honors College/ Engineering Honors Program, students are awarded a certificate, a medal, and a silver tassel, and they will receive a special transcript designation.
- Students with significant accomplishments in undergraduate research may petition to have the designation "Research Honors Scholar" placed on their transcript. For additional information, students may contact the Perry Honors College or review the Undergraduate Research Honors Scholar information on the Perry Honors College website.
- Upon completion of the requirements of the Perry Honors College/ Engineering Honors Program, PHC/EHP students who meet the following requirements may also apply for an honors designation on

their diploma (departmental honors): Minimum cumulative GPA of 3.25; Minimum GPA in the major of 3.50; completion of at least two 300/400-level courses designated by the department to be honors; and completion of at least 60 credit hours at Old Dominion, 54 of which must be in grade-point graded courses. Note: To determine eligibility for departmental honors, the student's complete record, including grades and hours for courses that have been forgiven or adjusted, will be evaluated to calculate the final grade point average.

Program Requirements

Requirement 1: Perry Honors College/Engineering Honors Program ePortfolio/LinkedIn*

Requirement 2: Honors Courses (four required): Honors ENGN 121 (required for first-year students); select three from the following: ENGL 231C: Honors Section of Technical Communication, HNRS Independent Study (if approved by Honors College), honors general education courses, honors contract courses in engineering, engineering graduate courses taken as an undergraduate (e.g., those taken as part of a linked program).

Requirement 3: Experiential Learning and Leadership (select at least two from the following): engineering internship (may be repeated), participation in engineering competitions (e.g. concrete canoe, solar decathlon, motorsports, SAE aero, and Intelligent Ground Vehicle) or engineering projects with social impact (e.g., engineers without borders), HNRS 387 (Civic Learning Project), HNRS 396 (study abroad, when connected to engineering)

Requirement 4: Undergraduate Research (select at least two from the following): HNRS 226 (undergraduate research apprenticeship) or equivalent experience, poster or oral presentation at a regional/ national/ international conference, successful application for and completion of an Undergraduate Research Grant project (see undergraduate research program webpage for additional information), authorship or co-authorship of an article accepted or published in a peer-reviewed journal or conference proceedings, a Research Experience for Undergraduates (REU) for fall, spring, or summer. Note: Successful work in a faculty member's lab or a research-oriented internship may also be counted toward this requirement.

Requirement 5: Campus Events. PHC/EHP student are required to attend at least one campus event (e.g., internship fair, engineering club meeting, the PHC's undergraduate research symposium) per semester.

Optional requirement: Contract Course - Honors Engineering Senior Elective.

*An ePortfolio is a digital collection of student work developed across varied contexts (classes, internships, social activities, etc.) over time. As students progress through a course of study at ODU, an ePortfolio can serve as a repository for their work. As a result, when the need arises for students to reflect on and display their experiences, they may draw on the archived material, crafting a showcase portfolio for potential employers and for faculty writing recommendations. Due to its digital nature, an ePortfolio allows students to create and share multi-media elements, such as videos, audio files, animation, and so forth. Honors College students will create and maintain an ePortfolio showcasing work in and out of class while in the Honors College, which will be reviewed each semester. The Honors College provides workshops, as well as individualized support to assist students in the development of the ePortfolio. Placing all e-portfolio information on the student LinkedIn page is a requirement.

Kenneth J. Fridley, Ph.D., *Vice President for Research and Economic Development*

Brandi Hephner LaBanc, Ed.D., *Vice President for Student Enrollment, Engagement & Services*

Alonzo C. Brandon, B.S., *Vice President for University Advancement*

Kimberly Osborne, M.S., *Vice President for University Communications and Chief Marketing Officer*

Laura L. Delbrugge, Ph.D., *Dean of the College of Arts and Letters*

Erika Marsillac, Ph.D., *Dean of the Strome College of Business*

Tammi F. Dice, Ph.D., *Dean of the Darden College of Education and Professional Studies*

Jeffrey W. Fergus, Ph.D., *Dean of the Batten College of Engineering and Technology*

Bonnie Van Lunen, Ph.D., *Dean of the Ellmer College of Health Sciences & Senior Associate Vice President for Academic Innovation*

Gail Dodge, Ph.D., *Dean of the College of Sciences*

Zaryab Iqbal, Ph.D., *Dean of the Perry Honors College*

Rene Love, Ph.D., *Dean of the Ellmer School of Nursing*

Li-Wu Chen, Ph.D., *Dean of the Joint School of Public Health*

Holly A. Handley, Ph.D., *Interim Dean of Interdisciplinary Schools*

Marisol P. Perez, Ph.D., *Dean of the Graduate School*

Timothy A. Hackman, M.L.S., M.A., *Dean of University Libraries*

Department and School Chairs

HONG (KIM) DUONG, Ph.D., *School of Accountancy (Interim)*

JOHN ROTH, M.F.A., *Art*

HOLLY D. GAFF, Ph.D., *Biological Sciences*

CRAIG A. BAYSE, Ph.D., *Chemistry and Biochemistry*

SANDEEP KUMAR, Ph.D., *Civil and Environmental Engineering*

TIM J. ANDERSON, Ph.D., *Communication and Theatre Arts*

JAMES D. BLANDO, Ph.D., *Epidemiology, Biostatistics, and Environmental Health*

RAVI MUKKAMALA, Ph.D., *Computer Science*

MARK C. REHFUSS, Ph.D., *Counseling and Human Services*

DANIEL TAKABI, Ph.D., *School of Cybersecurity*

FRANK Y. LIU, Ph.D., *School of Data Science*

BRENDA T. BRADSHAW, M.S., *School of Dental Hygiene*

ROBERT MCNAB, Ph.D., *Economics*

MICHAEL (MICKEY) KOSLOSKI, Ph.D., *Educational Leadership and Workforce Development*

OSCAR R. GONZALEZ, Ph.D., *Electrical and Computer Engineering*

ERTUNGA CEM OZELKAN, Ph.D., *Engineering Management and Systems Engineering*

VUKICA JOVANOVIC, Ph.D., *Engineering Technology*

VERONICA T. WATSON, Ph.D., *English*

DANIEL M. RUSSELL, Ph.D., *School of Exercise Science*

BRUCE RUBIN, Ph.D., *Finance*

BRIAN C. MARTIN, Ph.D., *Health Behavior, Policy, and Management (Interim)*

INGO HEIDBRINK, Ph.D., *History*

XIHE ZHU, Ph.D., *Human Movement Studies and Special Education*

WEIYONG ZHANG, Ph.D., *Information Technology and Decision Sciences*

SHAOMIN LI, Ph.D., *Management*

CHUANYI TANG, Ph.D., *Marketing*

GORDON MELROSE, Ph.D., *Mathematics and Statistics*

MARWAN AL-HAIK, Ph.D., *Mechanical and Aerospace Engineering*

HAROLD C. RIETHMAN, Ph.D., *School of Medical Diagnostic and Translational Sciences*

BRANDON A. SHAH, M.S., M.B.A., *Military Science and Leadership*

NANCY K. KLEIN, Ph.D., *School of Music*

BRIAN C. BECKER, M.B.A., *Naval Science*

KEVIN M. YEAGER, Ph.D., *Ocean and Earth Sciences*

NICOLE WILLOCK, Ph.D., *Philosophy and Religious Studies*

SEBASTIAN E. KUHN, Ph.D., *Physics*

TOM R. ALLEN, Ph.D., *Political Science and Geography*

GEORGE H. NOELL, Ph.D., *Psychology*

BRUCE D. MCDONALD, Ph.D., *School of Public Service*

PATRICIA A. LAVERDURE, Ph.D., *School of Rehabilitation Sciences*

RUTH A. TRIPLETT, Ph.D., *Sociology and Criminal Justice*

STACIE RAYMER, Ph.D., *School of Speech-Language Pathology*

SHANA L. PRIBESH, Ph.D., *STEM Education and Professional Studies*

KUNTAL BHATTACHARYYA, Ph.D., *School of Supply Chain, Logistics, and Maritime Operations*

ANGELA L. ECKHOFF, Ph.D., *Teaching and Learning*

ELIZABETH GROENEVELD, Ph.D., *Women's and Gender Studies*

ELIZABETH C. BLACK, Ph.D., *World Languages and Cultures*

Faculty

Please see the A to Z directory on the ODU website for Faculty information: <https://www.odu.edu/directory> (<https://www.odu.edu/directory/>).

Emeriti Faculty and Administrators

A

Eileen P. Abrahamsen, *Associate Professor Emerita of Communication Disorders & Special Education**

John A. Adam, *University Professor Emeritus and Professor Emeritus of Mathematics & Statistics*

Clifford L. Adams, *Professor Emeritus of Physics**

Kimberly Adams Tufts, *Professor Emerita of Nursing*

Cephas J. Adkins, Jr., *Professor Emeritus of Psychology**

Abdel M. Agami, *Professor Emeritus of Accounting*

Ali Osman Akan, *Professor Emeritus of Civil and Environmental Engineering*

Robert "Bob" L. Ake, *University Professor Emeritus and Associate Professor Emeritus of Chemistry and Biochemistry*

William Gerald Akers, *Professor Emeritus of German Language and Literature**

Betty B. Alexy, *Associate Professor Emerita of Nursing*

Tami C. Al-Hazza, *Associate Professor Emerita of Teaching and Learning*

Dwight W. Allen, *Eminent Scholar Emeritus of Educational Reform and Professor Emeritus**

Claire J. Anderson, *Associate Professor Emerita of Management*

Eric E. Anderson, *Associate Professor Emeritus of Economics*

Michael C. Andrews, *Eminent Scholar Emeritus and Louis I. Jaffe Professor Emeritus of English*

Robert P. Arnett, *Associate Professor Emeritus of Communication and Theatre Arts*

Robert L. Ash, *Eminent Scholar Emeritus and Professor Emeritus of Mechanical and Aerospace Engineering*

Steven K. Atiyah, *Assistant Professor Emeritus of Mathematics and Statistics**

Larry P. Atkinson, *Eminent Scholar Emeritus and Professor Emeritus of Ocean, Earth and Atmospheric Sciences**

Roy E. Aycok, *Professor Emeritus of English**

B

Howard W. Baeumler, *Associate Professor Emeritus of Mathematics**

Virginia S. Bagley, *Associate Professor Emerita of Biological Sciences**

Han P. Bao, *Professor Emeritus of Mechanical and Aerospace Engineering and Mitsubishi Kasei Professor Emeritus of Engineering Manufacturing*

Peter Stephen Barna, *Professor Emeritus of Mechanical Engineering and Mechanics**

Barbara R. Bartkus, *University Professor Emerita and Associate Professor Emerita of Management*

William S. Bartolotta, *Associate Professor Emeritus of Music*

David R. Basco, *Professor Emeritus of Civil and Environmental Engineering*

Deborah "Debbie" B. Bauman, *Assistant Dean Emerita of Health Sciences and Associate Professor Emerita of Dental Hygiene*

Nancy Topping Bazin, *Eminent Scholar Emerita and Professor Emerita of English*

Jacob Becher, *Associate Professor Emeritus of Physics*

William W. Beck, *Professor Emeritus of Civil Engineering Technology**

Walter Herman Bell, Sr., *Professor Emeritus of French Language and Literature**

Charles E. Bell, Jr., *Professor Emeritus of Chemistry and Biochemistry**

Richardean S. Benjamin, *Associate Dean Emerita, College of Health Sciences, and Associate Professor Emerita of Nursing*

Linda K. Bennington, *Clinical Associate Professor Emerita of Nursing*

Maurice R. Berube, *Eminent Scholar Emeritus and Professor Emeritus of Educational Leadership*

Samuel Bieber, *Professor Emeritus of Biological Sciences**

Richard Hugh Bigelow, *Professor Emeritus of Civil Engineering**

Frank William Billmyer, Jr., *Professor Emeritus of Chemical Sciences**

Janet M. Bing, *University Professor Emerita and Professor Emerita of English*

Ray S. Birdsong, *Professor Emeritus of Biological Sciences and Oceanography**

Carvel H. Blair, *Associate Professor Emeritus of Oceanography**

Charles P. Blicht, *Professor Emeritus of Economics**

Thomas W. Blossom, *Professor Emeritus of History**

Kathryn W. Boone, *Librarian III Emerita*

Darwin F. Bostick, *Associate Professor Emeritus of History (posthumous)**

Nicholas G. Bountress, *Professor Emeritus of Communication Disorders and Special Education*

Judy M. Bowman, *Assistant Vice President Emerita for Undergraduate Studies*

Wayne E. Bowman, *Associate Professor Emeritus of English**

Colin E. Box, *Professor Emeritus of Community and Environmental Health**

Carl Boyd, *Eminent Scholar Emeritus and Louis I. Jaffe Professor Emeritus of History*

Earl W. Bracey, *Associate Professor Emeritus of Office Administration**

Martyn H. Bradley, *Associate Athletic Director Emeritus for Sports Medicine and Athletic Training*

John David Branch, *Associate Professor Emeritus of Kinesiology and Health Science*

S. Eliot Breneiser, *Professor Emeritus of Music**

Violet Breneiser, *Assistant Professor Emerita of Foreign Languages & Literatures**

William "Bill" H. Brenner, *Professor Emeritus of Philosophy and Religious Studies**

John P. Broderick, *University Professor Emeritus and Professor Emeritus of English*

John R. Broderick, *President Emeritus and Distinguished Lecturer in Higher Education and Public Affairs*

Kate Broderick, *First Lady Emerita*

Nina W. Brown, *Eminent Scholar Emerita, University Professor Emerita, and Professor Emerita of Counseling and Human Services*

Kenneth G. Brown, *Professor Emeritus of Chemistry and Biochemistry*

William R. Brown, *Professor Emeritus of Educational Curriculum & Instruction**

Janet E. Brunelle, *Master Lecturer Emerita of Computer Science*

Lindal J. Buchanan, *Associate Professor Emerita of English and Women's Studies*

Katherine T. Bucher, *Professor Emerita of Educational Curriculum and Instruction*

James L. Bugg, Jr., *President Emeritus and Eminent Professor Emeritus of History**

Gordon C. Buhner, *Assistant Professor Emeritus of Management Information Systems and Decision Sciences**

Charles O. Burgess, *Professor Emeritus of English**

Dana D. Burnett, *Professor of Practice Emeritus of Educational Foundations and Leadership*

Carroll "C.J." M. Butler, *Master Lecturer Emeritus of Communication Disorders and Special Education*

C

James Van Dyck Card, *Professor Emeritus of English**

Dianne C. Carmody, *University Professor Emerita and Associate Professor Emerita of Sociology and Criminal Justice*

Leslie G. Carr, *Associate Professor Emeritus of Sociology and Criminal Justice**

Jimmie Carraway, *University Distinguished Teacher Emeritus and Senior Lecturer Emeritus of Information Technology and Decision Sciences*

Marion E. Carroll, *Assistant Professor Emeritus of Exercise Science, Physical Education and Recreation*

Keith A. Carson, *Associate Professor Emeritus of Biological Sciences*

Thomas F. Cash, *Professor Emeritus of Psychology*

Wilkie Willis Chaffin, *Professor Emeritus of Information Systems and Decision Sciences**

Paul J. Champagne, *Professor Emeritus of Management*

Joseph C. Chandler, *Professor Emeritus of Health and Physical Education**

David Chapman, *Master Lecturer Emeritus of Public Service*

Thomas "Tom" E. Chapman, *Associate Professor Emeritus of Political Science & Geography*

Sushil K. Chaturvedi, *Professor Emeritus of Mechanical and Aerospace Engineering*

Robert Y. K. Cheng, *Professor Emeritus of Civil Engineering**

Kwang S. Choi, *Associate Professor Emeritus of Finance*

Kae H. Chung, *Professor Emeritus of Management*

Allen K. Clark, *Professor Emeritus of Chemistry and Biochemistry**

Forrest "Pat" Clay, Jr., *Professor Emeritus of Physics**

Benjamin F. Clymer, *Associate Professor Emeritus of Library Science**

Glynn D. Coates, *Professor Emeritus of Psychology**

Sheri R. Colberg-Ochs, *Professor Emerita of Human Movement Sciences*

Faye E. Coleman, *Associate Professor Emerita of Medical Diagnostic and Translational Sciences**

Charlie H. Cooke, *Professor Emeritus of Mathematics and Statistics**

Reuben Cooper, *Professor Emeritus of Speech**

Gary E. Copeland, *Professor Emeritus of Physics**

Samuel F. Coppage, Jr., *Associate Professor Emeritus of Information Technology and Decision Sciences (posthumous)**

Joseph "Joe" P. Cosco, *Associate Professor Emeritus of English*

Matilda Cox, *Master Lecturer Emerita of English*

James L. Cox, Jr., *Professor Emeritus of Physics*

Jeremiah F. Creedon, *Director Emeritus of Transportation Research*

Edward M. Cross, *Professor Emeritus of Information Systems and Decision Sciences**

Ernest "Jim" Cross, Jr., *Professor Emeritus of Aerospace Engineering**

Gary R. Crossman, *Professor Emeritus of Engineering Technology*

William "Bill" H. Crouch, *Associate Professor Emeritus of Information Technology and Decision Sciences*

Jon R. Crunkleton, *Associate Professor Emeritus of Finance*

Gabriel T. Csanady, *Professor Emeritus of Oceanography**

Frederick W. Culpepper, *Professor Emeritus of Occupational and Technical Studies**

William "Bill" G. Cunningham, *Eminent Scholar Emeritus and Professor Emeritus of Educational Leadership and Counseling*

Stephen G. Cupschalk, *Associate Professor Emeritus of Mechanical Engineering*

Robert "Rob" F. Curry, *Director Emeritus of Advising for Distance Learning*

D

Ram C. Dahiya, *Eminent Scholar Emeritus and Professor Emeritus of Mathematics and Statistics*

Dayle A. Daines, *Associate Professor Emerita of Biological Sciences*

Kenneth G. Daley, *University Professor Emeritus and Professor Emeritus of Art**

Jane H. Dané, *Associate Vice President Emerita for Enrollment Management*

Joseph C. Daniel, Jr., *Professor Emeritus of Biological Sciences and Dean Emeritus of College of Sciences**

Mona J. Danner, *Professor Emerita of Sociology and Criminal Justice*

Dennis A. Darby, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Michele L. Darby, *Eminent Scholar Emerita, University Professor Emerita and Professor Emerita of Dental Hygiene**

Daniel M. Dauer, *Eminent Scholar Emeritus and Professor Emeritus of Biological Sciences*

Anne S. Daughtrey, *Professor Emerita of Management**

Donald D. Davis, *Associate Professor Emeritus of Psychology*

John J. Davye, *Professor Emeritus of Music**

Frank P. Day, *Eminent Scholar Emeritus and Professor Emeritus of Biological Sciences*

Chandra R. de Silva, *Professor Emeritus of History*

Diana L. Deadrick, *Associate Professor Emerita of Management*

Walter F. Deal, III, *Associate Professor Emeritus of Occupational and Technical Studies*

Elizabeth S. deBedts, *Associate Professor Emerita of Library Science**

Ralph deBedts, *Professor Emeritus of History**

Dianne DeBeixedon, *Associate Professor Emerita of Art*

Charles M. DeHority, *Professor Emeritus of Management**

David E. Delzell, *Professor Emeritus of Biological Sciences**

Ayodeji "Deji" O. Demuren, *Professor Emeritus of Mechanical and Aerospace Engineering*

Valerian Derlega, *Professor Emeritus of Psychology*

John J. DeRolf, III, *Professor Emeritus of Educational Leadership and Services**

Amin N. Dharamsi, *Professor Emeritus of Electrical and Computer Engineering*

Beth Ann Dickie, *Director Emerita, Office of Educational Accessibility*

Gail K. Dickinson, *Professor Emerita of STEM Education and Professional Studies*

Terry L. Dickinson, *Professor Emeritus of Psychology*

Paul A. Dicklin, *Associate Professor Emeritus of Speech Communication and Theater Arts (posthumous)**

Fred C. Dobbs, *Professor Emeritus of Ocean and Earth Sciences*

Leonard E. Dobrin, *Associate Professor Emeritus of Sociology and Criminal Justice**

Carol A. Doll, *Professor Emerita of Teaching and Learning*

Frances McGrath Dolloph, *Community and Student Success Director Emerita, Distance Learning*

John Mark Dorrepaal, *Professor Emeritus of Mathematics and Statistics*

Lawrence G. Dotolo, *President Emeritus of the Virginia Tidewater Consortium*

Michael J. Doviak, *Associate Professor Emeritus of Mathematics and Statistics*

Suzanne D. Doviak, *Senior Lecturer Emerita of Mathematics and Statistics**

Lynn H. Doyle, *Associate Professor Emerita of Educational Leadership*

Christine "Chris" Drake, *Professor Emerita of Political Science and Geography*

William A. Drewry, *Professor Emeritus of Civil and Environmental Engineering**

James "Jim" P. Duffy, *Associate Vice President Emeritus for Academic Affairs*

Cynthia B. Duncan, *University Librarian Emerita**

Perry M. Duncan, *Associate Professor Emeritus of Psychology*

Thomas H. Dunham, *Associate Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Robert "Bob" F. Dunker, *Medical Director Emeritus of Student Health Services*

ReNeé S. Dunman, *Assistant Vice President Emerita for Equity and Diversity*

William M. Dunstan, Jr., *Professor Emeritus of Ocean, Earth and Atmospheric Sciences**

E

Carolyn S. Eakin, *Director Emerita of Technology and Data Analysis*

John L. Echternach, *Eminent Scholar Emeritus of Physical Therapy**

Patricia A. Edwards, *Senior Lecturer Emerita of Art*

Mary C. Enderson, *Professor Emerita of Teaching and Learning*

A. James "Jim" English, *Associate Professor Emeritus of Community and Environmental Health**

Elizabeth H. Esinhart, *Senior Lecturer Emerita of Political Science and Geography*

Edward R. Estes, Jr., *Professor Emeritus of Civil Engineering Technology**

Natalie W. Etheridge, *Associate Professor Emerita of Health, Physical Education and Recreation**

Rodney "Rod" L. Evans, Jr., *Senior Lecturer Emeritus of Philosophy and Religious Studies*

F

John A. Fahey, *Associate Professor Emeritus of Foreign Languages and Literatures**

Joong Fang, *Professor Emeritus of Philosophy**

Anita C. Fellman, *Professor Emerita of History*

Dale J. Feltes, *Director Emeritus of Design and Construction*

Raymond E. Ferrari, *Associate Professor Emeritus of Mechanical Engineering Technology**

T. Ross Fink, *Professor Emeritus of Education**

Charlene E. Fleener, *Associate Professor Emerita of Teaching and Learning*

Ike L. Flory, *Associate Professor Emeritus of Engineering Technology*

Beverly "Bev" Forbes, *Associate Director Emerita for Experiential Education Programs*

Lewis S. Ford, *Louis I. Jaffe Professor Emeritus of Humanities and Professor Emeritus of Philosophy and Religious Studies**

Jennifer J. Foss, *Director Emerita of Student Health Services*

Stephen J. Foster, *Professor Emeritus of Foreign Languages and Literatures*

Willard C. Frank, *Associate Professor Emeritus of History**

Mark Fravel, *Professor Emeritus of Educational Curriculum and Instruction**

Frederick G. Freeman, *Professor Emeritus of Psychology*

Justin C. Friberg, *Professor Emeritus of Political Science and Geography**

Morel A. Fry, *Assistant University Librarian Emerita for Administration*

Agnes Rose Fuller Wynne, *Master Lecturer Emerita of Music**

G

Robert A. Gable, *Eminent Scholar Emeritus and Professor Emeritus of Communication Disorders and Special Education*

Ann E. Gargett, *Professor Emerita of Ocean, Earth and Atmospheric Sciences*

Lucille L. Garner, *Librarian III Emerita**

Glenn A. Gerdin, *Associate Professor Emeritus of Electrical and Computer Engineering*

William "Bill" R. Gideon, *Associate Director Emeritus for Military Programs, Distance Learning*

Henry Barry Gillen, *Associate Professor Emeritus of Psychology**

Philip S. Gillette, *Associate Professor Emeritus of Political Science and Geography*

Billy J. Gilpin, *Associate Professor Emeritus of Mathematics and Statistics**

Myron Glassman, *Professor Emeritus of Marketing*

Albert S. Glickman, *Eminent Professor Emeritus of Psychology**

Albert I. Godden, *Associate Professor Emeritus of Mechanical Engineering Technology**

Gennaro L. Goglia, *Professor Emeritus of Mechanical Engineering and Mechanics**

Andrew S. Gordon, *Professor Emeritus of Biological Sciences*

Fred W. Granger, *Associate Professor Emeritus of Information Technology and Decision Sciences*

William H. Graves, *Professor Emeritus of Counseling and Human Services and Dean Emeritus of the Darden College of Education*

Deborah C. Gray, *Clinical Associate Professor Emerita of Nursing*

Douglas G. Greene, *Professor Emeritus of History*

Richard V. Gregory, *Professor Emeritus of Chemistry and Biochemistry*

Gail Grisetti, *Associate Professor Emerita of Physical Therapy and Athletic Training**

Chester E. Grosch, *Eminent Professor Emeritus and Professor Emeritus of Ocean, Earth, and Atmospheric Sciences**

Vance E. Grover, *Professor Emeritus of Accounting**

Elizabeth C. Guy, *Associate Professor Emerita of Psychology (posthumous)**

H

John R. Hackworth, *University Professor Emeritus and Associate Professor Emeritus of Engineering Technology*

Randy C. Haddock, *Senior Lecturer Emeritus, College of Engineering and Technology*

David R. Hager, *Professor Emeritus of Political Science and Higher Education Administration**

Jane M. Hager, *Professor Emerita of Teaching and Learning**

Adolphus C. Hailstork, *Eminent Scholar Emeritus and Professor Emeritus of Music*

Jean R. Halladay, *Associate Professor Emeritus of English**

Hiroyuki Hamada, *Associate Professor Emeritus of Exercise Science, Sport, Physical Education and Recreation*

Thomas T. Hamilton, *Associate Professor Emeritus of History**

David F. Harnage, *Chief Operating Officer Emeritus**

Ruth F. Harrell, *Professor Emerita of Special Education**

Wynford L. Harries, *Eminent Scholar Emeritus and Professor Emeritus of Physics**

Richard E. Harrington, *Associate Professor Emeritus of Engineering Technology**

David Alan Harris, *Associate Professor Emeritus of History**

Ransom B. Harris, *Professor Emeritus of Philosophy and Religious Studies**

Thomas L. Harris, *Professor Emeritus of Educational Leadership and Counseling**

Scott B. Harrison, *Associate Vice President Emeritus for Administration in Student Enrollment, Engagement, and Services*

Lawrence J. Hatab, *Professor Emeritus of Philosophy and Religious Studies, Louis I. Jaffe Professor Emeritus of Arts and Letters, Eminent Scholar Emeritus, and University Professor Emeritus*

Mark D. Havey, *Eminent Scholar Emeritus, University Professor Emeritus and Professor Emeritus of Physics (posthumous)**

Harold G. Hawn, *Professor Emeritus of Music**

Alex Hawryluk, *Professor Emeritus of Management**

John H. Heinbockel, *Professor Emeritus of Mathematics and Statistics*

Paul Heine, *Associate Professor Emeritus of Exercise Science, Sport, Physical Education, and Recreation and Associate Dean Emeritus of the Darden College of Education**

Loree C. Heller, *Professor Emerita of Medical Diagnostic and Translational Sciences*

Richard Heller, *Eminent Scholar Emeritus and Professor Emeritus of Medical Diagnostic and Translational Sciences*

Carl O. Helvie, *Professor Emeritus of Nursing**

Carl N. Helwig, *Associate Professor Emeritus of Educational Foundations and Special Programs**

David E. Henderson, *Professor Emeritus of Civil Engineering**

Erlene M. Hendrix, *Associate Professor Emerita of Communication and Theatre Arts*

James D. Hendry, *Associate Professor Emeritus of Electrical Engineering Technology**

Elizabeth S. Henry, *Associate Professor Emerita of Psychology*

James O. Henry, *Professor Emeritus of Educational Leadership and Services**

Laurie J. Henry, *University Professor Emerita and Associate Professor Emerita of Accountancy*

Louis H. Henry, *Professor Emeritus of Economics and Dean Emeritus of the Honors College*

Peggy Hester, *Professor Emerita of Human Movement Studies and Special Education*

Robert C. Hill, *Professor Emeritus of Accounting**

Carol F. Hines, *Associate Professor Emerita of Art**

Carole P. Hines, *Associate Professor Emerita of English**

Samuel Philip Hines, Jr., *Associate Professor Emeritus of English**

Gene W. Hirschfeld, *Eminent Professor Emeritus and Professor Emeritus of Dental Hygiene**

Leonard A. Hobbs, *Associate Professor Emeritus of Electrical Engineering Technology (posthumous)**

Edward T. Hodges, *Associate Professor Emeritus of Mathematics**

Brian J. Hodson, *Director Emeritus of Information Technology in the Darden College of Education*

Joyce M. Hoffmann, *Associate Professor Emerita of English*

Robert H. Holden, *Professor Emeritus of History*

John F. Holley, *Associate Professor Emeritus of Foreign Languages and Literatures*

John R. Holsinger, *Eminent Scholar Emeritus and Professor Emeritus of Biological Sciences**

Paul J. Homsher, *Professor Emeritus of Biological Sciences**

William E. Hopkins, *Professor Emeritus of Sociology**

Lisa A. Horth, *Professor Emerita of Biological Sciences*

Clare W. Houseman, *Associate Professor Emerita of Nursing*

Ian David Howard, *Professor Emeritus of Physics**

Curtis William Howard, III, *Assistant Professor Emeritus of Psychology**

Gilbert R. Hoy, *Eminent Scholar Emeritus and Professor Emeritus of Physics**

Steve C. Hsiung, *Professor Emeritus of Engineering Technology*

Jen-Kuang Huang, *Professor Emeritus of Mechanical and Aerospace Engineering*

Michael E. Hucles, *Associate Professor Emeritus of History*

Sylvia C. Hudgins, *Professor Emerita of Finance*

Jesse W. Hughes, *Professor Emeritus of Accounting*

Donna K. Hughes-Oldenburg, *Library Faculty Emerita*

Natalie Hutchinson, *Senior Lecturer Emerita of Mathematics and Statistics*

I

Samir R. Ibrahim, *Professor Emeritus of Mechanical and Aerospace Engineering**

Linda Irwin-DeVitis, *Professor Emerita of Teaching and Learning**

Thomas "Tom" L. Isenhour, *Professor Emeritus of Chemistry and Biochemistry*

Isao Ishibashi, *Professor Emeritus of Civil and Environmental Engineering*

Arminda B. Israel, *Coordinator Emerita of the Military Career Transition Program and Academic Advisor Emerita*

J

Alexander B. Jackson, *Professor Emeritus of Art (posthumous)**

Charles W. Jackson, *Professor Emeritus of Exercise Science, Physical Education and Recreation**

Katherine M. Jackson, *Master Lecturer Emerita of English*

Edward H. Jacobs, *Professor Emeritus of English*

Louis H. Janda, *Associate Professor Emeritus of Psychology**

James "Jim" Jarrett, *Professor Emeritus of Human Movement Sciences*

Beverley B. Johnson, *Associate Professor Emerita of Health, Physical Education and Recreation**

David E. Johnson, *Associate Professor Emeritus of Art*

Dorothy E. Johnson, *Associate Professor Emerita of History**

Lynn S. Johnson, *Senior Lecturer Emerita of Management*

Ole S. Johnson, *Professor Emeritus of Marketing**

Roger A. Johnson, *Associate Professor Emeritus of Educational Curriculum and Instruction*

Ronald "Ron" E. Johnson, *University Professor Emeritus and Associate Professor Emeritus of Ocean, Earth and Atmospheric Sciences**

Cynthia M. Jones, *Eminent Scholar Emerita and Professor Emerita of Ocean and Earth Sciences*

Dorothy M. Jones, *Associate Professor Emerita of Business Management**

Elliott C. Jones, *Associate Professor Emeritus of Art*

Franklin Ross Jones, *Professor Emeritus of Educational Leadership and Counseling and Dean Emeritus of the Darden College of Education**

Maximilian B. Jones, *Professor Emeritus of Management**

Richard "Rick" L. Jones, *Senior Lecturer Emeritus of Engineering Technology*

William B. Jones, *Associate Professor Emeritus of Philosophy and Religious Studies*

David I. Joyner, *Professor Emeritus of Educational Curriculum and Instruction**

Sharon Ann Judge, *Professor Emerita of Communication Disorders and Special Education*

William "Bill" Q. Judge, *Professor Emeritus of Management and Entrepreneurship and E.V. Williams Endowed Chair Emeritus of Strategic Management*

Elaine M. Justice, *University Professor Emerita and Associate Professor Emerita of Psychology*

K

Osama A. Kandil, *Eminent Scholar Emeritus and Professor Emeritus of Mechanical and Aerospace Engineering**

Hideaki Kaneko, *Professor Emeritus of Mathematics and Statistics*

Kenneth Karloff, *Assistant Professor Emeritus of Educational Curriculum and Instruction**

Janet E. Katz, *Associate Dean Emerita, College of Arts and Letters and Associate Professor Emerita of Sociology and Criminal Justice*

Allan H. Kaufman, *Associate Professor Emeritus of Occupational and Technical Studies*

Charles "Chuck" B. Keating, *Professor Emeritus of Engineering Management and Systems Engineering*

John F. Keeling, Jr., *Senior Lecturer Emeritus of Management**

Richard K. Keplar, *Associate Professor Emeritus of Engineering Technology**

Robert Lee Kernell, *Professor Emeritus of Physics**

Katharine C. Kersey, *Director Emerita (2008) & University Professor Emerita and Professor Emerita of Teaching and Learning (2014)**

Lewis S. Keyes, *Associate Professor Emeritus of Chemistry and Biochemistry**

Govind S. Khandelwal, *Professor Emeritus of Physics**

Sue C. Kimmel, *Professor Emerita of STEM Education & Professional Studies*

Earl C. Kindle, *Professor Emeritus of Oceanography and Geophysical Sciences**

Deborah "Deb" Kinney, *Coordinator Emerita for Undergraduate Student Services, Department of Electrical and Computer Engineering*

Raymond H. Kirby, *Professor Emeritus of Psychology**

Paul W. Kirk, Jr., *Professor Emeritus of Biological Sciences**

Jeanie P. Kline, *Executive Academic Initiatives Administrator Emerita*

Lee M. Klinefelter, *Professor Emeritus of Engineering**

Karl F. Knight, *Professor Emeritus of English**

Stephen "Steve" E. Knott, *Senior Lecturer Emeritus of Human Movement Sciences*

Carl F. Koch, *Professor Emeritus of Geological Sciences*

James V. Koch, *President Emeritus and Board of Visitors Professor Emeritus of Economics*

James "Jim" Kosnik, *Professor Emeritus of Music and University Professor Emeritus*

Karen M. Kott, *Associate Professor Emerita of Physical Therapy and Athletic Training*

Edgar A. Kovner, *Professor Emeritus of Mechanical Engineering Technology**

Sridharan Krishnaswami, *Lecturer Emeritus of Management**

John E. Kroll, *Associate Professor Emeritus of Mathematics and Statistics*
 Terry R. Kubichan, *University Distinguished Teacher Emerita and Senior Lecturer Emerita of Accountancy*
 John W. Kuehl, *Associate Professor Emeritus of History*
 Harry S. Kuper, *Associate Professor Emeritus of Chemistry and Biochemistry**

L

Ralph V. Lahaie, *Professor Emeritus of Speech Communication and Theater Arts**
 Philip J. Langlais, *Professor Emeritus of Psychology*
 John D. Lape, *Lecturer Emeritus of Information Technology and Decision Sciences*
 Mounir C. Laroussi, *Professor Emeritus of Electrical & Computer Engineering*
 Roland W. Lawrence, *Associate Professor Emeritus of Engineering Technology**
 William "Bill" M. Leavitt, *Associate Professor Emeritus of Public Service*
 John Hirst Lederle, *Associate Professor Emeritus of Engineering Technology**
 Larry D. Lee, *Associate Professor Emeritus of Mathematics and Statistics*
 Lorraine M. Lees, *University Professor Emerita and Professor Emerita of History*
 Mark Lesley, *Associate Professor Emeritus of Mathematics and Statistics*
 Parker Lesley, *Professor Emeritus of Art**
 Irwin B. Levinstein, *Associate Professor Emeritus of Computer Science*
 Gerald L. Levy, *Professor Emeritus of Biological Sciences**
 Robin J. Lewis, *Professor Emerita of Psychology*
 Ling X. Li, *Eminent Scholar Emerita, University Professor Emerita, and Professor Emerita of Information Technology and Decision Sciences*
 Linda Lane Lilley, *Associate Professor Emerita of Nursing*
 Elizabeth Lipsmeyer, *Associate Professor Emerita of Art*
 Elizabeth Locke, *Senior Lecturer Emerita of Rehabilitation Sciences*
 Lucien X. Lombardo, *Professor Emeritus of Sociology and Criminal Justice*
 Christopher W. Lovell, *Associate Professor Emeritus of Educational Leadership and Counseling*
 Cameron A. Lowe, *Associate Professor Emeritus of Dental Hygiene and Dental Assisting**
 Frederick A. Lubich, *Professor Emeritus of World Languages and Cultures*
 Robert A. Lucking, *Professor Emeritus of Teaching and Learning*
 John C. Ludwick, *Professor Emeritus of Oceanography**
 Judy Luedtke, *Executive Director Emerita of Student Transition and Family Programs*
 James "Pete" G. Luton, *Professor Emeritus of Dental Hygiene**

M

John E. McCormack, *Professor Emeritus of Music**
 Robert H. MacDonald, *Professor Emeritus of Educational Curriculum and Instruction*
 Robert A. Magoon, *Professor Emeritus of Educational Leadership and Services**

George C. Maihafer, *Associate Professor Emeritus of Physical Therapy and Athletic Training*

Debra "Debbie" A. Major, *Eminent Scholar Emerita and Professor Emerita of Psychology*
 Jean A. Major, *University Librarian Emerita*
 Wendell E. Malbon, *Professor Emeritus of Mathematical Sciences**
 Kurt J. Maly, *Professor and Eminent Scholar Emeritus of Computer Science and Kaufman Professor Emeritus of Computer Science*
 Alan Mandell, *Professor Emeritus of Educational Curriculum and Instruction (posthumous)**
 M. Lee Manning, *Eminent Scholar Emeritus and Professor Emeritus of Teaching and Learning*
 Thomas E. Manore, *Associate Professor Emeritus of Management Information Systems**
 Alf J. Mapp, Jr., *Eminent Scholar Emeritus and Louis I. Jaffe Professor Emeritus of English**
 Donald K. Marchand, *Associate Professor Emeritus of Geological Sciences**
 Joseph M. Marchello, *Professor Emeritus of Mechanical and Civil Engineering**
 Edward "Ed" P. Markowski, *University Professor Emeritus and Professor Emeritus of Information Technology and Decision Sciences*
 Marilyn F. Marloff, *Professor Emerita of Communication and Theatre Arts*
 Harold G. Marshall, *Morgan Professor Emeritus and Professor Emeritus of Biological Sciences*
 Mary E. Marshall, *Senior Lecturer Emerita of Philosophy and Religious Studies*
 Sharon M. Martin, *Community and Student Success Director Emerita*
 Otto B. Martinson, *Professor Emeritus of Accounting**
 Richard A. Massey, *Associate Vice President Emeritus of Foundations*
 Terri M. Mathews, *Associate Dean Emerita, College of Sciences*
 Alfred Warren Matthews, *Professor Emeritus of Philosophy and Religious Studies*
 Ernest J. Mauer, *Professor Emeritus of Art**
 Steven D. Maurer, *Professor Emeritus of Management**
 NorLisa "Lisa" Mayes, *Executive Director Emerita of Academic Success Initiatives and Support*
 William Mazel, *Associate Professor Emeritus of Finance**
 Russell Bruce McAfee, *Professor Emeritus of Management*
 Garrett J. McAuliffe, *University Professor Emeritus and Professor Emeritus of Counseling and Human Services*
 Vernon A. McCart, *Fine and Performing Arts Reference Librarian and Librarian III Emeritus*
 Richard C. McCleary, *Professor Emeritus of Philosophy**
 Robert C. McClelland, *Professor Emeritus of Ancient Languages**
 Gayle B. McCombs, *University Professor Emerita and Professor Emerita of Dental Hygiene*
 John R. McConaughy, *Associate Professor Emeritus of Ocean, Earth and Atmospheric Sciences*
 Linda F. McGreevy, *Professor Emerita of Art*
 Timothy "Tim" C. McKee, *Associate Professor Emeritus of Accounting**

James J. McNally, *Professor Emeritus of English**

Griffith J. McRee, Jr., *Associate Professor Emeritus of Electrical and Computer Engineering**

John "Jack" P. McSweeney, *Professor Emeritus of Educational Leadership and Counseling**

Edward Grant Meade, *Professor Emeritus of Political Science**

Donna W. Meeks, *University Policy Manager and Executive Secretary to the Board of Visitors Emerita*

Chuh Mei, *Eminent Scholar Emeritus and Professor Emeritus of Aerospace Engineering*

Heinz K. Meier, *Eminent Professor Emeritus, Dean Emeritus of the School of Arts and Letters, and Professor Emeritus of History (posthumous)**

Regula A. Meier, *Associate Professor Emerita of Foreign Languages and Literatures**

Berhanu Mengistu, *Professor Emeritus of Public Service*

Constance "Connie" L. Merriman, *Associate Dean Emerita, Strome College of Business*

Jane T. Merritt, *Professor Emerita of History*

Arthur B. Metheny, *Professor Emeritus of Health, Physical Education, Recreation, and Athletics**

Robert F. Michel, *Associate Professor Emeritus of Engineering Technology**

Roland R. Mielke, *University Professor Emeritus and Professor Emeritus of Modeling, Simulation and Visualization Engineering*

Leonid I. Mihalap, *Associate Professor Emeritus of Foreign Languages and Literatures**

Peter J. Mikulka, *Professor Emeritus of Psychology*

John C. Miller, *Eminent Professor Emeritus of English**

Malvern L. Miller, *Associate Professor Emeritus of Occupational and Technical Studies**

Linda Miller-Dunleavy, *Master Lecturer Emerita of Communication Disorders and Special Education*

Leona "Shelley" Mishoe, *Professor Emerita of Community and Environmental Health*

Susan C. Mitchell, *Director Emerita of Webb University Center and Auxiliary Services*

Taj O. Mohieldin, *Professor Emeritus of Engineering Technology*

Joseph P. Mooney, *Professor Emeritus of Educational Leadership and Services**

Kenneth "Ken" G. Mopper, *Eminent Scholar Emeritus and Professor Emeritus of Chemistry and Biochemistry*

Raymond "Ray" F. Morgan, *Professor Emeritus of Educational Curriculum and Instruction*

Jay D. Morris, *Senior Lecturer Emeritus of Computer Science*

Sara A. Morris, *Associate Professor Emerita of Management*

Gary R. Morrison, *Professor Emeritus of STEM Education and Professional Studies*

Ula K. Motekat, *Professor Emeritus of Accounting**

Moustafa R. Moustafa, *Professor Emeritus of Engineering Technology*

Gail E. Mullin, *Professor Emeritus of Economics*

Arthur C. Munyan, *Professor Emeritus of Geophysical Sciences**

Susan L. Murray, *Senior Lecturer Emerita of Nursing*

Lytton John Musselman, *Eminent Scholar Emeritus, Professor Emeritus of Biological Sciences and Mary Payne Hogan Distinguished Professor Emeritus of Botany*

Donald A. Myers, *Professor Emeritus of Teaching and Learning**

Bismarck Myrick, *Lecturer Emeritus of Political Science and History**

N

Tracy B. Nabers, *Associate Professor Emeritus of Mechanical Engineering Technology (posthumous)**

Joyce L. Neff, *Professor Emerita of English*

Christianne Nesbitt, *Associate Professor Emerita of Nursing*

Kneeland K. Nesius, *University Professor Emeritus and Associate Professor Emeritus of Biological Sciences**

Dwight H. Newell, *Constance and Colgate Darden Professor Emeritus and Professor Emeritus of Educational Leadership and Services**

Jack W. Nickson, *Professor Emeritus of Economics**

Ahmed K. Noor, *Eminent Scholar Emeritus and Professor Emeritus of Modeling, Simulation and Visualization Engineering*

Ali Nowroozi, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Arthur E. Nudelman, *Associate Professor Emeritus of Sociology and Criminal Justice**

O

George F. Oertel, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Donald P. Ogdon, *Professor Emeritus of Psychology**

Roy C. Ogle, *Professor Emeritus of Medical Diagnostic and Translational Sciences*

Virginia S. O'Herron, *University Librarian Emerita*

Renee E. Olander, *Associate Vice President Emerita for Regional Higher Education Centers*

Emilia L. Oleszak, *Associate Professor Emerita of Biological Sciences*

Richard C. Overbaugh, *Professor Emeritus of Teaching and Learning*

Charles "Mike" M. Overstreet, *Associate Professor Emeritus of Computer Science*

Allan D. Owen, *Associate Professor Emeritus of Music**

William "Bill" A. Owings, *Professor Emeritus of Educational Foundations and Leadership**

P

Kay Palmer, *Associate Professor Emerita of Nursing*

Richard A. Palmer, *Assistant Professor Emeritus of Chemistry and Biochemistry**

David L. Pancoast, *Associate Professor Emeritus of Psychology**

Elizabeth G. Pappas, *Associate Professor Emerita of Music**

John M. Patterson, *Associate Professor Emeritus of Occupational and Technical Studies**

William H. Patterson, *Associate Professor Emeritus of Accounting**

William W. Patterson, Jr., *Associate Professor Emeritus of Information Systems and Decision Sciences**

Marian L. Pauson, *Associate Professor Emerita of Philosophy and Religious Studies**

Kathy L. Pearson, *University Professor Emerita and Associate Professor Emerita of History*

Michael P. Pearson, *University Professor Emeritus and Professor Emeritus of English*

E. Vernon Peele, *Dean Emeritus of the School of Arts and Letters**

Janet Peery, *University Professor Emerita and Professor Emerita of English*

Helen L. Perry, *Associate Professor Emerita of Education**

Leland D. Peterson, *Professor Emeritus of English**

Margaret C. Phillips, *Professor Emerita of Mathematical and Computing Sciences**

Victor A. Pickett, *Professor Emeritus of Art**

Wolfgang Pindur, *Professor Emeritus of Urban Studies and Public Administration (posthumous)**

Emily V. Pittman, *Professor Emerita of Health and Physical Education**

Melvin A. Pittman, *Dean Emeritus of the School of Sciences**

Patricia Pleban, *Associate Professor Emerita of Chemistry and Biochemistry*

Stanley R. Pliska, *Professor Emeritus of History**

Louis G. Plummer, *Professor Emeritus of Education**

Deborah M. Polca, *Senior Associate Athletic Director Emerita*

Norman H. Pollock, *Associate Professor Emeritus of History**

Karen Polonko, *University Professor Emerita and Professor Emerita of Sociology and Criminal Justice (posthumous)**

Linda L. Pond, *Master Lecturer Emerita of Teaching and Learning*

Bryan E. Porter, *Associate Dean Emeritus, The Graduate School, University Professor Emeritus, Professor Emeritus of Psychology*

Mary Barclay Porter-Troupe, *Senior Lecturer Emerita of English*

Ramamurthy Prabhakaran, *Professor Emeritus of Mechanical and Aerospace Engineering and Eminent Professor Emeritus*

Gene Hill Price, *Senior Lecturer Emeritus of Computer Science*

Wenton Maurice Pritchard, *Professor Emeritus of Physics**

Harold J. Protsman, *Professor Emeritus of Music**

Anthony J. Provenzano, Jr., *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

David Putney, *Associate Professor Emeritus of Philosophy and Religious Studies*

Q

Usman A. Qureshi, *Professor Emeritus of Economics**

R

David P. Radcliffe, *Associate Director Emeritus for Military Operations*

Philip Raisor, *Professor Emeritus of English*

John W. Ramsey, *Professor Emeritus of Political Science**

Robert E. Ratzlaff, *Associate Professor Emeritus of Biological Sciences*

Sharon A. Raver-Lampman, *University Professor Emerita and Professor Emerita of Communication Disorders and Special Education*

Anne Raymond-Savage, *Associate Professor Emerita of Educational Curriculum and Instruction and Vice Provost Emerita for Distance Learning*

Zia Razzaq, *Professor Emeritus of Civil & Environmental Engineering*

James B. Reece, *Professor Emeritus of English**

William T. Reece, *Professor Emeritus of Accounting**

Thomas Jackson Reed, *Associate Professor Emeritus of Finance**

Elbridge K. Reid, *Associate Professor Emeritus of Sociology and Criminal Justice**

Theodore P. Remley, Jr., *Professor Emeritus of Counseling and Human Services*

Lindsay L. Rettie, *Professor Emerita of Dental Hygiene and Dental Assisting and Dean Emerita of the College of Health Sciences*

Sheri A. Reynolds, *University Professor Emerita and Professor Emerita of English*

George "Steve" S. Rhiel, *University Professor Emeritus and Associate Professor Emeritus of Information Technology and Decision Sciences*

Carolyn H. Rhodes, *Professor Emerita of English and Women's Studies**

Ernest L. Rhodes, *Professor Emeritus of English**

John H. Richardson, Jr., *Associate Professor Emeritus of Biological Sciences*

Roger S. Richman, *Professor Emeritus of Urban Studies and Public Administration*

Betty R. Ricks, *Associate Professor Emerita of Management**

William C. Riesenberg, *Associate Professor Emeritus of Dental Hygiene**

June H. Ritchie, *Associate Director Emerita, Center for Learning and Teaching*

John M. Ritz, *Professor Emeritus of STEM Education and Professional Studies*

Willard E. Robb, *Associate Professor Emeritus of Music**

Albert Sidney Roberts, Jr., *Professor Emeritus of Mechanical Engineering**

James T. Robey, *Associate Professor Emeritus of Accounting**

Jack E. Robinson, *Associate Professor Emeritus of Educational Foundations and Leadership*

Thomas M. Robinson, *Associate Professor Emeritus of Health, Physical Education, and Recreation**

Patrick J. Rollins, *Professor Emeritus of History (posthumous)**

Alfred B. Rollins, Jr., *President Emeritus and Professor Emeritus of History**

Robert K. Rose, *Professor Emeritus of Biological Sciences*

Helen C. Rountree, *Professor Emerita of Anthropology*

Thomas "Tom" C. Royer, *Eminent Scholar Emeritus and Slover Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Leonard I. Ruchelman, *Eminent Scholar Emeritus and Professor Emeritus of Urban Studies and Public Administration*

Edwin Murray Rudisill, *Professor Emeritus of Educational Curriculum and Instruction*

Nancy A. Rudolph, *Community and Student Success Director Emerita, Distance Learning*

Charles E. Ruhl, *Professor Emeritus of English**

Joseph H. Rule, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Richard A. Rutyna, *Associate Professor Emeritus of History**

S

Annabel L. Sacks, *Director of Student Services Emerita*

Janis V. Sanchez-Hucles, *Professor Emerita of Psychology*

Allen G. Sandler, *Associate Professor Emeritus of Early Childhood, Speech-Language Pathology and Special Education*

Kent L. Sandstrom, *Professor Emeritus of Sociology and Criminal Justice*

Kehar S. Sangha, *Professor Emeritus of Economics**

Clifford C. Saunders, *Professor Emeritus of Sociology**

Judith S. Schapiro, *Professor Emerita of Child Study and Special Education**

Joanne Scheibman, *Associate Professor Emerita of English*

Adrienne D. Schellings, *Associate Professor Emerita of Library Science**

Rocco Schiavilla, *Eminent Scholar Emeritus and Professor Emeritus of Physics*

Henry H. Schmoele, Jr., *Associate Professor Emeritus of Vocational and Technical Education**

Karl H. Schoenbach, *Eminent Scholar Emeritus and Professor Emeritus of Electrical and Computer Engineering*

Reiko M. Schwab, *Associate Professor Emerita of Educational Leadership and Counseling**

Ann V. Schwarz-Miller, *Associate Professor Emerita of Economics*

Louis Searleman, *Associate Professor Emeritus of Accounting**

Herbert Lee Sebren, *Associate Professor Emeritus of English**

Scott R. Sechrist, *Associate Professor Emeritus of Medical Diagnostic and Translational Sciences*

Timothy "Tim" S. Seibles, *Professor Emeritus of English*

Bruce Seifert, *Professor Emeritus of Finance*

Gregory V. Selby, *Professor Emeritus of Mechanical and Aerospace Engineering*

Simon H. Serfaty, *Eminent Scholar Emeritus and Professor Emeritus of International Studies*

Joseph C. Sever, Jr., *Associate Professor Emeritus of Communication Disorders and Special Education*

William W. Seward, *Professor Emeritus of English**

Stephen P. Shao, *Professor Emeritus of Management Information Systems and Decision Sciences**

Stewart N. T. Shen, *Professor Emeritus of Computer Science**

Calder S. Sherwood, III, *Professor Emeritus of Chemical Science and Physical and Geophysical Science**

David L. Shores, *Professor Emeritus of English**

Deanne Shuman, *Professor Emerita of Dental Hygiene*

Charles K. Sibley, *Professor Emeritus of Art**

Jose G. Simon, *Associate Professor Emeritus of Foreign Languages and Literatures**

Carol Simpson, *Professor Emerita of Ocean, Earth and Atmospheric Sciences and Provost and Vice President for Academic Affairs Emerita*

John Taylor Sims, *Professor Emeritus of Marketing**

Anusorn Singhapakdi, *Professor Emeritus of Marketing*

Charles M. Smith, *Associate Professor Emeritus of Educational Curriculum and Instruction**

Donald H. Smith, *Associate Professor Emeritus of Sociology and Criminal Justice*

Eugene F. Smith, *Associate Professor Emeritus of Engineering Technology**

Janis Krebs Smith, *University Distinguished Teacher Emerita and Senior Lecturer Emerita of English*

Theodore F. Smith, *Associate Professor Emeritus of Marketing*

Ronald "Ron" W. Snapp, *Associate Professor Emeritus of Art*

Petra E. Snowden, *Associate Professor Emerita of Educational Leadership and Counseling*

John A. Sokolowski, *Associate Professor Emeritus of Computational Modeling and Simulation Engineering*

Carmine Thomas "Tom" Somma, *Associate Professor Emeritus of Medical Diagnostic and Translational Sciences*

Daniel E. Sonenshine, *Professor Emeritus of Biological Sciences*

Randall S. Spencer, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Ulysses Van Spiva, *Professor Emeritus of Educational Leadership and Counseling and Dean Emeritus of the Darden College of Education**

Randall R. Spurrier, *Master Lecturer Emeritus of Accountancy*

Judith M. St. George, *Clinical Supervisor Emerita of Student Health Services*

George M. Stabler, *Professor Emeritus of Sociology and Criminal Justice**

William D. Stanley, *Eminent Professor Emeritus of Engineering Technology*

Robert L. Stern, *Professor Emeritus of Political Science**

Ralph W. Stevens, *University Professor Emeritus and Associate Professor Emeritus of Biological Sciences*

Peter C. Stewart, *Associate Professor Emeritus of History*

Edgar Stillwell, *Associate Professor Emeritus of Biological Sciences**

Maureen D. Stiner, *Senior Lecturer Emerita of Finance*

Yates Stirling, III, *Associate Professor Emeritus of Engineering**

John W. Stoughton, *Professor Emeritus of Electrical and Computer Engineering*

Raymond S. Strangways, *Professor Emeritus of Economics*

Sharon C. Stull, *Lecturer Emerita of Dental Hygiene*

Glen Sussman, *University Professor Emeritus and Professor Emeritus of Political Science and Geography**

David P. Swain, *University Professor Emeritus and Professor Emeritus of Kinesiology & Health Science*

Cynthia Wright Swaine, *Instructional Services Librarian Emerita**

Robert "Jim" J. Swanson, *University Professor Emeritus and Professor Emeritus of Biological Sciences*

Mary K. Swartz, *Registrar Emerita*

James R. Sweeney, *Associate Professor Emeritus of History*

John J. Swetits, *Professor Emeritus of Mathematics and Statistics*

Deborah L. Swiecinski, *Associate Vice President Emerita for Financial Services*

Donald J. Swift, *Eminent Scholar Emeritus and Professor Emeritus of Ocean, Earth and Atmospheric Sciences**

T

John R. Tabb, *Professor Emeritus of Economics and Dean Emeritus of the College of Business and Public Administration**

Wayne K. Talley, *Eminent Scholar Emeritus and Professor Emeritus of Economics*

Michael "Mike" Tamburello, *Associate Professor Emeritus of Rehabilitation Sciences*

John "Jeff" F. Tanner, Jr., *Dean Emeritus, Strome College of Business, and Professor Emeritus of Marketing*

James Albert Tatem, Jr., *Associate Professor Emeritus of Health, Physical Education, and Recreation**

Albert Teich, Jr., *Professor Emeritus of Finance**

Lee J. Tepley, *Lecturer Emeritus of Music**

Gerald Wayne Thompson, *Associate Professor Emeritus of Educational Curriculum and Instruction**

Lenora Hicks Thompson, *Senior Executive Director Emerita of Counseling Services*

Sophie K. Thompson, *Associate Professor Emerita of Medical Diagnostic and Translational Sciences*

George William "GW" Thompson, III, *Director Emeritus of the Center for Major Exploration*

William H. Thornton, *Associate Professor Emeritus of Engineering Technology**

Surenda N. Tiwari, *Eminent Scholar Emeritus and Professor Emeritus of Mechanical Engineering**

Shunichi Toida, *Associate Professor Emeritus of Computer Science*

Susan Lynn Tolle, *Professor Emerita of Dental Hygiene and University Professor Emerita*

Alan Rufus Tonelson, *Professor Emeritus of Education**

Stephen "Steve" W. Tonelson, *Professor Emeritus of Communication Disorders and Special Education*

Patrick K. Tow, *Associate Professor Emeritus of Health, Physical Education and Recreation (posthumous)**

Alfred S. Townsend, *Associate Professor Emeritus of Music*

Cecelia Taliaferro Tucker, *Assistant to the President Emerita for Community Relations*

Kimberly Adams Tufts, *Professor Emerita of Nursing*

Andrew C. Tunogi, *Professor Emeritus of Philosophy**

Charles "Charlie" G. Turner, *Associate Professor Emeritus of Economics*

John E. Turner, *Associate Professor Emeritus of Occupational and Technical Studies*

John Tweed, *Professor Emeritus of Mathematics and Statistics*

Joseph M. Tyrrell, *Professor Emeritus of History**

V

Margaret Daugherty Van Damm, *Associate Professor Emerita of English**

John D. Van Norman, *Professor Emeritus of Chemical Sciences**

Jay Wallace Van Orden, *Eminent Scholar Emeritus and Professor Emeritus of Physics*

Karen Vaughan, *Faculty Administrator Emerita, University Libraries*

Paul Thomas Vernier, *Research Professor Emeritus of the Frank Reidy Research Center for Bioelectronics*

Charles E. Vogan, *Professor Emeritus of Music**

Leposava Vuškovi#, *Eminent Scholar Emerita and Professor Emerita of Physics*

W

Nancy L. Wade, *Associate Professor Emerita of Biological Sciences**

William H. Wagner, *Associate Professor Emeritus of Art*

John R. Waitekus, *Physician Emeritus of Student Health Services*

Alice P. Wakefield, *Associate Professor Emerita of Teaching and Learning*

Martha L. Walker, *Associate Professor Emerita of Rehabilitation Sciences*

Leon R. L. Wang, *Professor Emeritus of Civil and Environmental Engineering**

Stanley E. Warner, Jr., *Professor Emeritus of Accounting**

Sandra "Sandy" Miller Waters, *Executive Director Emerita for Advising Administration and Academic Partnerships*

Harold Q. Webb, *Professor Emeritus of Management**

Lewis W. Webb, Jr., *President Emeritus**

Katarina E. Wagar, *Associate Professor Emerita of Sociology and Criminal Justice*

Stanley E. Weinstein, *Professor Emeritus of Mathematics and Statistics**

Thomas L. Wells, *Associate Professor Emeritus of Political Science and Geography**

Marek Wermus, *Associate Professor Emeritus of Information Technology and Decision Sciences*

Terri N. Wheaton, *Director Emerita of Intake and Student Success Online*

Rogers D. Whichard, *Professor Emeritus of French Language and Literature**

William F. Whitbeck, *Professor Emeritus of Marketing**

Debbie Harmison White, *Senior Associate Athletic Director Emerita for External Relations*

Edward L. White, *Professor Emeritus of the School of Engineering**

Garland White, *Associate Professor Emeritus of Sociology and Criminal Justice**

Frederick D. Whitehurst, *Professor Emeritus of Accounting*

George William "Bill" Whitehurst, *George M. and Linda H. Kaufman University Lecturer Emeritus of Public Affairs*

George "Rich" R. Whittecar, *University Professor Emeritus and Associate Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

John Christian Wild, *Associate Professor Emeritus of Computer Science*

Melvin H. Williams, *Eminent Scholar Emeritus and Professor Emeritus of Exercise Science, Physical Education and Recreation**

Roy L. Williams, *Professor Emeritus of Chemistry and Biochemistry**

Daniel S. Wilson, *Associate Professor Emeritus of English**

Harold S. Wilson, *Professor Emeritus of History*

Jack H. Wilson, *Professor Emeritus of English*

Larry W. Wilson, *Associate Professor Emeritus of Computer Science*

Charles E. Wilson, Jr., *University Professor Emeritus, Dean Emeritus of the College of Arts and Letters, and Professor Emeritus of English*

Conrad S. Wilson, Jr., *Associate Professor Emeritus of English**

Barbara A. Winstead, *Professor Emerita of Psychology*

Konrad G. Winters, *Associate Professor Emeritus of Communication and Theatre Arts**

Pauline K. Wise, *Associate Professor Emerita of Elementary Education**

Philip R. Wohl, *Associate Professor Emeritus of Mathematics and Statistics**

Denny T. Wolfe, Jr., *Professor Emeritus of Educational Curriculum and Instruction*

Lloyd Wolfenbarger, Jr., *Professor Emeritus of Biological Sciences*

George T. Wong, *Professor Emeritus of Ocean, Earth and Atmospheric Sciences*

Ronald R. Woodard, *Director Emeritus of Transfer Services, Distance Learning*

Robert J. Wunderlin, *Associate Professor Emeritus of Psychology**

X

Li D. Xu, *Professor Emeritus of Information Technology and Decision Sciences*

Course Index and Course Search

Courses of Instruction

Course Search (<http://catalog.odu.edu/course-search/>)

Courses numbered 100 are primarily for freshmen, 200 for sophomores, 300 for juniors, 400 for seniors. 500-, 600-, 700-, and 800-level courses are generally for graduate credit. Courses at the 500 level are cross-listed to undergraduate 400-level courses, with additional work and higher-level outcomes required for 500-level courses.

General education courses are designated by the fourth digit in the course number. At the lower division, the following designations are used: for Skills courses, C=Composition, F=Language and Culture, G=Information Literacy and Research, M=Mathematics, and R=Oral Communication; for Ways of Knowing courses, A=Human Creativity, H=Interpreting the Past, L=Literature, N=The Nature of Science, P and E=Philosophy and Ethics, S=Human Behavior, and T=Impact of Technology. Writing intensive courses are designated by a W in the fourth digit.

Some of the courses listed indicate the semester the course will be offered. Every attempt will be made to offer the courses in the semester(s) indicated. However, this may not always be possible. Please consult the academic advisor or graduate program director for course offerings.

The University reserves the right to withdraw any course for which there is insufficient registration.

AAST - African-American Studies

AAST 100S Introduction to African American Studies (3 Credit Hours)

An interdisciplinary examination of the African American experience in America. The course examines the historical and contemporary conditions of African American people. It also explores the various modes of artistic expression, values and philosophical underpinnings of African American culture.

AAST 105H Interpreting the African Past (3 Credit Hours)

This course offers students a critical approach to interpreting the history of Africa. A fast-paced survey of African history, it affords students a grounding in the major themes of African history. The course focuses on the major economic, social, and political institutions of Africa, past and present, and explores how historical developments assist comprehension of present-day Africa.

AAST 201 Introduction to Historical Methods (3 Credit Hours)

Required of all history and secondary education social studies majors. Recommended prior to upper-division course work. Examines methods of historical research and primary and secondary source analysis, inclusive of internet usage. Explores historiography and historical writing. Introduces students to issues in the philosophy of history.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

AAST 308 Research Design (3 Credit Hours)

Covers the design and implementation of quantitative and qualitative methods of inquiry in social sciences.

Prerequisites: AAST 100S or permission of the instructor

AAST 310 Human Rights and Social Change in Africa (3 Credit Hours)

This course examines historical social movements in Africa such as economic, ethnic, women's, political, and religious social movements. This course will also link micro-level, meso-level, and macro-level implications for the social structures and cultures of various African nations and communities.

Prerequisites: General Education human behavior course

AAST 316 Politics of Africa (3 Credit Hours)

This course is intended to familiarize students with the struggles, advances, and setbacks of African peoples for state-building and socioeconomic development during the colonial and post-independence eras.

Prerequisites: AAST 100S or permission of the instructor

AAST 320 Introduction to Research Methods (3 Credit Hours)

This course is an introduction to social research methods. The primary purpose of this course is to survey the major research designs and research techniques that are the core of contemporary approaches used to study social phenomena as well as the lives and experiences of African Americans. Ethical implications of social research and data analysis will also be covered.

Prerequisites: General Education human behavior course

AAST 323 Sociology of Minority Families (3 Credit Hours)

Examination and explanation of minority families' lives in relationship to other societal institutions and historical developments. The course focuses on issues of minority families and places these issues in a sociological framework, e.g., stratification, poverty and gender.

Prerequisites: SOC 201S or permission of the instructor

AAST 361 African-American History to 1865 (3 Credit Hours)

The course examines African-American history from the African background through the Civil War. Emphasis is placed on an analysis of African-Americans' role in the political, economic, social and cultural life of the United States.

Prerequisites: AAST 100S or permission of the instructor

AAST 368 Internship (3 Credit Hours)

Individual practical experience in community-based organizations, public bureaucracies, administrative agencies and other organizations and firms. Student can gain exposure in the not-for-profit and profit sectors.

Prerequisites: Permission of program director

AAST 381 Africa in the 20th Century (3 Credit Hours)

This course surveys the political, social and cultural history of colonial and post-independent Africa. Major themes include colonization and resistance, anti-colonial movements, social and cultural transformations, urbanization and popular culture and post colonial challenges.

Prerequisites: AAST 100S or permission of the instructor

AAST 395 Topics in African American Studies (3 Credit Hours)

These courses are open to majors and non-majors. Ethnic studies majors may take these courses to satisfy requirements for the concentration. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: AAST 100S or permission of the instructor

AAST 396 Topics in African American Studies (3 Credit Hours)

These courses are open to majors and non-majors. Ethnic studies majors may take these courses to satisfy requirements for the concentration. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: AAST 100S or permission of the instructor

AAST 410 Africana Intellectual Thought and Economic Development (3 Credit Hours)

This course examines Africana philosophical and theoretical thought as it pertains to issues of race, labor and production. Through an examination of the social and economic legacy of slavery and colonialism, this course investigates how systems of exploitation have influenced the underdevelopment of Africa, the Caribbean and North America in its contribution to Western Capitalism.

Prerequisites: General Education human behavior course

AAST 412 Politics of the Civil Rights Movement (3 Credit Hours)

Examines the political activities which resulted in the passage of the nation's second Civil Rights policy, the 1960 and 1964 Civil Rights Acts, the 1965 Voting Rights Act and the 1968 Fair Housing Act. The course will analyze the underpinnings, leadership, and political strategies of the Civil Rights Movement.

Prerequisites: Six hours in human behavior and junior standing

AAST 420W African American Political and Social Thought (3 Credit Hours)

This course is designed to introduce students to the historical and contemporary experiences of "Blackness" as it has been constructed, contested and affirmed in various historical, political and narrative contexts. Embracing the theme of duality, the course examines what it means for a culture and people to be both integral to and excluded from the American political and social community. This is a writing intensive course.

Prerequisites: Grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C and a General Education human behavior course

AAST 426 Minority Group Relations (3 Credit Hours)

The study of the process of and responses to the oppression of racial, religious, ethnic, and national minorities in a variety of countries within a historical and comparative perspective. Special emphasis given to American minorities and especially African Americans.

Prerequisites: SOC 201S or permission of the instructor

AAST 451 Race, Ethnicity, Crime and Justice (3 Credit Hours)

This course will examine the intersectionality of race, ethnicity, crime, justice and the operation of the criminal justice system and will critically assess controversial issues surrounding race, ethnicity, crime, and justice. Students will discuss contemporary social justice issues as they relate to race, ethnicity, crime, and justice. The theoretical frameworks that explain the intersection between race, ethnicity, crime and justice will be examined. The course will also investigate the broad range of policy issues and recommendations impacting communities of color and the administration of criminal and social justice.

Prerequisites: CRJS 215S or SOC 201S or permission of the instructor

AAST 452 Diversity in Criminal Justice Organizations (3 Credit Hours)

This course examines the impact of diversity, culture, and ethnic origin in criminal justice organizations. The course is designed to better prepare students to meet the challenge of diversity in criminal justice organizations.

Prerequisites: SOC 201S or CRJS 215S or permission of the instructor

AAST 460 Psychology of African Americans (3 Credit Hours)

This course examines the issues and perspectives related to the psychological evolution of African Americans in the United States. Particular emphasis is placed on exploring the discipline of psychology from an Afrocentric focus.

Prerequisites: AAST 100S and junior standing or permission of the instructor

AAST 488 Introduction to Critical Race and Media Studies (3 Credit Hours)

In this course, students examine how media culture - both historic and contemporary - contribute to the intersectional production of race in the United States. A guiding question will be: How do media and popular culture - as texts, practices, industries, and sites of identity formation and pleasure - construct race? Although students will theorize the politics of representation, they will also work to situate texts within a larger historic, political, and discursive context in order to assess the type of cultural work they perform.

Prerequisites: AAST 100S and junior standing or permission of the instructor

AAST 490 Senior Seminar (3 Credit Hours)

This course will introduce students to the key concepts involved in developing and executing an interdisciplinary research project. Students will read and interpret research literature, execute a research project, write a final research paper, and present research findings in a professional setting.

Prerequisites: AAST 320

AAST 495 Topics in African American Studies (3 Credit Hours)

This course focuses on a variety of selected topics in African American Studies. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Senior standing

AAST 497/597 Independent Study (1-3 Credit Hours)

Students are exposed to opportunities to conduct independent research and/or study in areas focused on the political, social and cultural experiences of people of African descent in the U.S. and the African Diaspora.

Prerequisites: Junior standing or permission of instructor

ACCT - Accounting

ACCT 201 Principles of Financial Accounting (3 Credit Hours)

Elementary financial accounting concepts and procedures used in the preparation of financial statements; elementary financial statement analysis; and use of financial accounting information for special-purpose decision making.

Prerequisites: Qualifying score on the math placement test, or completion of MATH 101M or higher

ACCT 202 Principles of Managerial Accounting (3 Credit Hours)

Elementary managerial accounting concepts and procedures; operational accounting; and use of accounting data for special-purpose internal decision making.

Prerequisites: ACCT 201 or ACCT 226

ACCT 226 Honors: Principles of Financial Accounting (3 Credit Hours)

Open only to students in the Honors College. Special honors section of ACCT 201. Elementary financial accounting concepts and procedures used in the preparation of financial statements; elementary financial statement analysis; and use of financial accounting information for special-purpose decision making.

ACCT 227 Honors: Principles of Managerial Accounting (3 Credit Hours)

Open only to students in the Honors College. Special honors section of ACCT 202. Elementary managerial accounting concepts and procedures; operational accounting; and use of accounting data for special-purpose internal decision making.

Prerequisites: Completion of ACCT 201 or ACCT 226

ACCT 300 Accounting for Entrepreneurs (3 Credit Hours)

This course is for non-accounting students who wish to start their own businesses. The course is designed to support entrepreneur activities such as: producing meaningful financial statements and management accounting reports to measure firm performance; choosing the appropriate business entity type; basic tax issues and planning in starting and running a small business; establishing an effective governance structure; and setting up an anti-fraud prevention program. Accounting majors or minors cannot use this course as an accounting elective, but can use the course as a 300-400 business elective. This course will not be used in the calculation of grade point average for an accounting major or accounting minor.

Prerequisites: Completion of MATH 102M or higher, or STAT 130M, or qualified to enroll in Math 162M or higher, and a declared major in the University or permission of the Chair's Office of the School of Accountancy

ACCT 301 Intermediate Accounting I (3 Credit Hours)

This course is required for students following the accounting curriculum in the 2015-16, 2016-17, 2017-18, and 2018-19 Catalogs and should be taken only by these students. The course covers financial statement and managerial accounting information preparation for external and internal users in accordance with prevailing accounting standards established by recognized accounting bodies. Students who have not had ACCT 201 and ACCT 202 within two years of planning to enroll in ACCT 301 are strongly encouraged to retake these courses in preparation for ACCT 301. Students must have a C or better in ACCT 301 to proceed to other upper-level accounting courses. Students in the Accounting Major Professional (AP) program or seeking acceptance in the MSA program must achieve a B- or better in ACCT 301.

Prerequisites: ACCT 201 and ACCT 202 or ACCT 226 and ACCT 227, and a declared major in the University or permission of the Dean's Office

ACCT 302 Intermediate Accounting II (3 Credit Hours)

This course is required for students following the accounting curriculum in the 2015-16, 2016-17, 2017-18, and 2018-19 Catalogs and should be taken only by these students. Preparation of financial statements and other reports in accordance with prevailing accounting standards established by the accounting profession. Students must have a C- or better grade in ACCT 302 to graduate with a major in accounting. Students in the Accounting Major Professional concentration or seeking admission to the MSA program must earn a grade of B- or better.

Prerequisites: ACCT 201 and ACCT 202 or ACCT 226 and ACCT 227; ACCT 301 with a C or better; and a declared major in the University or permission of the Dean's Office

ACCT 305 Essentials of Financial Accounting I (3 Credit Hours)

This course is the gateway to the undergraduate accounting program at Old Dominion University. It is the first of three financial accounting courses designed to strengthen the technical, communication, and critical thinking skills required to succeed in accounting-related careers. This course covers the theoretical foundation, concepts, and principles that underlie financial statement preparation. It exposes students to accounting by providing an in-depth study of the accounting cycle, income statement and balance sheet. Students gain an understanding of how financial statements are prepared using Excel, including an introduction to data analysis using Excel and authoritative sources to support an accounting position. Students who have not had ACCT 201 and ACCT 202 within two years of planning to enroll in ACCT 305 are strongly encouraged to retake these courses in preparation for ACCT 305. Students must have a C or better in ACCT 305 to proceed to other upper-level accounting courses. Students seeking acceptance to the MSA program must achieve a B- or better in ACCT 305.

Prerequisites: ACCT 201 and ACCT 202 or ACCT 226 and ACCT 227, and a declared major in the University or permission of the Dean's Office

ACCT 306 Essentials of Financial Accounting II (3 Credit Hours)

This is the second of the three-course financial accounting series and continues the study of financial statement preparation. Selected topics include: inventories; property, plant, and equipment; investments; and current and long-term liabilities. Students gain an in-depth understanding of how these topics are presented in the financial statements and use the FASB Accounting Standards Codification to support an accounting position. Students gain an understanding of how financial statements are prepared using Excel, including an introduction to data analysis using Excel and authoritative sources to support an accounting position. Students must have a C- or better in ACCT 306 to proceed to other upper-level accounting courses. Students seeking acceptance to the MSA program must achieve a B- or better in ACCT 306.

Prerequisites: ACCT 201 and ACCT 202 or ACCT 226 and ACCT 227; ACCT 305 with a C or better; and a declared major in the University or permission of the Dean's Office

ACCT 307 Essentials of Financial Accounting III (3 Credit Hours)

This is the third of the three-course financial accounting series and continues the study of financial statement preparation. Selected topics include leases, pensions, accounting for income taxes, stockholders' equity, earnings per share, the Statement of Cash Flows, and other corporate reporting issues. Students gain an in-depth understanding of how these topics are presented in the financial statements and use the FASB Accounting Standards Codification to support an accounting position. Students gain an understanding of how financial statements are prepared using Excel, including an introduction to data analysis using Excel and authoritative sources to support an accounting position. Students must have a C- or better grade in ACCT 307 to graduate with a major in accounting. Students seeking admission to the MSA program must earn a grade of B- or better in ACCT 307.

Prerequisites: ACCT 201 and ACCT 202 or ACCT 226 and ACCT 227; ACCT 305 with a C or better; ACCT 306 with a C- or better; and a declared major in the University or permission of the Dean's Office

ACCT 311 Managerial Accounting (3 Credit Hours)

This course is required for students following the accounting curriculum in the 2015-16, 2016-17, 2017-18, and 2018-19 Catalogs and should be taken only by these students. This course focuses on recording and allocating costs within traditional managerial accounting systems. Common and joint cost allocations are performed under job order, process and standard costing systems. Income models are developed for exploring cost-volume-profit relationships. Students must have a C- or better in ACCT 311 to graduate with a major in accounting. Students in the Accounting Major Professional concentration or seeking admission to the MSA program must earn a grade of B- or better.

Prerequisites: ACCT 201 and ACCT 202 or ACCT 226 and ACCT 227; ACCT 301 with a C or better or ACCT 305 with a C or better; BNAL 206; junior standing; and a declared major in the University or permission of the Dean's Office

ACCT 367 Cooperative Education (1-6 Credit Hours)

May be repeated for credit and available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and the Center for Career & Leadership Development prior to the semester in which the work experience is to take place.

Prerequisites: ACCT 301 with a C or better; or ACCT 305 with a C or better and ACCT 306 with a C- or better; and a declared major in the University or permission of the Dean's Office; approval of the Center for Career & Leadership Development; transfer students must have completed one semester at Old Dominion University

ACCT 368 Student Internship (1-3 Credit Hours)

Student participation in a professional work experience. Approval for enrollment and allowable credits are determined by the department. Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment.

Prerequisites: ACCT 301 with a C or better; or ACCT 305 with a C or better and ACCT 306 with a C- or better; and a declared major in the University or permission of the Dean's Office; transfer students must have completed a minimum of one semester at Old Dominion University

ACCT 369 Practicum (1-3 Credit Hours)

Student participation in a professional work experience. Approval for enrollment and allowable credits are determined by the department. Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment.

Prerequisites: ACCT 301 with a C or better; or ACCT 305 with a C or better and ACCT 306 with a C- or better; junior standing and permission of the chief departmental advisor; transfer students must have completed a minimum of one semester at Old Dominion University

ACCT 405/505 Accounting and Auditing in the Public/Nonprofit Sector (3 Credit Hours)

The application of accounting principles to governmental funds and not-for-profit organizations. Emphasis is placed on budgeting and control as well as auditing concerns for such entities. Students must have a C- or better in ACCT 405 to graduate with a major in accounting. Students in the Accounting Major Professional concentration or seeking acceptance to the MSA program must achieve a B- or better in ACCT 405.

Prerequisites: ACCT 301 with a C or better; or ACCT 305 with a C or better and ACCT 306 with a C- or better; senior standing; and a declared major in the University or permission of the Dean's Office

ACCT 411/511 Financial Auditing (3 Credit Hours)

Current financial auditing processes are emphasized, and Generally Accepted Accounting Principles (GAAP) are used to evaluate the fairness of financial statements. Additionally, standards and ethics of the public accounting profession, generally accepted auditing standards, and public reporting are covered. Students must have a C- or better grade in ACCT 411 to graduate with a major in accounting.

Prerequisites: ACCT 305 with a C or better and ACCT 306 with a C- or better; or ACCT 301 with a C or better; Junior or Senior standing; and a declared major in the University or permission of the Dean's Office

ACCT 421/521 Taxation (3 Credit Hours)

This course is required for students following the accounting curriculum in the 2015-16, 2016-17, 2017-18, and 2018-19 Catalogs and should be taken only by these students. An analysis of federal income tax law and its application to personal and business tax situations. Reconciliation of tax and accounting concepts. Students must have a C- or better in ACCT 421 to graduate with a major in accounting. Students in the Accounting Major Professional concentration or seeking admission to the MSA program must earn a grade of B- or better.

Prerequisites: ACCT 301 with a C or better for accounting majors or FIN 431 with a C or better and a declared major in the University or permission of the Dean's Office

ACCT 422/522 Tax Research (3 Credit Hours)

An intensive course in taxation. Focuses on the choice of business entity by covering taxation of corporations (both C and S corporations), partnerships and sole proprietorships. The course emphasizes research skills and professional ethics. Students must have a C- or better in ACCT 422 to graduate with a major in accounting.

Prerequisites: ACCT 301, ACCT 302 and ACCT 421 with a C or better; or ACCT 305 with a C or better and ACCT 306, ACCT 307, ACCT 425, and ACCT 426 with a C- or better; senior standing; and a declared major in the University or permission of the Dean's Office

ACCT 425 Taxation of Individuals (3 Credit Hours)

An analysis of federal income tax law and its application to personal and business tax situations. Reconciliation of tax and accounting concepts. Students must have a C- or better in ACCT 425 to graduate with a major in accounting. Students seeking admission to the MSA program must earn a grade of B- or better. This course, plus an additional self-study module and test on Blackboard, will satisfy the requirement for those whose catalog requires ACCT 421.

Prerequisites: ACCT 305 with a C or better and ACCT 306 with a C- or better for accounting majors; or ACCT 301 with a C or better; or FIN 431 with a C or better, and a declared major in the University or permission of the Dean's Office

ACCT 426 Taxation of Business Entities (3 Credit Hours)

An analysis of federal income tax law and its application to business entities. Students must have a C- or better in ACCT 426 to graduate with a major in accounting. Students seeking admission to the MSA program must earn a grade of B- or better.

Prerequisites: ACCT 425 with a C- or better, or ACCT 421 with a C- or better, and a declared major in the University or permission of the Dean's Office

ACCT 440/540 Introduction to Accounting (3 Credit Hours)

This course provides a succinct working knowledge of the underlying concepts of financial and managerial accounting. With a strong emphasis on the interpretation of real-world financial statements, the course teaches students how to read, analyze, and interpret financial and managerial accounting data to make informed business decisions.

Prerequisites: Instructor permission

ACCT 450/550 International and Advanced Accounting (3 Credit Hours)

The study of accounting for international operations and business combinations. Students may enroll in ACCT 450 as the BSBA required International Business elective. Students must have a C- or better in ACCT 450 to graduate with a major in accounting. Students in the Accounting Major Professional concentration or seeking acceptance to the MSA program must achieve a B- or better in ACCT 450.

Prerequisites: ACCT 301 with a C or better and ACCT 302 with a C- or better; or ACCT 305 with a C or better and ACCT 306 and ACCT 307 with a C- or better; senior standing; and a declared major in the University or permission of the Dean's Office

ACCT 460 Accounting Information Systems (3 Credit Hours)

The theoretical and practical approaches to the understanding of accounting information systems. Emphasis is placed on the understanding of how accounting is related to other business processes and how internal controls are ensured. Students must have a C- or better in ACCT 460 to graduate with a major in accounting. Students are encouraged to take ACCT 460 before completing ACCT 411.

Prerequisites: IT 360T; ACCT 305 with a C or better; ACCT 306 with a C- or better; or ACCT 301 with a C or better, ACCT 302 with a C- or better; and a declared major in the University or permission of the Dean's Office

ACCT 495 Selected Topics in Accounting (1-3 Credit Hours)

Study designed for students desiring additional work in an area of particular interest in accounting. This course may not be substituted for any required accounting course. Students must have a C- or better in ACCT 495 to graduate.

Prerequisites: ACCT 301 with a C or better; or ACCT 305 with a C or better and ACCT 306 with a C- or better; a declared major in the University or permission of the Dean's Office, and approval of the Chair of the School of Accountancy

AI - Artificial Intelligence

AI 301 Artificial Intelligence (AI) Literacy: Concepts and Implications (3 Credit Hours)

This course emphasizes fundamental AI concepts, an awareness of AI applications across various fields, and the critical evaluation of AI's growing integration into daily life. Students will explore the opportunities and challenges presented by AI in diverse contexts while examining its ethical, social, and economic implications.

Prerequisites: Permission of Instructor

AI 302 Artificial Intelligence (AI) Literacy: Applications and Responsible Use (3 Credit Hours)

This course focuses on practical applications and the responsible use of AI tools across various disciplines. Students will participate in hands-on projects to explore real-world applications, critically evaluate AI's limitations, and address challenges such as data privacy, bias, and societal impacts.

Prerequisites: Permission of Instructor

AI 315 Artificial Intelligence in Content Creation (3 Credit Hours)

This course explores the intersection of marketing and digital design, focusing on how to effectively integrate AI tools into modern content creation workflows. Students will utilize AI tools while developing content for a specific brand. By the end of the course, you will be equipped to harness AI in ideation, design, and distribution, empowering you to streamline and elevate your marketing content creation process.

Prerequisites: Permission of instructor

AI 319 Artificial Intelligence (AI) in Digital Marketing Management (3 Credit Hours)

This course provides a comprehensive exploration of how artificial intelligence is transforming digital marketing. It equips students with the knowledge and skills to leverage AI tools and technologies across various aspects of marketing strategy and management. Students will build a strong foundation of AI concepts and technologies relevant to marketing and will learn to leverage AI to better understand and engage customers, plan and execute marketing plans, and increase operational efficiency. The course also highlights unique ethical considerations related to AI in marketing and examines emerging trends in AI-powered marketing, preparing students for a successful future in the field.

Prerequisites: Permission of Instructor

AI 410/510 Artificial Intelligence (AI) Methods and Models (3 Credit Hours)

This course offers an introduction to Artificial Intelligence (AI). Students will explore the field's fundamental concepts, techniques, and applications. Methods, such as Generative AI (GenAI) that enable machines to learn and process information, and models, such as machine learning (ML) that uses data sets to recognize patterns and make decisions without human intervention will be covered. The course is designed for non-specialists and does not require prior computer science or programming knowledge.

Prerequisites: Permission of the instructor

AI 421/521 Generative AI in Cybersecurity (3 Credit Hours)

This course provides an in-depth examination of the intersection between Generative AI (Gen AI) and Cybersecurity. It focuses on the dual nature of advanced AI systems as both enhancers and potential threats to security infrastructure. Students will acquire a comprehensive understanding of the underlying principles, algorithms, and practical applications of Gen AI models in the discovery of attack vectors, identification of cyber threats, and automation of security tasks. Additionally, the course will address defensive strategies aimed at mitigating the risks stemming from AI-driven cyberattacks.

Prerequisites: Permission of Instructor

AI 446/546 Artificial Intelligence (AI) Ethics and Policy (3 Credit Hours)

This course explores whether and how ethical AI is possible by examining moral standards as they apply to the various dimensions of AI development and use. It reviews the major ethical theories and discusses how principles such as transparency, privacy, safety, non-discrimination, and sustainability should govern the creation and use of AI technologies. Moreover, it considers how these principles could serve as the ethical framework for the social and policy structures that regulate and shape the future development of these technologies.

Prerequisites: Permission of Instructor

AI 466/566 Principles and Practices of Cyber Defense (3 Credit Hours)

This course is designed to help students gain a thorough understanding of vulnerabilities and attacks in systems and networks and learn cyber defense best practices. It covers fundamental security design principles and defense strategies and security tools used to mitigate various cyber attacks. The topics may include identification of Recon Ops, intrusion detection, identification of C2 Ops, data exfiltration detection, identifying malicious codes, network security techniques, cryptography, malicious activity detection, system security architectures, defense in depth, distributed/cloud and virtualization.

Prerequisites: Permission of Instructor

AI 481/581 Trustworthy Health Analytics (3 Credit Hours)

This course offers a comprehensive, project-driven approach to integrating AI in healthcare, focusing on building prototype models for prevention, diagnosis, and treatment while stressing the need of adopting ethical, responsible methods to reduce risks and improve patient outcomes.

Prerequisites: Permission of Instructor

AI 483/583 Artificial Intelligence Applications in Health (3 Credit Hours)

This course offers an exploration of how artificial intelligence (AI) is transforming healthcare delivery and improving patient outcomes. Building on foundational knowledge from AI Ethics and Policy and AI Methods and Models, students will dive deeper into the integration of AI in clinical and operational contexts. Key topics include the role of AI in diagnostics and personalized medicine and other AI implementations in healthcare.

Prerequisites: Permission of instructor

AI 495/595 Topics in Artificial Intelligence (AI) (1-3 Credit Hours)

The advanced study of selected artificial intelligence topics designed to permit small groups of qualified students to work on subjects of mutual interest. These courses will appear in the course schedule and will be more fully described in information distributed to academic advisors.

Prerequisites: Permission of Instructor

AL - Arts and Letters

AL 100 Introduction to Arts and Letters: Scholarship in the Disciplines (1 Credit Hour)

Through guest presentations from each major department in the college, the Career Management Center and other University resources, students will learn about majors, minors, career options, effective goal-setting, study skills, and time management strategies. Coursework includes weekly reading and journal assignments, attendance at campus events, and visits to campus resources.

AL 195 Topics (3 Credit Hours)

A topics course in the area of arts and letters.

AL 196 Topics (3 Credit Hours)

A topics course in the area of arts and letters.

AL 203 (3 Credit Hours)

AL 295 Topics (3 Credit Hours)

A topics course in the area of arts and letters.

AL 296 Topics (3 Credit Hours)

A topics course in the area of arts and letters.

AL 367 Internship in Peer Advising (1-3 Credit Hours)

Students receive training in communications, counseling practices and College and University resources and services, and then serve as Peer Advisors to undecided prospective Arts & Letters students. Up to 150 hours required. Weekly staff meetings, readings, and a peer advising journal are also required.

Prerequisites: Approval of the College Director of Academic Advising

AL 395 Topics in Humanities (3 Credit Hours)

An interdisciplinary study of selected topics in the humanities. These courses will appear in the course schedule booklet, and will be more fully described in a booklet distributed to academic advisors.

Prerequisites: Junior standing or permission of the instructor

AL 396 Topics in Social Studies (3 Credit Hours)

An interdisciplinary study of selected topics in social studies. These courses will appear in the course schedule booklet, and will be more fully described in a booklet distributed to academic advisors.

Prerequisites: Junior standing or permission of the instructor

AL 495/595 Topics in Humanities (1-3 Credit Hours)

An advanced study of selected topics in humanities.

Prerequisites: Junior standing or permission of the instructor

AL 496/596 Topics in Social Studies (3 Credit Hours)

An advanced study of selected topics in social studies.

Prerequisites: Junior standing or permission of the instructor

AL 497/597 Tutorial Work in Arts and Letters Topics (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Junior standing or permission of the instructor

AMST - American Studies

AMST 300 Perspectives in American Studies (3 Credit Hours)

An exploration of current methodological approaches utilized in the interdisciplinary field of American Studies. Through integrative themes that cut across time, place and cultural identity, this course will allow students to build a working definition of civilization in the United States.

Prerequisites: ENGL 110C or HIST 104H or permission of instructor

AMST 495 Topics (1-3 Credit Hours)

Rotating course content in American Studies, with interdisciplinary focus. Course can be used to fulfill a requirement in the American Studies minor.

Prerequisites: ENGL 211C or ENGL 231C

ANTR - Anthropology

ANTR 110S Introduction to Anthropology (3 Credit Hours)

A survey of what we know about the emergence of humans: where we came from; how we developed physically and why; how human cultures became more complex through time; and the variety of human ways of life today.

ANTR 303 Biological Anthropology (3 Credit Hours)

Human physical and cultural evolution from our earliest primate beginnings through the appearance of anatomically modern humans.

Prerequisites: ANTR 110S

ANTR 304 Digging Up the Past (3 Credit Hours)

A comprehensive study of the philosophical and scientific foundations of archaeology and of a general prehistory to which they are applied. The course includes discussions of methods and theories used to reconstruct ancient Egypt and Mexico and other early cultures.

Prerequisites: ANTR 110S or completion of the human behavior requirement or permission of the instructor

ANTR 305 North American Archaeology (3 Credit Hours)

The study of the prehistory of native cultures north of Mexico from the peopling of the New World to contact with Europeans.

Prerequisites: ANTR 110S or completion of the human behavior requirement or permission of the instructor

ANTR 395 Topics in Anthropology (1-3 Credit Hours)

A study of selected topics, designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: ANTR 110S or permission of instructor

ANTR 495 Topics in Anthropology (1-3 Credit Hours)

A study of selected topics designed for either majors or nonmajors. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: Senior standing or approval of the department chair

ANTR 497 Tutorial Work in Special Topics in Anthropology (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of department chair

ARAB - Arabic

ARAB 111F Beginning Arabic (6 Credit Hours)

This is an introductory class to Modern Standard Arabic and Middle Eastern Culture. Students are expected to reach intermediate low to intermediate mid-level. The Arabic alphabet and sounds are introduced as well as simple language in context reflecting the authentic cultural nuances dealing with simple topics ranging from family, school and hobbies. No prior knowledge is required.

ARAB 195 Topics (1-6 Credit Hours)

Special topics in Arabic.

ARAB 212 Intermediate Arabic (6 Credit Hours)

The class is a continuous sequence of ARAB 111F or an equivalent class. The students are expected to reach intermediate high level. The class focuses on expanding the topics of communication the students developed in the introductory class. Modern standard and Levantine Arabic will be the means of communication in class and the student will be exposed to practical grammar, authentic media and texts. The students will produce culture through role plays and group work simulations and recognize the different registers in the targeted culture through paying attention to sociolinguistic variations.

Prerequisites: ARAB 111F

ARAB 295 Topics (1-6 Credit Hours)

A topics course in Arabic, with topics announced prior to the semester in which they are offered.

ARAB 311 Advanced Arabic Language and Culture I (3 Credit Hours)

The purpose of the class is to reinforce the vocabulary and grammar introduced in ARAB 111F and ARAB 212 through activating the learned materials and pushing the students to the advanced level. The language of interaction will be Levantine and Standard Arabic, which students will be able to manipulate to the specific language situations as in the countries this diglossic phenomenon exists. In addition to the grammar and vocabulary introduced in the textbook, the class will incorporate an extensive authentic reading component and a variety of Arabic contemporary media to reflect the linguistic and cultural aspects of the Middle East.

Prerequisites: ARAB 212

ARAB 312 Advanced Arabic Language and Culture II (3 Credit Hours)

The class is a continuous sequence of ARAB 311 or an equivalent class. Students are expected to reach advanced low level and explore the Middle Eastern cultures through the language spoken there. Levantine and Standard Arabic are the only means of communication in this class. The class incorporates a high load of writing to express students' ideas relating to a wide variety of Middle Eastern topics and current events, which will be introduced through weekly readings and authentic media. This is a crucial class for students planning to travel to the Middle East, who want to explore the Arab world first hand.

Prerequisites: ARAB 311

ARAB 395 Topics in Arabic (1-6 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule booklet and will be more fully described in a booklet distributed to academic advisors.

Prerequisites: ARAB 212 or equivalent

ARAB 495 Topics in Arabic (1-6 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule and will be more fully described in a booklet distributed to academic advisors.

Prerequisites: ARAB 212 or equivalent

ARTE - Art Education

ARTE 301 Foundations of Art Education (3 Credit Hours)

This course introduces historical, philosophical, and sociological foundations and contemporary issues of American public education, including the history and philosophies of art in education, best practice methods, and learning theories in PreK-12 schools, cultural institutions, and museum settings. Virginia Standards of Learning, National Core Arts Standards for Art, and an introduction to teaching for the understanding of visual art, visual inquiry, lesson planning, and assessment will be addressed. All students will complete a 30-hour observation experience in an appropriate PreK-12 setting specific to art education. Students must complete a criminal background check.

Prerequisites: ENGL 110C and ENGL 211C or ENGL 231C with a grade of C or better; Art education majors only and sophomore standing

ARTE 305 Elementary Art Education Methods and Classroom Management (3 Credit Hours)

This course will attend to issues of children's art making and how the visual arts can empower learning in a variety of settings. Through site visitations students will broaden their understanding of age-appropriate pedagogical practices while also exploring various artmaking materials and classroom management strategies. Through research and thought provoking hands-on activities students will develop critical thinking skills and increase their awareness of content knowledge. Students will begin work on developing their portfolios. A 35 hour practicum in an elementary setting is required. (Offered spring semester; to be taken sophomore year.)

Prerequisites: ARTE 301 with a grade of C or better; Criminal Background Check completed; open to art education majors only

ARTE 306 Secondary Art Education Methods and Classroom Management (3 Credit Hours)

This course is designed to address theoretical and practical aspects of curriculum development and classroom management with an emphasis on honoring diversity and advocating for equity in secondary art education learning environments. Pedagogy will focus on implementing studio based lessons, including current approaches to digital and instructional technology. Through research and site visits students will broaden their understanding of age-appropriate pedagogical practices. Students will critically reflect on their development as an educator while understanding their role as an advocate for the field of art education. Work on portfolios is continued. A 35 hour practicum in a secondary setting is required. Students must apply to the teacher prep program. (Offered fall semester; to be taken junior year.)

Prerequisites: ARTE 301 and ARTE 305, both with a grade of C or better; PRAXIS Art Content (5134) score must be on file

ARTE 411 Curriculum and Instruction in Art Education (3 Credit Hours)

This course is designed to prepare students for their upcoming capstone and student teaching internship from the inception of an idea to writing units of instruction for K-12 classrooms and museum and cultural institution settings. Students will use foundational knowledge to design comprehensive curriculum including relevant assessments. Students will review current topics and practice through reading, research and writing in the field of art education. Students will focus on dispositions of visual art educators as defined by NEAE national standards as well as the development of culturally relevant pedagogy. (Offered spring semester; to be taken junior year.)

Prerequisites: Grades of C or better in ARTE 301, ARTE 305, and ARTE 306; acceptance in the teacher preparation program; Praxis Art Content (5134) score must be on file

ARTE 480 Capstone in Art Education (3 Credit Hours)

Designed to provide advanced art education students with substantial practical experience in planning, developing, administering, and evaluating a program of visual arts education in a local museum setting for Youth Art Saturday School (YASS). This includes 30 hours of teaching in alternative settings. Students will reflect critically on their practice through arts-based methods and writing activities, and will curate a final art exhibition for participants and their families. Student portfolios will include all required components, with the exception of documentation of their student teaching or museum and cultural institutions internship. This course includes a final BFA show. (Offered fall semester; to be taken in the senior year.)

Prerequisites: Grades of C or better in ARTE 301, ARTE 305, ARTE 306, and ARTE 411; acceptance into the teacher preparation program, and passing score on the Praxis 2 Art content knowledge exam (5134); must complete the Child Abuse and Neglect, Cultural Competency, Dyslexia, First Aid/CPR/AED, and Restraint and Seclusion certifications

ARTE 485 Museum and Cultural Institutions Internship (6 Credit Hours)

Internship with educational programming and the facilitation of learning for young learners in a museum or cultural institution. Current partners include the Virginia Museum of Contemporary Art, the Chrysler Museum of Art, and the Hermitage Museum School of Visual Arts. (Offered spring semester; to be taken in the senior year.)

Prerequisites: Grades of C or better in ARTE 301, ARTE 305, ARTE 306, ARTE 411, and ARTE 480

ARTH - Art History

ARTH 121A Introduction to the Visual Arts (3 Credit Hours)

An introduction to the various media, techniques, styles, content, and contexts in the visual arts as they are manifested in the world's cultures.

ARTH 127A Honors: Introduction to the Visual Arts (3 Credit Hours)

An introduction to the various media, techniques, styles, content, and contexts in the visual arts as they are manifested in the world's cultures. Open only to students in the Honors College.

ARTH 150 Global Survey of Art History (3 Credit Hours)

This course provides an opportunity to discover, appreciate, and acquire broad knowledge of art history through the ages, from the Prehistoric era to contemporary times within a global perspective. Students will learn to examine and critically analyze major forms of artistic expression from diverse cultures and periods of art in order to understand their individual and collective contributions to the arts.

ARTH 195 Topics (1-3 Credit Hours)

Special topics in art history.

ARTH 203 Ancient Art (3 Credit Hours)

This course covers the art and architecture of the ancient world from its Paleolithic origins to the end of antiquity and the birth of Christian art. Ranging from drawings in caves to mosaics in churches, the material addressed in the course is situated in its social, political, and historical context. The objective of this course is to provide a visual and cultural literacy of ancient art and to familiarize students with the methods, theories, and traditions upon which ancient art history is grounded.

Prerequisites: ENGL 211C or ENGL 221C or ENGL 231C or permission of instructor

ARTH 204 Pseudoarchaeologies and Conspiratorial Thinking in Art (3 Credit Hours)

This course is an effort to confront conspiratorial thinking where art is concerned. The interpretation of human visual culture – particularly from ancient periods – is a particularly subjective endeavor, but in recent years social media have accelerated the proliferation of baseless theories about art, architecture, and material culture. From alien-builder theories to simple misconceptions about the polychromatic nature of Classical art, these pseudoarchaeologies can be found throughout the world, but they tend to harangue and ultimately undermine non-European peoples and cultures and their cultural heritage.

Prerequisites: ENGL 211C or ENGL 221C or ENGL 231C or permission of instructor

ARTH 210 Early Modern Art in Europe (3 Credit Hours)

“Early Modern” is a relatively new term applied to a broad period of artistic production in Europe that encompasses distinct, yet overlapping, style periods, which include the “Renaissance,” “Baroque,” “Rococo,” and “Neoclassicism.” This course will examine painting, sculpture, architecture, and graphic arts in Europe from 1400—1800 within the context of artistic creativity in relationship with intellectual, religious, economic, political, scientific, and cultural changes and developments in the Western world.

Prerequisites: ENGL 211C or ENGL 221C or ENGL 231C or permission of instructor

ARTH 230 Survey of Modern and Contemporary Art (3 Credit Hours)

A survey of modern and contemporary art with respect to its theoretical grounding and diverse practices. Students will encounter globally prominent artists of the last century as well as art of the immediate present on display in our area. Students will also receive instruction and experience in research and writing within the discipline of art history.

Prerequisites: ENGL 211C or ENGL 221C or ENGL 231C or permission of instructor

ARTH 295 Topics (3 Credit Hours)

A study of selected art history topics to be specified in the class schedule each semester. May be repeated for credit as topics vary.

Prerequisites: ENGL 211C or ENGL 221C or ENGL 231C or permission of instructor

ARTH 305 Egyptian Art (3 Credit Hours)

This course explores the art and architecture of ancient Egypt from the migrations of anatomically modern humans out of Africa to the persistence of Egyptian identity under Roman domination. Egypt looms large in the popular consciousness of modern society, with extraterrestrial or magical connotations. This course encourages critical thinking skills by stressing the importance of evidence and context in the interpretation of Egyptian monuments and iconography. Fulfills non-western requirement for majors.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 310 Women in the Visual Arts (3 Credit Hours)

The contributions of women in the various fields in the visual arts--painting, graphics, sculpture, architecture, and the crafts.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 314 15th and 16th Century Art in Northern Europe (3 Credit Hours)

The painting, sculpture, and graphics of the Netherlands, France and Germany in the fifteenth and sixteenth centuries with discussion of artists such as Jan van Eyck, Hieronymus Bosch, Pieter Bruegel the Elder, and Albrecht Durer.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 315 Early Renaissance Art in Italy (3 Credit Hours)

Painting, sculpture, and architecture in 14th- and 15th-century Italy from Giotto to Botticelli, among others.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 316 High Renaissance Art in Italy (3 Credit Hours)

This course is a survey of High Renaissance Art in Italy (roughly 1473 to 1520), focusing on the recognized major artists or 'masters' of the High Renaissance, Leonardo da Vinci, Michelangelo, Raphael, and Titian, as well as their lesser known contemporaries.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 317 Mannerism and Late Renaissance Art in Italy (3 Credit Hours)

The works of Leonardo, Michelangelo, and Raphael brought the Renaissance to its height, but by 1520, two of these masters were dead. It is in this aftermath - post-1520 - that a new generation of artists arose revolutionizing the art world. This course is a survey of mid-late sixteenth-century art in Italy.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 318 Baroque Art in Italy and Spain (3 Credit Hours)

This course is a survey of Baroque Art in Italy and Spain. Material includes painting, sculpture, and architecture of the seventeenth and early eighteenth centuries, with discussion of artists such as Caravaggio, Annibale Carracci, Gian Lorenzo Bernini, Francesco Borromini, Diego Velazquez, Jusepe de Ribera, and Francisco de Zurbaran, among others.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 319 Baroque Art in Northern Europe (3 Credit Hours)

This course is a survey of Baroque Art in Northern Europe. Materials include painting, sculpture, and architecture of the seventeenth and early eighteenth centuries, with discussion of artists such as Peter Paul Rubens, Rembrandt, Vermeer, and Poussin, among others.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 320W History of Graphic Design (3 Credit Hours)

A critical study of the formal, cultural, and intellectual developments of the graphic design discipline, including related activity in fine art, illustration, and industrial design. This is a writing intensive course.

Prerequisites: Grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; and ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of instructor

ARTH 321 History of Decorative Arts (3 Credit Hours)

Examines the major historical developments in the decorative and applied arts, landscape design, and material culture from the Renaissance to the Modern period.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 322 American Art and Architecture, 1600 to the Present (3 Credit Hours)

Through the study of form, content, and context of selected works of painting, architecture and sculpture made in colonial North America and the US from the 17th to the 20th century, this course will probe changing American social and cultural values embodied in art. Students will study individual artists as well as themes, with particular attention to the production and reception of art in a developing nation, the transformation of European architectural styles into a new environment, the construction of race in ante- and post-bellum America, and the identification of an abstract style of art with the political ascendancy of the US after World War II.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 323 Nineteenth-Century European Art (3 Credit Hours)

Survey of the mainstreams of European art during the late eighteenth and nineteenth centuries, including discussion of architecture, sculpture, painting, and the graphic arts.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 327 History of Photography (3 Credit Hours)

An examination of the development of photography as a scientific curiosity, a tool for artists, and as a fine art in itself from the early nineteenth century to the present day.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 328 Art of Gardens (3 Credit Hours)

An introductory course to the history of gardens. Gardening is explored as an artistic expression and connections are made to other visual arts such as painting, sculpture and architecture, as well as to theater and public representation. The course combines a heavy site-visiting component with readings and individual research directed towards the final course paper and presentations.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of instructor

ARTH 339 Surrealism and other Utopias (3 Credit Hours)

A study of the international movements in visual arts and design in the interwar years from Dada to the New World's Fair.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 340 Abstract Expressionism and its Discontents (3 Credit Hours)

An intensive study of the two decades when modernist styles and theories in art, design, and architecture were codified and challenged internationally.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 350W Art Criticism (3 Credit Hours)

A study of the analysis, theoretical approaches, methodologies, and effects of the practice of art criticism. This is a writing-intensive course.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor; grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

ARTH 351W Research Methods in Art History (3 Credit Hours)

An investigation of past and present approaches to scholarship in art history. Students participate in a series of writing assignments designed to strengthen their research and writing skills, culminating with the presentation of original research in oral and written form. This is a writing intensive course.

Prerequisites: Grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; and ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 360 Asian Art (3 Credit Hours)

An introduction to the architecture, sculpture, calligraphy, pottery, ink painting, miniature painting, and gardens of India, China, and Japan. Emphasis will be placed on the connections among the cultures: Buddhism and pilgrimage, the importance of the scholar painters, the role of trade routes and the emergence of native writing. Cross-listed with ASIA 360.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 365 Problems in Postmodernism (3 Credit Hours)

Lectures and critical discussion of the development and configurations of the various styles emergent since 1960, both in America and Europe.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 368 Internship (1-3 Credit Hours)

An unpaid, structured work experience in a museum, gallery, archive, or related environment for credit. Criteria for evaluation will be determined by work supervisor and cooperating faculty advisor. May be repeated for credit. Available for pass/fail grading only.

Prerequisites: Approval of the program director and Monarch Internship and Co-Op Office

ARTH 369 Practicum (1-3 Credit Hours)

A specialized field activity outside of the classroom. Qualifies as a CAP experience. Available for pass/fail grading only.

Prerequisites: Approval of the program director

ARTH 377 Extracurricular Studies (1-6 Credit Hours)

An extracurricular activity approved for credit based on objectives, criteria, and evaluative procedures as formally determined by the department and the student prior to the semester in which the activity is to take place. Such credit is subject to review by the provost.

Prerequisites: Approval of the program director

ARTH 378 Extracurricular Studies (1-6 Credit Hours)

An extracurricular activity approved for credit based on objectives, criteria, and evaluative procedures as formally determined by the department and the student prior to the semester in which the activity is to take place. Such credit is subject to review by the provost.

Prerequisites: Approval of the program director

ARTH 395 Topics in Art History (3 Credit Hours)

A study of selected topics in art history to be specified in the class schedule each semester. May be repeated for credit as topics vary.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 396 Topics in Art History (3 Credit Hours)

A study of selected topics in art history to be specified in the class schedule each semester. May be repeated for credit as topics vary.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 408/508 Hieronymus Bosch (3 Credit Hours)

Before Dalí...before Magritte...before De Chirico, there was Hieronymus Bosch. Well before the advent of the Surrealism movement in the twentieth century, the late fifteenth-century/early sixteenth-century Dutch painter Hieronymus Bosch rocked the art world with his fantastical, disturbing, and enigmatic paintings. This course will critically examine Bosch and his work. Students will work like detectives, first by dismantling long-standing misinterpretations about Bosch's work, then by analyzing and deciphering his iconography through the lens of the period in which he lived, including art theory, politics, religion, devotion, and alchemy, among other topics.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of instructor

ARTH 410/510 Michelangelo (3 Credit Hours)

This course examines the life, sculptures, paintings, and architecture of one of the greatest Italian Renaissance artists, Michelangelo Buonarroti.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 411/511 Caravaggio (3 Credit Hours)

This course examines the life and revolutionary paintings of the Italian Baroque painter Caravaggio.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 416/516 Myths of Venice (3 Credit Hours)

Venice is set apart from other cities in Italy and from Europe not only by its geography—a city seemingly floating on water, with canals instead of streets—but also by its unique history, traditions, and cultural identity. The consideration and examination of its mythical origins in the fifth century, through its history as a territory of the Byzantine Empire, and the establishment of their Republic in 1297, this course will examine how Venice fashioned its own identity through its art and architecture during the Italian Renaissance.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of instructor

ARTH 417/517 Renaissance and Baroque Women (3 Credit Hours)

This course will examine the ways in which prevailing ideas about women shaped visual imagery, and in turn, how these images influenced, perpetuated, and even changed perceptions about women from the fifteenth through seventeenth centuries in Italy (Renaissance and Baroque periods). Students will explore how text and visual imagery informed one another, and closely examine works of art by women artists, commissioned by women patrons, and works featuring women through thematic topics. Although patriarchy dominated the Renaissance and Baroque periods, the course will recover the histories of women artists, patrons, and writers, and examine how women navigated the gender oppression of their periods to reclaim their power and value.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of instructor

ARTH 420/520 Pompeii (3 Credit Hours)

This seminar is an exploration of the visual and material culture of Pompeii, incorporating a broad spectrum of evidence, ranging from the city's temples to the wall paintings in the city's brothels. The goal of the class is to instill a working knowledge of the most recent scholarship on the ancient city and to contextualize Pompeii's art and architecture in the historical narrative of the city and the broader body of scholarship on Roman cultural history.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 434/534 Romantic Architecture (3 Credit Hours)

A survey of the aesthetic, technological, and social forces that transformed international architecture in the 18th and 19th centuries.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 435W/535 Modern Architecture (3 Credit Hours)

An examination of the architecture, planning, and related design of the twentieth and twenty-first centuries around the globe. Special emphasis is placed on the formation of the international style between the world wars and its disintegration in the recent past. This is a writing intensive course; the course also satisfies the general education impact of technology requirement.

Prerequisites: Grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; and ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 441/541 Realism in Modern and Contemporary Art (3 Credit Hours)

This course examines the changing motivations, contexts, and characteristics of realist art since the inception of modernism. While definitions of radical and conservative have wavered and flipped, recognizable imagery seems always to function as a critical intervention within aesthetic racial, or gender-based hegemonies. As students examine numerous artists' strategies, they will see that reality isn't always so easy to pin down.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of instructor

ARTH 442/542 Painting Now (3 Credit Hours)

Anxiety about painting's purpose and relevance are woven into modern art's linear concept of history. The goal of this class is to help students understand, both intellectually and emotionally, the ambitions that motivate painting, as well as to give them an opportunity to sample the diverse practices and critical approaches that make up the painterly landscape, and finally to examine how or if it fits within the broader scope of contemporary art.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of instructor

ARTH 450/550 Public Art (3 Credit Hours)

This course is a collaborative exploration of the problems and opportunities of national and international public art that combines the practical with the theoretical, and the studio with the art-historical.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 480 Senior Thesis (3 Credit Hours)

The research and writing of a thesis on an advanced topic in art history to be determined by the student in concert with a faculty advisor. The thesis option is intended for art history majors preparing for graduate study in the field, and serves as the required culminating work for their degree.

Prerequisites: Senior standing; 12 hours of art history electives at the 300 and 400 levels; requires program director approval

ARTH 481 Capstone (3 Credit Hours)

The research and writing of a capstone on an advanced topic in art history to be determined by the student in concert with a faculty advisor. The capstone serves as the required culminating work for students who are not pursuing graduate studies in the field.

Prerequisites: Approval of the program director

ARTH 495/595 Topics in Art History (3 Credit Hours)

A study of selected topics in art history to be specified in the class schedule each semester. May be repeated for credit as topics vary.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 496/596 Topics in Art History (3 Credit Hours)

A study of selected topics in art history to be specified in the class schedule each semester. May be repeated for credit as topics vary.

Prerequisites: ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of the instructor

ARTH 497/597 Tutorial Work in Art History (3 Credit Hours)

Independent research on a topic to be selected under the guidance of a faculty advisor. Course is restricted to art history majors.

Prerequisites: Approval of program director

ARTH 498/598 Tutorial Work in Art History (3 Credit Hours)

Independent research on a topic to be selected under the guidance of a faculty advisor. Course is restricted to art history majors.

Prerequisites: Approval of program director

ARTS - Art, Studio

ARTS 122A Visual Communication (3 Credit Hours)

An introduction to essential themes and means of visual communication in the fine arts with an emphasis on studio experience in techniques from the different disciplines in studio art.

ARTS 126A Honors: Art as Experience (3 Credit Hours)

Open only to students in the Honors College. A special honors section of ARTS 122A.

ARTS 202 Two-Dimensional Design and Color Theory (3 Credit Hours)

An introduction to pictorial design via an intensive study of the elements and principles of art and design and Gestalt Theory. These fundamental ideas are reinforced as color theory principles are introduced, such as: additive and subtractive color systems, color interaction, and harmonies as well as the phenomenon of simultaneous contrast.

ARTS 203 Three-Dimensional Design (3 Credit Hours)

A basic course examining the relation of form and structure in a three-dimensional environment.

ARTS 204 Foundational Concepts in Studio Art (3 Credit Hours)

This course provides students an overview of the options, methods, and strategies by which modern and contemporary artists operate. One of the primary learning outcomes is for students to be conversant with the discourse and ideas that they have inherited as artists, designers, and scholars in the 21st century in order to enrich their own creative practices.

ARTS 211 Introduction to Digital Photography (3 Credit Hours)

Introduction to conceptual, technical and historical aspects of photography as a creative medium using digital technology. Technical areas covered include camera use, digital image processing, and digital printing. Class time is divided between demonstrations of applicable skills, in class work time, lectures and critiques.

Prerequisites: ARTS 279 or permission of the instructor

ARTS 221 Introduction to Glass: Survey (3 Credit Hours)

This course is structured to provide instruction to glass forming, balanced with the history, criticism, and aesthetics of glass art. It is a basic course in the techniques of glassblowing, flameworking, kiln forming and coldworking, taught through a series of hands-on projects. Lectures, demonstrations, and critiques encourage students to consider both the technical and conceptual manifestations of this material. In addition, the Chrysler Museum's extensive contemporary and historical glass collection and interaction with visiting and resident glass artists will be utilized. The course allows students of all skill levels to learn new techniques to advance to a higher level of art production.

Prerequisites: ARTS 203

ARTS 231 Drawing I: Fundamentals of Drawing (3 Credit Hours)

An intensive studio course that fosters observational and visualization skills through a comprehensive exploration of composition, linear perspective, and sighting and measuring techniques. These principles are executed by utilizing line and value with a variety of media including graphite, charcoal, and ink. Investigations of the discipline's historic and contemporary dimensions support the course objectives.

ARTS 241 Painting I (3 Credit Hours)

An observational painting course that serves as an introduction to the fundamental concepts and competencies of oil painting. Primary emphasis is on composition, accuracy of color mixing, description of form and space as well as paint application techniques.

Prerequisites: ARTS 202 and ARTS 231

ARTS 254 Printmaking: The Relief Print (3 Credit Hours)

An introduction to basic relief printing techniques including woodcut, linocut, letterpress, and collograph.

Pre- or corequisite: ARTS 202 and ARTS 231; one or both may be taken before; one may be taken as a corequisite

ARTS 257 Print I: Intaglio and Relief (3 Credit Hours)

A basic introduction to the aesthetic and conceptual possibilities of print media, focusing primarily on Intaglio and Relief printing techniques. Studio projects and demonstrations will be supplemented with lectures and readings exploring the significance of print to contemporary artists.

Prerequisites: ARTS 202 and ARTS 231

ARTS 258 Print I: Screenprint and Lithography (3 Credit Hours)

A basic introduction to the aesthetic and conceptual possibilities of print media, focusing primarily on Screenprinting and Lithography. Studio projects and demonstrations will be supplemented with lectures and readings exploring the significance of print to contemporary artists.

Prerequisites: ARTS 202 and ARTS 231

ARTS 259 Print I: Letterpress and Book Arts (3 Credit Hours)

A basic introduction to the aesthetic and conceptual possibilities of print media, focusing primarily on Letterpress and Book Arts. Studio projects and demonstrations will be supplemented with lectures and readings exploring the significance of print to contemporary artists.

Prerequisites: ARTS 202 and ARTS 231

ARTS 261 Introduction to Sculpture (3 Credit Hours)

Conceptual thinking in three dimensions; the development of visual capacity and spatial sense through direct experience in materials.

Prerequisites: ARTS 202 and ARTS 203

ARTS 263 Introduction to Ceramics (3 Credit Hours)

A studio core course designed as an introduction to ceramics. Students will explore functional and sculptural techniques through handbuilding and wheel-throwing, as well as basic claybody, glaze and firing theory. Students will also develop a basic understanding of the historical and cultural aspects of ceramics.

Prerequisites: ARTS 202 and ARTS 203

ARTS 279 Digital Basics (3 Credit Hours)

This course is an introduction to the Macintosh operating system, design industry-standard software programs, and technical applications to visual arts and design production. The course provides an overview of Adobe software programs (Photoshop, Illustrator, InDesign) and techniques for bitmap and vector image creation as well as page layout as used in print design and digital media development.

ARTS 291 Introduction to Jewelry and Metalsmithing (3 Credit Hours)

This course is an introduction to the fundamentals of design and metal fabrication techniques for both jewelry and small objects. Working with precious and non-precious metals, students will learn traditional techniques including sawing, filing, cold connections, soldering, and polishing. A series of structured assignments guide students as they transform their ideas into finished works. Solutions for projects are open to enable the student to explore their own aesthetic while mastering the outlined material. Lectures on historical, contemporary and cultural examples of jewelry inform and inspire students' work.

Prerequisites: ARTS 203 or permission of the instructor

ARTS 300 Introduction to Computer Graphics (3 Credit Hours)

An introductory studio art course for non-art majors. The course is designed to acquaint students with industry standard graphic software, the Macintosh operating system, and its application to digital graphics production. It includes an overview of computer hardware and software used for visual communication.

Prerequisites: Junior standing

ARTS 311 Photography 2 (3 Credit Hours)

This course encourages the refinement of technical skills as well as emphasizing the critical framework in which to place photographic imagery. Assignments will challenge students to think creatively and develop their unique perspective. Reading, research, and discussion introduce students to the major photographic movements that have shaped current theory.

Prerequisites: ARTS 211 or permission of the instructor

ARTS 312 Lighting for Photography (3 Credit Hours)

This class explores controlled lighting for photography both inside and outside the studio. Emphasis is placed on exploring photographic concepts and the creative application of lighting technique and style both inside the studio and on location. Students will also investigate ways to communicate ideas through strong photographic imagery and how photography shapes and influences society through class readings and discussion.

Prerequisites: ARTS 211 or permission of the instructor

ARTS 313 Darkroom Photography (3 Credit Hours)

This course will focus on alternative as well as conventional techniques of the black and white darkroom. The class will approach image making with a focus on experimentation. Techniques covered will include photograms, pinhole photography, Van Dyke brown and gelatin silver prints. In addition to production of images, an early history of photography, beginning with the camera obscura, will be discussed. Class sessions will be divided into lecture/slide presentations, critique of students' work, demonstrations, and open lab time. Students will create a final portfolio to be reviewed as a class at the end of the semester.

Prerequisites: ARTS 211 or permission of the instructor

ARTS 321 Intermediate Glass: Hot and Flame (3 Credit Hours)

This course is structured to provide instruction to glass forming, balanced with the history, criticism, and aesthetics of glass art. It is an intermediate course in the techniques of glassblowing, flame working, and coldworking, taught through a series of hands-on projects. Lectures, demonstrations, and critiques will encourage students to consider both the technical and conceptual manifestations of this material. In addition, the Chrysler Museum's extensive contemporary and historical glass collection and interaction with visiting and resident glass artists will be utilized. The course allows students of intermediate levels to learn new techniques to advance to a higher level of art production.

Prerequisites: ARTS 203 and ARTS 221

ARTS 331 Drawing II (3 Credit Hours)

This is an intensive studio course that builds on the perceptual and technical skills developed in ARTS 231. Using a variety of media including ink, charcoal, graphite, and chalk pastels, initial coursework will act as a review of direct observational drawing skills with an introduction to the formal optics of color perception and interaction through the framework of drawing. Students will begin exploring the expressive potential of drawing through thematically-driven projects during the second half of the semester.

Prerequisites: ARTS 231 and ARTS 202

ARTS 341 Painting II (3 Credit Hours)

An intensive studio course that builds on the perceptual and technical skills developed in ARTS 241. Coursework includes a review and expansion of direct observational painting skills with exploration into the expressive potential of painting through thematically-driven projects.

Prerequisites: ARTS 241 and ARTS 331

ARTS 343 Techniques in Abstraction (3 Credit Hours)

This course serves to expose students to various techniques in contemporary abstraction. Students explore a range of strategies for producing both objective and non-objective abstract work using drawing and/or painting media.

Prerequisites: ARTS 341 or by permission of the instructor

ARTS 350 Advanced Printmaking (3 Credit Hours)

Further investigation of chosen print technique (screenprint, lithography, relief, or intaglio) with special attention to the implementation of color.

Prerequisites: ARTS 279 and any introductory printmaking course (ARTS 254, ARTS 257, ARTS 258, or ARTS 259)

ARTS 351 Print II: The Hybrid Print (3 Credit Hours)

Students investigate the integration of traditional print media with digital prints, photographic techniques, and rapid prototyping technologies. Readings and discussions will explore the relationship between analog and digital media. Students choose a conceptual theme that will guide their work throughout the semester.

Prerequisites: ARTS 257, ARTS 258 or ARTS 259 or permission of the instructor

ARTS 352 Print II: Medium Intensive (3 Credit Hours)

Students focus on a single print medium from Print I (Intaglio, Relief, Screenprint, Lithography, or Letterpress) for intensive study. Use of color, registration, and alternative techniques will be emphasized within a given medium. Students choose a conceptual theme that will guide their work throughout the semester.

Prerequisites: ARTS 257, ARTS 258 or ARTS 259 or permission of the instructor

ARTS 361 Advanced Sculpture (3 Credit Hours)

Investigation involves the combination of various materials and construction techniques. Each student will improve their skills in fabrication to execute their research and concepts in object making and installation.

Prerequisites: ARTS 203, ARTS 261 or permission of the instructor

ARTS 362 Ceramics Studio (3 Credit Hours)

This course is an introduction to the use of clay, also known as ceramics. It includes clay forming with pinch pots, slabs, coils and pottery wheels.

Prerequisites: by permission of instructor

ARTS 363 Intermediate Ceramics (3 Credit Hours)

Students will explore functional and sculptural techniques through handbuilding and wheel-throwing, as well as basic claybody, glaze and firing theory. Students will also develop a basic understanding of the historical and cultural aspects of ceramics. The class includes glaze chemistry, firing procedures, ceramic history and contemporary ceramics.

Prerequisites: Permission of instructor

ARTS 368 Internship (1-3 Credit Hours)

A structured work experience involving aspects of design or craft, filmmaking, video, museum or gallery work, either with or without remuneration. Criteria for evaluation will be determined by work supervisor and cooperating faculty advisor.

Prerequisites: Approval by the department chair is necessary prior to registration; additional support may be provided by the Monarch Internship and Co-Op Office in at least one semester prior to enrollment

ARTS 369 Practicum (1-3 Credit Hours)

A structured research experience, under the supervision of an art department faculty member. A paper evaluating/analyzing the research, a log of research progress, and satisfactory evaluation by the supervising faculty are required.

Prerequisites: approval by the department chair

ARTS 377 Extracurricular Studies (1-6 Credit Hours)

Extracurricular activities may be approved for credit based on objectives, criteria, and evaluative procedures as formally determined by the department and the student prior to the semester in which the activity is to take place. Such credit is subject to review by the provost.

Prerequisites: approval by the department and the dean, in accordance with the policy on granting credit for extracurricular activities

ARTS 378 Extracurricular Studies (1-6 Credit Hours)

Extracurricular activities may be approved for credit based on objectives, criteria, and evaluative procedures as formally determined by the department and the student prior to the semester in which the activity is to take place. Such credit is subject to review by the provost.

Prerequisites: approval by the department and the dean, in accordance with the policy on granting credit for extracurricular activities

ARTS 381 Weaving and Fibers: Intermediate (3 Credit Hours)

An overview of techniques related to pattern drafting, advanced loom and off-loom weaving, and fabric painting.

Prerequisites: permission of the instructor

ARTS 391 Intermediate Jewelry (3 Credit Hours)

This course will expand upon the fundamentals of design and metal fabrication techniques for jewelry. Working with precious and non-precious metals, students will learn traditional techniques including casting, stone setting and production processes. A series of structured assignments guide students as they transform their ideas into finished works. Solutions for projects are open to enable the student to explore their own aesthetic while mastering the outlined material. Lectures on historical, contemporary and cultural examples of jewelry inform and inspire students' work.

Prerequisites: ARTS 291 or permission of the instructor

ARTS 392 Blacksmithing (3 Credit Hours)

This course offers an introduction to the basic tools, materials and techniques used in forging, forming, hardening and tempering steel. Exploration of form and process in working metal.

Prerequisites: ARTS 291 or permission of the instructor

ARTS 394 Intermediate Metalsmithing (3 Credit Hours)

This course will expand upon the fundamentals of design and metal fabrication techniques for small objects. Working with precious and non-precious metals, students learn traditional techniques including chase and repousse, raising and forming. A series of structured assignments guide students as they transform their ideas into finished works. Solutions for projects are open to enable the student to explore their own aesthetic while mastering the outlined material. Lectures on historical, contemporary and cultural examples of metalsmithing inform and inspire students' work.

Prerequisites: ARTS 291 or permission of the instructor

ARTS 395 Topics in Studio Art (3 Credit Hours)

A study of selected topics designed for non majors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: appropriate survey or introductory course or permission of the instructor

ARTS 400 Senior Show (3 Credit Hours)

This is the capstone class for all students in the BFA program (except students in the graphic design concentration take ARTS 401). Focusing on the development and articulation of aesthetic vision and studio practice, students will identify key ideas and sources for their work. They will also clarify their methods and concepts to create a finished, exhibition quality project. The class also addresses professional installation, promotion, and documentation of finished work, culminating with an exhibition.

Prerequisites: Permission of the instructor to confirm students are in the final semester of major

ARTS 411 Photography 3 (3 Credit Hours)

The course focuses on the photographic series examining reportage and contemporary narrative. Students will work on developing a fully conceived photographic series on a theme developed through guided individual research. Reading and discussion will provide students a critical framework in which to place their photographic imagery.

Prerequisites: ARTS 211 and ARTS 311 or permission of instructor

ARTS 412/512 Photo Seminar 1 (3 Credit Hours)

The first of a two-semester sequence of concentrated individual work. Students will identify a topic and create a complete body of work culminating in the senior show, ARTS 400. Lectures, readings, discussion, critique, and field trips to develop the articulation of ideas and the clarification of purpose.

Prerequisites: ARTS 211, ARTS 311 and ARTS 411 or permission of the instructor

ARTS 413/513 Photo Seminar 2 (3 Credit Hours)

This is the second in a two-semester sequence of concentrated individual work culminating in the senior show. Through readings, discussion, critiques, field trips, and intense individual work, students will compile a body of work realizing their personal vision and articulate their ideas through the crafting of an artist statement.

Prerequisites: ARTS 211, ARTS 311, ARTS 411 and ARTS 412 or permission of the instructor

ARTS 421 Advanced Glass: Hot and Flame (3 Credit Hours)

This course is structured to provide instruction to glass forming, balanced with the history, criticism, and aesthetics of glass art. It is an advanced course in the techniques of glassblowing and flame working. Lectures, demonstrations, and critiques will encourage students to consider both the technical and conceptual manifestations of this material. In addition, the Chrysler Museum's extensive contemporary and historical glass collection and interaction with visiting and resident glass artists will be utilized. The course allows students to learn new techniques to advance to a higher level of art production.

Prerequisites: ARTS 203, ARTS 221 and ARTS 321

ARTS 431/531 Drawing Studio (3 Credit Hours)

Further concentration on conceptual content and drawing skills, development of individual body of work exploring preferred concepts, subject matter, techniques, and media. May be repeated for credit.

Prerequisites: ARTS 331

ARTS 432/532 Figure Drawing Anatomy (3 Credit Hours)

A study of visually important aspects of the structural, skeletal and muscular systems of the body. Anatomical study will be related to drawing from the live model.

Prerequisites: ARTS 331 or permission of the instructor

ARTS 433/533 Figure Drawing/ Composition (3 Credit Hours)

This course places the emphasis on advanced composition using the figure as the central theme. The figure's expressive potential, along with a study of historical responses to figure drawing, will be examined in depth.

Prerequisites: ARTS 432/ARTS 532

ARTS 441 Advanced Painting and Drawing (3 Credit Hours)

An intensive studio course that builds upon skills developed in ARTS 331 and ARTS 341. Students pursue various approaches to the development of pictorial space and investigate the connection between formal decision making, media use, and individual expression within their work.

Prerequisites: ARTS 341

ARTS 442/542 Painting and Drawing Studio (3 Credit Hours)

Students develop an individual body of work exploring preferred concepts, subject matter, techniques, and media in close consultation with faculty. Written proposal by students required at registration.

Prerequisites: ARTS 441 and ARTS 445

ARTS 445 Hybrid Approaches to Painting and Drawing (3 Credit Hours)

This course emphasizes hybrid approaches to contemporary drawing and painting including the integration of digital processes into studio practice and production. Students will be introduced to various applications and techniques regularly used in contemporary painting and drawing, including generating digital imagery, diorama construction and image compositing. Traditional and nontraditional media and subjects may be used to assist in the fulfillment of students' analytical and expressive intentions.

Prerequisites: ARTS 341 or by permission of the instructor

ARTS 450/550 Printmaking III (3 Credit Hours)

Students create a body of personal work based on their research and interests. Readings, discussion, and presentations situate students' practice within contemporary print discourses.

Prerequisites: ARTS 351 or ARTS 352 or permission of the instructor

ARTS 455/555 Letterpress Printmaking (3 Credit Hours)

A visual and literary investigation of language and wordplay using foundry and wood type and a Vandercook SP-20 proofing press. Projects include expressive printed impressions of personal poetry and song lyric, political rant, and broadsides for entertainment or proselytizing. A theme group project, such as a folio or a bound book, is usually assigned.

Prerequisites: ARTS 259 or permission of instructor

ARTS 456 2D Seminar (3 Credit Hours)

This course covers both theoretical and practical concerns within contemporary 2D art (painting, drawing, print. A combination of reading, writing, and critique develop and deepen the trajectory of students' creative practice.

Prerequisites: ARTS 450 or ARTS 441 or permission of the instructor

ARTS 461/561 Sculpture Studio (3 Credit Hours)

Experimental work reflecting individual initiative and attitude.

Prerequisites: ARTS 361 or ARTS 363, and permission of the instructor

ARTS 463/563 Advanced Ceramics (3 Credit Hours)

An advanced course in the science and art of ceramics. Students will engage in guided independent research, developing their own direction by investigating clay bodies, glazes, firing methods and contemporary ceramic art.

Prerequisites: ARTS 263 and ARTS 363

ARTS 469/569 Assemblage (3 Credit Hours)

Assemblage combines elements of various art and non-art media and materials. Lectures will be comprised of presentations about relevant artists, gallery and studio visits, and critiques. Studio time allows students to explore personal directions in the medium.

Prerequisites: junior standing or permission of the instructor

ARTS 472/572 Art Therapy (3 Credit Hours)

This class is designed to initiate students from both studio art and non-studio backgrounds to the study of art therapy. It examines the history of art therapy in the United States, introduces the Expressive Therapies Continuum (ETC), and explores the application of art therapy techniques and their underlying rationales.

Prerequisites: Instructor permission required

ARTS 473/573 The Book (3 Credit Hours)

The book as a work of art. Lecture will explore historical and technical aspects of book design and production. Studio work will be devoted to the production of a series of books involving page design, paper selection, printing and binding.

Prerequisites: ARTS 202, ARTS 279, and junior standing or permission of the instructor

ARTS 481/581 Weaving and Fibers: Advanced (3 Credit Hours)

Advanced work in pattern drafting, loom techniques, off-loom weaving and fabric painting.

Prerequisites: ARTS 381

ARTS 491/591 Advanced Jewelry and Metalsmithing (3 Credit Hours)

This course offers further exploration and concentration on jewelry and metalsmithing techniques. Through readings, discussions, self-directed and self-determined projects, students will explore new methods and content to develop an individual body of work. Additional emphasis will be placed on developing supplemental portfolio materials. May be repeated once for credit.

Prerequisites: ARTS 291 and either ARTS 391 or ARTS 394

ARTS 492 Wood Studio/Furniture Design (3 Credit Hours)

An exploration of concepts and techniques in wood sculpture and furniture design and fabrication.

Prerequisites: Junior standing

ARTS 493/593 Jewelry and Metalsmithing Studio (3 Credit Hours)

This course offers further exploration and concentration on jewelry and metalsmithing techniques. Through readings, discussions, self-directed and self-determined projects, students will explore new methods and content to develop an individual body of work. Additional emphasis will be placed on developing supplemental portfolio materials. May be repeated for credit once.

Prerequisites: ARTS 291 and either ARTS 391 or ARTS 393

ARTS 495/595 Topics in Studio Art (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on studio projects of mutual interest.

Prerequisites: permission of the instructor

ARTS 497/597 Tutorial Work in Special Studio Topics (3 Credit Hours)

Independent investigation of a subject to be selected under the advisement of the instructor. Conferences, papers, field trips, portfolios, or exhibitions as appropriate.

Prerequisites: senior standing and permission of the chief departmental advisor

ARTS 498 Tutorial Work in Special Studio Topics (3 Credit Hours)

Independent investigation of a subject to be selected under the advisement of the instructor. Conferences, papers, field trips, portfolios, or exhibitions as appropriate.

Prerequisites: senior standing and permission of the chief departmental advisor

ASIA - Asian Studies

ASIA 332 South Asia Since Independence (3 Credit Hours)

This is a comparative study of the main political, economic and social developments in the major countries of South Asia. Themes will include democratization, problems of economic development, the role of caste and religion, the causes of intrastate conflict and interstate conflict and the influence of global forces on the region.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

ASIA 336 The Emergence of New China (3 Credit Hours)

The history of China covering late Imperial China, the impact of Western imperialism, the Republican Period, and the establishment of the People's Republic.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

ASIA 337 Japan's Era of Transformation (3 Credit Hours)

The history of Japan since 1800. The decline of the Tokugawa Shogunate, modern national building in the Meiji period, domestic conflicts and war in the twentieth century, and the roots of Japan's economic prominence today.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

ASIA 338W Politics of East Asia (3 Credit Hours)

This course is designed for intermediate students who are interested in the theoretical and systematic study of world politics. The course first introduces students to several major theoretical approaches to the study of world politics and then applies these approaches to a number of major, contemporary issues--ranging from war and peace, conflict and cooperation, development and underdevelopment to global and national interests. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, six hours in human behavior, and junior standing or permission of the instructor

ASIA 353 Asian Religions (3 Credit Hours)

This course introduces students to several key religious traditions originating in Asia, such as: Hindu traditions in India; Confucianism, Daoism, and popular religion in China, Buddhism and Shinto in Japan; and Buddhist traditions of China, Tibet, and Mongolia. Students will read and analyze primary sources in English translation. By examining artifacts from literature, art, and poetry, students will also learn about cultural history. Throughout the course, we will be employing hermeneutical methods in the field of religions studies, such as methods of comparisons.

Prerequisites: Junior standing and three semester hours in philosophy, or permission of the instructor

ASIA 360 Asian Art (3 Credit Hours)

An introduction to the architecture, sculpture, calligraphy, pottery, ink, painting, miniature painting, and gardens of India, China, and Japan. Emphasis will be placed on the connections among the cultures: Buddhism and pilgrimage, the importance of the scholar painters, the role of trade routes and the emergence of native writing.

Prerequisites: A grade of C or higher in ENGL 110C; a grade of C or higher in ENGL 211C or ENGL 221C or ENGL 231C; ARTH 121A or ARTH 150 or ARTH 203 or ARTH 204 or ARTH 210 or ARTH 230 or permission of instructor

ASIA 395 Topics in Asian Studies (3 Credit Hours)

A study of selected topics designed for nonmajors or for elective credit within a major. These courses will appear in the course schedule and will be more fully described in information distributed to academic advisors.

Prerequisites: HIST 101H or permission of the instructor

ASIA 435 Chinese Politics (3 Credit Hours)

A study of origins of the Chinese revolution; development and functions of the Chinese Communist Party; government institutions; the defense establishment; evolution of foreign policy; and post-Mao political and economic reforms.

Prerequisites: POLS 100S or POLS 102S or permission of the instructor

ASIA 461W Asian Studies Capstone Seminar (3 Credit Hours)

As a required course for the Asian Studies major, the course helps students synthesize the knowledge they have learned from the undergraduate courses, write a capstone research paper and present the paper in class. This is a writing intensive course.

Prerequisites: HIST 101H, a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, and junior standing

ASIA 495/595 Topics in Asian Studies (3 Credit Hours)

This course is designed for small groups of qualified students to conduct advanced study of selected topics on Asian Studies, topics which may not be taught in regularly scheduled classes. The description of the course for each offering will appear in the course schedule booklet that is distributed to each advisor.

Prerequisites: Appropriate survey source or permission of the instructor

ASTP - Astrophysics

ASTP 103N Introductory Astronomy of the Solar System (4 Credit Hours)

A study of the physical principles and scientific investigation of objects in our solar system. Emphasis on how we acquire knowledge of celestial objects to develop models of our universe.

ASTP 104N Introductory Astronomy of Galaxies and Cosmology (4 Credit Hours)

Emphasizes the study of stars, star systems, cosmology and relativity. Emphasis on how we acquire knowledge of celestial objects to develop models of our universe.

ASTP 108 Intro Astronomy Solar Sys Lab (1 Credit Hour)

An introductory laboratory course in astronomy dealing with experiments about the laws of nature that apply to objects in our solar system. This course is intended for students with previous transfer credit for an Introductory Astronomy of the Solar System Lecture course.

Prerequisites: Written permission of the chief departmental advisor of the Physics Department

ASTP 109 Intro Astron Galaxy/Cosmo Lab (1 Credit Hour)

A laboratory course in astronomy dealing with experiments about the laws of nature that apply to galaxies and the cosmos as a whole. This course is intended for students with previous transfer credit for an Introductory Astronomy of Stars, Galaxies and the Cosmos Lecture course.

Prerequisites: Written permission of the chief departmental advisor of the Physics Department

ASTP 126N Honors: Introductory Astronomy of the Solar System (4 Credit Hours)

Open only to students in the Honors College. A special honors version of ASTP 103N.

ASTP 127N Honors: Introductory Astronomy of Galaxies and Cosmology (4 Credit Hours)

Open only to students in the Honors College. A special honors version of ASTP 104N.

ASTP 313 Elements of Astrophysics (3 Credit Hours)

A one-semester course covering the important topics of modern astrophysics. The elementary physical basis of stellar structure and evolution is derived from first principles. Theoretical and observational details of white dwarfs, neutron stars, pulsars, and black holes are developed. Elements of Big Bang cosmology are also presented.

Prerequisites: PHYS 232N or PHYS 227N or PHYS 262N

ASTP 406/506 Observational Astronomy (3 Credit Hours)

Observational techniques in astronomy with emphasis on constellation identification, celestial movements, and telescopic observation. Individualized night observations are required.

Prerequisites: Junior standing

ASTP 408/508 Astronomy for Teachers (3 Credit Hours)

A course in astronomy dealing with stars and stellar systems. Topics will include observational astronomy, the electromagnetic spectrum, relativity, stellar and galactic structures, cosmology, and the search for extraterrestrial intelligence.

Prerequisites: Junior Standing

ASTP 414 Relativity and Cosmology (3 Credit Hours)

Introduction to special and general relativity and cosmology. The course covers the current understanding of the structure and evolution of the Universe. The most important unsolved cosmological problems will be discussed, as well as current efforts/theories that may lead to the solution. Special and general relativity, Einstein's field equations, Friedmann-Lemaitre-Robertson-Walker metric, Friedmann's equations, Schwarzschild solution and black holes, Big Bang, cosmic microwave background radiation, dark matter and dark energy are covered.

Prerequisites: PHYS 232N or PHYS 227N or PHYS 262N and MATH 312 or MATH 307

ASTP 495/595 Special Topics in Astrophysics (3 Credit Hours)

In-depth study of a selected topic in astrophysics at the advanced undergraduate level. May include a laboratory or computational component.

Prerequisites: Permission of the instructor

BDA - Big Data Analytics

BDA 200T Elements of Data Science (3 Credit Hours)

This course offers a non-technical introduction to the emerging and interdisciplinary area of data science. Students will be introduced to the development, fundamental tools, and the impact of data science in a wide range of disciplines such as business, the sciences and engineering. Fundamental data visualization techniques and basic concepts of machine learning will be applied through real-life data science projects. Moreover, students will explore the general framework for ethical thinking and practicing data science, the current challenges, the benefits, the potential harms and risks posed by developing data science models and technology.

Prerequisites: MATH 102M or MATH 103M

BDA 401/501 Programming Languages for Data Science (3 Credit Hours)

An introductory course on programming languages and tools which are relevant to data analytics. Each language or tool is introduced as a separate module and incorporates applications in mathematics and statistics. Examples of included programming languages and tools are MATLAB, Python, R and SAS. Additional languages and tools may be covered based on current trends in data analytics. Students will complete hands-on programming assignments throughout the course.

Prerequisites: MATH 312, MATH 316 and STAT 330 or STAT 331

BDA 411/511 Introduction to Machine Learning (3 Credit Hours)

An introductory course on machine learning. Machine Learning is the science of discovering pattern and structure and making predictions in data sets. It lies at the interface of mathematics, statistics and computer science. The course gives an elementary summary of modern machine learning tools. Topics include regression, classification, regularization, resampling methods, and unsupervised learning. Students enrolled are expected to have some ability to write computer programs, some knowledge of probability, statistics and linear algebra.

Prerequisites: MATH 312, MATH 316, and STAT 330 or STAT 331

BDA 431/531 Modern Statistical Methods for Big Data Analytics (3 Credit Hours)

The statistical perspective of data mining is emphasized for majority of the course. Both applied aspects (programming, problem solving, and data analysis) and theoretical concepts (learning, understanding, and evaluating methodologies) of data mining will be covered. Topics include Regularization and Kernel Smoothing Methods, Tree-based Methods, Neural Networks and optional topics such as deep learning.

Prerequisites: BDA 411 and STAT 405

BDA 432/532 Introduction to Optimization in Data Science (3 Credit Hours)

Topics considered include the solution of non-smooth optimization problems arising in data science, including unconstrained and constrained optimization problems, Lagrange multiplier methods, inequality constraints, Kuhn-Tucker conditions, and applications. Also considered are linear and nonlinear inverse problems, regularization of ill-posed problem including singular value decomposition, and Tikhonov regularization methods and sparse regularization methods, inverse eigenvalue problems and applications such as compressed sensing, image reconstruction and machine learning.

Prerequisites: MATH 307, MATH 312 and MATH 316

BDA 450 Senior Project in Big Data Analytics I (3 Credit Hours)

This course introduces students to practical applications of big data analytics. Lecture topics include an overview of the various topics in business, engineering, and government currently using big data analytics. Students will choose a project involving a real world application to explore techniques learned during other course work. Course involves written and oral presentations for students to improve communication and teamwork skills.

Prerequisites: A grade of C or better in STAT 331 and STAT 405

Pre- or corequisite: BDA 431

BDA 451 Senior Project in Big Data Analytics II (3 Credit Hours)

This course allows the student to pursue an in-depth exploration of a project initiated in BDA 450. The course involves written and oral presentations for students to improve communication and teamwork skills.

Prerequisites: BDA 450 and permission of instructor

BIOE - Bioelectrics

BIOE 454/554 Introduction to Bioelectrics (3 Credit Hours)

Covers the electrical properties of cells and tissues as well as the use of electrical and magnetic signals and stimuli in the diagnosis and treatment of disease. Typical topics to be covered include basic cell physiology, endogenous electric fields in the body, electrocardiography, cardiac pacing, defibrillation, electrotherapy, electroporation, and electrotherapy in wound healing. In addition, ultrashort electrical pulses for intracellular manipulation and the application of plasmas to biological systems will be covered.

Prerequisites: PHYS 111N or higher and MATH 200 or higher

BIOL - Biological Sciences

BIOL 105N Biology for Nonscience Majors I (4 Credit Hours)

An introductory, non-sequential course for non-biology majors with laboratory. This course concentrates on major biological concepts concerning molecular biology, cellular biology, cellular reproduction, energetics, and organismal biology. Laboratory activities enhance understanding of core biological topics. Cannot be substituted for BIOL 121N and BIOL 122N or for BIOL 123N and BIOL 124N.

BIOL 106N Biology for Nonscience Majors II (4 Credit Hours)

An introductory, non-sequential course for nonbiology majors with laboratory. This course concentrates on major biological concepts involving classical and molecular genetics, biotechnology, evolution, and ecology. Laboratory activities enhance understanding of core biological topics. Cannot be substituted for BIOL 121N and BIOL 122N or for BIOL 123N and BIOL 124N.

BIOL 110N Environmental Science for Non-Majors (3 Credit Hours)

An introductory, non-sequential course for nonbiology majors focusing on scientific inquiry and the fundamental biological underpinnings of environmental science. The course concentrates on ecology, evolution, the nature of and threats to biodiversity, and conservation solutions. Cannot be substituted for BIOL 121N or BIOL 123N. BIOL 110N + BIOL 111N satisfy four credits of the University's Nature of Science general education requirement.

Pre- or corequisite: BIOL 111N

BIOL 111N Environmental Science Lab for Non-Majors (1 Credit Hour)

Laboratory activities and scientific experiments that enhance understanding of environmental science through a hands-on approach that cannot be provided in the lecture classroom setting. BIOL 110N + BIOL 111N satisfy four credits of the University's Nature of Science general education requirement. Cannot be substituted for BIOL 122N or BIOL 124N.

Pre- or corequisite: BIOL 110N

BIOL 112N Environment and Humanity (3 Credit Hours)

An introductory, non-sequential course for nonbiology majors focusing on the most serious environmental problems our society is facing today and how these problems can be solved. The course concentrates on the science behind natural resources and resource management, toxicology, environmental policies and ethics, and sustainable living. Cannot be substituted for BIOL 121N or BIOL 123N. BIOL 112N and BIOL 113N satisfy four credits of the University's Nature of Science general education requirement.

Pre- or corequisite: BIOL 113N

BIOL 113N Environment and Humanity Laboratory (1 Credit Hour)

Laboratory activities and experiments that enhance understanding of the scientific method and environmental sciences through a hands-on approach that cannot be provided in the lecture classroom setting. This course cannot be substituted for BIOL 122N or BIOL 124N. BIOL 112N + BIOL 113N satisfy four credits of the University's Nature of Science general education requirement.

Pre- or corequisite: BIOL 112N

BIOL 117N Introduction to Human Biology (3 Credit Hours)

An introductory lecture course for non-majors focusing on scientific inquiry and the structure and function of the human body with units on diet, nutrition, exercise, infectious disease, and cancer. Cannot be substituted for BIOL 121N or BIOL 123N.

Pre- or corequisite: BIOL 118N

BIOL 118N Introduction to Human Biology Lab (1 Credit Hour)

An introductory lab course for non-majors focusing on scientific inquiry and the structure and function of the human body with units on diet, nutrition, exercise, infectious disease, and cancer. Cannot be substituted for BIOL 122N or BIOL 124N.

Pre- or corequisite: BIOL 117N

BIOL 121N General Biology I (3 Credit Hours)

An introduction to the process of science, biological molecules, cell biology, metabolism, molecular biology, and Mendelian genetics. Students required to take BIOL 121N cannot earn credit for BIOL 105N, BIOL 106N, BIOL 110N, BIOL 112N, or BIOL 117N.

Prerequisites: Writing Success Placement Tool (WSPT) Score of 3 or ENGL 110C

Pre- or corequisite: BIOL 122N and MATH 102M or higher

BIOL 122N General Biology I Lab (1 Credit Hour)

A lab course emphasizing the process of science, biological molecules, cell biology, metabolism, molecular biology, and Mendelian genetics. Students required to take BIOL 122N cannot earn credit for BIOL 111N, BIOL 113N, or BIOL 118N.

Prerequisites: Placement into ENGL 110C

Pre- or corequisite: BIOL 121N and MATH 102M or higher

BIOL 123N General Biology II (3 Credit Hours)

An introduction to the process of science, evolutionary biology, ecology, and the basic biology of viruses, prokaryotes, and eukaryotes. Students required to take BIOL 123N cannot earn credit for BIOL 105N, BIOL 106N, BIOL 110N, BIOL 112N, or BIOL 117N.

Prerequisites: Placement into ENGL 110C and qualifying Math SAT/ACT score, or qualifying score on the Math placement test, or completion of MATH 102M or higher, and BIOL 121N passed with a grade of C (2.0) or higher

Pre- or corequisite: BIOL 124N

BIOL 124N General Biology II Lab (1 Credit Hour)

A lab course emphasizing the process of science, evolutionary biology, ecology, and the basic biology of viruses, prokaryotes, and eukaryotes. Students required to take BIOL 124N cannot earn credit for BIOL 111N, BIOL 113N, or BIOL 118N.

Prerequisites: Placement into ENGL 110C and qualifying Math SAT/ACT score, or qualifying score on the Math placement test, or completion of MATH 102M or higher, and BIOL 121N

Pre- or corequisite: BIOL 123N

BIOL 136N Honors General Biology I (3 Credit Hours)

This course is available only to students in the Honors College. An introduction to the process of science, biological molecules, cell biology, metabolism, molecular biology, and Mendelian genetics. Students required to take BIOL 136N cannot earn credit for BIOL 105N, BIOL 106N, BIOL 110N, BIOL 112N, or BIOL 117N.

Prerequisites: Placement into ENGL 110C and qualifying Math SAT/ACT score, or qualifying score on the Math placement test, and enrollment in the Honors College

Pre- or corequisite: BIOL 137N and MATH 102M or higher

BIOL 137N Honors General Biology I Lab (1 Credit Hour)

This lab course is available only to students in the Honors College. This lab course emphasizes the process of science, biological molecules, cell biology, metabolism, molecular biology, and Mendelian genetics. Students required to take BIOL 137N cannot earn credit for BIOL 111N, BIOL 113N, or BIOL 118N.

Prerequisites: Placement into ENGL 110C and qualifying Math SAT/ACT score, or qualifying score on the Math placement test, and enrollment in the Honors College

Pre- or corequisite: BIOL 136N and MATH 102M or higher

BIOL 138N Honors General Biology II (3 Credit Hours)

This course is available only to students in the Honors College. An introduction to the process of science, evolutionary biology, ecology, and the basic biology of viruses, prokaryotes, and eukaryotes. Students required to take BIOL 138N cannot earn credit for BIOL 105N, BIOL 106N, BIOL 110N, BIOL 112N, or BIOL 117N.

Prerequisites: Placement into ENGL 110C and qualifying Math SAT/ACT score, or qualifying score on the Math placement test, or completion of MATH 102M or higher, enrollment in the Honors College, and BIOL 136N

Pre- or corequisite: BIOL 139N

BIOL 139N Honors General Biology II Lab (1 Credit Hour)

This lab course is available only to students in the Honors College. This lab course emphasizes the process of science, evolutionary biology, ecology, and the basic biology of viruses, prokaryotes, and eukaryotes. Students required to take BIOL 139N cannot earn credit for BIOL 111N, BIOL 113N, or BIOL 118N.

Prerequisites: Placement into ENGL 110C and qualifying Math SAT/ACT score, or qualifying score on the Math placement test, or completion of MATH 102M or higher, enrollment in the Honors College, and BIOL 136N

Pre- or corequisite: BIOL 138N

BIOL 150 Introductory Microbiology (3 Credit Hours)

A course designed to acquaint the student with the elementary principles of bacteriology and other disease causing microorganisms. Emphasis is placed on microorganisms as etiological agents in disease, on practical methods of disinfection, and on the factors of infection and immunity.

Pre- or corequisite: BIOL 151

BIOL 151 Introductory Microbiology Laboratory (1 Credit Hour)

A course designed to acquaint the student with the elementary principles of bacteriology and other disease causing microorganisms. Emphasis is placed on microorganisms as etiological agents in disease, on practical methods of disinfection, and on the factors of infection and immunity.

Pre- or corequisite: BIOL 150

BIOL 195 Biology Lab Topics (1-3 Credit Hours)

Laboratory topics.

BIOL 196 Topics (1-3 Credit Hours)

Topics in Biology.

BIOL 197 Undergraduate Research Experience in Biology (0 Credit Hours)

Student participation in a supervised, undergraduate research experience for which credit will not apply to the degree. Experience must be related to the student's major, minor or career area of interest.

Prerequisites: permission of the instructor

BIOL 240 Fundamentals of Anatomy and Physiology I (4 Credit Hours)

This is the first of a two-part course that investigates the structure and function of the human body. Emphasis is on the basic organization of the body, biochemical composition, cellular structure, function, tissues and organs of the following systems: integumentary, skeletal, muscular, nervous, sensory and endocrine. In lab, students will study the interrelationship between structure and function of the human body using models, histological preparations, and human and feline anatomical specimens. Students with credit for BIOL 240 cannot receive credit for BIOL 250.

BIOL 241 Fundamentals of Anatomy and Physiology II (4 Credit Hours)

The second of a two-part course that investigates the structure and function of the human body. Emphasis is on the basic organization of the body, biochemical composition, cellular structure, function, tissues and organs of the following systems: cardiovascular, lymphatic, immune, respiratory, urinary, digestive, reproductive and human development. In lab, students will study the interrelationship between structure and function of the human body using models, histological preparations, and human and feline anatomical specimens. Students with credit for BIOL 241 cannot receive credit for BIOL 251.

Prerequisites: BIOL 240

BIOL 250 Human Anatomy and Physiology I (4 Credit Hours)

This course emphasizes the gross anatomical relationships and the molecular, cellular, physiological, and metabolic process of the integument, musculoskeletal, neural, and immune systems. Students with credit for BIOL 250 cannot receive credit for BIOL 240.

Prerequisites: BIOL 121N and BIOL 122N or BIOL 136N and BIOL 137N must be passed with a grade of C or higher

BIOL 251 Human Anatomy and Physiology II (4 Credit Hours)

This course emphasizes the physiology and pathophysiology of the cardiac, pulmonary, renal, endocrine, and reproductive systems. Only BIOL 251 (4 credits) may count toward upper-division elective requirements for the Biology major. Students with credit for BIOL 251 cannot receive credit for BIOL 241.

Prerequisites: BIOL 250 or permission of the instructor

BIOL 291 Ecology (3 Credit Hours)

An introduction to the basic concepts of ecology for both biology majors and nonmajors. The concepts are introduced with respect to terrestrial and aquatic environments.

Prerequisites: BIOL 123N and BIOL 124N or BIOL 138N and BIOL 139N must be passed with a grade of C or higher

BIOL 292 Evolution (3 Credit Hours)

An introduction to the basic concepts of evolution for both biology majors and nonmajors. The concepts are introduced with respect to terrestrial and aquatic environments.

Prerequisites: BIOL 123N and BIOL 124N or BIOL 138N and BIOL 139N must be passed with a grade of C or higher

BIOL 293 Cell Biology (3 Credit Hours)

A comprehensive course in the structural and functional features of cells, including prokaryotic and eukaryotic cells. The course will also examine biomacromolecules, techniques in cell and molecular biology, and current frontiers in cell biology research.

Prerequisites: BIOL 123N and BIOL 124N or BIOL 138N and BIOL 139N must be passed with a grade of C or higher

BIOL 294 Genetics (3 Credit Hours)

An introduction to the principles of biological inheritance and variation and the molecular basis of gene structure and function.

Prerequisites: BIOL 123N and BIOL 124N or BIOL 138N and BIOL 139N must be passed with a grade of C or higher

BIOL 300 Fundamental Biomolecules (3 Credit Hours)

This course provides a detailed understanding of the four major classes of organic biological molecules as well as inorganic biological molecules (vitamins and trace minerals). The course focuses on how these biomolecules relate to everyday life for a diversity of organisms. This course will additionally emphasize current research and topics in the media as they pertain to biomolecules. This course counts as an elective for BIOL majors; students with premedical, dental or veterinary emphasis should consider if this course will satisfy requirements for medical, dental, or veterinary schools.

Prerequisites: BIOL 123N or BIOL 138N or BIOL 251 with a C or better and CHEM 107N or CHEM 123N or CHEM 173T with a C or better

BIOL 301 Practice of Science-Biology (4 Credit Hours)

This course is designed to provide a genuine research experience for undergraduate students at the sophomore/junior level. Students will pursue a novel research question and use modern laboratory techniques to examine this question and test hypotheses.

Prerequisites: BIOL 121N, BIOL 122N, BIOL 123N, and BIOL 124N

Pre- or corequisite: BIOL 291 or BIOL 292 or BIOL 293 or BIOL 294

BIOL 302 Introduction to immunology (3 Credit Hours)

A review of the phenomena of immune resistance, the cells and tissues involved in immune responses and the consequences of immunization.

Prerequisites: BIOL 293

BIOL 304 Animal Nutrition (3 Credit Hours)

The course incorporates the fields of animal physiology, biochemistry, ecology and behavior to provide a comprehensive framework for energy acquisition, processing, and use in animals. The course content integrates cellular and molecular mechanisms of digestion and absorption, with tissue-specific and whole-animal metabolism, to the environmental influences on food resource availability and the diverse adaptations of animals to specific dietary and energetic constraints. The course primarily focuses on vertebrate animals.

Prerequisites: BIOL 123N or BIOL 138N; and BIOL 124N or BIOL 139N

Pre- or corequisite: BIOL 305

BIOL 305 Animal Nutrition Laboratory (2 Credit Hours)

This course in comparative animal nutrition and metabolism explores how diverse animals accomplish the universal task of acquiring food energy from their environments, processing and assimilating these resources, and use food energy in metabolism to support vital functions (e.g. growth, repair, reproduction).

Prerequisites: BIOL 123N or BIOL 138N; and BIOL 124N or BIOL 139N

Pre- or corequisite: BIOL 304

BIOL 306 Human Genetics (3 Credit Hours)

Human genetics applies the principles of genetics to understanding human disease and evolution. It covers classical genetics, molecular genetics and population genetics, meeting the undergraduate genetics requirement for biology and biochemistry majors.

Prerequisites: BIOL 121N, BIOL 122N, BIOL 123N, and BIOL 124N or the equivalent with a grade of C (2.0) or better

Pre- or corequisite: CHEM 441

BIOL 307 Invertebrate Zoology (5 Credit Hours)

An examination of the invertebrate phyla with emphasis on classification, morphology, phylogeny, and general biology.

Prerequisites: BIOL 292 must be passed with a grade of C or higher

BIOL 308 Botany (4 Credit Hours)

A general introduction to the structure, function, ecology, and diversity of plants.

Prerequisites: BIOL 291 and BIOL 292 must be passed with a grade of C or higher

BIOL 309 Foundations of Pathophysiology (4 Credit Hours)

This course is designed to teach the fundamentals of abnormal functions essential to understanding diseases, disease processes, and production of signs and symptoms. Chemical, biological, and biochemical alterations in physiology of all major organ systems will be considered.

Prerequisites: BIOL 240/BIOL 241 OR BIOL 250/BIOL 251

BIOL 310 Field Invertebrate Zoology (5 Credit Hours)

An examination of the invertebrate phyla with emphasis on classification, morphology, phylogeny, and general biology. This course will be taught as a full, immersive, field course in the Florida Keys.

Prerequisites: BIOL 292 must be passed with a grade of C or higher

BIOL 311 Global Change Biology (3 Credit Hours)

This course will emphasize the application of evolutionary and ecological principles such as species geographic range shifts, changes in phenology, acclimation, adaptation, and extinction in response to global environmental changes.

Prerequisites: BIOL 291 and BIOL 292 must be passed with a grade of "C" or higher

BIOL 313 Introduction to Neuroanatomy (4 Credit Hours)

This course is designed to give students a comprehensive understanding of the structure and function of the human nervous system, with a major focus on neuroanatomy. The basic principles of cellular neuroscience, neurophysiology, as well as, the sensory and motor pathways will be discussed in detail. Clinically relevant applications will be discussed when relevant. The laboratory component of this course will use cadavers and human tissue to study head and neck structures.

Prerequisites: BIOL 241 or BIOL 251 and BIOL 293 must be passed with a C (2.0) or better

BIOL 314 Developmental Biology (5 Credit Hours)

An analysis of development in animals. Lectures will explore experimental approaches to the study of gametogenesis, fertilization, cleavage and morphogenesis. Laboratories will emphasize the morphological features of the developing vertebrate embryo.

Prerequisites: BIOL 240 or BIOL 250 and BIOL 241 or BIOL 251 must be passed with a grade of C or higher

Pre- or corequisite: CHEM 211

BIOL 316 General Microbiology (3 Credit Hours)

This lecture course is a general survey of the nature and diversity of microorganisms, especially bacteria but including viruses and fungi, the roles and functions of microorganisms and basic microbiological research.

Prerequisites: BIOL 293 and BIOL 294 must be passed with a grade of C or higher

Pre- or corequisite: BIOL 317 or BIOL 318

BIOL 317 General Microbiology Laboratory (2 Credit Hours)

Laboratory course emphasizing basic techniques in microbiology. Students with credit for BIOL 317 cannot receive credit for BIOL 318.

Prerequisites: BIOL 293 and BIOL 294 must be passed with a grade of C or higher

Pre- or corequisite: BIOL 316

BIOL 318 Online General Microbiology Laboratory (2 Credit Hours)

Online laboratory course emphasizing basic techniques in microbiology. Students who take BIOL 318 cannot earn credit for BIOL 317.

Prerequisites: BIOL 293 and BIOL 294 with a grade of C or higher

Pre- or corequisite: BIOL 316

BIOL 322 Ethnobotany (3 Credit Hours)

A survey of plants used for food, fiber, medicine, dyes, perfumes, oils, and waxes. The role of plants in folklore and religion is included. A student research project with a written paper and presentation is required.

Prerequisites: BIOL 292 AND BIOL 308 must be passed with a grade of C or higher

BIOL 331 Marine Biology (3 Credit Hours)

A survey of the variety, ecology and adaptations of marine organisms. The course is designed to broadly introduce students to life in the oceans and the many special features of marine species that have evolved in the earth's oldest and most extensive ecosystem.

Prerequisites: BIOL 291 must be passed with a grade of C (2.0) or higher

BIOL 336 Vertebrate Zoology (4 Credit Hours)

This course will emphasize the organisms classified as vertebrates - fish, amphibians, reptiles, birds, and mammals - in addition to their evolutionary relatives. Detailed discussions of the changes that accompany this diversification of life will include topics in evolution, comparative anatomy, geology, and taxonomy. The lab will be a survey of specimens representing the major groups discussed in lecture.

Prerequisites: BIOL 291 and BIOL 292 must be passed with a grade of "C" or higher

BIOL 340 Field Botany (4 Credit Hours)

A survey of plants and plant communities of the Mid-Atlantic Coastal Plain. Skills in plant and mushroom identification, specimen preparation, and research databases are emphasized. Most classes are field trips.

Prerequisites: BIOL 291 must be passed with a grade of C or higher

BIOL 346 Plant Geography (3 Credit Hours)

The distribution and characteristics of major plant community types in North America and practices used in the study of biogeography are discussed.

Prerequisites: BIOL 123N and BIOL 124N must be passed with a grade of C or higher

BIOL 350 Phage Discovery and Genomics I (4 Credit Hours)

This course is the first semester of a two-semester laboratory and scientific writing course designed to provide a unique undergraduate research experience. It focuses on the discovery of viruses (also known as bacteriophage or phage) that infect bacteria with an emphasis on laboratory techniques. Students will collect phage from environmental samples and learn the laboratory techniques required for the isolation, purification and propagation of viruses. Students will further characterize phage based on microscopy, molecular microbiology techniques, and nucleic acid sequencing. This course emphasizes independent research and additional time outside of the laboratory will be required for sample collection and analysis. This course also is designed to complement the MonarchTeach curriculum.

Prerequisites: BIOL 294

BIOL 351 Phage Discovery and Genomics II (3 Credit Hours)

This is the second course of a two semester laboratory and scientific writing sequence that is designed to provide a unique research experience for undergraduate students. The second semester course is a continuation of the research on the phage project that was started in Phage Discovery and Genomics I (BIOL 350). The students will analyze the newly sequenced bacteriophage genome using bioinformatics tools with an emphasis on Genomics. The bioinformatics will be completed using computer software, mathematical modeling and presented in formal scientific laboratory reports and formal presentations. Upon successful completion of the year-long course, some students will be invited to participate in the SEA-PHAGE program coordinated by the Howard Hughes Medical Institute. The course is designed with an emphasis on independent research that could lead to a scientific publication.

Prerequisites: BIOL 350 and BIOL 294 must be passed with a grade of "C" or higher

BIOL 355 Stem Cell Biology (3 Credit Hours)

Tissue homeostasis requires the birth of new cells, typically derived from stem cells, as well as the removal of cells that are not needed or have become damaged. This course will focus on understanding the mechanisms by which new cells are generated and old or diseased cells are removed. The pathological consequences of failures in one or both of these key processes will be explored as well. Applications of stem cells to regenerative medicine will be considered in detail.

Prerequisites: A grade of "C" or higher in BIOL 293

BIOL 367 Cooperative Education (1-3 Credit Hours)

Student participation for credit in a paid work environment based on the academic relevance of the work experience as determined by the department and the Cooperative Education program, prior to the semester in which the work experience is to take place. Unstructured course. Students must identify a full-time biology faculty member with the expertise to determine if the cooperative education experience is appropriate for a biology curriculum, approve the learning contract, review the submitted assignments (student report and supervisor's evaluation) and assign a P/F grade.

Prerequisites: Approval by the department chair required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

BIOL 368 Internship (1-3 Credit Hours)

Supervised participation in non-research professional setting. Requires a minimum of 3 hours per week or equivalent for 1 credit, completion of work report and other documents relevant to the work experience, and supervisor evaluation. Unstructured course. Students must identify a full-time biology faculty member with the expertise to determine if the internship is appropriate for a biology curriculum, approve the learning contract, review the submitted assignments (student report and supervisor's evaluation) and assign a P/F grade.

Prerequisites: BIOL 123N and BIOL 124N must be passed with a grade of C (2.0) or higher, junior standing, and the approval of a full-time biology faculty member

BIOL 369 Practicum (1-3 Credit Hours)

A supervised experience in a research, teaching, or a work/field setting and culminating in the preparation of a written document relevant to the practicum experience. Unstructured course. Students must identify a full-time biology faculty member with the expertise to determine if the practicum is appropriate for a biology curriculum, approve the learning contract, review the submitted assignments (student report and supervisor's evaluation) and assign a P/F grade.

Prerequisites: BIOL 123N and BIOL 124N must be passed with a grade of C (2.0) or higher, acceptance as a declared major, junior class status, and approval by the sponsoring full-time biology faculty member and the practicum coordinator

BIOL 395 Topics (1-3 Credit Hours)

A structured specialty course designed to meet the needs of students in biology. Students are expected to perform at the level of other junior level classes.

Prerequisites: BIOL 123N and BIOL 124N must be passed with a grade of C or higher

BIOL 396 Topics in Biological Sciences (4-5 Credit Hours)

A structured specialty course for students at the junior level. Courses may include lecture and laboratory components.

Prerequisites: BIOL 123N and BIOL 124N with grades of C or better

BIOL 400/500 Plant Systematics (4 Credit Hours)

An evolutionary survey of vascular plant families and the principles and methodologies that define them; lab emphasis is placed on recognition and skills of identification. A lab and field intensive hands-on course.

Prerequisites: BIOL 292 and BIOL 308 with a C or better

BIOL 401W/501 Entomology (4 Credit Hours)

A comprehensive survey of the insects, including taxonomy, morphology, physiology, reproductive and developmental biology, and ecology. Research techniques in entomology will be learned through both field and laboratory work. Writing skills will be learned through written summaries, essay exams, laboratory reports and research proposals. This is a writing intensive course.

Prerequisites: BIOL 291 and BIOL 292 must be passed with a grade of C (2.0) or higher

BIOL 402/502 Scientific Diving Methods for Marine Research (4 Credit Hours)

This lecture/field experience course will train students in the common techniques used by marine scientists who employ scuba for their research. It satisfies the requirements for an American Academy of Underwater Scientist certification and covers other topics such as: use of underwater research equipment and marine resource surveys. A multi-day scuba trip is required.

Prerequisites: BIOL 123N and BIOL 124N with grades of C or better, Open Water Scuba certification or equivalent, and ODU Dive Physical Form signed/completed by a physician

BIOL 403/503 Medical Microbiology (3 Credit Hours)

This course integrates the disciplines of microbiology, immunology, and biochemistry with the pathophysiology of infections and the appropriate pharmacology in a problem-based learning setting. Students will learn the fundamental concepts and terminologies of infectious diseases. The material will be case studies in small group tutorials and emphasize independent learning.

Prerequisites: BIOL 240 or BIOL 250, BIOL 316 and BIOL 317 or BIOL 318, and CHEM 441 must be passed with a grade of C or higher or instructor approval

BIOL 404/504 Conservation Biology and Sustainable Development (5 Credit Hours)

The application of fundamental biological principles to the preservation of biodiversity, including the role of ecological and evolutionary theory to the preservation of biotas on a regional and global basis. Lectures will cover modern approaches to conservation biology, including conservation ethics and management issues. Laboratories will include discussion of case studies, introduction to software applicable to conservation biology, presentations by regional conservation practitioners, and visits to relevant field sites.

Prerequisites: BIOL 291 must be passed with a grade of C or higher and junior standing or permission of instructor

BIOL 405W Biology Seminar (3 Credit Hours)

This course offers a capstone experience in scientific writing, faculty-mentored library research, the review and synthesis of material from the primary technical literature, and oral presentation. Students will develop a deeper understanding of the purposes and types of scientific writing, the structure and interpretation of technical papers, and the oral and written communication skills appropriate to the discipline. This is a writing intensive course.

Prerequisites: BIOL 293, BIOL 294 and two 300- or 400-level elective courses, a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, and CS 120G or CS 121G or CS 126G or HLTH 120G or IT 150G or STEM 251G

BIOL 406 Mammalogy (4 Credit Hours)

This lecture and laboratory course examines the biology of mammals in depth. Course topics include the evolution of mammalian diversity, mammalian systematics, the behavior and social systems of mammals, mammalian biogeography and ecology, anatomical and physiological specializations in mammals, domestication of mammals, conservation of mammals, and human evolution. The laboratory portion of the course will focus on the various taxonomic groups within the Class: Mammalia through the study of museum material, pictures, video, and primary literature. In addition, students will learn how to identify specific mammal species found in the state of Virginia. Laboratory activities will also include field activities and one required weekend day trip.

Prerequisites: BIOL 291 and BIOL 292

BIOL 407/507 The Pharmacology and Neurobiology of How Recreational Drugs Work (3 Credit Hours)

This course in drug use and abuse is designed to distinguish between drug use and drug abuse as well as provide pharmacological knowledge of how recreational drugs work. Students will acquire knowledge regarding the abuse of prescription drugs, depressants, stimulants, hallucinogens, marijuana and inhalants. This information will be used to analyze pathophysiological conditions that can occur as a result of drug use and abuse.

Prerequisites: BIOL 293 or equivalent

Pre- or corequisite: BIOL 408 recommended

BIOL 408/508 Introduction to Pharmacology (3 Credit Hours)

This is a general introductory course in pharmacology dealing with chemistry, general properties and pharmacological effects on various physiological systems, therapeutic usefulness and toxicities of drugs. The course is designed to prepare upper-level undergraduate and graduate students for more advanced courses in pharmacology.

Prerequisites: course background in cell biology and/or human physiology

BIOL 411/511 Zymology: Fermentation Science (4 Credit Hours)

This is an introductory course in the theory and practice of zymology (fermentation). Edible and potable products of fermentation (beer, wine, mead, yogurt, cheese) have been known since antiquity and play an important role in today's society. The science of fermentation touches on many biological disciplines, such as microbiology and biochemistry, and the study of yeasts has provided considerable foundation to the fields of cell biology and molecular biology. In this course, we will cover fundamentals of fermentation and its practical application to production of beer, one of the oldest beverages produced by humans.

Prerequisites: BIOL 293

BIOL 412/512 Plant Physiology (4 Credit Hours)

Discover the incredible secrets behind what makes our green friends tick. This course includes a traditional lecture covering the physiological and chemical processes occurring in plants. A laboratory, greenhouse, and/or field-oriented lab will provide hands-on opportunities to understand plant stress responses, nutrient use, cell metabolism-respiration, photosynthesis, hormones, and processes driving growth patterns.

Prerequisites: BIOL 292 OR BIOL 308 must be passed with a grade of C or higher

Pre- or corequisite: BIOL 293 and CHEM 211

BIOL 415W/515 Marine Ecology (5 Credit Hours)

A lecture and laboratory course designed to introduce students to important ecological processes operating in coastal marine environments; this is a writing-intensive course. The course covers synthetic topics as well as the ecology of specific marine habitats. The laboratory is designed to provide students with experience in marine research and the organisms and ecological conditions common in various marine habitats visited by the class.

Prerequisites: BIOL 291 and BIOL 331 and ENGL 211C or ENGL 221C or ENGL 231C must be passed with a grade of "C" or higher; instructor approval required

BIOL 416/516 Clinical Immunology (3 Credit Hours)

A description of common immunological problems seen in the clinic.

Prerequisites: BIOL 302

BIOL 419/519 Wetland Plants (4 Credit Hours)

An exploration of the ecology of inland and coastal wetlands and their plants. The course emphasizes wetland and aquatic plant identification, field and laboratory methods, and core concepts important to wetland plants and their ecology. Linkages to wetland delineation and wetland adjacent systems will be made. Weekly field-based laboratories are expected to local wetlands focusing on hands on opportunities and research methods.

Prerequisites: BIOL 291 OR BIOL 308 must be passed with a grade of 'C' or higher; prerequisite waivers may be requested from the instructor

BIOL 420/520 Ichthyology (5 Credit Hours)

The biology of marine and freshwater fishes including morphology, physiology, evolution, distribution, ecology, and reproduction.

Prerequisites: BIOL 292 must be passed with a grade of C or higher and junior standing

BIOL 422/522 Field Studies in Ornithology (4 Credit Hours)

A combined lecture and field study of birds with emphasis on identification, behavior, and field methods. Extensive field trips, including at least one weekend, are taken.

Prerequisites: BIOL 291 and BIOL 292 must be passed with a grade of C or higher or permission of the instructor

BIOL 423W/523 Cellular and Molecular Biology (3 Credit Hours)

The molecular organization of eukaryotic cells is presented along with cell evolution, molecular genetics, the internal organization of the cell and the behavior of cells in multicellular organisms. This is a writing intensive course.

Prerequisites: BIOL 293, BIOL 294, and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

BIOL 424/524 Comparative Animal Physiology (5 Credit Hours)

An introduction to the basic mechanisms by which different animals function. How organisms acquire and use energy, regulate their internal environment, circulate and exchange gases and wastes, receive and conduct information about their environment, and move and use muscles will be some of the topics covered. Emphasis will be on how organisms make changes in these basic mechanisms to deal with different environmental conditions.

Prerequisites: BIOL 292 must be passed with a grade of C or higher

BIOL 425/525 Cancer Biology (3 Credit Hours)

This course will examine how mutation leads to altered gene products and expression, subverted cell activity, cell immortalization, and tumor formation. Students will explore the differences between benign tumors and malignant tumors as well as the factors involved in malignancy. The course will conclude with the exploration of current cancer therapy.

Prerequisites: BIOL 293 and BIOL 294 must be passed with a grade of C or higher

BIOL 426/526 Histology (5 Credit Hours)

The structure and function of cells, tissues and organs at both the light microscopic and ultrastructural levels.

Prerequisites: BIOL 240 or BIOL 250 and BIOL 293 must be passed with a grade of C or higher

BIOL 430W/530 Microbial Pathogenesis (3 Credit Hours)

Examination of bacterium-host interactions with an emphasis on how bacteria cause disease, particularly the means by which the bacterium is able to circumvent host defense mechanisms. This is a writing intensive course.

Prerequisites: BIOL 316 and BIOL 317 and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

BIOL 432W Modern Plant-Animal Interactions (3 Credit Hours)

This is a writing intensive course. It is designed to engage students in learning about the different types of plant-animal interactions that occur in a variety of the Earth's ecosystems. The goal is to understand these interactions and their significance, how they shape communities and ecosystems, and how they maintain biodiversity. A variety of animal taxa and their relationships with plants are investigated, including birds, mammals, bats, fishes, and insects. Varied ecosystems, including wetlands, prairies, tropical and hardwood forests, agricultural lands, tundra, oceans, lakes and more, will be considered.

Prerequisites: BIOL 291 and BIOL 292

BIOL 435/535 Marine Conservation Biology (3 Credit Hours)

This highly interdisciplinary science of conserving marine biodiversity will be taught through a review of old and new literature. This will include its history, marine ecology related to conservation biology, threats to marine biodiversity, assessment of extinction risk, conservation challenges of marine habitats and regions, and methods for conserving marine biodiversity.

Prerequisites: BIOL 331 must be passed with a grade of C or higher

BIOL 436W/536 Infectious Disease Epidemiology (3 Credit Hours)

This lecture course will focus on concepts related to the spread and control of infectious diseases. This course is a writing-intensive course.

Prerequisites: BIOL 293, and BIOL 294, and MATH 200 or MATH 163 or MATH 211 or MATH 205, and STAT 130M or STAT 310, and ENGL 231C or ENGL 221C or ENGL 211C; all must be passed with a grade of "C" or higher

BIOL 437W/537 One Health: People, Animals and the Environment (3 Credit Hours)

A course that examines the interdependence between human health, animal health and environmental health. The One Health approach to the threat of emerging infectious diseases includes understanding the interconnectedness of human and animal pathogens, epidemic zoonoses and corresponding environmental factors, insights into mechanisms of microbial evolution towards pathogenicity, new technologies and approaches towards disease surveillance, and political and bureaucratic strategies. This is a writing intensive course.

Prerequisites: BIOL 291 and BIOL 293

Pre- or corequisite: BIOL 292 and BIOL 294; a Microbiology course is recommended

BIOL 440/540 Methods in Immunological Research (4 Credit Hours)

The major objective of this hands-on course is to prepare students to independently perform basic laboratory techniques, assays, and experiments commonly used in entry-level immunology laboratory positions. The course will cover theory, sample and reagent preparation, instrumentation, data analysis and interpretation, and applications in immunology. Several topics covered in-class include ELISAs, mammalian cell culture, and flow cytometry; however, additional topics (such as confocal microscopy) will be covered using virtual technologies. This course is ideal for students who intend to pursue careers at the laboratory bench.

Prerequisites: BIOL 302, BIOL 316 and BIOL 317

BIOL 441/541 Animal Behavior (5 Credit Hours)

Animal behavior with special attention to its evolution and ecological significance. Field and laboratory activities will emphasize the observational and experimental techniques used to study behavior.

Prerequisites: BIOL 291 and BIOL 292 must be passed with a grade of C or higher and junior standing or permission of the instructor

BIOL 444/544 Field Studies in Marine Biology (5 Credit Hours)

An intensive study abroad field course offered during the summer at a foreign marine laboratory where students will be engaged in lectures and field studies of coastal marine environments. Check with the Director of the Marine Biology Concentration Program for details.

Prerequisites: BIOL 331 must be passed with a grade of C or higher

BIOL 445/545 Community Ecology (3 Credit Hours)

The goal of this course is to introduce and evaluate both classical and emerging paradigms in community ecology. This will be achieved by examining those processes (biotic and abiotic) that structure ecological communities and by exposing students to quantitative and theoretical aspects of these paradigms.

Prerequisites: BIOL 291 must be passed with a grade of C or higher

BIOL 446/546 Comparative Biomechanics (3 Credit Hours)

The principles of fluid and solid mechanics will be applied to a variety of plant and animal systems to understand how organisms deal with the immediate physical world and its accompanying constraints. A diverse range of topics will be covered, including aerial flight in insects, wind resistance in trees, jet propulsion in squid, flow within blood vessels, forces on intertidal organisms, viscoelasticity in biological materials, and energy storage during terrestrial movement.

Prerequisites: BIOL 293 must be passed with a grade of C or higher; PHYS 111N and PHYS 112N are recommended

BIOL 448 Population Ecology (3 Credit Hours)

This course uses conceptual and mathematical models to understand how populations grow and persist in space and time. Both plants and animals are discussed.

Prerequisites: MATH 205 or MATH 211

BIOL 449 Microbial Impact on Human Health (3 Credit Hours)

This course introduces the student to microorganisms with particular emphasis placed on their role in health, wellness and disease. Economic, social and cultural issues related to utilization, control, and research of the bacteria and viruses are also considered.

Prerequisites: BIOL 293 or BIOL 294 must be passed with a grade of C or better

BIOL 450/550 Principles of Plant Ecology (4 Credit Hours)

This course explores theoretical concepts in plant ecology through review of classical and cutting-edge literature and practice with field-based experimental design and statistical methods. This course emphasizes the structure, development, and processes that drive patterns in plant communities and the ecological communities they support. Weekly field-based laboratories involve hands-on experience and opportunities to explore field methods in ecological research.

Prerequisites: BIOL 291 OR BIOL 308

BIOL 451/551 Bioinformatics and Genomics I (4 Credit Hours)

The application of computer science to biology has led to major breakthroughs in the ability to read and understand the code written in genomes. This course will give students the skills to participate in the computational revolution in biology. The course will give students hands-on experience in writing simple yet powerful computer programs in the Python programming language and making beautiful data visualizations in the R programming language. Students will also learn how to combine existing pieces of bioinformatics software for their own workflows.

Prerequisites: BIOL 123N and BIOL 124N must be passed with a grade of C (2.0) or higher, junior standing, and permission of the instructor

BIOL 452/552 Bioinformatics and Genomics II (4 Credit Hours)

The application of computer science to biology has led to major breakthroughs in the ability to read and understand the code written in genomes. This course will give students the skills to participate in the computational revolution in biology. The course will build on the knowledge of writing programs. Students will learn about some key techniques "under the hood" of software that have been critical to the genomics revolution. Topics will include: graph algorithms, evolutionary trees, probability models for DNA and protein sequences, and an introduction to deep learning in biology.

Prerequisites: Knowledge of Python programming and permission of instructor, or BIOL 451 must be passed with a grade of C (2.0) or higher

BIOL 453/553 Molecular Ecology (4 Credit Hours)

This course will explore the biology of organisms by using molecular (nucleic acid and/or protein) techniques and data. It covers a wide variety of subdisciplines within Biology, including genetics, physiology, ecology, and evolution. This course will explore basic theory in population genetics, ecology, and evolution and cover DNA, RNA, and Protein techniques and their application to biological research.

Prerequisites: BIOL 291, BIOL 292, BIOL 293, AND BIOL 294 all must be passed with a grade of C or higher

BIOL 454/554 Research in Pathogen Biology I: Laboratory Investigation (4 Credit Hours)

This is the first course of a two-semester laboratory and analysis sequence that is designed to provide a genuine research experience for undergraduate students. Students will design a novel research question in pathogen biology, then use modern laboratory techniques such as polymerase chain reaction and next-generation DNA sequencing to examine this question and test hypotheses. Data generated in this course will be analyzed in the second course in the series, BIOL 455. Data and analyses generated during these courses may be used for publication in scientific journals.

Prerequisites: BIOL 294

BIOL 455/555 Research in Pathogen Biology II: Analysis (4 Credit Hours)

This is the second course of a two-semester laboratory and analysis sequence that is designed to provide a genuine research experience for undergraduate students. In this semester, students will analyze data generated during the previous semester in BIOL 454. Modern methods of data analysis will be used, including statistical and bioinformatics techniques. Data and analyses generated during these courses may be used for publication in scientific journals.

Prerequisites: BIOL 294 and BIOL 454

BIOL 457/557 General Virology (3 Credit Hours)

A basic course covering the history of virology, viral taxonomy, genetics, and the molecular biology and host responses to the major mammalian virus groups. Examples of recent impacts of viruses on human health such as influenza pandemics will also be covered.

Prerequisites: BIOL 293 and BIOL 294 must be passed with a grade of C or higher

BIOL 460/560 Frontiers in Nanoscience and Nanotechnology (1 Credit Hour)

Review of the structure, synthesis and properties of key nano-materials and their impact on living systems.

Prerequisites: BIOL 293 must be passed with a grade of C or higher

BIOL 461/561 Human Cadaver Dissection (5 Credit Hours)

Students will dissect a human cadaver fully and learn all of the major structures. The course will be divided into three sections: back and limbs, TAP (thorax, abdomen and pelvis), and head and neck. Instructor demonstrations include brain removal and dissection.

Prerequisites: BIOL 241 or BIOL 251, or its equivalent, must be passed with a grade of C (2.0) or higher

BIOL 462/562 Microbial Genetics (3 Credit Hours)

This course will emphasize the fundamental concepts of microbial genetics including the study of gene structure, gene regulation, operons, DNA replication, RNA biology, protein synthesis, plasmid biology, mobile genetic elements, and recombinant DNA technology.

Prerequisites: BIOL 316 and BIOL 317 or BIOL 318 must be passed with a grade of C (2.0) or higher

BIOL 463/563 Cell Signaling in Host Pathogen Interactions (3 Credit Hours)

This course will emphasize cell dynamics including host and pathogen induced cellular signaling, the regulation of actin cytoskeleton rearrangement, and the modulation of host transcription and translation by different pathogens.

Prerequisites: BIOL 293

BIOL 464/564 Biomedical Applications of Low Temperature Plasmas (3 Credit Hours)

This course is cross listed between ECE and Biology. It is intended for senior undergraduate students and first year graduate students. The course contents are multidisciplinary, combining materials from engineering and the biological sciences. The course covers an introduction to the fundamentals of non-equilibrium plasmas, low temperature plasma sources, and cell biology. This is followed by a detailed discussion of the interaction of low temperature plasma with biological cells, both prokaryotes and eukaryotes. Potential applications in medicine such as wound healing, blood coagulation, sterilization, and the killing of various types of cancer cells will be covered.

Prerequisites: Senior standing

BIOL 465/565 Biotechnology (3 Credit Hours)

This course provides an overview of how microbes are manipulated to solve practical problems through biotechnology. Topics include basic concepts in microbial technology, industrial microbiology, microbes in drug development, food microbiology, microbial interactions, gut microbiota, and metagenomics.

Prerequisites: BIOL 316 and BIOL 317 or BIOL 318 must be passed with a grade of C or higher or permission of instructor

BIOL 466W/566 Introduction to Mitigation and Adaptation Studies (3 Credit Hours)

Students will be introduced to the science underpinning mitigation of human-induced changes in the Earth system, including but not limited to climate change and sea level rise, and adaptation to the impacts of these changes. The course will cover the environmental hazards and the opportunities and limitations for conservation, mitigation and adaptation. This is a writing intensive course. Cross listed with IDS 466W and OEAS 466W.

Prerequisites: BIOL 291 or permission of instructor

BIOL 467/567 Sustainability Leadership (3 Credit Hours)

In this class, students will discover what makes a leader for sustainability. They will consider a range of global and local crises from a leadership point of view in the context of sustainability science, which addresses the development of communities in a rapidly changing social, economic, and environmental system-of-systems environment. The course will be based on taking a problem-motivated and solution-focused approach to the challenges considered. The course includes a service learning project focusing on a leadership experience in solving a real-world environmental problem.

Prerequisites: BIOL 466W or OEAS 466W or IDS 466W

BIOL 468W Research Methods in Mathematics and Science (3 Credit Hours)

Emphasizes the tools and techniques used to solve scientific problems. Topics include use and design of experiments, use of statistics to interpret experimental results, mathematical modeling of scientific phenomena, and oral and written presentation of scientific results. Students will perform four independent inquiries, combining skills from mathematics and science to solve research problems. Required for Biology teaching licensure track; not available as upper-division elective in content area. This is a writing intensive course.

Prerequisites: BIOL 307 or BIOL 308 or BIOL 316 and BIOL 317 or MATH 212 and ENGL 211C or ENGL 221C or ENGL 231C and STEM 201 must be passed with a grade of C or higher or permission of instructor, and admission to Monarch Teach

BIOL 470T/570 Diseases that Changed our World (3 Credit Hours)

Despite advancements in the development of antimicrobials and vaccines and in securing clear water and food supplies, modern civilizations are not immune to epidemic diseases. This course will provide insight into the role of different technologies in the struggle to attain disease control and eradication and explore the challenge of forecasting emerging plagues, describing the nature and evolution of diseases and conveying their significance in shaping Western culture and civilization, their impact, their consequences, their costs, and the lessons learned.

Prerequisites: Sophomore standing with a general biology course (BIOL 123N or BIOL 138N or BIOL 117N)

BIOL 471W/571 Marine Vertebrate Ecology, Management & Conservation (3 Credit Hours)

Course will explore the biology, diversity and major life history patterns of a suite of marine megafauna, including sea turtles, marine mammals, seabirds and sharks. Students will determine the major drivers behind large-scale declines of many marine megafauna species and be challenged to understand and attempt to solve conservation and management issues. This is a writing intensive course, with a focus on the content and mechanics of scientific writing. Pre- or

Prerequisites: BIOL 291, BIOL 292, and ENGL 211C or ENGL 221C or ENGL 231C must be passed with a C (2.0) or better

Corequisites: BIOL 331 OR OEAS 306

BIOL 475/575 Neurobiology (3 Credit Hours)

This course will focus on understanding brain structure as well as the morphology and function of the central nervous system in general.

Fundamental processes such as neuron morphogenesis, guidance, polarity, migration, and growth cone motility will be emphasized. The cellular and molecular basis of neurological disorders also will be discussed.

Prerequisites: BIOL 240 or BIOL 250 or BIOL 293 must be passed with a grade of "C" or higher or permission of instructor

BIOL 476/576 Cancer Immunology and Immunotherapy (3 Credit Hours)

Introduction to the immune system, tumor antigens, immunosuppressive cells and molecules, and cancer immunotherapy treatment approaches.

Prerequisites: BIOL 123N, BIOL 124N, and BIOL 293 or permission of the instructor

BIOL 478/578 Microbial Ecology (3 Credit Hours)

Study of the interactions between microorganisms, particularly bacteria, and their environment. Emphasis is placed on nutrient cycling and the influence of microbes on global mineral dynamics. The effects of physical and chemical factors on the distribution and activity of microbes in their environments and the applications (biotechnology) of these interactions are studied.

Prerequisites: BIOL 316 and BIOL 317 or BIOL 318 must be passed with a grade of C or higher

BIOL 479/579 Microbial Ecology Laboratory (1 Credit Hour)

A laboratory for measurement of microbial numbers and activity in natural environments.

Pre- or corequisite: BIOL 478

BIOL 481W/581 Forensic and Medical Entomology (5 Credit Hours)

This is a writing intensive course that provides a comprehensive survey of the insects used in legal investigations and medically important insects. Topics covered include the taxonomy, morphology, physiology, reproductive and developmental biology, and ecology of these insects along with the diseases they may vector. Research techniques in forensic and medical entomology will be learned through both field and laboratory activities.

Prerequisites: BIOL 291 and BIOL 292 must be passed with a grade of C (2.0) or higher

BIOL 482/582 Human and Veterinary Parasitology (3 Credit Hours)

The course will emphasize the principles of parasitism, including biology, physiology, genetics, morphology, and phylogeny of the major parasitic groups with a specific focus on the significant parasites of humans and animals of veterinary importance. The general biology of parasites including their life cycles, diagnosis, and treatment will be included as well.

Prerequisites: BIOL 293 and BIOL 294 must be passed with a grade of C or higher or permission of instructor

BIOL 487 Honors Research in Biology (2 Credit Hours)

Student performs mentored research in biological science. Student and faculty mentor must meet on a regular basis. The course is intended to be taken as a series with BIOL 488W. Available for pass/fail grading only.

Prerequisites: admission to the Honors Program and senior standing

BIOL 488W Honors Research in Biology (4 Credit Hours)

Independent study and scheduled meetings with faculty advisor. Supervised independent study in an area of individual interest in biology. The work in this course results in the production of a thesis. This is a writing intensive course.

Prerequisites: BIOL 487, admission to the Honors Program, senior standing, and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

BIOL 490/590 Advanced Human Physiology (4 Credit Hours)

All major physiological systems will be examined with an emphasis on normal physiology. Some clinical applications will be discussed.

Prerequisites: BIOL 241 or BIOL 251 must be passed with a grade of C (2.0) or higher

BIOL 494 Entrepreneurship in Biology (3 Credit Hours)

Ecological entrepreneurs consider the impact of products on the environment and are mindful of natural resources, sustainability, and social equity.

In this novel class students will test their skill at biologically-inspired entrepreneurship after learning about biomimicry, sustainability, and other relevant concepts.

Prerequisites: BIOL 291 and BIOL 292

BIOL 496/596 Topics in Biological Sciences (1-4 Credit Hours)

A structured specialty course for students at the senior level. Courses may include lecture and laboratory components.

Prerequisites: BIOL 123N and BIOL 124N must be passed with a grade of C (2.0) or higher, junior standing, and permission of instructor

BIOL 497 Undergraduate Research (1-3 Credit Hours)

The student performs laboratory and/or field research under the supervision of a Department of Biological Sciences faculty member. The student must devote a minimum of 3 hours per week for the equivalent of 1 credit. The student must maintain lab/field notes, must submit a written report, may be required to give an oral presentation, and must be evaluated by the faculty supervisor. If 3 credits are taken, then BIOL 497 counts as an upper-level biology elective course with a laboratory or field component.

Prerequisites: BIOL 123N and BIOL 124N or BIOL 138N and BIOL 139N must be passed with a grade of C or higher, junior standing, permission of the supervising faculty member, and permission of the Chief Departmental Advisor and Chair of the Department of Biological Sciences

BIOL 498/598 Independent Study (1-3 Credit Hours)

This unstructured course is based on a supervised project, without a laboratory or field component, that is selected to suit the needs of the individual student. The completion of a formal scientific paper documented with the appropriate primary technical literature is required. An oral presentation also may be required. Contact the Chief Departmental Advisor for details.

Prerequisites: BIOL 123N and BIOL 124N or BIOL 138N and BIOL 139N must be passed with a grade of C or higher; junior standing, permission of the supervising faculty member, permission of the Chief Departmental Advisor, and permission of the Chair of the Department of Biological Sciences also are required

BME - Biomedical Engineering

BME 403/503 Introduction to Mathematical Modeling in Physiology (3 Credit Hours)

This course introduces model development and model formulation with differential equations in physiology. Students will learn how to use Matlab to solve differential equations and visualize their results. The physiological focus will be on cellular physiology, particularly ion channel dynamics and homeostasis.

Prerequisites: BIOL 240 or BIOL 250 and MATH 200 or MATH 205 or MATH 211

BME 404/504 Introduction to Biomaterials (3 Credit Hours)

This course will introduce the properties of biomedical materials used as implants, prostheses, orthosis, and tissue-engineered materials as medical devices in contact with tissues and organs. Biocompatibility, immunological responses, wound healing, clotting cascade, surface compatibility and characterization of materials used for implantable medical devices will be introduced. Other topics such as ethical considerations and medical device regulatory mechanisms will be presented.

Prerequisites: BIOL 240 or BIOL 250 and MATH 200 or MATH 205 or MATH 211

BME 405/505 Biomechanics (3 Credit Hours)

The purpose of this course is to achieve a broad overview of biomechanics, focused on the musculoskeletal system. Students will explore multiscale mechanics, including whole-body movement and mechanical properties of the structures in the musculoskeletal system. Additionally, students will survey the experimental methods and computational modeling techniques used in biomechanics research.

Prerequisites: BIOL 240 or BIOL 250, and MATH 212

BME 409/509 Introduction to Regenerative Medicine (3 Credit Hours)

This course will introduce fundamental knowledge in regenerative medicine including therapeutic applications of biomaterials, tissue and stem cell engineering, gene therapy and bioelectronics, with emphasis on structure-function relationships of biologic systems. In addition to lecture, students will have opportunities for group discussions and presentations on milestone work related to tissue regeneration. Students will leave with a thorough understanding of true mammalian regeneration, wound healing/repair processes, and medical device milestones as related to human tissue regeneration and repair.

Prerequisites: BIOL 240 or BIOL 250 and MATH 200 or MATH 205 or MATH 211

BME 430/530 Therapy and Function Models for Medical Simulation (3 Credit Hours)

This course introduces students to the main Modeling & Simulation models. (1) Anatomical modeling based on robust medical image segmentation and meshing methodologies. (2) A therapy model to determine the impact of a medical intervention by synthesizing the effect of a therapy on the patient's tissues. (3) A collision model, which interacts with anatomy and therapy models, is used for haptics-driven simulations. This course will also explore physiological simulation and the use of finite elements to model biomechanics.

Prerequisites: ECE 250 or CS 250 or CS 251 and CS 260 or equivalent

BME 454/554 Introduction to Bioelectronics (3 Credit Hours)

This course covers the electrical properties of cells and tissues as well as the use of electrical and magnetic signals and stimuli in the diagnosis and treatment of disease. Typical topics to be covered include basic cell physiology, endogenous electric fields in the body, electrocardiography, cardiac pacing defibrillation, electrotherapy, electroporation, electrotherapy in wound healing. In addition ultra-short electrical pulses for intracellular manipulation and the application of plasmas to biological systems will be covered.

Prerequisites: PHYS 111N or higher and MATH 200 or higher

BME 462/562 Introduction to Medical Image Analysis (3 Credit Hours)

Introduction to basic concepts in medical image analysis. Medical image registration, segmentation, feature extraction, and classification are discussed. Basic psychophysics, fundamental ROC analysis and FROC methodologies are covered. Cross-listed with ECE 462/MSIM 462.

Prerequisites: a grade of C or better in MATH 212

BME 464/564 Biomedical Applications of Low Temperature Plasmas (3 Credit Hours)

This course is cross listed with ECE and Biology. It is designed to be taken by senior undergraduate students and first year graduate students. The course contents are multidisciplinary, combining materials from engineering and the biological sciences. The course covers an introduction to the fundamentals of non-equilibrium plasmas, low temperature plasma sources, and cell biology. This is followed by a detailed discussion of the interaction of low temperature plasma with biological cells, both prokaryotes and eukaryotes. Potential applications in medicine such as wound healing, blood coagulation, sterilization, and the killing of various types of cancer cells will be covered.

Prerequisites: Senior standing

BME 495/595 Topics in Biomedical Engineering (1-3 Credit Hours)

This course explores specialized topics in biomedical engineering, providing an in-depth study of emerging trends, technologies, and applications in the field. Topics may vary by semester and are designed to enhance students' understanding of cutting-edge developments in biomedical engineering.

Prerequisites: Departmental approval

BME 497/597 Independent Study in Biomedical Engineering (1-3 Credit Hours)

This course allows students to pursue independent research or study in biomedical engineering under the guidance of a faculty mentor. Students will explore specific areas of interest, develop problem-solving skills, and gain hands-on experience in a focused topic. A written report or presentation may be required as part of the course. Supervised and approved by the advisor.

Prerequisites: Departmental approval

BNAL - Business Analytics

BNAL 206 Business Analytics I (3 Credit Hours)

An introduction to methods of business analytics. Topics are concentrated in descriptive analytics, which include descriptive statistics, normal and binomial distributions, decision making under uncertainty and under risk, decision analysis incorporating sample information, sampling distributions and Central Limit Theorem, interval estimation, and hypothesis testing. Business and economic applications are emphasized. Computer software, as a tool for problem solving, is utilized where appropriate.

Prerequisites: A grade of C or better in MATH 162M or placement into a higher level math course

BNAL 306 Business Analytics II (3 Credit Hours)

Advanced descriptive and predictive analytics topics include advanced hypothesis testing, analysis of frequency data, correlation analysis, simple and multiple regression, and time series forecasting. Prescriptive analytics topics include linear programming formulation and managerial analysis, and distribution models. PERT/CPM models are also covered. Computer software is utilized throughout the course. Emphasis is on the interpretation of the various outcomes of the application of business analytics tools.

Prerequisites: MATH 200, BNAL 206 and a declared major in the University or permission of the Dean's Office

BNAL 367 Cooperative Education (1-3 Credit Hours)

Approval for enrollment and allowable credits are determined by the department. Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment.

Prerequisites: Junior standing and a declared major in the University or permission of the Dean's Office

BNAL 368 Internship (1-3 Credit Hours)

Approval for enrollment and allowable credits are determined by the department. Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment.

Prerequisites: BNAL 306 and a declared major in the University or permission of the Dean's Office

BNAL 369 Practicum (1-3 Credit Hours)

Approval for enrollment and allowable credits are determined by the department in the semester prior to enrollment; additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment. Student participation in a professional work experience. Qualifies as a CAP experience.

Prerequisites: BNAL 206 and BNAL 306 and a declared major in the University or permission of the Dean's Office

BNAL 403/503 Data Visualization and Exploration (3 Credit Hours)

This course introduces students to concepts and processes, technologies, and methodologies that are commonly used in data visualization that an organization may use to enhance its descriptive, predictive, and prescriptive methods for making fact-based decisions.

Prerequisites: A grade of C or better in BNAL 306 or permission of the instructor

BNAL 405 Spreadsheet-Based Data Analysis for Decision Making (3 Credit Hours)

The spreadsheet has become one of the most widely used analytical tools in the modern business environment. This course covers spreadsheet (e.g., Microsoft Excel) capabilities and business applications, with a focus on the use of spreadsheets for modeling, data analysis, and business decision support. Topics include concepts such as functions, pivot table, macros, analytical utilities, database connections, and interactive interfaces. Modeling and analysis in several areas such as forecasting, investment, quality, and sales are covered.

Prerequisites: BNAL 306 with a grade of C or better

BNAL 407/507 Prescriptive Analytics of Management Science (3 Credit Hours)

Students are introduced to prescriptive analytics through formulation and solution of mathematical models, with a particular focus on optimization models. The business use of the models, as well as their limitations, is emphasized. Topics include linear, integer, non-linear programming, network models, genetic algorithms, decision analysis, and project management models.

Prerequisites: A grade of C or better in BNAL 306 and a declared major in the University or permission of the Dean's Office or the instructor

BNAL 415/515 Advanced Business Analytics/Big Data Applications (3 Credit Hours)

This course addresses advanced business analytics techniques and the application of such techniques to large data sets. Some alternative business analytics strategies are introduced. Descriptive, predictive, and prescriptive models are included. Topics covered in this course include data visualization and exploration, cluster analysis, and developing and calibrating predictive models for big data. Applications of multivariate, logistic, and probit regression to business analytics are discussed. Software packages such as SAS/JMP/SPSS may be used.

Prerequisites: A grade of C or better in BNAL 306 and a declared major in the University or permission from the Dean's Office

BNAL 430/530 Probability and Statistics (3 Credit Hours)

This course provides a foundational understanding of probability and statistics in a business context. Students learn to analyze data, make informed decisions, and solve business problems using statistical techniques. Topics include sampling distributions, confidence intervals, hypothesis testing, simple and multiple regressions, and time series forecasting. Emphasis is placed on the application of the tools to business problems.

Prerequisites: Instructor permission

BNAL 432/532 Predictive Analytics for Business (3 Credit Hours)

Predictive analytics techniques for business. Applications include both shorter term forecasting for sales and operations management as well as forecasting for long term planning. Emphasis is on statistical methods to obtain and evaluate forecasts. Statistical models are implemented using standard software such as MINITAB, EXCEL, R, and/or Python.

Prerequisites: BNAL 306 and a declared major in the University or permission of the Dean's Office

BNAL 476/576 Simulation Modeling and Analysis for Business Systems (3 Credit Hours)

Simulation modeling is an integral part of the analytics revolution, enabling the creation of models that can represent the variability that exists in many real business systems. This course covers the theory and application of simulation modeling, with an emphasis on how simulation provides predictive and prescriptive analytics to support business decision-making. Topics include simulation fundamentals, the project life-cycle, model development, input and output analysis, verification and validation, and the presentation of a simulation study. We utilize a major commercial simulation software package for assignments and class projects.

Prerequisites: OPMT 303 with a grade of C or better and BNAL 306 with a grade of C or better, senior standing and a declared major in the University or permission of the Dean's Office

BNAL 495 Topics in Business Analytics (3 Credit Hours)

Selected advanced topics in decision sciences. Taught on an occasional basis. See the course schedule for the particular topic being taught each semester.

Prerequisites: Senior standing and a declared major in the University or permission of the Dean's Office

BNAL 497 Independent Study (1-3 Credit Hours)

Affords students the opportunity to undertake independent study under the direction of a faculty member.

Prerequisites: Permission of department

BUSN - Business Administration

BUSN 110 Introduction to Contemporary Business (1 Credit Hour)

Provides students with a preliminary understanding of business and gives them an opportunity to use office productivity software to enhance communications and presentations. Students should be able to identify career prospects for each of the primary business areas (such as Accounting, Finance, Management, etc.) and basic business terminology. Office productivity software (word processing, spreadsheets, and presentation) will be heavily used by the faculty and students for communication in the form of presentations and essays.

BUSN 401/501 Business Planning for Entrepreneurs I (2 Credit Hours)

Students are introduced to readily available resources to research and analyze a comprehensive feasibility process including a clear statement of the business idea/model, selection of the North American Industry Classification System (NAICS) codes, and research and analysis of the applicable industry, market and competitors. A marketing strategy, to include pricing, is developed, with emphases on social media and similar outreach tools.

Prerequisites: Junior standing

CDSE - Communication Disorders and Special Education

CDSE 497/597 Independent Study in Special Topics in Education (1-3 Credit Hours)

Independent study of selected topics in education.

Prerequisites: junior standing or permission of the instructor

CEE - Civil and Environmental Engineering

CEE 111 Information Literacy and Research (2 Credit Hours)

This course will introduce students to the needs, access, evaluation, use, impact and ethical/legal aspects of information, as well as to the application of information literacy and research in the fields of civil and environmental engineering.

Prerequisites: ENGN 110

CEE 195 Topics in Civil and Environmental Engineering (1-3 Credit Hours)

Special topics in civil and/or environmental engineering at the introductory level.

Prerequisites: Permission of the department chair

CEE 204 Statics (3 Credit Hours)

Introduction to engineering problems and their solutions through a study of the statics of particles and rigid bodies.

Prerequisites: MATH 211 with a C or higher

Pre- or corequisite: PHYS 231N

CEE 205 Engineering Dynamics (3 Credit Hours)

This course is designed to assist engineering students in acquiring a more thorough knowledge and proficiency in engineering mechanics. The course follows CEE 204 in the mechanics sequence. In this course, kinematics of particles and rigid bodies, mass moments of inertia, acceleration, work, energy, power, and special applications in the civil engineering field, such as inertia problems in vehicle collisions, rudiments of wave dynamics, etc. are included.

Prerequisites: CEE 204 with a grade of C or better

CEE 220 Mechanics of Deformable Bodies (3 Credit Hours)

This course provides fundamental theories to understand the strength of materials focused on civil engineering applications. It will cover stress-strain relationship, equilibrium of deformable bodies and behavior of axially loaded members. It will also analyze for stresses, strains, and deformation of members subjected to torsions in both elastic and inelastic ranges. Other topics, such as buckling and stability of columns, Mohr circle, and energy methods will also be discussed.

Prerequisites: CEE 204 with a grade of C or better

CEE 240 Geographic Information Systems in Civil and Environmental Engineering (2 Credit Hours)

Geographic Information Systems as they apply to civil and environmental engineering. Spatial data acquisition, generation and analysis methods from terrestrial, aerial and satellite sources. Modeling of terrain, land, and hydrographic information using CAD and GIS software in the creation and application of CAD design and GIS spatial databases to engineering problems.

Prerequisites: MATH 212, sophomore standing or higher

CEE 295 Topics in Civil and Environmental Engineering (1-3 Credit Hours)

Topics in civil and/or environmental engineering at the basic engineering level.

Prerequisites: Permission of the department chair

CEE 304 Probability and Statistics for Civil Infrastructure (3 Credit Hours)

This course studies the fundamentals of probability and statistics that are widely used in various fields of engineering. Specific areas of study include probability theory, counting methods, statistics and parameters, propagation of error, probability distribution functions, central limit theorem, hypothesis testing, linear regression, and correlation analysis. Applications of statistics and probability analysis in civil and environmental engineering will be discussed through examples. Furthermore, an introduction to data science and an overview of applications of artificial intelligence in CEE problems will also be discussed.

Prerequisites: junior standing in CEE

CEE 305 Numerical Methods for Civil and Environmental Engineering (1 Credit Hour)

Introduction to selected numerical methods and their applications in solving civil and environmental engineering problems.

Prerequisites: ENGN 150 or ENGN 122 and sophomore standing or higher

CEE 310 Structures I (3 Credit Hours)

Analysis of statically determinate structures. Influence lines and structural design. Displacement calculations. Introduction to analysis of indeterminate structures.

Prerequisites: CEE 220 with a grade of C or better

CEE 320 Civil Engineering Materials (3 Credit Hours)

Properties of steel, portland cement concrete, bituminous concrete, aggregates, and timber.

Prerequisites: CEE 220

CEE 323 Soil Mechanics (3 Credit Hours)

Fundamental engineering properties of soil and their application to earth structures and foundations. Topics include seepage, compaction, strength, and deformation characteristics of soils.

Prerequisites: CEE 220

Corequisites: CEE 324

CEE 324 Soil Mechanics Laboratory (1 Credit Hour)

Performance of various soil mechanics tests, including gradation, index testing, compaction, density, permeability, consolidation, shear tests for soils are conducted for students to gain hand-on experiences. The relevant principles are covered in CEE 323.

Prerequisites: Junior standing

Corequisites: CEE 323

CEE 330 Hydromechanics (3 Credit Hours)

Fluid properties, fluid statics and fundamentals of fluid kinematics. Steady, incompressible conservation laws for mass, momentum and energy including real fluid energy losses. Turbulent, incompressible fluid flows in closed conduits and with a free surface. Introduction to thermodynamics.

Prerequisites: MATH 212 and CEE 205 and junior standing in CEE

CEE 340 Hydraulics and Water Resources (3 Credit Hours)

Analysis of closed-conduit flow and open-channel flow. Principles of surface water hydrology and groundwater hydraulics. Economics and probability concepts in water resources planning.

Prerequisites: CEE 304; CEE 330 with a grade of C or better

Corequisites: CEE 341

CEE 341 CE Hydraulics and Water Resources Laboratory (1 Credit Hour)

Performing various labs and experiments for hydraulics, hydrology, and water resources for students to gain hand-on experiences. The relevant principles are covered in CEE 340.

Prerequisites: Junior standing

Corequisites: CEE 340

CEE 350 Environmental Pollution and Control (3 Credit Hours)

Introduction to the fundamental principles of environmental engineering. Topics in water quality, water and wastewater treatment, air quality, and solid waste and landfills are discussed.

Prerequisites: CHEM 121N-CHEM 122N, MATH 211, PHYS 231N and junior standing in CEE

CEE 367 Cooperative Education (1-3 Credit Hours)

May be repeated for credit. Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place.

Prerequisites: Approval by the department chair required; additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

CEE 368 Internship (1-3 Credit Hours)

May be repeated for credit. Available for pass/fail grading only. Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students to gain short duration career-related experience.

Prerequisites: Approval by department is required; additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

CEE 369 Practicum (1-3 Credit Hours)

May be repeated for credit. Available for pass/fail grading only. Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students to gain short duration career-related experience.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

CEE 370 Transportation Fundamentals (3 Credit Hours)

This course surveys the current practice of transportation engineering in the United States. It focuses on various ground transportation modes and covers policy, institutional planning and operational issues. Students are introduced to planning models, capacity analysis, and traffic impact analysis.

Prerequisites: Junior standing

CEE 395 Topics (1-3 Credit Hours)

Topics in civil and/or environmental engineering.

Prerequisites: permission of the instructor

CEE 402 Professional Practice of Engineering (1 Credit Hour)

The course will cover the practice and business aspects of engineering including concepts in management, business, public policy, and leadership. It will also cover public and private procurement of work, project management and execution, responsibility to clients, contracting, project finances, professional liability, and public safety.

Prerequisites: Senior standing

CEE 403W Civil Engineering Design Project and Professional Practice (3 Credit Hours)

For graduating seniors only. Group design project of civil engineering systems requiring synthesis, data gathering, preliminary investigation, master planning, conceptual designs, layouts, support studies, cost estimates and report writing. Emphasis will be on alternatives, constraints, economics, ethics and professional practice, business and project management, public policy and leadership. This is a writing intensive course.

Prerequisites: grade of C or better in CEE 401, ENGL 211C or ENGL 221C or ENGL 231C

CEE 410 Concrete Design (3 Credit Hours)

Fundamental concepts of reinforced concrete analysis and design by ultimate strength and working stress methods.

Prerequisites: CEE 310 with a grade of C or better

CEE 412/512 Computational Methods in Structures (3 Credit Hours)

Analysis of 2-D and 3-D determinate and indeterminate truss/beam/frame structures by the unified direct stiffness matrix method, for both hand-calculation and computer implementation. Popular commercialized (NASTRAN) software will also be discussed.

Prerequisites: CEE 310

CEE 414/514 Masonry Structures Design (3 Credit Hours)

Masonry materials, reinforced beams and lintels, walls, columns and pilasters, shear walls, and buildings.

Prerequisites: CEE 310

CEE 415/515 Steel Structures Design (3 Credit Hours)

Load and resistance factor design methods for steel structures.

Prerequisites: CEE 310

CEE 416/516 Wood Structures Design (3 Credit Hours)

Design of wood structures based on national design specification and load and resistance factor design.

Prerequisites: CEE 310

CEE 430/530 Foundation Engineering (3 Credit Hours)

Subsurface exploration, site preparation, design of shallow and deep foundations, and retaining structures.

Prerequisites: CEE 323 with a grade of C or better

CEE 431/531 Slope Stability and Earth Structures Design (3 Credit Hours)

Slope stability analysis, including limit equilibrium procedures, finite element method, seepage analysis, and advanced topics such as rapid drawdown, construction of embankments on soft soil, and seismic slope stability. Lateral earth retention systems, including gravity walls, excavation support systems, and applications of geosynthetic material, will be covered.

Prerequisites: CEE 323

CEE 432/532 Introduction to Earthquake Engineering (3 Credit Hours)

An overview of earthquake processes and details of the characteristics of destructive ground motion; the effects of such motion on civil engineering structures; reviews of current design practice in mitigating earthquake hazards for various civil engineering structures such as buildings, bridges, dams, lifelines, ports and harbors, etc.

Prerequisites: senior standing and permission of the instructor

CEE 433/533 Geomaterials Stabilization (3 Credit Hours)

This course studies soil and aggregate's physical, chemical and biological stabilization procedures. Students are introduced to chemical stabilization analysis and design using materials such as cement, lime, and fly ash. Physical ground modification, compaction methods and mechanical stabilization application and design are also studied.

Prerequisites: CEE 323

CEE 440/540 Hydraulic Engineering (3 Credit Hours)

Hydraulic transients; flow control structures; computer analysis of hydraulic systems; design of pipelines, open channels and culverts.

Prerequisites: CEE 340

CEE 446/546 Urban Stormwater Hydrology (3 Credit Hours)

Storm rainfall analysis, design rainfall hyetographs, runoff calculation procedures, detention basins, use of mathematical models to analyze and design urban storm drainage systems.

Prerequisites: CEE 340

CEE 447/547 Groundwater Hydraulics (3 Credit Hours)

Description of well hydraulics in single and multiple well systems. Determination of aquifer parameters from pumping tests. Use of computer models to determine drawdowns due to multiple well systems.

Prerequisites: CEE 340

CEE 450/550 Water Distribution and Wastewater Collection System Design (3 Credit Hours)

Design of water distribution systems, sanitary sewer systems and appurtenances.

Prerequisites: CEE 330

Corequisites: CEE 340

CEE 451 Water and Wastewater Treatment (3 Credit Hours)

Discussion of water quality constituents and introduction to the design and operation of water and wastewater treatment facilities.

Prerequisites: CEE 330, CEE 350

CEE 452/552 Air Quality (3 Credit Hours)

Study of air quality management standards and regulations and pollutant dynamics. Design and operation of emission control equipment for mobile and stationary sources of air pollution.

Prerequisites: CEE 350

CEE 454/554 Hazardous Waste Treatment (3 Credit Hours)

Study of sources, generation rates and characteristics of hazardous wastes and their regulation, handling, and design of treatment and disposal facilities.

Prerequisites: CEE 350

CEE 455/555 Pollution Prevention and Green Engineering (3 Credit Hours)

Application of engineering methods for the prevention of pollution. Review of the pollution prevention related regulations. Study of source reduction methods, analysis for environmentally conscious manufacturing methods, process changes, life cycle analysis, and water/energy conservation methods. Evaluation of pollution prevention case studies.

Prerequisites: CEE 350

CEE 457/557 Adaptation to Sea Level Rise (3 Credit Hours)

Investigation of complex relationships between humans and coastlines and study of how humans adapt and develop adaptation measures and solutions to tackle flooding caused by rising sea levels and subsequent heavy storm events. This course also evaluates natural and nature-based systems, engineered systems, different flood-proofing methods, and impacts of sea level rise on coastal water quality and the potential impacts on disease transmission.

Prerequisites: CEE 340 or CET 332

CEE 458/558 Sustainable Development (3 Credit Hours)

Overview of social, economical, technical environmental aspects of regional, national and international efforts to achieve sustainable development.

Discussion of the integration of industrial activity and ecological concerns utilizing principles of zero emissions, pollution prevention and design for the environment. (WEB Based, On-Line Course)

Prerequisites: junior standing or permission of instructor

CEE 459/559 Biofuels Engineering (3 Credit Hours)

Course covers the overview of renewable energy sources; fundamentals of biofuels; biomass and types of biomass (e.g., woody biomass, forest residues, agricultural residues, energy crops); composition of lignocelluloses (cellulose, hemicellulose, and lignin); biomass conversion technologies; thermochemical, supercritical water, and biochemical conversion processes; types of biofuels from biomass; liquid fuels (bioethanol, bio-oil, biocrude, and hydrocarbons); gaseous fuels (synthesis gas, hydrogen, biodiesel); solid fuels (biochar, torrefied biomass); biodiesel from vegetable oils, algae to biofuels; value-added processing of biofuel residues; economic and environmental assessments; policies and future R&D.

Prerequisites: permission of the instructor

CEE 471/571 Transportation Operations I (3 Credit Hours)

This is the first course in transportation operations and traffic flow theory. Topics include traffic engineering studies, capacity analysis, intersection control, traffic flow models, shockwave analysis, signal warrant analysis, and safety analysis. Course includes applications of modeling and simulation to isolated intersections.

Prerequisites: CEE 370

CEE 474/574 Transportation Data Analytics (3 Credit Hours)

This course presents the basic techniques for transportation data analytics. It will discuss statistical modeling, prominent algorithms, and visualization approaches to analyze both small- and large-scale data sets generated from transportation systems. Practices of using different data for various real-world traffic/transportation applications and decision making will also be discussed., (STAT 330); any programming language such as C, Python or Java is beneficial but not required.

Prerequisites: Basic probability and statistics (e.g

CEE 475/575 Geometric Design of Highways (3 Credit Hours)

This course provides students with an understanding of basic principles and techniques in order to develop skills in the highway geometric design process. It introduces design methods for three-dimensional layout for roadways, considering cross section (lanes and shoulders, curbs, medians, roadside slopes and ditches, sidewalks), horizontal alignment (tangents and curves), and vertical alignment (grades and vertical curves).

Prerequisites: CEE 370

CEE 482/582 Introduction to Coastal Engineering (3 Credit Hours)

Classical small amplitude wave theory, wave transformations in shallow water, shoaling, refraction, diffraction, reflection, breaking. Wave induced near shore currents and sediment transport processes. Alternatives to mitigate coastal erosion processes. Introduction to coastal structures.

Prerequisites: CEE 330 and permission of the instructor

CEE 495/595 Topics in Civil and Environmental Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in civil and/or environmental engineering.

Prerequisites: Permission of the department chair

CEE 497 Independent Study in Civil and Environmental Engineering (1-3 Credit Hours)

Individual analytical, experimental and/or design study selected by the student and supervised by the advisor.

Prerequisites: approval of the advisor

CET - Civil Engineering Technology

CET 120 Civil 2D Computer Aided Drafting (2 Credit Hours)

This course introduces students to computer aided drafting, where methods are taught with a major emphasis on practical application using two-dimensional AutoCAD software in the computer lab. This includes the basic principles of civil engineering drawings to include but not limited to: dimensioning, spot elevations, contours, plan and profile view, section views, details, scaling, measurements. It will introduce students to site plan drawings, structural views, architectural views, as well as buried infrastructure plan and profiles. Finally, it will be the basis for preparation of a working set of plans, for use in all follow-on CET courses.

CET 205 Principles of Surveying (3 Credit Hours)

Basic plane surveying measurements and computations, survey control systems, elementary digital mapping and simple curves, and building construction survey and stakeout. Field exercises using standard surveying instrumentation, traverse and leveling techniques, topographic mapping and curve layout.

Prerequisites: MATH 163 and MET 120 or CET 120

CET 210 Fundamentals of Building Construction (3 Credit Hours)

Introduction to various materials and methods available for design and construction of buildings. Covers application and combination of traditional materials and methods, and recent innovations in construction systems.

CET 221 Material Testing Laboratory (1 Credit Hour)

Standard Methods of inspecting and testing structural materials used in construction are demonstrated. Data is collected and interpreted according to industry standards with results reported.

Prerequisites: MATH 211

Pre- or corequisite: ENGT 220

CET 260 CAD for Building Applications (2 Credit Hours)

A detailed study of the form and content of typical construction drawings and 3D building models used in the construction industry. Commercial 3D CAD software is used to assemble a set of structural construction drawings. Standard specification documents are introduced.

Prerequisites: CET 120 or MET 120 and CET 210

CET 265 Civil 3D CAD (2 Credit Hours)

A detailed study into the development of civil site plans. Commercial software (AutoCAD Civil 3D) is introduced as a tool to assist in the design of civil sites and develop a set of civil site drawings.

Prerequisites: CET 120 or MET 120 and CET 205 and CET 210

CET 295 Topics (1-3 Credit Hours)

Study of selected topics.

CET 296 Topics (1-3 Credit Hours)

Study of selected topics.

CET 301 Introduction to Structural Design (4 Credit Hours)

Introduction to structural design of buildings and/or nonbuilding type structures using reinforced concrete, steel, and wood as materials. This course utilizes provisions of the American Concrete Institute ACI 318, American Institute of Steel construction AISC 360, and the National Design Specification NDS specifications. Forces, moments, and deflections in statically determinate beams, frames, and trusses due to various load cases and load combinations are determined.

Prerequisites: CET 220 and MATH 211

CET 325 Introduction to Land Development (3 Credit Hours)

Applications of fundamental site engineering principles, land design principles and permitting issues. A brief historical review of exemplary subdivision, urban designs and their impact on current practice. Site surveying and engineering issues including hydrology, storm water management, site geometry, grading, design of roads, engineering design standards, and computer applications in site engineering are examined. The principles of siting and theories of design for aesthetic and efficient alignment of roads, layout of structures, and subdivision parcels are introduced.

Prerequisites: CET 210

CET 330 Fluid Mechanics (4 Credit Hours)

Elementary mechanics of fluids. Fluid properties; hydrostatics; fluid kinematics; equations of motion; energy equation; momentum principles; flow of liquids and gasses in closed conduits; flow in open channels and/or compressible flow. Laboratory will demonstrate principles from the lecture material. All experiment results will be submitted in a written report format, including presentation and interpretation of experimental data. Use of spreadsheets is required.

Prerequisites: CET 220 and MATH 211

CET 332 Water Resources Engineering (3 Credit Hours)

Hydrologic and Hydraulic principles are utilized in the planning, design, operation and construction of water management projects. The course addresses fundamental Hydrology - the occurrence and movement of surface water including weather and climate; precipitation; evaporation; transpiration; runoff; infiltration; stream flow; hydrograph analysis; erosion; and sedimentation. Additional topics covered will include water distribution, use of water, and sustainability of water as a natural resource.

Prerequisites: CET 330

CET 334 Computer Applications in Hydraulic Engineering (3 Credit Hours)

Application of computer software in solving water resources problems; program development or application of available packages to solve assigned water resources problems. Use and application of commercial software for analysis and design of water distribution networks and gravity sewer collection systems.

Prerequisites: CET 330

CET 335 Fluid Mechanics Laboratory (1 Credit Hour)

A laboratory to demonstrate the verification of fluid equations and principles as well as the characteristics of fluid machinery. All experimental results will be submitted in a report format, including presentation and interpretation of experimental data. Use of spreadsheets is required. This is an online asynchronous class open only to transfer students with credit for the lecture portion of CET 330.

Prerequisites: CET 330

CET 340 Soils and Foundations (3 Credit Hours)

A study of the engineering properties of soil including stress, shear strength, and bearing capacity. Movement of water through soils, consolidation and settlement of structures and the design of shallow and deep foundations are also covered. Use of Excel spreadsheets is a requirement.

Prerequisites: CET 330

Corequisites: CET 341

CET 341 Soil Testing Laboratory (1 Credit Hour)

Course includes standard methods for inspecting, sampling, testing, and evaluating soils. Students use typical test equipment and perform tests on samples of local soils. Data is collected and results are interpreted and plotted.

Prerequisites: CET 330

Corequisites: CET 340

CET 355 Sustainable Building Practices (3 Credit Hours)

The course will examine industry trends in sustainable building practices. It explores the green building strategies used in the design and construction of sustainable buildings. The role of site selection, water efficiency, energy, materials and resources, and indoor environmental quality will be explored.

Prerequisites: Junior standing

CET 361 Construction Project Management (3 Credit Hours)

An introduction to the procedures and methods that are used by a contractor during the construction phase of a project. Special emphasis on planning, managing and documenting project activities. Topics include job site layout and control, subcontracting and purchasing and changes and claims/progress payments.

Prerequisites: CET 210

CET 365 Building Information Modeling (BIM) (3 Credit Hours)

This course is an introduction to building information modeling (BIM) and its implementation in building design and construction. Topics include the fundamentals of information modeling; business benefits of BIM; impacts of BIM on design and construction processes; integrated design process and project delivery; popular software applications and basic modeling techniques; and popular areas and best practices of BIM implementation.

Prerequisites: CET 260

CET 367 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place (offered fall, spring, summer).

Prerequisites: Approval by the CET program director in accordance with the policy for granting credit for Cooperative Education programs; a student who needs to add additional credit to maintain full-time status should contact the program director

CET 368 Internship (1-3 Credit Hours)

Available for pass/fail grading only. Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students to gain short duration career-related experience.

Prerequisites: approval by department

CET 395 Topics (1-3 Credit Hours)

Topics in Civil Engineering Technology.

Prerequisites: permission of the instructor

CET 396 Topics (1-3 Credit Hours)

Topics in Civil Engineering Technology.

Prerequisites: permission of the instructor

CET 400 Computer Applications in Structural Design (3 Credit Hours)

Analysis of indeterminate structures including the verification of results using the commercial software RISA 3D. Introduction to computer modeling in 2D and 3D, pre and post processors, interpretation of results and development of professionally written reports. Structural analysis topics include influence lines, cables and arches, slope deflection, moment distribution, and stiffness methods of analysis. Analysis and design of structures using steel, wood, and reinforced concrete materials using RISA 3D. Design meeting strength and serviceability requirements per codes, specifications, and standards.

Pre- or corequisite: CET 301

CET 402 Structural Steel Design (3 Credit Hours)

Structural analysis and design of steel structures, including beams, girders, columns, composite sections, trusses, rigid frames and connections using the LRFD method. Analysis of statically-determinate cantilever (hungspan) systems also are covered.

Prerequisites: CET 301

CET 405 Environmental Loads (3 Credit Hours)

Familiarize the student with the analysis of environmental design loads required for the design of building and non-building type structures in the United States. A thorough study of loading categories and load combinations for ASD and LRFD is also covered. Extensive use of the International Building Code (IBC) and the Minimum Design Loads for Building and Other Structures (ASCE 7) is expected.

Prerequisites: CET 301

CET 410 Reinforced Concrete Design (3 Credit Hours)

Structural analysis and design of reinforced concrete members. Topics include flexural analysis and design of structures, including slabs, beams and columns using strength design procedures.

Prerequisites: Junior standing

Pre- or corequisite: CET 301

CET 412 Wood Design (3 Credit Hours)

Analysis and design of wooden structural elements of buildings to satisfy design codes. Included are shearwall design and connections as well as beams, columns and other elements.

Prerequisites: CET 301

CET 414 Bridge Design (3 Credit Hours)

Familiarize the student with the analysis and design of simple and continuous span bridge structures utilizing the Load and Resistance Factor Design (LRFD) methodology. Determination of the most common design loads used in bridge design. Introduction to the AASHTO Specification for Structural Bridge Design used in United States.

Prerequisites: CET 410 or CET 450 or CET 402

CET 417 Design of Reinforced Concrete Foundations (3 Credit Hours)

Analysis and design of reinforced concrete foundations typically used in buildings and bridges. Topics include loads and loading groups, methods of analysis and design, abutments, and isolated and continuous footings. The class will be focused on the load and resistant factor design method. Use of the ASCE 7, ACI and AASHTO codes is necessary.

Prerequisites: CET 340 and CET 410

CET 420 Hydrology and Drainage (3 Credit Hours)

Hydrologic and hydraulic principles are utilized in the planning, design, operation and construction of water management projects. Topics include elements of stormwater drainage pertaining to hydrology, hydraulics of open channel and pipe flow, stormwater management, and issues pertinent to state stormwater regulations and the Chesapeake Bay Preservation Act.

Prerequisites: CET 332

CET 428 Buried Infrastructure (3 Credit Hours)

This is a capstone design course in the field of water resources. It incorporates pressurized pipe flow, gravity flow, and hydrology into the design of municipal infrastructure for water, sewer and stormwater projects. Topics will also cover rehabilitation and replacement of aging infrastructure in urban and neighborhood settings. Use of spreadsheets is required.

Prerequisites: CET 332 or CET 334 or CET 325

CET 430 Hydraulic Engineering (3 Credit Hours)

Analysis of hydraulics problems associated with the design of civil engineering structures. Uniform, steady flow in open channels; hydraulic models; design problems for dams; spillways and hydraulic structures; hydraulic machinery and other related topics will be discussed. Use of spreadsheets is required.

Prerequisites: CET 330

CET 456 Resilience and Sustainability (3 Credit Hours)

An investigation of emerging construction industry trends in resilience and sustainability. Evaluation of applications for vulnerable, small-scale and rural projects. Quantify increases in project value by incorporating life cycle analysis, planning for continuity of function, and deliberate risk management.

Prerequisites: CET 355

CET 458 Managing the Climate Crisis (3 Credit Hours)

This course provides a structured framework for developing resilience. It focuses on addressing the impacts of the climate crisis like flooding, heat, water, and wildfire through principles, designs, and real-world solutions. This is achieved by examining hard engineering structures, nature-based design, and hybrid solutions to protect communities and create a resilient design future.

Prerequisites: Junior standing

CET 460 Construction Cost Estimating (3 Credit Hours)

Evaluation and analysis of the basic elements of estimating construction costs for buildings. Elements of take off and pricing for Division 1 through Division 6 are covered. Use of computers and estimating software are emphasized.

Prerequisites: CET 361

CET 462 Construction Planning and Scheduling (3 Credit Hours)

The basic elements of planning and scheduling building construction projects. All elements of building construction, including the precedence methods of scheduling. Use of computers and planning and scheduling software are emphasized.

Prerequisites: CET 210

CET 467 Construction Finance and Equipment Utilization (3 Credit Hours)

This course provides a study of financial management in civil engineering construction projects. It emphasizes the development of techniques for effective financial monitoring. Additionally, the curriculum covers concepts related to construction equipment utilization, ensuring an economic alignment of machine capabilities with project requirements. It also addresses the application of time value of money principles for financial decision-making in equipment selection and utilization for heavy highway and major building construction projects.

Prerequisites: CET 361 and CET 301 or CET 330

CET 472 Contract Documents (3 Credit Hours)

The basic concepts of contracts and the standard contract documents used in construction. Also included is a study of the dispute resolution process in arbitration.

Prerequisites: CET 361

CET 495 Topics (1-3 Credit Hours)

Topics in civil engineering technology.

Prerequisites: permission of the instructor

CET 496 Topics (1-3 Credit Hours)

Topics in civil engineering technology.

Prerequisites: permission of the instructor

CGE - Center for Global Engagement

CGE 001 Beginning Reading and Vocabulary (0 Credit Hours)

This course helps students become independent and efficient readers of both academic and nonacademic texts by introducing students to a range of level-appropriate topics and genres often encountered at the university. Lessons focus on applying academic reading strategies, critical thinking, and vocabulary development skills across a variety of written texts. Classroom discussions and exercises allow students to share and discuss their ideas about texts.

Prerequisites: Beginning placement

CGE 002 Beginning Writing (0 Credit Hours)

This course provides instruction and practice in the writing and grammar skills to help students become successful in academic contexts. By the end of this course, students will be able to write in a number of level-appropriate genres with confidence and attention to clarity and grammatical accuracy. Reading materials provide a basis for developing ideas and models for writing. Grammar and mechanics are learned in context.

Prerequisites: Beginning placement

CGE 003 Beginning Listening and Speaking (0 Credit Hours)

This course focuses on building students' listening and speaking skills for both social and academic settings. Students develop their speaking skills through role-plays, discussions, vocabulary-building activities, and short presentations. In addition, students develop and apply listening skills to a variety of short lectures, podcasts, interviews, and conversations on a variety of topics.

Pre- or corequisite: Beginning placement

CGE 004 Beginning Pronunciation (0 Credit Hours)

This course focuses on the recognition and pronunciation of the English sound system. In addition to work on differentiating between similar and/or confusing sounds, students will have an opportunity to focus on personal difficult areas that interfere with the comprehension of the student's speech. Guidance will be provided on techniques to improve word stress, rhythm, articulation, pausing, and linking.

Prerequisites: Beginning placement

CGE 005 Beginning Topics in English for Academic Purposes (0 Credit Hours)

A study of selected topics in English for Academic Purposes based on student need and interest.

Prerequisites: Beginning placement

CGE 010 English Language Center Seminar (0 Credit Hours)

This seminar course is for academic and campus orientation and other required student activities for new and continuing English Language Center students.

CGE 011 Intermediate Reading and Vocabulary (0 Credit Hours)

This course helps students become independent and efficient readers of both academic and nonacademic texts by introducing students to a range of level-appropriate topics and genres often encountered at the university. Lessons focus on applying academic reading strategies, critical thinking, and vocabulary development skills across a variety of written texts. Classroom discussions and exercises allow students to share and discuss their ideas about texts.

Prerequisites: CGE 001 or Intermediate placement

CGE 012 Intermediate Writing (0 Credit Hours)

This course provides instruction and practice in the writing and grammar skills to help students become successful in academic contexts. By the end of this course, students will be able to write in a number of level-appropriate genres with confidence and attention to clarity and grammatical accuracy. Reading materials provide a basis for developing ideas and models for writing. Grammar and mechanics are learned in context.

Prerequisites: CGE 002 or Intermediate placement

CGE 013 Intermediate Listening and Speaking (0 Credit Hours)

This course focuses on building students' listening and speaking skills for both social and academic settings. Students develop their speaking skills through role-plays, discussions, vocabulary-building activities, and short presentations. In addition, students develop and apply listening skills to a variety of short lectures, podcasts, interviews, and conversations on a variety of topics.

Prerequisites: CGE 003 or Intermediate placement

CGE 014 Intermediate Pronunciation (0 Credit Hours)

This course focuses on the recognition and pronunciation of the English sound system. In addition to work on differentiating between similar and/or confusing sounds, students will have an opportunity to focus on personal difficult areas that interfere with the comprehension of the student's speech. Guidance will be provided on techniques to improve word stress, rhythm, articulation, pausing, and linking.

Prerequisites: CGE 004 or Intermediate placement

CGE 015 Intermediate Topics in English for Academic Purposes (0 Credit Hours)

A study of selected topics in English for Academic Purposes based on student need and interest.

Prerequisites: CGE 005 or Intermediate placement

CGE 021 Advanced I Reading and Vocabulary (0 Credit Hours)

This course focuses on developing students' academic reading skills through critical engagement with a variety of text genres including English literature, academic journal articles, research essays, and mainstream media. #Application of reading strategies, vocabulary development, critical thinking, reflection, and discussion of texts are centered throughout the course.

Prerequisites: CGE 011 or Advanced I placement

CGE 022 Advanced I Writing from Sources (0 Credit Hours)

This course focuses on building and refining students' advanced-level skills and strategies to be effective writers of the kinds of compositions they will produce in university coursework. Students will progress in their understanding and use of language, develop effective writing processes, incorporate sources, and demonstrate an understanding of the rhetorical situation. Grammar and mechanics are learned in context.

Prerequisites: CGE 012 or Advanced I placement

CGE 023 Advanced I Listening and Speaking (0 Credit Hours)

This course focuses on building students' listening competence and communicative fluency to a level sufficient to handle most everyday, academic, and professional encounters. In this course, students will move from listening to conversations, interviews, radio programs, or podcasts to more complex documentaries, movies, and lectures. Students will develop their discussion and conversation skills for social and academic purposes, both in and out of class.

Prerequisites: CGE 013 or Advanced I placement

CGE 024 Advanced I Academic Presentations and Pronunciation (0 Credit Hours)

This course prepares students for success in public speaking situations typically encountered in university courses and professional environments. Students will learn to plan, organize, and deliver presentations on a variety of formal and informal topics using effective visual aids. A variety of areas of pronunciation will be covered, paying special attention to comprehensibility and individual students' needs.

Prerequisites: CGE 014 or Advanced I placement

CGE 025 Advanced I Topics in English for Academic Purposes (0 Credit Hours)

Special topics in English for Academic Purposes based on student need and interest.

Prerequisites: CGE 015 or Advanced I placement

CGE 026 Advanced I Grammar (0 Credit Hours)

This course focuses on providing students with a comprehensive understanding of advanced grammatical structures, enabling students to effectively communicate and write in a precise, nuanced, and sophisticated manner within an academic setting. Emphasis is placed on both accuracy and fluency, ensuring that students not only recognize and understand advanced grammar rules but also practice incorporating them naturally in speaking and writing.

Prerequisites: Advanced I placement

CGE 030 University 101 (0 Credit Hours)

This course helps students develop a broad range of transferable skills to become a more versatile and successful university student, in addition to becoming a more reflective and adaptive learner. Students will learn foundational academic skills such as time management and goal setting, research and digital literacy, exam and study skills, as well as reflective and critical thinking.

Prerequisites: Advanced I or Advanced II placement

CGE 031 Advanced II Reading and Vocabulary (0 Credit Hours)

This course focuses on developing students' academic reading skills through critical engagement with a variety of text genres including English literature, academic journal articles, research essays, and mainstream media. #Application of reading strategies, vocabulary development, critical thinking, reflection, and discussion of texts are centered throughout the course.

Prerequisites: CGE 021 or Advanced II placement

CGE 032 Advanced II Writing from Sources (0 Credit Hours)

This course focuses on building and refining students' advanced-level skills and strategies to be effective writers of the kinds of compositions they will produce in university coursework. Students will progress in their understanding and use of language, develop effective writing processes, incorporate sources, and demonstrate an understanding of the rhetorical situation. Grammar and mechanics are learned in context.

Prerequisites: CGE 022 or Advanced II placement

CGE 033 Advanced II Listening and Speaking (0 Credit Hours)

This course focuses on building students' listening competence and communicative fluency to a level sufficient to handle most everyday, academic, and professional encounters. In this course, students will move from listening to conversations, interviews, radio programs, or podcasts to more complex documentaries, movies, and lectures. Students will develop their discussion and conversation skills for social and academic purposes, both in and out of class.

Prerequisites: CGE 023 or Advanced II placement

CGE 034 Advanced II Academic Presentations and Pronunciation (0 Credit Hours)

This course prepares students for success in public speaking situations typically encountered in university courses and professional environments. Students will learn to plan, organize, and deliver presentations on a variety of formal and informal topics using effective visual aids. A variety of areas of pronunciation will be covered, paying special attention to comprehensibility and individual students' needs.

Prerequisites: CGE 024 or Advanced II placement

CGE 035 Advanced II Topics in English for Academic Purposes (0 Credit Hours)

Special topics in English for Academic Purposes based on student need and interest.

Prerequisites: CGE 025 or Advanced II placement

CGE 036 Advanced II Grammar (0 Credit Hours)

This course focuses on providing students with a comprehensive understanding of advanced grammatical structures, enabling students to effectively communicate and write in a precise, nuanced, and sophisticated manner within an academic setting. Emphasis is placed on both accuracy and fluency, ensuring that students not only recognize and understand advanced grammar rules but also practice incorporating them naturally in speaking and writing.

Prerequisites: CGE 026 or Advanced II placement

CGE 040 Undergraduate Oral Communication and Literacy (0 Credit Hours)

This course is designed for multilingual and/or international undergraduate students in order to develop, use, and refine academic communication skills by critically engaging with a variety of college-level text genres. Students will learn to prepare and develop academic presentations as well as effectively participate in group discussions. This is a non-credit course; students cannot use this course for academic credit toward a degree program. Undergraduate Monarch English Transition (MET) Program Exit Criteria: Earn a grade point average of 2.5 in academic courses and grades of C or higher and 85% attendance or higher in the MET courses.

CGE 042 Undergraduate Academic Writing (0 Credit Hours)

This course develops multilingual and/or international undergraduate students' foundational writing skills, emphasizing the writing process. Students learn to match writing to audience and purpose, write in a variety of academic genres, and incorporate source material into their work to be able to transfer acquired skills into discipline-specific writing. Students will learn to recognize and avoid plagiarism by developing a personal voice while also appreciating the importance of the author's ideas and credibility. Problems with sentence structure, lexical grammar, and diction are addressed individually. This is a non-credit course; students cannot use this course for academic credit toward a degree program. Undergraduate Monarch English Transition (MET) Program Exit Criteria: Earn a grade point average of 2.5 in academic courses and grades of C or higher and 85% attendance or higher in the MET courses.

CGE 095 Topics in English for Special Programs (0 Credit Hours)

Specialized topics in English designed for Special Programs. Courses offered based on programmatic needs and interests.

Prerequisites: Enrollment within a Special Program

CGE 131 Advanced II Reading and Vocabulary (3-5 Credit Hours)

This course focuses on developing students' academic reading skills through critical engagement with a variety of text genres including English literature, academic journal articles, research essays, and mainstream media. #Application of reading strategies, vocabulary development, critical thinking, reflection, and discussion of texts are centered throughout the course.

Prerequisites: CGE 021 or Advanced II placement

CGE 132 Advanced II Writing from Sources (3-5 Credit Hours)

This course focuses on building and refining students' advanced-level skills and strategies to be effective writers of the kinds of compositions they will produce in university coursework. Students will progress in their understanding and use of language, develop effective writing processes, incorporate sources, and demonstrate an understanding of the rhetorical situation. Grammar and mechanics are learned in context.

Prerequisites: CGE 022 or Advanced II placement

CGE 133 Advanced II Listening and Speaking (3-5 Credit Hours)

This course focuses on building students' listening competence and communicative fluency to a level sufficient to handle most everyday, academic, and professional encounters. In this course, students will move from listening to conversations, interviews, radio programs, or podcasts to more complex documentaries, movies, and lectures. Students will develop their discussion and conversation skills for social and academic purposes, both in and out of class.

Prerequisites: CGE 023 or Advanced II placement

CGE 134 Advanced II Academic Presentations and Pronunciation (2-4 Credit Hours)

This course prepares students for success in public speaking situations typically encountered in university courses and professional environments. Students will learn to plan, organize, and deliver presentations on a variety of formal and informal topics using effective visual aids. A variety of areas of pronunciation will be covered, paying special attention to comprehensibility and individual students' needs.

Prerequisites: CGE 024 or Advanced II placement

CGE 135 Advanced II Topics in English for Academic Purposes (1-5 Credit Hours)

Special topics in English for Academic Purposes based on student need and interest.

Prerequisites: CGE 025 or Advanced II placement

CGE 136 Advanced II Grammar (2-4 Credit Hours)

This course focuses on providing students with a comprehensive understanding of advanced grammatical structures, enabling students to effectively communicate and write in a precise, nuanced, and sophisticated manner within an academic setting. Emphasis is placed on both accuracy and fluency, ensuring that students not only recognize and understand advanced grammar rules but also practice incorporating them naturally in speaking and writing.

Prerequisites: CGE 026 or Advanced II placement

CGE 140 Undergraduate Oral Communication and Literacy (4 Credit Hours)

This course is designed for multilingual and/or international undergraduate students in order to develop, use, and refine academic communication skills by critically engaging with a variety of college-level text genres. Students will learn to prepare and develop academic presentations as well as effectively participate in group discussions.

CGE 142 Undergraduate Academic Writing (4 Credit Hours)

This course develops multilingual and/or international undergraduate students' foundational writing skills, emphasizing the writing process. Students learn to match writing to audience and purpose, write in a variety of academic genres, and incorporate source material into their work to be able to transfer acquired skills into discipline-specific writing. Students will learn to recognize and avoid plagiarism by developing a personal voice while also appreciating the importance of the author's ideas and credibility. Problems with sentence structure, lexical grammar, and diction are addressed individually.

CGE 195 Topics in English for Academic Purposes (1-3 Credit Hours)

A study of selected topics in English for academic purposes. These courses will appear in the course schedule and will be more fully described by academic advisors.

CGE 196 Topics in Language, Culture, and Society (1-3 Credit Hours)

A study of selected topics in language, culture and society. These courses will appear in the course schedule and will be more fully described by academic advisors.

CGE 295 Topics in English for Academic Purposes (1-3 Credit Hours)

A study of selected topics in English for academic purposes. These courses will appear in the course schedule and will be more fully described by academic advisors.

CGE 296 Topics in Language, Culture, and Society (1-3 Credit Hours)

A study of selected topics in language, culture and society. These courses will appear in the course schedule and will be more fully described by academic advisors.

CGE 368 Internship (1-3 Credit Hours)

A structured work experience which allows students to apply skills and further develop knowledge related to their program of study in a multicultural and multilingual context. Students must work for at least 50 hours per course credit.

Prerequisites: Junior standing; permission of course instructor

CGE 395 Topics in English for Academic Purposes (3 Credit Hours)

A study of selected topics in English for academic purposes. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: Junior standing or approval of the department director

CGE 396 Topics in Language, Culture, and Society (3 Credit Hours)

A study of selected topics in language, culture and society. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: Junior standing or approval of the department director

CGE 449/549 Linguistics for Working with Multilingual Populations (3 Credit Hours)

This course introduces fundamental concepts in linguistics essential for working with multilingual populations. Students examine core structural components of language including sound systems, word formation, sentence structure, and meaning, developing skills to analyze linguistic data across diverse languages and global English varieties. The course examines the intricate relationships between language, culture, and society through topics such as linguistic worldviews, regional and social variation, multilingualism, writing systems, and language-based discrimination. This course includes a service-learning component which involves working directly with local multilingual learners at ODU and within the community.

Prerequisites: Junior standing or approval of the instructor

CGE 450/550 Social Justice & Literacy for Immigrant and Refugee Learners (3 Credit Hours)

This course provides an introduction to issues critical to the education of immigrant- and refugee-background learners. Students will learn to actively participate in refugee and immigrant communities, acquire an awareness of this population's experiences and needs, and explore issues related to social justice, education, language, and access. Language development theories and pedagogical strategies to engage collaboratively and compassionately with multilingual and multicultural newcomers are explored and practiced.

Prerequisites: Junior standing or approval of the instructor

CGE 496/596 Topics in Language, Culture, and Society (3 Credit Hours)

The advanced study of selected topics in language, culture, and society designed to permit small groups of qualified students to work on subjects of mutual interest, which because of their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: Junior standing or approval of the department director

CHEM - Chemistry and Biochemistry

CHEM 103 Preparatory Chemistry (3 Credit Hours)

An introductory course designed to acquaint the student with the basic principles of chemistry.

Prerequisites: knowledge of basic algebra

CHEM 105N Introductory Chemistry (3 Credit Hours)

This course is the first part of a two-semester sequence of chemistry covering topics in general, organic, and biological chemistry. In this part, an introduction to the principles of inorganic (general) chemistry is provided. The topics to be covered include measurements, atoms and elements, compounds and their bonds, energy and matter, gases, solutions, acids and bases, chemical reactions and quantities, chemical equilibrium, and nuclear chemistry. This course does not meet the prerequisite for CHEM 123N, and cannot be used toward the CHEM major or minor. Students wishing to pursue advanced study in chemistry should take CHEM 121N, CHEM 122N, CHEM 123N, and CHEM 124N. Credit for CHEM 105N is not allowed if a student has prior credit for CHEM 121N. CHEM 105N + CHEM 106N satisfy four credits of the University's Nature of Science general education requirement.

Prerequisites: knowledge of basic algebra

Corequisites: CHEM 106N

CHEM 106N Introductory Chemistry Laboratory (1 Credit Hour)

An introduction to common laboratory techniques and the process of science is provided. CHEM 105N + CHEM 106N satisfy four credits of the University's Nature of Science general education requirement.

Pre- or corequisite: CHEM 105N

CHEM 107N Introductory Organic and Biochemistry (3 Credit Hours)

This course is the second part of a two-semester sequence of chemistry covering topics in general, organic, and biological chemistry. In this part, an introduction to organic compounds and their role in biological systems is provided. The topics to be covered include the structure, nomenclature, and reactivity of organic compounds, the structure and function of important biomolecules, and the chemistry of metabolic pathways. This course does not meet the prerequisite for CHEM 211, and cannot be used toward the CHEM major or minor. Students wishing to pursue advanced study in chemistry should take CHEM 121N, CHEM 122N, CHEM 123N, and CHEM 124N. CHEM 107N + CHEM 108N satisfy four credits of the University's Nature of Science general education requirement.

Prerequisites: CHEM 105N with a grade of C or better

Corequisites: CHEM 108N

CHEM 108N Introductory Organic and Biochemistry Laboratory (1 Credit Hour)

Laboratory experiments involving organic compounds and biomolecules are performed. CHEM 107N + CHEM 108N satisfy four credits of the University's Nature of Science general education requirement.

Prerequisites: CHEM 106N with a grade of C or better

Pre- or corequisite: CHEM 107N

CHEM 120 Foundations of Chemistry I Laboratory for Online Degree Programs (1 Credit Hour)

In this course, students perform laboratory experiments to complement the topics presented in the companion lecture course, CHEM 121N. CHEM 121N + CHEM 120 does not satisfy the university's Nature of Science requirement. This is a distance learning course restricted to students in an online degree program.

Pre- or corequisite: CHEM 121N

CHEM 121N Foundations of Chemistry I Lecture (3 Credit Hours)

This is the first of a two-course series, designed for science and engineering majors, that prepares the student for subsequent studies in molecular science and constitutes the foundation for all upper-level chemistry courses. Topics include the descriptive chemistry of selected elements, modern atomic and molecular structure, stoichiometry, thermochemistry, and gas laws. A student receiving credit for CHEM 121N cannot receive additional credit for CHEM 103 or CHEM 105N. CHEM 121N + CHEM 122N satisfy 4 credits of the University's Nature of Science general education requirement. Pre- or **Prerequisites:** MATH 102M or MATH 103M or higher with a grade of C or better and a qualifying score on the Chemistry Placement Exam or successful completion of the Chemistry Placement online modules or CHEM 103 or CHEM 105N with a grade of C or better

Corequisites: CHEM 122N or CHEM 120

CHEM 122N Foundations of Chemistry I Laboratory (1 Credit Hour)

Laboratory experiments are designed to complement the topics presented in the companion lecture course, CHEM 121N. A student receiving credit for CHEM 122N cannot receive additional credit for CHEM 106N. CHEM 121N + CHEM 122N satisfy 4 credits of the University's Nature of Science general education requirement.

Pre- or corequisite: CHEM 121N

CHEM 123N Foundations of Chemistry II Lecture (3 Credit Hours)

This is the second of a two-course series, designed for science majors, that prepares the student for subsequent studies in molecular science and constitutes the foundation for all upper-level chemistry courses. Topics include states of matter, solutions, electrochemistry, thermodynamics, equilibria, and kinetics. CHEM 123N + CHEM 124N satisfy 4 credits of the University's Nature of Science general education requirement.

Prerequisites: CHEM 121N with a grade of C or better

CHEM 124N Foundations of Chemistry II Laboratory (1 Credit Hour)

Laboratory experiments are designed to complement the topics in the companion lecture course, CHEM 123N. CHEM 123N + CHEM 124N satisfy 4 credits of the University's Nature of Science general education requirement.

Prerequisites: CHEM 121N and CHEM 122N with grades of C or better

Pre- or corequisite: CHEM 123N

CHEM 125 Foundations of Chemistry II Lab with Introduction to Chemical Research (2 Credit Hours)

This course introduces students to foundational laboratory skills and research in the chemical sciences. Students will gain experience in experimental design and chemical research through a rotation in a faculty member's research lab.

Prerequisites: CHEM 121N, CHEM 122N, and CHEM 160G with a grade of B or better AND a Chemistry or Biochemistry major

Corequisites: CHEM 123N

CHEM 160G Introduction to Chemistry and Biochemistry Research and Careers (3 Credit Hours)

This course introduces students to information literacy and research in chemistry and biochemistry in the context of future career success. Students will develop skills in searching, evaluating, and citing information required for research projects. Potential career paths and strategies for student success will be investigated to establish a solid platform for development as a chemist or biochemist. Course activities will include field trips to and guest speakers from local industry.

Pre- or corequisite: CHEM 103 or a Nature of Science (N) course

CHEM 171T Influence of Polymers on Society (3 Credit Hours)

In this course, the history of synthetic and natural polymers will be studied from their initial development to modern day. Through these studies, students will learn how polymers are produced, the properties of polymers, and the many application of polymers. Further, the impact these materials have on society will be examined in many different areas such as medicine, electronics, consumer goods and the environment.

CHEM 173T Nutritional Biochemistry (3 Credit Hours)

Students will explore the role biotechnology plays in understanding and advancing nutrition and the effects this has on human health, development and societies. The key biological molecules such as vitamins, amino acids, proteins, fats and carbohydrates and their nutritional functions will be discussed. Nutritional biochemistry as it relates to human development, medicine and the evolution of human species will be explored. Students will review present day nutritional issues such as popular diets, organic foods, farming practices and advances such as genetically modified foods.

CHEM 175T Neurotechnology (3 Credit Hours)

Neurotechnology is the technology used to understand (assessment neurotechnology) and moderate (intervention neurotechnology) brain chemistry with regards to various aspects of consciousness, thought, memory, perception, addiction and other higher order activities and disorders in the brain. From pharmaceutical drugs to brain scanning, the impact of neurotechnology affects nearly everyone either directly or indirectly - for example: drug use for depression, sleep, ADD, or neurotic behavior; cancer scanning; stroke rehabilitation; etc. This course will explore the basics of neurotechnology and its impact on human behavior and performance as well as broader impacts on society. Further, students will learn how neurotechnology is used to assess and intervene in the neurochemistry of the brain with a particular emphasis on addictive behavior and neurodegenerative disorders.

CHEM 195 Selected Topics (1-3 Credit Hours)

Selected laboratory or lecture topics designed for students who need to supplement a transfer course to fulfill a course requirement.

Prerequisites: permission of the chief departmental advisor or chair of the department

CHEM 197 Undergraduate Research Experience in Chemistry and Biochemistry (0 Credit Hours)

Student participation in a supervised, undergraduate research experience for which credit will not apply to the degree. Experience must be related to the student's major, minor or career area of interest.

Prerequisites: permission of the instructor

CHEM 211 Organic Chemistry I Lecture (3 Credit Hours)

Introduction to organic compounds, isomerism and nomenclature, stereochemistry and conformational analysis, in depth mechanistic understanding of proton transfer reactions, substitution and elimination reactions, and addition to C=C bonds.

Prerequisites: CHEM 123N with a grade of C or better

CHEM 212 Organic Chemistry I Laboratory (2 Credit Hours)

Experience is offered in fundamental laboratory techniques applicable to the characterization, separation and purification of various organic compounds including stereoisomers and introduction to organic reactions.

Prerequisites: CHEM 124N or CHEM 125 with a grade of C or better

Pre- or corequisite: CHEM 211 with a grade of C or better

CHEM 213 Organic Chemistry II Lecture (3 Credit Hours)

Chemistry of carbon compounds with in-depth treatments of reaction mechanisms, modern spectral techniques, and new synthetic methods to meet the needs of chemistry and biochemistry majors.

Prerequisites: CHEM 211 with a grade of C or better

CHEM 214 Organic Chemistry II Laboratory (2 Credit Hours)

Experience is offered in synthetic, separation, and analytical methods of organic chemistry. Modern synthetic and spectroscopic techniques are introduced.

Prerequisites: CHEM 212 with a grade of C or better

Pre- or corequisite: CHEM 213 with a grade of C or better

CHEM 216 Advanced Organic Chemistry Laboratory (2 Credit Hours)

Experience is offered in advanced organic reactions and spectroscopic techniques. In addition, students will carry out a short, customized, research project in Organic Chemistry or Organic Materials.

Prerequisites: CHEM 211 and CHEM 212 with a grade of C or better; approval by the course instructor or coordinator

Pre- or corequisite: CHEM 213

CHEM 320T Survey of Forensic Science (3 Credit Hours)

This three-credit general education T course (Impacts of Technology) will delve into the principles and practices of forensic science, including crime scene investigation, evidence collection, and analysis using advanced technological methods. The course covers a wide range of forensic disciplines, emphasizes the legal and ethical aspects of forensic work, and includes case studies to illustrate the practical applications of technology in solving crimes. Through interdisciplinary collaboration and critical thinking, students will gain a comprehensive understanding of the crucial role technology plays in modern forensic science.

Prerequisites: Completion of CHEM 123N with a grade of C or better

CHEM 321 Analytical Chemistry Lecture (3 Credit Hours)

A study of the fundamental principles of quantitative chemical analysis including the application of principles of equilibria to analytical processes. Emphasis is given to gravimetric and titrimetric methods as well as consideration of electrical, optical, and other methods of chemical analysis.

Prerequisites: CHEM 123N and MATH 163 or MATH 205 with a grade of C or better

CHEM 322 Analytical Chemistry Laboratory (2 Credit Hours)

Statistical principles or measurements and error analysis are integrated with experiments designed to evaluate and refine techniques of fundamental measurements to a level of analytical competency. These techniques are applied to the analysis of samples using gravimetric, titrimetric, electrical and optical methods.

Prerequisites: CHEM 124N or CHEM 125 with a grade of C or better

Pre- or corequisite: CHEM 321 or permission of the instructor

CHEM 325 Forensic Biochemistry and Microscopy with Laboratory (3 Credit Hours)

This 3-credit upper-level undergraduate course explores the intersection of biochemistry and microscopy in forensic science. Students will gain an in-depth understanding of biochemical principles and techniques used to analyze biological evidence in criminal investigations, including blood, hair, and bodily fluids. The course emphasizes the application of advanced microscopy methods such as light, fluorescence, and electron microscopy to identify and characterize forensic samples. Through a combination of lectures, case studies, and hands-on laboratory work, students will develop skills in sample preparation, molecular analysis, and the interpretation of forensic data. Topics covered include protein analysis, DNA/RNA profiling, toxicology, and the role of microscopy in identifying trace evidence at crime scenes. By the end of the course, students will be equipped with the knowledge to apply biochemistry and microscopy tools to real-world forensic investigations and casework.

Prerequisites: CHEM 213

Pre- or corequisite: A grade of C or better in CHEM 214

CHEM 331 Physical Chemistry Lecture I (3 Credit Hours)

Quantum chemistry, molecular structure, and spectroscopy.

Prerequisites: CHEM 321, CHEM 213, MATH 212 and PHYS 231N-PHYS 232N with a grade of C or better

CHEM 332W Experimental Physical Chemistry I (2 Credit Hours)

A laboratory class focusing on a variety of physical chemical techniques. Topics may include electronic, vibrational (Raman) and NMR spectroscopies, calorimetry, viscosity, and atomic force microscopy. This is a writing intensive course, aiming to achieve an in-depth understanding of the physical principles underlying the techniques.

Prerequisites: grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

Pre- or corequisite: CHEM 331 with a grade of C or better

CHEM 333 Physical Chemistry Lecture II (3 Credit Hours)

Chemical thermodynamics of pure substances and solutions, chemical equilibrium, electrochemistry, chemical kinetics, and statistical thermodynamics.

Prerequisites: CHEM 331 with a grade of C or better

CHEM 334W Experimental Physical Chemistry II (2 Credit Hours)

A laboratory class focusing on a variety of physical chemical techniques. Topics may include X-Ray Diffraction, Bomb Calorimetry, Thermal Gravimetric Analysis (TGA), Conductance of Solutions, and Polymer Physical Properties. This course may also include a team project that will incorporate many of the techniques learned in the physical chemistry lab sequence. This project will introduce the students to working as a team to address a specific challenge such as one might encounter in an industrial or government laboratory setting. This is a writing intensive course.

Prerequisites: grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

Pre- or corequisite: CHEM 332W and CHEM 333 with a grade of C or better

CHEM 339T The Chemistry of the Environment (3 Credit Hours)

This class explores the impact of chemical technologies on current environmental topics using basic chemical principles and the scientific method as standards for evaluating and understanding pressing environmental issues. Topics include global and ocean warming, air pollution, atmospheric ozone depletion, effects of enhanced UV light, acid rain and ocean acidification, toxic heavy metals, radioactivity and nuclear power plant disasters, indoor air quality and radon, water pollution, sewage and water treatment, drinking water quality, waste disposal and plastics, pesticides, and the food chain. The course will use math to a modest degree including basic Algebra. It is highly recommended that students have passed a college level algebra math class (e.g., MATH 102M or MATH 103M or higher) and one year of high school chemistry.

Prerequisites: Any General Education Nature of Science (N) course

CHEM 343T Science and Technology in Art (3 Credit Hours)

This combined lecture and lab course will explore the chemical and physical properties of artists' materials from pigments and binders to ceramics. Topics will include the nature of light and color, historical origins and development of pigments and artistic methods, synthesis of dyes and pigments, and the application of technology to art historical analysis. The course will include hands-on experience with modern laboratory equipment and field trips to local museums and conservation labs.

Prerequisites: Completion of one Nature of Science general education course or permission of the instructor

CHEM 351 Inorganic Chemistry (3 Credit Hours)

This foundational course provides an introduction to inorganic chemistry. Topics include periodic law, bonding theory, oxidation/reduction, acid/base theory, descriptive chemistry of the main group, an introduction to transition metal coordination chemistry, and human applications of inorganic chemistry.

Prerequisites: Grade of C or better in CHEM 211

CHEM 352 Inorganic Chemistry Laboratory (2 Credit Hours)

Synthesis of metal and nonmetal inorganic compounds and organometallic compounds, their characterization by physical methods, and a study of their properties.

Prerequisites: CHEM 124N or CHEM 125 and CHEM 211 each with a grade of C or better

Pre- or corequisite: CHEM 351 with a grade of C or better

CHEM 359 Forensic Chemistry with Laboratory (3 Credit Hours)

Students will develop familiarity of scientific laboratory and evidentiary practices within the subfield of forensic chemistry as well as perform inquiry-based coursework on topics of importance within forensic science. Topics will include toolmark, serial number restoration and ballistic analysis; blood alcohol analysis; microscopic and chemical analysis of fibers; glass, soil and trace evidence analysis; fingerprint analysis; handwriting analysis; analysis of residues of explosives, accelerants, and unknown chemicals.

Prerequisites: CHEM 211 and CHEM 212

CHEM 365 Undergraduate Teaching Experience (1-3 Credit Hours)

Teaching experience in a chemistry classroom or laboratory setting under the direct supervision of the course instructor. Available for Pass/Fail grading only.

Prerequisites: junior standing and/or approval of the appropriate departmental coordinator

CHEM 367 Cooperative Education (1-3 Credit Hours)

May be repeated for credit. Student participation for credit is based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and the Cooperative Education program prior to the semester in which the work experience is to take place. Available for pass/fail grading only. (qualifies as a CAP experience)

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

CHEM 369 Chemistry Practicum (1-3 Credit Hours)

A student may choose a coop, internship, research, or student teaching experience to gain out-of-class experience related to the major.

Prerequisites: CHEM 331/CHEM 332W (Chemistry major) or CHEM 441/CHEM 442W (Biochemistry major) and the approval of the appropriate departmental coordinator

CHEM 411/511 Natural Products Chemistry in the Caribbean (4 Credit Hours)

A bioinorganic and natural products course that entails the chemistry of the use of chromium, vanadium, and herbs in medicine and the use of tunicates as biomonitors of heavy metal pollution in Jamaica. This is a study abroad course intended for the Maymester term.

Prerequisites: CHEM 211 and CHEM 212 with a C or better

CHEM 415/515 Intermediate Organic Chemistry (3 Credit Hours)

An in-depth look at organic reaction mechanisms, including polar, pericyclic, radical and organometallic reactions.

Prerequisites: CHEM 211-CHEM 213 with a grade of C or better

CHEM 421/521 Instrumental Analysis Lecture (3 Credit Hours)

Designed to be taken concurrently with CHEM 422/CHEM 522. A study of the basic principles of spectroscopic, chromatographic, and electrochemical methods of quantitative chemical analysis. Methods of chemical instrumentation are also included.

Prerequisites: CHEM 321, MATH 205 or MATH 211, and PHYS 232N or PHYS 112N each with a grade of C or better

CHEM 422/522 Instrumental Analysis Laboratory (3 Credit Hours)

An intensive laboratory study of the principles of analytical chemistry. Experiments in spectroscopic, chromatographic, and electrochemical methods are conducted to illustrate fundamental principles and to provide the opportunity to develop skills in the use of instrumentation for chemical measurement.

Prerequisites: CHEM 322

Pre- or corequisite: CHEM 421

CHEM 439/539 Introduction to Pharmaceutical Chemistry (3 Credit Hours)

An introduction to the fundamental concepts of drug action including pharmacodynamics (effect of drugs on the body) and pharmacokinetics (ADME: absorption, distribution, metabolism and elimination) of drugs; an introduction to the process of new drug discovery and synthesis will also be taught.

Prerequisites: CHEM 213 and CHEM 214 (or CHEM 216) with a grade of "C" or higher; CHEM 321 and CHEM 441 recommended

CHEM 441/541 Biochemistry Lecture (3 Credit Hours)

This course is a one-semester survey of the major molecular constituents, bioenergetics, enzymes, nucleic acid structure, and genetic information transfer pathways fundamental to biochemistry.

Prerequisites: CHEM 211 with a grade of C or better

CHEM 442W/542 Biochemistry Laboratory (4 Credit Hours)

Principles and techniques of biochemical and immunological procedures involving protein characterization and isolation, enzymology, bioinformatics, and common molecular biology techniques for nucleic acids will be presented. This is a writing intensive course.

Prerequisites: CHEM 214 with a grade of C or better and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better

Pre- or corequisite: CHEM 441/CHEM 541 with a grade of C or better

CHEM 443/543 Intermediate Biochemistry (3 Credit Hours)

This course presents an in-depth study of protein structure, folding, and synthesis. The major metabolic pathways will be studied in detail regarding thermodynamics and mechanism of regulation or control of individual enzymes and entire metabolic pathways. Concepts of metabolic disease will be introduced and effects on integrated metabolism will be presented.

Prerequisites: CHEM 441/CHEM 541 with a grade of C or better or equivalent

CHEM 449/549 Environmental Chemistry (3 Credit Hours)

An overview of the natural chemical systems operating in the atmosphere, in the terrestrial environment (both water and soils), and in the oceans, and the potential effects that human activities may have on them. Specific topics include the origin and evolution of the earth and life, the chemistry of the atmosphere (including the ozone layer and greenhouse effect), the organic and inorganic components of soil and water, chemical weathering of rocks, metal complexation, biological processes in soil and water, and global-scale chemical processes.

Prerequisites: CHEM 123N, CHEM 213 and CHEM 321 with a grade of C or higher or permission of the instructor

CHEM 451/551 Advanced Inorganic Chemistry (3 Credit Hours)

Theoretical aspects of modern inorganic chemistry: bonding theories, stereochemistry, acid-base theories, coordination compounds, organometallic and bioinorganic compounds.

Prerequisites: CHEM 351 with a grade of C or better

CHEM 452/552 Advanced Inorganic Chemistry Laboratory (2 Credit Hours)

Synthesis of metal and nonmetal inorganic compounds and organometallic compounds, their characterization by modern physical methods, and a study of their properties.

Prerequisites: CHEM 351 and CHEM 352

CHEM 453/553 Essentials of Toxicology (3 Credit Hours)

Fundamental principles of toxicology: dose-response relationship, toxicologic testing, chemical and biological factors influencing toxicity, organ toxicology, carcinogenesis, mutagenesis, teratogenesis.

Prerequisites: CHEM 213 with a grade of C or higher

CHEM 459 Advanced Forensic Chemistry and Crime Scene Investigation (3 Credit Hours)

Application of advanced scientific practices for the identification and collection of evidence, documentation, and techniques for crime scene reconstruction (e.g., blood stain pattern analysis and interpretation, accident reconstruction; ballistics) used in crime scene investigation. Topics include history and theory of crime scene investigation; nature and properties of evidence types; safety and security of the crime scene; crime scene search techniques; photography and videography used for documentation of crime scene evidence; report writing and case preparation. This laboratory course will culminate with a group crime scene reconstruction project.

Prerequisites: CHEM 359

Pre- or corequisite: CHEM 325

CHEM 460/560 Frontiers in Nanoscience and Nanotechnology (1 Credit Hour)

Nanotechnology presents unparalleled opportunities for advances in technology and medicine. Simultaneously, nanotechnology presents new challenges to organisms and to our environment. These undefined risk factors threaten to slow the development of new technologies and novel medical therapies. This course will review: structure, synthesis and properties of key nanomaterials; key applications of nanomaterials in technology and medicine; and impacts of nanomaterials on plant and animal physiology and the environment more generally. This course will be team-taught by faculty members in Biological Sciences, Chemistry and Biochemistry, and Engineering.

Prerequisites: junior standing

CHEM 461 Forensic Professional Practice (3 Credit Hours)

An examination and evaluation of scientific evidence in criminal investigations as well as individual and group activities focusing on professional practices of forensic science. Topics will include courtroom testimony, introduction to law, quality assurance and chain of custody as well as ethical considerations in forensic science. and the criminal justice system.

Prerequisites: CHEM 359

CHEM 468 Research Methods in Mathematics and Science (3 Credit Hours)

Emphasizes the tools and techniques used to solve scientific problems. Topics include use and design of experiments, use of statistics to interpret experimental results, mathematical modeling of scientific phenomena, and oral and written presentation of scientific results. Students will perform four independent inquiries, combining skills from mathematics and science to solve research problems. Required for Chemistry teaching licensure track; not available as upper-division elective in content area.

Prerequisites: CHEM 331, STEM 201, and admission to the MonarchTeach program

CHEM 485 Chemistry and Biochemistry Seminar (1 Credit Hour)

The formal presentation of a chemical or biochemical topic before students and faculty. Students will also take Major Field Test during this course.

Prerequisites: Senior standing; restricted to chemistry and biochemistry majors

Pre- or corequisite: CHEM 421 or CHEM 443

CHEM 490 Senior Thesis I (1 Credit Hour)

Part one of a two-semester thesis project involving literature research, development of scientific writing skills, and obtaining lab experience using a variety of techniques and equipment. Each student will undertake a research experience under the supervision of a departmental faculty member. A preliminary report of research findings is required at the end of the semester.

Prerequisites: Chemistry or Biochemistry major; Senior standing; Cumulative GPA of 3.20 or higher

CHEM 494 Entrepreneurship in Chemistry and Biochemistry (3 Credit Hours)

A high level of economic activity and development for any industrialized nation has at its core a strong STEM component. Within this component, the fields of chemistry and biochemistry form one of the strongest interdisciplinary links by providing an understanding of the processes and products at a molecular level. This course will allow students to combine their academic knowledge in chemistry and biochemistry with the needs of real-world businesses to formulate an economically viable business plan that encompasses a scientifically and economically sound proof-of-concept.

Prerequisites: Junior standing

CHEM 495/595 Selected Topics (1-3 Credit Hours)

Study of selected topics.

Prerequisites: permission of the instructor

CHEM 497 Independent Study (1 Credit Hour)

An opportunity is afforded students to undertake independent study or an original investigation under the direction of a faculty member.

Prerequisites: course background appropriate to the proposed study project and approval of the department chair and the faculty/research advisor

CHEM 498 Independent Study (2 Credit Hours)

An opportunity is afforded students to undertake independent study or an original investigation under the direction of a faculty member.

Prerequisites: course background appropriate to the proposed study project and approval of the department chair and the faculty/research advisor

CHEM 499 Senior Thesis II (2 Credit Hours)

Continuation of CHEM 490. The research culminates in a thesis that includes a literature review, description of methods, results and conclusions, and an oral presentation.

Prerequisites: CHEM 490 and a cumulative GPA of 3.20 or better

CHIN - Chinese

CHIN 111F Beginning Chinese (6 Credit Hours)

This course focuses on the fundamental elements of the Chinese language within a cultural context. Emphasis is placed on building a foundation of basic listening, speaking, reading, and writing skills. The course includes Chinese Pinyin phonetic system, character formation, basic sentence structures, and Chinese culture and cultural activities. Students are expected to comprehend and respond to essential topics in Chinese and demonstrate their cultural awareness.

CHIN 212 Intermediate Chinese (6 Credit Hours)

This course continues to focus on the fundamental elements of the Chinese language within a cultural context. Emphasis is placed on the development of basic listening, speaking, reading, and writing skills. The course includes Chinese basic sentence patterns and real-life topics on Chinese cultural activities. Students are expected to comprehend and respond with grammatical accuracy to spoken and simple written Chinese and demonstrate their cultural awareness.

Prerequisites: CHIN 111F

CHIN 295 Topics in Chinese (1-3 Credit Hours)

Study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest.

Prerequisites: Junior standing or permission of instructor

CHIN 311 Advanced Chinese Language and Culture I (3 Credit Hours)

This course takes students to an advanced level of communicative competence and language social interaction. The course includes more complex sentence patterns and Chinese cultural activities. Students learn to respond to topics of interest to college-age students, such as campus life, career planning, and Chinese cultural traditions. Students are exposed to the speech of native speakers in real cultural situations and develop sensitivity to communicative strategies and cultural competency.

Prerequisites: CHIN 212

CHIN 312 Advanced Chinese Language and Culture II (3 Credit Hours)

This course takes students to a higher level of communicative competence and language social interaction. The course gradually introduces more formal speech and written-style language in the real cultural context. The course trains students to interpret textual and cultural meanings and to express their opinions and cultural understanding by using connected paragraph length discourse.

Prerequisites: CHIN 311

CHIN 395 Topics in Chinese (1-3 Credit Hours)

Selected topics, genres, authors and/or literary, cultural, sociopolitical, or historical movements in the Chinese-speaking world. May be repeated for credit if the topic is different.

Prerequisites: Junior standing or permission of the instructor

CHIN 396 Topics in Chinese (1-3 Credit Hours)

Seminars engage students in in-depth study of a specified topic through readings, research and oral and written student reports. Special attention is paid to theoretical and bibliographic issues. Topics vary according to the areas of expertise and professional interests of departmental faculty. May be repeated if topics are different.

Prerequisites: Junior standing or permission of the instructor

CHIN 495 Topics in Chinese (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. May be repeated for credit if the topic is different.

Prerequisites: Senior standing or permission of the instructor

COMM - Communications

COMM 101R Public Speaking (3 Credit Hours)

Preparation, delivery, and analysis of types of speeches with emphasis on extemporaneous speaking.

COMM 103R Voice and Diction (3 Credit Hours)

An introduction to the analysis and practice of effective voice and articulation. Applications across various communication contexts, such as public communication, media, and social communication.

COMM 112R Introduction to Interpersonal Communication (3 Credit Hours)

An introduction to concepts, processes, and effects of communication in personal and social relationships. Emphasis on fundamental communication skills necessary for the formation and maintenance of relationships.

COMM 126R Honors: Public Speaking (3 Credit Hours)

Open only to students in the Honors College. A study of the theory, strategies, and techniques of public speaking with emphasis on its application to effective conflict resolution.

COMM 195 Topics in Communication (1-3 Credit Hours)

A study of selected topics designed for non-majors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in a booklet distributed to all academic advisors.

COMM 196 Topics in Communication (1-3 Credit Hours)

A study of selected topics designed for non-majors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in a booklet distributed to all academic advisors.

COMM 200S Introduction to Human Communication (3 Credit Hours)

An introduction to the discipline and methods of human communication. Survey of the major approaches to studying communication across the range of human communication contexts and functions.

COMM 225 Introduction to Production Technology (3 Credit Hours)

Fundamentals of construction, lighting, and production techniques in contemporary theatre and film. Students will apply acquired skills to active productions for ODU Theatre and Film productions.

COMM 226S Honors: Introduction to Human Communication (3 Credit Hours)

Open only to students in the Honors College. An introduction to the discipline and methods of human communication. Survey of the major approaches to studying communication across the range of human communication contexts and functions.

COMM 227A Honors: Film Appreciation (3 Credit Hours)

Open only to students in the Honors College. This class will focus on both contextual and close text analysis of masterworks as they have influenced film art and industry. Students in this course are expected to develop basic research, communication, viewing and critical thinking skills as they apply their knowledge to the analysis of the film experience.

COMM 244 Introduction to Production Design (3 Credit Hours)

An introduction to principles, methods, and materials used in designing stage and film productions.

COMM 260 Understanding Media (3 Credit Hours)

An examination of mass communication--books, newspapers, magazines, radio, TV, film, sound recordings, and the Internet--as a global institution, industry, and social force. Media literacy skills are emphasized, as are matters of technology, content, economics, history and impact.

COMM 269 Visual Storytelling (3 Credit Hours)

This online course will introduce students to the process of making movies. Students will learn basic conceptual and technical principles of the filmmaking process using personal equipment, such as an iPhone. The course is intended for non-cinema majors and does not satisfy the prerequisite requirement for higher-level production courses.

COMM 270A Film Appreciation (3 Credit Hours)

This class focuses on both contextual and close text analysis of masterworks as they have influenced film art and industry. Students in this course are expected to develop basic research, communication, viewing and critical thinking skills as they apply their knowledge to the analysis of the film experience.

COMM 271 Introduction to Filmmaking (3 Credit Hours)

This course will introduce the beginning student to making movies. Students will learn the basics of working with cameras, lights, sound recording, video editing and post production. This is a hands-on production course and the required prerequisite to most higher-level production courses. Students who complete COMM 271 cannot enroll in COMM 269 and have that course count toward their major.

COMM 272G Digital Literacy (3 Credit Hours)

Digital literacy refers to the unequal understanding people have about how digital technologies work, how that work is regulated, and how digital technologies are used - by us and by others - as effective and strategic communication and information tools. This course offers students a pathway to become digitally literate by teaching them how the work they perform on digital platforms impacts their interpersonal, communal, and social interactions as consumers, citizens, and content producers.

COMM 278G Advertising & Society (3 Credit Hours)

Advertising influences consumer beliefs and decision-making. This course introduces students to fundamental concepts in advertising and consumer culture while developing skills and knowledge in information and digital literacy. Topics covered include consumerism and resistance, representation in advertising, audience segmentation, and digital advertising. As they learn to critically evaluate and analyze advertising and its audiences, students will practice message evaluation and research skills. Students will also consider legal and ethical use of information in advertising.

COMM 280T Entertainment Technologies (3 Credit Hours)

This course is an introduction to the entertainment industry including working methods, processes, and equipment for live, recorded, and interactive entertainment. The exploration will include theatre, opera, dance, concert productions, theme parks, themed-retail, film production, immersive, interactive and virtual environments, and gaming technology. Attention is given to the positive and negative aspects of entertainment technologies and how they impact culture and society.

COMM 295 Topics in Communication (1-3 Credit Hours)

A study of selected topics designed for nonmajors or for elective credit within a major. These courses will appear in the course schedule and will be more fully described by academic advisors.

COMM 300 International Sojourning (3 Credit Hours)

This course is designed to prepare ODU study-abroad students for successful international sojourns. Topics to be covered include culture, culture shock, reverse culture shock and strategies for a successful study-abroad experience.

Prerequisites: junior standing or permission of instructor

COMM 301 Critical Methodologies (3 Credit Hours)

This survey course introduces students to critical methodologies utilized in the study of media texts. Through case studies and hands-on exercises, students will learn how to study the production, consumption, and engagement with popular culture and how to decode its meanings.

Prerequisites: COMM 260

COMM 302 Communication Research Methods I (3 Credit Hours)

An introduction to communication research from a social science perspective. Experiment, survey, content analysis and observational approaches are covered. Students learn statistical data collection and data analysis techniques.

Prerequisites: STAT 130M, COMM 200S and six hours of 300-400 level communication courses or permission of instructor

COMM 303 Introduction to Strategic Communications (3 Credit Hours)

A study of interactions within and among communication workplaces and the public. Attention is given to the media, promotions, community relations, and public information.

Prerequisites: COMM 308W or permission of the instructor

COMM 304 Advanced Public Speaking (3 Credit Hours)

An analysis and expression of professional speeches, delivered in public, business and special occasion contexts. Attention is given to audience analysis, library research, development of arguments/evidence as content, creation and use of professional visual aids, expression of appropriate verbal and nonverbal speech cues, speaker credibility, and extemporaneous delivery skills.

Prerequisites: COMM 101R

COMM 305 Work-Life Communication (3 Credit Hours)

This course is an examination of both the theory and practice of communication in the professional setting. Content includes communication theory, work-life communication, as well as the roles of interpersonal, organizational, and mediated communication as related to the workplace.

Prerequisites: Junior standing or permission of instructor

COMM 307 Understanding European Film (3 Credit Hours)

This course provides students with an historic overview of films from a variety of European countries. Students gain the vocabulary necessary to analyze individual films and for the comparative analysis of films from different cultural and historical contexts. The course will focus on issues such as national and individual identity, film as aesthetic form, gender and sexuality, and popular culture.

Prerequisites: Junior standing or permission of instructor

COMM 308W Effective Media Writing (3 Credit Hours)

This writing-intensive course equips students with the foundational skills for effective writing across multiple media platforms, including print, digital, and broadcast. Emphasizing clarity, accuracy, and ethical practices, students will learn to craft news stories, feature articles, and press releases while adapting their work to diverse audiences. The course also introduces the role of data in enhancing media writing, demonstrating how analytics can shape content strategy and improve audience engagement. Students will also integrate multimedia elements and explore storytelling techniques essential for professional media environments. Ultimately, this prerequisite course for the Journalism/Public Information and Strategic Communication concentrations seeks to ensure a solid writing foundation for all future media professionals.

Prerequisites: Sophomore standing

COMM 309 Media Relations (3 Credit Hours)

Companies and organizations from just about every sector have a person or in some cases entire offices tasked with media relations. This course will take an in-depth look at the evolving landscape of multimedia communications, including seismic changes in the media in general, the rise of bloggers, influencers, and other shared media models, and the increasing role that content generation plays in traditional media relations. The course will include hands-on instruction and projects in content generation, media pitching and contact lists, media interviews, press conferences, as well as non-traditional earned media practices.

Prerequisites: COMM 260 or permission of the instructor

Pre- or corequisite: COMM 303 or permission of the instructor

COMM 310 Strategic Communications Campaigns (3 Credit Hours)

This course emphasizes a multi-disciplinary and multi-media approach to problem solving. Students will prepare a strategic communication campaign on behalf of a real client. It will include the production of research, strategy, and media material for use by the client. These materials, in turn, may be used in student portfolios as examples of professional capabilities.

Prerequisites: COMM 260 or permission of the instructor

Pre- or corequisite: COMM 303 or permission of the instructor

COMM 311 Strategic Communications Tactics (3 Credit Hours)

This course provides students skills needed to enter the workforce with a robust set of domain-specific skills, which includes practicing those skills in a realistic, hands-on setting, so they feel more ready to win and succeed in jobs in the competitive, modern marketplace. This course will provide relevant skills training to strategic communication students, while fortifying these students for professional success.

Prerequisites: junior standing

Pre- or corequisite: COMM 303

COMM 314 Nonverbal Communication (3 Credit Hours)

An introduction to the theories, processes and effects of communication in nonverbal codes. Topics include kinesics, proxemics and paralanguage. Critical analysis and contemporary research emphasized.

Prerequisites: Junior standing and COMM 200S, or permission of the instructor

COMM 315W Sex, Gender, and Communication (3 Credit Hours)

An overview of communication theory and research examining gendered verbal and nonverbal communication. Topics include communication differences as a function of gender, theories that seek to explain these differences, and critical examination of social practices that create gender prescriptions. This is a writing intensive course.

Prerequisites: Junior standing, COMM 200S, and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, or permission of the instructor

COMM 321 Production Management for Television and Stage (3 Credit Hours)

This course assists students in understanding the elements of production management both in television and on stage. The course emphasizes organizational and communication skills; technical production knowledge; professional rehearsal and performance protocol according to the rules of AEA, AFTRA and SAG as well as basic production budgeting and scheduling.

Prerequisites: Junior standing or permission of the instructor

COMM 323 Leadership and Events Management (3 Credit Hours)

The course covers the systematic process of organizational assessment from basic communication channels (verbal, printed, and electronic modes of communication), to interpersonal and group communication, to the management of events and staff. This course examines the importance of leadership roles within organizations in planning any event as well as the communication dynamics between management and those being supervised.

Prerequisites: COMM 200S or permission of the instructor

COMM 325 Sound Design for Stage and Camera (3 Credit Hours)

This class introduces the concepts and techniques of sound design and sound effects for the stage and camera. Students learn design of sound elements in both a live and recorded environment as well as learn the current equipment and software in digital sound reproduction.

Prerequisites: Junior standing or permission of the instructor

COMM 326 Foundations of Group Communication (3 Credit Hours)

An introduction to the study of communication in task groups. Course reviews foundational literature and emphasizes communication competencies relevant to optimizing group outcomes including group observation, participation, assessment, and leadership.

Prerequisites: Junior standing and COMM 200S or permission of the instructor

COMM 330 The Short Script (3 Credit Hours)

This course builds upon the principles taught in Screenwriting 1 (or equivalent) using the short script as a basis for the exploration. Utilizing concepts of characterization, plot, dialogue and narrative style, students should complete the course with several production-ready short scripts.

Prerequisites: COMM 346 or THEA 346

COMM 333 Persuasion (3 Credit Hours)

An overview of the rhetorical and social scientific theories and research about persuasion and applications in speeches and campaigns.

Prerequisites: COMM 200S or permission of the instructor

COMM 334 Narrative Adaptation (3 Credit Hours)

This screenwriting course explores the ways teleplays, stage plays, and screenplays can be crafted using a variety of primary source materials. Through multiple screenings, writing exercises, and deep reading, it examines what constitutes an adaptable piece of prose and how that material can be transformed. Primary weight is given to the movement from novel to film.

Prerequisites: COMM 346 or THEA 346

COMM 335W Rhetorical Criticism (3 Credit Hours)

With the goal of being able to critique a communication event, students study a variety of rhetorical approaches that may include neo-Aristotelian, generic, feminist, metaphoric, fantasy theme, and pentadic approaches to rhetorical criticism. This is a writing intensive course.

Prerequisites: COMM 101R and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, or permission of the instructor

COMM 339 Entertainment Journalism (3 Credit Hours)

In this course, students learn how to transform casual expressions of opinion about celebrities and media into polished reviews and articles worthy of publication in newspapers, magazines, and online platforms. Students will examine models of good entertainment journalism, past and present, in print, on the Web and in podcasts. In particular, students will consider critical reviews, profiles of artists and entertainers, interviews, and trend stories.

Prerequisites: junior standing

Pre- or corequisite: COMM 260

COMM 340 Media and Popular Culture (3 Credit Hours)

This course examines the basic ways in which the mass media intersect with the currents of contemporary culture. Both historical and critical approaches to the study of mass communication and popular culture trace the full implications of their mutual determination and interdependence.

Prerequisites: COMM 260

COMM 341 Lighting Design for Stage and Film (3 Credit Hours)

This is a production course introducing students to the world of light and shadow, mood and composition by surveying lighting design, its technologies for stage and camera, and such principles as basic electrical theory and stage/studio/location design aesthetics.

Prerequisites: COMM 225/THEA 225 and COMM 271/THEA 271 or permission of instructor

COMM 342 Post-Production 1 (3 Credit Hours)

This course serves as an introduction to the art of video post-production. Students explore the theory and practice of various editing styles in order to gain a better understanding of how stories are constructed in the editing room. The course covers principles of post-production of narrative, documentary, and experimental films. Through demonstrations and hands-on experience, students learn editing techniques with an in-depth examination of tools and approaches in a non-linear editing system.

Prerequisites: COMM 271 or THEA 271 or DANC 271

COMM 344 Introduction to Media Industries (3 Credit Hours)

This course provides students with an overview of a range of media industries, exploring their histories and structures and their impact on contemporary media production. Students will track ongoing industry developments, applying course concepts and learning how media is made and how that process is restricted by a range of social, cultural, political, and economic forces.

Prerequisites: COMM 260

COMM 345 Media Audiences (3 Credit Hours)

This course is designed to introduce students to the major theories and perspectives that inform the ways media audiences are made meaningful to the creation, distribution, promotion, regulation, and evaluation of media and popular culture.

Prerequisites: COMM 260

COMM 346 Screenwriting I (3 Credit Hours)

This course is an introduction to narrative screenwriting focusing on the traditional feature film. Students will study screenwriting principles through text reading, film viewing, script analysis and substantial writing assignments. Focus is on story structure, character development, action, dialogue, and proper screenplay format.

Prerequisites: ENGL 110C with a grade of C or better and ENGL 211C with a grade of C or better

COMM 348 Acting for the Camera (3 Credit Hours)

This course examines the process of building characters for the camera, and the ways in which the conventions of the stage are adapted for the film or video audience.

Prerequisites: THEA 152R

COMM 349 Costume Design for Stage and Camera (3 Credit Hours)

This course explores the design aesthetic, historical context, and contemporary impact on performance of the costume garment and its accessories. Students explore the application of design principles in a practical experience.

Prerequisites: THEA 244

COMM 351 Interpersonal Communication in Organizations (3 Credit Hours)

Focuses on communication theory, research, and applications of a variety of forms of communication in organizational relationships. Topics include superior-subordinate communication, interviewing, and presentations with an emphasis on a diversity of perspectives and types of organizations.

Prerequisites: Junior standing and COMM 200S or permission of the instructor

COMM 353 Animation (3 Credit Hours)

This is a project oriented, studio class that will focus on the art of animated storytelling from the traditional perspective of stop motion animation combined with digital post production. Students will engage in individual research, writing, storyboarding, editing, and sound creation to produce original short animations. Crosslisted with THEA 353.

Prerequisites: COMM 271, DANC 271, or THEA 271

COMM 354 Drafting and Rendering for Stage and Screen (3 Credit Hours)

This course is an intermediate level course designed to introduce the student to the fundamentals of graphic skills necessary for the implementation of a scenic design on either the stage or in front of a lens. Techniques and skills will be demonstrated in drafting (hand and computer generated) and perspective sketching and rendering. Crosslisted with THEA 354.

Prerequisites: THEA 225/COMM 225

COMM 355 Organizational Communication (3 Credit Hours)

Focuses on critical analysis of theory and research organizations as functional communication systems at the individual, dyadic, small group, and organizational levels. Topics include information processing, problem solving, impression management, compliance gaining, and network analysis.

Prerequisites: COMM 200S or permission of instructor

COMM 356 3D Animation 1 (3 Credit Hours)

This is a project-oriented studio class that will focus on the art of animated storytelling through the use of computer-based 3D animation.

Prerequisites: COMM 271 or THEA 271 or DANC 271

COMM 357 3D Animation 2 (3 Credit Hours)

This is a project-oriented studio class that will focus on the art of animated storytelling from the perspective of computer-based 3D animation, building on the skills developed in 3D Animation 1. Students will engage in individual research, writing, storyboarding, editing, and sound creation to produce original short animations.

Prerequisites: COMM 356 or THEA 356

COMM 358 Color for Digital Cinema & TV (3 Credit Hours)

This course will introduce students to color workflow in the digital cinema environment. The focus will be on working with color beginning with the camera, through color correction to delivery, mixing software-specific techniques with a deepening understanding of the underlying theories of color theory and practice. Students will learn and apply industry standard best practices in the field of visual post-production. This is a hands-on workshop style post-production course.

Prerequisites: COMM 271 or DANC 271 or THEA 271

COMM 359 Costume Crafts (3 Credit Hours)

This course will develop design principles and craft techniques to create a wide variety of costume crafts. The course will focus on individual research, design elements and technical challenges. Projects will encourage students to explore textile modification, various applications for clothing design, costume crafts and art materials. Cross-listed with THEA 355.

Prerequisites: Junior standing or permission of the instructor

COMM 361 Editing Aesthetics (3 Credit Hours)

This course is designed to provide students with an in-depth knowledge of the theory of film editing and concepts in film editing such as pacing, rhythm, juxtaposition, and color. The course will encourage students to investigate and understand the effectiveness of various editing techniques deployed by film editors.

Prerequisites: COMM 270A/THEA 270A or COMM 271/THEA 271

COMM 363 Introduction to Journalism (3 Credit Hours)

This class focuses on media literacy and on the role of media in society. Students learn and practice elements of news writing, including writing leads, organizing stories, reporting techniques, and interviewing. Story assignments come from handouts, press releases, press conferences, speeches, and public meetings. Some assignments are completed under simulated deadline pressure in the computer lab. This course is identical to the course previously named Reporting and News Writing I and satisfies that requirement.

Prerequisites: COMM 308W or permission of instructor

COMM 367 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience takes place. May be repeated for credit.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

COMM 368 Internship (3-6 Credit Hours)

A structured work experience with or without remuneration, in an appropriately related disciplinary field. An ePortfolio, 150 hours of site work, plus satisfactory evaluations by supervisor and cooperating faculty member are required. Available for pass/fail grading only. Available to Communication, Theatre, and Dance majors and minors only. Cross-listed with DANC 368 and THEA 368.

Prerequisites: Approval of departmental internship director prior to registration

COMM 369 Research Practicum (3 Credit Hours)

A structured research experience, under the supervision of communication faculty member. A paper evaluating/analyzing the research, a log of research progress, and satisfactory evaluation by the supervising faculty are required.

Prerequisites: Completion of core courses and 6 hours of upper-level major courses; approval of supervising faculty and department chair prior to registration

COMM 372T Introduction to New Media Technologies (3 Credit Hours)

Introduction to new media practices and theories. Focuses upon the powers of composition, networked communities, information management, social networking and identification in digital environments. Students will examine practical applications such as blogging, online mapping and tagging, online collaborative work such as wikis and self composition in online social networks.

Prerequisites: Junior standing or permission of the instructor

COMM 375 Television Production (3 Credit Hours)

This course explores the basic process of producing television from script to presentation.

Prerequisites: COMM 271 or THEA 271 or permission of the instructor

COMM 380 Documentary Production I (3 Credit Hours)

This course offers the student an opportunity to explore the world of documentary filmmaking. Students will perform research to develop evidence in support of a thesis, then utilize the camera to capture a narrative story based on the thesis. Through this process, the student is better able to understand documentary filmmaking. Students will develop and deliver short documentary films by the end of the semester.

Prerequisites: THEA 271 or COMM 271 or DANC 271 with grade of C or higher

COMM 382 Reporting News for Television and Digital Media (3 Credit Hours)

This course focuses on writing for television news and producing online news reports. Students will strengthen their journalistic skills and learn the importance of writing clearly for a viewing audience while working under newsroom deadlines. By the end of the course, students should feel confident in producing accurate, detailed reports for television news and online news sites.

Prerequisites: ENGL 110C and ENGL 211C

COMM 383 Directing the Actor (3 Credit Hours)

This course is designed as a practical guide for directors to elicit strong performances from the actors who tell their stories. The class will establish vocabulary and practice techniques that are equally applicable to work in film or theatre. Ideally, the course will encourage students to think beyond genre as they create work that is both dramatically and humanly compelling.

Prerequisites: COMM 271 or THEA 271 or DANC 271 or THEA 152R

COMM 385 Cinematography (3 Credit Hours)

Introduces students to cinematography. The course explores camera technique, blocking actors, lighting, and cinematography fundamentals. The concepts of the course are applied to fiction and nonfiction cinema. This is a production class.

Prerequisites: THEA 271 or COMM 271 or DANC 271 with grade of C or higher

COMM 386 Post-Production 2 (3 Credit Hours)

This course builds on the fundamentals learned in Post-Production I, exploring advanced post-production techniques in picture editing, color correction and grading, sound editing and mixing, VFX editing, title and graphics editing, chroma key and compositing. The focus will be on mixing software-specific techniques with deepening understanding of the underlying theories of editing, color theory and principles of sound post-production. The students will learn and apply industry standard best practices in the field of audiovisual post-production. This is a hands-on workshop style post-production course.

Prerequisites: COMM 342 or THEA 342

COMM 387 TV News Production (3 Credit Hours)

This course is designed to provide students with an introduction to the reporting, writing, and production aspects of a television news program. Students will learn how to create 15- and 30-minute news broadcasts by developing story ideas and news gathering. Students will also learn the intricacies of shooting and editing video along with the production process involved in recording a live news broadcast. Each student will spend time both in front of and behind the television studio cameras. The goal of this course is to produce weekly news programs worthy of broadcast on local television. Students will assume the roles of reporter, writer, producer, floor director, photojournalist, videographer, technician, and more.

Prerequisites: COMM 271 or THEA 271 or DANC 271

Pre- or corequisite: COMM 382 or ENGL 382

COMM 388 Motion Picture Aesthetics (3 Credit Hours)

This course is designed to develop within students a heightened and multifaceted awareness and appreciation for aesthetics of a particular type - motion picture aesthetics. Aesthetic considerations impact us intellectually, emotionally, psychologically, and viscerally. Professionals most definitely employ a language to filmmaking. One must learn the language of motion picture production and aesthetic design in order to convey concepts to their audiences.

Prerequisites: COMM 270A or THEA 270A

COMM 389 Sound Recording and Mixing for Film (3 Credit Hours)

This course will explore the best concepts in recording, editing and mixing audio for film and post-production. Students will be using Pro Tools hands-on to sync and mix audio to picture. Topics will include location audio, sound design, ADR, mixing, and more.

Prerequisites: COMM 271 or THEA 271 or DANC 271

COMM 395 Topics in Communication (1-3 Credit Hours)

A study of selected topics designed for non-majors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Junior standing and permission of the instructor

COMM 396 Topics in Communication (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Junior standing and permission of the instructor

COMM 400W/500 Intercultural Communication (3 Credit Hours)

This course is designed to introduce students to the study of communication in cultural contexts, the purpose of which is to prepare one to live and work within an increasingly multicultural world. This is accomplished by defining and critically analyzing concepts of culture. Throughout the semester, the course will investigate theories of culture and communication that address the development of cultural identity, intercultural communication competence, the role of verbal and nonverbal communication across cultures, the cultural composition of the U.S., and ethical communication and challenge in a globalized era. This is a writing intensive course.

Prerequisites: COMM 200S and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, or permission of instructor

COMM 401/501 Communication Theory (3 Credit Hours)

An overview of general and contextual theories of communication. Focus is on the nature of communication theory, the role of theory in communication inquiry, and the relationships among theory, research, and practice.

Prerequisites: COMM 200S or permission of the instructor

COMM 402 Communicating Data (3 Credit Hours)

An overview of effective oral, written and visual means to communicate data and to communicate about data to a variety of audiences.

Prerequisites: COMM 101R

COMM 403/503 Public Information and Crisis Communications (3 Credit Hours)

This course introduces students to the basic elements of public information as it pertains to assisting organizations avoid, mitigate and recover from crisis situations. Students will have the opportunity to both observe and participate in crisis communications situations.

Prerequisites: COMM 308W or permission of instructor

COMM 404/504 Emergency Management Communication (3 Credit Hours)

This course introduces students to the multi-layered challenges associated with communication in the event of accidents, crises and natural disasters. In addition to incorporating basic elements of public relations as it pertains to assisting organizations avoid, mitigate and recover from external crisis situations, students will have the opportunity to both observe and participate in crafting multi-agency responses to these unplanned events.

Prerequisites: COMM 308W or permission of the instructor

COMM 405/505 Communication and Culture in the Middle East (3 Credit Hours)

The course examines the tensions between modernity and tradition in the context of Middle East culture. Cultural variables for study include myth and religion, family structures and the use of science and technology.

Prerequisites: Six hours of lower-level social science course work

COMM 408 Health Communication (3 Credit Hours)

This course provides an overview of contemporary scholarship on phenomena within the scope of interpersonal health communication. Students will become familiar with fundamental communication processes that are involved in the interprofessional management of physical and mental health. Additionally, students will develop an awareness of how communication among friends, family members, professionals, and others influences people's well-being, and how, in turn, health and illness shape communication and relationship dynamics.

Prerequisites: COMM 200S

COMM 412W/512 Interpersonal Communication Theory and Research (3 Credit Hours)

A survey of classic and contemporary theories and research of communication in personal and social relationships across the lifespan. Emphasizes communication as a means to facilitate conditions for development of positive relational outcomes. This is a writing intensive course.

Prerequisites: COMM 200S and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better

COMM 421/521 Communication and Conflict Management (3 Credit Hours)

Focus on theory and research of communication processes in conflict episodes across social and personal relational contexts. Applications of communication approaches to conflict management emphasized.

Prerequisites: Junior standing and COMM 200S or permission of the instructor

COMM 422/522 Listening to Self, Others, Nature and the Divine (3 Credit Hours)

The listening course introduces students to: 1) Practices for exploring and developing listening competencies, 2) Theoretical perspectives and models of listening, and 3) Research on listening. Practice, theory, and research are all integrated across the contexts of self, others, nature, and the divine.

Prerequisites: Junior Standing

COMM 423/523 Nonviolent Communication and Peace (3 Credit Hours)

Perspectives on nonviolent communication and peace are covered from the micro level (e.g., individual beliefs and worldviews) to interpersonal relationships (e.g., conflict management), groups (e.g., tribes, gangs), organizational systems (e.g., businesses, governments), and macro or global level (e.g., political relationships between nations).

Prerequisites: Junior standing

COMM 424/524 Communicating Love (3 Credit Hours)

This course investigates the history, types, characteristics, functions, and applications of love in everyday life, emphasizing the communication of altruistic/compassionate/agape love in four interrelated contexts: self, spirit, others, and creation. Theory, research, and applications of love will be explored within the spiritual, scientific, and dialogic (the conversation between science and spirit) perspectives.

Prerequisites: Junior standing

COMM 425/525 Family Communication Theory and Research (3 Credit Hours)

A survey of classic and contemporary theories and research of communication in family units, family relationships, and family interfacing with society. The course emphasizes communication in the social construction of evolving 'family' realities as well as communication as means to facilitate conditions for development of positive domestic outcomes.

Prerequisites: Junior standing and COMM 200S or permission of the instructor

COMM 427/527 Children's Communication Theory and Research (3 Credit Hours)

A survey of theories and research of communication during childhood. Emphasis is on children as developing communicators, their relationships, and their interactions with media. Factors affecting optimal development of children's communication and development of applications to enhance children's communication development are emphasized.

Prerequisites: COMM 200S or permission of instructor

COMM 430 TV Screenwriting (3 Credit Hours)

This course concentrates on the development and delivery of industry standard one-hour long TV scripts and the associated script 'bible.' Students will study sample scripts from broadcast TV programs and develop their own spec scripts. Cross-listed with THEA 430.

Prerequisites: COMM 346 or THEA 346

COMM 433 Capstone (3 Credit Hours)

This capstone course requires students to exhibit knowledge from disciplinary curricula. Students will review an informed snapshot of current topics, methods and research within the communication discipline. Students will demonstrate communication competency through the development of a relevant final project (with required research).

Prerequisites: Senior in good academic standing, COMM 200S, COMM 260, COMM 301 or COMM 302, and completion of the writing intensive course in the major

COMM 435 Arts Journalism (3 Credit Hours)

This course offers ways for artists—and people invested in the arts—to contribute to the development, production, and distribution of radio programs, criticism, podcasts, and documentary films that engage audiences with topics in creative and appealing ways. Students will be exposed to how critics have both opened—and foreclosed—paths for artists to achieve 'success.' Students will develop projects that are grounded in humanities scholarship and that demonstrate how approaches to artistic creation can be thoughtful, balanced, and analytical, and may be (mis)interpreted by critics in mainstream press. Ultimately, this course investigates how creativity intersects with digital platforms to explore how both writing and discourse about the arts benefit from digital circulations.

Prerequisites: COMM 308W

COMM 436 Multimedia Journalism (3 Credit Hours)

This course focuses on the act and application of writing journalistic content across a variety of media. Students will create content and integrate multiple modalities of writing to form cohesive reports. Students will work on deadline to produce meaningful and informative news stories for their portfolios.

Prerequisites: COMM 308W or COMM 363 or permission of instructor

COMM 437/537 Podcasting (3 Credit Hours)

In today's digital landscape, storytelling is a powerful tool for effective communication. This course explores the intersection of strategic communication and podcasting, equipping students with the skills to craft compelling narratives that engage audiences across various platforms. Through a combination of theoretical insights, practical exercises, and hands-on podcasting projects, students will learn how to develop, produce, and distribute podcasts strategically to achieve communication objectives.

Prerequisites: COMM 308W or permission of instructor

COMM 438/538 The Advertising Industry (3 Credit Hours)

This course explores the history, theory, industry, and practice of advertising as a communication discipline. This course explores the origins of advertising and its evolution into its contemporary, technologically-driven form while introducing students to skills and concepts necessary for work in the field.

Prerequisites: COMM 308W or permission of instructor

COMM 439 WHRO Production (3 Credit Hours)

This is an experiential style course in the art and business of documentary production in the hands-on, professional environment of WHRO, which operates Hampton Roads' PBS affiliate TV station as well as two public radio stations. Students will be guided through the production of content for WHRO by an ODU faculty member and the WHRO staff. Cross-listed with THEA 439.

Prerequisites: COMM 271 or THEA 271 or DANC 271

COMM 440 Documentary Filmmaking Study Abroad (3 Credit Hours)

This is an in-the-field study abroad course where students will, in small groups, produce a short documentary film about a local NGO (Non-Governmental Organization) creating positive change in the local community.

Prerequisites: COMM 271 or THEA 271 or DANC 271 with a grade of C or higher

COMM 441 The Music Industry and Communication (3 Credit Hours)

This course will seek to better understand the music industry. To do this, the organization and operation of the modern music industry will be examined. Issues of publishing, copyright and intellectual property and technology will also be examined.

Prerequisites: COMM 260 or permission of instructor

COMM 442 Media Spaces (3 Credit Hours)

This course explores the geographic dimensions of media, considering how issues of space and place intersect with the production and consumption of different forms of media. Employing semester-long cases that explore a range of mediated spaces from theme parks to television productions, students in the course will consider how spatiality shapes the cultural, economic, and creative dynamics of that production/experience.

Prerequisites: COMM 260 and Junior standing

COMM 443/543 Hispanic Film (3 Credit Hours)

A topical study of the major works of Spanish and Latin American film from Bunuel to the present. The course will explore many issues, including those related to gender, race, symbolism, and class struggle.

Prerequisites: COMM 270A or THEA 270A or permission of the instructor

COMM 444/544 German Cinema I (3 Credit Hours)

The first half of the 20th century was the most creative and destructive period in German and European history. Its rich cultural achievements included Viennese psychoanalytical theory of the turn of the century, Art Nouveau, German Expressionism, and the avant garde aesthetics of the Weimar Republic. Conversely, World War I and II exposed the cultural agony and human depravity of modern civilization. This course will trace these various aspects and developments in a variety of exemplary genres. Readings and discussions in German. (Cross-listed with WCS 445/WCS 545 and GER 445/GER 545)

Prerequisites: COMM 270A or permission of the instructor

COMM 445/545 Communication Analysis and Criticism (3 Credit Hours)

A survey of the key methods used in critiquing various forms of human and mediated communication for the purpose of becoming more discerning consumers of public and mass mediated messages. Analysis will include films, television, and radio programs, advertisements, newspapers, public discourses, speeches, and conversations.

Prerequisites: COMM 200S or permission of the instructor

COMM 446 Directing for the Camera (3 Credit Hours)

This course seeks to provide students with fundamental principles and practical techniques of directing the narrative fiction film: script development and analysis, production planning, shot composition and framing, and working with actors and crew.

Prerequisites: COMM 383 or THEA 383 with a grade of C or higher

COMM 447W/547 Electronic Media Law and Policy (3 Credit Hours)

This course focuses on legal and policy issues related to modern media systems and technologies, with an emphasis on legal considerations of electronic media. Topics include First Amendment issues concerning news, programming, and advertising; station licensing; and challenges to traditional legal thought brought about by new technologies. This is a writing intensive course.

Prerequisites: COMM 260 and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, or permission of the instructor

COMM 448/548 Global Media Industries (3 Credit Hours)

An examination of the rise of broadcast technology and world flow of information and entertainment. Theory and policy issues of systems of broadcast ownership, access, regulation, programming, transborder, broadcasting and cultural imperialism and dominance of Western programming will be addressed.

Prerequisites: COMM 260 or permission of the instructor

COMM 453 Voice Over (3 Credit Hours)

This course is for students who are interested in the field of voice over for commercials, narration, industrials, animation, Internet, and gaming. Students will practice voicing copy using acting techniques, vocal techniques, building characters, and analyzing copy. Students will learn to select, edit and prepare copy for a future demo and learn to perform cold voice over auditions. This is a performance-oriented course that is a workout session each day. Crosslisted with THEA 453.

Prerequisites: Junior standing or permission of instructor

COMM 454 Strategic Communications Case Studies (3 Credit Hours)

Strategic communications is best learned by doing, including researching what has worked and what hasn't worked in strategies and tactics conducted by other professionals. This course will introduce students to a series of case studies organized thematically, grounding the knowledge gained in COMM 303 and allowing students to apply that knowledge to contemporary industries and cases of their own choosing.

Prerequisites: COMM 303 or permission of the instructor

COMM 455/555 Critical Analysis of Journalism (3 Credit Hours)

A critical examination of the news industry as practiced in the printed press, network and cable television, magazines, the Internet, and alternative press. Class examines the political economy of journalism, the sociology of journalistic practice, international news flows, ideological/political control of news, and mythological narrative forms within news.

Prerequisites: COMM 260 or permission of instructor

COMM 456/556 Organizations and Social Influence (3 Credit Hours)

Focuses on theories, research and applications of the social influence function of communication in a variety of organizational contexts. Examines traditional and nontraditional social influence theories and research as applied to organizational change.

Prerequisites: COMM 333 or COMM 355 or permission of the instructor

COMM 457/557 Market Research (3 Credit Hours)

The foundation of any successful strategic communications, from marketing to public relations to advertising, is research. This course introduces students to secondary and primary research methods in an applied way, having students actually design and conduct full research studies for a client in the community. Students will discuss and conduct various forms of market research (situation, stakeholder, and competitor), explaining how it is integral to strategic thinking and responsible growth in order to directly prepare them for work in the field.

Prerequisites: COMM 303 or permission of the instructor

COMM 460/560 Social Marketing (3 Credit Hours)

Social marketing, the process through which communications professionals attempt to introduce, reinforce, or augment social change through theories and practices of marketing, is a growing field with implications ranging from social entrepreneurship to international relations to community resiliency. This course will introduce the theories of social marketing, applying them through collaborations with a local organization or cause. Students will focus on a practical approach to constructing a brand through communication strategy and media tactics, and how those relate to constructing and maintaining the identity of a larger organization while also promoting social benefit.

Prerequisites: COMM 303

COMM 462/562 Sport Communication (3 Credit Hours)

A survey of sport media and communications. This course will expose students to the rapidly evolving sport media landscape, analyzing the communication processes involved in both strategic communication and journalism, through the mediums used to convey messages. The internal and external audiences involved in sport communication will be examined, both through an analysis of journalism's impact on sport and an exploration of the strategic communication planning process.

Prerequisites: COMM 398W or permission of instructor

COMM 463W Reporting and News Writing II (3 Credit Hours)

Designed to familiarize students with the fundamentals of beat reporting and its practice in the multimedia environment of 'converged' newsrooms. The course emphatically focuses on writing but also provides instruction on how the tools and techniques of multimedia platforms are used to enhance storytelling. Emphasis is also placed on accessing information through web-based resources and government documents. This is a writing intensive course.

Prerequisites: ENGL 211C or ENGL 231C and COMM 363

COMM 466 Feature Story Writing (3 Credit Hours)

Course includes discussion and practice of writing a variety of newspaper and magazine feature stories. Students will write and critique stories on people, places, businesses, trends, and issues. Assistance is given in the marketing of manuscripts.

Prerequisites: COMM 363

COMM 469 Communication Education Practicum (3 Credit Hours)

An examination of communication education theory and methodology via structured experiences and readings. Students taking this course serve as teaching assistants for COMM 200S, which serves as a lab for practicing skills and techniques.

Prerequisites: Completion of core courses and 6 hours of upper-level major courses, and approval of supervising faculty and department chair

COMM 471W/571 International Film History (3 Credit Hours)

An examination of world cinema as a technology, a business, an institution, and an art form from its inception to the present. Emphasis is on the narrative fiction film, its technological and aesthetic development, economic organization, and socio-cultural context. Representative classic and contemporary works will be screened and analyzed. This is a writing intensive course.

Prerequisites: COMM 270A or THEA 270A, a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, and junior standing or permission of the instructor

COMM 472/572 New Media Topics: Theories and Practices (3 Credit Hours)

This upper-division seminar investigates one or two particular emergent new media practices and theories. The topics will be chosen at the discretion of the instructor but may include issues such as 'mobile media,' 'micro media and audiences,' and 'social media.'

Prerequisites: COMM 372T or permission of the instructor

COMM 473/573 Television and Society (3 Credit Hours)

The role of television in the cultural, psychological, and economic life of America. The structure and design of television programs; and the history and function of television in reinforcing or altering public perceptions of ideas, events, and people. Major critical approaches are employed in examining television's social impact and global reach.

Prerequisites: Junior standing and COMM 260

COMM 474 Reality Television (3 Credit Hours)

In the past two decades, reality television has become television's most replicated genre, documenting real people in 'real' situations across broadcast, cable, and streaming outlets. This class investigates the historical, cultural, and industrial logics that govern the rise of reality TV, exploring how the genre intersects with issues of race, gender, sexuality, and class, and asking students to apply their understanding of the genre to detailed analysis of its ongoing efforts to capture the complexities of everyday life.

Prerequisites: COMM 260

COMM 478/578 Media Marketing and Promotion (3 Credit Hours)

This course introduces students to the ways in which different media forms are used for advertising and marketing purposes. Emphasis is on electronic media, though other approaches, such as direct marketing techniques and the increasing use of new media technologies for marketing, are also examined.

Prerequisites: Junior standing and COMM 260 or permission of the instructor

COMM 479W/579 American Film History (3 Credit Hours)

An examination of American motion pictures as an art form, a business and an institution from inception to the present. Primary attention is accorded to the narrative fiction film, its aesthetic and technological development, economic organization and social impact. This course highlights the many connections between film history and American culture. This is a writing intensive course.

Prerequisites: COMM 270A or THEA 270A, a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, and junior standing or permission of the instructor

COMM 480/580 Documentary Production II (3 Credit Hours)

Students will continue the work performed in COMM 380 with more advanced proposals, research, and production work.

Prerequisites: COMM 380 or THEA 380

COMM 482 Screenwriting II (3 Credit Hours)

Students will explore storytelling for cinema through screenplay analysis, scene study, character development, narrative structure, and story development. This upper-level, hands-on course applies a range of screenwriting principles to writing exercises, critique, and construction of the first half of a feature-length screenplay.

Prerequisites: COMM 346 or THEA 346 with a grade of C or better

COMM 483 Advanced Cinema Projects (3 Credit Hours)

This is an intensive capstone course in film production. Students experience pre-production, production, and post-production phases while creating a product to be entered in regional and national competitions.

Prerequisites: COMM 383 or THEA 383

COMM 484/584 Strategic Media Design and Production (3 Credit Hours)

This course is designed to extend students' knowledge of the media elements of strategic communications, from graphics to images to video. Students will discuss how to ground creative production in strategy for a client, how to focus on content and storytelling for a specific stakeholder, and how to create an extended, coherent plan using both creative and organizational goals. This is not intended to make students 'creative' but instead to show students how to design, direct, and manage the work that a media production team might do.

Prerequisites: COMM 303 or permission of the instructor

COMM 485/585 Film and Television Genres (3 Credit Hours)

This course is designed to examine the conventions and meanings of various film and television genres within their broader aesthetic, socio-historical, cultural, and political contexts. Each time the class is offered it will focus in depth on a different genre, such as the gangster, the Western, the musical, the comedy, science fiction, among others. Class may be repeated for credit as long as the genres are different.

Prerequisites: COMM 270A or THEA 270A or COMM 260

COMM 486/586 Advanced Filmmaking (3 Credit Hours)

This course offers students an opportunity to collaborate on a faculty led project beyond the scope of typical classroom projects. Students will execute an assigned duty for the duration of the semester.

Prerequisites: permission of the instructor

COMM 487 Advanced TV News Production (3 Credit Hours)

This course is designed to provide students with advanced instruction in reporting, writing, and production for a television news program. Students will take on important roles in 15- and 30-minute news broadcasts and refine their skills in shooting and editing video. The goal of this course is to produce weekly news programs worthy of broadcast on local television. Students will receive significant experience in front of the camera as news, sports, and entertainment anchors/reporters as well as leadership positions in the television studio during the live broadcasts.

Prerequisites: COMM 387, THEA 387 or ENGL 387

COMM 488 Introduction to Critical Race and Media Studies (3 Credit Hours)

In this course, students examine how media culture - both historic and contemporary - contribute to the intersectional production of race in the United States. A guiding question will be: How do media and popular culture - as texts, practices, industries, and sites of identity formation and pleasure - construct race? Although students will theorize the politics of representation, they will also work to situate texts within a larger historic, political, and discursive context in order to assess the type of cultural work they perform.

Prerequisites: COMM 260

COMM 489/589 Health and Interpersonal Communication (3 Credit Hours)

This course is designed to give an overview of contemporary scholarship on phenomena within the scope of interpersonal health communication.

Prerequisites: Instructor permission required

COMM 490/590 ROAR Communications Agency (3 Credit Hours)

In this course, students gain hands-on experience working in an agency setting. They work directly with clients to create specific materials, and learn new tools and software suitable for each project. We emphasize building students' professional qualifications connected to their interests and the client's needs that bridge the gap between coursework and a career. Students will conduct situation analyses, choose audiences and strategy, and create professional-quality materials for clients. If they take the class for a second semester, students will have more senior roles, where they interface more extensively with the client and become team leaders with bigger projects.

Prerequisites: COMM 303 or permission of the instructor

COMM 491/591 Communication and Activism (3 Credit Hours)

This course will delve into activism and social change from a local and global perspective in order to enhance students' perspectives of social change as it manifests via popular media and community action.

Prerequisites: Instructor permission required

COMM 492 Cinematography 2 (3 Credit Hours)

This course builds on the fundamentals learned in Cinematography 1, exploring advanced camera and lighting techniques primarily used in narrative cinema. Advanced cameras, grip, electric, and lighting equipment will be covered, exposing students to gear and practices beyond the scope of a standard student production. This is a production class.

Prerequisites: COMM 385 or THEA 385

COMM 493 Feature Film Production (6 Credit Hours)

This intensive course will bring students onto the set of a Feature Film Production, working crew positions as the film is shot. Cross-listed with THEA 493.

Prerequisites: COMM 271/THEA 271/DANC 271 and two of the following: COMM 380/ THEA 380, COMM 383/THEA 383, COMM 385/ THEA 385, COMM 386/THEA 386, COMM 389/THEA 389, COMM 483/ THEA 483, COMM 486/THEA 486, COMM 492/THEA 492 with a grade of C or better

COMM 494 Entrepreneurship and Public Relations (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals, while at the same time, meeting a critical need for Old Dominion University. Through a partnership with ODU's Office of Strategic Communication and Marketing, a select group of upper-level public relations, marketing or related discipline students will work, individually and in teams, as a "bureau" for the University's central marketing and communications office.

Prerequisites: COMM 303 or equivalent

COMM 495/595 Topics in Communication (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Appropriate survey course or permission of the instructor

COMM 496/596 Topics in Communication (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Appropriate survey course or permission of the instructor

COMM 497/597 Tutorial Work in Special Topics in Communication (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the department chair

COMM 498/598 Tutorial Work in Special Topics in Communication (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the department chair

COUN - Counseling

COUN 495 Topics (1-6 Credit Hours)

Study of selected topics in counseling.

Prerequisites: permission of the instructor

COUN 497 Topics in Counseling (1-6 Credit Hours)

Study of selected topics in counseling.

Prerequisites: permission of the instructor

CPD - Center for Professional Development

CPD 100S Leadership and Society (3 Credit Hours)

This course addresses the social, political, psychological, economic, and international dimensions of leadership through a social science framework. A specific focus is given to the dynamic interactions between social structures and leadership behavior. Students explore how society shapes leaders and how leaders shape society. Using an introspective approach, students consider their role as current and future leaders in a diverse society.

CPD 303T Maritime Leadership, Technology, and Society (3 Credit Hours)

This course introduces students to the intersections between maritime leadership, technology, and society. It will explain the important elements of the marine transportation and technological systems, which consist of waterways and ports that allow for various modes of transportation to move people and goods to, from, and on the water. Specific topics include an introduction to different types of cargo, how cargo is moved, ship types, ship equipment, ship routes, basic navigation and ship stability, emerging industries including offshore wind and autonomous systems, maritime law, maritime safety, and leadership.

Prerequisites: ENGL 110C

CPD 330 Public Safety Leadership (3 Credit Hours)

This class uses leadership theory and research to introduce students to leadership principles and practices related to the management, supervision, and governance of public safety agencies. Attention is given to the way that leadership in public safety (law enforcement, homeland security, emergency management, information security, and fire and rescue) agencies is distinct from leadership in private companies and businesses. Specific attention is given to the ethical, social, political, economic, and technological dimensions of public safety leadership.

Prerequisites: Junior standing or permission of the instructor

CPD 340 AWS Cloud Foundations (3 Credit Hours)

AWS Academy Cloud Foundations is intended for students who seek an overall understanding of cloud computing concepts, independent of specific technical roles. It provides a detailed overview of cloud concepts, AWS core services, security, architecture, pricing, and support.

Prerequisites: Junior standing or permission of the instructor

CPD 368 Internship in Professional Studies (1-6 Credit Hours)

An opportunity to integrate service and applied learning experience with leadership perspectives.

Prerequisites: junior standing

CPD 395 Topics (1-3 Credit Hours)

The study of selected topics which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: junior standing or permission of the instructor

CPD 397 Independent Study (1-6 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor.

Prerequisites: Permission of instructor

CPD 398 Independent Study (1-6 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor.

Prerequisites: Permission of instructor

CPD 400 Foundations of Leadership (3 Credit Hours)

This course is designed to provide students with a basic introduction to leadership, with a focus on leadership history, leadership styles, traits, and skills. The differences between managers and leaders will be explored.

Prerequisites: junior standing or permission of the instructor

CPD 404 Red Hat Linux System Administrator I (3 Credit Hours)

The first of two courses covering the core system administration tasks needed to manage Red Hat Enterprise Linux servers Red Hat System Administration I is designed for IT professionals without previous Linux system administration experience. The course provides students with Linux administration competence by focusing on core administration tasks. This course also provides a foundation for students who plan to become full-time Linux system administrators by introducing key command-line concepts and enterprise-level tools. This course is the first of a two-course series that takes a computer professional without Linux system administration knowledge to become a fully capable Linux administrator.

Prerequisites: Junior level standing or higher, or permission of the instructor

CPD 405 Red Hat Linux System Administrator II (3 Credit Hours)

Red Hat System Administration II is the second part of the RHCSA training track for IT professionals who have already attended Red Hat System Administration I. The course goes deeper into core Linux system administration skills in storage configuration and management, installation and deployment of Red Hat Enterprise Linux, management of security features such as SELinux, control of recurring system tasks, management of the boot process and troubleshooting, basic system tuning, and command-line automation and productivity. This course assumes that students have attended Red Hat System Administration I.

Prerequisites: Junior level standing or higher, or permission of the instructor and CPD 404

Pre- or corequisite: CPD 404

CPD 406 Cyber Law (3 Credit Hours)

This course tackles two major cyber law subjects. The first part of the course examines various U.S. laws and legal considerations that impact the digital and cyberspace worlds from traditional civil, and to a lesser extent, traditional criminal perspectives. The second part will familiarize cyber operations professionals about the extent of and limitations on their authorities to ensure operations in cyberspace are in compliance with U.S. law, regulations, directives and policies. The course will also introduce students to miscellaneous cybersecurity topics such as the Federal Acquisition Requirements.

Prerequisites: junior standing

CPD 408 Global Leadership (3 Credit Hours)

This course will introduce students to the concepts and complexity of leadership in a globalized society and provide the opportunity to put leadership theory into practice. Emphasis will be on the development of the student as a leader who thinks globally, appreciates cultural diversity, is technologically savvy, knows how to build partnerships and alliances, and has the capacity to share leadership. Students will also evaluate their current mindset and leadership skills and create a professional plan for development as a global leader.

Prerequisites: junior standing or permission of the instructor

CPD 409 Leadership and Cultural Competence (3 Credit Hours)

This course focuses on the study of contemporary leadership theory and practice, with particular emphasis on public and non-profit sectors. The critical themes of ethics and cultural competence are woven throughout the course.

Prerequisites: Junior standing or higher, or permission of the instructor

CPD 410 Leadership Ethics (3 Credit Hours)

This course examines how ethical principles can be used to guide effective leadership practices. Students will gain an understanding of how ethical principles in the workplace have developed over time. They will also explore the connections between individual ethics and workplace behaviors, in addition to leadership strategies that promote ethical behavior by workers.

Prerequisites: junior standing or permission of the instructor

CPD 412 Leadership and Law (3 Credit Hours)

This course addresses leadership in public, private, and non-profit organizations relative to laws that impact such organizations. Students will examine their role as leaders within legal systems that influence business operations such as employment law, intellectual property, antitrust, white collar crime, and bankruptcy.

Prerequisites: junior standing or permission of the instructor

CPD 414 Design Thinking for Leaders (3 Credit Hours)

Design thinking is a human-centered approach to problem solving and innovation. With design thinking one can confidently generate solutions to problems in organizations or to launching a new product or enterprise. It is being used by leaders for developing meaningful and useful responses to contemporary challenges. In this course, an overview of design thinking is provided, along with a model containing key questions and tools to help leaders understand design thinking as a problem solving approach.

Prerequisites: junior standing or permission of the instructor

CPD 415 Women in Leadership (3 Credit Hours)

This course examines gender differences in leadership, including communication styles, leadership style, and experiences in business environments. Students will explore media and cultural representations of women in leadership, as well as women leaders in popular industries. Personal leadership development and skills will be explored from the perspective of advancing women in leadership roles.

Prerequisites: junior standing or permission of the instructor

CPD 416 Trends and Issues in Leadership (3 Credit Hours)

This course is focused on examining and expanding on the application of leadership principles and decision making. It is designed to have students step out of their comfort zones and look at leadership issues from various sides. The course will provide background and learning on primary leadership concepts with ethics ideals sprinkled within the content. Students will be challenged to find articles and examples for leadership application in multiple business, industry, government, and societal realms, taking on both protagonist and antagonist roles in the examination of the issues.

Prerequisites: junior standing or permission of the instructor

CPD 417/517 Digital Leadership (3 Credit Hours)

This course explores technology as it relates to leadership experiences. Theories, case studies and real world examples are analyzed to show both successful and unsuccessful uses of online and digital approaches that inform leaders' communication strategies. Students will explore how their own digital identities may impact their futures as leaders. They will also learn how to create digital identities that will shape their professional identities throughout their careers.

Prerequisites: junior standing or permission of instructor

CPD 494 Entrepreneurship in Professional Studies (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. This course offers students an opportunity to integrate disciplinary theory and knowledge through developing a nonprofit program, product, business, or other initiative. The real-world experiences that entrepreneurs provide will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems.

Prerequisites: Junior standing or permission of the instructor

CPD 495 Topics (1-3 Credit Hours)

The advanced study of selected topics which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: junior standing or permission of the instructor

CRJS - Criminal Justice

CRJS 215S Introduction to Criminology (3 Credit Hours)

Introduction to criminology as a science, including the study of crime, criminals, and society's response to them.

CRJS 222 The Criminal Justice System (3 Credit Hours)

A study of social response to criminal behavior as cases move through the machinery of justice. Describes the interdependence of crime statistics, law enforcement, criminal courts, and correctional procedures for purposes of analyzing the entire system.

CRJS 226S Honors: Introduction to Criminology (3 Credit Hours)

Open only to students in the Honors College. Special honors section of CRJS 215S.

CRJS 262 Law and the Criminal Justice System (3 Credit Hours)

The course covers both substantive and procedural law related to the definitions, investigations, processing and punishment of crimes. It is meant to provide the students with an overall understanding of the articulation between law and the criminal justice system.

CRJS 310 Cybercriminology: Foundations (3 Credit Hours)

This course will provide students with an overview of computer-related crimes and how law enforcement officials investigate them. The course begins by describing the environment that has been created through information and communication technologies, and how this new environment facilitates different types of behavior. The course then moves into defining and describing the different types of computer-related crimes, the techniques used by officials, and the legal issues inherent in combating cybercrime.

Prerequisites: CRJS 215S

CRJS 316 Juvenile Delinquency (3 Credit Hours)

A study of juvenile misbehavior in the contemporary community, its nature, extent, treatment, and control, including juvenile court procedure and philosophy.

Prerequisites: CRJS 215S or SOC 201S or permission of instructor

CRJS 317 Correctional Institutions (3 Credit Hours)

Examines the history of prisons and jails, their formal and informal organization, their effects on individuals, and issues and philosophies of penal reform.

Prerequisites: CRJS 215S or CRJS 222 or permission of the instructor

CRJS 318 Probation, Parole and Community-Based Corrections (3 Credit Hours)

Examines the history, law, administration and social setting of probation, parole and other noninstitutional sentencing alternatives. Also explores nontraditional alternatives to criminal adjudication such as arbitration and diversion programs.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 319 Public and Private Security (3 Credit Hours)

The organization of security systems in public and private agencies and institutions.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 320 Law and Social Control (3 Credit Hours)

Examines the creation, use and effectiveness of formal and informal mechanisms of social control for both criminal and noncriminal deviant behavior. Cross-cultural comparisons are given special emphasis.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 321 Death Penalty (3 Credit Hours)

This course examines the historical and philosophical foundations of the death penalty in the United States, the Supreme Court case precedent that has effectively narrowed its modern application, and the contentious issues that surround America's most severe punishment. Topics will include the moral/legal arguments surrounding the death penalty; the legal process of capital cases; the racial, ethnic, socioeconomic, and gender disparities that exist in death sentencing and executions; recent trends and scholarly evidence related to capital punishment; reasons for continued support; and the movement toward abolition.

Prerequisites: CRJS 215S or permission of instructor

CRJS 323 Police in American Society (3 Credit Hours)

Examines the role of police in a free society. Police functions, subculture, community relations and decision making receive special attention. Problems such as police corruption, violence and the methods by which society attempts to control police behavior are also discussed.

Prerequisites: CRJS 215S or CRJS 222 or permission of the instructor

CRJS 325 Women and Crime (3 Credit Hours)

Examines the role of women as offenders, victims and employees of the criminal justice system. Theories of female criminality and the treatment of female offenders are explored. Attention is given to the victimization of women, specifically wife abuse and rape, problems of minority women, and the impact of current legislation.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 326 LGBTQ People, Crime, and Justice (3 Credit Hours)

Learning appropriate terminology to discuss LGBTQ individuals, as well as a review of the social issues facing these populations, including damaging cultural stereotypes. Critically exploring the history of interactions between LGBTQ communities and agents of formal control, such as schools and the police, including responses to bullying and bias crimes. Interrogating how changing political and social contexts affect policy regarding formal responses to LGBTQ communities.

Prerequisites: SOC 201S or CRJS 215S

CRJS 340 White-Collar Crime (3 Credit Hours)

This course will describe and explain corporate, state-corporate, government (state) crime and crimes of globalization from sociological and criminological perspectives. Although the course will deal with the general topic of white collar crime, the specific focus will be on organizational offenders such as business corporations, government, state agencies and international finance organizations.

Prerequisites: CRJS 215S

CRJS 344 Social Science and Crime Mapping (3 Credit Hours)

A critical exploration of applying geographic information system (GIS) to view, understand, question, interpret, and visualize social science and crime data that reveal relationships, patterns, and trends. Students will learn to 1) frame a research question or hypothesis from a location-based perspective; 2) collect, create and examine geographically referenced demographic, social, and criminological data; 3) learn to use GIS mapping software to visualize, manage and analyze this data in order to investigate the relationship between geographic, demographic, social and criminological variables; and 4) arrive upon decisions and conclusions and communicate these via the creation of publishable maps.

Prerequisites: SOC 201S or CRJS 215S or permission of the instructor

CRJS 345 Organized Crime: A Survey of Domestic and World-Wide Organized Crime Activities (3 Credit Hours)

A broad survey of the history and consequences of organized crime in the United States and the world. Special focus will be directed at the economic, social and developmental effects of organized criminal activities.

Prerequisites: CRJS 215S, CRJS 222, or CRJS 262

CRJS 348 Film and Society (3 Credit Hours)

Sociological examination of film as an art form, an industry, and a social institution. Major topics include socialization through film, how one's unique socialization affects the film experience, social inequality (racism/ethnocentrism/sexism/ageism) as exhibited in film, and as they occur within the film industry, film as an educational tool, gender roles as exhibited in film and perpetuated within the film industry, film and copycat crime, crime in the film industry, portrayal of crime in film, international cinema and globalization.

Prerequisites: SOC 201S or permission of the instructor

CRJS 350 Victimology (3 Credit Hours)

Examination of the multifaceted problem of criminal victimization. Focuses on defining victimization, the incidents of victimization, social characteristics of victims, treatment of victims in the criminal justice system, and efforts designed to alleviate the consequences of victimization.

Prerequisites: SOC 201S or CRJS 215S or six hours of social science perspective or permission of the instructor

CRJS 355 Crime and the Community (3 Credit Hours)

This course focuses on the effect of crime on communities and the ways in which communities affect crime. The class considers both ethnographic community studies as well as larger-scale demographic analysis.

Prerequisites: CRJS 215S or SOC 201S or permission of the instructor

CRJS 356 Gangs (3 Credit Hours)

This course seeks to evaluate issues central to the study of modern gangs, such as gang definitions, prevalence, proliferation, migration, formation, histories, and gang/gang member characteristics. Another objective is to understand why and how young people both join and leave their gangs and explore how gang structure and organization can influence gang and gang member behavior, including their involvement in violence, other illegal acts, their victimization, and the gendered experiences of female gang members. Students will also review assess policies and efforts regarding gang prevention, intervention, and suppression and distinguish between stereotypes/myths and realities about gangs and gang members based on empirical research and theory.

Prerequisites: SOC 201S or CRJS 215S

CRJS 368 Internship (1-6 Credit Hours)

This course allows students to volunteer to work in an agency related to their major. Students must volunteer for 50 hours per course credit.

Prerequisites: Approval by the department internship director

CRJS 370 State Crime (3 Credit Hours)

This course explores state crime from a sociological and criminological perspective. It examines historical and current cases of governmental crime at home and abroad. It also explores the intertwining of states with other states, corporations, and, when applicable, international financial institutions as well as their roles in facilitating or constraining acts of state crime. Finally, the class discusses the problems of control, domestically and internationally.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 375 Crime Prevention (3 Credit Hours)

This course provides an introduction to the approaches and practices of crime prevention. In addition, the course discusses primary, secondary, and tertiary crime prevention measures aimed at reducing or eliminating crime. Finally, the course addresses research and information on many aspects of crime prevention, including the physical environment and crime, neighborhood crime prevention, and crime in schools.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 395 Topics in Criminal Justice (1-3 Credit Hours)

A study of selected topics designed for nonmajors or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 396 Topics in Criminal Justice (1-3 Credit Hours)

A study of selected topics designed for nonmajors or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 401 Understanding Violence (3 Credit Hours)

Examines a variety of forms of violence from suicide, child abuse, rape and family violence, terrorism, torture, death squads and the death penalty and hate violence. Explores the circumstances, rationalizations, patterns, explanations and effects on survivors.

Prerequisites: CRJS 215S or SOC 201S or permission of instructor

CRJS 403 Violence in the World of Children (3 Credit Hours)

This child-centered course examines the interaction of adults in violent conflict with the world of children, children's experience of violence and its meaning in the lives of children. Topics include: valuing children, violence toward children in culture, families, and schools; child physical and sexual abuse and neglect; gangs, violent communities and children and war. The effects of childhood experiences of violence, children's coping with violence, and alternatives to violence are also developed.

Prerequisites: SOC 201S or CRJS 215S or six hours in human behavior or permission of the instructor

CRJS 404 Law and Digital Forensics (3 Credit Hours)

This course will focus on the intersection between digital forensics and the criminal justice system, namely how digital forensics is understood and applied to key criminal justice, constitutional and statutory considerations within the criminal justice system. Students will explore such topics as the nature and types of cybercrime; search and seizure principles in the digital world; finding, handling and maintaining chain of custody of digital evidence; interviewing individuals relating to digital evidence and related activities; and testifying in court about digital evidence matters.

Prerequisites: Junior standing or permission of instructor

CRJS 406 Cyber Law (3 Credit Hours)

This course tackles two major cyber law subjects. The first part of the course examines various U.S. laws and legal considerations that impact the digital and cyberspace worlds from traditional civil, and to a lesser extent, traditional criminal perspectives. The second part will familiarize cyber operations professionals about the extent of and limitations on their authorities to ensure operations in cyberspace are in compliance with U.S. law, regulations, directives and policies. The course will also introduce students to miscellaneous cybersecurity topics such as the Federal Acquisition Requirements. Cross-listed with CYSE 406 and CPD 406.

Prerequisites: CRJS 262 or junior standing

CRJS 407 Violence Against Children Internationally (3 Credit Hours)

This course focuses on the research on child maltreatment abuse internationally, in particular on the most common types of child abuse and neglect—i.e., perpetrated by parents, family members. The negative effects of child abuse and neglect are associated subsequently with every social problem from poverty, teenage motherhood, substance abuse, violent crime, domestic violence, and mental health problems, to ill-health—from cancer to diabetes.

Prerequisites: SOC 201S or CRJS 215S

CRJS 408 Children's Rights and the Law (3 Credit Hours)

A study of the law concerning children from a children's rights perspective. The rights of children in the US will be compared to other nations with special emphasis being placed on the UN Convention on the Rights of the Child.

Prerequisites: SOC 201S OR CRJS 215S or related social science Way of Knowing or permission of the instructor

CRJS 409 Crime and Computer Applications (3 Credit Hours)

The purpose of this interdisciplinary course is to introduce students to the ways in which computers are involved in the commission and the investigation of crime. Students will learn the fundamentals of cryptography and steganography and the tools used to perform these activities. Students will also use forensic software to identify, gather, and verify relevant digital evidence. Cross-listed with CYSE 409.

Prerequisites: CRJS 310 or permission of the instructor

CRJS 410 Correctional Treatment (3 Credit Hours)

Methods and programs which attempt to correct the behaviors of juvenile delinquents and adult criminal offenders are explored. Treatment strategies employed in both community and institutional settings are examined. Techniques of classification and the role of the correctional worker are also discussed.

Prerequisites: CRJS 215S or CRJS 222 or permission of the instructor

CRJS 415 Courtroom As a Social System (3 Credit Hours)

An overview of the role of all of the actors in the American courtroom, the interaction of these actors and the effect of social forces on their behavior. Includes prosecutor, plaintiff and defense lawyers, judges, juries, eye witnesses, expert witnesses, and court staff.

Prerequisites: CRJS 222 or permission of the instructor

CRJS 416 The American Jury (3 Credit Hours)

A review of the literature, law and practical materials that cover the American jury system from the creation of the master list through the verdict. Includes history, social context and jury selection.

Prerequisites: CRJS 222 or permission of the instructor

CRJS 418 Crime, Society, and the Media (3 Credit Hours)

A critical exploration of media portrayals of crime and criminal justice. News and entertainment genres are examined. Connections between the mass media and crime, culture, politics, society, and individual behavior receive special attention.

Prerequisites: CRJS 215S or CRJS 222 or permission of the instructor

CRJS 419 Animals and Society (3 Credit Hours)

This is a class about the role of nonhuman animals in society. Animals are used to entertain, to do work, to provide companionship, to provide food, and more. In this class, we discuss the causes and consequences of both individual and institutional animal abuse. Society's relation to wildlife is also an important component and includes poaching, sport and trophy hunting, and society's reaction to wolves, coyotes, and wild horses in the West. Cross-listed with SOC 419.

Prerequisites: Any human behavior (S) course, such as SOC 201S, CRJS 215S, PSYC 201S, COMM 200S, or permission of instructor

CRJS 421/521 Deviant Behavior (3 Credit Hours)

A study of various definitions and forms of deviant behavior, theoretical explanations of causes of deviant behavior, and the impact of deviant behavior on society and the individual.

Prerequisites: SOC 201S or CRJS 215S or permission of the instructor

CRJS 423 Public Policy in Criminal Justice (3 Credit Hours)

A study of the nature, development, and utilization of public policy within agencies of the criminal justice system. Topics include policy formulation, constraints on policy makers, influence of constituencies, and the role of research information. Case studies of issues such as crime control, prison overcrowding, police use of deadly force, the death penalty and parole guidelines will be undertaken.

Prerequisites: CRJS 215S

CRJS 424 Juvenile Justice: Issues, Policy, and Practice (3 Credit Hours)

This course will provide an overview of significant policy issues in contemporary juvenile justice. The first objective of the course is to examine the nature, extent, treatment and control of juvenile delinquency. The second objective of the course is to discuss the history of juvenile justice policy reform and evidence-based practices. Third, the course will identify and analyze a number of key juvenile justice policy issues, including: mental health, gender disparities, disproportionate minority contact (DMC), trauma, adult transfer and certification, as well as policies and practices for preventing and responding to delinquency.

Prerequisites: CRJS 215S

CRJS 426W/526 Criminological Theory (3 Credit Hours)

An in-depth study of the major theoretical issues in criminology. Deals extensively with issues of crime causation. This is a writing intensive course.

Prerequisites: Senior standing, CRJS 215S, and grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, or permission of the instructor

CRJS 427/527 Gender-Based Violence (3 Credit Hours)

This course takes an expansive and intersectional approach to studying various forms of gender-based violence, from the interpersonal to the systemic, institutional, and cultural. Prevalence, risk factors, theoretical explanations, and legal remedies related to topics such as intimate partner violence, sexual assault on college campuses, gender-based violence in the military, sexual violence against undocumented immigrants, commercial sexual exploitation, and racism and reproductive health will be examined.

Prerequisites: SOC 201S or CRJS 215S or other human behavior course or permission of instructor

CRJS 430 Homicide (3 Credit Hours)

This course explores the topic of homicide in the U.S. It includes a discussion of the types of homicide, historical patterns and trends, and characteristics of offenders and victims. A variety of theoretical frameworks are utilized to examine homicide at micro and macro levels. In-depth examination of specific types of homicide is included.

Prerequisites: SOC 201S or CRJS 215S or another human behavior course

CRJS 431 Serial Offenders (3 Credit Hours)

This course explores the topic of serial offenders, also referred to as repeat offenders, recidivists, and career criminals. The course begins with an overview and discussion of patterns of crime, followed by a discussion of relevant theoretical perspectives. We also discuss profiling and the role it can play in the investigation of serial crimes. Next, we move into modules devoted to specific types of crime (arson, rape, homicide, etc.), and discuss the research on serial offenders in each group. Finally, prevention, as well as social policy issues, are addressed.

Prerequisites: SOC 201S or CRJS 215S

CRJS 436 Capstone Research Project (3 Credit Hours)

Students work in groups to plan, design, and carry out a research project. Final papers which report the results for the study are presented in a formal research seminar. The projects reflect knowledge gained from undergraduate work and training received in STAT 130M and SOC 337.

Prerequisites: Senior standing, STAT 130M and SOC 337

CRJS 441/541 Drugs and Society (3 Credit Hours)

The study of sociological and social-psychological explanations of drug-using behaviors and of legal and medical control of drugs. Topics include changes in the legal status of drugs, cross-cultural and historical variations in the control of drugs, and social epidemiology of drug use in contemporary society.

Prerequisites: SOC 201S or CRJS 215S

CRJS 444 Community Justice (3 Credit Hours)

This is a service learning course designed to study how the emerging field of community justice, a neighborhood-based strategy, can reduce crime and improve public safety by investing in social, human and cultural capital.

Prerequisites: SOC 201S or CRJS 215S

CRJS 445 Workplace Law and Society (3 Credit Hours)

This course examines the laws of the workplace from a sociological and issue-driven approach considering two perspectives – both employer and employee. Relevant laws are identified, explored and made relevant through examples of their application in real-world situations. Sometimes the wisdom of these laws will be challenged; students will be encouraged to raise questions about a law's utility, justice or fairness, whether in principle or in application.

Prerequisites: Junior standing

CRJS 448 Women, Sex Discrimination and the Law (3 Credit Hours)

This course introduces students to legal issues which specifically affect women and examines historical attitudes that have been used to justify differential treatment of women. It explores various legal approaches used to achieve equal protection under the law and examines a variety of specific topics such as: the equal protection analysis; Title VII and Title IX and their relationship to sex discrimination; affirmative action; and reproductive freedom.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 450/550 Blacks, Crime and Justice (3 Credit Hours)

Examines historical and contemporary theories and research on African-Americans, criminal behavior and the administration of justice. Selected topics will include African-American perspectives, the death penalty, victimization, police brutality, and justice systems in Africa and the Caribbean.

Prerequisites: CRJS 215S and CRJS 222 or permission of the instructor

CRJS 451 Race, Ethnicity, Crime and Justice (3 Credit Hours)

This course will examine the intersectionality of race, ethnicity, crime, justice and the operation of the criminal justice system and will critically assess controversial issues surrounding race, ethnicity, crime, and justice. Students will discuss contemporary social justice issues as they relate to race, ethnicity, crime, and justice. The theoretical frameworks that explain the intersection between race, ethnicity, crime and justice will be examined. The course will also investigate the broad range of policy issues and recommendations impacting communities of color and the administration of criminal and social justice.

Prerequisites: CRJS 215S or SOC 201S

CRJS 452 Diversity in Criminal Justice Organizations (3 Credit Hours)

This course examines the impact of diversity, culture, and ethnic origin in criminal justice organizations. The course is designed to better prepare students to meet the challenge of diversity in criminal justice organizations.

Prerequisites: SOC 201S or CRJS 215S or permission of instructor

CRJS 462/562 Substantive Criminal Law (3 Credit Hours)

This course deals with the major substantive concepts involved in American criminal law, including development of criminal law, elements of criminal liability, defenses against criminal responsibility, and descriptions and definitions of specific offenses.

Prerequisites: CRJS 215S or CRJS 222 or permission of the instructor

CRJS 475/575 Criminal Justice Systems Around the World (3 Credit Hours)

The study of criminal justice systems around the world in order to understand how criminal behavior is defined and responded to in various cultures. Cultural differences will be highlighted in order to recognize that definitions of and responses to crimes closely reflect the cultures in which they exist.

Prerequisites: CRJS 215S or CRJS 222 or permission of the instructor

CRJS 494 Entrepreneurship in Sociology/Criminal Justice (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to integrate disciplinary theory and knowledge through developing a nonprofit program, product, business, or other initiative. The real-world experiences that entrepreneurs provide will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems. The course can be delivered either as an independent project for individual students or as group projects similar to those sometimes offered in topics courses.

Prerequisites: junior standing

CRJS 495/595 Topics in Criminal Justice (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 496/596 Topics in Criminal Justice (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: CRJS 215S or permission of the instructor

CRJS 497/597 Independent Study (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the department chair

CRJS 498/598 Tutorial Work in Special Topics in Criminal Justice (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the department chair

CS - Computer Science

CS 112 Information Literacy for Former Engineering Majors (1 Credit Hour)

The objective of this course is to enhance the ability of students to locate, manage, critically evaluate, and use information for problem solving, research, and decision making in a complex digital world. Emphasis in this course will be on information security, laws, regulations, institutional policies and ethical issues surrounding the access and use of information.

Prerequisites: CEE 111 or ECE 111 or ENGT 111 or MAE 111 or MSIM 111

CS 115 Introduction to Computer Science with Python (1 Credit Hour)

An overview of computer science as a problem-solving discipline and as a career path. Topics include fundamentals of software, hardware computing fundamentals, and an introduction to the development of software to solve problems. Software development is introduced using the Python programming language. Intended for prospective CS majors. Laboratory work required. Computer science majors who already have credit for CS 150, CS 151, CS 152, or ENGN 122 cannot subsequently take CS 115 for credit toward their degree.

CS 120G Introduction to Information Literacy and Research (3 Credit Hours)

Students will learn to locate, manage, critically evaluate and use information for problem solving, research and decision making. Includes collaborative tools for document development and office productivity tools for presentation. Information security, laws and etiquette related to use and access of information are covered.

CS 121G Introduction to Information Literacy and Research for Scientists (3 Credit Hours)

Students will learn to locate, manage, critically evaluate and use information for scientific problem solving and research. Includes mathematical tools for data analysis and presentation and office and collaborative tools, as well. Information security, laws and etiquette related to use and access of information are covered.

CS 126G Honors: Introduction to Information Literacy and Research (3 Credit Hours)

Open only to students in the Honors College. A special honors version of CS 120G.

CS 150 Introduction to Programming with C++ (4 Credit Hours)

Laboratory work required. Introduction to computer-based problem solving and programming in C++. Topics include problem solving methodologies, program design, algorithm development, and testing. C++ language concepts include variables, data types and expressions, assignment, control-flow statements, functions, arrays, pointers, structs, and classes.

Prerequisites: MATH 162M

CS 151 Introduction to Programming with Java (4 Credit Hours)

Laboratory work required. Introduction to computer-based problem solving and programming in Java. Topics include problem solving methodologies, program design, algorithm development, and testing. Java language concepts including variables, data types and expressions, assignment, control-flow statements, I/O, exception handling, functions, arrays, and classes.

Prerequisites: MATH 162M

CS 153 Introduction to Programming with Python (4 Credit Hours)

Laboratory work required. Introduction to computer-based problem solving and programming in Python. Topics include problem solving methodologies, program design, algorithm development, and testing. Python language concepts include variables, data types and expressions, assignment, control-flow statements, functions, tuples, lists, and dicts.

Prerequisites: MATH 162M

CS 170 Introduction to Computer Architecture I (3 Credit Hours)

Fundamentals of the architecture and operation of modern computers. Basic computer logic: logic equations; gates; combinatorial logic. Basic computer arithmetic: binary numbers; floating point representation. System hierarchy, overview of a computer; integrated circuit technology. Performance: metrics; choosing benchmarks; Amdahl's law. Instruction Sets and Operations: assembly language; machine language; examples of other instruction sets.

Prerequisites: MATH 162M and a grade of C or better in any one of: CS 150, CS 151, CS 153, DASC 257, or ENGN 122

CS 195 Topics (1-3 Credit Hours)

Special topics in computer science that are not part of the current curriculum at the freshman/sophomore level.

CS 197 Undergraduate Research Experience in Computer Science (0 Credit Hours)

Student participation in a supervised, undergraduate research experience for which credit will not apply to the degree. Experience must be related to the student's major, minor or career area of interest.

Prerequisites: permission of the instructor

CS 202G Information Literacy for Cybersecurity (3 Credit Hours)

This course provides an in-depth introduction to information literacy from library and information science, information ethics, and computer science perspectives along with applications to cybersecurity research and professional activity. This course is aligned with Old Dominion University's general education learning outcomes for information literacy.

Prerequisites: ENGL 110C

CS 222 Introduction to Digital Image Processing (3 Credit Hours)

This course introduces the basic concepts and algorithms of digital image processing. Topics include image representation, sampling, quantization, enhancement, filtering, restoration, segmentation, color image processing, imaging geometry, image transforms, and morphological processing.

CS 250 Programming with C++ (4 Credit Hours)

Laboratory work required. Design issues arising in software systems and C++ programming techniques aiding in their solution. Topics include the software life cycle, methods of functional decomposition, design documentation, abstract data types and classes, inheritance, common data structures, dynamic data structures, algorithmic patterns, and testing and debugging techniques.

Prerequisites: CS 150 or ENGN 122 with a grade of C or better and MATH 163

CS 251 Programming with Java (4 Credit Hours)

Laboratory work required. Design issues arising in software systems and Java programming techniques aiding in their solution. This course provides the conceptual basis for programming techniques and program design with object and classes. Topics include the software life cycle, methods of functional decomposition, abstract data types and classes, inheritance, references, common data structures, algorithmic patterns, and testing and debugging techniques.

Prerequisites: MATH 163 and a grade of C or better in any one of: CS 150, CS 151, CS 153, DASC 257, ENGN 122

CS 252 Introduction to Unix for Programmers (1 Credit Hour)

Laboratory work required. Available for pass/fail grading only. An introduction to Unix with emphasis on the skills necessary to be a productive programmer in Unix, Linux, and related environments. Topics include SSH, command line shells, files and directories, editing, compiling and debugging, SSH keys, git and programming IDEs.

Prerequisites: A grade of C or better in any one of: CS 150, CS 151, CS 153, ENGN 122, DASC 257, or IT 205

CS 253 Transfer Credit for Programming with Python (4 Credit Hours)

This course is a VCCS transfer credit vehicle. The course will not be offered for credit by Old Dominion University. An equivalent course would be a second programming course, this one in Python, that emphasizes the conceptual basis for programming techniques and program design with object and classes. Topics should include the software life cycle, methods of functional decomposition, abstract data types and classes, inheritance, common data structures, algorithmic patterns, and testing and debugging techniques.

Prerequisites: A prior programming course

CS 260 C++ for Programmers (1 Credit Hour)

Laboratory work required. An introduction to the C++ programming language for students who are familiar with programming in Java or Python. Topics include basic language syntax, data structures, control flow, structs, classes, inheritance, and basic elements of the C++ standard library. Not open to students with credit for CS 250.

Prerequisites: A grade of C or better in CS 251 or CS 253

CS 261 Java for Programmers (1 Credit Hour)

Laboratory work required. An introduction to the Java programming language for students who are familiar with programming in C++ or Python. Topics include basic language syntax, data structures, control flow, classes, inheritance, exception handling, and basic elements of the Java API. Not open to students with credit for CS 251.

Prerequisites: A grade of C or better in any one of: CS 250, CS 253 or ECE 250

CS 263 Python for Programmers (1 Credit Hour)

Laboratory work required. An introduction to the Python programming language for students who are familiar with programming in C++ or Java. Topics include basic language syntax, data structures, control flow, classes, inheritance, and basic elements of the Python standard library. Not open to students with credit for CS 253.

Prerequisites: A grade of C or better in any of: CS 250, CS 251 or ECE 250

CS 270 Introduction to Computer Architecture II (3 Credit Hours)

Fundamentals of the architecture and operation of modern computers. Building an ALU. The cache-Ram interaction. The virtual memory system. The Fetch/Execute cycle. Implementing a set of the ALU, Load/Store and Branch instructions in a single cycle implementation. Basics of microprogramming. Design of the control unit. A pipelined implementation. Multicores, multiprocessors and clusters.

Prerequisites: A grade of C or better in CS 170

CS 295 Topics in Computer Science (1-3 Credit Hours)

Special topics in computer science which are not part of the current curriculum at the freshman/sophomore level.

CS 300T Computers in Society (3 Credit Hours)

Covers changes in the world's society due to continuing implementation of computing technologies. Evaluation of technological expansions in areas of governments, business/industry, education, medicine, transportation, communication and entertainment. Topics include: intellectual property, software piracy, computer crimes and ethics. Students must research a societal topic and present in written and oral forms.

Prerequisites: ENGL 110C

CS 312 Internet Concepts (3 Credit Hours)

Laboratory work required. An in-depth introduction to the Internet and the World Wide Web for CS or similar majors as a basis for more advanced studies in Web programming. Topics include: historical and current development of the Internet Web document publishing. Internet design, communication, and application protocols and the tools that use them. Internet search tools and their design. Internet issues such as netiquette, copyright, spam, computer viruses, cookies, security, and future of the Internet.

Prerequisites: CS 252

CS 315 Computer Science Undergraduate Colloquium (1 Credit Hour)

This course consists of talks by invited speakers, including Old Dominion University faculty and guests from different research and industry communities. The colloquium introduces the possibilities of future research and career opportunities in the various areas of the computer science field. Additionally, students will learn about available scholarships and how to apply for them.

Prerequisites: Junior/senior standing as a computer science major; and a grade of C or better in any of: CS 150, CS 151, CS 153, ENGN 122, DASC 257

CS 330 Object-Oriented Design and Programming (3 Credit Hours)

Laboratory work required. The techniques, idioms, and design patterns of object-oriented programming. Methods of object-oriented analysis and design with the Unified Modeling Language. Multi-thread programs, synchronization, and graphic user interfaces.

Prerequisites: CS 252 and a grade of C or better in any of: CS 250, CS 251, CS 253, ECE 250

CS 350 Introduction to Software Engineering (3 Credit Hours)

Laboratory work required. An exploration of the software development process, with an emphasis on the tools and techniques that support project teams. Topics include: software development process models, requirements, automated testing, documentation, build, version and configuration management, issue tracking, and agile methods. The course requires each student to participate as a member of a project team and to demonstrate proficiency with a variety of development tools.

Prerequisites: CS 252 and a grade of C or better in CS 330 or CS 361

CS 355 Principles of Programming Languages (3 Credit Hours)

Survey of significant features of programming languages. Language types including imperative, functional, logical, and object-oriented are covered. Concepts include lexical and syntactic analysis, type systems, flow control, modularity, and parallel programming. Small programs in several languages required. Laboratory work required.

Prerequisites: CS 252 and a grade of C or better in any of: CS 250, CS 251, CS 253, ECE 250

CS 361 Data Structures and Algorithms (3 Credit Hours)

Laboratory work required. Common abstract data types, including vectors, lists, stacks, queues, sets, maps, heaps, and graphs. Standard Java interfaces for these ADTs. Iterators and generics. Choosing data structures and algorithms to implement ADTs, via analysis of their time and space complexity.

Prerequisites: CS 252, MATH 211, and a grade of C or better in CS 251 or CS 261

CS 367 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place. Written report required.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

CS 368 Computer Science Internship (1-3 Credit Hours)

Available for pass/fail grading only. Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students to gain short duration career-related experience. An academic project may be required by the department to enhance the value of the educational experience. Written report required.

Prerequisites: Approval by department is required; additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

CS 381 Introduction to Discrete Structures (3 Credit Hours)

Topics include propositional and predicate logic, rules of inference, methods of proof, set operations, functions, complexity of algorithms, growth of functions, induction, counting, relations, equivalence relations and graphs.

Prerequisites: MATH 163 and a grade of C or better in any of: CS 150, CS 151, CS 153, DASC 257, ENGN 122

CS 390 Introduction to Theoretical Computer Science (3 Credit Hours)

Elementary study of theoretical aspects of computer science. Topics in formal languages and automata theory are covered including regular languages, regular expressions, finite automata, context-free languages, pushdown automata, grammars, Turing machines, and unsolvable problems.

Prerequisites: A grade of C or better in CS 381 and in any one of: CS 250, CS 251, CS 253, ECE 250

CS 395 Topics in Computer Science (1-3 Credit Hours)

Special topics in computer science that are not part of the current curriculum at the junior/senior level.

Prerequisites: permission of the instructor

CS 402/502 Formal Software Foundations (3 Credit Hours)

Laboratory work required. Foundational principles and techniques for building correct-by-construction software systems with provable guarantees. Includes functional programming, algebraic and polymorphic data types, pattern matching, computer-assisted theorem proving, proof automation, extraction of certified executable code, examples of verified algorithms.

Prerequisites: CS 381

CS 410/510 Professional Workforce Development I (3 Credit Hours)

Laboratory work required. Provides students with challenges of business environments in developing a technology based project. Students identify a societal problem, identify solutions, define project solutions, develop project objectives, conduct feasibility analysis, establish organizational group structure to meet project objectives and develop formal specifications. Students make formal technical project presentations and develop web documentation. Students prepare a draft grant proposal.

Prerequisites: A grade of C or better in CS 330 or CS 361

Pre- or corequisite: CS 350

CS 411W/511 Professional Workforce Development II (3 Credit Hours)

Laboratory work required. Students write professional documents and continue the development of the project defined in CS 410. Written work is reviewed and returned for corrective rewriting. Students will design and develop a project prototype using accepted best practices of professional software development. They will demonstrate the prototype to a formal panel and defend its satisfaction of the goals established in CS 410. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C and a grade of C or better in CS 330, CS 350, and CS 410

CS 417/517 Computational Methods and Software (3 Credit Hours)

Laboratory work required. Algorithms and software for fundamental problems in scientific computing. Topics: properties of floating point arithmetic, linear systems of equations, matrix factorizations, stability of algorithms, conditioning of problems, least-squares problems, eigenvalue computations, numerical integration and differentiation, nonlinear equations, iterative solution of linear systems.

Prerequisites: MATH 316 and a grade of C or better in any of: CS 250, CS 251, CS 253, ECE 250

CS 418/518 Web Programming (3 Credit Hours)

Laboratory work required. Overview of Internet and World Wide Web; web servers and security, HTTP protocol; web application and design; server side scripts and database integration, and programming for the Web.

Prerequisites: A grade of C or better in CS 312 and CS 330

CS 422/522 Introduction to Machine Learning (3 Credit Hours)

Laboratory work required. An introduction to machine learning with a focus on practical aspects of various learning techniques. Topics include supervised learning (linear models, probabilistic models, support vector machine, decision trees, neural networks, etc.), unsupervised learning (scaling, dimension reduction, clustering, etc.), reinforcement learning, and model evaluation. The course will also discuss applications on image analysis, text processing, and biomedical informatics.

Prerequisites: MATH 316 and a grade of C or better in any one of: CS 150, CS 151, or CS 153

CS 431/531 Web Server Design (3 Credit Hours)

Laboratory work required. Extensive coverage of the hypertext transfer protocol (HTTP), specifications and commentary (IETF RFCs), and implications for servers and clients. Students will develop a web server providing common HTTP functionality and implementing all HTTP (including unsafe and conditional) methods, content negotiation, transfer and content encoding, basic & digest authentication, and server-side execution of programs (i.e., dynamic resources). Frequent in-class demonstrations of progress and protocol conformance will be required.

Prerequisites: A grade of C or better in any one of: CS 150, CS 151, CS 153

CS 432/532 Web Science (3 Credit Hours)

Provides an overview of the World Wide Web and associated decentralized information structures, focusing mainly on the computing aspects of the Web: how it works, how it is used, and how it can be analyzed.

Students will examine a number of topics including: web architecture, web characterization and analysis, web archiving, Web 2.0, social networks, collective intelligence, search engines, web mining, information diffusion on the web, and the Semantic Web.

Prerequisites: A grade of C or better in any one of: CS 250, CS 251, CS 253, CS 260, CS 261, CS 263, or DASC 255

CS 433/533 Web Security (3 Credit Hours)

Provides detailed experience with: principles of web security, attacks and countermeasures, the browser security model, web app vulnerabilities, injection, denial-of-service, TLS attacks, privacy, fingerprinting, same-origin policy, cross site scripting, authentication, JavaScript security, emerging threats, defense-in-depth, techniques for writing secure code, web archiving, and rehosting.

Prerequisites: A grade of C or better in CS 312 and CS 330

CS 441/541 App Development for Smart Devices (3 Credit Hours)

Laboratory work required. Project-oriented coverage of the principles of application design and development for Android platform smart devices. Topics include user interface; input methods; data handling; network techniques; localization and sensing. Students are required to produce a professional-quality mobile application.

Prerequisites: CS 330 and either CS 251 or CS 261

CS 445/545 Introduction to Quantum Computing (3 Credit Hours)

The course covers the fundamental concepts of quantum information and computation, including the quantum bits, single- and multi-gate circuits, and related concepts like superposition, entanglement, interference, measurements, basic theory, quantum communication protocols, and time-permitted basic algorithms in quantum computing. The class focuses on the material required to transition from theory to practical use cases based on the class's interests. Familiarity with Jupyter Notebooks, linear algebra, and discrete structures is recommended.

Prerequisites: A grade of C or better in CS 150, CS 151, CS 153, CS 260, CS 261 or CS 263

CS 450/550 Database Concepts (3 Credit Hours)

Laboratory work required. Three level database architecture. The relational database model and relational algebra. SQL and its use in database procedures and with conventional programming languages. Entity relationship modeling. Functional dependencies and normalization. Transactions, concurrency and recovery.

Prerequisites: CS 252 and a grade of C or better in CS 381 and either CS 330 or CS 361

CS 454/554 Network Management (3 Credit Hours)

Laboratory work required. The administration of computer networks and their interaction with wide area networks: network topologies for local and wide area networks, common protocols and services, management of distributed file services, routing and configuration, security, monitoring and trouble-shooting.

Prerequisites: A grade of C or better in CS 455

CS 455/555 Introduction to Networks and Communications (3 Credit Hours)

Internet and the 5-layered protocol architecture for the Internet, applications built on top of data networks, specifically the Internet, the web, the transport layer, TCP and UDP protocols, the network layer, the data link layer, also some of the technologies for the physical layer.

Prerequisites: CS 252, CS 270, and a grade of C or better in any one of: CS 250, CS 251, CS 253, ECE 250

CS 458/558 Unix System Administration (3 Credit Hours)

Laboratory work required. Aspects of administering a SOLARIS/UNIX operating system in a networked environment are covered. Topics covered include installation, file system management, backup procedures, process control, user administration, device management, Network File Systems (NFS), Network Information Systems (NIS), UNIX security, Domain Name Services (DNS), and integration with other operating systems.

Prerequisites: experience with UNIX

CS 460/560 Computer Graphics (3 Credit Hours)

Laboratory work required. An introduction to graphical systems and methods. Topics include basic primitives, windowing, transformations, hardware, interaction devices, 3-D graphics, curved surfaces, solids, and realism techniques such as visible surface, lighting, shadows, and surface detail. Requires project involving OpenGL programming.

Prerequisites: A grade of C or better in CS 361

CS 462/562 Cybersecurity Fundamentals (3 Credit Hours)

Introduction to networking and the Internet protocol stack; Vulnerable protocols such as HTTP, DNS, and BGP; Overview of wireless communications, vulnerabilities, and security protocols; Introduction to cryptography; Discussion of cyber threats and defenses; Firewalls and IDS/IPS; Kerberos; Transport Layer Security, including certificates; Network Layer Security.

Prerequisites: MATH 162M

CS 463/563 Cryptography for Cybersecurity (3 Credit Hours)

This course covers mathematical foundations, including information theory, number theory, factoring, and prime number generation; cryptographic protocols, including basic building blocks and protocols; cryptographic techniques, including key generation and key management, and applications; and cryptographic algorithms--DES, AES, stream ciphers, hash functions, digital signatures, etc.

Prerequisites: MATH 162M

CS 464/564 Networked Systems Security (3 Credit Hours)

Authentication in cyber systems including password-based, address-based, biometrics-based, and SSO systems; Authorization and accounting in cyber systems; Securing wired and wireless networks; Secured applications including secure e-mail services, secure web services, and secure e-commerce applications; Security and privacy in cloud environments.

Prerequisites: MATH 162M

CS 465/565 Information Assurance for Cybersecurity (3 Credit Hours)

Introduction to information assurance. Topics to be covered include metrics, planning and deployment; identity and trust technologies; verification and evaluation, and incident response; human factors; regulation, policy languages, and enforcement; legal, ethical, and social implications; privacy and security trade-offs; system survivability; intrusion detection; and fault and security management.

Prerequisites: MATH 162M and familiarity with computer security area

CS 466/566 Principles and Practice of Cyber Defense (3 Credit Hours)

This course is designed to help students gain a thorough understanding of vulnerabilities and attacks in systems and networks and learn cyber defense best practices. It covers fundamental security design principles and defense strategies and security tools used to mitigate various cyber attacks. The topics may include identification of Recon Ops, intrusion detection, identification of C2 Ops, data exfiltration detection, identifying malicious codes, network security techniques, cryptography, malicious activity detection, system security architectures, defense in depth, distributed/cloud and virtualization.

Prerequisites: A grade of C or better in any one of: CS 250, CS 251, CS 253, CS 270, CS 455, CS 462, CS 471, or ECE 250; no prior knowledge of computer security is necessary

CS 467/567 Introduction to Reverse Software Engineering (3 Credit Hours)

Laboratory work required. Covers all the major components such as static analysis, dynamic analysis, Windows x86/64 Assembly, APIs, DLL/process injection, covert launching methods, behaviors, anti-disassembly, anti-VM, packing/unpacking, shell code, C++, buffer overflow attacks and various kinds of networking attacks; includes a final project that analyzes a piece of real malware.

Prerequisites: CS 270 and a grade of C or better in any one of: CS 250, CS 251, CS 253, ECE 250

CS 468W Research Methods in Mathematics and Sciences (3 Credit Hours)

Emphasizes the tools and techniques used to solve scientific problems. Topics include use and design of experiments, use of statistics to interpret experimental results, mathematical modeling of scientific phenomena, and oral and written presentation of scientific results. Students will perform four independent inquiries, combining skills from mathematics and science to solve research problems. Required for Physics teaching licensure track; not available as upper-division elective in content area. This is a writing intensive course.

Prerequisites: Admission to the Monarch Teach Program; CS 361 or MATH 212; and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

CS 469/569 Data Analytics for Cybersecurity (3 Credit Hours)

The course introduces classical and advanced models and techniques in machine learning and deep learning. It applies these techniques in the cybersecurity domain including anomaly detection, network security, and malware detection and classification. Advanced applications such as self-driving cars and IoT systems are also discussed. In addition, cyber-attacks on machine learning techniques and AI systems and the possible consequences are also discussed.

Prerequisites: CS 462 or CS 455 or experience in cybersecurity

CS 470/570 Introduction to Computer Architecture (3 Credit Hours)

This course provides an overview of the fundamentals of computer architecture. Major components include basic computer logic, integrated circuits, instruction sets, cache-RAM interaction, virtual memory, the fetch/execute cycle, basics of microprogramming, pipelined implementation, parallel processors including SISD, MIMD, SIMD, and SPMD. The course also introduces hardware multithreading, multicores, multiprocessors, GPUs, multiprocessor network topologies, and cluster networking.

Prerequisites: A grade of C or better in CS 170

CS 471/571 Operating Systems (3 Credit Hours)

Operating system structures. Multiprogramming and multiprocessing. Process management. Memory and other resource management. Storage management, I/O systems, distributed systems. Protection and security. The concepts will be illustrated through example systems such as Unix and Windows.

Prerequisites: ECE 346 or ECE 443 or a grade of C or better in CS 361 and CS 170; a grade of C or better in ENGN 122 or CS 150 or CS 260

CS 472 Network and Systems Security (3 Credit Hours)

Laboratory work required. Basic protocols, techniques and programming issues to secure network and computer systems. Topics include: cryptographic algorithms and concepts (Secret Key Cryptography, Hashes and Message Digests, Public Key and Authentication); Security Standards (Kerberos, Public Key Infrastructure, IPsec, SSL/TLS); Security applications (PEM, S/MIME, PGP, HTTP, Firewalls); Hands-on programming using OpenSSL.

Prerequisites: A grade of C or better in CS 361

CS 475/575 Introduction to Computer Simulation (3 Credit Hours)

Laboratory work required. Efficient implementation methods. Time management. Planning and design of simulation experiments. Statistical issues in simulation. Generation of random numbers and stochastic variates. Programming with graphically- and text-based simulation languages. Verification and validation of simulation models. Distributed simulation. Special topics such as HLA will be discussed.

Prerequisites: STAT 330 and a grade of C or better in CS 330 or CS 361

CS 476/576 Systems Programming (3 Credit Hours)

Laboratory work required. This course is to help students fully understand and utilize the internal workings and capabilities provided by modern computing, networking and programming environments. Topics include: Shell Script Programming, X Windows (Xlib and Motif), UNIX internals (I/O, Processes, Threads, IPC and Signals), Network Programming (UDP/TCP Sockets and Multicasting) and Java Systems Programming (SWING, Multithreading and Networking).

Prerequisites: A grade of C or better in CS 330 and CS 361

CS 478/578 Computational Geometry, Methods and Applications (3 Credit Hours)

The discipline of Computational Geometry is devoted to the study of algorithms which are formulated in terms of spatially embedded arrangements of objects, such as points, lines, surfaces, and solids. This course covers fundamental algorithms including convex hulls, polygon triangulations, point location, Voronoi diagrams, Delaunay triangulations, binary space partitions, quadrees, and other topics.

Prerequisites: CS 361 and MATH 211

CS 480/580 Introduction to Artificial Intelligence (3 Credit Hours)

Laboratory work required. Introduction to concepts, principles, challenges, and research in major areas of AI. Areas of discussion include: natural language and vision processing, machine learning, machine logic and reasoning, robotics, expert and mundane systems.

Prerequisites: A grade of C or better in any one of: CS 250, CS 251, CS 253, CS 260, CS 261, CS 263, or DASC 255

CS 481/581 Trustworthy Health Analytics (3 Credit Hours)

This course offers a comprehensive, project-driven approach to integrating AI in healthcare, focusing on building prototype models for prevention, diagnosis, and treatment while stressing the need of adopting ethical, responsible methods to reduce risks and improve patient outcomes.

Prerequisites: Instructor permission required

CS 486/586 Introduction to Parallel Computing (3 Credit Hours)

Laboratory work required. The motivation for and successes of parallel computing. A taxonomy of commercially available parallel computers. Strategies for parallel decompositions. Parallel performance metrics. Parallel algorithms and their relation to corresponding serial algorithms. Numerous examples from scientific computing, mainly in linear algebra and differential equations. Implementations using public-domain network libraries on workstation clusters and computers.

Prerequisites: MATH 316; knowledge of a high level language

CS 487 Applied Parallel Computing (3 Credit Hours)

Laboratory work required. Fundamental concepts of parallel computing: Machine models, architectures, parallel topologies and languages, parallel algorithm design and parallel programming, architecture independent message passing interface (MPI) communication library, and scaled-speedup. Group project required.

Prerequisites: A grade of C or better in CS 270 and either CS 361 or CS 330; CS 417 or linear algebra is recommended

CS 488/588 Principles of Compiler Construction (3 Credit Hours)

Laboratory work required. Theoretical and practical aspects of compiler design and implementation. Topics will include lexical analysis, parsing, translation, code generation, optimization, and error handling.

Prerequisites: A grade of C or better in CS 361

CS 491/591 Honors Research I in Computer Science (3 Credit Hours)

Laboratory work required. Students perform mentored research in a group environment to develop computational approaches in addressing computer science challenges. The project needs approval by the Computer Science Honors Program director, and registration requires approval of the mentor. A GPA of 3.00 or better is required, or approval by the director of the Computer Science Honors Program.

Prerequisites: grade of C or better in CS 350

CS 492/592 Honors Research II in Computer Science (3 Credit Hours)

Laboratory work required. Students continue mentored research using the project defined in CS 491. Students will present the work and findings to the public. The project needs approval by the Computer Science Honors Program director, and registration requires approval of the mentor.

Prerequisites: A grade of B or better in CS 491

CS 495/595 Topics in Computer Science (1-3 Credit Hours)

Special topics.

Prerequisites: permission of the instructor

CS 497/597 Independent Study in Computer Science (1-3 Credit Hours)

Independent study under the direction of an instructor.

Prerequisites: permission of the instructor

CS 499W Honors Thesis in Computer Science (3 Credit Hours)

Laboratory work required. Each student writes a thesis and continues the development of the project defined in CS 491. Written work is reviewed and returned for corrective rewriting. Students will present the work and findings to the public. The project needs approval by the Computer Science Honors Program director, and registration requires approval of the mentor. This is a writing intensive class.

Prerequisites: A grade of C or better in CS 491

CSD - Communication Sciences and Disorders

CSD 350 Survey in Communication Disorders (3 Credit Hours)

This course is designed to acquaint students with the discipline of speech-language pathology and audiology and provide an introduction to developmental and acquired disorders of speech and language.

Prerequisites: Permission of instructor

CSD 351 Anatomy of Speech, Language, and Swallowing (3 Credit Hours)

Study of the psycholinguistic, acoustic, anatomical, and physiological aspects of speech and language, as well as anatomical and physiological aspects of swallowing.

Prerequisites: permission of the instructor

CSD 352 Phonetics (3 Credit Hours)

Study of the production and classification of sounds in American English; practice in phonetic transcription.

Prerequisites: permission of the instructor

CSD 446 Neural Bases of Communication and Swallowing Disorders (3 Credit Hours)

The content of this course focuses upon the neurological bases of speech, language, and swallowing, and communication and swallowing disorders that result from acquired neuropathologies affecting the central and peripheral nervous system.

Prerequisites: Grade of C- or better in CSD 350 and CSD 351

CSD 447 Introduction to Language Disorders in Children (3 Credit Hours)

This course presents an introduction to the various language disorders manifested by children and adolescents with a focus on characteristics, etiologies, assessment, and general intervention approaches.

Prerequisites: a grade of C- or higher in CSD 453

Pre- or corequisite: ENGL 370 or ENGL 350

CSD 449W/549 Clinical Observation and Writing in Communication Sciences and Disorders (3 Credit Hours)

Speech-language pathology/audiology students will learn practical and foundational clinical skills necessary for deconstructing speech-language pathology treatment sessions, for identifying important parts-of-speech, and for completing disciplinary writing tasks. Objectives in this class are met using guided observations. This is a writing intensive course.

Prerequisites: Grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

Pre- or corequisite: Senior standing and a grade of C- or better in CSD 447

CSD 451/551 Introduction to Speech Sound Disorders (3 Credit Hours)

This course emphasizes causes, identification, and treatment of speech sound disorders. The class is designed to acquaint students with speech development from infancy through childhood, introduce assessment procedures and treatment principles, and build awareness and understanding of cultural and linguistic differences.

Prerequisites: CSD 453

Pre- or corequisite: CSD 352

CSD 452 Introduction to Voice and Fluency Disorders (3 Credit Hours)

This content of this course focuses upon the basic tenets related to fluency and voice disorders. The purpose is to introduce students to the basic terminology, concepts of the role of articulation, phonation, and respiration as they relate to both fluency and voice disorders. Diagnosing and treating fluency and voice disorders will be discussed.

Prerequisites: Grade of C- or better in CSD 351

CSD 453/553 Speech and Language Development (3 Credit Hours)

This course reviews speech and language development from the perspective of the speech-language pathologist.

Prerequisites: Grade of C- or better in CSD 350

CSD 458/558 Speech and Hearing Science (3 Credit Hours)

The content of this course focuses upon basic acoustics, speech acoustics, psychoacoustics, speech perception, and clinical laboratory instrumentation. The course is designed to provide fundamental information regarding normal and abnormal aspects of speech and hearing processes.

Prerequisites: Grade of C- or better in CSD 460

CSD 460/560 Hearing Disorders and Basic Audiometry (3 Credit Hours)

A study of the physics of sound, anatomy, and physiology of the human ear, basic audiometry and hearing disorders.

Prerequisites: Permission of instructor

CSD 461/561 Aural Rehabilitation I (3 Credit Hours)

A study of audiological findings and the implications for hearing therapy; speech and language development of the deaf.

Prerequisites: Grade of C- or better in CSD 460

CSD 465 Sign Language and Deaf Culture I (3 Credit Hours)

Study of the grammatical structure and use of American sign language; exposure to ideals and culture of the deaf community. (This course does not satisfy the general education foreign language skills requirement.)

Prerequisites: Permission of the instructor

CSD 466 Sign Language and Deaf Culture II (3 Credit Hours)

Advanced studies of the grammar and symbols of American Sign Language, and appreciation for concepts and issues surrounding deaf culture. (This course does not fulfill the general education foreign language requirement.)

Prerequisites: Grade of C- or higher in CSD 465

CSD 469 Practicum in Speech-Language Pathology (3 Credit Hours)

The clinical practicum in speech-language pathology takes place off campus, giving students the opportunity to earn clinical hours with an ASHA-certified speech-language pathologist in their senior year. The practicum involves 90 hours, divided between direct and indirect clinical services, as well as class meetings. A background check is required before students can be placed at the practicum site. Students are required to have a GPA in the major of 3.0 or higher.

Prerequisites: A grade of B- or better in CSD 447 and CSD 451; senior standing

Pre- or corequisite: CSD 449W

CSD 497/597 Independent Study in Communication Sciences and Disorders (1-3 Credit Hours)

Independent study of special topics in communication sciences and disorders.

Prerequisites: Permission of the instructor

CSD 498 Directed Research in Speech-Language Pathology (1-6 Credit Hours)

Supervised research on a specific problem in speech-language pathology. Regular meetings with faculty and a written/oral report are required.

Prerequisites: permission of instructor

CYSE - Cybersecurity

CYSE 001 Cybersecurity SFS LeADERS (0 Credit Hours)

This course outlines the curricular and co-curricular requirements for Scholarship for Service Students in the Cyber LeADERS program.

CYSE 100 Cyber Explorers and University Orientation (1 Credit Hour)

This course provides an introduction to cyber hygiene and orientation to university life.

CYSE 200T Cybersecurity, Technology, and Society (3 Credit Hours)

Students will explore how technology is related to cybersecurity from an interdisciplinary orientation. Attention is given to the way that technologically-driven cybersecurity issues are connected to cultural, political, legal, ethical, and business domains.

CYSE 201S Cybersecurity and the Social Sciences (3 Credit Hours)

This course addresses the social, political, legal, criminological, and economic dimensions of cybersecurity through a social science framework. Students are introduced to a human-factors approach to understanding cybersecurity threats. Attention is given to the social factors that contribute to cyber incidents and the political and legal mechanisms that are developed to control the behaviors of those who create risks and cybersecurity incidents. The class also explores how cybersecurity is studied by social scientists in various social science disciplines.

CYSE 202G Information Literacy for Cybersecurity (3 Credit Hours)

This course provides an in-depth introduction to information literacy from library and information science, information ethics, and computer science perspectives along with applications to cybersecurity research and professional activity. This course is aligned with Old Dominion University's general education learning outcomes for information literacy.

Prerequisites: ENGL 110C

CYSE 250 Basic Cybersecurity Programming and Networking (3 Credit Hours)

This course introduces the cybersecurity-centric programming and networking concepts. Students will develop problem solving skills by using low-level programming languages (including C and assembly) and learn fundamentals of network protocols. This course is the technical base for students to take cybersecurity major courses. No prior knowledge of programming and networking is assumed.

Prerequisites: MATH 162M or higher

CYSE 270 Linux System for Cybersecurity (3 Credit Hours)

This course introduces the basic operations in major Linux distros for cybersecurity using both graphical interface and command line interface. Students will learn about the basic installation and configuration, file systems management, shell scripts, and user authentication in Linux systems. This course is the technical base for students to take cybersecurity major courses.

CYSE 280 Windows System Management and Security (3 Credit Hours)

This course introduces tools and techniques used to configure, manage and implement Windows and its security-related features. Students will install, configure, manage and secure Windows client & server operating systems and related networking environment using a variety of software tools. This course also details how to mitigate malware threats, identify security issues by using auditing and the Advanced Threat Analysis feature in Windows Server, secure virtualization platform, and use new deployment options for enhancing the security.

CYSE 300 Introduction to Cybersecurity (3 Credit Hours)

This course provides an overview of the field of cybersecurity. It covers core cybersecurity topics including computer system architectures, critical infrastructures, cyber threats and vulnerabilities, cryptography, information assurance, network security, and risk assessment and management. Students are expected to become familiar with fundamental security concepts, technologies and practices, and develop a foundation for further study in cybersecurity.

Prerequisites: MATH 162M or permission of the instructor

CYSE 301 Cybersecurity Techniques and Operations (3 Credit Hours)

This course introduces tools and techniques used to secure and analyze large computer networks and systems. Students will explore and map networks using a variety of diagnostic software tools, learn advanced packet analysis, configure firewalls, write intrusion detection rules, perform forensic investigation, and practice techniques for penetration testing.

Prerequisites: MATH 162M and CYSE 270 or permission of the instructor

CYSE 368 Cybersecurity Internship (3-6 Credit Hours)

Internships provide a personalized exploration of structured employment within the major. This course mandates an initial or ongoing internship that the student obtains, as assignments are rooted in their concurrent internship experience. Course assignments will define the employment relationship, articulate learning outcomes, and offer opportunities for reflection to enhance the student's academic, career, and professional readiness. Students must complete 50 hours of site work per course credit.

Prerequisites: The student's internship placement must be coordinated with the site supervisor and approved by the School of Cybersecurity's Internship Director

CYSE 395 Topics in Cybersecurity (1-3 Credit Hours)

Study of selected topics in cybersecurity.

Prerequisites: junior standing

CYSE 404 Law and Digital Forensics (3 Credit Hours)

This course will focus on the intersection of digital forensics and the criminal justice system, namely how digital forensics is understood and applied to key criminal justice, constitutional and statutory considerations within the criminal justice system. Students will explore such topics as the nature and types of cybercrime; search and seizure principles in the digital world; finding, handling and maintaining chain of custody of digital evidence; interviewing individuals relating to digital evidence and related activities; and testifying in court about digital evidence matters.

Prerequisites: Junior standing or permission of instructor

CYSE 406 Cyber Law (3 Credit Hours)

This course tackles two major cyber law subjects. The first part of the course examines various U.S. laws and legal considerations that impact the digital and cyberspace worlds from traditional civil, and to a lesser extent, traditional criminal perspectives. The second part will familiarize cyber operations professionals about the extent of and limitations on their authorities to ensure operations in cyberspace are in compliance with U.S. law, regulations, directives and policies. The course will also introduce students to miscellaneous cybersecurity topics such as the Federal Acquisition Requirements.

Prerequisites: junior standing

CYSE 407 Digital Forensics (3 Credit Hours)

This course introduces the basic concepts and technologies of digital forensics. Students will learn the fundamental techniques and tools utilized for collecting, processing, and preserving digital evidence on computers, mobile devices, networks, and cloud computing environments. Students will also engage in oral and written communication to report digital forensic findings and prepare court presentation materials.

Prerequisites: declared major and junior standing

CYSE 409 Crime and Computer Applications (3 Credit Hours)

The purpose of this interdisciplinary course is to introduce students to the ways in which computers are involved in the commission and the investigation of crime. Students will learn the fundamentals of cryptography and steganography and the tools used to perform these activities. Students will also use forensic software to identify, gather, and verify relevant digital evidence. Cross-listed with CRJS 409.

Prerequisites: CRJS 310 or permission of instructor

CYSE 410/510 Artificial Intelligence (AI) Methods and Models (3 Credit Hours)

This course offers an introduction to Artificial Intelligence (AI). Students will explore the field's fundamental concepts, techniques, and applications. Methods, such as Generative AI (GenAI) that enable machines to learn and process information, and models, such as machine learning (ML) that uses data sets to recognize patterns and make decisions without human intervention will be covered. The course is designed for non-specialists and does not require prior computer science or programming knowledge.

Prerequisites: Permission of the instructor

CYSE 416/516 Cyber Defense Fundamentals (3 Credit Hours)

This course focuses on cybersecurity theory, information protection and assurance, and computer systems and networks security. The objectives are to understand the basic security models and concepts, learn fundamental knowledge and tools for building, analyzing, and attacking modern security systems, and gain hands-on experience in cryptographic algorithms, security fundamental principles, and Internet security protocol and standards. (Offered fall)

Prerequisites: permission of the instructor

Pre- or corequisite: ECE 355 or equivalent or permission of the instructor

CYSE 417 Digital Leadership (3 Credit Hours)

This course explores technology as it relates to leadership experiences. Theories, case studies and real world examples are analyzed to show both successful and unsuccessful uses of online and digital approaches that inform leaders' communication strategies. Students will explore how their own digital identities may impact their futures as leaders. They will also learn how to create digital identities that will shape their professional identities throughout their careers.

Prerequisites: Junior standing or permission of instructor

CYSE 419/519 Cyber Physical System Security (3 Credit Hours)

Cyber Physical Systems (CPS) integrate computing, networking, and physical processes. The objectives of this course are to learn the basic concepts, technologies and applications of CPS, understand the fundamental CPS security challenges and national security impact, and gain hands-on experience in CPS infrastructures, critical vulnerabilities, and practical countermeasures.

Prerequisites: ECE 355 or permission of the instructor

CYSE 420/520 Applied Machine Learning in Cybersecurity (3 Credit Hours)

This course introduces the concepts and technologies of machine learning with a focus on applications related to cybersecurity. The objectives are to learn fundamental knowledge and practical experience and identify the use case of machine learning techniques in cybersecurity. The course will discuss traditional and advanced machine learning techniques, e.g., neural network, deep convolutional neural network, generative adversarial network, and transfer learning algorithms. Students will engage in oral and written communication by reporting and presenting the materials of the course project.

Prerequisites: CYSE 250 or permission of the instructor

CYSE 421/521 Generative AI in Cybersecurity (3 Credit Hours)

This course provides an in-depth examination of the intersection between Generative AI (Gen AI) and Cybersecurity. It focuses on the dual nature of advanced AI systems as both enhancers and potential threats to security infrastructure. Students will acquire a comprehensive understanding of the underlying principles, algorithms, and practical applications of Gen AI models in the discovery of attack vectors, identification of cyber threats, and automation of security tasks. Additionally, the course will address defensive strategies aimed at mitigating the risks stemming from AI-driven cyberattacks.

Prerequisites: Permission of instructor

CYSE 425W/525 Cybersecurity Strategy and Policy (3 Credit Hours)

This writing intensive course explores cybersecurity policy and strategy and introduces students to the essentials of strategy development and policy making in cybersecurity. Topics considered include planning principles in cyber strategy; risk management and cybersecurity policy; the connections between cybersecurity policies, businesses, and governmental institutions; the knowledge, skills, and abilities needed to develop and implement cybersecurity policy; the social, political and ethical implications that arise in cybersecurity policies and strategies; strategies to assess cybersecurity policy; and the ties between national security and cybersecurity policy.

Prerequisites: ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better and CYSE 200T or IT 200T or POLS 101S

CYSE 426/526 Cyber War (3 Credit Hours)

This course explores the national security dimensions of cybersecurity and examines cyber war in international relations. Exploration of cyber war begins with an examination of cybersecurity as a component of national security and investigates the topics of U.S National Cybersecurity and other national approaches to cyber war. The topics of cyber deterrence, cyber as a military domain, the roles of international organizations in cyber war, cyber terrorism, the role of social media, and information warfare will be discussed. The international dimension of cybersecurity is also discussed.

Prerequisites: CYSE 200T or POLS 101S or permission of the instructor

CYSE 430/530 Introduction to Cybersecurity Risk Management (3 Credit Hours)

This course addresses the broad topic of risk management and how risk, threats, and vulnerabilities impact information systems. Areas of instruction include how to assess and manage risk based on defining an acceptable level of risk for information systems. Elements of a business impact analysis (BIA), business continuity plan (BCP), disaster recovery plan (DRP), and computer incident response team (CIRT) plan will also be discussed.

Prerequisites: CYSE 300

CYSE 431/531 Advanced Techniques Cybersecurity Risk Management (3 Credit Hours)

Expert-level approach on the Risk Management Framework (RMF) system Authorization to Operation (ATO), including Continuous cATO. Curriculum that is aligned to the NIST SP 800-53, Revision 5. Advanced topics include Assess and Authorize, System Categorization, Security Control Assessment, System Test Results, Plan of Action and Milestones (POA&M), and Continuous Monitoring (CONMON).

Prerequisites: CYSE 430

CYSE 432/532 Cyber Risk CSF/CMMC (3 Credit Hours)

This course introduces cybersecurity, the NIST Cybersecurity Framework (CSF), and the Cybersecurity Maturity Model Certification (CMMC) program. Topics to be addressed include the risk management fundamentals, IT risk management, and cyber risk controls; cyber threats and vulnerabilities; data security and sanitization; the NIST CSF, including its core functions, categories, and subcategories; and the CMMC comprising its levels, domains, and implementation guidelines.

Prerequisites: CYSE 431

CYSE 433/533 Cyber Risk FedRAMP/Audit (3 Credit Hours)

This course explores the Federal Risk and Authorization Management Program (FedRAMP) and Auditing. Topics to be addressed include an overview of the FedRAMP framework, including its objectives, components, and stages; the needed documents and guidelines to develop system security plans and security assessment reports; the NIST Risk Management Framework (RMF) comprising its different stages and the adoption mechanism; FISMA compliance and auditing assessment; and real-world case studies and future challenges.

Prerequisites: CYSE 432

CYSE 450 Ethical Hacking and Penetration Testing (3 Credit Hours)

This course introduces the basic terminologies used in ethical hacking and useful tools in relation to penetration testing on Kali Linux. Students will learn to explore the vulnerabilities in various systems and operate the industry-leading tools and framework to perform the penetration testing on different target systems.

Prerequisites: CYSE 270 and CYSE 301 or permission of the instructor

CYSE 494 Entrepreneurship in Cybersecurity (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to integrate disciplinary theory and knowledge through developing a nonprofit program, product, business, or other initiative. The real-world experiences that entrepreneurship provide will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems. The course can be delivered either as an independent project for individual students or as group projects similar to those sometimes offered in topics courses.

Prerequisites: Approval by the Director of the Center for Cybersecurity Education and Research

CYSE 495/595 Topics in Cybersecurity (1-3 Credit Hours)

The advanced study of selected cybersecurity topics designed to permit small groups of qualified students to work on subjects of mutual interest. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: permission of the instructor

CYSE 497/597 Tutorial Work in Special Topics in Cybersecurity (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the instructor

CYTO - Cytotechnology

CYTO 403 Gynecological Screening Laboratory (3 Credit Hours)

Laboratory experience in the screening of gynecological smears.

Prerequisites: Acceptance into the Cytotechnology Program and/or permission of the cytotechnology program director

Pre- or corequisite: CYTO 405 and CYTO 415

CYTO 404 General Pathology (3 Credit Hours)

This course is an overview of general disease processes and causes in the human. All body systems will be covered including respiratory, gastrointestinal, circulatory, nervous, reproductive, and urinary. Aging, dietary, and stress factors will be discussed in the disease process. Bacteria, fungi, and viruses will be discussed in general and for each body system. Neoplasms will be covered for each body site. This course will be of benefit to anyone interested in diseases of the human body or entering the medical field. (cross listed with MLS 401)

Prerequisites: junior standing

Pre- or corequisite: BIOL 250 and BIOL 251 or equivalent

CYTO 405 Normal Gynecological Cytology (3 Credit Hours)

Introduction to histological and cytological features of the normal female genital tract with emphasis on normal and non-neoplastic abnormalities. Principles of cytological diagnostic techniques will be discussed.

Prerequisites: Acceptance into the Cytotechnology Program or permission of program director

Pre- or corequisite: CYTO 403

CYTO 407 Clinical Histology (3 Credit Hours)

This course consists of the systematic study of cellular components as well as the grouping/organization of tissues into major 'organ' systems. Additionally, the cellular basis of examples of human diseases will be studied. Microscopic and virtual identification and morphology of cells, tissues, and organ substructures will be emphasized. This course will be of benefit to anyone interested in diseases of the human body or entering the medical field.

Prerequisites: permission of the instructor

CYTO 415 Abnormal Gynecological Cytology (4 Credit Hours)

Introduction to diagnostic cytological techniques and pathology of the female reproductive tract with emphasis on premalignant and malignant changes.

Pre- or corequisite: CYTO 403 and CYTO 405

CYTO 424 Respiratory Cytology (4 Credit Hours)

Principles of diagnostic cytology and pathology of the respiratory tract, including benign conditions, inflammatory and infectious diseases, premalignant conditions and primary and metastatic malignancies.

Prerequisites: Admission to the cytotechnology program

Pre- or corequisite: CYTO 405 and CYTO 415

CYTO 428W Cytopreparatory Techniques and Procedures (3 Credit Hours)

Introduction to collection, processing and preparation of cytologic specimens from all body sites and general laboratory procedures and regulations.

A portion of this course consists of practical experience acquired in the laboratory. Practical experience will be perfected during clinical site rotations throughout the Cytotechnology Program. Students will learn how to properly write lab reports and papers related to health science fields. This is a writing intensive course.

Prerequisites: Pre-admission to the Cytotechnology Program or Program Director permission; completion of ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or higher

CYTO 430 Cytopreparation & Ancillary Techniques (4 Credit Hours)

The course offers an introduction to cytopreparation and ancillary diagnostic techniques. Upon completion, students should be able to understand the principles of cytology preparatory techniques as well as fixation and staining theory and use. In addition, students will learn the application and interpretation of various special and immunohistochemical stains, and understand the various molecular tests available for use in cytopathology.

Prerequisites: CYTO 404

Pre- or corequisite: CYTO 403, CYTO 405 and CYTO 415

CYTO 442 Gastro-Intestinal Cytology (2 Credit Hours)

Study of the pathology and cytology of the gastro-intestinal tract, including the oral cavity, esophagus, stomach, colon, and rectum. Emphasis on normal conditions, benign inflammatory, infections, parasitic conditions, gastric ulcers, premalignant and malignant lesions.

Pre- or corequisite: CYTO 405 and CYTO 415

CYTO 444 Genitourinary Cytology (2 Credit Hours)

Study of the pathology and cytology of the genitourinary tract, with emphasis in normal conditions, benign inflammatory and infectious conditions, crystals, premalignant and malignant lesions.

Pre- or corequisite: CYTO 405 and CYTO 415

CYTO 445 Breast Cytology (2 Credit Hours)

Study of pathology and cytology of the breast, with emphasis on benign, inflammatory conditions, premalignant and malignant disease in both breast smears and fine needle aspirations.

Prerequisites: CYTO 407

Pre- or corequisite: CYTO 405 and CYTO 415

CYTO 446 Body Fluids Cytology (3 Credit Hours)

Study of the pleural, peritoneal and pericardial cavity fluids, synovial and cerebral spinal fluids, with emphasis on benign, inflammatory conditions, and primary and metastatic malignancies.

Prerequisites: CYTO 407

Pre- or corequisite: CYTO 405 and CYTO 415

CYTO 448 Non-Epithelial Cytology (1 Credit Hour)

Study of the pathology and cytology of non-epithelial lesions with emphasis on benign, inflammatory, and malignant conditions.

Prerequisites: Admission to the cytotechnology program

Pre- or corequisite: CYTO 405, CYTO 415, CYTO 424, CYTO 444, CYTO 445, and CYTO 446

CYTO 456 Fine Needle Aspiration Cytology I (3 Credit Hours)

Study of specialized collection techniques, processing and diagnosis of fine needle aspirations from various body sites, including thyroid, liver, lymph nodes, pancreas, lung, mediastinum, salivary gland, and ovary. Clinical practical application of these principles will be continued at the clinical sites.

Prerequisites: CYTO 403, CYTO 405, CYTO 415, and CYTO 428W

CYTO 457 Fine Needle Aspiration Cytology II (3 Credit Hours)

Study of specialized collection techniques, processing and diagnosis of fine needle aspirations from various body sites, including kidney, retroperitoneum, breast, soft tissue, bone, eye, central nervous system, and skin. Clinical practical application of these principles will be continued at the clinical sites.

Prerequisites: CYTO 403, CYTO 405, CYTO 415, CYTO 424, CYTO 428W, CYTO 445, CYTO 446, CYTO 448, and CYTO 456

CYTO 458 Cytology Internship I (3 Credit Hours)

Directly supervised experience in a clinical setting: includes evaluation of gynecologic smears and study set assignments. Students will be exposed to cytopreparatory techniques.

Pre- or corequisite: CYTO 405 and CYTO 415

CYTO 468 Cytology Internship II (4 Credit Hours)

Directly supervised experience in a clinical setting. Includes evaluation of gynecologic and non-gynecologic specimen slides and study set assignments. Students will pre-screen gynecologic and non-gynecologic smears and study set assignments. Students will be exposed to cytopreparatory techniques.

Pre- or corequisite: CYTO 405, CYTO 415, CYTO 424, CYTO 444, CYTO 445, and CYTO 446

CYTO 478 Cytology Internship III (8 Credit Hours)

Directly supervised experience in a clinical setting. Includes evaluation of gynecologic and non-gynecologic smears and study set assignments. Students will be exposed to cytopreparatory techniques.

Prerequisites: Admission to the cytotechnology program

Pre- or corequisite: CYTO 405, CYTO 415, CYTO 424, CYTO 444, CYTO 445, CYTO 446, CYTO 456, and CYTO 457

CYTO 495 Topics in Cytology (1-3 Credit Hours)

Independent study of selected topics in clinical cytology. Review of cytologic specimens from various body sites

Prerequisites: permission of the program director

CYTO 497 Cytology Senior Seminar (1 Credit Hour)

Supervised experience consists of clinical cases and seminar presentations into current advances within the specialty of clinical cytology. A student research project and oral presentation of current journal articles and the research paper are required.

Prerequisites: permission of the program director

CYTO 498 Topics (1-3 Credit Hours)

Topics.

Prerequisites: Instructor approval

CYTO 499 Comprehensive Cytology Review (1 Credit Hour)

The course is a comprehensive review course that includes the review and study of the exfoliative and non-exfoliative (including fine needle aspirations) cytomorphologic features of neoplastic and non-neoplastic lesions of the female genital tract, respiratory tract, urinary tract, body fluids, lymph nodes, thyroid, salivary glands, pancreas and biliary tract, the diagnostic pitfalls associated with the various body sites, the appropriate use of ancillary techniques in diagnostic cytology, the principles of quality assurance, and the new developments in the field of cytopathology.

Prerequisites: CYTO 403, CYTO 405, CYTO 415, CYTO 424, CYTO 428W, CYTO 442, CYTO 444, CYTO 445, CYTO 446, CYTO 448, CYTO 456, CYTO 457, CYTO 458, and CYTO 468

DANC - Dance

DANC 152R Acting One (3 Credit Hours)

An introduction to the physical and vocal principles of performance coupled with an opportunity to increase awareness of the constructed nature of social interactions. Students will explore confident self-expression through the physical, vocal, emotional and technical aspects of acting, as an art form and a daily experience, in a format that encourages freedom of imagination and personal growth. Emphasis is on the fundamental communication skills of presence, body language, imagination, and social communication.

DANC 185A Dance and Its Audience (3 Credit Hours)

This course is designed to acquaint students with the components of theatrical dance performance, its historical and ethnic origins, its role as a creative expression of peoples and societies and its relationship to other art forms. Through films, videos, live performances, guest speakers, readings and discussions, students consider philosophical approaches to language, communication, aesthetics and style of choreography.

DANC 195 Topics in Dance (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major.

DANC 196 Topics in Dance (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in a booklet distributed to academic advisors.

DANC 201 Ballet Technique 1 (2 Credit Hours)

Introduction to ballet technique.

DANC 211 Modern Dance Technique 1 (2 Credit Hours)

Introduction to modern dance technique.

DANC 231 Ballroom Dance 1 (1 Credit Hour)

This class introduces students to basic American and Latin ballroom dance. Basic steps of the foxtrot, waltz, swing, tango, cha cha and rumba will be covered. Focus on rhythm, technique, leading and following is also included. This class is open to single students and couples.

DANC 232 Ballroom Dance 2 (1 Credit Hour)

This class is a continuation of basic American and Latin ballroom dance. Basic steps of the foxtrot, waltz, swing, tango, cha cha and rumba will be covered. Focus is on rhythm, technique, leading and following. The class is open to single students and couples.

DANC 235 Yoga (2 Credit Hours)

An introduction to yoga postures, breathing exercises, and relaxation techniques that promote health, alleviate stress, improve skeletal alignment, and increase muscular strength and flexibility. Students are also introduced to the history and philosophy of yoga.

DANC 241 Pilates Mat Class I (1 Credit Hour)

This course will introduce students to the Pilates method. Students will learn beginning-level Pilates exercises on the mat.

DANC 242 Pilates Mat Class 2 (1 Credit Hour)

A continuation of the study of the Pilates method. Students will learn intermediate-level Pilates exercises on the mat.

Prerequisites: DANC 241 or permission of the instructor

DANC 251 Tap Dance I (1 Credit Hour)

Introduction to tap dance styles including classic, hoof and rhythm. Fundamental movements such as time steps, grab-offs, riffs, etc. are incorporated using counterpoint rhythms and challenges. Students gain an understanding of tap dance as an American art form.

DANC 271 Introduction to Filmmaking (3 Credit Hours)

This course will introduce the beginning student to making movies. Students will learn the basics of working with cameras, lights, sound recording, video editing and post production. This is a hands-on production course.

DANC 295 Topics in Dance (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses appear in the course schedule, and are fully described in a booklet distributed to academic advisors.

DANC 296 Topics in Dance (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses appear in the course schedule, and are fully described in a booklet distributed to academic advisors.

DANC 301 Ballet in Context (1 Credit Hour)

An examination of the history, theory, and practice of Ballet.

Prerequisites: Junior standing

Pre- or corequisite: DANC 201

DANC 302 Ballet Technique 2 (2 Credit Hours)

Continuation of ballet technique.

Prerequisites: DANC 201 or permission of the instructor

DANC 303 Ballet Technique 3 (1-4 Credit Hours)

Continuation of ballet technique at an intermediate level.

Prerequisites: DANC 302 or permission of the instructor

DANC 311 Modern Dance in Context (1 Credit Hour)

An examination of the history, theory, and practice of Modern Dance.

Prerequisites: Junior standing

Pre- or corequisite: DANC 211

DANC 312 Modern Dance Technique 2 (2 Credit Hours)

Continuation of modern dance technique.

Prerequisites: DANC 211 or permission of the instructor

DANC 313 Modern Dance Technique 3 (1-4 Credit Hours)

Continuation of modern dance technique at an intermediate level.

Prerequisites: DANC 312 or permission of the instructor

DANC 320 Jazz in Context (1 Credit Hour)

An examination of the history, theory, and practice of Jazz.

Prerequisites: Junior standing

Pre- or corequisite: DANC 201 or DANC 211

DANC 321 Jazz Dance 1 (1 Credit Hour)

Introduction to jazz dance technique.

Prerequisites: DANC 201 or DANC 211 or DANC 260 or permission of instructor

DANC 322 Jazz Dance 2 (1 Credit Hour)

Continuation of jazz dance technique.

Prerequisites: DANC 321 or permission of the instructor

DANC 330 Extreme Moves (Conditioning for Dancers) (2 Credit Hours)

This course explores the extended physical technique known as Extreme Moves. The Extreme Moves training method focuses on the body's alignment with regard to how forces are present, how they act upon it, and how to build strength to resist or collaborate with these forces. Students will work with props such as large physio balls, elastic bands, mats and the wall in order to improve their core strength, balance, upper and lower body strength and alignments. Through physical practice, readings and videos, students will learn the conceptual framework for Extreme Moves.

Prerequisites: Junior standing or permission of the instructor

DANC 341 Pilates Equipment Lab 1 (1-2 Credit Hours)

This course will focus on learning beginning and some intermediate exercises on the Pilates apparatus, which includes the Reformer, Cadillac, Low Chair and Magic Circle.

Prerequisites: DANC 241 or instructor permission

DANC 342 Pilates Equipment Lab 2 (1-2 Credit Hours)

This course will focus on learning intermediate and some advanced exercises on the Pilates apparatus, which includes the Reformer, Cadillac, Low Chair and Magic Circle.

Prerequisites: DANC 341 or instructor permission

DANC 360 Rhythmic Analysis (1 Credit Hour)

A study of basic music theory specifically designed for the dancer. Emphasis is on score reading, accompaniment for dance, note values and rhythms as they directly relate to choreography in a classroom as well as in the rehearsal studio. Students perform movement studies based on rhythmic structures.

Prerequisites: DANC 201 or DANC 211 or permission of the instructor

DANC 361 Hip Hop Dance & Culture 1 (2 Credit Hours)

This course will explore hip hop dance and culture from several points of entry: movement, historical, political, aesthetic, sonic, and geographical. The historical focus of the course locates hip-hop dance as a personal, interactive, and cultural expression. Students will navigate through the evolution of hip hop dance and culture from its birthplace in the Bronx, NY through its development into a global phenomenon. The course will discuss the elements of hip hop culture: DJ, B-Boy/Girl, Graffiti Art, MC, and Beat Box, and how they intersect. Students will explore how hip-hop influences and is influenced by geopolitics, race, gender, and other social structures.

Prerequisites: DANC 261

DANC 362 Hip Hop Dance & Culture 2 (2 Credit Hours)

This course will continue to explore hip hop dance and culture from several points of entry: movement, historical, political, aesthetic, sonic, and geographical. The historical focus of the course locates hip hop dance as a personal, interactive, and cultural expression. Students will navigate deeper through the evolution of hip hop dance and culture from its birthplace in the Bronx, NY through its development into a global phenomenon. The course will continue its discussion on the elements of hip hop culture: DJ, B-Boy/Girl, Graffiti Art, MC, and Beat Box, and how they intersect. Students will continue to explore how hip-hop influences and is influenced by geopolitics, race, gender, and other social structures.

Prerequisites: DANC 361

DANC 367 Cooperative Education (1-3 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria and evaluative procedures as formally determined by the department prior to the semester in which the work experience takes place. Available for pass/fail grading only.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

DANC 368 Internship (1-3 Credit Hours)

A structured work experience with or without remuneration, in an appropriately related disciplinary field. An ePortfolio, 150 hours of site work, plus satisfactory evaluations by supervisor and cooperating faculty member are required. Available for pass/fail grading only. Available to Communication, Theatre, and Dance majors and minors only. Cross-listed with COMM 368 and THEA 368.

Prerequisites: Approval of departmental internship director prior to registration

DANC 369 Practicum (1-3 Credit Hours)

Field experience in dance.

Prerequisites: Permission of the instructor

DANC 370 Dance Composition 1 (2 Credit Hours)

Designed for dance majors or minors, this course is a study of the elements and craft of choreography through practical and written experience. Time, space and dynamics are explored through assigned movement studies.

Projects are designed for the creative development of personal movement repertoire and compositional skills for the dancer, choreographer and dance educator.

Prerequisites: DANC 211 and DANC 390 or equivalent (DANC 312, DANC 313, DANC 414, DANC 415, DANC 416)

DANC 373 Production/Performance Lab (1 Credit Hour)

This course provides students opportunities to participate in productions in Theatre, Dance or Film. These positions provide hands-on experience in the discipline. Cross-listed with THEA 373.

Prerequisites: Junior standing or permission of the instructor

DANC 374 Production/Performance Lab (1 Credit Hour)

This course provides students opportunities to participate in productions in Theatre, Dance or Film. These positions provide hands-on experience in the discipline. Cross-listed with THEA 374.

Prerequisites: Junior standing or permission of the instructor

DANC 389W Dancing Power: Dance as Communication and Transformation (3 Credit Hours)

This course focuses on the documentation and communication of 'dance history' as a site that both affirms and challenges dominant ideas. Students will examine which artists and dance forms are included in (and excluded from) canonical narratives. We will study forms of documentation, including film, digital platforms, social media, and dance criticism, and their roles in promoting certain artists, plus the importance of digital technologies in shifting our definitions of dance and expanding settings for dance beyond traditional concert dance stages. This writing intensive class will hone students' critical thinking, reading, and writing skills by placing special attention on ways of describing and analyzing dancing, dancers, and choreography.

Prerequisites: A grade of C or better in ENGL 211C or equivalent

DANC 390 Improvisation (3 Credit Hours)

An exploration of creativity through structured exercises, games and problems. Students participate in experiential studies that explore improvisational approaches, devices and elements to gain skills in the art of improvisation. This course also includes group discussions of reading assignments and feedback sessions following the improvisations performed in class. Through readings, journal writings, and in-class exercises, students develop the skills to articulate what they see, feel and respond to as artists, performers, and observers. Cross-listed with THEA 390.

Prerequisites: Junior standing or permission of the instructor

DANC 393 Functional Anatomy for Movement Practices (3 Credit Hours)

This course is an analysis of human motion through a study of anatomy, kinesiology and movement fundamentals.

Prerequisites: DANC 201 or DANC 211 or DANC 235 or DANC 241 or DANC 321 or DANC 341 or DANC 361

DANC 395 Topics in Dance (3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses appear in the course schedule, and are more fully described in a booklet distributed to academic advisors.

Prerequisites: Permission of the instructor

DANC 396 Topics in Dance (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses appear in the course schedule, and are more fully described in a booklet distributed to academic advisors.

Prerequisites: Permission of the instructor

DANC 404 Ballet Technique 4 (1-4 Credit Hours)

Continuation of ballet technique at an intermediate level.

Prerequisites: DANC 303 or permission of the instructor

DANC 405 Ballet Technique 5 (1-4 Credit Hours)

Continuation of ballet technique at an advanced level.

Prerequisites: DANC 404 or permission of the instructor

DANC 414 Modern Dance Technique 4 (1-4 Credit Hours)

Continuation of modern dance technique at an intermediate level.

Prerequisites: DANC 313 or permission of the instructor

DANC 415 Modern Dance Technique 5 (1-4 Credit Hours)

Continuation of modern dance technique at an advanced level.

Prerequisites: DANC 414 or permission of the instructor

DANC 423 Jazz Dance 3 (1 Credit Hour)

Continuation of jazz dance technique at an intermediate/advanced level.

Prerequisites: DANC 322 or permission of the instructor

DANC 424 Jazz Dance 4 (1 Credit Hour)

Continuation of jazz dance technique at an intermediate/advanced level.

Prerequisites: DANC 423 or permission of the instructor

DANC 463 Hip Hop Dance and Culture 3 (2 Credit Hours)

This course locates hip hop dance as a personal, interactive, and cultural expression. The course will focus primarily on the movement elements (Breakin, Popping, Locking, Party Dances, and Choreographic elements) of Hip Hop, deepening the breadth of knowledge students have been exposed to in DANC 361 and DANC 362.

Prerequisites: DANC 361 and DANC 362 or permission of instructor

DANC 464 Hip Hop Dance and Culture 4 (2 Credit Hours)

This course locates hip hop dance as a personal, interactive, and cultural expression. The course will continue its study of the movement elements (Breakin, Popping, Locking, Party Dances, and choreographic elements) of Hip Hop, deepening the breadth of knowledge students have been exposed to in Hip Hop DANC 361, DANC 362 and DANC 463. Lastly a major focus of this course will be a test of self and how each student embraces the cypher and its many elements as a tool to continue the exploration into knowledge production, creative expression, and critical inquiry

Prerequisites: DANC 361, DANC 362 and DANC 463 or permission of instructor

DANC 470 Dance Composition 2 (2 Credit Hours)

This course builds on the skills developed in Dance Composition 1, including the exploration of time, space and dynamics, with a focus on constructing fully realized group and solo dance compositions.

Prerequisites: DANC 370 and permission of the instructor

DANC 473 Production/Performance Lab (1 Credit Hour)

This course provides students opportunities to participate in productions in Theatre, Dance or Film. These positions provide hands-on experience in the discipline. Cross-listed with THEA 473.

Prerequisites: Junior standing or permission of the instructor

DANC 474 Production/Performance Lab (1 Credit Hour)

This course provides students opportunities to participate in productions in Theatre, Dance or Film. These positions provide hands-on experience in the discipline. Cross-listed with THEA 474.

Prerequisites: Junior standing or permission of the instructor

DANC 489 Principles of Teaching Dance (2 Credit Hours)

This course covers basic methods of movement education as applied to the teaching of ballet, modern dance, jazz, and movement for children. An understanding of anatomical structure and mechanics is utilized in the analysis of student performance in dance class. Specific objectives for dance exercises are explored. Practical experiences in the planning, organization and structure of technique classes of various styles are designed to prepare students as dance educators.

Prerequisites: Permission of the instructor

DANC 490 Pedagogy for Dance Educators (3 Credit Hours)

Methods and instructional theories and strategies of movement education as applied to the teaching of ballet, modern dance, jazz, and movement for children. Practical experience in the structure, organization and assessment of dance arts programs for the K-12 public school setting.

Prerequisites: A passing score on the Praxis I or equivalent instrument and admittance into the Teacher Education program

DANC 495/595 Topics in Dance (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses appear in the course schedule, and are more fully described in a booklet distributed to academic advisors.

Prerequisites: Appropriate survey course or permission of the instructor

DANC 496/596 Topics in Dance (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses appear in the course schedule, and are more fully described in a booklet distributed to academic advisors.

Prerequisites: Appropriate survey course or permission of the instructor

DANC 497/597 Tutorial Work in Special Topics in Dance (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the department chair

DANC 498/598 Tutorial Work in Special Topics in Dance (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the department chair

DANC 499 Senior Project (1 Credit Hour)

Completion of a major research project during one's senior year on a topic of particular interest to the student. Topics to be selected under the direction of an instructor with conferences as appropriate. (Qualifies as a CAP experience.)

Prerequisites: Senior standing and approval of the department chair

DASC - Data Science

DASC 157 Introduction to Data Science Programming (4 Credit Hours)

An introduction to computational problem-solving in the context of data science. This course introduces students to the programming language Python and how to use it as a tool for problem-solving. The course utilizes illustrative examples to help students grasp the fundamental concepts and reinforces their understanding through a variety of practical exercises. No prior programming experience is required to take this course.

Prerequisites: MATH 102M or permission of the instructor

DASC 205S Data, Technology, Society (3 Credit Hours)

This course investigates how data science is transforming not only our sense of science and scientific knowledge, but our sense of ourselves and our communities and our commitments concerning human affairs and institutions generally. Social implications of the digital revolution, including ethical issues associated with algorithmic design and privacy will be examined. Students will use a sociological lens to explore how our increasingly digital lifestyle changes institutions and social relations.

DASC 255 Data Processing with Python (4 Credit Hours)

Python provides several libraries which facilitate data manipulation, processing, analysis, and visualization. This course will introduce standard Python packages used for Data Science, including pandas, numpy, seaborn, matplotlib, and scikit-learn. By the end of the course, students will be equipped to create and modify existing Python code to explore a range of data sets.

Prerequisites: CS 153

DASC 257 Data Science Programming (4 Credit Hours)

This course focuses on problem solving and programming in Python. Emphasis is placed on common algorithms and programming principles utilizing the standard library distributed with Python. Upon completion, students should be able to design, code, test, and debug Python language programs.

Prerequisites: DASC 157

DASC 300 Foundations of Data Science (3 Credit Hours)

This course provides an interdisciplinary overview of data sciences drawing on key elementary topics related to data analytics. A specific focus is given to the way that decisions made about data from those disciplinary pursuits inform policy, product development, and humanity. Topics addressed include elements of data, data collection, the connections between machine learning and data, survey research, programming with Python and R, statistical learning, model evaluations, digital engineering, and ethical uses of data.

Prerequisites: junior standing

DASC 312 The Art of Data Visualization (3 Credit Hours)

This course explores artistic foundations for visualization including art theory and aesthetics, color theory, composition and layout. We will also discuss the psychology of visual perception, and semiotics and the underlying nature of symbolic representation. Students will gain experience applying these principles by sketching and using technological tools, and will also critically evaluate visualizations based on the theories discussed.

Prerequisites: DASC 300

DASC 324 Introduction to Data Visualization (3 Credit Hours)

This course focuses on the design and creation of effective visualizations for communicating data. The Python programming language will be used to create static and interactive visualizations for a variety of data types including tabular, text, and geographic data. Students will develop a portfolio and also will gain experience in analyzing, interpreting, and revising visualizations created by others.

Prerequisites: DASC 300 or permission of the instructor

Pre- or corequisite: CS 153

DASC 357E Ethics and Data (3 Credit Hours)

This course explores, from a philosophical perspective, ethical questions arising from collecting, drawing inferences from, and acting on data, especially when these activities are automated and on a large scale. This course will provide students a framework for considering the ethical implications of data usage. Emphasis will be placed on discussing how historic and contemporary examples of potentially unethical practice could be altered to reduce harm and increase equity. Topics to be covered may include, but are not limited to, systematic approaches to assessing ethical issues; privacy and confidentiality; defining research and the responsibilities associated with conducting ethical research; implicit and structural biases in data collection and analysis; freedom of speech; and consent to data collection.

Prerequisites: ENGL 110C

DASC 368 Data Science Internship (1-6 Credit Hours)

This course allows students to work for an employer in a position related to data science. Students must work for 50 hours per course credit and complete course assignments.

Prerequisites: approval by the program coordinator

DASC 424 Data Storytelling (3 Credit Hours)

Data storytelling combines data, narrative, and visualizations to communicate insights and influence decision-making. This course will present the conceptual basis for storytelling and techniques for narrative development, as well as leverage technical skills to analyze and visualize data. By the end of the course, students will have experience in developing cohesive data-driven stories using a variety of platforms and tools.

Prerequisites: DASC 324 or instructor permission

DASC 434 Data Curation and Management (3 Credit Hours)

Large data sets are rarely ready for analysis after collection. Data must be organized, processed, integrated, and evaluated for accuracy and relevance, and subsequently maintained and enhanced over time. In this course, students will learn how to make data accessible and ensure its validity for analytic projects during course of the data lifecycle.

Prerequisites: DASC 300 or permission of the instructor

DASC 436W Data Science Capstone Project (3 Credit Hours)

Students work individually or in groups to plan, design, and carry out a research project demonstrating expertise with data science. Final papers that report the results for the study are presented in a formal research seminar. The projects reflect knowledge gained from undergraduate work and training received in discipline-specific research methods and statistics courses. This is a writing intensive course.

Prerequisites: ENGL 211C/ENGL 221C/ENGL 231C with a grade of C or better and senior standing

DASC 494 Entrepreneurship in Data Science (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to integrate disciplinary theory and knowledge through developing a nonprofit program, product, business, or other initiative. The real-world experiences that entrepreneurship provide will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems. The course can be delivered either as an independent project for individual students or as group projects similar to those sometimes offered in topics courses.

Prerequisites: junior standing

DASC 496/596 Topics in Data Science (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: junior standing

DASC 497/597 Independent Study (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: senior standing and approval of the program coordinator

DNTH - Dental Hygiene

DNTH 300 Dental Hygiene Theory I (4 Credit Hours)

An introduction to the theoretical foundations of preventive and therapeutic oral health services used in the dental hygiene process. Emphasis is on prevention of disease transmission, patient assessment, dental hygiene instrumentation, oral health instruction, treatment planning and ethical decision making. (offered fall)

Prerequisites: junior standing

Pre- or corequisite: DNTH 302 and DNTH 304

Corequisites: DNTH 301

DNTH 301 Dental Hygiene Services I (3 Credit Hours)

Preclinical experience in the on-campus supervised clinic. Clinical and laboratory application of introductory skills essential to rendering oral health services to patients with emphasis on basic dental hygiene instrumentation and ergonomics. Offered each fall.

Pre- or corequisite: DNTH 300 and DNTH 302

DNTH 302 Oral Anatomy and Histology (3 Credit Hours)

A study of the anatomical, histological, embryological and morphological features and development of the head, neck and dentition. Emphasis is on nomenclature, nerve and vascular innervation, muscles of mastication, orofacial embryology and histological features of the oral cavity for practice and forensic identification.

Prerequisites: BIOL 240 or BIOL 250 and BIOL 241 or BIOL 251 or equivalent

DNTH 303 Applied Dental Materials (3 Credit Hours)

An introduction to biomaterials with emphasis on those materials and techniques common in dental hygiene practice and used and maintained by the dental hygienist. (offered fall)

Prerequisites: CHEM 105N-CHEM 106N

DNTH 304 Oral Radiology I (3 Credit Hours)

Study of the nature and production of x rays and basic principles and procedures in oral radiology. Emphasis is on radiation physics, radiation biology, radiation protection and safety, basic intraoral radiographic techniques and imaging procedures. (offered fall)

Prerequisites: permission of the instructor

DNTH 305 Dental Hygiene Theory II (3 Credit Hours)

Continuation of study of the theoretical foundation of preventive and therapeutic oral health services used in the dental hygiene process. Emphasis is on preparation for ethical, evidence-based client care. (offered spring).

Prerequisites: DNTH 300 and DNTH 301

DNTH 306 Dental Hygiene Services II (3 Credit Hours)

Clinical experience in the on-campus supervised clinic. Continued development of clinical proficiency and ethical, evidence-based decision making in rendering comprehensive preventive oral health services using the dental hygiene process. Emphasis is on clinical application and development of competence in maintenance, management and evaluation of the periodontal patient; care planning, disease control strategies; and scaling and oral debridement on periodontally involved patients (offered spring).

Prerequisites: DNTH 300, DNTH 301 and DNTH 304

Corequisites: DNTH 305

DNTH 307 Pharmacology and Medical Emergencies (3 Credit Hours)

A study of pharmacologic agents used in oral healthcare and of medications that the patient may be taking, their clinical effects, adverse effects, and dental implications, and the prevention and management of medical emergencies. Emphasis is on agents commonly used by patients which may require the alteration of treatment procedures, therapeutic agents used adjunctively in dental hygiene therapy and agents used in medical emergency procedures. (offered spring)

Prerequisites: DNTH 302 and BIOL 240 or BIOL 250 and BIOL 241 or BIOL 251 or equivalent

DNTH 308 Oral Pathology (3 Credit Hours)

Principles of the disease process and general pathology including cell injury, infection, inflammation, neoplasia and circulatory disturbances are followed by the study of pathology of the teeth, supporting and associated oral structures. Emphasis is on the clinical and radiological appearance of local and systemic disease processes affecting the oral and facial structures. (offered spring)

Prerequisites: DNTH 202

DNTH 309 Oral Radiology II (2 Credit Hours)

Continued development of the principles and techniques obtained in Oral Radiology I with emphasis on supplemental intraoral techniques especially for client management; extraoral techniques; radiographic interpretation of film-based and digitally acquired images; and use of dental photography in patient care. (offered spring)

Prerequisites: DNTH 304

DNTH 310 Dental Hygiene Therapies and Practice (3 Credit Hours)

Emphasis is on principles of periodontics, evaluation of periodontal disease, and theoretical and clinical preparation for delivery of dental hygiene interventions. (offered spring)

Prerequisites: DNTH 300 and DNTH 301

DNTH 316 Dental Hygiene Theory and Services III (3 Credit Hours)

Clinical experience in the on-campus supervised clinic. Continued development of clinical competency and ethical, evidence-based decision making in rendering comprehensive preventive and therapeutic oral health services and technologies using the dental hygiene process of care. (offered summer)

Prerequisites: DNTH 305, DNTH 306, DNTH 307 and DNTH 309

DNTH 317 Anxiety and Pain Control (2 Credit Hours)

Clinical experience in the on-campus supervised clinic. Principles and techniques for local anesthesia injections and nitrous oxide-oxygen analgesia administration, neurophysiologic considerations, prevention of anesthesia-associated emergencies and application of techniques in laboratory. Five hours of instruction will be web-based. (Offered summer)

Prerequisites: DNTH 305, DNTH 306, DNTH 307, and DNTH 309

Corequisites: DNTH 316

DNTH 395 Topics in Dental Hygiene Practice (1-6 Credit Hours)

Selected topics in dental hygiene vary by semester. (offered fall, spring, summer)

Prerequisites: permission of the instructor

DNTH 397 Independent Study in Dental Hygiene (1-6 Credit Hours)

Independent reading and study on a topic selected under direction of a faculty member. (offered fall, spring, summer)

Prerequisites: permission of the instructor

DNTH 410 Dental Hygiene Theory IV (3 Credit Hours)

Study of the psychosocial, physical and oral characteristics of patients with special needs. Emphasis is on the care and clinical management of the following patients: cognitively, developmentally and physically challenged, aged, pregnant, epileptic, diabetic, cancer, AIDS, chemically dependent and the blind and deaf. (offered fall)

Prerequisites: DNTH 305, DNTH 306, and DNTH 316

DNTH 411 Dental Hygiene Services IV (6 Credit Hours)

Clinical experience in the on-campus supervised clinic. Continued development of clinical proficiency and ethical, evidence-based decision making in providing comprehensive preventive and therapeutic oral health services. Emphasis is on intra/interprofessional clinical application and development of competencies for the treatment of diverse, special needs and periodontally involved patients using the dental hygiene process of care. (offered fall)

Prerequisites: DNTH 305, DNTH 306, and DNTH 309

Corequisites: DNTH 410

DNTH 412W/512 Perspectives on Dental Hygiene Practice (3 Credit Hours)

Course is designed for the licensed dental hygienist who seeks to maintain an awareness of changing trends, perspectives, evidence-based interventions and technologies in dental hygiene, health, and society that influence the dental hygiene process of care. This is a writing intensive course. (Offered summer)

Prerequisites: grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C and admission into the dental hygiene program

DNTH 413 Community Oral Health Planning (3 Credit Hours)

Introduction to the principles of dental public health, health literacy, oral epidemiology, evidenced-based prevention and control of oral disease on a population basis. Emphasis is on program assessment, planning, implementation, and evaluation for the development of community-based dental programs. This course prepares students for the role of oral health educator, client advocate and resource person in community settings. (offered fall)

Prerequisites: DNTH 305, DNTH 306 or permission of the instructor

DNTH 414/514 Educational Concepts for the Health Professional I (3 Credit Hours)

This course is designed to explore various educational concepts, principles and methods of teaching for adults. Students will learn to present educational information to a diverse client population, in a variety of settings, in an ethical and professional manner. Topics include, but are not limited to, objectives, planning, implementation and evaluation of instruction; instructional strategies; delivery models; presentation skills; and techniques for communicating health information.

Prerequisites: admission to the dental hygiene program

DNTH 415/515 Research Methods in the Health Sciences (3 Credit Hours)

Designed to develop skills in scientific methods, evidence based decision making and critical analysis of research findings. Emphasis on types of research, levels of evidence, problem selection and hypothesis writing, research planning and design, data collection and measuring techniques, analysis and interpretation of data, research proposal writing and computer application. A written research proposal is required for graduate credit. (offered fall)

Prerequisites: STAT 130M

DNTH 416/516 Administrative Leadership and Professional Development (3 Credit Hours)

A study of current trends that influence the profession of dental hygiene including oral health care delivery, manpower, financing mechanisms, quality improvement, third party payers, professional associations, regulatory agencies and legislation. Emphasis is on ethical, political, and legal issues as they relate to the dental hygiene profession. offered spring)

Prerequisites: Admission to the dental hygiene program

DNTH 417W Dental Hygiene Theory V (3 Credit Hours)

Designed to transition students into diverse employment settings nationally and globally. Emphasis is on written communication skills, practice management, working in multicultural settings, selecting an employment setting, values clarification, resume writing, interview techniques, networking, ethical dilemmas and cross-cultural competencies necessary for contemporary healthcare environments. Various national and international career opportunities are explored. This is a writing intensive course.

Prerequisites: DNTH 410, DNTH 411 and a grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

Corequisites: DNTH 418

DNTH 418 Dental Hygiene Services V (6 Credit Hours)

Clinical experience in the on-campus supervised clinic. Continued development of proficiency and ethical, evidence-based decision making in providing comprehensive preventive and therapeutic oral health services within the dental hygiene process of care. Emphasis is on intra/interprofessional development of competencies for the treatment of periodontally involved, special needs and diverse patients. (offered spring)

Prerequisites: DNTH 410 and DNTH 411

Corequisites: DNTH 417W

DNTH 419 Community Oral Health Practice (3 Credit Hours)

Interprofessional service-learning and internship experiences designed to prepare students to function as oral health practitioners, educators, client advocates and resource persons in community health settings. Emphasis is on providing evidenced-based educational, preventive, and therapeutic services for vulnerable and underserved populations including low-income, geriatric, pediatric, institutionalized, and cognitively, developmentally, and physically challenged individuals. Design and delivery of a poster session is required. (offered spring; varies days and times)

Prerequisites: DNTH 413

DNTH 440T/540 Telehealthcare Technology (3 Credit Hours)

This course examines the concept, global impact, and trends in telehealthcare technology on the client/patient, multidisciplinary practitioners, and various healthcare systems. Emphasis is on effective evidence-based decision making to reduce errors in patient care, promote care in remote or underserved geographical areas, and the ability to retrieve and evaluate healthcare information that improves access to quality, cost effective health care. (Offered spring)

Prerequisites: sophomore standing and permission of the instructor

DNTH 450 International Dental Hygiene (1-3 Credit Hours)

International locations are determined by the School of Dental Hygiene in conjunction with the Office of Study Abroad. Program participation requires approval from the School of Dental Hygiene and the Office of Study Abroad. Provides an on-location international experience in oral care delivery, practice and regulation, and dental hygiene education. Students will be required to give presentations, review the dental care delivery system, and explore how the cultural beliefs and practices affect oral health, dental care seeking behaviors, and the oral health status of the population. Orientations will be conducted prior to travel.

Prerequisites: DNTH 316

DNTH 451 Ergonomics and Exercises for Static Posture Occupations (1 Credit Hour)

This active participation course is designed for persons who work in static posture professions (e.g., dental hygienists, laboratory and computer office personnel) and who seek to practice ergonomic body mechanics and exercise therapies to prevent musculoskeletal disorders and repetitive strain injuries. Topics include biomechanics, creating an ergonomically sound work space, alternative sitting and standing techniques during clinical care, types of disorders and injuries, risk management, comprehension and demonstration of full body exercises with emphasis on core strength training, and self-monitoring. (offered online summer session only)

Prerequisites: permission of instructor

DNTH 495 Topics in Dental Hygiene (1-3 Credit Hours)

Seminars on selected topics in dental hygiene. Topics vary by semester. (offered fall, spring, summer)

Prerequisites: permission of the instructor

DNTH 497/597 Independent Study in Dental Hygiene (1-6 Credit Hours)

Independent reading and study on a topic selected under direction of a faculty member. (Offered fall, spring, summer)

Prerequisites: permission of instructor

DNTH 498 Directed Research in Dental Hygiene (1-6 Credit Hours)

Supervised research on a specific problem in dental hygiene. Regular meetings with faculty and a written/oral report are required.

Prerequisites: Permission of instructor

ECE - Electrical and Computer Engineering

ECE 195 Topics in Electrical and Computer Engineering (1-3 Credit Hours)

Study of topics in electrical and computer engineering.

Prerequisites: Departmental approval

ECE 201 Circuit Analysis I (3 Credit Hours)

An introduction to the analysis and theory of linear electrical circuits. Topics include: passive component definitions and connection rules; independent and dependent sources, concepts of power & energy; Kirchhoff's laws; development of network reduction techniques; formulation of mesh-current and node-voltage equations; network theorems including Thevenin, Norton, Maximum power transfer, and superposition Theorem, Operational Amplifiers, Energy Storage Elements, and initial conditions. Time Domain Analysis of First Order and Second Order Circuits, Introduction to Phasors. Basics of matrices and linear algebra with Gaussian elimination; matrix applications to linear circuit analyses; MATLAB and Circuit Simulation software (Multisim) with analyses and applications to passive circuits. (offered fall, spring, summer)

Prerequisites: ECE 111 or ENGN 121 or equivalent and a grade of C or better in MATH 212

Pre- or corequisite: PHYS 232N or PHYS 262N

ECE 202 Circuit Analysis II (3 Credit Hours)

Time domain analysis; Sinusoidal steady state analysis; Phasor representation of AC Circuits, Maximum power transfer and Thevenin-Norton theorems for AC circuits; Frequency response of circuits (with R, L, and C components), Laplace Transforms and transfer functions of linear circuits; extension to frequency domain circuit analysis including Bode plots. Active and passive filter design and analysis. (offered fall, spring, summer)

Prerequisites: PHYS 232N or PHYS 262N; MATH 280 or MATH 307 and a grade of C or better in ECE 201

ECE 241 Fundamentals of Computer Engineering (4 Credit Hours)

This course develops the foundation of computer engineering for computer engineers as well as an introductory breadth appropriate for electrical engineers. Class topics include computer information, digital design (combinational and sequential circuits), computer organization, and assembly language. The laboratory includes building digital circuits (focusing on programmable logic), assembly language programming, and system interfacing. The use of a hardware description language is employed in class and the laboratory to specify, simulate and synthesize digital circuits.

Prerequisites: A grade of C or better in CS 150 or ENGN 150 or ENGN 122 and a grade of C or better in MATH 211

ECE 242 Fundamentals of Computer Engineering Lab (1 Credit Hour)

Available for pass/fail grading only. The laboratory includes building digital circuits (focusing on programmable logic), assembly language programming, and system interfacing. The use of a hardware description language is employed in the laboratory to specify, simulate and synthesize digital circuits. This course is only for students who do not have the laboratory component in ECE 241.

Prerequisites: (CS 150 or ENGN 122 or ENGN 150) and MATH 211 with a grade of C or better for both, and written permission of the Chief Departmental Advisor of the Electrical & Computer Engineering Department

ECE 250 Object-Oriented Programming in C++ for Engineers (3 Credit Hours)

Provides coverage of object-oriented programming in C++. Topics include classes, data structures, algorithms, the Standard Template Library (STL), and abstract data types. Assignments will follow a current engineering theme such as autonomous systems to introduce functional decomposition and illustrate course topics.

Prerequisites: ENGN 122

Pre- or corequisite: ECE 241

ECE 287 Fundamental Electric Circuit Laboratory (2 Credit Hours)

Objective of course is to provide students in electrical and computer engineering with a 'hands-on' introduction to selected topics in electrical engineering. Students will use basic circuit analysis skills and programming skills to design, build, and test electrical networks interfacing to an Arduino Uno micro-controller. Labs will also provide an introduction to basic measurement techniques and electrical laboratory equipment (power supplies, oscilloscopes, voltmeters, etc).

Prerequisites: A grade of C or better in both CS 150 or ENGN 150 or ENGN 122 and a grade of C or better in ECE 201

Pre- or corequisite: ENGL 211C or ENGL 221C or ENGL 231C and ECE 202

ECE 300 Math Review for Graduate Engineering Analysis (3 Credit Hours)

Complex algebra, linear algebra and matrix methods, aspects of multivariable calculus, differential equations, Laplace transforms, and aspects of probability. Applications and examples in the field of electrical engineering will be used. The use of Matlab in engineering problem solving will be presented. Course not available to ECE undergraduate majors.

Prerequisites: Departmental approval

ECE 301 Review of Electrical Engineering Analysis (3 Credit Hours)

Electrical engineering problems, including time-domain and frequency-domain circuit analysis, analysis of networks with electronic components. The use of Matlab and Simulink in electrical engineering problem solving will be presented. Course not available to ECE undergraduate majors.

Prerequisites: Departmental approval

ECE 302 Linear System Analysis (3 Credit Hours)

This course covers the fundamental concepts of signal and linear system representation and analysis in continuous time. Topics include: Operations with sinusoids and complex exponentials. Signal properties, operations, and models. System properties, classification, and models. Time-domain system analysis, including impulse response, total system response, stability, and convolution. Fourier analysis of continuous-time signals and signal transmission through linear time-invariant systems. Ideal and practical filters. Advanced matrix operations and linear algebra with applications to signal and system analysis. Characteristic equation of a matrix, eigenvalues and eigenvectors. Performing time and frequency domain analysis using MATLAB. (offered fall, spring).

Prerequisites: MATH 280 or MATH 307 and a grade of C or better in ECE 201 and ECE 202

Pre- or corequisite: ECE 287

ECE 303 Introduction to Electrical Power (3 Credit Hours)

AC steady state power, single-phase and three-phase networks, electric power generation, transformers, transmission lines, electric machinery and the use of power. Energy resources, power plants, renewable energy, electric safety. (offered fall, summer)

Prerequisites: a grade of C or better in ECE 201

ECE 304 Probability, Statistics, and Reliability (3 Credit Hours)

Introduction to probability, probability models, discrete and continuous random variables, statistics, reliability, and stochastic processes. Applications include modeling of physical systems, data analysis, communications, designed engineering experiments, stochastic processes, and hypothesis testing.

Prerequisites: a grade of C or better in MATH 212

Pre- or corequisite: ECE 202

ECE 306 Discrete System Modeling and Simulation (3 Credit Hours)

An introduction to the modeling and simulation of discrete-state, event-driven systems. Models for Discrete Event Systems (DES) are presented including state automata, Petri nets, queuing models, and event graphs. Event management strategies are developed leading to methodologies for simulating DES models. Example engineering simulation applications covered include digital circuits, computer networks, manufacturing, and traffic. Investigation of the steps of a DES simulation study including problem formulation, conceptual model design, simulation model development, input data modeling, output data analysis, verification and validation, and design of simulation experiments.

Prerequisites: A grade of C or better in ECE 241

Pre- or corequisite: ECE 304

ECE 313 Electronic Circuits (4 Credit Hours)

Introduction to junction diodes, bipolar junction transistors (BJTs), MOS field-effect transistors (MOSFETs) and operational amplifiers (op-amps). Design concepts for discrete analog circuits with diodes, BJTs, MOSFETs and op-amps. The lab component introduces design and techniques for implementation of analog circuits.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, and a grade of C or better in ECE 201, ECE 202 and ECE 287

Pre- or corequisite: a grade of C or better in ECE 241

ECE 314 Electronics (3 Credit Hours)

Students will be introduced to concepts of signal amplification along with detailed analysis and design of operational amplifier circuits. The main emphasis of the course is to introduce students to the basic operation of PN junctions, and bipolar junction (BJT) and Metal Oxide Semiconductor (MOS) transistors and their application in the design electronic circuits. Detailed large signal and small signal models of these devices will be developed. Analysis and design of basic electronic circuit building blocks with diodes, BJT and MOSFETs will be studied. Both discrete and Integrated Circuits analog design techniques will be covered. The building blocks of an operational amplifier along with differential amplifiers will be covered. Not open to electrical engineering majors or electrical engineering/computer engineering dual majors.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, and a grade of C or better in ECE 201, ECE 202 and ECE 287

Pre- or corequisite: a grade of C or better in ECE 241

ECE 320 Continuous System Modeling and Simulation (3 Credit Hours)

An introduction to the fundamentals of modeling and simulating continuous-state, time-driven systems. Topics include state-space model formulation of systems, model representation using block diagrams, stock-flow diagrams and bond graphs, and numerical integration techniques including Taylor series, families of Runge-Kutta and Adams methods. Application domains include electrical systems, signals (including sampling), physical, and biological simulations.

Prerequisites: Junior standing

Pre- or corequisite: ECE 302

ECE 323 Electromagnetics (3 Credit Hours)

This course provides an introduction to the basic concepts of electromagnetics. Topics include math fundamentals for electromagnetic studies, Maxwell's equations, electrostatics, electromagnetic waves, polarization, wave propagation in various media and across interfaces and transmission lines. This fundamental course is to build an electrical engineering/physics foundation for students and enable them to identify, formulate, and solve future engineering problems.

Prerequisites: MATH 285 or MATH 312 and a grade of C or better in ECE 201, ECE 202 and ECE 287

ECE 332 Microelectronic Materials and Processes (3 Credit Hours)

An introduction to fundamental properties of semiconductors and device fabrication processes. The topics include crystal structure, bonding, energy bands, doping, carrier densities, mobility, resistivity, recombination, drift, and diffusion. Basic structure of p-n junctions, BJTs and MOSFETs and their fabrication processes, including solid state diffusion, thermal oxidation of silicon, ion implantation, chemical vapor deposition, thin film deposition, photolithography and etching are reviewed. (offered fall and spring)

Prerequisites: A grade of C or better in ECE 201, ECE 202 and ECE 287

ECE 341 Digital System Design (3 Credit Hours)

Tools and methodologies for top-down design of complex digital systems. Important topics include minimization, mixed logic, algorithmic state machines, microprogrammed controllers, creating and using a gold model, data and control path design and data movement and routing via buses. Design methodologies covered include managing the design process from concept to implementation, verification using a gold model, and introduction to design flow. A hardware description language is used extensively to demonstrate models and methodologies, and is also used in design exercises and projects. (offered fall, spring)

Prerequisites: a grade of C or better in ECE 241

ECE 342 Field Programmable Gate Arrays Design Laboratory (2 Credit Hours)

Introduction to the application of FPGAs for data processing problems. Introduction to interfacing, timing closure, built-in logic analyzers. Emphasis is on the design, simulation, implementation, and testing of digital systems. Design methods incorporate CAD design tools, system on a chip (SoC) tools, implementation with advanced integrated circuit technology and contemporary software tools.

Prerequisites: ECE 341

Pre- or corequisite: ECE 346

ECE 346 Microcontrollers (3 Credit Hours)

This course introduces the principles of microcontrollers and microprocessors. It covers CPU and general architecture based on ARM processor platform. The course will provide students with the necessary knowledge to program, configure, and interface the microcontroller to perform real-world engineering computations using assembly and C programming languages. The course also covers peripheral I/O interfacing such as timers, interrupts, PWM, ADC, and communication interfaces for real-time applications. Students will learn to incorporate microcontrollers into the FPGA boards, and to address safety and security issues. Students will complete the course by designing, building, testing, and troubleshooting a microcontroller consumer application.

Prerequisites: a grade of C or better in ECE 241

ECE 348 Simulation Software Design (3 Credit Hours)

Introduction to data structures, algorithms, programming methodologies, and software architectures in support of computer simulation. Topics include object-oriented programming, data structures (including lists, queues, sets, and trees), algorithms (including searching, sorting, and order of complexity), and advanced topics (reusable code, design patterns, multithreading, and coroutines). Simulation structures developed include event lists, time management, and queuing models. Software models are implemented and tested. Application areas focus on digital circuit and computer networks. The course also analyzes the broader impacts of simulation in a global, economic and societal context.

Prerequisites: ECE 306, CS 381, and a grade of C or better in CS 250 or ECE 250

Pre- or corequisite: ECE 341

ECE 350 Mathematics for Data Analytics Engineering (3 Credit Hours)

Mathematical concepts for data analytics engineering including linear algebra, matrix operations, linear spaces, and advanced differential calculus.

Prerequisites: Grade of C or better in MATH 212

Pre- or corequisite: ECE 304

ECE 355 Introduction to Networks and Data Communications (3 Credit Hours)

This course introduces the basic concepts of computer networks and data communications. Topics include protocol layers, the application layer, the transport layer, the network layer, the data link layer, and the physical layer. Students will learn how to use network packet analyzer tools to do simple network analysis. Emphasis is on gaining an understanding of network engineering as it relates to system operation and maintenance. (offered fall)

Prerequisites: ECE 304 and a grade of C or better in ECE 241

ECE 368 Student Internship/Cooperative Education (1-3 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures. Upon successful completion, the combination of three consecutive semesters of ECE 368 (one-credit internship) can be considered equivalent to one three-credit Technical Elective course. (offered fall, spring, summer)

Prerequisites: Approval by ECE Chief Department Advisor

ECE 381 Introduction to Discrete-time Signal Processing (3 Credit Hours)

This course covers fundamental digital signal processing (DSP) techniques that form the basis to a wide variety of application areas. Topics include continuous Fourier Transform, discrete-time signals and systems, time domain analysis, solutions of difference equations, Z-transform analysis, Fourier transform (FT), Discrete-time Fourier transform (DTFT), and Discrete Fourier transform (DFT), sampling theorem, and Fourier analysis of linear time-invariant systems. The course also analyzes the broader impacts of DSP in a global, economic, and societal context

Prerequisites: ECE 202

ECE 387 Microelectronics Fabrication Laboratory (3 Credit Hours)

The laboratory course will enable students to fabricate MOSFETs, MOS capacitors, diffused resistors and p-n diodes. Students will be trained to operate the equipment required for wet and dry oxidation, thin film deposition, solid state diffusion, photolithography, and etching. Students will fabricate and analyze the devices by current-voltage characteristic, capacitance-voltage characteristic, film thickness and conductivity measurements. (offered fall and spring).

Prerequisites: ECE 332

ECE 395 Topics in Electrical and Computer Engineering (1-3 Credit Hours)

Study of topics in electrical and computer engineering.

Prerequisites: departmental approval

ECE 396 Topics in Electrical and Computer Engineering (1-3 Credit Hours)

Study of topics in electrical and computer engineering.

Prerequisites: departmental approval

ECE 403/503 Power Electronics (3 Credit Hours)

Power electronics provides the needed interface between an electrical source and an electrical load and facilitates the transfer of power from a source to a load by converting voltages and currents from one form to another. Topics include: alternating voltage rectification, Pulse Width Modulation (PWM), DC converters (Buck, Boost, Buck-Boost, Cuk and SEPIC converters), negative feedback control in power electronics, isolated switching mode power supply, flyback and forward power supply, solid state power switches, AC inverter. (Offered spring)

Prerequisites: ECE 303, ECE 313 and a grade of C or better in ECE 202 and ECE 287

ECE 404/504 Electric Drives (3 Credit Hours)

Electric drives efficiently control the torque, speed and position of electric motors. This course has a multi-disciplinary nature and includes fields such as electric machine theory, power electronics, and control theory. Topics include: switch-mode power electronics, magnetic circuit, DC motor, AC motor, Brushless DC motor, induction motor, speed control of induction motor, vector control of induction motor, stepper-motor. (offered fall)

Prerequisites: ECE 303 and a grade of C or better in ECE 202 and ECE 287

ECE 405/505 Power System Design & Analysis (3 Credit Hours)

This course covers basic power circuit analysis and introductory power system engineering and focuses on the transmission line design, power flow study, short circuit protection, and power distribution in electric power systems, followed by a survey of several applications and case studies. (offered fall)

Prerequisites: ECE 303 and a grade of C or better in ECE 202 and ECE 287, or equivalent knowledge in electric machines and circuits

ECE 406/506 Computer Graphics and Visualization (3 Credit Hours)

The course provides a practical treatment of computer graphics and visualization with emphasis on modeling and simulation applications. It covers digital image and signal processing basics such as sampling and discrete Fourier transform, computer graphics fundamentals, visualization principles, and software architecture for visualization in modeling and simulation. Written communication and information literacy skills are stressed in this course. (Offered fall).

Prerequisites: ECE 348 or CS 361

ECE 407/507 Introduction to Game Development (3 Credit Hours)

An introductory course focused on game development theory and modern practices with emphasis on educational game development. Topics include game architecture, computer graphics theory, user interaction, audio, high level shading language, animation, physics, and artificial intelligence. The developed games can run on a variety of computer, mobile, and gaming platforms. (Offered spring).

Prerequisites: CS 361 or ECE 348

ECE 408/508 Fundamentals of Electric Vehicles (3 Credit Hours)

This course covers the fundamentals of electric vehicles and focuses on the components, power control, energy management, power train dynamics and other related topics in purely electric and hybrid electric vehicle systems, including a survey of several applications and case studies. (Offered spring)

Prerequisites: ECE 303 and a grade of C or better in ECE 202 and ECE 287

ECE 409/509 Introduction to Distributed Simulation (3 Credit Hours)

An introduction to distributed simulation. Topics include motivation for using distributed simulation, distributed simulation architectures, time management issues, and distributed simulation approaches. Current standards for distributed simulation are presented.

Prerequisites: ECE 348

ECE 410/510 Model Engineering (3 Credit Hours)

The goal of this course is to develop understanding of the various modeling paradigms appropriate for capturing system behavior and conducting digital computer simulation of many types of systems. The techniques and concepts discussed typically include UML, concept graphs, Bayesian nets, Markov models, Petri nets, system dynamics, Bond graphs, etc. Students will report on a particular technique and team to implement a chosen system model. (Offered spring).

Prerequisites: ECE 306

Pre- or corequisite: ECE 320

ECE 412/512 Advanced Virtual Reality, Augmented Reality, and Haptics System (3 Credit Hours)

This course is designed to introduce students to the hardware and software required for humans to interact with virtual worlds, both visually and tactilely. Students will be introduced to virtual reality (VR), augmented reality (AR), and haptic devices. A discussion of relative coordinate systems will allow them to virtually position the devices in a virtual world. They will learn to build a haptic device and build an interface using a microcontroller. They will also learn how to interface the devices with a virtual world built in a standard game engine such as Unreal. The course will be project based giving the opportunity to work with VR and AR goggles.

Prerequisites: ECE 250, CS 250 or (CS 251 and CS 260) or equivalent

ECE 415/515 Parallel Computing for High-Performance Data Analytics (3 Credit Hours)

Introduction to modeling and analysis of parallel execution performance of emerging simulations on modern high-performance (HPC) and Cloud computing platforms. Hands-on experience with Old Dominion University campus HPC clusters and Cloud-based platforms available globally. Programming models for large-scale and data-analytics applications. Case studies of realistic parallel scientific, engineering, and data-analytics simulations. Course projects may be assigned for students to apply the gained knowledge to analyze execution efficiency of a parallel distributed simulation.

Prerequisites: ENGN 122 or equivalent

ECE 416/516 Cyber Defense Fundamentals (3 Credit Hours)

This course focuses on cybersecurity theory, information protection and assurance, and computer systems and networks security. The objectives are to understand the basic security models and concepts, learn fundamental knowledge and tools for building, analyzing, and attacking modern security systems, and gain hands-on experience in cryptographic algorithms, security fundamental principles, and Internet security protocol and standards. (Offered fall)

Prerequisites: Permission of the instructor

Pre- or corequisite: ECE 355

ECE 418/518 Transportation Simulation and Analytics (3 Credit Hours)

This course is designed to introduce students to i) the fundamental concepts of transportation simulation; ii) traffic simulation models for the planning, design, and operations of modern transportation systems; iii) approaches to develop, calibrate, and validate transportation simulation models; and iv) methods to design and analysis of transportation simulation experiments. This course emphasizes more on the modeling, simulation, and analysis of emerging mobility systems such as connected/autonomous vehicles, electrical vehicles, and micro-mobility. The structured lectures and hands-on work with the simulation tools provide students the ability and practical experience to solve complex, real-world transportation problems with simulation.

Prerequisites: ECE 250, or CS 250, or CS 251 and CS 260, and ECE 306

ECE 419/519 Cyber Physical System Security (3 Credit Hours)

Cyber Physical Systems (CPS) integrate computing, networking, and physical processes. The objectives of this course are to learn the basic concepts, technologies and applications of CPS, understand the fundamental CPS security challenges and national security impact, and gain hands-on experience in CPS infrastructures, critical vulnerabilities, and practical countermeasures. (Offered spring)

Prerequisites: ECE 355 or permission of the instructor

ECE 430/530 Therapy and Function Models for Medical Simulation (3 Credit Hours)

This course introduces students to the main Modeling & Simulation models. (1) Anatomical modeling based on robust medical image segmentation and meshing methodologies. (2) A therapy model to determine the impact of a medical intervention by synthesizing the effect of a therapy on the patient's tissues. (3) A collision model, which interacts with anatomy and therapy models, is used for haptics-driven simulations. This course will also explore physiological simulation and the use of finite elements to model biomechanics.

Prerequisites: ECE 250 or CS 250 or CS 251 and CS 260 or equivalent

ECE 441/541 Advanced Digital Design and Field Programmable Gate Arrays (3 Credit Hours)

Course will present FPGA technologies and methods using CAD design tools for implementation of digital systems using FPGAs. Topics include advanced methods of digital circuit design including specification, synthesis, implementation and prototyping; managing multiple clock domains, static timing analysis, timing closure, system reset design, simulation, and optimization; troubleshooting using embedded logic analyzers and integrated development environments (IDEs). Practical system design examples include general purpose data processing, system on a chip (SOC) prototyping, hardware accelerators, and an introduction to domain specific architectures. (Offered spring)

Prerequisites: ECE 342

ECE 443/543 Computer Architecture (3 Credit Hours)

An introduction to computer architectures. Analysis and design of computer subsystems including central processing units, memories and input/output subsystems. With features based on the ARM architecture, students will learn important concepts, including data paths, computer arithmetic, instruction cycles, pipelining, virtual and cache memories, direct memory access and controller design. (Offered fall).

Prerequisites: ECE 346

Pre- or corequisite: ECE 342

ECE 445/545 Introduction to Computer Vision (3 Credit Hours)

Overview of digital image processing including visual perception, image formation, spatial transformations, image enhancement, color image representation and processing, edge detection, image segmentation, and data processing method for computer vision applications. Hand-on projects will be introduced to better understand computer vision applications. (Offered fall).

Prerequisites: ECE 304 and grade of C or better in either ENGN 122 or ENGN 150 or CS 150 or CS 151 or CS 153

ECE 450/550 Introduction to Machine Learning Engineering (3 Credit Hours)

Machine Learning provides a practical treatment of design, analysis and implementation of algorithms, which learn from examples. Topics include multiple machine learning models: linear regression, logistic regression, neural networks, support vector machines, deep learning, Bayesian learning and unsupervised learning. Students are expected to use popular machine learning tools and algorithms to solve real data engineering problems. (Offered spring)

Prerequisites: ECE 304 and a grade of C or better in either ENGN 122 or ENGN 150 or CS 150 or CS 151 or CS 153

ECE 451/551 Communication Systems (3 Credit Hours)

Fundamentals of communication systems engineering. Modulation methods including continuous waveform modulation (amplitude, angle). Design and analysis of modulation systems and performance in the presence of noise. Communication simulation exercises through computer experiments. (Offered spring)

Prerequisites: ECE 304 and ECE 302

ECE 452/552 Introduction to Wireless Communication Networks (3 Credit Hours)

Introduction to current wireless network technologies and standards. The radio frequency spectrum and radio wave propagation models (pathloss, fading, and multipath). The radio link and link budgets. Modulation, diversity, and multiple access techniques. Wireless network planning and operation. Current and emerging wireless technologies (satellite systems, vehicular/sensor networks). (Offered fall)

Prerequisites: ECE 304 and ECE 302

ECE 453/553 Analysis for Modeling and Simulation (3 Credit Hours)

An introduction to analysis techniques appropriate to the conduct of modeling and simulation studies. Topics include input modeling, random number generation, output analysis, variance reduction techniques, and experimental design. In addition, techniques for verification & validation are introduced. Course concepts are applied to real systems and data.

Prerequisites: ECE 306 and ECE 304

ECE 454/554 Introduction to Bioelectrics (3 Credit Hours)

Covers the electrical properties of cells and tissues as well as the use of electrical and magnetic signals and stimuli in the diagnosis and treatment of disease. Typical topics to be covered include basic cell physiology, endogenous electric fields in the body, electrocardiography, cardiac pacing, defibrillation, electrotherapy, electroporation, electrotherapy in wound healing. In addition, ultrashort electrical pulses for intracellular manipulation and the application of plasmas to biological systems will be covered.

Prerequisites: PHYS 111N or higher; MATH 200 or higher

ECE 455/555 Network Engineering and Design (3 Credit Hours)

This course is an extension of ECE 355 into a semester long project. Emphasis is on gaining an understanding of networking design principles that entails all aspects of the network development life cycle. Topics include campus LAN models and design, VLANs, internetworking principles and design, WAN design, design of hybrid IP networks, differentiated vs. integrated services, traffic flow measurement and management. (offered spring)

Prerequisites: ECE 355 or permission of the instructor

ECE 458/558 Instrumentation (3 Credit Hours)

Computer interfacing using a graphical programming language with applications involving digital-to-analog conversion (DAC), analog-to-digital conversion (ADC), digital input output (DIO), Virtual Instrument System Architecture (VISA) and universal Service Bus (USB). Analysis of sampled data involving use of probability density function, mean and standard derivations, correlations, and the power spectrum. (offered spring, summer)

Prerequisites: ECE 302 or permission of instructor

ECE 461/561 Automatic Control Systems (3 Credit Hours)

This course introduces the fundamental principles and methodologies of feedback control of linear systems. Learn to analyze and design current control systems found in automobiles, aircraft, autonomous vehicles, robots, and many other engineering systems. The course introduces time and frequency domain techniques including root locus, Bode, Nyquist and state space methods together with computer-aided analysis and design. These topics serve as a foundation for further studies in, for example, automation, electrical drives, power electronics, and robotics. (Offered Fall)

Prerequisites: ECE 202

ECE 462/562 Introduction to Medical Image Analysis (MIA) (3 Credit Hours)

Introduction to basic concepts in medical image analysis. Medical image registration, segmentation, feature extraction, and classification are discussed. Basic psychophysics, fundamental ROC analysis and FROC methodologies are covered. (Offered every other spring)

Prerequisites: a grade of C or better in MATH 212

ECE 463/563 Design and Modeling of Autonomous Robotic Systems (3 Credit Hours)

This course focuses on autonomous robotics systems with emphasis on using modeling and simulation (M&S) for system level design and testing. Fundamental concepts associated with autonomous robotic systems are discussed. Course topics include: robotic control, architectures, and sensors as well as more advanced concepts such as error propagation, localization, mapping and autonomy. Design strategies that leverage M&S to accelerate the development and testing of sophisticated autonomous robotic algorithms for individual or teams of robots are covered.

Prerequisites: CS 150 or ENGN 122 or ENGN 150

ECE 464/564 Biomedical Applications of Low Temperature Plasmas (3 Credit Hours)

This course is cross listed between ECE, BME and BIOL. It is designed to be taken by senior undergraduate students and first year graduate students. The course contents are multidisciplinary, combining materials from engineering and the biological sciences. The course covers an introduction to the fundamentals of non-equilibrium plasmas, low temperature plasma sources, and cell biology. This is followed by a detailed discussion of the interaction of low temperature plasma with biological cells, both prokaryotes and eukaryotes. Potential applications in medicine such as wound healing, blood coagulation, sterilization, and the killing of various types of cancer cells will be covered. (Offered fall)

Prerequisites: Senior standing

ECE 468/568 Realtime Interactive Simulation and Visualization (3 Credit Hours)

This course is designed to provide students with advanced knowledge and skills in the field of real-time interactive simulation and visualization using the Unreal game engine with emphasis on applications for engineering and sciences. Topics covered include 3D computer graphics theory fundamentals, software architecture, user interaction, physics engine, artificial intelligence, animation, visual representations of complex data, cross-platform development (desktop, mobile, VR/AR). Applications include robotics simulation, transportation simulation, serious games, medical simulation, virtual laboratories, among others.

Prerequisites: ECE 250 or CS 250 or CS 251 and CS 260 or equivalent

ECE 470/570 Foundations of Cyber Security (3 Credit Hours)

Course provides an overview of theory, tools and practice of cyber security and information assurance through prevention, detection and modeling of cyber attack and recovery from such attacks. Techniques for security modeling, attack modeling, risk analysis and cost-benefit analysis are described to manage the security of cyber systems. Fundamental principles of cyber security and their applications for protecting software and information assets of individual computers and large networked systems are explored. Anatomy of some sample attacks designed to compromise confidentiality, integrity and availability of cyber systems are discussed. (Offered fall).

Prerequisites: A grade of C or better in ENGN 122 or ENGN 150 or CS 150 and junior standing or permission of the instructor

ECE 471/571 Introduction to Solar Cells (3 Credit Hours)

This course is designed to provide the fundamental physics and characteristics of photovoltaic materials and devices. A focus is placed on i) optical interaction, absorption, and design for photovoltaic materials and systems, ii) subsequent energy conversion processes in inorganic/organic semiconductor such as generation, recombination, and charge transport, and iii) photovoltaic testing and measurement techniques to characterize solar cells including contact and series resistance, open circuit voltage, short circuit current density, fill factor, and energy conversion efficiency of photovoltaic devices. (Offered fall)

Prerequisites: ECE 332

ECE 472/572 Plasma Processing at the Nanoscale (3 Credit Hours)

The science and design of partially ionized plasma and plasma processing devices used in applications such as etching and deposition at the nanoscale. Gas phase collisions, transport parameters, DC and RF glow discharges, the plasma sheath, sputtering, etching, and plasma deposition.

Prerequisites: ECE 323

ECE 473/573 Solid State Electronics (3 Credit Hours)

The objective of this course is to understand basic semiconductor devices by understanding semiconductor physics (energy bands, carrier statistics, recombination and carrier drift and diffusion) and to gain an advanced understanding of the physics and fundamental operation of advanced semiconductor devices. Following the initial introductory chapters on semiconductor physics, this course will focus on the theory of p-n junctions, metal-semiconductor Schottky diodes, MOS capacitors, MOS field effect transistors (MOSFET) and bipolar junction transistors (BJTs). (Offered fall)

Prerequisites: ECE 313, ECE 323, ECE 332 and MATH 212

ECE 474/574 Optical Fiber Communication (3 Credit Hours)

This course introduces seniors and first year graduates to the physics and design of optical fiber communication systems. The topics covered are: electromagnetic waves; optical sources including laser diodes; optical amplifiers; modulators; optical fibers; attenuation and dispersion in optical fibers; photodetectors; optical receivers; noise considerations in optical receivers; optical communication systems.

Prerequisites: ECE 323

ECE 475/575 Transportation Data Analytics (3 Credit Hours)

This course presents the basic techniques for transportation data analytics. It will discuss statistical modeling, prominent algorithms, and visualization approaches to analyze both small- and large-scale data sets generated from transportation systems. Practices of using different data for various real-world traffic/transportation applications and decision making will also be discussed.

Prerequisites: STAT 330 or ECE 304

ECE 481W Preparatory ECE Senior Design (3 Credit Hours)

3 credits - The course is the preparatory, proposal development section of the senior capstone design experience for computer engineering and electrical engineering majors. The course will focus on developing a proposal for a group design project. The senior design projects aim at developing engineering design skills of a complete computer/electrical system. Elements of developing a successful proposal are emphasized along with written communication skills, engineering professional development, technical presentation skills, developing an understanding of the societal impact of the project, and developing realistic constraints on the design based on engineering standards. Oral and written communication skills are stressed. This is a writing intensive course. Industry-sponsored multi-disciplinary design projects are an option. (offered Fall, Spring)

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; ECE 381; (ECE 302; ECE 313) or (ECE 341; ECE 346) or (ECE 302; ECE 320; ECE 341; ECE 346)

Pre- or corequisite: ECE 304; (ECE 303; ECE 323; ECE 332; ECE 451; ECE 461) or (ECE 342 ; ECE 355; ECE 302 or ECE 306 or ECE 350 or ECE 313 or ECE 314; ECE 443) or (ECE 406)

ECE 482 ECE Senior Design (3 Credit Hours)

This is the second semester of the senior capstone design experience for computer engineering, modeling and simulation engineering, and electrical engineering majors. In this course, the students will implement the design proposal developed in ECE 481W. The senior design projects aim at developing engineering design skills of a complete computer/electrical system. Oral and written communication skills are emphasized. Industry-sponsored multi-disciplinary design projects are an option.

Prerequisites: ECE 481W

ECE 483/583 Embedded Systems (3 Credit Hours)

This course covers fundamentals of embedded systems: basic architecture, programming, and design. Topics include processors and hardware for embedded systems, embedded programming and real time operating systems. (Offered fall)

Prerequisites: ECE 346

ECE 484W Computer Engineering Design I (3 Credit Hours)

Emphasis is on the design of a complex digital circuit and microcontroller interfacing. A semester-long project involves the design, simulation and testing of a digital architecture and software GUI. Several moderate scale digital modules are designed, simulated, implemented and tested during the semester. Design methods incorporate CAD design tools, implementation with advanced integrated circuit technology and contemporary software tools. Oral and written communication skills are stressed. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; ECE 302; ECE 341; ECE 346; and ECE 381 OR ECE 320

Pre- or corequisite: ECE 304, ECE 313, and ECE 406 OR ECE 443

ECE 485W Electrical Engineering Design I (3 Credit Hours)

This course is designed to give senior electrical engineering students the opportunity to design and test electronic subsystems to address realistic engineering problems. Lectures focus on providing professional orientation and exploration of the design process. Small group design projects focus on the development of electronic subsystems. Oral and written communication skills are stressed. The students will be in groups of two or three and they are to develop a robot, test its capabilities and modify them to meet a design challenge in the last few weeks of the semester. Topics include programming the ARDUINO UNO, wire-wrap techniques, sensor testing, motor testing, and overall robot functioning. This is a writing intensive course.

Prerequisites: ECE 302, ECE 313 and ECE 381 and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

Pre- or corequisite: ECE 303, ECE 304, ECE 323, and ECE 332

ECE 486 Preparatory ECE Senior Design II (2 Credit Hours)

The course is the preparatory, proposal development section of part two of the senior capstone design experience for electrical and computer engineering majors. The course will focus on developing a proposal for a group design project. The senior design projects aim at developing engineering design skills of a complete computer/electrical system. Elements of developing a successful proposal are emphasized along with written communication skills. Industry-sponsored multi-disciplinary design projects are an option.

Prerequisites: senior standing

Pre- or corequisite: ECE 484W or ECE 485W

ECE 487 ECE Senior Design II (2 Credit Hours)

Part two of the senior capstone design experience for electrical and computer engineering majors. In this course, students will implement the design proposal developed in ECE 486. The senior design projects aim at developing engineering design skills of a complete computer/electrical system. Oral and written communication skills are emphasized. Industry-sponsored multi-disciplinary design projects are an option.

Prerequisites: ECE 486

Pre- or corequisite: ECE 484W or ECE 485W

ECE 488 ECE Senior Design III (3 Credit Hours)

Part three of the senior capstone design experience for electrical and computer engineering majors. Individual and group design projects focus on the development of complete electrical and computer systems. Oral and written communication skills are stressed. Industry-sponsored multi-disciplinary design projects are an option.

Prerequisites: ECE 487

ECE 491 Microelectronics Design Experience (3 Credit Hours)

This is a Virginia Microelectronics Consortium (VMEC) practical hands-on, state-of-the-art summer research internship experience in the laboratory. This is not a regular class, but a summer research internship open only to those undergraduate students who apply for and win a VMEC Summer Research Scholarship. The VMEC internship provides excellent technical knowledge as well as industrial and academic contacts for career development. Students complete a 10-13 week summer project on a microelectronics research project or design activity at an engineering school or in the State-of-the-Art Cleanroom of the industry members of the VMEC, including Micron Technology & British Aerospace Systems (BAE Systems) both in Manassas, VA. Details regarding eligibility and report requirements are available in the department during fall with application deadline of October 30 each fall.

Prerequisites: Sophomore or Junior standing in electrical or computer engineering with GPA above 3.0 and department approval

ECE 495/595 Topics in Electrical and Computer Engineering (1-3 Credit Hours)

Study of topics in electrical and computer engineering.

Prerequisites: departmental approval

ECE 496/596 Topics in Electrical and Computer Engineering (1-3 Credit Hours)

Study of topics in electrical and computer engineering.

Prerequisites: departmental approval

ECE 498 ECE Senior Thesis I (1 Credit Hour)

Part one of a two-semester thesis project involving literature research, development of technical writing skills, and possibly obtaining lab experience using a variety of techniques and equipment. Each student will undertake a research experience under the supervision of a departmental faculty member. A preliminary report of research findings is required at the end of the semester. Upon successful completion, the combination of ECE 498 (1 credit) and ECE 499 (2 credits) can be considered equivalent to one 3-credit ECE Technical Elective Course. (Offered fall, spring, summer)

Prerequisites: Major in Electrical Engineering, Computer Engineering, or Modeling & Simulation Engineering; Cumulative GPA of 3.00 or higher

Pre- or corequisite: ECE 484W or ECE 485W

ECE 499 ECE Senior Thesis II (2 Credit Hours)

Continuation of ECE 498. The research culminates in a thesis that includes a literature review, description of methods, results and conclusions, and an oral presentation. Upon successful completion, the combination of ECE 498 (1 credit) and ECE 499 (2 credits) can be considered equivalent to one 3-credit ECE Technical Elective Course. (Offered fall, spring, summer)

Prerequisites: ECE 498, and a cumulative GPA of 3.00 or better

ECON - Economics

ECON 200S Basic Economics (3 Credit Hours)

The course presents an overview of the major principles of micro- and macroeconomics. Topics include opportunity costs, supply and demand, competition and monopoly, national income determination, creation of money and credit, and international problems. No credit will be given to students pursuing majors in the Strome College of Business.

ECON 201S Principles of Macroeconomics (3 Credit Hours)

Development of the theory of supply and demand, and their interaction in a market economy. Classical, Keynesian, and monetarist explanations of inflation and unemployment are presented and analyzed. Emphasis is placed on income determination, fiscal policy, monetary policy, and the issue of government efforts to improve economic performance.

Prerequisites: Qualifying math SAT/ACT score, qualifying score on the math placement test, or completion of MATH 102M or higher

ECON 202S Principles of Microeconomics (3 Credit Hours)

An examination of how individuals and businesses interact in a market economy. Emphasis is placed on consumer behavior, price and output decisions of firms, the economic efficiency of the resulting allocation of society's resources, and the gains from international trade and impact of trade barriers.

Prerequisites: Qualifying math SAT/ACT score, qualifying score on the math placement test, or completion of MATH 102M or higher

ECON 226S Honors: Principles of Macroeconomics (3 Credit Hours)

Open only to students in the Honors College. A special honors section of ECON 201S.

ECON 227S Honors: Principles of Microeconomics (3 Credit Hours)

Open only to students in the Honors College. A special honors section of ECON 202S.

ECON 301 Managerial Economics (3 Credit Hours)

Examines the application of economic theory and methodology to managerial decision making and strategy. Key topics are demand analysis, economic forecasting, production, cost analysis, the economics of organization, market structure and strategic behavior, pricing techniques, and government regulation and its implications for firm behavior. Emphasis is placed on the global context of managerial decisions.

Prerequisites: ECON 201S and ECON 202S and BNAL 206, in addition to a declared major at the University or permission of the Dean's Office

Pre- or corequisite: MATH 200 or equivalent

ECON 304 Intermediate Microeconomic Theory (3 Credit Hours)

Develops methods of microeconomic analysis beyond the principles level. Major emphasis is placed on consumer behavior and demand, production and cost, market organization, distribution theory, and welfare theory.

Prerequisites: MATH 200 or equivalent and a graded of C or better in ECON 202S, along with a declared major in the University or permission of the Dean's Office

ECON 305 Intermediate Macroeconomic Theory (3 Credit Hours)

Provides an overall 'big picture' of the economy, focusing on the central problems of unemployment, inflation, the business cycle, and economic growth. Important issues include national income accounting, fiscal policy, monetary policy, the money supply, the money market, interest rates, saving rates, labor markets, productivity, budget surpluses/deficits, trade deficits, and exchange rates.

Prerequisites: MATH 162M or equivalent, and a grade of C or better in ECON 201S and ECON 202S, along with a declared major at the University or permission of the Dean's Office

ECON 311 Analytical Tools for Economists (3 Credit Hours)

In this course, students will learn how to build statistical models and use data to answer real-world questions. Through hands-on work with modern statistical software, students will learn to visualize, estimate, interpret, evaluate, and articulate relationships in data. Students will obtain real, tangible skills such as experience with statistical software as well as develop their economic intuition.

Prerequisites: ECON 202S or equivalent

ECON 368 Internship (1-3 Credit Hours)

Supervised internship in economics. Approval for enrollment and allowable credits is determined by the department. Credit for internship and practicum in economics may not both be applied to meeting requirements for the major.

Prerequisites: ECON 304 and ECON 305, along with a declared major at the University or permission of the Dean's Office

ECON 369 Practicum in Economics (3 Credit Hours)

Application of economic theory and principles to a practical problem of interest to a sponsoring community organization. (Qualifies as a CAP experience.)

Prerequisites: ECON 304 and ECON 305; BNAL 206 and BNAL 306, along with a declared major at the University or permission of the Dean's Office

ECON 395 Topics in Economics (1-3 Credit Hours)

A study of selected topics, the title of which will appear in the course schedule.

Prerequisites: ECON 200S and ECON 201S or ECON 202S, along with a declared major at the University or permission of the Dean's Office

ECON 396 Topics in Economics (1-3 Credit Hours)

A study of selected topics, the title of which will appear in the course schedule.

Prerequisites: ECON 200S and ECON 201S or ECON 202S, along with a declared major at the University or permission of the Dean's Office

ECON 400 From Correlation to Causation: Applied Causal Inference (3 Credit Hours)

In this course, students will discover when correlation does in fact imply causation. Traditional statistical tools are used to estimate associative relationships, while the modern causal inference techniques taught in this course will allow students to make causal claims. In other words, students will be able to design statistical tests to answer the question 'what is the effect of X on Y?' This is imperative for researchers, analysts, managers, policy makers, etc. Topics include omitted variable bias, endogeneity, treatment effects, and research designs that identify causation under certain assumptions. Using modern statistical software, students will replicate published studies as well as carry out their own research.

Prerequisites: ECON 201S, ECON 202S, BNAL 206, BNAL 306, and ECON 311, along with a declared major at the University or permission of the Dean's Office

ECON 402/502 Transportation Economics (3 Credit Hours)

A survey of the transportation system in the United States including its development, pricing, and regulation. Special attention is given to railroads, highways, pipeline, water and air transportation; and the roles that these modes of transportation play in economic development.

Prerequisites: ECON 202S (or ECON 200S and permission of the instructor) along with a declared major at the University or permission of the Dean's Office

ECON 407W/507 Labor Market Economics (3 Credit Hours)

Economic analysis of various facets of labor markets. Emphasis is placed on the analysis of labor supply, labor demand, wage determination, earnings differentials and inequality, occupational choice, human capital investment, labor market discrimination, mobility and immigration, impact of unions, and unemployment. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, ECON 202S (or ECON 200S and permission of the instructor), along with a declared major at the University or permission of the Dean's Office

ECON 410/510 Economics for Managers (3 Credit Hours)

Managerial economics applies key economic principles to decision making in business organizations. This course provides insight into consumer and business behavior and allows an improved understanding of how the external business environment can shape how businesses operate. Economics is, at its core, a way of thinking about problems, courses of action, and the impact of decisions. Economics stresses the importance of incentives as determinants of consumer and business behavior and stresses the interaction between costs and benefits in the margin with respect to decision making.

Prerequisites: Instructor permission

ECON 421/521 Public Economics (3 Credit Hours)

This course examines the interaction between government and the economy, with particular emphasis on the role of the federal government. Topics that address the motivation for government involvement in the economy include market failure, income inequality, and redistribution of income. Specific programs studied include Medicare/Medicaid, welfare programs, and the social security system.

Prerequisites: ECON 201S and ECON 202S, along with a declared major at the University or permission of the Dean's Office

ECON 425 Introduction to Mathematical Economics (3 Credit Hours)

The course focus is on the use of differential and integral calculus, matrix algebra, difference equations and classical optimization theory in the presentation and development of economic theory.

Prerequisites: ECON 201S, ECON 202S, and MATH 200 or equivalent, along with a declared major at the University or permission of the Dean's Office

ECON 427/527 Industrial Organization and Public Policy (3 Credit Hours)

A study of market structures and the conduct and performance of business firms in different market structures. The emphasis is on the theory and measurement of industrial concentration and public policy responses to industrial concentration.

Prerequisites: MATH 200 or equivalent and ECON 202S (or ECON 200S and permission of the instructor), along with a declared major at the University or permission of the Dean's Office

ECON 431/531 Money and Banking (3 Credit Hours)

Examines the nature and functions of money and credit, the commercial banking system, the Federal Reserve System, the quantity theory of money, the theory of income determination, the balance of payments and exchange rates, and the history of monetary policy in the United States.

Prerequisites: ECON 201S and ECON 202S, along with a declared major at the University or permission of the Dean's Office

ECON 435/535 Health Economics: A Global Perspective (3 Credit Hours)

This course introduces the student to the economics of health care and the application of health economics to health care problems, the issues surrounding those problems, and the potential solutions to those problems. The course will emphasize institutional features of the health care industry, the market for health care, the political economy of health care, and government involvement in the delivery of health care. Further, the course will survey the delivery of health care in other countries and provide a global perspective on selected health care issues such as AIDS, water and air quality, and the aging of the population.

Prerequisites: ECON 202S and a declared major at the University or permission of the Dean's Office

ECON 436/536 Sports Economics (3 Credit Hours)

This course introduces the student to the economics of sports in America. The course will emphasize institutional features of the sport industry. Specific topics included are: sports franchises as profit-maximizing firms; monopoly and antitrust rules as applied to the sports industry; public finance of sports; costs and benefits of a sports franchise to a city; the labor economics of professional sports; discrimination in sports; and the economics of college sports. This course may not be applied toward the major in economics as an economics elective or toward the minor in economics or the M.A. in economics. (It could, however, be used as a non-economics elective for the major.)

Prerequisites: ECON 202S or equivalent and a declared major at the University or permission of the Dean's Office

ECON 445W/545 Urban Economics (3 Credit Hours)

An analysis of the economic factors which give rise to the formation of urban centers and which contribute to the following problems: urban poverty, housing conditions, traffic congestion, and the fiscal crisis faced by modern cities. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, ECON 202S (or ECON 200S and permission of the instructor), and a declared major at the University or permission of the Dean's Office

ECON 447W/547 Natural Resource and Environmental Economics (3 Credit Hours)

Topics discussed include conservation and scarcity, market failure, fishery management, benefit-cost analysis, water resource development, environmental quality, recreation, energy, and marine resources. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; ECON 202S (or ECON 200S and permission of the instructor), and a declared major at the University or permission of the Dean's Office

ECON 450 International Economics (3 Credit Hours)

An analysis of the principles of trade theory and policy with an overall exposition of the principles of international finance. The main objective of the course is to provide knowledge of analytical tools used by economists in analyzing contemporary international economic problems.

Prerequisites: ECON 201S and ECON 202S, along with a declared major at the University or permission of the Dean's Office

ECON 451/551 History of Economic Thought (3 Credit Hours)

A study of the history of economic theory with attention to the economic ideas and philosophy of Adam Smith, David Ricardo, Karl Marx, J.M. Keynes and other major figures in the development of economics.

Prerequisites: ECON 201S (or ECON 200S) and ECON 202S, along with a declared major at the university or permission of the Dean's Office

ECON 454W/554 Economic Development (3 Credit Hours)

This course is intended to provide an introduction to the problems of economic development in the Third World, including the problems of economic growth, income distribution, poverty, urbanization, uneven development, agricultural policy, economic planning, industrial policy, trade policy, balance of payments, finance, and currency crises. To illustrate these issues we will examine the problems of certain individual countries, such as Brazil, Korea, Philippines, India, Mexico, Kenya, Indonesia, and Thailand. The course tries to strike a balance between economic theory and institutional economics. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; ECON 201S and ECON 202S; junior standing or permission of the chief departmental advisor; and a declared major at the university or permission of the Dean's Office

ECON 455/555 Comparative Economic Systems (3 Credit Hours)

This course examines and compares different economies from around the world, including such economies as the UK, France, Germany, Sweden, Japan, India, Korea, Russia, and China. Students look at the economic growth, GDP per capita, unemployment, inflation, income distribution, economic efficiency, institutions, policies, industrial structure, legal infrastructure, and international trade of these economies. Students study the functioning of markets and the problems of market and government failure. The course addresses the question, what is the best way to organize society.

Prerequisites: ECON 201S, ECON 202S and a declared major at the university or permission of the Dean's Office

ECON 495/595 Selected Topics in Economics (1-3 Credit Hours)

Taught on an occasional basis. A study of selected topics, the title of which will appear in the course schedule.

Prerequisites: ECON 201S, ECON 202S, permission of instructor, and a declared major at the University or permission of the Dean's Office

ECON 499 Readings in Economics (3 Credit Hours)

Designed to provide the advanced student in economics an opportunity to do independent study under the guidance of a member of the faculty.

Prerequisites: ECON 201S, ECON 202S, ECON 304, ECON 305, senior standing, a declared major in Economics, and permission of the Chief Departmental Advisor

EET - Electrical Engineering Technology

EET 110 Electrical Circuits I (3 Credit Hours)

Fundamentals of electrical circuits including basic electrical parameters and variables, circuit laws and theorems, mesh analysis, node analysis, Thevenin's and Norton's Theorems, capacitance, inductance, magnetism, and elementary RC and RL transients.

Prerequisites: MATH 162M

EET 120 Fundamentals of Logic Circuits (3 Credit Hours)

An introduction to logic circuits, Boolean algebra, digital interface devices, combinational and sequential logic design, and microprocessor fundamentals.

EET 125 Logic Circuits Laboratory (1 Credit Hour)

Team-oriented experiments in basic combinational and sequential logic circuits and an introduction to fundamental microprocessors.

Pre- or corequisite: EET 120

EET 195 Topics (1-3 Credit Hours)

Study of selected topics.

EET 200 Electrical Circuits II (3 Credit Hours)

A continuation of EET 110 with emphasis on steady-state ac circuit analysis and applications. Topics include alternating current and voltage, phasors and complex numbers and their applications in circuit analysis, series and parallel resonance, complex power, and polyphase circuits.

Prerequisites: MATH 163 and a grade of C or better in EET 110

EET 205 Electrical Circuits Laboratory (1 Credit Hour)

Electrical laboratory instruction including test equipment, measurements, data analysis, verification of circuit laws, formal report preparation, and circuit implementation.

Pre- or corequisite: EET 200

EET 210 Electronic Circuits (3 Credit Hours)

Semiconductor properties and semiconductor devices including diodes, MOS field-effect transistors, junction field-effect transistors and bipolar junction transistors. The ideal operational amplifier and its applications. FET and BJT biasing, including constant current biasing, and amplifier circuits with emphasis on DC modeling and graphical analysis, including Multisim simulation of circuit biasing.

Prerequisites: EET 110

EET 225 Electronic Circuits Laboratory (1 Credit Hour)

Practical design, construction, testing and troubleshooting of electronic circuits, including single state and multistage amplifiers, power amplifiers, linear integrated circuits, and control devices.

Prerequisites: EET 125

Pre- or corequisite: EET 210

EET 261 Introduction to Microprocessors and Microcontrollers (3 Credit Hours)

Introduction of software and hardware that relates to PIC16FXXX 8 bit microprocessor and microcontroller architectures, interface circuitry, and system designs. Programming in controls of internal and external hardware/peripherals, communication protocols between the logic circuits, peripherals, and MCUs. The ASM programming and design is the focus and C coding will also be introduced.

Prerequisites: EET 120 and EET 125

EET 263 Introduction to Programmable Logic Controllers (PLCs) (3 Credit Hours)

An introduction to the design and programming of automatic machine controls. Topics include controls diagrams, programmable logic controllers, ladder logic programming, interfacing, sensors, transducers, encoders, analog I/O, PID, motor controls, codes and standards, controls programming languages, controls safety, and pneumatics. Lab assignments include ladder logic program simulations.

Prerequisites: EET 120 or EET 350

Pre- or corequisite: EET 210

EET 295 Topics (1-3 Credit Hours)

Study of selected topics.

EET 300 Advanced Circuit Analysis (3 Credit Hours)

General analysis of linear networks using classical methods, Laplace transforms and computer-aided methods. Topics include single element transients, first- and second-order circuits, transfer function analysis, Bode plots and waveform analysis. Circuit analysis software is used to support the analytical methods.

Prerequisites: MATH 211 and a grade of C or better in EET 200

EET 310 Digital Electronics (3 Credit Hours)

First course in an upper division sequence in digital electronics circuits and systems. Topics include a comprehensive treatment of Boolean algebra, computer arithmetic, and applications of digital integrated circuits.

Prerequisites: EET 120, EET 125, EET 205, and EET 210

EET 312 Principles of Communication Systems (4 Credit Hours)

Overview of communications systems, including both time and frequency domain analysis. Topics include spectrum analysis, analog modulation methods, digital modulation methods, receiver design, and multiplexing methods. Virtual laboratory projects utilize simulation software.

Prerequisites: EET 300 and ENGT 305

EET 315 Digital Electronics Laboratory (2 Credit Hours)

Application-oriented experiments and design problems in digital electronics. Multistage prototype construction requiring system design, module interface, and Engineering Design Journaling.

Prerequisites: junior standing

Pre- or corequisite: EET 310

EET 320 Microcontroller Applications (3 Credit Hours)

This is the second course in the digital electronics course sequence. The course will focus on software/hardware design of microprocessors and microcontrollers in C under ARM M4 and PIC microcontrollers, interface circuitry, simulation, and system designs in CAD circuit layout. The focus will be on application of microprocessor-based systems design.

Prerequisites: EET 120 and EET 125

EET 325 Microcontroller Applications Laboratory (2 Credit Hours)

Hands-on implementation of microprocessor and microcontroller systems and peripheral interfacing experiments. Emphasis is placed on the hardware and software design and firmware construction in embedded system applications.

Prerequisites: junior standing

Pre- or corequisite: EET 320

EET 330 Linear Electronics (3 Credit Hours)

General treatment of linear electronic circuits with emphasis on the operational amplifier and integrated circuits derived from it. Topics include various amplifier circuits and converters, integrators and differentiators, comparators, waveform generators, active filters, A/D and D/A converters, and regulators. Design of circuits to meet specifications. Circuit analysis software is used to validate some of the designs.

Prerequisites: EET 210 and EET 300

EET 335 Linear Electronics Laboratory (2 Credit Hours)

Design testing, and evaluation of 'linear' electronic circuits and subsystems with primary emphasis on circuit components and modules. Measurement techniques, instrumentation and error analysis. Simulation of circuit designs using Multisim including transient response and frequency response.

Prerequisites: junior standing

Pre- or corequisite: EET 330

EET 350 Fundamentals of Electrical Technology (3 Credit Hours)

A comprehensive course in electrical engineering technology for nonmajors. Major topics are basic electricity (AC and DC), circuit analysis, linear electronics and digital electronics. Not open to electrical engineering technology majors except as a substitute for EET 110 in special cases.

Prerequisites: junior standing

Pre- or corequisite: MATH 211

EET 355 Electrical Laboratory (1 Credit Hour)

Selected electrical laboratory topics for nonmajors including basic measurements, instrumentation, operational amplifiers, digital circuits, and rotating machines. Not open to electrical engineering technology majors.

Prerequisites: junior standing

Pre- or corequisite: EET 350

EET 360 Electrical Power and Machinery (3 Credit Hours)

A study of synchronous and asynchronous AC machinery, DC machinery, power distribution systems, and instrumentation.

Prerequisites: EET 200 or EET 350

EET 366 Electrical Power and Machinery Laboratory (2 Credit Hours)

A laboratory course dealing with electrical power and machinery as covered in EET 360.

Prerequisites: EET 205 or EET 355

Pre- or corequisite: EET 360

EET 367 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

EET 368 Internship (1-3 Credit Hours)

Available for pass/fail grading only. Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students to gain short duration career-related experience.

Prerequisites: Approval by department is required; additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

EET 369 Practicum (1-3 Credit Hours)

Available for pass/fail grading only.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

EET 370 Energy and The Environment (3 Credit Hours)

A study of existing and new energy production methods, energy as a purchased/traded commodity, physics of energy, positive and negative implications for the environment, economics of energy alternatives, and resulting human/social impacts.

Prerequisites: PHYS 101N or PHYS 111N or PHYS 226N or PHYS 231N

EET 373 Instrumentation (3 Credit Hours)

Fundamental concepts of electromechanical devices used in mechatronics and automation control systems. The working principles, calibration, interfacing methods and control loops of analog and digital instrumentation devices in a process control system. The instrumentation devices, including sensors, actuators, signal conditioning circuits and data acquisition boards, will be used in class projects as basic feedback control blocks in practical simulation and PLC-based mechatronics systems. The simulation projects will use PLC hardware, MATLAB and/or LabView software.

Prerequisites: EET 210 and EET 263; or ENGT 270

EET 395 Topics (1-3 Credit Hours)

Study of selected topics.

Prerequisites: junior standing

EET 396 Topics (1-3 Credit Hours)

Study of selected topics.

Prerequisites: junior standing

EET 405 Data Communications and Computer Networks (3 Credit Hours)

The course provides an overview of the local area networks (LANs), wide-area networks (WANs), and backbone technologies. It combines the fundamental concepts of data communications and networking with practical applications and emphasizes the OSI reference model and its relationship to traditional and next-generation LAN/WAN technologies, as well as general topics such as network topology, network interface, client/server hardware, bridges and routers. Hands-on activities using Wireshark are included.

Prerequisites: ENGT 305

EET 412 Wireless Communication Systems (3 Credit Hours)

Topics include digital encoding techniques, signal-to-noise comparisons of different analog and digital modulation methods, link analysis, basic data transmission, cellular networks, wireless standards, basic computer networks framing and protocols, and satellite communication. System level simulations for determining subsystem design requirements and overall performance.

Prerequisites: ENGT 305

EET 420 Advanced Logic Design (3 Credit Hours)

Advanced digital logic design and circuit reduction. Topics include lattice structure, symmetry recognition and simplification, threshold logic, design-for-testing techniques, shortest path test planning, adaptive testing, and fuzzy logic. Computer assignments include design simulation and testing.

Prerequisites: ENGT 305 and EET 310

EET 430 Advanced Motion Control Systems (3 Credit Hours)

A study of modern control devices and applications including electrical, mechanical and pneumatic types. This course is a study of modern electro-mechanical devices and advanced PLCs as applied to modern automation process control systems. The course covers motion control mathematical modeling, design using advanced PLCs and motion control PLC module cards, closed loop control theory and simulations. The emphasis is on understanding the underlying principles that support the building blocks of industrial process control systems.

Prerequisites: ENGT 305 and EET 360

EET 470 Microcontrollers/Embedded-Based Designs (3 Credit Hours)

Advanced embedded system designs. Topics focus in ADC, DAC, EEPROM External Memories, temperature sensor, digital RF wireless communications, communications in synchronous and asynchronous serial forms of SCI, SPI, & I2C, and parallel communication in system integration and design. The 32 bit ARM M4 in C code designs will be used in the course.

Prerequisites: EET 310, EET 320, and EET 325

EET 483 Introduction to Smart Grids (3 Credit Hours)

The course introduces the fundamental principles and techniques in smart grids, with focus on information and communication technologies (ICT) deployed to modernize the electric energy infrastructure. It provides an overview on: the smart grid and its main components; smart devices at transmission, distribution and customer level; distributed energy resources (DER) and emerging technologies; customer systems, including demand response, home energy management and smart appliances; communications technologies and standards/protocols for the smart grid; and smart distribution and customer system projects from real-world smart grid projects.

Prerequisites: EET 360 and ENGT 305

EET 485 Electrical Power Systems (3 Credit Hours)

Fundamentals of electrical power transmission and distribution systems. Transformer operation/application, balanced/unbalanced loads, power factor correction, per-unit system system applications, fault calculations, power quality, over-current protection, relay construction/application, lighting system design, grounding, and introduction to the National Electric Code.

Prerequisites: EET 360 and ENGT 305

EET 495 Topics in Electrical Engineering Technology (1-3 Credit Hours)

Study of selected topics.

Prerequisites: junior standing

EET 496 Topics in Electrical Engineering Technology (1-3 Credit Hours)

Study of selected topics.

Prerequisites: junior standing

ELS - Educational Leadership and Services

ELS 496/596 Topics in Education (1-3 Credit Hours)

The College of Education offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of the instructor

ELS 497/597 Topics in Education (1-3 Credit Hours)

The College of Education offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of the instructor

ELS 498/598 Topics in Education (1-3 Credit Hours)

The College of Education offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of the instructor

ENGL - English

ENGL 101 Composition Studio (3 Credit Hours)

This course is an immersive study of writing, rhetoric, and composing concepts and strategies designed to extend the ENGL 110C curriculum. The course provides additional instruction, guided practice, and support as writers learn to successfully compose and revise in multiple genres for multiple purposes and audiences and navigate university literacy expectations.

Prerequisites: A score of 1 on the WSPT or an override from an academic advisor

Corequisites: ENGL 110C

ENGL 110C English Composition (3 Credit Hours)

The principal objective of the course is to prepare students to be effective writers of the kinds of compositions they will be called on to produce during their college careers. By the end of the course, students should be more mature in their understanding and use of language, should develop efficient writing processes, and should know and demonstrate the qualities of effective composition in a given rhetorical situation.

Prerequisites: A passing grade on the Writing Success Placement Tool (WSPT)

ENGL 112L Introduction to Literature (3 Credit Hours)

This course introduces students to a broad range of literary forms, including poetry, fiction and drama, exposing students to a diverse range of writers across race, gender, sexuality, nationality, and time periods. As students engage with the readings, they will develop skills in literary interpretation, analysis and critical evaluation.

ENGL 114L American Writers, American Experiences (3 Credit Hours)

This course introduces students to the diversity of American culture as depicted in American literature. Readings expose students to a diverse range of writers across race, gender, sexuality, and time periods. As students engage with the readings, they will develop skills in literary interpretation, analysis and critical evaluation.

ENGL 126C Honors: English Composition (3 Credit Hours)

Open only to students in the Honors College. A special honors section of ENGL 110C.

Prerequisites: A passing score on the Writing Success Placement Tool (WSPT)

ENGL 127L Honors: Introduction to Literature (3 Credit Hours)

Open only to students in the Honors College. A special honors section of ENGL 112L.

ENGL 200 Introduction to English Studies (1 Credit Hour)

A preview of the subject areas of an English major (literature, linguistics, creative writing, journalism, professional writing, rhetoric, teaching) with attention to the student's curricular and career planning. Required of English majors. Open to anyone interested in English.

ENGL 211C Writing, Rhetoric, and Research (3 Credit Hours)

To foster dynamic transfer into major-level writing courses, this course emphasizes academic literacy and the skills necessary to decode and understand the writing process, the fundamental rhetorical principles of writing, and the research process and how they adapt to shifting requirements of audience, subject matter, and context. It is recommended that students take this course in their sophomore year. A student with credit for ENGL 111C, ENGL 131C, ENGL 221C, ENGL 231C or any Honors equivalents cannot receive credit for ENGL 211C. A student also may not receive credit more than once for this course or its Honors equivalent under different titles.

Prerequisites: ENGL 110C with a grade of C or higher

ENGL 215L Deep Dive Literature (3 Credit Hours)

This course provides students the opportunity to take an in depth look into a specific literary topic of shared interest while developing their skills in literary interpretation, analysis and critical evaluation. Readings will represent a diverse set of voices and genres but also center a specific set of questions to explore.

Prerequisites: Completion of ENGL 110C or equivalent with C or higher

ENGL 226C Honors: Writing, Rhetoric, and Research (3 Credit Hours)

Open only to students in the Honors College. A special honors section of ENGL 211C. A student with credit for ENGL 111C, ENGL 211C, ENGL 221C, or ENGL 231C cannot receive credit for ENGL 226C. A student also may not receive credit more than once for this course or its equivalent under different titles.

Prerequisites: ENGL 110C or ENGL 126C with a grade of C or higher

ENGL 228C Honors: Writing, Rhetoric, and Research: Special Topics (3 Credit Hours)

Open only to students in the Honors College. A special honors section of ENGL 231C. A student with credit for ENGL 111C, ENGL 211C, ENGL 221C, or ENGL 231C cannot receive credit for ENGL 228C. A student also may not receive credit more than once for this course or its equivalent under different titles.

Prerequisites: ENGL 110C or ENGL 126C with a grade of C or higher

ENGL 231C Writing, Rhetoric, and Research: Special Topics (3 Credit Hours)

A special themed section of ENGL 211C that is recommended for specific populations of students according to discipline, workplace, or other shared purpose. This course emphasizes academic literacy and the skills necessary to decode and understand the writing process, fundamental rhetorical principles of writing, and research, with a focus on the expectations of specific audience/s and in response to emerging rhetorical situations, thus fostering dynamic transfer into future work. The themes of these sections will be more fully described in information distributed to academic advisors. It is recommended that students take this course in their sophomore year.

A student with credit for ENGL 111C, ENGL 131C, ENGL 211C, ENGL 221C, or any Honors equivalents cannot receive credit for ENGL 231C.

A student also may not receive credit more than once for this course or its Honors equivalent under different titles.

Prerequisites: A C or better in ENGL 110C

ENGL 295 Topics (1-3 Credit Hours)

A study of selected topics designed for nonmajors or for elective credit within a major.

Prerequisites: ENGL 110C with a grade of C or better

ENGL 300W Introduction to Creative Writing (3 Credit Hours)

A creative writing workshop course combining individual conferences with the instructor and class discussion of student writing. Students will work in fiction, non-fiction, poetry, and other genres. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

ENGL 301 Introduction to British Literature I (3 Credit Hours)

A survey of British literature from the beginning of textual records until 1780, focusing on the development of different literary forms in their social and cultural contexts.

Prerequisites: Literature way of knowing requirement and 6-hour General Education composition requirement or permission of the instructor

ENGL 302 Introduction to British Literature II (3 Credit Hours)

A survey of British literature after 1780, focusing on the development of different literary forms in their social and cultural contexts.

Prerequisites: Literature way of knowing requirement and 6-hour General Education composition requirement or permission of the instructor

ENGL 303 Shakespeare's Histories and Comedies (3 Credit Hours)

An exploration of Shakespearean comedy and historical drama, through plays such as, A Midsummer Night's Dream, The Merchant of Venice, As You Like It, Measure for Measure, and The Tempest for the former; Richard II, Henry IV, and Richard III for the latter.

Prerequisites: Literature way of knowing requirement and 6-hour General Education composition requirement or permission of instructor

ENGL 304 Shakespeare's Tragedies and Poetry (3 Credit Hours)

A study of Shakespearean poetry and tragedy through the longer poems and the sonnets for the former, and through plays such as Romeo and Juliet, Hamlet, Othello, Macbeth, and Antony and Cleopatra for the latter.

Prerequisites: Literature way of knowing requirement, 6-hour General Education composition requirement, or permission of instructor

ENGL 307T Digital Writing (3 Credit Hours)

This course introduces students to issues of writing in various digital environments like web pages, email, blogs, wikis, and discussion boards. It also introduces fundamentals of hypertext authoring, digital and visual rhetoric, and image manipulation.

Prerequisites: ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

ENGL 325 Introduction to Rhetorical Studies (3 Credit Hours)

Explores the nature and function of rhetoric and its contribution to the knowledge-making enterprises of English studies and other disciplines. Students will use that 'lens' to assess the effectiveness of their own language practices.

Prerequisites: 6-hour General Education composition requirement

ENGL 327W Advanced Composition (3 Credit Hours)

This course emphasizes development of a mature, professional style in expository writing by study of the stylistic and analytical principles underlying effective prose writing. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 110C and a grade of C or better in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 333 Introduction to Critical Theory (3 Credit Hours)

This course introduces students to theories about the nature and value of literature and gives them experience in applying such theories to specific literary texts.

Prerequisites: Lower-division General Education requirements in Literature (3 hours, under Ways of Knowing) and in Written Communication (6 hours), or permission of instructor

ENGL 334W Technical Writing (3 Credit Hours)

This course provides the student with a working knowledge of various types of technical communication, including the writing of proposals, instructions, and reports for both specialist and nonspecialist audiences. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

ENGL 335 Editing and Document Design (3 Credit Hours)

This course provides practical experience in document design and copy editing and includes an analysis of technical formats used in journalism, business, industry, and government. It features hands-on lab work in document presentation, page layout, and design.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

ENGL 336 The Short Story (3 Credit Hours)

A genre course on the art of the short story. Students will explore how the writers' careful selection of detail creates meanings that emerge through the characters, plot, setting, diction, point of view, and other elements of fiction.

Prerequisites: Literature way of knowing requirement and 6-hour General Education composition requirement or permission of the instructor

ENGL 338 Writing for Games (3 Credit Hours)

A genre course on the aesthetic considerations of writing for games. Students will explore how games translate traditional elements of storytelling such as character, conflict, voice, and plot into effective gameplay. This course will provide students with an opportunity to experiment with composing narratives for a variety of genres of games and game-related productions. It also provide students with practical experience composing game design documents and other industry-specific forms of writing.

Prerequisites: six-hour General Education composition requirement or permission of instructor

ENGL 340 American Drama (3 Credit Hours)

A study of American drama from its beginnings to the present day. The course includes plays from the eighteenth and nineteenth centuries, with a generous selection from the twentieth and twenty-first centuries.

Prerequisites: Literature way of knowing requirement and 6-hour General Education composition requirement or permission of instructor

ENGL 342 Southern Literature (3 Credit Hours)

A survey of the literature of the American South from William Byrd to Ernest Gaines. Selected writings are studied not only for their literary value but also as expressions of evolving regional attitudes to be evaluated in terms of the mainstream of American culture.

Prerequisites: Literature way of knowing requirement and 6-hour General Education composition requirement or permission of the instructor

ENGL 345 American Literature to 1860 (3 Credit Hours)

The course presents a survey of American literature from the beginning to the Civil War. It will explore the many voices, genres, and textual encounters that contribute to the literary traditions we recognize as American, with attention paid to how notions of race, gender, class, and ethnicity are formulated in this period of settlement and early nationhood.

Prerequisites: Literature way of knowing requirement and 6-hour General Education composition requirement or permission of instructor

ENGL 346 American Literature Since 1860 (3 Credit Hours)

The course explores significant writers and literary movements, which might include naturalism, social realism, modernism, the Harlem Renaissance, post-war confessional poetry, the Civil Rights era, and postmodernism.

Prerequisites: Literature way of knowing requirement and 6-hour General Education composition requirement or permission of instructor

ENGL 349 The Contemporary American Novel (3 Credit Hours)

Reading and analysis of American novels published since 1945. Emphasis on contemporary themes and techniques.

Prerequisites: Literature way of knowing requirement and 6-hour General Education composition requirement or permission of the instructor

ENGL 350 Aspects of the English Language (3 Credit Hours)

An introduction to the grammar of mainstream English. Primary focus is on analyzing English sentences, including study of parts of speech, phrases, clauses, and sentence types.

Prerequisites: 6-hour general education composition requirement or permission of instructor

ENGL 351 Fiction Workshop (3 Credit Hours)

Students write, criticize, discuss, and revise works of fiction.

Prerequisites: ENGL 300W or permission of the instructor, based on writing samples submitted

ENGL 352 Poetry Workshop (3 Credit Hours)

Students write, criticize, discuss, and revise poetry.

Prerequisites: ENGL 300W or permission of the instructor, based on writing samples submitted

ENGL 354 Client-Based Research Writing (3 Credit Hours)

This is a client-based research course that aims to provide students with workplace research experience. The primary objective is to teach students the rhetorical nature of conducting and reporting research in professional contexts for multiple audiences. Research methods such as surveys, interviews, and observations will be covered.

Prerequisites: ENGL 110C and ENGL 211C

ENGL 355 Game Design and Rhetoric (3 Credit Hours)

Using a number of methodologies privileged by English studies, this course will study the representative and rhetorical strategies through which computer game designers make meaning via their rhetorical choices. Multi-perspective in nature, it will also examine the discursive struggles that determine how players construct themselves as subjects in and against computer games via their rhetorical choices. This course will attempt to come to terms with the larger question of how scholars, through various forms of critical play, construct, categorize, and produce computer games as a subject of academic study.

Prerequisites: Grade of C or better in ENGL 110C, and either ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 360 World Literature I (3 Credit Hours)

An introduction to selected major works in translation from the beginnings of world literature through the early seventeenth century. Works will be chosen that illustrate the relationship of literature to cultural tradition in different global regions.

Prerequisites: Literature way of knowing requirement, 6-hour General Education composition requirement, or permission of instructor

ENGL 363 World Literature II (3 Credit Hours)

An introduction to selected major works of literature in translation from the seventeenth century to the present day. Works from a variety of world cultures will be used to explore the interaction between literature and society in centuries of expanding global awareness.

Prerequisites: Literature way of knowing requirement, 6-hour General Education composition requirement, or permission of instructor

ENGL 367 Cooperative Education (1-3 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and the Cooperative Education program prior to the semester in which the work experience is to take place.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

ENGL 368 English Internship (1-3 Credit Hours)

A structured work experience involving skills cultivated and practiced in English classroom spaces. Reflective materials connecting educational and professional experiences are required, as well as satisfactory evaluations from the workplace supervisor.

Prerequisites: Sophomore status with a passing grade in at least one 300- or 400-level English course and approval by the Director of Student Internships prior to registration

ENGL 369 Research Practicum (3 Credit Hours)

This course enables students to combine traditional research and scholarship with real world applications. Can be repeated for credit.

Prerequisites: ENGL 327W or ENGL 335, plus 15 hours in the major (with sufficient coursework in an involved emphasis) and approval by faculty practicum advisor

ENGL 370 English Linguistics (3 Credit Hours)

A survey of topics in English linguistics. Topics include the sound system, the structure of words, the ways in which words and phrases form meaningful utterances, the structure of conversations, differences between spoken and written English, language acquisition by children, language variation, and language in its social context.

Prerequisites: 6-hour general education composition requirement or permission of instructor

ENGL 371W Language and Culture (3 Credit Hours)

An interdisciplinary examination of intercultural communication through film and readings in anthropology, linguistics, and world literature, this course will compare the values, beliefs, social structures and conventions of a number of cultures to those of the U.S. This course is part of the World Cultures interdisciplinary minor. This is a writing intensive course.

Prerequisites: 6-hour general education composition requirement or permission of instructor

ENGL 380 Introduction to Journalism (3 Credit Hours)

This class focuses on media literacy and on the role of media in society. Students learn and practice elements of news writing, including writing leads, organizing stories, reporting techniques, and interviewing. Story assignments come from handouts, press releases, press conferences, speeches, and public meetings. Some assignments are completed under simulated deadline pressure in the computer lab. This course is identical to the course previously named Reporting and News Writing I and satisfies that requirement.

Prerequisites: Six semester hours in English

ENGL 381 Public Relations (3 Credit Hours)

This course is designed to introduce the student to certain disciplines related to the public relations process. The emphasis is equally distributed between the handling of written materials and the dynamics of group relations, i.e., the publicist and the person or persons whom he or she is representing. The focus is distinguished from advertising by virtue of its emphasis upon public service, particularly the continued need for the free flow of information in the democratic process.

Prerequisites: Six semester hours in English

ENGL 382 Reporting News for Television and Digital Media (3 Credit Hours)

This course focuses on writing for television news and producing online news reports. Students strengthen their journalistic skills and learn the importance of writing clearly for a viewing audience while working under newsroom deadlines. By the end of the course, students should feel confident in producing accurate, detailed reports for both television news and online news sites.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C

ENGL 383 Digital Journalism (3 Credit Hours)

Students will create a WordPress site and are expected to produce news stories on this site from events on campus and in the community. These news stories may include the use of audio, short video, hyperlinks, infographics, digital maps, and photo galleries. This is a hands-on practical course that will include news reporting and writing for on-line platforms, podcasts, blogs, video, and social media. Students will create a Twitter account and will be expected to Tweet from news events that they will cover. Additionally, in a group project, students will either produce a podcast or a video news story. By the end of the course, students will have marketable digital portfolio.

Prerequisites: Grade of C or better in ENGL 110C and either ENGL 211C, ENGL 221C or ENGL 231C

ENGL 384 Business and Science Journalism (3 Credit Hours)

This course is a combination of lecture and hands-on news reporting/analysis. The focus of this course is to familiarize students with the techniques of the traditional and 'new media' journalist engaged in addressing critical societal problems. Additionally, this course will emphasize techniques of journalistic research to create reporting that is thorough, fair, and well-supported.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

ENGL 385 The Press and Making of American Democracy (3 Credit Hours)

In this course, students will study the role journalism and a free press have played in American history from the Colonial period to the current digital age. Most significantly, students will understand the relationship between a free press and the development of American democracy. The way the press has framed the debate on political, cultural, economic and social issues over the course of U.S. history will be examined. Also examined will be how the changing practice of journalism – from print, to radio, television and today's social media - has impacted the relationship between the media, the government, and the citizen.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

ENGL 387 TV News Production (3 Credit Hours)

This course is designed to provide students with an introduction to the reporting, writing, and production aspects of a television news program. Students will learn how to create 15- and 30-minute news broadcasts by developing story ideas and news gathering. Students will also learn the intricacies of shooting and editing video along with the production process involved in recording a live news broadcast. Each student will spend time both in front of and behind the television studio cameras. The goal of this course is to produce weekly news programs worthy of broadcast on local television. Students will assume the roles of reporter, writer, producer, floor director, photojournalist, videographer, technician, and more. (Cross listed with COMM 387/THEA 387)

Prerequisites: COMM 271 or THEA 271 or DANC 271

Pre- or corequisite: COMM 382 or ENGL 382

ENGL 390 TESL Methods, Materials, & Assessment (3 Credit Hours)

This course is designed to provide students with the background and tools necessary for teaching English as a Second Language (ESL) at the K-12 or post-secondary level. The course covers the major theories of language learning, focusing primarily on current methods for language learning and teaching along with practical applications of teaching methods through a focus on designing activities and lesson plans, developing assessment tools, and teaching with technology.

Prerequisites: 6-hour general education composition requirement or permission of instructor

ENGL 395 Topics in English (1-3 Credit Hours)

A study of selected topics designed for nonmajors or for elective credit within a major. These courses will appear in the course schedule and will be more fully described in information distributed to academic advisors.

Prerequisites: Grade of C or better in ENGL 110C and either ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 396 Topics in English (1-3 Credit Hours)

A study of selected topics designed for nonmajors or for elective credit within a major. These courses will appear in the course schedule and will be more fully described in information distributed to academic advisors.

Prerequisites: Lower-division General Education requirements in Literature (3 hours, under Ways of Knowing) and in Written Communication (6 hours), or permission of instructor

ENGL 406/506 The Teaching of Literature (3 Credit Hours)

This course is designed to provide an intensive examination of issues, approaches, and methods utilized in the teaching of literature, particularly literature written for children and young adults.

Prerequisites: One 300-level literature course or permission of the instructor

ENGL 407/507 Chaucer's Canterbury Tales (3 Credit Hours)

A study of The Canterbury Tales with an introduction to Middle English language and culture.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 416/516 English Renaissance Drama (3 Credit Hours)

An extensive survey of the secular national dramas of Renaissance England that were written and performed by Shakespeare's contemporaries in London between 1576 and 1642. Students study the literary features, social contexts and ideological underpinning of representative works by Kyd, Marlowe, Jonson, Webster, Ford, and others.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 418W/518 Jewish Writers (3 Credit Hours)

This course introduces students to the Jewish literary traditions and the cultural trends shaping these traditions and the Jewish identity. It will examine the impact of such issues as immigration, family, marginality, the Holocaust, assimilation, cultural diversity, feminism, Israel, race and religion. Readings will include short stories, poems, essays, novels, and autobiographical writing. This is a writing intensive course.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in ENGL 110C and a grade of C or better in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 419/519 The Harlem Renaissance (3 Credit Hours)

The class provides students with a solid grasp of the Harlem Renaissance: what it was, why it came to be, and how it continues to resonate in American culture. Students will gain a greater understanding of this period and the ways in which the artistic endeavors of the Harlem Renaissance--especially the literature--helped to transform that era and make possible the growing respect for diversity that we now enjoy.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 421/521 British Literature 1660-1800 (3 Credit Hours)

British literature from the Restoration of the monarchy after the Civil War and Puritan Commonwealth to the French Revolution, focusing on how cultural changes (legalized female actors, commercialized printing, colonialism, and growing market capitalism) interacted with the flowering of satire and scandalous theatrical comedy, and the emergence of modern literary forms (periodical journalism, 'picturesque' poetry, and the novel).

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 423/523 The Romantic Movement in Britain (3 Credit Hours)

A study of the literature written in Britain between 1770-1830, focusing on how the literary experiments and innovations of poets like Blake, Wordsworth, Coleridge, Byron, Percy Shelley, Keats, Burns, and Barbauld, and of novelists like Mary Shelley, Radcliffe, and Scott interacted with cultural changes such as the Industrial Revolution, the French Revolution, and the emergence of feminism and working-class radicalism.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 427W/527 Writing in the Disciplines (3 Credit Hours)

This is a discussion/workshop course emphasizing contexts and strategies of text production in and across academic disciplines and professional settings. Students will produce a variety of texts designed to meet the needs of specific audiences. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

ENGL 432/532 Origins and Early Development of the British Novel to 1800 (3 Credit Hours)

A study of early British novels and how the novel genre developed from and in relation to other traditions such as the epic, romance, criminal biography, periodical journalism, and travel narrative.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 433/533 Victorian Literature (3 Credit Hours)

A study of the chief writers and the cultural and philosophical backgrounds of the Victorian era, touching on the changes from the early to the later part of the period. Works analyzed include fiction, nonfiction prose, and poetry.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 435W/535 Management Writing (3 Credit Hours)

This course focuses on writing as a means of making and presenting management decisions. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, and six semester hours in English, to include ENGL 334W or permission of the instructor

ENGL 436/536 Writing for the Government (3 Credit Hours)

This course will focus on writing for a number of government agencies through the application of rhetorical theory. The course will apply theory to practice in the process of assessing audience, context, and genre, as well as ethical writing practices.

Prerequisites: A grade of C or better in ENGL 110C and a grade of C or better in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 438/538 The Twentieth-Century British Novel (3 Credit Hours)

Offered in specific sections of 1900-1945, 1945-present, 1900-present. Major British novels are studied.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 439/539 Writing in Digital Spaces (3 Credit Hours)

This course will teach students the rhetorically sound development of digital media for a range of audiences within a variety of possible digital contexts through discussion of accessibility and the application of fundamentals of usability studies.

Prerequisites: ENGL 307T or equivalent or permission of instructor

ENGL 440/540 General Linguistics (3 Credit Hours)

An introduction to linguistic analysis of world languages. Emphasis is on the analysis of sound systems (phonetics, phonology) and the structure of words and sentences (morphology and syntax).

Prerequisites: Junior standing or permission of instructor; previous 300- or 400-level coursework in phonetics or linguistics strongly recommended with ENGL 370 preferred

ENGL 441/541 American Travel Literature (3 Credit Hours)

This is a survey course that examines the American experience, American identity and American culture through travel 'texts' that include prose, poetry, art, and film. The course takes an interdisciplinary American Studies approach, using lenses such as race, gender, and class.

Prerequisites: ENGL 112L or ENGL 114L

ENGL 442/542 English Grammar (3 Credit Hours)

This course is a descriptive study of English grammar as it relates to the contexts in which it is used, with implications for grammar pedagogy and TESOL classrooms.

Prerequisites: ENGL 350 or permission of instructor

ENGL 443/543 Southern and African American English (3 Credit Hours)

This course focuses on the linguistic diversity of the American South, with an emphasis on different dialects and cultures throughout the region. In addition to consideration of the variation in the language system, it examines the social salience of stigmatized Southern varieties and dialect discrimination, directed towards Southern and African American speakers both inside and out of the South.

Prerequisites: 6-hour general education composition requirement or permission of instructor

ENGL 444/544 History of the English Language (3 Credit Hours)

A study of the origins and development of the English language. Focus is on the changes of sounds, words, and other language structures across time, with deep consideration of the social and cultural factors that shape the history of English.

Prerequisites: Junior standing or permission of instructor; previous 300- or 400-level coursework in phonetics or linguistics is strongly recommended with ENGL 370 preferred

ENGL 445/545 Forensic Linguistics (3 Credit Hours)

The course is an introduction to forensic linguistics—the application of linguistic analysis to language as used in legal contexts (e.g., federal, state, and local code, legal documents, government and the judicial process, etc.). Course topics include interaction in the legal process (interviews, interrogations, courtroom discourse), authorship analysis, speaker identification and profiling, multilingualism, trademarks and product warnings, language and sexual crimes, and terrorism. Students become familiar with debates in the forensic domain, theoretical issues, and tools of analysis that are suited to forensic work.

Prerequisites: 6-hour general education composition requirement or permission of instructor

ENGL 447/547 The American Novel to 1920 (3 Credit Hours)

Examination of the American novel from its origins in the late eighteenth century through World War I. The course will emphasize the novel as a genre, cultural trends during the period, and such relevant literary modes as romanticism, realism, and naturalism.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 448/548 The American Novel 1920 to Present (3 Credit Hours)

Examination of the American novel from the end of World War I to the present day. The course will emphasize formal issues related to the genre of the novel and relevant literary and cultural trends during the period including modernism and postmodernism.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 449/549 Craft of Literary Nonfiction (3 Credit Hours)

A detailed study of technique in literary nonfiction with an emphasis on the memoir, the essay, reportage, and travel narrative. Especially designed for, but not limited to, creative writing students; supplements the creative writing workshops.

Prerequisites: ENGL 300W, or three semester hours in literature and permission of the instructor

ENGL 450/550 American English (3 Credit Hours)

When people think of 'American English,' they usually have a standard form in mind. In this course, we focus on the variety of ways English is spoken in the U.S. and the social meaning of that variation. We also discuss language-based discrimination and strategies that can be used to confront it. Models for collecting, describing, and analyzing variation in American English are introduced and applied to real-life situations.

Prerequisites: 6-hour general education composition requirement or permission of instructor

ENGL 451/551 Advanced Fiction Workshop (3 Credit Hours)

This course, an expansion of the principles and techniques learned in ENGL 351, focuses on the writing and criticism of the short story, the novella, and the novel.

Prerequisites: ENGL 351; junior standing, or permission of the instructor, based on writing samples submitted

ENGL 452/552 Advanced Poetry Workshop (3 Credit Hours)

This course, an expansion of the principles and techniques learned in ENGL 352, focuses on the writing and criticism of poetry.

Prerequisites: ENGL 352 and junior standing or permission of the instructor, based on writing samples submitted

ENGL 454/554 Creative Nonfiction (3 Credit Hours)

A course in the techniques of writing nonfiction imaginatively within a factual context. Emphasis is placed on regard for reader psychology, selection of significant detail, and the development of a style at once lively and lucid. Assignments are made individually with regard to the student's field of interest—history, biography, science, politics, informal essay, etc. Advice is given on the marketing of promising manuscripts.

Prerequisites: ENGL 327W or ENGL 351 and junior standing or permission of the instructor, based on writing samples submitted

ENGL 455/555 The Teaching of Composition, Grades 6-12 (3 Credit Hours)

A study of the theory and practice of teaching writing. Special attention will be given to the ways effective teachers allow theories and experiences to inform their pedagogical strategies.

Prerequisites: ENGL 300W or ENGL 327W or permission of the instructor

ENGL 456/556 The Craft of Fiction (3 Credit Hours)

A detailed study of fictional technique in the novel and short story, with emphasis on character development, conflict, point of view, plot, setting, mood, tone, and diction. Especially designed for, but not limited to, creative writing students; supplements the creative writing workshops.

Prerequisites: Six semester hours in literature or ENGL 300W plus three semester hours in literature; junior standing or permission of the instructor

ENGL 457/557 The Craft of Poetry (3 Credit Hours)

A detailed study of technique in poetry, with emphasis on form, imagery, rhythm, and symbolism. Especially designed for, but not limited to, creative writing students; supplements the creative writing workshops.

Prerequisites: Six semester hours in literature or ENGL 300W plus three semester hours in literature; junior standing or permission of the instructor

ENGL 459W/559 New Literatures in English (3 Credit Hours)

A study of the diverse 'new' literatures in English, including those of the Caribbean and Central America, Africa, India, as well as of Canada and Australia, in their current historical and political contexts. This is a writing intensive course.

Prerequisites: One 300-level literature course or permission of instructor and a grade of C or better in ENGL 110C and a grade of C or better in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 461/561 American Poetry of the Early Twentieth Century (3 Credit Hours)

Works of important American poets from 1900-1945 are studied.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 463W/563 Women Writers (3 Credit Hours)

This course applies concepts developed through women's and gender studies scholarship using intersectional feminist frameworks that acknowledge the socially constructed nature of the word 'woman' to interpret and analyze works by writers who identify as women and speak from diverse perspectives. This is a writing intensive course.

Prerequisites: One 300-level course in English or permission of instructor and a grade of C or better in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 464W/564 Native American Literature (3 Credit Hours)

This class offers an investigation of Native American literature both past and present and seeks to foster an appreciation for indigenous cultures, traditions, and the ongoing concerns that inform so much of Native literary output. By privileging Native centered approaches to narrative and history-keeping, the course hopes to promote a greater understanding of the issues Native peoples faced in the colonial milieu and the continued implications of those histories for Native communities and indigenous identities today. This is a writing intensive course.

Prerequisites: One 300-level course in English or permission of instructor and a grade of C or better in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 465W/565 African American Literature (3 Credit Hours)

An investigation of how African American literature has innovated, influenced, and been influenced by literary movements, historical events, social transitions, and political upheavals. This is a writing intensive course.

Prerequisites: One 300-level course in English or permission of instructor and a grade of C or better in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 466W/566 Asian American Literature (3 Credit Hours)

The course introduces students to key texts in Asian American literature, supported by critical studies (and occasion films) to interrogate the theme of Asian American identities in their multiple forms. The course will examine sociopolitical histories that undercut the literature and the contributions of Asian American writers to the breadth and scope of American as well as global literature today. This is a writing intensive course.

Prerequisites: One 300-level course in English or permission of instructor and a grade of C or better in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 468 Advanced English Internship (1-3 Credit Hours)

A structured work experience involving skills cultivated in English classroom spaces. Reflective materials connecting educational and professional experiences are required, as well as satisfactory evaluations from the workplace supervisor.

Prerequisites: A passing grade in ENGL 368 and approval by the Director of Student Internships prior to registration

ENGL 473/573 Writing with Video (3 Credit Hours)

This course engages students in a comprehensive exploration of video as a rhetorical narrative medium, with emphasis on the actual production of video work. Writing is also integrated into the production process. From brainstorming to storyboarding and critique, writing is positioned as an integral part of the course.

Prerequisites: ENGL 307T

ENGL 477/577 Language, Gender and Power (3 Credit Hours)

This class explores social hierarchy through the lenses of language and power. Using the metaphor of the 'cultural food chain' for the social order (gender, race, class, sexual orientation, and other aspects of personhood), we examine how language is central to reproducing hierarchies as well as confronting and disrupting them.

Prerequisites: 6-hour general education composition requirement or permission of instructor

ENGL 482/582 Sports Journalism (3 Credit Hours)

This is primarily a sportswriting course in which students are introduced to various types and styles of sports stories that are representative of sports journalism as practiced in newspapers and magazines. The course also explores the role of sports in American society.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

ENGL 483W/583 Reporting and News Writing II (3 Credit Hours)

Designed to familiarize students with the fundamentals of beat reporting and its practice in the multi-media environment of 'converged' newsrooms. The course emphatically focuses on writing but also provides instruction on how the tools and techniques of multimedia platforms are used to enhance storytelling. Emphasis is also placed on accessing information through web-based resources and government documents. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C; ENGL 380 or permission of instructor

ENGL 484/584 Feature Story Writing (3 Credit Hours)

Course includes discussion and practice of writing a variety of newspaper and magazine feature stories. Students will write and critique stories on people, places, businesses, trends, and issues. Assistance is given in the marketing of manuscripts.

Prerequisites: Nine semester hours in English

ENGL 485W/585 Editorial and Persuasive Writing (3 Credit Hours)

A study of the practice and function of writing editorials, commentary, reviews and columns for newspapers and online media. Lectures will focus on the techniques of crafting a persuasive argument, content analyses of Pulitzer Prize-winning editorials and columns, and guest lectures by newspaper editorial writers. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C; ENGL 380

ENGL 486/586 Media Law and Ethics (3 Credit Hours)

Designed to introduce students to components of communication law that may affect the professional writer or broadcaster. Topics include defamation, constitutional constraints, freedom of information, privacy, copyright, and telecommunications law. Ethical issues relating to the mass media will also be examined.

Prerequisites: Junior standing or permission of the instructor

ENGL 487 Television News Production Workshop (3 Credit Hours)

This course is designed to introduce students to the reporting, writing, and production of a television news program. Students will learn how to create a 30-minute news program from the framing of story ideas and news gathering to shooting and editing video along with the production process involved in recording a live news broadcast. Each student will spend time both in front of and behind the video and television studio cameras. The goal of this course is to produce weekly news broadcasts. In doing so, students will alternately assume the roles of reporter, writer, producer, director, anchor, photojournalist, technician, and more. Using the campus and surrounding neighborhoods as our news universe, students will report news and feature stories that impact the University and its neighbors.

Prerequisites: ENGL 380 or ENGL 382 or COMM 271 or THEA 271

ENGL 490/590 Professionalization in English (1-3 Credit Hours)

Advanced study of career opportunities and industry trends across a variety of fields, with a focus on reflection, synthesis, and professional development. Students will prepare a major project—as well as materials for career or educational advancement—and will discuss the nature, purpose, and value of an English degree.

Prerequisites: Senior standing in English

ENGL 492/592 Modern World Drama (3 Credit Hours)

A comparative study of selected major dramatic works of the world, featuring texts drawn from a range of cultures from around the globe. The course will begin in the late nineteenth century and continue to the present. Works written in languages other than English will be read in translation.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 493/593 Contemporary World Literature (3 Credit Hours)

Fiction, poetry, and plays written during the last fifty years in nations throughout the world. Most texts will have been written originally in languages other than English. The course will focus on a comparative study of works produced in a variety of cultural contexts, and will explore a range of approaches to defining or circumscribing world literature.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 494 Entrepreneurship in English Studies (3 Credit Hours)

This course will broach the theoretical and practical questions of how entrepreneurship intersects with English Studies. Conceived of as a studio course, it is designed to teach students a hands-on methodology through which they can translate disciplinary theory and knowledge into real-world outcomes. This course will teach students how academic knowledge can lead to transformations, innovations, and solutions to different types of problems.

Prerequisites: Grade of C or better ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

ENGL 495/595 Topics in English (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, because of their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: One 300-level English course or permission of instructor and a grade of C or better in in one of the following: ENGL 211C, ENGL 221C, or ENGL 231C

ENGL 496/596 Topics in English (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, because of their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: Three semester hours in literature

ENGL 497 Tutorial Work in Special Topics in English (1-3 Credit Hours)

Independent study in literature, writing, or linguistics according to a program of reading and/or writing designed under the direction of an instructor.

Prerequisites: Senior standing and approval of the chair of the Department of English

ENGL 498 Tutorial Work in Special Topics in English (1-3 Credit Hours)

Independent study in literature, writing, or linguistics according to a program of reading and/or writing designed under the direction of an instructor.

Prerequisites: Senior standing and approval of the chair of the Department of English

ENGN - Engineering

ENGN 105 Engineering Orientation (1 Credit Hour)

Success skills for new engineering students. Introductory overview of the college's different majors leading into the profession of engineering.

Pre- or corequisite: ENGN 121 or ENGN 110 or instructor approval

ENGN 108 Exploring Engineering (3 Credit Hours)

Exploration of topics in the sciences and technologies of civil, mechanical, electrical, manufacturing and computer engineering. Course outcomes include study skills for engineering students and development of foundational skills including application of the Engineering Design Process to solve an engineering problem.

Pre- or corequisite: MATH 102M or MATH 103M; Intended Engineering major; or instructor approval

ENGN 121 Introduction to Engineering and Technology (4 Credit Hours)

This course introduces engineering and engineering technology disciplines, and develops problem-solving and teamwork skills required in the design and commissioning of an engineered product. Students will collaborate in hands-on, group projects to understand the engineering design process and explore roles and responsibilities in an engineering team. Students will develop technical skills, such as identifying, formulating, and solving engineering problems, prototype creation and testing, representation and analysis of data using software packages to form conclusions and solve problems. Students will also learn professional skills needed to become successful engineering students and engineers including, but not limited to teamwork, project management, communication (written, oral, and graphical), engineering ethics, information literacy, and critical reading skills.

Pre- or corequisite: MATH 162M or higher

ENGN 122 Computer Programming for Engineering (4 Credit Hours)

Introduction to engineering problem-solving through computer programming. Topics include computational thinking, program design, algorithm development, and testing. Programming language concepts will include variables, data types and expressions, assignment, control-flow statements, and functions. Laboratory exercises involve C++ and Matlab to solve engineering problems (information processing, simulation, data analysis).

Pre- or corequisite: MATH 163 or MATH 166 or higher

ENGN 195 Special Topics in Engineering I (3 Credit Hours)

Interdisciplinary or multidisciplinary topics for first year students enrolled in engineering or engineering technology majors.

ENGN 205 Engineering Career Readiness (1 Credit Hour)

Provides an introduction to career and employment preparation skills such as resume development, interviews, and internship and job seeking strategies for engineers.

Pre- or corequisite: ENGN 121 or ENGN 110 or instructor approval

ENGN 295 Special Topics in Engineering II (3 Credit Hours)

Interdisciplinary or multidisciplinary topics for second year students enrolled in engineering or engineering technology majors.

ENGN 401 Fundamentals of Engineering Review (1 Credit Hour)

This course prepares the engineering and engineering technology students for the Fundamentals of Engineering Examination.

Prerequisites: Senior standing

ENGN 485 Introduction to Uncrewed Aerial Systems (3 Credit Hours)

This course introduces Small Uncrewed Aircraft Systems (sUAS) types and platforms (such as multirotor, fixed wing, hybrids) and explores mission planning, applications, payloads, flight authorization processes, and crew resource management. Additionally, this course introduces operation of autonomous vehicles in the National Airspace System including Universal Traffic Management, radio frequency allocations, and airport usage, including knowledge of government and industry compliance standards. Attention will be paid to topics of system integration for operations efficiency, risk management, safety, and human factors and human / machine interface in autonomous systems. Includes case studies.

Prerequisites: PHYS 112N or equivalent

ENGN 486 Multirotor UAS Design and Construction (3 Credit Hours)

A look at engineering multi-rotor Uncrewed Aerial System (UAS) design. Course topics will include Stability and control of UAS, Electric propulsion and battery technology. Overview of sensors (lidar, sonar, vision etc.); autopilot design and automatic control; airframe structural design of UAS; Flight dynamics and simulation for UAS. Accompanying laboratory topics include motor/propeller testing, building small quadcopters, understanding system elements, PID tuning, programming UAS, and autonomous drone operations. Students will learn to specify all components including motors, propellers, power system, autopilot, GPS, power monitor, frame, etc. Additional topics will include autopilot setup, firmware configuration, telemetry configuration, ground station setup and sensor specifications and integration (lidar, sonar, radar, optical flow). Mission planning, and test flights will complete the course.

Prerequisites: PHYS 112N or equivalent

ENGN 487 Fixed Wing and VTOL UAS Design and Construction (3 Credit Hours)

This course covers fixed wing aerodynamics and aircraft performance, propeller performance; basic stability and automatic control of aircraft. Introduction to vertical takeoff and landing, hybrid UAS design including tail sitting and lift-to-cruise configurations. Electric propulsion: motor selection, prop matching and system integration. Basic airframe structural design methods. Instrumentation for autonomous flight. Accompanying laboratory topics include: building small fixed wing/VTOL aircraft; autopilot configuration; flight test, planning and operations.

Prerequisites: ENGN 486

ENGN 488 Autonomous Mission Platforms Systems Integration (3 Credit Hours)

This interdisciplinary class is a mission based, collaborative course with majors across the college working alongside industry partners and or mentors. Students will work in teams to research, design, build (or rebuild existing) Unmanned Vehicles and apply them toward ecologically, humanitarian or 'customer based' focused projects.

Prerequisites: ENGN 486

ENGN 495 Multidisciplinary Topics in Engineering and Technology (1-3 Credit Hours)

Special interdisciplinary or multidisciplinary topics of interest with emphasis on emerging areas in engineering.

Prerequisites: instructor permission

ENGT - Engineering Technology

ENGT 111 Engineering Technology Information Literacy/Research (2 Credit Hours)

Fundamental information literacy and research as applied to engineering technology. Course includes where and how to efficiently locate and critically evaluate technical information. Proper use of technical information and the associated ethical and legal issues will be examined.

Prerequisites: ENGN 110

ENGT 200 Statics (3 Credit Hours)

Scalar methods and free body diagrams are employed in the analysis of discrete and distributed force systems and their application to bodies in external equilibrium. Friction, moment of inertia, and center of gravity are also included.

Prerequisites: PHYS 111N

Pre- or corequisite: MATH 211

ENGT 220 Strength of Materials (3 Credit Hours)

Mechanical behavior of materials subjected to various external loads. Stress-strain relationships are utilized to design members subjected to shear, axial, bending, and torsional loads. Deformations are predicted and Mohr's circle is introduced.

Prerequisites: MATH 211 and a C or better in ENGT 200, CET 200, or MET 210

ENGT 230 Engineering Graphics and Computer Solid Modeling (3 Credit Hours)

Graphical communication for engineers studies the concept of 3D parametric modeling and its application in industry. In this course students will learn the fundamentals of sketching, basics of surface design, assembly modeling, and dynamic modeling of mechanisms using industry standard parametric modeling software. Emphasis on developing the skills needed for engineering design.

ENGT 270 Automation and Controls (3 Credit Hours)

A study of the design and analysis of feedback control system. Includes the fundamentals of programmable controllers as well as practical applications of interfacing mechanical, electrical, pneumatic and hydraulic feedback control circuits. Computer simulation software is used to model system responses.

Prerequisites: MATH 211

Pre- or corequisite: ENGT 286

ENGT 286 Automation and Controls Laboratory (1 Credit Hour)

Laboratory and computer simulation of control systems including programmable controllers as well as practical applications of interfacing mechanical, electrical and pneumatic control systems.

Prerequisites: MATH 211

Pre- or corequisite: ENGT 270

ENGT 305 Advanced Technical Analysis (3 Credit Hours)

Analytical and computational methods to support upper-division engineering technology courses. Topics include linear algebra, ordinary differential equations of engineering systems, elements of vector analysis, introductory statistical concepts, and software usage/development. MATLAB is used throughout the course to support all the topics. Presentation of various topics is adjusted for CET, EET or MET programs.

Prerequisites: a grade of C or better in MATH 211

ENGT 365 Geometric Dimensioning and Tolerancing (3 Credit Hours)

Methods and rules of dimensioning and tolerancing, calculation of fits, and geometrical tolerances using ANSI-Y14.5M, tolerances of form, orientation, and profile, including flatness, straightness, circularity, cylindricity, angularity, etc. Student work consists of designing and detailing various product drawings.

Prerequisites: MET 230 or ENGT 230

ENGT 375 Applied Machine Learning for Engineering Technology (3 Credit Hours)

This course introduces the fundamental principles and techniques of applied machine learning for data collection, processing, analysis, visualization, and data-driven decision-making. It provides a foundational understanding of data science and machine learning concepts, along with hands-on experience using industry-standard tools. Through projects and case studies, the course emphasizes practical applications designed specifically for engineering technology, providing skills to work with real-world datasets and solve relevant technical problems.

Prerequisites: ENGT 305

ENGT 434 Introduction to Senior Design Project (3 Credit Hours)

This course must be taken in the semester prior to the Senior Project course. A collection of career-related topics pertaining to engineering technology. Topics include engineering codes and standards, engineering ethics, technical report writing, job search and resume writing techniques, patents and property rights, and professional engineering licensure. The course concludes with the selection of the student's project topic for the subsequent Senior Project course.

Prerequisites: MET 300 and MET 310 and MET 330, or EET 310 or EET 312 or EET 320 or EET 360 or CET 301 or CET 330 or CET 361

ENGT 435W Senior Design Project (3 Credit Hours)

A capstone course utilizing upper-level coursework involving independent or group design projects under the direction of a sponsoring faculty member. Projects may involve analytical and/or experimental results. Formal written and oral reports will be required. This is a writing intensive course.

Prerequisites: ENGT 434; senior standing or faculty approval; grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

ENMA - Engineering Management

ENMA 301 Introduction to Engineering Management (3 Credit Hours)

An introduction to principles of management and organizational behavior as they apply to the engineering profession. Special emphasis on team building, quality leadership and planning, handling personnel issues, and marketing technology. Group exercises, case studies, and extensive writing and speaking assignments.

Prerequisites: Junior standing

ENMA 302 Engineering Economics (3 Credit Hours)

Introduction to cost estimation, accounting and financial metrics. Valuation techniques, time value of money, and cash flow analysis. Economic analysis of engineering alternatives including depreciation effects, income taxes, inflation, engineering management capital budgeting of projects, portfolio and public sector projects.

Prerequisites: Junior standing

ENMA 401 Project Management (3 Credit Hours)

Foundations, principles, methods, and tools for effective design and management of projects in technology-based organizations. Project organization, life cycle, planning, scheduling, implementation, control, and evaluation. Special emphasis on project leadership, problem solving in team-based projects, project failure analysis, and advanced methods. Use of case studies and applications to reinforce course concepts. Students design and plan a project from concept through completion including proposal and post-project analysis.

Prerequisites: Junior standing

ENMA 410/510 Agile Project Management (3 Credit Hours)

This course focuses the management of projects using an agile approach to respond to the continuous changes that affect project capabilities and performance. Although any project can be managed using agile project management, projects with high degree of uncertainty obtain the most benefits from this approach (e.g., R&D projects). The course covers Scrum and expands it by articulating the human and business factors that make successful agile project management. Case studies and/or short-projects are required.

Prerequisites: ENMA 401 or equivalent preferred

ENMA 415/515 Introduction to Systems Engineering (3 Credit Hours)

Introduces the principles, concepts and process of systems engineering. Examination of problem formulation, analysis, and interpretation as they apply to the study of complex systems. Emphasizes the design nature of systems engineering problem solving, and includes case studies stressing realistic problems. Development of system requirements, system objectives, and the evaluation of system alternatives.

Prerequisites: Junior standing

ENMA 420 Statistical Concepts in Engineering Management (3 Credit Hours)

Introduction to concepts and techniques in probability and statistics, including descriptive and inferential statistics. Topics include fundamentals of probability, distributions, estimation, hypothesis testing, regression, process control, and reliability. Applications include engineering design and analysis, manufacturing, decision aids, and quality management problems.

Prerequisites: MATH 211 or equivalent

ENMA 421 Decision Techniques in Engineering (3 Credit Hours)

A systematic approach to the formulation of problems, the generation and evaluation of alternatives, and the selection and implementation of courses of action applied to engineering design, manufacturing, and management decisions. Topics include: goals and objectives; variables and relations; constraints and feasibility; uncertainty and risk; models and optimization; data and information; analysis and simulation. Case studies requiring oral presentations and written reports are used to emphasize concepts and systems analysis.

Prerequisites: Junior standing

ENMA 424 Risk Analysis in Engineering Management (3 Credit Hours)

The systematic approach to analysis of risk as applied to engineering management with emphasis on cyber systems. The objectives of this course are (1) to gain an appreciation of the strategic importance of risk analysis and its relationship to other enterprise and engineering functions and (2) to develop a working knowledge of the concepts and methods in risk analysis as they may apply to cyber systems.

Prerequisites: Junior standing

ENMA 480 Ethics and Philosophy in Engineering Applications (3 Credit Hours)

This course is designed to expose prospective engineering managers the theories and practices that are inherent in the ethical environment of modern organizations. Topics include definitions of ethical behavior and leadership, the history of ethical thought, moral decision-making, and the importance of values such as honesty, integrity, and trustworthiness. A full exploration of ethical autonomy, collaboration, communication and moral imagination will be conducted. A variety of methods will be used to facilitate learning, including a textbook, movie and videos, case studies, experiential activities and writing assignments. The successful student should gain a full appreciation for the value and practices of ethical leadership.

Prerequisites: Junior standing

ENMA 495/595 Topics in Engineering Management (1-6 Credit Hours)

Special topics with emphasis placed on the recent developments in engineering management.

Prerequisites: permission of the instructor

ENTR - Entrepreneurship

ENTR 100 Survey of Entrepreneurship and Innovation (1 Credit Hour)

This course represents an introduction to pertinent topics related to entrepreneurship and innovation. Students will be exposed to numerous topics through guest speakers supplemented by readings and class discussion. Topics include conceptualization, creativity, patents, capitalization, venture formation, commercialization, market assessment, project management, and launch. A multidisciplinary perspective is emphasized.

ENTR 201S Introduction to Entrepreneurship (3 Credit Hours)

This course will broaden students' views of careers and work in an increasingly global and diverse world. It provides students intellectual perspectives of entrepreneurship, and engages students in the search for knowledge regarding opportunity value and resource management. Basic analytical and critical thinking skills are developed for making reasoned judgments concerning organization creation.

ENTR 301 Fundamentals of Entrepreneurship (3 Credit Hours)

This course is designed for students interested in learning about entrepreneurship. It examines entrepreneurship from different perspectives, and engages students in opportunity recognition, value creation and resource management. Basic analytical and critical thinking skills are developed for making reasoned judgments concerning venture creation. Students will learn how to improve the likelihood of success of business start-ups. Course will also be valuable for students interested in consulting with small businesses or launching new divisions in large businesses.

Prerequisites: Junior standing

ENTR 368 Entrepreneurship Internship (1-3 Credit Hours)

Students complete an entrepreneurial project or assignment for a business, non-profit agency, or other organization. Students should work 50 hours for each credit and complete course assignments integrating coursework and entrepreneurial experiences.

Prerequisites: ENTR 201S and approval of the program coordinator and Strome Entrepreneurial Center director

ENTR 410 Small Business Management (3 Credit Hours)

This course investigates the challenges of small businesses to gain understanding for some of the common processes involved in operating new ventures. Students will be exposed to the tools needed to navigate important financial, legal, marketing, and managerial decisions when creating and growing a sustainable small business. Students learn to develop the skills that will give them a unique advantage in a hotly competitive environment.

Prerequisites: MGMT 325 or ENTR 301

ENTR 440 Digital Entrepreneurship: New Venture Creation (3 Credit Hours)

This course is an immersive and hands-on experience designed to guide students through starting and operating a functional online business. Through a combination of theoretical knowledge, practical exercises, and real-world application, students will actively apply entrepreneurial principles and strategies and navigate the various stages of launching and managing an online business, from conception to execution. They will be responsible for developing and executing a business plan, creating a user-friendly online presence, implementing effective digital marketing strategies, managing online transactions, and optimizing operations for growth and sustainability. By the end of the course, students will have developed a viable online business and gained valuable insights into the challenges and opportunities inherent in the digital marketplace and will leave the course with a tangible online business that can serve as a foundation for future entrepreneurial endeavors.

Prerequisites: ENTR 301, MKTG 311, MGMT 325, and senior standing

ENTR 450 Innovation Project (3 Credit Hours)

This course provides students with a unique cross-disciplinary, team-based course experience in the area of innovation. The focal point will be a real-life innovation problem sponsored by a company (or organization) on which students will provide presentations and a final report. The course is directed through ODU's Strome Center for Entrepreneurship and Innovation.

Prerequisites: junior or senior standing

ENTR 476/576 Social Entrepreneurship (3 Credit Hours)

The class draws students from all disciplines to collaborate with each other, faculty and community members as they co-design project-based solutions to pertinent social issues. Topics related to social entrepreneurship vary each year. Guided by distinguished faculty, students analyze their topic through in-depth classroom and field research, readings and off-campus trips.

Prerequisites: ENTR 201S or PAS 300

ENTR 477/577 Design Thinking (3 Credit Hours)

Design thinking is a human-centered approach to innovation that uses design methods and tools to integrate the needs of people and organizations, the opportunities of technology, and the requirements for personal, organizational, and business success. The design thinking course introduces students to a robust process for understanding problems, ideation, innovation, and entrepreneurship. This course is facilitated using workshops where students will work in project teams in a design thinking innovation challenge.

Prerequisites: ENTR 201S

ENTR 490 Entrepreneurship Capstone (3 Credit Hours)

The Entrepreneurship Capstone emphasizes practicing entrepreneurship through experiential learning, focusing on start-up activities. Drawing on a broad range of business disciplines, including Marketing, Management, Finance, and Accounting, students identify an opportunity and develop an industry analysis, marketing and finance plans, and a business pitch they present to investors and serial entrepreneurs.

Prerequisites: ENTR 301, MKTG 311, and Senior Standing

ENTR 494 Entrepreneurship Project in Management (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to integrate disciplinary theory and knowledge through developing a nonprofit program, product, business, or other initiative. The real-world experiences that entrepreneurs provide will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems. The course can be delivered either as an independent project for individual students or as group projects similar to those sometimes offered in topics courses.

Prerequisites: ENTR 201S or MGMT 426

ENTR 498 Tutorial Work in Special Topics in Entrepreneurship (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. The study should lead to presentation of a paper at a conference or publication as appropriate.

Prerequisites: ENTR 201S and approval of the program coordinator

ENVH - Environmental Health

ENVH 301 Principles of Environmental Health Science (3 Credit Hours)

An introduction to the chemical, physical and biological factors affecting human health and well-being. The emphasis is on application of controls to prevent disease and maximize environmental quality.

Prerequisites: A grade of C or better in ENGL 110C

ENVH 395 Topics in Environmental Health (1-3 Credit Hours)

Advanced study of selected topics.

Prerequisites: permission of the instructor

ENVH 401/501 Occupational Health (3 Credit Hours)

An introduction to the industrial environment relative to health problems and the etiologically related agents.

Prerequisites: junior standing

ENVH 402W/502 Environmental and Occupational Health Administration and Law (3 Credit Hours)

A review of the concepts and practice of administering environmental and occupational health control programs within agencies at the federal, state and local levels. The principles of administration and leadership of programs in the private sector are also discussed. The constitutional, statutory and administrative law bases for organizing and conducting such programs and developing environmental and occupational policies as well as the legal implications of enforcement will be addressed. A review of all major statutes and their agencies that enforce them will be addressed. This is a writing intensive course.

Prerequisites: junior standing and a grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

ENVH 403 Environmental and Occupational Health Internship I (3 Credit Hours)

Includes placement in a health-related facility or industrial setting, prearranged with faculty instructor.

Prerequisites: ENVH 301, a minimum of 12 semester hours of ENVH courses, and permission of program director

ENVH 404 Environmental Health Internship II (3 Credit Hours)

Includes placement in a health-related facility or industrial setting, prearranged with faculty instructor.

Prerequisites: ENVH 301, a minimum of 12 semester hours of ENVH courses, and permission of program director

ENVH 405 Environmental Health Internship III (6 Credit Hours)

Includes placement in a health-related facility or industrial setting, prearranged with faculty instructor.

Prerequisites: ENVH 301, a minimum of 12 semester hours of ENVH courses, and permission of program director

ENVH 406/506 Principles of Occupational Safety and Health (3 Credit Hours)

A broad overview of the field of safety. A study of the factors influencing the occurrence of accidents and incidents is set in the context of safety legislation, current issues in the practice of safety and the ethical and professional responsibilities of the safety practitioner. The course also includes discussions of product safety, fire prevention and protection systems safety and human elements in loss prevention.

Prerequisites: junior standing

ENVH 407/507 Occupational Safety Standards, Laws and Regulations (3 Credit Hours)

A review of the important Occupational Safety and Health Standards and Codes with particular emphasis on application of these codes to typical work situations. Governmental enforcement methodologies are also discussed.

Prerequisites: junior standing

ENVH 420/520 Communicable Diseases (3 Credit Hours)

An in-depth study of the communicable disease processes as they pertain to environmental sources. A detailed discussion of specific communicable diseases that are manifested by various environmental etiologic agents. Various environmental control measures to prevent the incidence of communicable diseases are presented.

Prerequisites: BIOL 110N or BIOL 121N, BIOL 117N or BIOL 123N, BIOL 150, or permission of the instructor

ENVH 421/521 Food Safety (3 Credit Hours)

A comprehensive study of food and milk production, processing and preservation and controls exercised for the prevention of foodborne illnesses and spoilage.

Prerequisites: BIOL 110N or BIOL 121N, BIOL 117N or BIOL 123N, BIOL 150, or permission of instructor

ENVH 422/522 Water and Wastewater Technology (3 Credit Hours)

Introduction to water quality management and wastewater treatment technology. Topics include the effect of organic, inorganic and thermal pollutants in water quality streams, waterborne diseases, monitoring concepts, methods of water quality management, regulatory considerations, theory and application of wastewater treatment concepts, wastewater characterization, and treatment methods and disposal methods.

Prerequisites: BIOL 150 or permission of instructor

ENVH 423/523 Vector-Borne Diseases and Their Control (3 Credit Hours)

Vector-borne diseases affect the health and well-being of humans and other animals in a wide variety of ways. Arthropod vectors (e.g., mosquitoes, filth flies, ticks and related groups) transmit numerous debilitating infectious diseases that oftentimes impose significant burden on healthcare systems. This course provides insight on the ways in which arthropods impact global health and economic growth through the diseases they transmit.

Prerequisites: BIOL 110N or BIOL 121N, BIOL 117N or BIOL 123N, BIOL 150, or permission of instructor

ENVH 424/524 Residential and Institutional Environments (3 Credit Hours)

A study of the physical aspects of housing and institutions as they relate to human health and well-being. Coverage is also given to infection control in health-care facilities.

Prerequisites: junior standing

ENVH 425/525 Occupational Safety and Health Program Management (3 Credit Hours)

The establishment, implementation and maintenance of occupational safety and health programs. Paradigms of safety, techniques for safety training and creation of value for safety among business managers and employees are emphasized.

Prerequisites: ENVH 406 or permission of instructor

ENVH 426/526 Physical Hazards and Their Control (3 Credit Hours)

An in-depth examination of the varied types of physical hazards in the work environment and the methods of prevention, recognition and control.

Prerequisites: junior standing

ENVH 438/538 Environmental Emergencies and Disasters (3 Credit Hours)

This course uses a multi-disciplinary approach and draws on theory, case studies, research, and field experience to examine the global problem of environmental emergencies and disasters. Particular attention is devoted to the public health challenges posed by chemical and radiological contamination situations. Students discuss contemporary issues and controversies, and spend time working in teams to craft solutions to key emergency preparedness problems.

Prerequisites: Junior standing

ENVH 440/540 Principles of Ergonomics (3 Credit Hours)

An introduction to the terminology, concepts and applications of physiology, anthropometry, biomechanics and engineering to workplace and work methods design. Emphasis will be given to workplace design and work methods for job safety and health.

Prerequisites: junior standing

ENVH 441/541 Industrial Hygiene (3 Credit Hours)

An in-depth study of the chemical and physical agents responsible for occupational illness and the methods used for their measurement, evaluation and control.

Prerequisites: CHEM 121N, CHEM 123N, CHEM 211, BIOL 240 or BIOL 250, or permission of instructor

ENVH 442/542 Industrial Hygiene Sampling Methods (3 Credit Hours)

An introduction to the detection and sampling alternatives used for estimating worker exposure to hazardous chemical, physical and biological agents in the occupational environment. Field and class activities are intended to simulate select occupational exposure situations and provide a basis for selection of the best evaluation techniques. Emphasis is on quantitative and qualitative methods typically used when estimating employee exposure to hazardous agents and the subjective decision making process.

Prerequisites: Junior standing

Pre- or corequisite: ENVH 441 or permission of instructor

ENVH 443 Principles of Toxicology (3 Credit Hours)

An introduction to the fundamentals of toxicology with emphasis on the interaction of environmental and industrial chemicals with humans are studied. Exposure, dose response, kinetics and distribution of toxicants, metabolism of toxic agents, factors that affect toxicity and introductory chemical carcinogenesis are discussed.

Prerequisites: BIOL 110N or BIOL 121N, BIOL 117N or BIOL 123N, BIOL 240 or BIOL 250, CHEM 121N, CHEM 123N, or permission of the instructor

ENVH 445/545 Air Pollution and Its Control (3 Credit Hours)

The study of air pollution in relation to air quality criteria, pollutant production, atmospheric evolution, measurement and control techniques.

Prerequisites: PHYS 101N or PHYS 111N, CHEM 121N, CHEM 123N, MATH 162M, or permission of instructor

ENVH 446/546 Physical Hazards Laboratory (2 Credit Hours)

Use and application of sampling methods and equipment for measurement of physical hazards in the work environment. Includes aspects such as ergonomics, noise, vibration and radiation.

Prerequisites: Junior standing

Pre- or corequisite: ENVH 426 or permission of instructor

ENVH 448/548 Epidemiology and Biostatistics (3 Credit Hours)

An introductory course in the principles and practices of epidemiology and the application of statistical and mathematical design and analysis of health research studies for the understanding and control of population health and disease with emphasis on environmental applications.

Prerequisites: STAT 130M, MATH 162M or permission of instructor

ENVH 461/561 Hazardous Waste Management (3 Credit Hours)

Description of the hazardous waste problem, the fundamentals of the chemistry involved with hazardous waste transport, methods of identification, assessment, control, and disposal of toxic and hazardous waste are discussed. In addition the relevant legal statutes, risk assessment emergency response and case studies are presented. Introduction to the toxicological effects of exposure to hazardous waste is discussed.

Prerequisites: junior standing

ENVH 465/565 Hazardous Materials Management (3 Credit Hours)

The management of hazardous materials includes a wide array of interlocking regulations addressing use, manufacturing, exposure, storage, shipping and disposal. A life cycle review of hazardous materials highlighting best practices and legislation is presented. Useful in preparation for CHMM examination.

Prerequisites: junior standing

ENVH 466 Environmental and Occupational Risk Assessment and Decision Analysis (3 Credit Hours)

The principles of quantitative health risk assessment of toxicants are presented. Qualitative and quantitative skills necessary to evaluate the probability of injury, disease, or death in the general population from exposure to environmental and occupational contaminants are discussed. Hazardous identification, exposure assessment, dose-response evaluation and risk characterization are emphasized. Risk management group projects assessing some real environmental risks are an important segment of the class.

Prerequisites: junior standing

ENVH 470/570 Industrial Environmental Management (3 Credit Hours)

Course addresses day-to-day technical and management aspects of environmental compliance, as well as regulatory issues faced in industrial applications. Includes audits and inspections, air and water pollution and hazardous waste.

Prerequisites: junior standing

ENVH 495/595 Topics in Environmental Health (1-3 Credit Hours)

Advanced study of selected topics.

Prerequisites: junior standing

ENVH 498/598 Independent Study in Environmental Health (1-3 Credit Hours)

An opportunity is afforded students to undertake independent study under the direction of a faculty member.

Prerequisites: permission of the Program Director

ENVH 499 Environmental and Occupational Health Senior Seminar (1 Credit Hour)

Advanced seminar.

Prerequisites: second semester senior standing and permission of the program director

EXSC - Exercise Science

EXSC 225 Introduction to Exercise Science (3 Credit Hours)

Broad overview of exercise science including the history of the discipline and introduction to the following: Healthy People 2010 goals and objectives related to physical activity and nutrition; basic principles of nutrition, body composition, applied physiology, functional anatomy, and exercise prescription/programming for healthy individuals and those who are high risk/diseased; career opportunities in various allied-health fields such as physical therapy, physician assistant, personal training, community/corporate/hospital-based wellness programs, cardiac rehabilitation; and research areas in exercise science.

Prerequisites: open only to students with Exercise Science as a concentration or major or minor

EXSC 240 Prevention and Care of Injuries Related to Physical Activity (3 Credit Hours)

Practice in the skills of injury recognition and evaluation and training in cardiopulmonary resuscitation. Principles and uses of therapeutic modalities are also discussed.

Prerequisites: BIOL 240 or BIOL 250 AND MATH 102M or higher with a C or better

EXSC 250 Strength and Conditioning Leadership (3 Credit Hours)

This course will provide the student with skills in exercise leadership.

The student will learn how to lead resistance training, flexibility training, cardiovascular training involving a variety of exercise modes, and group exercise, such as step aerobics.

Prerequisites: BIOL 240 or BIOL 250 AND MATH 102M or higher with a C or better

EXSC 295 Special Topics in Exercise Science (1-3 Credit Hours)

The study of special topics in exercise science.

Prerequisites: Permission of the instructor

EXSC 309 Fundamentals of Exercise Physiology (3 Credit Hours)

This course is intended for non-exercise science majors. The course will investigate the metabolic adaptations, neuromuscular, endocrinological, cardiovascular and respiratory responses to acute and chronic exercise. Implications for health and physical performance will be integrated through applied exercise physiology. Specifically, the effects of different training modes, environmental factors, aging, disease states, nutrition, and ergogenic aids.

Prerequisites: BIOL 240 or BIOL 250

EXSC 322 Anatomical Kinesiology (3 Credit Hours)

Anatomical and mechanical analysis of human musculoskeletal function including skeletal, muscular, and neuromuscular control aspects necessary for movement.

Prerequisites: BIOL 240 or BIOL 250 AND MATH 102M or higher with a C or better

EXSC 326 Exercise Physiology I (3 Credit Hours)

An investigation into the metabolic adaptations, neuromuscular, endocrinological, and respiratory responses to acute and chronic exercise endeavors. Implications for enhanced health and physical performance are integrated.

Prerequisites: BIOL 240 or BIOL 250 with a C or better and MATH 102M or higher with a C or better

Pre- or corequisite: BIOL 241 or BIOL 251 with a C- or better and CHEM 121N and CHEM 122N with a C- or better

EXSC 327 Exercise Physiology II (3 Credit Hours)

Focuses on cardiovascular responses to exercise and applied exercise physiology, specifically the effects of different training modes, environmental factors, aging, disease states, nutrition, and ergogenic aids.

Prerequisites: BIOL 240 or BIOL 250 AND MATH 102M or higher with a C or better; EXSC 326

EXSC 366 Exercise Science Seminar (1 Credit Hour)

Seminar will include resume and cover letter writing skills, internship requirements, agency placement referrals, interviewing techniques, and certification options.

Prerequisites: BIOL 240 or BIOL 250 AND MATH 102M or higher with a C or better; EXSC 326

EXSC 368 Internship (12 Credit Hours)

Final field placement required for all students with an emphasis in exercise science. Students will be placed in an agency to gain experience in methodologies, administration techniques, and programs specific to their area of emphasis. Minimum of 400 clock hours. (qualifies as a CAP experience)

Prerequisites: senior standing, permission of the instructor, and completion of all required courses in appropriate emphasis areas

EXSC 369 Practicum in Exercise Science (3-6 Credit Hours)

Field-based experience in a fitness or allied-health setting. Minimum of 200 clock hours.

Prerequisites: EXSC 225

EXSC 397 Independent Study (1-3 Credit Hours)

Independent study of special topics under supervision of faculty.

Prerequisites: Junior standing and permission of the instructor

EXSC 403 Lifetime Fitness and Wellness (3 Credit Hours)

The focus of this course is on a positive healthy lifestyle designed to enhance the current and future quality of life. Topics include: proper exercise programs, healthful nutrition, stress management techniques, and avoidance of high-risk health behaviors in order to reduce disease risk and promote healthful aging. Various laboratory assessments are used to identify health status and recommend remedial approaches.

Prerequisites: Junior standing

EXSC 408/508 Nutrition for Fitness and Sport (3 Credit Hours)

Emphasizes the role of nutrition as a means to enhance health and performance in sport. Topics covered include energy metabolism and nutrients, regulation of metabolism by vitamins and minerals, and weight control.

Prerequisites: BIOL 240 or BIOL 250 with a C or better and MATH 102M or higher with a C or better

Pre- or corequisite: BIOL 241 or BIOL 251 with a C- or better and CHEM 121N and CHEM 122N with a C- or better

EXSC 415/515 Exercise Testing for Normal and Special Populations (4 Credit Hours)

The application of different methodologies in the measurement of physiologic responses to exercise. Emphasis is placed on understanding American College of Sports Medicine guidelines, appropriate experimental techniques, and equipment necessary to evaluate changes in body composition and various metabolic, cardiovascular, and respiratory adjustments during exercise.

Prerequisites: BIOL 240 or BIOL 250 AND MATH 102M or higher with a C or better; EXSC 326

EXSC 417/517 Biomechanics (4 Credit Hours)

Application of physical laws and mechanical principles to the human musculoskeletal system.

Prerequisites: BIOL 240 or BIOL 250 and MATH 102M or higher with a C or better; PHYS 111N with a C- or better; EXSC 322

EXSC 420 Research Methods in Exercise Science (3 Credit Hours)

Introduction to the scientific method applied to exercise science research including bioethics, review of the literature, research design, data collection, appropriate statistical analysis, research writing, and peer review.

Prerequisites: BIOL 240 or BIOL 250 and MATH 102M or higher with a C or better; STAT 130M

EXSC 421/521 Strength and Conditioning Applications (3 Credit Hours)

A study of the principles and techniques utilized in optimizing physical performance and reducing injury through proper and effective strength and conditioning programs. Special emphasis will be placed on current research findings, breakthrough techniques, advanced weight training techniques, and popular conditioning practices.

Prerequisites: EXSC 250 and EXSC 322

EXSC 428/528 Exercise Prescription for Chronic Disease (3 Credit Hours)

A study of pathophysiology of common diseases with concentration in the design, implementation and administration of exercise prescription for a variety of chronic diseases.

Prerequisites: BIOL 240 or BIOL 250 AND MATH 102M or higher with a C or better; EXSC 326

EXSC 431W/531 Wellness Programming and Administration (3 Credit Hours)

This course provides an introduction to the principles of administration and implementation of fitness and wellness programs to individuals, groups, centers, and corporate settings. This is a writing intensive course.

Prerequisites: BIOL 240 or BIOL 250, MATH 102M or MATH 103M or MATH 162M, and ENGL 211C or ENGL 221C or ENGL 231C with a C or better

EXSC 480/580 Exercise Psychology (3 Credit Hours)

Exercise Psychology examines the dynamic influences that psychological factors, environmental factors, and exercise behaviors exert upon one another. The field of exercise psychology actively promotes evidence-based interventions guided by theory and behavior change techniques. Utilization of the scientist-practitioner model involves the ability to consume and appropriately apply contemporary theory and scientific findings to the practice of applied exercise psychology. The content and assignments emphasize the theoretical and applied perspectives on the science and practice of exercise psychology.

Prerequisites: BIOL 240 or BIOL 250; and BIOL 241 or BIOL 251

EXSC 495 Special Topics In Exercise Science (1-3 Credit Hours)

The study of special topics in exercise science.

Prerequisites: Permission of the instructor

EXSC 498 Directed Research in Exercise Science (1-6 Credit Hours)

Supervised research on a specific problem in exercise science. Regular meetings with faculty and a written/oral report are required.

Prerequisites: Permission of the instructor

FAST - Filipino-American Studies

FAST 395 Topics in Filipino American Studies (3 Credit Hours)

A study of selected topics designed for non-majors, or for elective credit within a major. These courses will appear in the course schedule booklet, and will be more fully described in a booklet distributed to all academic advisors.

Prerequisites: appropriate survey or introductory course or permission of the instructor

FAST 396 Topics in Filipino American Studies (3 Credit Hours)

A study of selected topics designed for non-majors, or for elective credit within a major. These courses will appear in the course schedule booklet, and will be more fully described in a booklet distributed to all academic advisors.

Prerequisites: appropriate survey or introductory course or permission of the instructor

FIN - Finance

FIN 195 Topics (3 Credit Hours)

Study of selected topics.

FIN 210S Personal Financial Literacy (3 Credit Hours)

This course provides basic financial information an informed individual should understand in order to successfully reach their personal goals. Topics include budgeting, goal setting, the process of accumulating and protecting wealth, use of credit, the car and housing decisions, and risk management. Emphasis is on understanding how our behaviors affect successfully reaching these goals and how to improve decision making.

Prerequisites: MATH 101M or higher

FIN 220 Bloomberg Data System/Wall Street 101 (3 Credit Hours)

This course is designed to provide students with basic knowledge of Wall Street while learning how to utilize Bloomberg Terminals to gain practical knowledge and experience. The Bloomberg Lab and Trading Room provides students with access to the comprehensive data system used by major national and international companies, financial organizations, and government agencies. Students are required to complete Bloomberg Market Concepts program and earn a Bloomberg Certification, of value to many employers. Students will utilize an interactive trading game to experience the role of Wall Street traders and market makers.

FIN 323 Introductory Financial Management (3 Credit Hours)

Financial analysis, planning, and control in the business enterprise. An introduction to budgeting, problems in long- and short-term financing, sources of capital and financial markets.

Prerequisites: ACCT 201 or ACCT 226, ACCT 202 or ACCT 227, and ECON 202S or ECON 227S; a declared major in the University or an intended major in the Strome College of Business or permission of the Dean's Office of the Strome College; AND Junior Standing

FIN 331 Legal Environment of Business (3 Credit Hours)

Introduction to the legal environment of business, providing the student with an understanding of the nature of public law and the regulation of business and of the basic principles that control business practices.

Prerequisites: A declared major in the University or permission of the Dean's Office

FIN 333 The Legal Environment of Electronic Commerce (3 Credit Hours)

This course will focus on the identification and management of legal issues and problems that confront businesses taking part in the rapidly growing internet economy. Issues will include the establishment and protection of an online identity, electronic contracting, libel, product and firm disparagement, and unfair consumer practices.

Prerequisites: FIN 331, and a declared major in the University or permission of the Dean's Office

FIN 367 Cooperative Education (1-6 Credit Hours)

Available for pass/fail grading only. May be repeated for credit up to a maximum of 6 credits.

Prerequisites: Approval by department is required; additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment; declared major in the University or permission of the Dean's Office

FIN 368 Finance Internship (1-3 Credit Hours)

Student participation in a professional work experience. Approval for enrollment and allowable credits is determined by the Finance department chair in the semester prior to enrollment. A transfer student must have completed one semester at Old Dominion University.

Prerequisites: a declared major in the University or permission of the Dean's Office

FIN 387 Honors: Introductory Financial Management (3 Credit Hours)

A special honors section of FIN 323. Open only to students in the Honors Program in Business Administration.

Prerequisites: ACCT 201 or ACCT 226, ACCT 202 or ACCT 227, and ECON 202S and a declared major in the University or permission of the Dean's Office

FIN 388 Honors: Legal Environment of Business (3 Credit Hours)

A special honors section of FIN 331. Open only to students in the Honors Program in Business Administration.

Prerequisites: a declared major in the University or permission of the Dean's Office

FIN 414 Estate Planning (3 Credit Hours)

This course is designed to provide students with a background in the field of estate planning. Topics will include wills and trusts, the probate system, estate and gift taxation, and fiduciary income taxation.

Prerequisites: ACCT 421 (or permission of instructor) and a declared major in the University or permission of the Dean's Office

FIN 415 Capstone in Financial Plan Development (3 Credit Hours)

This course is designed to provide students majoring in personal financial planning with the ability to integrate technical material from previous coursework and prepare a comprehensive financial plan. Emphasis will be on integrating knowledge, preparing a financial plan, and effectively communicating with a client. Case studies will be emphasized.

Prerequisites: FIN 210S, FIN 431, RMI 317, RMI 411, and ACCT 425; and a declared major in the University or permission of the Dean's Office
Corequisites: FIN 414

FIN 431 Investments (3 Credit Hours)

This course develops the financial tools and knowledge needed to select among alternative financial assets. The emphasis is on the individual investor. Real world experience includes stock analysis, portfolio simulations and interactions with professionals in the securities industry.

Prerequisites: FIN 323 with a grade of C or better and a declared major in the University or permission of the Dean's Office

FIN 432 Intermediate Financial Management (3 Credit Hours)

Theoretical framework relevant to decision making in financial management; capital budgeting, capital structure, cost of capital, and working capital management.

Prerequisites: FIN 323 with a grade of C or better and junior standing

FIN 433 Introduction to Futures and Options (3 Credit Hours)

An introduction to the understanding of futures and options. Basic features and trading mechanisms; valuation of financial derivatives; methods of managing financial risk; arbitrage techniques; and speculation strategies.

Prerequisites: FIN 323 with a grade of C or better and FIN 431 and a declared major in the University or permission of the Dean's Office

FIN 434 Management of Financial Institutions (3 Credit Hours)

An examination of the objectives, functions, policies, organizational practices, and government regulations of financial institutions.

Prerequisites: FIN 323 with a grade of C or better and a declared major in the University or permission of the Dean's Office

FIN 435 International Financial Management (3 Credit Hours)

Financial decision making involving flow and funds across national boundaries.

Prerequisites: FIN 323 with a grade of C or better and a declared major in the University or permission of the Dean's Office

FIN 439 Financial Decision Making (3 Credit Hours)

Application of financial theory and techniques to the analysis and solution of actual financial problems. Case analysis.

Prerequisites: FIN 432 with a grade of C or better and a declared major in the University or permission of the Dean's Office

FIN 441 Student Managed Investment Fund (3 Credit Hours)

This course is designed to provide students with experience managing an investment fund. The students will apply the theoretical knowledge of finance to manage a real portfolio.

Prerequisites: FIN 431

FIN 497 Selected Topics in Finance (3 Credit Hours)

For advanced students in financial management.

Prerequisites: permission of the department chair

FOUN - Foundations of Education

FOUN 101S Learning to Learn (3 Credit Hours)

Learning is essential to human development and is a primary goal of formal schooling. Further, the nature of work is ever changing and the need to adapt to changing environments by learning new skills in new domains is essential for future success. In this educational psychology course, students will focus on the theoretical and empirical study of the science of learning. Students will gain insights into learning processes and achieve a deeper understanding of their own learning, including how to enhance their learning in various contexts.

FOUN 301 Learning and Development (3 Credit Hours)

This course focuses on educational psychology theory and research related to student learning and development. There will be an emphasis on how to incorporate research based principles in designing instruction, motivating students, and promoting a positive classroom climate based on how students learn and develop.

Prerequisites: ENGL 110C

FOUN 302 Assessment of Learning (3 Credit Hours)

This course focuses on exploring and implementing ethical assessment principles in a K-12 setting in order to ensure equity amongst a diverse population of students. Students will discuss and develop assessments for formative and summative purposes. They will analyze and interpret assessment data to measure and promote student success. State assessment programs will be discussed including social justice implications. The purpose of this course is to prepare future educators to analyze instructional situations, identify instructional targets, and determine appropriate assessment tools to monitor and support student learning.

Prerequisites: FOUN 301

FR - French

FR 101F Beginning French I (3 Credit Hours)

Aural comprehension, oral drill and discussion of grammar principles, written exercises, and reading assignments.

FR 102F Beginning French II (3 Credit Hours)

Aural comprehension, oral drill and discussion of grammar principles, written exercises, and reading assignments.

Prerequisites: FR 101F or satisfactory score on the placement exam

FR 195 Topics in French (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule.

FR 196 Topics in French (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule.

FR 201 Intermediate French I (3 Credit Hours)

Graded readings with grammar review. Emphasis on civilization and culture, also on speaking and listening competency.

Prerequisites: FR 102F or satisfactory score on the placement exam

FR 202 Intermediate French II (3 Credit Hours)

Graded readings with grammar review. Emphasis on civilization and culture and also speaking and listening.

Prerequisites: FR 201 or satisfactory score on the placement exam

FR 295 Topics in French (1-3 Credit Hours)

A study of selected topics designed as electives for nonmajors. These courses will appear in the course schedule.

FR 296 Topics in French (1-3 Credit Hours)

A study of selected topics designed as electives for nonmajors. These courses will appear in the course schedule.

FR 311 Global Conversations (3 Credit Hours)

This course is primarily a conversation course to develop linguistic and cultural proficiency in verbal communication. Task-oriented communication strategies in cross-cultural training will be practiced by presenting students with models that demonstrate appropriate linguistic and cultural competencies. Students will practice these skills by role-playing, giving presentations, enriching self-awareness with practiced in-group discussions on various topics (such as, prejudice, racism, values, and customs) that dispel stereotypes and foster more in-depth social-cultural understanding, and with participation in guided cultural encounters. Students will improve their listening and comprehension skills and deepen cultural proficiency by learning how to communicate and collaborate with other people and cultures in a global age. (This is an oral skills course.)

Prerequisites: A grade of C or better in FR 202 or advanced placement or permission of the instructor

FR 312W Writing Around the World (3 Credit Hours)

This is a writing intensive course designed with writing assignments that examine various cultural contexts that enable students to understand cultural content, style, audience and organization. The main objective of the course is increased awareness of and sensitivity to appropriate word choice, and syntax in the language. Students will engage in writing for different cultural audiences and in varied contexts such as literary, artistic and media expressions around the world. Special emphasis is placed on the methodology of close reading as students hone the analytics skills and vocabulary necessary to interpret idioms, regionalism, cultural expressions and overall intercultural skills observed in various genres and cultures. Students will analyze compelling global issues and the diverse cultural perspectives that inform them.

Prerequisites: a grade of C or better in ENGL 211C, ENGL 221C, or ENGL 231C and a grade of C or better in FR 202 or advanced placement

FR 323 World Cultures and Contexts (3 Credit Hours)

This course introduces students to social, political, economic, intellectual and artistic manifestations of France and the French-speaking world today. Students learn to analyze socio-cultural trends as well as innovations in industry as they unfold and develop by reading French and Francophone newspapers and magazines, watching news broadcasts, and exploring online content such as blogs, advertising, and social media.

Prerequisites: FR 202 or advanced placement

FR 331 French Literary Forms: Prose (3 Credit Hours)

Students will be introduced to a selection of French/Francophone short stories, which will give them a general sampling of a variety of different styles and periods from the 18th to the 20th century, contextualized in historical, social, political, and cultural milieux. Students will learn different ways of approaching the French short story (historical, stylistic, philosophical), what to look for in a given story (ideas, language, plot) and how to write about French prose critically and creatively.

Prerequisites: FR 202 or advanced placement

FR 332 French Literary Forms: Theatre (3 Credit Hours)

Students will be introduced to a selection of French plays, which will give them a general sampling of a variety of different dramaturgical styles and periods from the Middle Ages to the 20th century, contextualized in the historical, social, political, and cultural milieu. Students will learn different ways of approaching French theater (historical, stylistic, philosophical), what to look for in a given play (ideas, poetry, plot) and how to write about French theater critically and creatively.

Prerequisites: FR 202 or advanced placement

FR 333 French Literary Forms: Poetry (3 Credit Hours)

Survey of French-language literary movements and an introduction to the genre of poetry from the Middle Ages to the present day. Poems and poets are contextualized in the historical, social, political, and cultural milieux. Course aims: allow students to gain an understanding of literary developments in the French language; introduce methods of literary analysis primarily through close reading of texts; give an experience of the creative process that goes into writing fixed-form poetry; practice recitation; allow students to reflect on recurrent themes in French-language poetry; and assess the pertinence of a literary form in the creative imagination of a nation.

Prerequisites: FR 202 or advanced placement

FR 366 Business French: Language and Culture (3 Credit Hours)

Students are introduced to the culture, politics, economics and commerce of modern France as they relate to the French business world, providing a background for all students regardless of specific career goals. They will learn to write and speak in a professional context and learn to apply what they have learned through the study of business documents and training in commercial correspondence. This class will also be useful preparation for those interested in internships abroad or in the U.S.

Prerequisites: FR 202 or advanced placement

FR 369 Practicum (1-3 Credit Hours)

Internships in private, public and business organizations that deal with foreign nationals, foreign products or are involved in teaching French.

Prerequisites: nine credit hours at the 300 or 400 level

FR 395 Topics in French (1-3 Credit Hours)

A study of selected topics designed for non-majors, or for elective credit within a major. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: FR 202 or advanced placement test

FR 396 Topics in French (1-3 Credit Hours)

A study of selected topics designed for non-majors, or for elective credit within a major. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: FR 202 or advanced placement test

FR 407/507 Advanced Grammar and Syntax (3 Credit Hours)

This class is designed to solidify and refine students' working knowledge of written skills in the language, with an emphasis on increasing their written sophistication. Focus is on analysis of vocabulary, grammar, and cultural nuances in the syntax to examine how language reflects the ways of life and beliefs of its speakers, contrasted with the extent of language's influence on culture. Students will refine their skills in written inter-cultural communication, paying attention to idioms and the fine points of 'cultural grammar,' communicative competence and specialized discourse to develop excellent communication skills. This course is intended to prepare students for using their knowledge of language and culture in professional settings.

Prerequisites: FR 312W or permission of the instructor

FR 410/510 Berlin and Paris: Crucibles of European Ideas (3 Credit Hours)

This course explores the cultural movements that have characterized the German-French commonalities and differences from the early 1900s through the 1990s in cross-disciplinary discourses such as film, literature, art, politics, and economics. Cross-listed with WCS 410/WCS 510.

Prerequisites: German and French students must read and write in the target language

Pre- or corequisite: FR 312W

FR 415/515 Applied Phonetics (3 Credit Hours)

This class is a skills-based, laboratory class on French phonetics designed to develop students' mastery of spoken French. Students will acquire a more native-like French accent and see clear correspondences between orthography and pronunciation. By using oral texts with social and cultural themes students acquire knowledge of French pronunciation in a culturally relevant way. Students additionally investigate non-standard accents from Quebec, the south of France, and Belgium.

Prerequisites: FR 311 or permission of the instructor

FR 420/520 Francophone Civilization (3 Credit Hours)

This seminar traces the historical narratives of French colonialism up until contemporary times, examining the roots of unrest in the Maghreb and other ex-French colonies through representative political, literary, and cinematic texts relating to today's political flashpoints in the Maghreb and West Africa as well as other former French colonies. It also approaches different aspects of France's colonial and post-colonial legacy through a historical lens as students explore texts from such revolutionary leaders as Césaire, Senghor, Memmi and others. Examination of both the revolutionary movements that propelled France's ex-colonies towards independence and France's shifting perspectives from ex-colonizer to Francophone ally.

Prerequisites: FR 312W or the instructor's permission

FR 427/527 Studies in Seventeenth-Century French Literature (3 Credit Hours)

Following a preparatory period, the political stability of the French monarchy ushers in the golden age of classicism. Representative works from comic and dramatic theater, philosophy, poetry and the evolving novel.

Prerequisites: FR 312W or permission of the instructor

FR 428/528 Studies in Eighteenth-Century French Literature (3 Credit Hours)

A study of the two main currents of ideas of the Age of Reason or Enlightenment; the rationalistic drive to question established authority, exemplified by the 'Encyclopédie' and leading to the Revolution of 1789; and the Rousseauistic return to nature and emotivity. Representative readings.

Prerequisites: FR 312W or permission of the instructor

FR 437/537 Studies in Nineteenth-Century French Literature (3 Credit Hours)

A study of the post-Revolutionary (1789) literary movements: Romanticism, Realism, Naturalism, Symbolism, which opened new horizons of modern science and culture in France. Representative works.

Prerequisites: FR 312W or permission of the instructor

FR 438/538 Studies in Twentieth-Century French Literature (3 Credit Hours)

A survey of representative works and movements in 20th century French and Francophone literature.

Prerequisites: FR 312W or permission of the instructor

FR 469/569 A History of French Cinema (3 Credit Hours)

This course will function as a survey of French film classics from the birth of cinema through contemporary times, and also shed light on various French cultural and literary movements as they are represented in film (Surrealism, WWII, Nouvelle Vague, decolonization).

Prerequisites: FR 312W or permission of instructor

FR 495/595 Topics in French (1-3 Credit Hours)

The advanced study of the selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: FR 311, FR 312W, FR 320 or permission of the instructor

FR 496/596 Topics in French (1-3 Credit Hours)

The advanced study of the selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: FR 311, FR 312W, FR 320 or permission of the instructor

FR 497 Tutorial Work in Special Topics in French (1-3 Credit Hours)

Independent reading and study on topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: senior standing and approval of department chair

FR 498 Tutorial Work in Special Topics in French (1-3 Credit Hours)

Independent reading and study on topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: senior standing and approval of department chair

GAME - Gaming

GAME 111 Introduction to Game Programming (3 Credit Hours)

This course is designed to introduce fundamentals of computer programming and C# to the students of all majors. Students will learn how programming languages are used to talk to the machines. Students will create console applications primarily focused on games using C# and be introduced to how to represent data, write functions, develop logic, organize code in object-oriented format, store, and process data from collections, etc.

GAME 201T Introduction to Game Studies (3 Credit Hours)

An introduction to the core concepts and methodologies that inform game design, development, and criticism. This course will provide students with a critical overview of each of these content areas and will demonstrate how their specific concerns intersect in the design, production, and reception of contemporary games. It will also teach students hands-on methodologies through which to translate these concepts into creative and critical praxis.

GAME 214 Visual Design Fundamentals for Game Design (3 Credit Hours)

This course is designed to introduce Game Design majors to basic art elements and design principles fundamental to visual asset creation for games and game-based applications. It will cover color theory, drawing fundamentals, spatial relationships, and other aspects of 2D composition. It will discuss how to apply these principles to effective User Interface (UI) design, as well as how to transform 2D assets into 3D objects. This course will also discuss architectural principles as they apply to level design, environmental design, and other subjects related to the visual design of games.

GAME 222 Technologies for Game Design and Development (3 Credit Hours)

This course is designed to introduce Game Design and Development majors to technologies and technological methodologies that are frequently employed by the industry. These technologies include but are not limited to 2D and 3D art, animation, and design software, game engines, music composition and sound design software, software development tools, and version control and collaboration software. This course will also discuss the challenges involved in designing and developing games for a variety of different platforms.

GAME 240 Game Criticism (3 Credit Hours)

This course is designed to introduce students to the major theoretical approaches and debates that comprise game studies as an academic discipline. It will teach students how to research, evaluate, analyze, and construct persuasive arguments about games and game-related artifacts.

GAME 333 Game Balance, Rules, and Mechanics (3 Credit Hours)

This course focuses on the complex question of how game designers produce balance through rules, mechanics, aesthetics, and other formal and informal gameplay elements. This course will provide students with an analytical framework to better understand how these elements are not only manifested in specific games, but how they work to simultaneously distinguish genres of games. More significantly, it will provide students with a practical methodology that will help them understand how to apply the insights gained through this analysis to their own games.

Prerequisites: GAME 201T

GAME 340 Visual Design and Digital Graphics for Games (3 Credit Hours)

This course focuses on visual design and digital graphics for game-based applications. Designed to help students make the transition from traditional 2D drawing and illustration techniques to the types of 2D and 3D digital asset creation privileged by games and game-based applications, it provides students with hands-on experience with using industry standard software to generate sprites, UI components, textures, and other common 2D elements. It also introduces students to 3D modeling and texturing techniques, including but limited to optimization, texture mapping, and basic rigging and animation techniques.

Prerequisites: GAME 201T

GAME 355 Game Design and Rhetoric (3 Credit Hours)

This course will study the representative and rhetorical strategies through which computer game designers make meaning via their rhetorical choices. Multi-perspective in nature, it will also examine the discursive struggles that determine how players construct themselves as subjects in and against computer games via their rhetorical choices. This course will attempt to come to terms with the larger question of how scholars, through various forms of critical play, construct, categorize, and produce computer games as a subject of academic study.

Prerequisites: GAME 201T or permission of instructor

GAME 360 Development with Game Engines (3 Credit Hours)

This course will provide introduction to game engines including Unity, Unreal, Godot, & Stride. We will be using a wide range of software standards to explore and take advantage of well known game-engine programming patterns, concepts of software versioning, creating and maintaining changelogs, taking advantage of version control systems like git, and importantly using distributed version control systems like GitHub/GitLab. The class will focus on one core project that students will continue to iterate on across the length of the class.

Prerequisites: GAME 201T

GAME 395 Topics in Game Studies (3 Credit Hours)

A study of selected topics designed for nonmajors or for elective credit within a major.

Prerequisites: GAME 201T

GAME 440 Advanced Visual Design and Digital Graphics for Games (3 Credit Hours)

This course focuses on advanced visual design and digital graphics for game-based applications, including but not limited to topics such as 3D modeling, texturing, texture mapping, animation, optimization, shaders, and particle systems. Conceived as a studio course, it provides students with hands-on experience working with a variety of digital software applications to create and optimize graphical assets for games and similar applications.

Prerequisites: GAME 201T

GAME 450 Game Development and Design Workshop (3 Credit Hours)

This workshop affords upper-division students the opportunity to tackle a wide variety of advanced projects on their own recognizance. It provides students working in game design and development with practical, individualized guidance in crucial aspects of the design and development process, including ideation, research, prototyping, implementation, documentation, and playtesting. Likewise, it provides students working in game criticism with instruction in the scholarly process of identifying, researching, drafting, and revising critical arguments about games and game-related issues.

Prerequisites: GAME 201T and senior status

GAME 460 Advanced Development with Game Engines (3 Credit Hours)

This class will take an advanced Systems Engineering approach to using Game Engines to prototype, compile, and develop functioning software across major hardware and operating systems. It will focus on industry standard game engines and use the experience to produce games and game-like content to facilitate in-depth exploration into how game engines implement similar systems. This course will cover a range of advanced topics relevant to content creation and implementation with game engines including agile development, game engine programming patterns, networking, mobile development, procedural content generation, render-pipelines, and VR development. It will also explore how to publish and deploy games and game-related projects across a variety of digital platforms.

Prerequisites: GAME 360 or permission of instructor

GAME 465 Narrative World Building (3 Credit Hours)

An examination of world building as ludic, narrative, and spatial praxis. This course will examine how games and game-related texts create playable realities through a critical examination of historical and contemporary examples of world building across a variety of media. It will provide students practical experience with how to translate these theoretical examples into effective gameplay across a variety of genres of games.

Prerequisites: GAME 201T and junior or senior status

GAME 466 Graphical World Building (3 Credit Hours)

An examination of world building as spatial and architectural praxis. This course will examine how to use advanced 3D art and animation techniques to create believable, playable realities. It will provide students with hands-on experience using industry-standard graphics software to create compelling game environments for a variety of games and game-genres.

Prerequisites: GAME 201T and junior or senior status

GAME 494 Entrepreneurship in Game Studies, Development, and Design (3 Credit Hours)

Although traditionally associated with commercial ventures, entrepreneurship encompasses a wide variety of approaches that are also relevant to the creative and critical performances that intersect in the design, production, and study of games. This course will broach the theoretical and practical questions of how entrepreneurship intersects with and is implicated in the production of game and game-based endeavors. Conceived as a studio course, it is designed to teach students a hands-on methodology through which they can translate entrepreneurial approaches into real-world outcomes.

Prerequisites: GAME 201T

GAME 495 Topics in Game Studies (3 Credit Hours)

A study of selected topics designed for nonmajors or for elective credit within a major.

Prerequisites: GAME 201T

GDES - Graphic Design

GDES 280 Introduction to Graphic Design (3 Credit Hours)

This course includes intensive study of the basic principles, theories and methods of graphic design, and the creation of visual communication. Topics of study include the characteristics and compositional principles applied to symbol, image, and letterform, as well as the history and practice of graphic design. Emphasis will be placed on creative process, developing visual concepts, formal values, use of materials, and craft. (Offered fall only)

Pre- or corequisite: ARTS 279 with a grade of C or higher

GDES 315 Artificial Intelligence in Content Creation (3 Credit Hours)

This course explores the intersection of marketing and digital design, focusing on how to effectively integrate AI tools into modern content creation workflows. Students will utilize AI tools while developing content for a specific brand. By the end of the course, you will be equipped to harness AI in ideation, design, and distribution, empowering you to streamline and elevate your marketing content creation process.

Prerequisites: Permission of instructor

GDES 365 Basic Typography (3 Credit Hours)

This course includes intensive study of the history, terminology, theory, and application of typography, and the creation of visual communication with particular emphasis on typographic content. Topics of study include typographic form and meaning, hierarchy, legibility and readability, structure and composition, and the management of written content within the design process. Specialized technical instruction includes software applications for document construction, layout, and letterform manipulation, building upon the experiences of ARTS 279. (Offered spring only)

Prerequisites: Graphic design major and GDES 280 with a grade of C or higher

GDES 368 Design Internship (3 Credit Hours)

This advanced course is an individualized internship that focuses on the student's emphasis within the graphic design industry. It is normally taken during the last semester. Students participate on-site with professionals and are evaluated by predetermined curriculum objectives that have been agreed upon by the employer, instructor and student. This course provides the student with valuable on-the-job experience, interaction with industry professionals, and preparation for job entry. Students must interview for and acquire their internship site. It is recommended that the student seek out instructor expertise for possible recommendation.

Prerequisites: Approval of the instructor and department is required; additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

GDES 371 Design Concepts (3 Credit Hours)

The course includes intensive study of the development of creative and effective ideation for application to graphic design problems from selected aspects of the field. Topics of study include project research, content development, messaging, and individual and collaborative creative processes. Emphasis will be placed on critical skills, articulation, productivity, and response to clients, audiences and contexts. (Offered fall only)

Prerequisites: GDES 280 with a grade of C or higher

GDES 372 Advanced Typography (3 Credit Hours)

This is an elective course restricted to students admitted to the graphic design program. It continues the development of typographic practice, exploring issues pertaining to meaning, concept, and expression. The course will also include investigation of typographic history. Topics of study include advanced issues in typographic composition, denotative and connotative aspects of type use, typeface selection, and typesetting.

Prerequisites: GDES 365 with a grade of C or higher

GDES 374 Web Design (3 Credit Hours)

This advanced course is an introduction to the basic methods and techniques used to design for web-based delivery. Topics of study include; site management and organization, navigation, grid structures, hierarchy and inventory of content, appropriate use of type and graphics, and format. Emphasis will be placed on process and research, appropriateness, accessibility, dynamic user interface experiences.

Prerequisites: GDES 371 with a grade of C or higher and GDES 372 with a grade of C or higher or permission of the instructor

GDES 378 Brand Identity (3 Credit Hours)

This course is devoted to the study and design of coordinated systems of visual communication elements used to identify a company or cause. Projects will address project research, creative brief development, messaging, and effective ideation for application across coordinated graphic design campaigns for print and digital delivery.

Prerequisites: GDES 280 with a grade of C or higher

GDES 381 Interactive Design (3 Credit Hours)

This advanced course is devoted to creating dynamic design solutions for interactive devices, systems, and services. Students will learn to apply observational techniques to understand interactions in context, develop conceptual models and representations to assess the perspectives of prospective users, and develop interactions that are understandable and useful. Students will be introduced to the fundamental digital design process, and will experiment with a variety of interactive and dynamic design applications.

Prerequisites: GDES 371 with a grade of C or higher and GDES 372 with a grade of C or higher or permission of the instructor

GDES 382 UI (User Interface) Design (3 Credit Hours)

UI (User Interface) designers focus on developing the aesthetics, or the point of contact, of interactive experiences. This course is intended to provide students with the skills needed to utilize traditional design principles to create interactive experiences for a range of platforms. Students will explore key topics such as Principles of User Interface Design, Responsive Design, Design Systems, Wireframing, and Prototyping, gaining a comprehensive skill set to shape the visual and interactive landscapes of digital interfaces.

Prerequisites: GDES 280, GDES 365, GDES 371, and GDES 378, all with a grade of C or higher

GDES 383 UX (User Experience) Design (3 Credit Hours)

UX (User Experience) designers ensure that digital experiences are relevant to users. This course is intended to provide students with the skills to create experiences focused on user needs and built on research and data. Students will explore key topics such as User Research Methods, User Journeys, and Usability Testing.

Prerequisites: GDES 280, GDES 365, GDES 371, and GDES 378, all with a grade of C or higher

GDES 385 Advanced Graphic Design (3 Credit Hours)

Building on concepts introduced in GDES 280, the course will consider and engage the collaborative, complex, and interrelated nature of design practice, in public and private manifestations, and through form and concept. The personal dimensions of design practice will also be explored through a self-determined project.

Prerequisites: GDES 280, GDES 365, GDES 371, and GDES 378, all with a grade of C or higher

GDES 386 Socially Conscious Design (3 Credit Hours)

This course delves into the realm of visual communication as a powerful tool for advocating social, environmental, and justice issues. Students will explore the transformative potential of graphic design in fostering positive change within society. As the world faces pressing challenges, this course empowers artists to leverage their creative skills and voices to contribute meaningfully to the betterment of our global community. Key topics covered include ethical design principles and the responsibility of designers in shaping inclusive narratives. Through practical exercises, projects, and case studies, students will develop the skills to navigate the delicate balance between aesthetics and advocacy, ensuring that their designs not only captivate but also inspire positive action.

Prerequisites: GDES 280, GDES 365, GDES 371, and GDES 378, all with a grade of C or higher

GDES 395 Topics in Graphic Design (3 Credit Hours)

Selected topics designed for elective credit within the graphic design program.

Prerequisites: Permission of the instructor

GDES 470 Design Services (3 Credit Hours)

Design services acts as an independent design agency. Students will gain experience working directly with clients on a design project; discover the aspects of developing commissioned design projects; and consider the legal, practical and ethical considerations of working as an independent (freelance) designer.

Prerequisites: GDES 280, GDES 365, GDES 371, and GDES 378, all with a grade of C or higher

GDES 474 Motion Graphics (3 Credit Hours)

This advanced course is an introduction to the basics of motion graphic design processes, and focuses on the creative and technical processes of creating motion graphics (predominantly 2D) for a variety of mediums including film, broadcast, DVD, and web. Students will gain practical experience in the development of an animated broadcast graphics package. Motion graphics in the context of interactive interfaces is also explored.

Prerequisites: GDES 371 with a grade of C or higher and GDES 372 with a grade of C or higher or permission of the instructor

GDES 480 Advanced New Media (3 Credit Hours)

Modern graphic design often includes the creation of multi-faceted experimental experiences. This course is intended to provide students with an advanced studio experience, where they will utilize a wide range of software to create experiences that push what each individual student thinks is possible. This course may cover topics such as 3D Modeling, Motion Graphics, Augmented Reality, Installation Art, and more.

Prerequisites: GDES 280, GDES 365, GDES 371, and GDES 378, all with a grade of C or higher

GDES 490 Design Seminar (3 Credit Hours)

This course is restricted to students admitted to the graphic design program, and is the seventh course in the graphic design sequence. This course introduces students to the broader opportunities and directions present in contemporary design. Through readings, discussion, and self-directed and self-determined projects, students will explore personal directions and sensibilities in their design practice. (Offered fall only)

Prerequisites: GDES 373 with a grade of C or higher

GDES 491 Design Capstone (3 Credit Hours)

This is the concluding course in the graphic design major. Students will prepare for transition to design practice/appreciation or graduate study through the completion of a thesis project appropriate to personal and career goals. Course topics will include creating a portfolio of design work, career options, self-promotion, resume preparation, graduate study, and interview skills. All students are required to present their work at the Graphic Design Gala. Additional review may be required by syllabus. (Offered spring only)

Prerequisites: GDES 490 with a grade of C or higher

Pre- or corequisite: 12 hours of Graphic Design elective coursework

GDES 497 Tutorial Work in Graphic Design (3 Credit Hours)

An independent investigation of a subject selected and conducted under the advisement of a graphic design instructor.

Prerequisites: Senior standing and permission of instructor and the chief departmental advisor

GEOG - Geography

GEOG 100S Human Geography (3 Credit Hours)

This course provides a basic topical introduction to human and cultural geography. It focuses on the diversity of human societies, their distribution, characteristics, and cultural impact on the landscape. Topics include the geography of population, migration, language, religion, economic development, urbanization, resources, and the political landscape.

GEOG 101S Environmental Geography (3 Credit Hours)

A geographical study of the diverse characteristics of the Earth's physical landscape, spatial distribution of environmental characteristics, the impacts of these on human populations and human populations' impact on the natural environment. Topics include climate and climate change, mass movements and natural hazards, biogeography and environmental problems such as desertification and deforestation, and the use and abuse of water resources.

GEOG 102T Digital Earth: Geospatial Technology and Society (3 Credit Hours)

This course provides an overview and exploration of: 1) the digital representation of the Earth and 2) geospatial science and technology. The course investigates geospatial technological innovations affecting the environment, resources, and society, including satellite global positioning systems, geographic information systems, and earth observations. Students develop hands-on skills as well as critical-thinking skills concerning the role of increasingly ubiquitous geospatial technology and their influences on social, economic, and human-environment interactions.

GEOG 126S Honors: Cultural Geography (3 Credit Hours)

Open only to students in the Honors College. A special honors section of GEOG 100S.

GEOG 250 World Regional Geography (3 Credit Hours)

A study of the physical and cultural characteristics of the major geographical regions of the world. The course focuses upon significant problems within each of the world's major regions and examines the relevance of the geographical background to these problems.

GEOG 295 Topics in Geography (3 Credit Hours)

A study of selective topics in Geography.

GEOG 296 Topics in Geography (3 Credit Hours)

A study of selective topics in Geography.

GEOG 300 Maps and Geographic Information (3 Credit Hours)

An investigation of different representations of the Earth: physical and cognitive maps, atlases, spatial databases, aerial photographs, and remote sensing imagery, with an emphasis on the use of geographic tools for communicating and analyzing information.

Prerequisites: GEOG 100S or GEOG 101S

GEOG 305 World Resources (3 Credit Hours)

A geographical analysis of the distribution and accessibility of the world's resources including population, agricultural land, biodiversity, water, renewable and nonrenewable materials, and energy sources.

Prerequisites: GEOG 100S or GEOG 101S, or permission of the instructor

GEOG 306T Hazards: Natural and Technological (3 Credit Hours)

An exploration of human perceptions of and responses to extreme geophysical and technological threats, including nuclear bombs and accidents, hurricanes, tornadoes, earthquakes, and volcanoes.

Prerequisites: junior standing and six credits in the social sciences or permission of the instructor

GEOG 308 Research Design (3 Credit Hours)

Covers the design and implementation of quantitative and qualitative methods of inquiry in social sciences.

Prerequisites: GEOG 100S or GEOG 101S

GEOG 310 Geography of the City (3 Credit Hours)

An analysis of the structure, growth, and development of cities. Topics include the use of urban land, location of public services, structure of the urban economy, social problems of urban populations, and decay and revitalization.

Prerequisites: Completion of General Education human behavior requirement

GEOG 320 Political Geography (3 Credit Hours)

A study of the relationship between geographical and political factors; the nation state and its subdivisions; interaction among states; and the political geography of everyday life.

Prerequisites: Completion of General Education human behavior requirement

GEOG 321 World Economic Geography (3 Credit Hours)

An analysis of differences in spatial patterns on the economic landscape at national and international levels, and the processes which create such differences. Introduces basic concepts, theories, and models in economic geography at the global scale.

Prerequisites: GEOG 100S or GEOG 101S, or permission of the instructor

GEOG 325 Ethnic Minorities (3 Credit Hours)

A study of ethnic minorities worldwide with emphasis on geographical dimensions of ethnic identity and relationships between ethnicity and territory, regionalism, politics, and cultural expression.

Prerequisites: Sophomore standing or permission of the instructor

GEOG 330 Field Methods (3 Credit Hours)

A review of selected techniques for generating data in a field situation. Lectures deal with the description and evaluation of techniques such as sampling methods, observation, interviewing, questionnaires, human relations skills and ethical considerations. The project component involves the definition of field problems and the application of appropriate techniques.

Prerequisites: Sophomore standing or permission of the instructor

GEOG 350 Geography of the United States and Canada (3 Credit Hours)

The human and physical geography of the United States and Canada with special emphasis on the distribution of population and natural resources, migration patterns, location of major economic activities, and the variety of regional identities within the U.S. and Canada.

Prerequisites: Junior standing and six credits in human behavior, or permission of the instructor

GEOG 355 Topics in Regional Geography (3 Credit Hours)

A study of selected regions or selected problems within a particular region of the world.

Prerequisites: Junior standing or permission of the instructor

GEOG 367 Cooperative Education (1-3 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place.

Prerequisites: Approval by the department

GEOG 368 Internship in Geography (1-12 Credit Hours)

Individualized practical experience in the area of applied geography. The credits will be commensurate with the level of the student's involvement.

Prerequisites: Twelve hours in geography

GEOG 370 Introduction to Emergency Management (3 Credit Hours)

Disasters in the U.S and abroad are examined to study the evolution of emergency practices. Factors contributing to the hazardousness of place and community vulnerability are explored. Emergency phases are practiced through interactive simulations.

Prerequisites: GEOG 100S or GEOG 101S, or permission of the instructor

GEOG 395 Topics in Geography (1-4 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: Junior standing or permission of the instructor

GEOG 396 Topics in Geography (1-4 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: Junior standing or permission of the instructor

GEOG 398 Tutorial Work in Geography (1-3 Credit Hours)

Independent study under the direction of an instructor.

Prerequisites: Permission of the instructor

GEOG 400W/500 Seminar in Geography (3 Credit Hours)

Advanced study of a specialized topic in geography. The choice of the topic may vary according to the availability of faculty expertise and student interest. This is a writing intensive course. This course may be repeated once provided it is a different topic and with permission of the instructor.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; GEOG 100S or GEOG 101S, or permission of the instructor

GEOG 401/501 Global Environmental Policy (3 Credit Hours)

This course analyzes the causes, severity, potential consequences, and proposed solutions regarding global ecological issues with special attention to the scientific debate and the political and policy process. It examines environmental policies of national governments, regional/international organizations, and global conferences.

Prerequisites: GEOG 100S or GEOG 101S or GEOG 102T or POLS 100S or POLS 101S or POLS 102S or permission of the instructor

GEOG 402/502 Geographic Information Systems (3 Credit Hours)

A study of the conceptual basis of GIS as a tool for manipulating spatial information. The course focuses on how geographic information can be input and organized within the framework of a GIS. Students will work on a computer-based GIS to gain a greater understanding of spatial database structures and analytical operations.

Prerequisites: Junior standing, GEOG 102T, or permission of instructor

GEOG 404/504 Digital Techniques for Remote Sensing (3 Credit Hours)

Study of the theory and application of remote sensing, emphasizing environmental applications and aerial and satellite imagery. Covers the fundamentals of multispectral digital image processing, including sensors pre-processing, enhancement, classification, accuracy assessment, and GIS data integration.

Prerequisites: Junior standing, GEOG 102T, or permission of instructor

GEOG 405/505 Seminar in International Resource Management (3 Credit Hours)

Discussion of the ecological and management principles underlying international resource management and the goal of attaining a sustainable, ecologically balanced world.

Prerequisites: GEOG 100S or GEOG 101S; GEOG 305 recommended

GEOG 408/508 Cartography (3 Credit Hours)

Computer-assisted methods and techniques employed in the design, construction, and use of maps and other graphics as tools for data analysis and communication.

Prerequisites: GEOG 300 or GEOG 402

GEOG 409/509 Drone Applications Proseminar (3 Credit Hours)

Survey of the state-of-the-art geospatial applications of small Uncrewed Autonomous Systems (sUAS) mapping, surveying, and modeling. Course combines seminars spanning application sectors of research and professional practice; lectures on mission planning, operations, analysis and regulations; and hands-on practical exercises incorporating risk management, safety, ethics, and legal issues.

Prerequisites: GEOG 402 or permission of instructor

GEOG 410/510 Seminar in Urban Geography (3 Credit Hours)

Discussion of specific urban and metropolitan problems based on outside readings and individually selected research topics.

Prerequisites: GEOG 100S or GEOG 101S, or permission of the instructor

GEOG 411/511 Urban and Regional Planning (3 Credit Hours)

A study of planning concepts and principles used to guide contemporary metropolitan growth and development. Emphasis is on the application of planning tools and methods that guide the planning process from conception to execution.

Prerequisites: GEOG 100S or GEOG 101S, or permission of the instructor

GEOG 412/512 Cities of the World (3 Credit Hours)

An examination of cities of the world's major cultural realms with an emphasis on the urban landscape as it varies between developed and developing countries.

Prerequisites: Junior standing or permission of the instructor

GEOG 417/517 GIS for Planning and Public Policy (3 Credit Hours)

Geographic Information Systems (GIS) and science are an essential tool for urban planners and policy makers who have special interests in places and who need this kind of knowledge for decision making. The purpose of this course is to teach students the foundations of GIS and how it is applied in urban planning and other related disciplines. The course combines lectures, discussion of readings, and hands-on exercises in the computer lab.

Prerequisites: GEOG 402 or permission of the instructor

GEOG 418 Quantitative Methods (3 Credit Hours)

A survey of and practicum in the basic techniques of quantitative research, including the logic of empirical research, the identification of data sources, and the use of appropriate statistical techniques.

Prerequisites: GEOG 100S or GEOG 101S, GEOG 308 with a grade of C- or better

Pre- or corequisite: STAT 130M with a grade of C- or better

GEOG 419/519 Spatial Analysis of Coastal Environments (3 Credit Hours)

The course integrates remotely sensed and field techniques for scientific investigation and practical management of coastal environmental systems. Spatial modeling of coastal processes and management tools using Geographic Information System (GIS).

Prerequisites: GEOG 300, GEOG 402 or GEOG 502, or permission of instructor

GEOG 420/520 Marine Geography (3 Credit Hours)

An analysis of the environmental geography and resources of the ocean, with particular emphasis on geospatial analysis of the seafloor, hydrography, climate change, fisheries, ocean pollution, maritime activity spaces and management.

Prerequisites: GEOG 300 or GEOG 402 or permission of the instructor

GEOG 422W/522 Coastal Geography (3 Credit Hours)

An examination of the physical and human geography of the coastal zone. Considers problems of managing coastal resources with an emphasis on North America. Lectures focus on coastal patterns, processes, and problems at the global, national, and local scales. Students investigate a section of the local coastline and write a report on the physical and human geography on the basis of field study, library, and internet research. This is a writing intensive course.

Prerequisites: GEOG 100S or GEOG 101S, a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, or permission of the instructor

GEOG 424/524 Weather, Climate and Society (3 Credit Hours)

Weather and climate play a pivotal role in nearly every aspect of life. How does temperature relate to health outcomes? What impact does El Niño have on Peruvian farmers? How is the issue of climate change reflected in national security policy? Why? Topics also include the energy balance equation, remote sensing techniques, and climatological data acquisition and analysis. Beyond an understanding of the complex processes that dictate the flow of the atmosphere, the course analyzes the socioeconomic, political, and cultural perspectives of climate and weather. The course also provides a framework for stewardship and responsibility to the future.

Prerequisites: GEOG 100S, GEOG 101S, or permission of the instructor

GEOG 425/525 Internet Geographic Information Systems (3 Credit Hours)

Theoretical and practical exploration of methods, standards, and policies related to the development and utilization of geographic information systems on the Internet. Students will create and utilize distributed geospatial data and analytical systems using the WWW and the Internet to address geographical problems.

Prerequisites: GEOG 402

GEOG 432/532 Advanced GIS (3 Credit Hours)

The study of a series of advanced topics in the field of geographic information systems/science. Focus is placed on the development of projects/models and a survey of several advanced techniques. Students will work on a computer based GIS to implement topics from lectures.

Prerequisites: GEOG 402

GEOG 446/546 Geography, Gender, and Sexuality (3 Credit Hours)

This course examines gender identity and sexuality in all of their diverse forms through a lens of human geography, such as metaphors of space and place, the cultural landscape, and 'mapping territory.' Topics explored include global gender identities; 'queer space;' 'locating' gender and sexuality within the arts and tourism; the gendered citizen and the nation; and political economies of gender and sexuality.

Prerequisites: Junior standing, GEOG 100S or GEOG 101S, a grade of C or better in ENGL 211C, ENGL 221C, or ENGL 231C, or permission of the instructor

GEOG 451/551 Europe (3 Credit Hours)

A geographical analysis of the interrelationships among physical, cultural, economic, and political factors in Europe.

Prerequisites: Junior standing and GEOG 100S or GEOG 101S, or permission of the instructor

GEOG 452/552 Africa (3 Credit Hours)

A geographical analysis of the interrelationships among physical, cultural, economic, and political factors in Africa.

Prerequisites: Junior standing and GEOG 100S or GEOG 101S, or permission of the instructor

GEOG 453/553 Asia (3 Credit Hours)

A geographical analysis of the interrelationships among physical, cultural, economic, and political factors in Asia excluding the Middle East and the former USSR.

Prerequisites: Junior standing and GEOG 100S or GEOG 101S, or permission of the instructor

GEOG 454W/554 Latin America (3 Credit Hours)

A geographical analysis of the interrelationships among physical, cultural, economic, and political factors in Latin America. This is a writing intensive course.

Prerequisites: Junior standing, GEOG 100S or GEOG 101S, a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, or permission of the instructor

GEOG 455/555 The Middle East (3 Credit Hours)

A geographical analysis of the interrelationships among physical, cultural, economic, and political factors in the Middle East.

Prerequisites: Junior standing and GEOG 100S or GEOG 101S, or permission of the instructor

GEOG 458/558 Geography of Virginia (3 Credit Hours)

An analysis of Virginia's population, resources, and regional landscapes as they have been influenced by physical, cultural, historical, and economic factors.

Prerequisites: GEOG 100S or GEOG 101S

GEOG 460/560 Medical Geography (3 Credit Hours)

The course covers a range of topics in medical and health geography, including spatial behaviors of infectious disease and health care access. The focus of the course is on the geographical patterns of health and disease from the population rather than individual scale. In addition to seminar style lectures and discussions, the course enables students to further investigate by learning how to conduct medical/health geography research.

Prerequisites: Successful completion of the University's lower-division General Education requirement in Human Behavior, or permission of the instructor

GEOG 462/562 Advanced Spatial Analysis (3 Credit Hours)

This course introduces the essential theoretical concepts and analytical tools for analyzing spatial process, spatial autocorrelation, spatial patterns, techniques for spatial interpolation, network connectivity, big data, and landscape patterns. The course culminates with students carrying out their own spatial analysis projects. This course assumes that students understand the basic concepts in GIS with some experience in software operation of ArcGIS.

Prerequisites: GEOG 402 or permission of the instructor

GEOG 463/563 GIS Programming (3 Credit Hours)

This course develops students' GIS programming skills. Focus is placed on Python programming in ArcGIS and JavaScript in Web GIS development.

Prerequisites: GEOG 402

GEOG 464/564 Advanced Environmental Geography Seminar (3 Credit Hours)

The objective of the course is to provide students with a deeper understanding of the current concepts and debates in environmental geography. By exploring the ethical and philosophical foundations of the field, the course considers the environment's opportunities and constraints. While topics may include climate change, agricultural security, and renewable energy, the course will be driven by student-led discussions and participation. Critically thinking about complex phenomenon, the seminar will include various weekly readings, discussions, and writing assignments.

Prerequisites: GEOG 100S or GEOG 101S or permission of the instructor

GEOG 473/573 Geographic Information Systems for Emergency Management (3 Credit Hours)

Students will demonstrate advanced skills and techniques using spatial data to prevent, mitigate, respond to, and recover from intentional, natural, and accidental homeland security threats and emergencies. This course demonstrates the importance of rapidly disseminating spatial information towards the prevention and response of various organizations to homeland security events. This course will provide students with the tools and experience required to collect, prepare and manage spatial data and enable students to be prepared to map and analyze the data to quickly and effectively create a coordinated response to real homeland security events.
Prerequisites: GEOG 100S, GEOG 101S, GEOG 102T, or permission of the instructor

GEOG 475/575 Urban Resiliency (3 Credit Hours)

This course examines the multifaceted interface of built and natural environments and their impacts on land use management at spatial and temporal scales. It evaluates the impact of population pressure on sustainability through a survey of urban areas and analyzes urban planning and management capacities to maintain resilience despite environmental and technological hazards.

Prerequisites: GEOG 100S or GEOG 101S or permission of the instructor

GEOG 480W Senior Seminar in International Studies (3 Credit Hours)

Interdisciplinary research and the preparation of a senior thesis in international studies. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, senior standing in the BAIS degree program or permission of the instructor

GEOG 481 Geographic Inquiry and Professional Development (3 Credit Hours)

This course is designed to allow students to synthesize Geography concepts, theories, and knowledge and apply them to: 1) understand their positionality within the paradigms of the discipline, 2) explore future career paths, discover job possibilities, and graduate school opportunities in Geography, and 3) prepare materials (such as resumes and e-portfolios) to be used to apply for such positions.

Prerequisites: GEOG 100S OR GEOG 101S OR GEOG 102T

GEOG 490/590 Applied Cartography/GIS (1-3 Credit Hours)

Practical experience in applying the principles of cartography and geographical information systems to the design and construction of maps and other graphics.

Prerequisites: Junior standing or permission of the instructor

GEOG 495/595 Topics in Geography (1-4 Credit Hours)

The advanced study of selected topics which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Appropriate survey course or permission of the instructor

GEOG 496/596 Topics in Geography (1-4 Credit Hours)

The advanced study of selected topics which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Appropriate survey course or permission of the instructor

GEOG 497/597 Independent Research in Geography (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of the instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the director of geography

GEOG 498/598 Tutorial Work in Geography (1-3 Credit Hours)

Independent study under the direction of an instructor.

Prerequisites: Permission of instructor

GEOG 499 Senior Thesis (3 Credit Hours)

Completion of a research paper supervised by a faculty member from the Geography program. Research topic to be selected in concert with the faculty supervisor and a final written report required.

Prerequisites: GEOG 308 and senior standing in Geography

GER - German

GER 101F Beginning German I (3 Credit Hours)

This is the first part of a two-semester introductory German language and culture course. Through the study of German culture, such as German geography, etiquette, customs, holidays as well as university, family, and work life, students learn basic grammatical concepts and vocabulary. The communicative cultural approach, interactive in-class and homework assignments, and the inclusion of multimedia (online resources, Youtube videos, songs, texts, films, etc.) enhance the acquisition of the basic skills of listening comprehension, speaking, reading, writing, and cultural competency.

GER 102F Beginning German II (3 Credit Hours)

This is the second part of a two-semester introductory German language and culture course. Through the study of German culture, such as food and leisure culture, the German health system, and traveling in Germany, students continue to learn basic vocabulary and grammatical concepts. The communicative cultural approach, interactive in-class and homework assignments, and inclusion of multimedia (online resources, Youtube videos, songs, texts, films, etc.) enhance the acquisition of the basic skills of listening comprehension, speaking, reading, writing, and cultural competency.

Prerequisites: GER 101F

GER 195 Topics in German (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule.

GER 196 Topics in German (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule.

GER 201 Intermediate German I (3 Credit Hours)

This is the first part of a two-semester intermediate German language and culture course. Through the study of German culture, students continue to learn basic vocabulary and grammatical concepts and deepen their understanding of German culture. The communicative cultural approach, interactive in-class and homework assignments, and inclusion of multimedia (German websites, Youtube videos, songs, texts, films, etc.) enhance the acquisition of the basic skills of listening comprehension, speaking, reading, writing, and cultural competency.

Prerequisites: GER 102F or satisfactory score on the placement test

GER 202 Intermediate German II (3 Credit Hours)

This is the second part of a two-semester intermediate German language and culture course. Through the study of German culture, students continue to learn basic vocabulary and grammatical concepts and deepen their understanding of German culture. The communicative approach, interactive in-class and homework assignments, and inclusion of multimedia (online resources, Youtube videos, songs, texts, films, etc.) enhance the acquisition of the basic skills of listening comprehension, speaking, reading, writing, and cultural competency.

Prerequisites: GER 102F or satisfactory score on the placement test

GER 295 Topics in German (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule.

GER 296 Topics in German (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule.

GER 311 Global Conversations (3 Credit Hours)

This course is primarily a conversation course to develop linguistic and cultural proficiency in verbal communication. Task-oriented communication strategies in cross-cultural training will be practiced by presenting students with models that demonstrate appropriate linguistic and cultural competencies. Students will practice these skills by role-playing, giving presentations, enriching self-awareness with practiced in-group discussions on various topics (such as, prejudice, racism, values, and customs) that dispel stereotypes and foster more in-depth social-cultural understanding, and with participation in guided cultural encounters. Students will improve their listening and comprehension skills and deepen cultural proficiency by learning how to communicate and collaborate with other people and cultures in a global age. (This is an oral skills course.)

Prerequisites: A grade of C or better in GER 202 or advanced placement or permission of the instructor

GER 312W Writing Around the World (3 Credit Hours)

This is a writing intensive course designed with writing assignments that examine various cultural contexts that enable students to understand cultural content, style, audience and organization. The main objective of the course is increased awareness of and sensitivity to appropriate word choice, and syntax in the language. Students will engage in writing for different cultural audiences and in varied contexts such as literary, artistic and media expressions around the world. Special emphasis is placed on the methodology of close reading as students hone the analytics skills and vocabulary necessary to interpret idioms, regionalism, cultural expressions and overall intercultural skills observed in various genres and cultures. Students will analyze compelling global issues and the diverse cultural perspectives that inform them.

Prerequisites: A grade of C or better in ENGL 211C, ENGL 221C or ENGL 231C and a grade of C or better in GER 202, advanced placement or permission of the instructor

GER 323 World Cultures and Contexts (3 Credit Hours)

Over the centuries, German culture and history have exerted a tremendous influence on Western Civilization. This course will trace Germany's historical and cultural development from Emperor Barbarossa's Holy Roman Empire of the German Nation to World War I. Readings will include segments from various chapters of *Die Deutschen* reflecting central aspects of the major cultural epochs of Western Civilization including the Middle Ages, the Age of Reformation and the Nordic Renaissance, Baroque, The Age of Enlightenment, German Classicism and Romanticism, Young Germany during the revolutionary period of 1848 and up to German Expressionism and World War I. The central themes will be complemented by a variety of other samples drawn from poetry, philosophy, music and the visual arts.

Prerequisites: GER 311 or GER 312W

GER 350 Modern Swiss German Literature: A Multicultural Model (3 Credit Hours)

Readings and discussions of selected master works by Frisch and Durrenmatt, the two literary giants of modern Swiss literature. Topics include the multicultural aspects of modern Switzerland, the concepts 'Heimat,' provincialism versus globalism, Old World versus New World, the dialectics of myth and modernity, the mixed blessings of technology, as well as the discourse of gender ideology and matriarchal mythography. The course is complemented by a film screening and slide presentations. Readings and discussions are in German.

Prerequisites: GER 311 or GER 312W or permission of the instructor

GER 355 The City as Cultural Focus (3 Credit Hours)

This course will focus on a particular German city such as Berlin, Vienna, or Munich in light of historical and cultural shifts and continuities. Students will read literary and historical texts, poetry and newspaper articles and screen films.

Prerequisites: GER 311 or GER 312W or permission of the instructor

GER 366 Business German: Language and Culture (3 Credit Hours)

This is an advanced intermediate German language and culture course that prepares students for using German in professional settings. Since the course focuses on German language usage in personal, business, and employment situations, the vocabulary is geared toward living and working abroad. Students gain a deep knowledge about German business culture and social etiquette, engage in situational role-playing, create an application portfolio in German geared towards the German job market, and prepare for job interviews. The workshop format of the course, the inclusion of online resources and authentic materials provide students with hands-on immersion in German business culture. This course offers some grammar review and practice.

Prerequisites: GER 311 or GER 312W or permission of the instructor

GER 378 Extracurricular Studies (1-3 Credit Hours)

An extracurricular activity approved for credit based on objectives, criteria, and evaluative procedures as formally determined by the department and the student prior to the semester in which the activity is to take place. Such credit is subject to review by the provost.

Prerequisites: approval of the department chair

GER 380 German Literature from Sturm und Drang to Jugendstil (3 Credit Hours)

Readings and critical interpretations of exemplary literary works and historical documents that reflect the various representative periods of German and European culture and history from the second half of the 18th century to the beginning of the 20th century. In addition to understanding and appreciating these texts for their own artistic and historical value, students will also interpret them as first intellectual articulations of issues that will become central for the social and cultural history of (post-) modernity. They include the topics of religious relativism, issues of gender and sexual politics, aesthetics, social justice and multicultural diversity. The course will be complemented with video clips, films, and samples from musical history and the visual arts. Readings and discussions in German.

Prerequisites: GER 311 or GER 312W

GER 395 Topics in German (1-3 Credit Hours)

A study of selected topics designed for non-majors, or for elective credit within a major. These courses will appear in the course schedule.

Prerequisites: GER 202 or the equivalent

GER 396 Topics in German (1-3 Credit Hours)

A study of selected topics designed for non-majors, or for elective credit within a major. These courses will appear in the course schedule.

Prerequisites: GER 202 or the equivalent

GER 407/507 Advanced Grammar and Syntax (3 Credit Hours)

This class is designed to solidify and refine students' working knowledge of written skills in the language, with an emphasis on increasing their written sophistication. Focus is on analysis of vocabulary, grammar, and cultural nuances in the syntax to examine how language reflects the ways of life and beliefs of its speakers, contrasted with the extent of language's influence on culture. Students will refine their skills in written inter-cultural communication, paying attention to idioms and the fine points of 'cultural grammar' communicative competence and specialized discourse to develop excellent communication skills. This course is intended to prepare students for using their knowledge of language and culture in professional settings.

Prerequisites: GER 311 and GER 312W, or permission of the instructor

GER 408/508 Conversation and Composition (3 Credit Hours)

This course is designed to further develop the mastery of spoken and written German, review grammar, build vocabulary and fine-tune the student's stylistic proficiency in German. The textbook *Anders gedacht* is an intermediate/advanced reader that covers a wide variety of historical, political and cultural events and developments in contemporary German speaking countries. The *Übungsbuch* accompanies the grammatical and thematic features of the textbook and provides further exercises. The course will be complemented by several video screenings and multi-media presentations covering a variety of aspects in contemporary German speaking culture.

Prerequisites: GER 311 and GER 312W, or permission of the department chair

GER 410/510 Berlin and Paris: Crucibles of European Ideas (3 Credit Hours)

This course explores the cultural movements that have characterized the German-French commonalities and differences from the early 1900s through the 1990s in cross-disciplinary discourses such as film, literature, art, politics, and economics. Cross-listed with WCS 410/WCS 510.

Prerequisites: German and French students must read and write in the target language

GER 420/520 Masterpieces of German Poetry (3 Credit Hours)

This course will delineate 800 years of German poetry, analyzing exemplary works within their cultural and historical context such as the courtly love tradition of the Middle Ages, the spirituality of the German Reformation, the (meta-)physical passions of the Baroque, the humanist ideals of Weimar Classicism, the profound longings and ultimate ironies of German Romanticism, fin de siècle symbolism and European decadence, the avant-garde of Weimar culture, the legacy of the Third Reich, and the poetics and politics of East/West Germany up to the fall of the Berlin Wall and the unification of Germany. The close readings will be complemented by videos, film clips, slides and musical samples. Readings and discussions in German.

Prerequisites: GER 311 and GER 312W, or permission of instructor

GER 445/545 German Cinema I (3 Credit Hours)

The first half of the 20th century was the most creative and destructive period in German and European history. Its rich cultural achievements included Viennese psychoanalytical theory of the turn of the century, Art Nouveau, German Expressionism, and the avant garde aesthetics of the Weimar Republic. Conversely, World War I and II exposed the cultural agony and human depravity of modern civilization. This course will trace these various aspects and developments in a variety of exemplary genres. Readings and discussions in German. (Cross-listed with WCS 445/WCS 545 and COMM 444/COMM 544)

Prerequisites: GER 311 or GER 312W or permission of instructor

GER 446/546 German Cinema II (3 Credit Hours)

This course will focus on the German cinema from perspectives such as fascism and its legacy, film as historical critique, or Weimar cinema. This survey course covers major German movies in film history from the 1970's to the present. (Cross-listed with WCS 445/WCS 545 and COMM 444/COMM 544)

Prerequisites: GER 311 or GER 312W or permission of instructor

GER 450/550 German Satires and Parodies (3 Credit Hours)

A study of comical and satirical features in exemplary literary and visual texts ranging from late medieval broad sheets and moralistic narratives to postmodern parodies in literature, music, film and graphic design. Students will study a wide variety of texts and analyze them as critical reflections of their social and cultural contexts, which include the spiritual conflicts and religious challenges of the Age of Renaissance and Reformation, anti-Nazi collages, and the permanent quest for pleasure and entertainment in our present-day multi-media Spassgesellschaft (fun society). Readings and discussions in German.

Prerequisites: GER 311 and GER 312W, or permission of instructor

GER 455/555 Germany 1900-1945: From High Culture to Holocaust (3 Credit Hours)

The first half of the 20th century was the most creative and destructive period in German and European history. Its rich culture achievements included Viennese psychoanalytical theory of the turn of the century, Art Nouveau, German Expressionism in painting and poetry, and the avant garde aesthetics of the Weimar Republic (film, dance, cabaret, architecture etc). They played a central part in the evolution of a modern and postmodern sensibility. Conversely, World War I and World War II exposed the cultural agony and human depravity of modern Civilization. This course will trace these various aspects and developments in a variety of exemplary verbal and visual texts, including the genres of poetry, novella, drama, painting and film. Readings and discussions in German.

Prerequisites: GER 311 and GER 312W

GER 470/570 Post World War II Germany (3 Credit Hours)

The course will cover representative literary texts and cultural events of divided and united Germany, including Heinrich Boll, Gunter Grass, Max Frisch, Christa Wolf, Doris Dorrie et al, as well as film, painting, popular music, the culture of memory and German Jewish relations after the Shoah.

Prerequisites: GER 311 or GER 312W

GER 476/576 German-Jewish Literature and Culture (3 Credit Hours)

A survey of seminal texts by German-Jewish philosophers and writers from the Enlightenment to the present day, including Marx, Kafka, Freud, Schnitzler and Arendt. (cross-listed with WCS 476/WCS 576).

Prerequisites: junior standing

GER 478/578 German Drama (3 Credit Hours)

This course provides a survey of representative examples from 200 years of German drama. Texts include plays from Weimar Classicism, Young Germany, Naturalism and Symbolism, fin de siècle Vienna, German Expressionism, Weimar Modernism, Exile Literature, "Vergangenheitsbewältigung" (texts of coming to terms with the past), and post-modern experimentalism. The course will focus on issues such as mythology, psychopathology, sexual morality, epic theater, Marxist ideology, fascism and guilt, and feminist politics and aesthetics. The readings will be complemented by screenings of various film adaptations. All readings and discussions are in German.

Prerequisites: GER 311 and GER 312W

GER 495/595 Topics in German (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: appropriate survey course or permission of the instructor

GER 496/596 Topics in German (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: appropriate survey course or permission of the instructor

GER 497 Tutorial Work in Special Topics in German (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: senior standing and approval of the department chair

GER 498 Tutorial Work in Special Topics in German (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: senior standing and approval of the department chair

HEBR - Hebrew

HEBR 111F Beginning Hebrew I (6 Credit Hours)

Aural comprehension, oral drill and discussion of grammar principles, written exercises and reading assignments.

HEBR 212 Intermediate Hebrew (6 Credit Hours)

Oral drill and discussion of grammar principles, written exercises and reading assignments.

Prerequisites: HEBR 111F or permission of the instructor

HIST - History

HIST 100H Interpreting the World Past Since 1500 (3 Credit Hours)

The course offers students a critical approach to interpreting World history. A fast-paced survey of World history from 1500 to the present, it focuses on the major intellectual, religious, social, cultural, political, environmental and scientific developments that have influenced the course of World history. It looks at cross-cultural relations in the form of economic exchange, technology transfer, war and conquest, and international organizations.

HIST 101H Interpreting the Asian Past (3 Credit Hours)

The course is a fast-paced survey of Asian civilization in a global context from the emergence of Indian and Chinese civilizations to the events unfolding today. It follows the courses of political, social, cultural, religious, and economic development in East, South, and Southeast Asia.

HIST 102H Interpreting the European Past (3 Credit Hours)

The course is a fast-paced survey of European civilization. It focuses on the major intellectual, religious, social, cultural, political, environmental, and scientific developments that have influenced the course of European history.

HIST 103H Interpreting the Latin America Past (3 Credit Hours)

This fast-paced survey covers the last 600 years in the political, social, economic, and cultural histories of Latin America. Special attention will be paid to the global context of this multi-ethnic and multi-lingual region.

HIST 104H Interpreting the American Past (3 Credit Hours)

This course offers students a critical approach to interpreting the history of the United States. A fast-paced survey of American history from the era of colonization to the present, it focuses on the major intellectual, religious, social, cultural, political, environmental, and scientific developments that have influenced the development of the United States.

HIST 105H Interpreting the African Past (3 Credit Hours)

This course offers students a critical approach to interpreting the history of Africa. A fast-paced survey of African history, it affords students a grounding in the major themes of African history. The course focuses on the major economic, social, and political institutions of Africa, past and present, and explores how historical developments assist comprehension of present-day Africa.

HIST 126H Honors: Interpreting the American Past (3 Credit Hours)

The course is open only to students in the Honors College. Special honors section of HIST 104H.

HIST 127H Honors: Interpreting the European Past (3 Credit Hours)

The course is open only to students in the Honors College. Special honors section of HIST 102H.

HIST 201 Introduction to Historical Methods (3 Credit Hours)

Required of all history and secondary education social studies majors. Recommended prior to upper-division course work. Examines methods of historical research and primary and secondary source analysis, inclusive of internet usage. Explores historiography and historical writing. Introduces students to issues in the philosophy of history.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 205H Heroes & Hoplites: History of Ancient Greece (3 Credit Hours)

This course explores the history and material culture of the ancient Greek world, from the Bronze Age Minoans to the end of the Peloponnesian War between Athens and Sparta. Key ideas will include Greek religion, hoplite warfare, the conflict with Persia and the development of Athenian democracy.

HIST 302 People, Technology & Belief: the World to 1500 (3 Credit Hours)

The course gives students a critical perspective on world civilizations from prehistory to 1500. It focuses on the major cultural, intellectual, scientific, geographic/environmental and religious developments of the world. The course emphasizes the critical assessment of primary documents and artifacts and the utilization of that material in the classroom.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 304T History of Medicine, Disease, and Health Technology (3 Credit Hours)

Examines the history of medicine and epidemiology from ancient times through the twenty-first century. The course takes a comparative look at medical practices in Europe and around the globe and focuses heavily on the complex relationship between human societies and disease. The development of medical technologies and their impact are examined.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 309 The Crusades (3 Credit Hours)

This course examines the series of conflicts between Western Europe and the Middle East from the 11th to the 14th century. It investigates the motives, process and outcomes of the invasion of the Middle East by European armies. It also addresses how this phenomenon has been understood in the past.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 310 Renaissance Europe (3 Credit Hours)

This is an examination of the Renaissance in both Italy and Northern Europe from the 14th to the 16th centuries emphasizing the new learning, humanism and the place of the individual as well as the political and artistic new achievements of the age.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H

HIST 311 Early Modern Europe (3 Credit Hours)

The course covers the period between the late Middle Ages and the beginning of the modern era, roughly 1350-1715, exploring the Renaissance, the Reformation, and the Age of Exploration. There is emphasis on the culture of the period as contemporaries coped with depression, plague, religious change, and cultural encounters outside Europe.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H

HIST 312 The Rise of Rome: The Roman Republic (3 Credit Hours)

The course explores the history and material culture of the Roman Republic from its foundation in the sixth century BCE through the civil wars of the first century BCE. This class will emphasize the political institutions of the Republic and its conquests throughout the Mediterranean world. It will also study the social and religious institutions that influenced Rome.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 313 Bread and Circuses: The Roman Empire (3 Credit Hours)

This course explores the history and material culture of the Roman Empire as it emerged from the ashes of the Roman Republic, through its transformation in later antiquity under the Christian emperors. It studies the emperor's ability to maintain peace and explores the ways in which religion, family, and entertainment shaped the daily life of the empire's inhabitants.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 315 Into the Arena: Christians in the Ancient World (3 Credit Hours)

How did Christians go from being a tiny sect to the religion of the Roman Empire? Why did some Romans persecute Christians? Could someone be both a Jew and a Christian at the same time? This class explores the history and material culture of early Christianity from its origins in Jewish Palestine to its ascendancy as an imperial religion.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 316 Cold War in History (3 Credit Hours)

The course explores changes in the international system which arose in the wake of World War II and focuses on conflict and cooperation in selected regions of the developed and developing world.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 320 Ancient Greece Study Abroad: Temples, Treasures and Transformations (3 Credit Hours)

This study-abroad course is an on-site immersion in history, archaeology, and art of Greece from the heroes of the Bronze Age to the military might of the Spartans, the architectural achievements of the Athenians, the transformations of the Romans and Byzantines, and ultimately the birth of modern Greece.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H; instructor approval is required

HIST 321 Promised Land, Holy Land: From Ancient Israel to the Muslim Conquest (3 Credit Hours)

This course examines the history and archeology of the region that is today the modern state of Israel, a contested region from antiquity to today. It considers identity formation among ancient Israelites and Samaritans, along with the way that Jews, Christians, Muslims and the empires that ruled them, conceptualized the land.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H or HIST 205H; instructor approval required

HIST 322 Ancient and Medieval England (3 Credit Hours)

This course explores the social and political history of early England, with an emphasis on the fall of the Romans, the Anglo-Saxon and Norman invasions, medieval social and cultural life, the evolution of feudal relationships, and the development of the English monarchy.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 323 Britain and the World (3 Credit Hours)

This course explores the development of Britain in the 18th, 19th and 20th centuries. Key themes include the evolution of English democracy, the rise and decline of the British empire, Britain's role in international affairs, and England's tenuous relationship with Ireland, Scotland, and Wales.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 324 Europe in the Twentieth Century (3 Credit Hours)

This course explores the evolution and development of European states, institutions and cultures over the course of the twentieth century. Relations among European states--large and small--and their peoples are examined.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 325 Rise and Fall of Empires (3 Credit Hours)

This course examines the expansion of European empires from the 15th through the 20th century. It explores the dynamics of imperialism and colonialism, including ideologies of conquest, trade and commerce, labor and slavery, cultural encounters, and racism and exploitation. It concludes with a review of decolonization and its consequences for our world.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 327 Russia: Culture and Civilization (3 Credit Hours)

The course is a survey of Russian history from the ninth to the end of the nineteenth century stressing the distinctiveness of Russian culture and institutions, the influence of the West, the multi-national character of the Empire, and the decline of the old regime.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 328 Russia from Stalin to Putin (3 Credit Hours)

The course is a survey of the formation and development of the USSR from the fall of the Russian monarchy and the revolutions of 1917 to the emergence of the Russian Federation after 1991.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 330 Modern South Asia, c. 1700 to Present (3 Credit Hours)

This course examines the history of the area comprising the modern nation-states of India, Pakistan, Bangladesh, and Afghanistan from the early eighteenth century to the present day. Topics will include: precolonial states and societies, colonial rule and its impact, anticolonial nationalist and regional separatist movements; movements for gender and sexual equality; globalization and the environment.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 336 The Emergence of New China (3 Credit Hours)

The course is the history of China covering late Imperial China, the impact of Western imperialism, the Republican Period, and the establishment of the People's Republic.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 338 Japan's Era of Transformation (3 Credit Hours)

This is the history of Japan since 1800. It covers the decline of the Tokugawa Shogunate, modern nation building in the Meiji period, domestic conflicts and war in the twentieth century, and the roots of Japan's economic prominence today.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 345 Native American History (3 Credit Hours)

The course examines the history and culture of Native American peoples from early contact with Europeans to present day. There is particular focus on ways that cultural interactions affected and transformed native peoples - their beliefs, societies, and political structures.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 346 Colonial and Revolutionary America (3 Credit Hours)

The course examines social, cultural, economic and political developments in North America from 1492 to the ratification of the Constitution of 1787. Course explores the role of class, gender, and race in the creation of an American culture.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 348 The Early American Republic, 1787-1850 (3 Credit Hours)

The course explores America's transformation from a republic to a democracy by examining the political, economic, social and intellectual history of the United States' first half century.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 349 American Naval History (3 Credit Hours)

This course examines American naval history and American naval theory from the colonial period to the present day. It analyzes the importance of American naval conflicts, developments in naval technology, and the social and political changes that shaped the U.S. Navy.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 350 History of the Old South (3 Credit Hours)

The course is a study of the Old South civilization from the colonial era to the Civil War, with particular emphasis on the frontier, slavery, the cotton kingdom, and southern cultural contributions.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 351 The Civil War and Reconstruction (3 Credit Hours)

The course is a study of the origins of the idea of secession and of the war, of the military, political, and economic contest between the Confederate and Federal governments, and finally of the long-range effects of the war as revealed in the failure of Reconstruction.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 352 The Immigrant Experience in U.S. History (3 Credit Hours)

This class examines the history of U.S. immigration during the 19th and 20th centuries. The course strives to complicate the 'Melting Pot' metaphor in U.S. history by exploring the transnational quality of immigrants' lives, the way class, race, gender, and nationality have shaped the immigrant experience, and the role nation-states have played in managing immigration.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 353 Robber Barons, Reformers, and Radicals: The US Gilded Age and Progressive Era (3 Credit Hours)

This course covers the Gilded Age and Progressive Era of U.S. history (1870s-1920s), a dynamic period characterized by industrialization, imperialism, international and internal migration, World War I, and a variety of social and political movements. This course explores these and other topics from an international perspective to consider how global processes influenced the U.S., and how the U.S. influenced the rest of the world in the late 19th and early 20th century.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 354 From the Jazz Age to the Atomic Age: US, 1920-1945 (3 Credit Hours)

The course covers the domestic and international history of the U.S. during the Roaring Twenties, The Great Depression, World War II.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 355 The United States, 1945-1991 (3 Credit Hours)

The course is the history of the United States from the end of World War II to the end of the Cold War. The course focuses on domestic politics, social change, economic developments and international relations.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 356 Virginia History (3 Credit Hours)

The course is an examination of Virginia's past from Jamestown to the present. The course emphasizes the colonial experience, Virginia's role in the new nation, the post-Civil War era and Virginia in the twentieth century.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 357 The United States in the 1960s (3 Credit Hours)

The course examines the political, social and cultural revolutions which occurred in the United States from 1960 to 1974. Topics include the reforms of JFK and LBJ; the rise of conservatism; the impact of the baby boom generation; the civil rights, anti-war, and women's movements; the war in Indochina; and Watergate and the fall of Richard Nixon.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 358 The U.S. in the Second World War (3 Credit Hours)

The course is designed to familiarize students with important concepts in the history of America's involvement in the Second World War. It surveys the significant events, personalities, and changes that occurred between 1941 and 1945, heavily focusing on America's three 'fronts': the European, the Pacific and the home front.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 359 American Maritime History (3 Credit Hours)

The course explores the various maritime influences in American history. Topics discussed include ocean exploration, navies and maritime conflicts, shipping and shipbuilding, marine resource extraction, rivers and canal transportation, maritime migration, water use, and other issues in maritime history from exploration to the present.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 360 American Military History (3 Credit Hours)

The course is a study of American military policy, 1763 to the present, in relation to its political, economic, and social implications.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 361 African-American History to 1865 (3 Credit Hours)

The course examines African-American history from the African background through the Civil War. Emphasis is placed on an analysis of African-Americans' role in the political, economic, social and cultural life of the United States.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 362 African-American History Since 1865 (3 Credit Hours)

This course examines African-American history from Reconstruction to the present. Emphasis is placed on the analysis of African-Americans' role in the political, economic, social and cultural life of the United States.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 363 Women in U.S. History (3 Credit Hours)

The course examines the experiences of women in U.S. history from 1607 to the present, paying particular attention to influences of race, class, ethnicity and changing conceptions of gender.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 365 Reform in U.S. History (3 Credit Hours)

This course explores the role of reform in shaping American history from the colonial era to the late 20th century. Topics addressed include rebellion as reform, the eras of reform, reform in modern America, and the role of conformity versus individualism.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 368 Internship (3 Credit Hours)

The content varies according to the internship. Qualifies as a CAP experience.

Prerequisites: Permission of the department and one or more Interpreting the Past courses

HIST 369 Practicum (3 Credit Hours)

The content varies according to practicum.

Prerequisites: Permission of the department and one or more Interpreting the Past courses

HIST 370 Africa and the Atlantic Slave Trade (3 Credit Hours)

This course examines political, commercial and cultural developments in the Atlantic world from 1400 to 1900 in the context of the Atlantic slave trade. It provides students an understanding of the historical slave trade, including the roles of Europeans, Americans and Africans within the trade, the slave trade's impact on African economies and societies, the experiences of enslaved people, and the making of an African Diaspora.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 371 Modern Mexico (3 Credit Hours)

This survey of Mexico's history since independence highlights the social, cultural and economic changes that accompanied four turning points in the political history of Mexico: the independence movement, the wars of the reform, the Revolution of 1910, and the trend toward democratization that began in the 1980s. Attention will be paid to the changing scope of Mexico's relations with the United States, and to comparisons of Mexico's experience with that of other Latin American countries.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 372 Central America and the Caribbean Since 1800 (3 Credit Hours)

This course surveys socio-economic and political change after about 1800 in the Caribbean Basin (Central America and the insular Caribbean), a region whose diverse colonial, ethnic, labor and migratory experiences will provide rich opportunities for comparative study. Plantation slavery and its legacies, independence movements, export-led economic growth, nationalism, social movements, revolution and great-power rivalries will be the major themes.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 373 U.S.-Latin American Relations (3 Credit Hours)

This survey of Latin America's relations with the United States since the early nineteenth century will seek to identify and account for changing patterns in what has been a highly asymmetrical power relationship. The emphasis will be on the outcomes of U.S. policy in the region, combining the study of broad trends (especially in economic and security policy since the 1890s) with a close analysis of three cases: Mexico, Cuba and Central America. The influence of the larger international environment on those relations will be considered.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 374 Spain in America: The Rise of the Hispanic World (3 Credit Hours)

Beginning with Spain's leading role in European expansion in the 15th and 16th centuries, this course explores the formation of the 300-year Spanish empire in America, the impact in both America and Europe of its encounter with native Americans, and the myriad colonial-era institutions that would shape the future of the Hispanic world.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 381 Africa in the 20th Century (3 Credit Hours)

This course surveys the political, social and cultural history of colonial and post-independent Africa. Major themes include colonization and resistance, anti-colonial movements, social and cultural transformations, urbanization and popular culture and post colonial challenges.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 382 African Civilizations (3 Credit Hours)

This course explores the history of African states, societies, and cultures from the earliest civilizations to the nineteenth century. Major themes include: trade, technology and state formation, power and authority in ancient and medieval Africa, women and gender, religious transformations, including the spread of Christianity and Islam, and cross-cultural encounters.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 386T The Evolution of Modern Science (3 Credit Hours)

The course traces the development of modern science from the ancient Greeks to the 21st Century.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 388T Discovering Earth's History (3 Credit Hours)

Geology and paleontology as technological systems during the industrial revolution of the nineteenth century, including global & local exploration, competing interpretations of empirical data, and the discovery that the earth itself had a history whose sources were inscribed in the very ground on which they walked. Readings include Darwin, Lyell, Humboldt, and others.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 389T Technology and Civilization (3 Credit Hours)

This course examines the role of technology and relevant science. Students examine the interaction between society and technology and investigate why technology is both a reflection of, and a shaping influence upon, "modern" culture and beyond.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 391 Paris/Auschwitz Study Abroad (3 Credit Hours)

This course explores the history of the Holocaust in France and Poland by taking students to key sites tied to the Holocaust in Europe. Students visit Paris and explore the history of pre-war Jewry and sites of deportation. Students travel to Poland and juxtapose the French and Polish experience and denial of the Holocaust. Public history in the museum setting is explored.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 392 The Holocaust and Vichy France (3 Credit Hours)

This course surveys French history during World War II, focusing on the fall of France, the German occupation, and the establishment of the Vichy collaborationist government. It explores the fate of French and foreign-born Jews under Vichy, deportation and resistance, and the issues of post-war memory and denial.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 393 Studies in Jewish History (3 Credit Hours)

This course examines specific topics, eras, and themes of Jewish history. Specific titles will be listed in the on-line course schedule.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 394 Independent Study in Political and Social History (3 Credit Hours)**HIST 396 Topics in History (1-3 Credit Hours)**

The course is a study of selected topics. These courses are open to both majors and nonmajors. History majors may take these courses to satisfy history concentration requirements. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 402W Senior Seminar in History (3 Credit Hours)

The course is an advanced study of selected topics leading to production of a research paper. It is required of all history and secondary education social studies majors. This is a writing intensive course.

Prerequisites: HIST 201 and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

HIST 408 War and American Society in the Twentieth Century (3 Credit Hours)

The course is an exploration of the content and meaning of wartime experiences within American society between 1898 and 1975. Emphasis is on comparing the levels of national, institutional and personal experiences of war as they affected people at home and in battle, and on considering the relationships between war-making and social development at particular times.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 409 History of US-Mexico Borderlands (3 Credit Hours)

The course examines the history of the region straddling the U.S. - Mexico border from the Spanish Conquest to the present day, focusing on issues of immigration, economic and political integration and the complicated nature of state-building in a transnational environment.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 414 Freedom, Rights and Revolution: Evolution of the State System 1648-1815 (3 Credit Hours)

The course examines the social, cultural, political, legal and diplomatic history of Old Regime Europe, the rise of the territorial state, and challenges to its authority. In addition to events and sources contemporary to that age, students will be introduced to the most important interpretive theories that have emerged in the past generation on the Continent as well as in Britain and America.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 415 Empire, Nations, and Industrialization: Evolution of the State System, 1815-1914 (3 Credit Hours)

The course focuses on the evolution of international politics, diplomacy, and social, cultural and economic structures in the development of empires, nations and industrialization in the evolution of the modern state system from 1815 to 1914. Explores the relationship among European powers and their relations with smaller states in Europe and spheres of influence throughout the world.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 416 States, Territories and International Organization: Evolution of the State System Since 1914 (3 Credit Hours)

The course focuses on the evolution of international politics, diplomacy and social, cultural and economic structures in states territories, and international organizations since 1914. Emphasis on shifting European alignments since 1914, the two World Wars, the development of the bi-polar world and the development and evolution of international organizations.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 417 World War I: The Great World War on All Fronts (3 Credit Hours)

This course will examine "The Great War" from its origins in the late nineteenth century to the Paris Peace Conference and from a variety of perspectives from battlefields and trenches to the home-front. It will also consider the impact of the war on society and its relevance to the contemporary world.

Prerequisites: Hist 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 450 American Revolution and Historical Memory (3 Credit Hours)

This seminar style course will introduce the principal writings and interpretations of the era of the American Revolution from the mid-eighteenth century to the ratification of the federal constitution of 1787. Besides exploring the relationship between the British Empire and its colonies, the course will look at the role of historical memory in understanding of the past.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126, HIST 127H, or HIST 205H

HIST 451 The Atlantic World and Early America (3 Credit Hours)

During the early modern period, global processes of imperial, economic, and demographic expansion drew British North America into transnational networks that spanned the Atlantic Ocean and brought Europeans, Africans, and Americans together. This course will explore the Atlantic World as a place, a process, and a new field of historical inquiry.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 455 African-American Historiography (3 Credit Hours)

The course is an examination of the ways historians have addressed specific issues in African-American history.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 456 Research in Local History (3 Credit Hours)

The course explores the history of Hampton Roads through student use of research materials.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 470 Struggle for Democracy and Development in Latin America (3 Credit Hours)

This course analyzes, from a historical perspective, two core problems in Latin America's modern (since c. 1880) history: political authoritarianism and economic underdevelopment. The temporal and spatial dimensions of change are highlighted in discussions of patron-client political systems, military autonomy and impunity, social movements and revolution, export-oriented economic growth, industrialization, and the roles of national, ethnic and gender identities.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 471 Revolution in Latin America (3 Credit Hours)

No world region matches Latin America in the frequency or extensive impacts of social revolution and social revolutionary movements from the 19th century to the present. A comparative approach to causation, process and outcome will govern the course, with special attention to the role of violence, ideology, international relations and socioeconomic structure.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 475 Global Africa (3 Credit Hours)

The course is designed to enrich students' understanding of the political, economic, social and cultural forces that shaped Africa and continue to affect the lives of peoples throughout the continent. It will focus on the contributions of African people, ideas and materials to global history and the impacts of imperialism, decolonization and globalization in Africa.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 480W Senior Seminar in International Studies (3 Credit Hours)

This writing-intensive course for advanced undergraduates explores the international dimensions of historical problems selected by the instructor. It fulfills the Senior Seminar requirement for International Studies majors, who are expected to have senior standing.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, senior standing in the BAIS degree program or permission of the instructor and the director of the BAIS program

HIST 481 Museums and Museology (3 Credit Hours)

The course examines the history of the public museum. It introduces museology, the profession of museum organization and management, focusing on design, outreach, artifact acquisition and preservation, and international museum standards. Museums as sites of historical research and teaching will receive special attention.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 482 Global History of Sport (3 Credit Hours)

This course examines imperialism, globalization, cultural diffusion, modernization, and social movements through the aperture of global sport. It pays attention to how sports act as embodiments of cultural performance and enable culture and political influence, as well as resistance, from the ancient Greeks through the twentieth century.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 483 Oral History (3 Credit Hours)

This course introduces students to the theories and methods of oral history. Topics include the history and applications of history, memory and history, project design and collection, and how to interpret and present interviews. Students will also learn about the technologies and digital formats of oral history and apply them during final projects.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H or HIST 205H

HIST 493 Holocaust and Film: Representing the Unimaginable in the Visual Turn (3 Credit Hours)

The course explores the history of the Holocaust through the medium of film as document, testimony, propaganda, artifact, artistic representation and projection of collective memory. Special attention is given to considering the medium of film from the viewpoint of the historian.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, HIST 127H, or HIST 205H

HIST 495/595 Topics in History (1-3 Credit Hours)

The course is an advanced study of selected topics designed for small groups of qualified students to work on subjects of mutual interest which may not be offered regularly. These courses appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: HIST 100H or HIST 101H or HIST 102H or HIST 103H or HIST 104H or HIST 105H or HIST 126H or HIST 127H or HIST 205H

HIST 497 Tutorial Work in Special Topics in History (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: HIST 201 and HIST 100H, or HIST 101H, or HIST 102H, or HIST 103H, or HIST 104H, or HIST 105H, or HIST 126H, or HIST 127H, or HIST 205H, senior standing, and approval of the department chair

HIST 498 Tutorial Work in Special Topics in History (3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the department chair

HLSC - Health Sciences

HLSC 318 Principles of Nutrition (3 Credit Hours)

This course is designed especially for those entering the health education or health care field, covering the physiology of each of the major body systems as a basis for understanding those aspects of its function that reflect the importance of various nutrients.

Prerequisites: CHEM 105N-CHEM 106N or CHEM 121N-CHEM 122N and CHEM 123N-CHEM 124N; BIOL 240, BIOL 241, BIOL 250 or BIOL 251, or permission of the instructor

HLSC 320 Health Equity and Disability Culture (3 Credit Hours)

This course will explore the history of health equity and disability and how prejudice and discrimination against people with disabilities impact health. Students will learn how to apply health equity frameworks, theories, and research to address disability-specific models of health disparities and to achieve health equity in populations with disabilities.

Prerequisites: RT 261 with a grade of C- or higher or PUBH 200 with a grade of C or higher or HLTH 120G with a grade of C or higher

HLSC 335 Population Health (3 Credit Hours)

This course provides a population-based approach to professional work in disease management, chronic care management and politics, in addition to students studying public health, health policy, quality and patient safety, health care administration, medicine, nursing, pharmacy, social work and other related clinical professions.

Prerequisites: RT 261 with a grade of C- or higher or PUBH 200 with a grade of C or higher or HLTH 120G with a grade of C or higher

HLSC 390 The U.S. Healthcare Delivery System (3 Credit Hours)

The uniqueness of the U.S. healthcare delivery system will be explored in terms of a systems framework and its complexity. The basic characteristics that differentiate the U.S. healthcare delivery system from that of other countries will be presented.

Prerequisites: RT 261 with a grade of C- or higher or PUBH 200 with a grade of C or higher or HLTH 120G with a grade of C or higher

HLSC 395 Topics in Health (1-3 Credit Hours)

Study of selected topics.

Prerequisites: Permission of the instructor

HLSC 405 Interprofessional Study Abroad on Global Health (1-3 Credit Hours)

This study abroad service learning course will introduce the student to the political, social, cultural, and ethical issues involved in prevention and health promotion globally. Students will travel to another country and learn the incidence/prevalence, morbidity/mortality, and identified public health problems in specific regions and countries.

Prerequisites: ENGL 110C

HLSC 425/525 Health Aspects of Aging (3 Credit Hours)

Identifies major issues and problems in meeting health care needs of the aged. Emphasis on role of social assets and supports in determining effects of life changes on the aging process.

Prerequisites: PUBH 200

HLSC 430W/530 Community Health Resources and Health Promotion (3 Credit Hours)

Designed to provide information about community health resources and health promotion theory. This is a writing intensive course.

Prerequisites: ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better, and a major in Health Sciences-Health Services Administration or a minor in Community Health

HLSC 440/540 Finance and Budgeting in Healthcare (3 Credit Hours)

This course covers financial management functions in healthcare organizations including operating and capital budgeting processes along with budgeting and financial controls.

Prerequisites: Junior standing and a declared major in the BSHS Health Services Administration program

HLSC 445/545 Health Sciences Research Methods (3 Credit Hours)

This course focuses on the principles and statistical procedures used in health sciences research and its application in health care settings.

Prerequisites: STAT 130M with a C or higher grade

HLSC 450/550 Public and Community Health Administration (3 Credit Hours)

A review of the principles and practice of administering public and community health organizations and programs at federal, state, and local levels. Constitutional, statutory and administrative bases for organizing and conducting public/community health programs will be discussed.

Prerequisites: A major in the BSHS Health Services Administration program, BS in Public Health program, or minor in Community Health

HLSC 461/561 Managerial Epidemiology (3 Credit Hours)

This course will blend theory and application of epidemiology. This course will also provide a comprehensive introduction to epidemiology and explain how to use epidemiological concepts and tools to improve decisions about the management of health services.

Prerequisites: STAT 130M and a declared major in the BSHS Health Services Administration program or approval of the program director

HLSC 465/565 Policy and Politics of Health (3 Credit Hours)

This course will explore both health policy and the politics of health. Students will develop an understanding of the systematic and analytical framework for developing health and health care policy issues.

Prerequisites: A major in the BSHS Health Services Administration program or minor in Community Health

HLSC 468 Internship (1-3 Credit Hours)

The internship will allow a student new to the Bachelor of Science in Health Science degree program to complete a capstone internship to gain entry skills for a beginning career pathway in the profession. The course is intended to provide clinical field experience and assimilation of the theoretical aspects learned in the coursework in a practical/work setting. A minimum of 120 hours is required for the 3-credit internship.

Prerequisites: Major in BSHS and senior standing

HLSC 475/575 Healthcare Marketing (3 Credit Hours)

This course provides a basic understanding of marketing in a health care setting. It will cover the following: the history of marketing in a health care setting, health care markets, marketing techniques, and leadership skills in managing and supporting the marketing efforts.

Prerequisites: A major in BSHS Health Services Administration or BS in Public Health

HLSC 480/580 Health Ethics and the Law (3 Credit Hours)

This course provides the students with a basic knowledge of health law and examines legal issues confronting health services administrators in various health care environments.

Prerequisites: A declared major in the BSHS Health Services Administration program

HLSC 483/583 Artificial Intelligence Applications in Health (3 Credit Hours)

This course offers an exploration of how artificial intelligence (AI) is transforming healthcare delivery and improving patient outcomes. Building on foundational knowledge from AI Ethics and Policy and AI Methods and Models, students will dive deeper into the integration of AI in clinical and operational contexts. Key topics include the role of AI in diagnostics and personalized medicine and other AI implementations in healthcare.

Prerequisites: Permission of instructor

HLSC 485/585 Health Informatics (3 Credit Hours)

This course focuses on healthcare informatics (information systems) and applications in health care organizations. It provides an overview of health information system concepts, management, and integration of technology in healthcare organizations as applicable to the majors in Health Sciences.

Prerequisites: Declared BSHS major

HLSC 495/595 Topics in Public/Community Health Administration (1-3 Credit Hours)

This course provides the opportunity for the study of selected topics in public/community health under the supervision of a faculty member.

Prerequisites: Permission of the instructor

HLSC 498 Directed Research in Health Services Administration (1-6 Credit Hours)

Supervised research on a specific problem in health services administration. Regular meetings with faculty and a written/oral report are required.

Prerequisites: Permission of the instructor

HLTH - Health

HLTH 101 Introduction to the Health Professions (1 Credit Hour)

Explores careers in the health professions. Assists students in making informed choices regarding careers and programs of study and prepares students to apply for acceptance into health-related majors. Activities are included to help freshmen transition to college work.

HLTH 102 Health Professions in the United States (1 Credit Hour)

This course examines the health care system in the U.S. and identifies the role played by selected health professions in the delivery of care. Designed for students preparing themselves for entry into health related majors.

Prerequisites: HLTH 101 or permission of instructor

HLTH 120G Information Literacy for Health Professions (3 Credit Hours)

This course introduces students to information literacy and research in health disciplines in the context of future careers. Students will develop skills in searching, evaluating, and citing information required for health research projects. The course examines the methods and tools of health analysis and explores the mechanics of research presentation and writing to help student pursuing health related majors and careers prepare for successful completion of upper-division requirements. The class provides a brief introduction to ethical issues related to health research and writing.

HLTH 130 Computer Technology Skills for the Health Professions (2 Credit Hours)

This course is designed to help students in the health professions gain the computer and technological skills needed to succeed in their academic careers and in today's workplace. Students will develop personal competency in practical applications such as Google Docs, spreadsheets and presentation graphics, note taking applications, document revisions, computer hardware, information retrieval and ethics in health information.

HLTH 397 Independent Study (3 Credit Hours)**HLTH 425 Leadership and Management for Health Professionals (3 Credit Hours)**

A review of the administration, management, policies, and practices governed by scopes of practice in a variety of health care settings. Topics covered include communication, planning and decision making, leadership and conflict management, and legal and ethical issues of concern to specific health professions.

Prerequisites: junior standing

HLTH 495/595 Topics in Health (1-3 Credit Hours)

HMS - Human Movement Sciences

HMS 200S Personal Health and Wellness (3 Credit Hours)

This course will take a holistic approach to discuss and apply the dimensions of wellness as related to personal health. Dimensions of wellness covered will include physical, emotional, social, financial, intellectual, environmental, spiritual, and occupational. Students will evaluate how lifestyle, environment, and heredity impact each dimension of wellness. Emphasis will be placed on identifying how health behaviors impact each dimension of wellness and overall quality of life. In addition, the course will allow students to explore their own personal health and learn how to develop and implement behavioral and environmental strategies to improve their wellness.

HMSV - Human Services

HMSV 339 Interpersonal Relations (3 Credit Hours)

Students will learn concepts and theories of interpersonal relationships. Development of skills necessary for effective communication will be stressed.

Prerequisites: ENGL 211C or ENGL 221C or ENGL 231C

HMSV 341 Introduction to Human Services (3 Credit Hours)

Students will learn about human services, the helping process, and the role and function of the human service worker. Students will be exposed to local and state human services facilities.

Prerequisites: ENGL 211C or ENGL 221C or ENGL 231C OR acceptance to the certificate in Addiction Prevention and Treatment and a test code of APTW

HMSV 343 Human Services Methods (3 Credit Hours)

Presents theories and techniques used by human services workers in a variety of settings.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C OR acceptance to the certificate in Addiction Prevention and Treatment and a test code of APTW

Pre- or corequisite: HMSV 341 with a grade of C or better

HMSV 344 Career Development and Appraisal (3 Credit Hours)

Focuses on career development throughout the life span with emphasis on vocational theories, interventions, assessments, and socioeconomic factors.

Prerequisites: Junior standing

Pre- or corequisite: HMSV 341 with a grade of C or higher

HMSV 346 Diversity Issues in Human Services (3 Credit Hours)

This course serves as an introduction to multicultural helping. The influence of socio-identities (e.g., race, ethnicity, religion, gender, socioeconomic status, sexual orientation) on individuals' functioning, concerns, and the helping process will be explored.

Prerequisites: Junior standing

Pre- or corequisite: HMSV 341 with a grade of C or higher

HMSV 368 Case Management & Crisis Techniques through Field Observation (3 Credit Hours)

Students will visit and examine human services systems such as mental health, substance abuse, criminal justice, education, rehabilitation, and professional associations to facilitate decision-making in selecting an internship and to gain a complex understanding of the roles of the human services professional.

Prerequisites: HMSV 341 with a grade a C or higher and HMSV 343 with a grade of C or higher OR acceptance to the certificate in Addiction Prevention and Treatment and a test code of APTW

HMSV 397 Independent Study (3-6 Credit Hours)

Individual study under the supervision of an undergraduate faculty member.

Prerequisites: Approval of Human Services Program Director and Counseling and Human Services Department Chair

HMSV 440W Program Development, Implementation, and Funding (3 Credit Hours)

This course presents models and practices in evaluating, monitoring, and implementing human services programs. The course includes an overview of funding, creating budgets and monitoring expenditures for programs. This is an upper-level writing intensive class. A grade of C or better is required.

Prerequisites: HMSV 341 with a C or better, HMSV 343 with a C or better, and ENGL 211C or ENGL 221C or ENGL 231C with a C or better

HMSV 444 Psycho-educational Groups (3 Credit Hours)

This course combines lectures and experiential learning about psycho-educational groups. Principles and practices for developing and leading psycho-educational groups are emphasized.

Prerequisites: HMSV 341 with a grade of C or higher and HMSV 343 with a grade of C or higher

HMSV 447 Introduction to Substance Abuse (3 Credit Hours)

This course develops the professional identity of the student as a practitioner of substance abuse services while introducing the student to the signs and symptoms of substance abuse, the recovery process and relapse prevention methods.

Prerequisites: HMSV 341 with a grade of C or better and HMSV 343 with a grade of C or better OR acceptance to the certificate in Addiction Prevention and Treatment and a test code of APTW

HMSV 448 Interventions and Advocacy with Children (3 Credit Hours)

This course provides an overview of how human service workers assist children in a variety of settings. Emphasis will be placed upon advocacy, supportive work, and short term crisis intervention.

Prerequisites: HMSV 341 with a grade of C or higher and HMSV 343 with a grade of C or higher

HMSV 449 Crisis Intervention, Prevention and Ethics (3 Credit Hours)

This course explores effective crisis intervention, examines prevention strategies, and develops students' ethical decision making within human service practice.

Prerequisites: HMSV 341 with a grade of C or higher and HMSV 343 with a grade of C or higher OR acceptance to the certificate in Addiction Prevention and Treatment and a test code of APTW

HMSV 452 Substance Abuse Treatment and Research (3 Credit Hours)

This course explores effective substance abuse treatment planning and intervention strategies through lectures and experiential learning and examines research trends in the substance abuse field.

Prerequisites: HMSV 341 with a grade of C or better, HMSV 343 with a grade of C or better and HMSV 447 with a grade of C or better OR acceptance to the certificate in Addiction Prevention and Treatment and a test code of APTW

HMSV 468 Internship in Human Services (12 Credit Hours)

This course involves field placement in a human services setting. Approximately 400 hours are devoted to field placement, group seminars and individual supervision.

Prerequisites: Completion of all coursework including General Education requirements, core courses, major courses, and elective courses; a grade of C or better in all prior HMSV courses and program approval is required

Pre- or corequisite: HMSV 339, HMSV 341, HMSV 343, HMSV 344, HMSV 346, HMSV 368, HMSV 440W, HMSV 444, HMSV 447 or HMSV 448, HMSV 449, HMSV 452 or HMSV 494, and HMSV 491

HMSV 491 Family Guidance (3 Credit Hours)

This course provides a study of the family as a system and an introduction to a variety of issues confronting the family, including child abuse, substance abuse and addiction, spouse abuse, and others that produce more than usual stress in the family. Available community resources for helping families will be examined.

Prerequisites: HMSV 341 with a grade of C or higher and HMSV 343 with a grade of C or higher

HMSV 494 Entrepreneurship in Human Services and Non-Profit Fundraising (3 Credit Hours)

This course is designed to expose human service students to the art of ethical fund-raising in human services, including annual and capital campaigns, telemarketing, special events, direct mail marketing, face-to-face solicitation, e-fund-raising, and grant writing. This course replaced HMSV 441. Students with credit for HMSV 441 cannot receive credit toward their degree for HMSV 494.

Prerequisites: HMSV 341 with a grade of C or higher and HMSV 343 with a grade of C or higher

HMSV 495 Topics in Human Services (1-6 Credit Hours)

The study of selected topics in human services.

Prerequisites: senior standing or permission of the instructor

HNRS - Honors

HNRS 100 Honors General Education Abroad (Humanities) (3 Credit Hours)

Taught in an international setting, special honors sections of general education courses meeting one of the following lower-division general education requirements: oral communication, information literacy, language and culture, literature, human creativity, human behavior, interpreting the past, the impact of technology, or philosophy and ethics.

Prerequisites: A passing score on the Writing Success Placement Tool (WSPT) and permission of the instructor

HNRS 101 Honors General Education Abroad (Sciences) (3-4 Credit Hours)

Taught in an international setting, special honors sections of general education courses meeting one of the following lower-division general education requirements: mathematical skills, information literacy, the nature of science, and the impact of technology.

Prerequisites: A passing score on the Writing Success Placement Tool (WSPT)

HNRS 109 Engineering Student Success (3 Credit Hours)

For Perry Honors College students, the course introduces students to the engineering profession. The course covers math skills with engineering applications, as well as study skills and strategies for a successful transition into college. An application-oriented, hands-on approach to reinforce math topics used in core engineering courses will be used in the course. The course prepares prospective engineering majors for ENGN 110. This course does not count towards Batten College of Engineering & Technology graduation credit.

Prerequisites: Honors College approval and MATH 102M or MATH 103M

HNRS 200 Peer Education and Leadership (3 Credit Hours)

This course prepares students for work as peer mentors and tutors. Students will develop skills in information literacy and research as they learn how to create and implement individualized student success/academic plans for themselves and others.

HNRS 201 Monarch Think Tank I (3 Credit Hours)

The Monarch Think Tank draws students from all disciplines to collaborate with each other, faculty and community members as they design project-based solutions to pertinent social issues. Think Tank topics vary each year. Guided by distinguished faculty, students analyze their topic through in-depth classroom and field research, readings and off-campus trips.

HNRS 226 Undergraduate Research Apprenticeship (1-3 Credit Hours)

The Research Apprenticeship offers students the opportunity to develop and acquire skills in research and information literacy through active involvement in ongoing research programs or in research projects under the supervision of a faculty mentor. Experiences may include but are not limited to gathering and analyzing information to develop proposals, survey construction, stakeholder identification, stimulus development, quantitative and qualitative data collection, statistical analysis, writing reports, and presenting results. Available research projects/programs will vary each semester. Interested students should consult with the Honors College Dean and visit the Honors College website for more information about research apprenticeship opportunities: <http://www.odu.edu/ao/honors>.

Prerequisites: approval of Honors College Dean

HNRS 250G Media and Info Literacy in the Google Age (3 Credit Hours)

This information literacy course focuses on communication technology and our sources for information, including digital, print, and non-print sources. By focusing on the credibility control, privacy, and ownership of information, students will learn to identify an information need, then locate, evaluate, and use resources effectively and responsibly. The course will enhance students' knowledge, evaluation, and use of scholarly and popular media material in the 21st century so that they might become well-informed critical thinkers, professionals, and citizens.

HNRS 300 Great Book Seminar (1 Credit Hour)

A 'Great Book' Seminar is a small (5-10 student), discussion-based class focused on a book that makes a difference, a work that has changed and influenced the ways people live and continue to think about themselves, others, and the world. Led by a faculty mentor, students will develop their information literacy by interpreting, communicating, problem-solving, and charitably listening to a variety of viewpoints. Faculty and student mentors will select the book read in this course.

Prerequisites: Must be a student in the Perry Honors College

HNRS 301 Monarch Think Tank II (3 Credit Hours)

The Monarch Think Tank draws students from all disciplines to collaborate with each other, faculty and community members as they design project-based solutions to pertinent social issues. Think Tank topics vary each year. Guided by distinguished faculty, students analyze their topic through in-depth classroom and field research, readings and off-campus trips.

Prerequisites: ENGL 211C or equivalent

HNRS 326 Undergraduate Research Apprenticeship II (3 Credit Hours)

Research apprenticeship with a faculty member, assisting a faculty member in the development and execution of research. May be repeated to 9 credit hours maximum.

Prerequisites: Honors College, permission of the instructor and 3.0 cumulative grade point average

HNRS 368 Honors Internship (3 Credit Hours)

Internship credit is available for Perry Honors College students who have secured an internship outside of their field of study or students that are not offered internship credit through their department.

Prerequisites: Must be a Perry Honors College Student

HNRS 386T Evolution of Modern Science (3 Credit Hours)

A section of SCI 302T/HIST 386T for Perry Honors College students, this course outlines the history of science from Aristotle to the present. Scientific progress has always been coupled with human progress and subject to the politics and culture of the times. Scientists, in most instances, have been in the mainstream of society. But, because of their curiosity and innovation, scientists have often clashed with the prevailing culture.

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, HIST 105H, HIST 126H, or HIST 127H

HNRS 387 Honors Civic Learning Project (1 Credit Hour)

Students volunteer for 45 hours of work, keep a work experience journal reflecting on their day-to-day experiences as a volunteer, and write a short paper detailing how the experience helped them to identify, revise and accomplish future learning and career goals.

Prerequisites: junior standing in the Honors College

HNRS 389 McNair Summer Research Institute (3 Credit Hours)

This research course is open only to TRiO McNair Scholars. During this 8-week course, students will acquire basic skills in research to include understanding research ethics, developing technical writing skills, and effectively disseminating their research. Students will demonstrate an understanding of research methodology, prepare a written literature review, construct their research proposal, and perform statistical analyses. Course instructors, faculty mentors, and the graduate assistant serving as the research and writing coach will offer individualized support to students in the completion of their research projects.

Prerequisites: junior standing in the Honors College

HNRS 390 McNair Senior Seminar (1 Credit Hour)

This course is open only to TRiO McNair Scholars. The purpose of this course is to prepare students for applying for admission into graduate programs and provide critical strategies for thriving at the graduate level and as a professional. Students will receive support in identifying the essential components of a graduate school application and establishing a clear understanding of how to prepare and succeed as a graduate student.

Prerequisites: Junior standing in the Honors College

HNRS 395 Honors Topics (1-3 Credit Hours)

A study of selected topics. Honors Topics courses are designed to help students to make connections between academic knowledge and relevant experience, observe connections across disciplines, as well as adapt/apply skills, abilities, theories or methodologies gained in one situation to meet the needs of new situations. These courses are open to non-honors students with at least a 3.25 cumulative GPA. Courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Junior standing and permission of the instructor

HNRS 396 Honors Topics (Study Abroad) (1-4 Credit Hours)

A study of selected topics examined in an international setting. Honors Topics Abroad courses are designed to help students gain new perspectives on their fields of study, develop intercultural competencies and communication skills, and engage with situations and questions that challenge their own assumptions/values. These courses are open to non-honors students with a cumulative GPA of at least 3.25. Courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Junior standing and permission of the instructor

HNRS 400 Honors ePortfolio (1 Credit Hour)

Recommended for juniors and seniors in the Perry Honors College, this course explores ways to showcase and reflect on the students' curricular and extracurricular honor education--showing the progression of their learning, experiences, and accomplishments that leads to where they want to go in life. This is a guided opportunity to assist students in fulfilling their honors ePortfolio requirement and to develop their social media profiles.

Prerequisites: must be a Perry Honors College student

HNRS 401/501 Social Entrepreneurship (3 Credit Hours)

This class draws students from all disciplines to collaborate with each other, faculty, and community members as they co-design project-based solutions to pertinent social issues. Topics related to social entrepreneurship vary each year. Guided by distinguished faculty, students analyze their topic through in-depth classroom and field research, readings, and off-campus trips.

Prerequisites: ENGL 211C or equivalent

HNRS 402 Language Directed Study (3 Credit Hours)

Under the supervision of a faculty mentor, students work independently using self-instructional materials. The focus is on grammar, reading or writing. Language Directed Study does not satisfy general education, major or college language requirements. Permission of the Honors College required.

Prerequisites: Honors College Students Only; Permission of Honors College required

HNRS 490 Translation Project (3 Credit Hours)

Honors College students will work in teams and individually to prepare sample translations for a variety of target audiences, markets, or clients. Individual project content will be varied: some projects may focus on literary translation, while others with adapting websites, software, video games, and other products into forms that meet local expectations for content. The overarching goal is for students to develop tools for thinking about the centrality of translation across academic disciplines and realms of human experience. An intermediate or advanced level of fluency in a language other than English is recommended to take this course.

Prerequisites: Perry Honors College student

HNRS 497 Honors Independent Study (1-3 Credit Hours)

Offered upon request each semester. This course is an opportunity for students to engage in directed readings and/or research in a topic with which they are familiar.

Prerequisites: open to juniors and seniors in the Honors College

HNRS 498 Honors Independent Study (1-3 Credit Hours)

Offered upon request each semester. This course is an opportunity for students to engage in directed readings and/or research in a topic with which they are familiar.

Prerequisites: open to juniors and seniors in the Honors College

HNRS 499 Senior Honors Thesis (3 Credit Hours)

Each student will undertake a research experience under the supervision of a faculty member. A research proposal and research report are required.

Prerequisites: permission of the Honors College Dean, 3.25 cumulative GPA

HPE - Health and Physical Education

HPE 200 Foundations of Education, Physical Education and Health (3 Credit Hours)

Teacher candidates gain insight into the techniques, methodology, and philosophy of field-based health and physical education teachers. Teacher candidates will be expected to observe and participate in the teaching of simple lessons. This course requires a completed ODU clearance/background check prior to entering a school or community agency. Visit: odu.edu/occe for clearance procedures. If students do not have the clearance by the first week of classes, they will be dropped. This course requires a 20 hour placement in an elementary setting.

HPE 218 Aquatics and Outdoor Education (2 Credit Hours)

Teacher candidates gain insight into the techniques, methodology, and philosophy of field-based health and physical education teachers. Teacher candidates will be expected to observe and participate in the teaching of simple lessons.

Prerequisites: open to PE - Teacher Prep majors only

HPE 220 Teaching of Team Sports (3 Credit Hours)

This course covers skills and strategies of team sports, where opposing teams interact directly and simultaneously to achieve an objective. The team sports will be broken down into the components of territory, net/wall, and fielding/run scoring games. The student teacher will become familiar with teaching and organizational techniques appropriate for each activity. Emphasis is placed on a tactical approach and knowledge of sport specific skills, game strategy, rules, teaching facilitation, organization, and demonstration of different parts of a lesson.

Prerequisites: open to PE-Teacher Preparation majors only

HPE 222 Teaching Individual Sports and Dance (3 Credit Hours)

This course is designed as both a laboratory and methods class in which the student learns skills and strategies of pickleball, bowling, badminton, golf, tennis, gymnastics, and dance. It is designed to develop knowledge, understanding, and attitudes of fundamental movements. The student teacher will become familiar with teaching and organizational techniques appropriate for each activity. Emphasis is placed on a tactical approach and knowledge of specific skills, game strategy, rules, teaching facilitation, organization, and demonstration of different parts of a lesson.

Prerequisites: open to PE - Teacher Prep majors only

HPE 295 Topics in Physical Education (1-3 Credit Hours)

This course provides an opportunity for in-depth study of selected topics in physical education.

Prerequisites: sophomore standing and approval of program advisor

HPE 300 Teaching Elementary Physical Education (3 Credit Hours)

This course is designed to acquaint the teacher candidate with elementary age children, their characteristics, interests, needs, and learning styles. Observation, analysis, and prescription of motor skills, curriculum design using skill themes and movement concepts are aimed at providing the teacher candidate with an increased understanding of how these actions directly relate to the process of effective teaching. Includes a 15 hour field experience.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C and HPE 200

HPE 301W Methods and Materials in Teaching Physical Education (3 Credit Hours)

This course is designed to acquaint the teacher candidate with the current theories, techniques, and practices utilized in teaching physical education at the secondary level. Discussions will focus on the various age group characteristics, interests, needs and learning styles as related to a school setting. Observation, analysis, and prescription of motor skills, movement concepts, instructional techniques, and curriculum models are aimed at providing the professional educator with an increased understanding of how these factors directly relate to a process of effective teaching. This writing intensive course includes a 15 hour field experience.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C and HPE 200

HPE 308 Driver Education Foundations of Traffic Safety (3 Credit Hours)

The intent of the course is to develop a thorough understanding of the highway transportation systems, the complexity of the driving task, and factors contributing to performance of highway users (e.g. attitudes and skills) necessary to develop competent drivers. The course will provide prospective teachers with the essential knowledge and skills to effectively deliver course content as an endorsed driver education trainer.

Prerequisites: A grade of C or better in ENGL 110C or instructor permission

Pre- or corequisite: HPE 309

HPE 309 Principles and Methodologies of Classroom and In-Car Instruction (3 Credit Hours)

This course provides teacher candidates with an overview of teaching methods and effective practices for driver education instruction with a focus on teaching skills. An emphasis is placed on program organization, administration, classroom instruction, single car instruction, multiple-car range instruction, simulation and evaluation. A minimum of 20 hours behind-the-wheel supervised teaching experiences.

Prerequisites: A grade of C or better in ENGL 110C or instructor permission

Pre- or corequisite: HPE 308

HPE 317 Human Growth & Motor Development (3 Credit Hours)

This course is an examination of the physical growth and motor development of the human being over the life span. Emphasis is on the assessment of physical and cognitive development, particularly in the K-12 ages. Theory and technique for research are discussed and the use of research findings is incorporated into the assessment materials. Attention is directed toward acquisition of basic skills, perceptual-motor development, and age-related changes.

Prerequisites: HPE 200

HPE 318 Motor Learning (3 Credit Hours)

This course is designed to provide the student with experiences in the practical application of theory related to motor learning. Feedback, transfer learning, practice, and motor control principles and concepts are addressed.

Prerequisites: HPE 200

HPE 324 Teaching Injury Care for Sports (3 Credit Hours)

This course presents the knowledge, skills, and teaching techniques essential for proper care in emergency and sport injury situations. Aspects of emergency first aid, sport specific injury recognition and care, and CPR will be covered. Upon satisfactory completion of the course and payment of certification fees, students will receive a two-year certification in first aid and CPR. Students will have the option of taking the sports first aid certification test from ASEP for coaching.

Prerequisites: HPE 200

HPE 327 Teaching of Health and Physical Education, Pre-K-8 (3 Credit Hours)

This course is designed to prepare classroom teachers in PreK-8 licensure programs for the teaching of health and physical education. Appropriate content, instructional strategies, effective classroom management, and safety issues and requirements will be presented.

Prerequisites: junior standing

HPE 368 Coaching Internship (6 Credit Hours)

Final field placement required for all students with an emphasis in a coaching minor. Students will be placed in an athletic coaching environment to gain experience in personal communication, technique instruction, practice organization and administrative duties required of the specific sport of their emphasis. Placement of internship subject to instructor approval. Minimum of 200 clock hours (hours to be arranged).

Prerequisites: Senior standing and HPE 409, HPE 415, and HPE 456

HPE 400 Management Skills for Teaching Health and Physical Education (3 Credit Hours)

Foundations in psychological, sociological, and academic needs of students, with specific focus on management skills in open classroom and sport settings. Specialized safety concerns and environmental considerations are also addressed. Lesson planning, goal setting, and movement formations unique to HPE activities are included.

Prerequisites: HPE 200

HPE 402/502 Methods and Materials in Health Education (3 Credit Hours)

This course will enable teacher candidates to gain insight into the techniques, methodology, and philosophy of field-based health and physical education. Teacher candidates will be expected to observe and participate in the teaching of simple lessons.

Prerequisites: HPE 200

HPE 404/504 Adapted Physical Education (4 Credit Hours)

Students will become acquainted with the practices and researching of different disabilities, the learning modes of the exceptional child, and IDEA (the law that advocates free and appropriate education). The course will also examine how to work within the ecosystem surrounding a child with disabilities. A vital component of the course will be the practical application of theory.

Prerequisites: HPE 200

HPE 406/506 Tests and Measurement in Physical Education and Health (3 Credit Hours)

This course is designed to acquaint the student with tests and measurement in the fields of health and physical education, test construction, scoring, and methods of using results.

Prerequisites: junior standing

HPE 409/509 Physiology of Exercise (3 Credit Hours)

An investigation into the physiological adjustments of the human organism to exercise, including systematic and biochemical molecular changes. Major areas of concern include neuromuscular, metabolic, and cardiorespiratory changes during exercise and the influence of such variables as nutrition, drugs, environment, age, sex, training and body weight.

Prerequisites: BIOL 240 or BIOL 250

HPE 415/515 Principles of Coaching Management (3 Credit Hours)

This course is designed to provide students with a basic knowledge of the coaching profession. Special emphasis will be placed on establishing a sound coaching philosophy, selecting a coaching style, desirable qualities of a coach, ethics and the coach, roles of the head coach, planning and organizing for games and practices, coaching pedagogy, off-season planning, final preparations for the season, and issues and problems related to coaching and recruiting athletes.

Prerequisites: Junior standing

HPE 430/530 Nutrition and Fitness Education (3 Credit Hours)

The study of techniques for the teaching of nutrition and health-related fitness. Content to be covered includes nutrition and various aspects of fitness training appropriate for the teaching of PreK-12 physical education and health.

Prerequisites: HPE 200 and HPE 402

HPE 456/556 Sports Psychology (3 Credit Hours)

Study of the psychological bases of coaching strategies and methodologies. Emphasis is placed on applying knowledge in field settings.

Prerequisites: Junior standing

HPE 469/569 Practicum Experience and Instructional Planning in Health and Physical Education (3 Credit Hours)

Instructional planning coupled with a clinical experience that allows the teaching candidate to teach and observe professionals in a field-based setting. Portfolio development, reflective assessment of teaching, and student assessment techniques will be emphasized. This course requires a completed ODU clearance/background check prior to entering a school or community agency. Visit: <https://www.odu.edu/oce> for clearance procedures. If students do not have the clearance by the first week of classes, they will be dropped.

Prerequisites: HPE 200 and admission into teacher education program

HPE 480 Teacher Candidate Seminar (1 Credit Hour)

Study and group discussion of problems growing out of the student teaching (teacher candidate internship) experience.

Prerequisites: acceptance into teacher education and approval of the program advisor

HPE 485 Teacher Candidate Internship (12 Credit Hours)

A culminating experience that provides a field-based application of effective techniques in behavior, management, instructional strategies, and the development of professional attributes in K-12 school setting. This course requires a completed ODU clearance/background check prior to entering a school or community agency. Visit: <https://www.odu.edu/oce> for clearance procedures. If students do not have the clearance by the first week of classes, they will be dropped.

Prerequisites: acceptance into teacher education, completion of approved program, passing scores on the appropriate PRAXIS II content examination, and an approved application for Teacher Candidate Internship

HPE 497 Topics in Health and Physical Education (1-3 Credit Hours)

A study of specialized topics in health and physical education.

Prerequisites: permission of the instructor

HPE 498 Topics in Health and Physical Education (1-3 Credit Hours)

A study of specialized topics in health and physical education.

Prerequisites: permission of the instructor

IDS - Interdisciplinary Studies

IDS 300W Interdisciplinary Theory and Concepts (3 Credit Hours)

An examination of the history, concepts and application of interdisciplinary study. This course includes an analysis of similarities and differences in academic disciplines and the application of interdisciplinary approaches to a specific topic of study. This is a writing intensive course.

Prerequisites: a grade of C or better in ENGL 211C, ENGL 221C or ENGL 231C

IDS 301 Data and Humanities Research (3 Credit Hours)

This course examines the ways quantitative and qualitative data can enhance our understanding of cultural, historical, and artistic phenomena across the humanities. Students will learn to analyze, visualize, and interpret data while engaging with theoretical frameworks relevant to the humanities.

Prerequisites: Junior-level or above

IDS 307T Digital Writing (3 Credit Hours)

This course introduces students to issues of writing in various digital environments like web pages, email, blogs, wikis, and discussion boards. It also introduces fundamentals of hypertext authoring, digital and visual rhetoric, and image manipulation.

Prerequisites: ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

IDS 368 Internship in Interdisciplinary Studies (1-6 Credit Hours)

An opportunity to integrate service and applied learning experience with interdisciplinary perspectives.

Prerequisites: junior standing and permission of individualized interdisciplinary studies program coordinator

IDS 369 Internship in Sustainability and Conservation Leadership (3-6 Credit Hours)

As part of the Sustainability and Conservation Leadership minor, this graded internship will provide an opportunity to integrate service and applied learning experience with interdisciplinary perspectives. 300 hours are required for the 3-credit option, and 600 hours are required for the 6-credit option.

Prerequisites: BIOL 466W/OEAS 466W/IDS 466W and BIOL 467/OEAS 467/IDS 467

IDS 397 Independent Study (1-6 Credit Hours)**IDS 398 Independent Study (1-6 Credit Hours)****IDS 400/500 Study Abroad (0 Credit Hours)**

IDS 466W Introduction to Mitigation and Adaptation Studies (3 Credit Hours)

Students will be introduced to the science underpinning mitigation of human-induced changes in the Earth system, including but not limited to climate change and sea level rise, and adaptation to the impacts of these changes. The course will cover the environmental hazards and the opportunities and limitations for conservation, mitigation and adaptation. This is a writing intensive course. Cross listed with BIOL 466W and OEAS 466W.

Prerequisites: BIOL 291 or permission of instructor

IDS 467 Sustainability Leadership (3 Credit Hours)

In this class, students will discover what makes a leader for sustainability. They will consider a range of global and local crises from a leadership point of view in the context of sustainability science, which addresses the development of communities in a rapidly changing social, economic, and environmental system-of-systems environment. The course will be based on taking a problem-motivated and solution-focused approach to the challenges considered. The course includes a service learning project focusing on a leadership experience in solving a real-world environmental problem.

Prerequisites: BIOL 466W or OEAS 466W or IDS 466W

IDS 493 IDS Electronic Portfolio Project (3 Credit Hours)

The preparation of an electronic portfolio integrating the student's academic study, work experiences, skill identification and work products. Alternative formats are used for varying uses of the portfolio.

Prerequisites: IDS 300W or permission of the instructor and senior standing

IDS 494 Entrepreneurship in Interdisciplinary Studies (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to integrate disciplinary theory and knowledge through developing a nonprofit program, product, business, or other initiative. The real-world experiences that entrepreneurs provide will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems.

Prerequisites: IDS 300W and approval of the program coordinator

IDS 495 Topics in Integrative Studies (3 Credit Hours)

Focused study of selected topics linking perspectives, research and applications from a variety of disciplines. Emphasis is on disciplinary synthesis.

Prerequisites: IDS 300W

IDS 496/596 Topics in Interdisciplinary Studies (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: IDS 300W or permission of instructor

IDS 497 IDS Individualized Senior Project (3 Credit Hours)

This course is a vehicle for the execution of the senior project requirement of the Interdisciplinary Studies Program. The project will be negotiated between the student, faculty sponsors, and the program. Open only to individualized integrative studies majors.

Prerequisites: IDS 300W, permission of the instructor and an approved individualized integrative studies curriculum plan

INBU - International Business

INBU 367 Cooperative Education (1-3 Credit Hours)

May be repeated for credit. Supervised experience in the international business work place requiring written statement of objectives and evaluation of experience. Pass/fail grading only.

Prerequisites: Permission of IB coordinator and a declared major in the University or permission of the Dean's Office

INBU 368 Internship in International Business (1-3 Credit Hours)

Supervised experience in the international business work place requiring written statement of objectives and evaluation of experience. Pass/fail grading only.

Prerequisites: Permission of IB coordinator, and a declared major in the University or permission of the Dean's Office

INBU 431 Doing Business in Europe (3 Credit Hours)

A survey course to provide an overview of the contemporary business environment in Europe, with a focus on the European Union. Topics will include an examination of the social, political, and economic forces which affect business in Europe.

Prerequisites: MGMT 325, FIN 323, and MKTG 311 or permission of the instructor, and a declared major in the University or permission of the Dean's Office

INBU 432 Doing Business in Latin America (3 Credit Hours)

A survey to provide an overview of the contemporary business environment in Latin America. Topics will include an examination of the social, political and economic forces which affect business in Latin America.

Prerequisites: MGMT 325, FIN 323, and MKTG 311 or permission of the instructor, and a declared major in the University or permission of the Dean's Office

INBU 433 Doing Business in Asia (3 Credit Hours)

An analysis of business practices in Asia. Emphasis will be on business, government relations, business strategy, structure, organizational processes, and human resource management.

Prerequisites: MGMT 325, FIN 323, and MKTG 311 or permission of the instructor, and a declared major in the University or permission of the Dean's Office

INBU 434 International Trade Field Study (3 Credit Hours)

An applied field research study to develop an export trade plan which involves market analysis, risk analysis, financing and distribution decisions in overseas markets.

Prerequisites: ECON 450, MKTG 411, FIN 435 or MGMT 361, or permission of the instructor, and a declared major in the University or permission of the Dean's Office

INBU 436 International Business Law (3 Credit Hours)

This course examines the sources of international business law, the relationship between such law and the U.S. legal system, the choice of law in international business disputes, the special issues that arise when doing business with foreign governments, the law governing international sales and the shipment of goods, and international intellectual property protection. In addition, the relationships between law and culture involved in international business transactions will be examined.

Prerequisites: WCS 350 and a declared major in the university or permission of the Dean's Office

INBU 437 International Human Resource Management (3 Credit Hours)

International HRM focuses on the management of human resources in an international context. The course will focus on policies, programs and practice characteristics of organizational efforts to manage human assets worldwide, including an overview of cross-national team dynamics and communication systems, leadership techniques, and national employment laws. It will also explore the critical impact that these policies have on the success of firms in doing business abroad.

Prerequisites: MGMT 325 (or equivalent) or permission of the instructor, and a declared major in the University or permission of the Dean's Office

INBU 438 Globalization and International Trade (3 Credit Hours)

This course provides an economic overview of international trade and the theories that support globalization and international trade policies. The course introduces students to the global value chain and its stakeholders, with an emphasis on costs, transportation, infrastructure, and technology. Students will examine supply chain management processes that organizations use to successfully manage import and export operations.

Prerequisites: ECON 201S and ECON 202S, and a declared major in the university or permission of the Dean's office

INBU 450 Global Business (3 Credit Hours)

Lecture, discussion and case studies. A capstone course to integrate and apply the theories and concepts learned in required international business courses to the operations of international business organizations.

Prerequisites: ECON 450, MKTG 411, FIN 435, or permission of the instructor, and a declared major in the University or permission of the Dean's Office

INBU 463 International Business Seminar Abroad (3 Credit Hours)

A study tour abroad arranged in cooperation with a foreign university, including lectures on international business topics and visits to international firms and economic/business organizations. Written work required.

Prerequisites: a declared major in the University or permission of the Dean's Office

INBU 495 Topics in International Business (1-3 Credit Hours)

A study of selected topics, the title of which will appear in the course schedule.

Prerequisites: permission of the IB coordinator, and a declared major in the University or permission of the Dean's Office

INBU 496 Topics in International Business (1-3 Credit Hours)

A study of selected topics, the title of which will appear in the course schedule.

Prerequisites: permission of the IB coordinator, and a declared major in the University or permission of the Dean's Office

INBU 497 Independent Study in International Business (1-3 Credit Hours)

Affords students the opportunity to undertake independent study under the direction of a faculty member.

Prerequisites: permission of the department

IPEH - Interprofessional Education-Health

IPEH 490/590 Social Determinants of Health: An Interprofessional Approach (3 Credit Hours)

The social determinants of health status and health outcomes, including structural, financial and personal influences will be examined. The utility of an interprofessional collaborative approach to health care delivery will be highlighted.

Prerequisites: Junior standing or permission of the instructor

IT - Information Technology

IT 150G Basic Information Literacy and Research (3 Credit Hours)

This course is designed to provide students with the basic skills necessary to identify, to access and to utilize task appropriate information. Students will learn to evaluate information sources and to apply good research strategies. The course will address qualitative, quantitative, visual and auditory data sources along with the ethical use of data and respect for intellectual property. Focus will be given to research topics in various fields including business, humanities, social science and technology.

IT 200T Cybersecurity, Technology, and Society (3 Credit Hours)

Students will explore how technology is related to cybersecurity from an interdisciplinary orientation. Attention is given to the way that technologically-driven cybersecurity issues are connected to cultural, political, legal, ethical, and business domains.

IT 201 Introduction to Information Systems (3 Credit Hours)

An introduction to the major hardware/software components of modern information systems. Topics include introduction to the history of computers, numbering systems conversion, system and application software, networks and the Internet. Additional topics include Information Systems and Systems Development Life Cycle, Introduction to Programming, Databases and Business Intelligence, Information Security, and Privacy and Ethics in the cyber world. Intended as a comprehensive introduction course to the Information Systems majors.

IT 205 Introduction to Object-Oriented Programming (3 Credit Hours)

An introductory course on object-oriented programming that emphasizes problem solving for business applications. The programming language is Java, Python, or instructor's choice. Topics include simple data types, selections, loops, methods, arrays, classes, inheritance, etc.

IT 310 Object-Oriented Programming with C++ (3 Credit Hours)

An advanced C++ programming course focusing on object-oriented design/ methodologies and the development of Graphic User Interfaces (GUI) for business applications. Special topics include: dynamic variables, linked lists, abstract data types, classes, inheritance, composition, exception handling, templates, and overloading.

Prerequisites: IT 205 and a declared major in the university or permission of the Dean's Office

IT 315 Introduction to Networking and Security (3 Credit Hours)

Introduction to modern networking concepts and technology. Provides students with the fundamental concepts, technologies, components and issues related to communications and data networks. Topics include network architectures, infrastructures, services, protocols, cyber attacks, adversaries, and defense.

Prerequisites: IT 201

IT 317 Enterprise Information Architecture (3 Credit Hours)

A comprehensive treatment of the fundamental concepts of enterprise information architecture. Topics include enterprise architecture, information technology infrastructure, components of modern computing environments, system usability and security.

Prerequisites: IT 201 with a C or better (grade requirement may be waived by the department), and a declared major in the university or permission of the Dean's Office

IT 325 Web Site and Web Page Design (3 Credit Hours)

Advanced design and hands-on implementation skills in designing and creating dynamic web sites. Key topics include: web page design, usability principles, HTML, XHTML, Cascading Style Sheets (CSS), JavaScript and Internet security.

Prerequisites: IT 150G

IT 360T Principles of Information Technology (3 Credit Hours)

A survey of computer hardware, software, procedures, applications, and management information concepts. Provides an understanding of the application of the computer to the support of managerial decision making. Information Systems majors may not use this course for credit toward the B.S.B.A. degree.

Prerequisites: completion of general education information literacy and research requirement and junior standing; and a declared major in the University or permission of the Dean's Office

IT 363 Systems Analysis and Design (3 Credit Hours)

This course provides an introduction to the analysis and design of computer-based information systems. Emphasis is placed upon the development of requirements that serve the business needs of the organization as well as the logical and physical design of business information systems. This course covers both the structured and the object-oriented approach of system analysis and design process. Topics covered include introduction to the software development methodologies, requirement gathering, modeling, and logical/physical design techniques. Students are also exposed to emerging topics that promise major improvements in software development area. Factors relevant to the creation of business information systems through development and implementation will be examined in detail.

Prerequisites: IT 201 with a C or better, IT 205, and a declared major in the university or permission of the Dean's Office of the Strome College of Business

IT 367 Cooperative Education (1-3 Credit Hours)

Approval for enrollment and allowable credits are determined by the department in the semester prior to enrollment. Available for pass/fail grading only.

Prerequisites: junior standing and a declared major in the university or permission of the Dean's Office

IT 368 Student Internship (1-3 Credit Hours)

Approval for enrollment and allowable credits are determined by the department in the semester prior to enrollment. Available for pass/fail grading only.

Prerequisites: junior standing and a declared major in the university or permission of the Dean's Office

IT 369 Practicum (1-3 Credit Hours)

Approval for enrollment and allowable credits are determined by the department in the semester prior to enrollment. Available for pass/fail grading only.

Prerequisites: junior standing and a declared major in the university or permission of the Dean's Office

IT 374 C# and Applications (3 Credit Hours)

An introduction to programming concepts and skills of the C# programming language and Visual Studio .NET. Topics include: computing fundamentals and Microsoft .NET platform, C# programming fundamentals and object-oriented programming, web app development and cloud app development.

Prerequisites: CS 150 or equivalent

IT 376 PHP and Applications (3 Credit Hours)

An introduction to programming concepts and skills of the PHP programming language. Topics include: Internet and web concepts, HTML, CSS and XML, PHP programming basics, database with PHP, PHP web services.

Prerequisites: IT 201

IT 401 Mobile and Cloud Computing (3 Credit Hours)

An introduction to key concepts and techniques of mobile and cloud computing. Topics include: cloud deployment and service models, cloud programming and software environments, performance and security of cloud systems, cloudlets and mobile cloud computing.

Prerequisites: IT 450 or CS 450

IT 408 E-Business Portal Programming (3 Credit Hours)

An introduction to key concepts, programming techniques, technologies and standards involved in the development of E-Business portal. Topics include: E-Business programming technologies, software development environments, developing a practical E-business project, securing the E-business portal, performance tuning and evaluation.

Prerequisites: IT 325

IT 410 Business Intelligence (3 Credit Hours)

Business intelligence, data warehouse, data mining, and OLAP. The course will use state-of-the-art business intelligence software tools including SAS products to provide hands-on experience in designing and using data warehouses.

Prerequisites: BNAL 206

IT 416 Network Server Configuration and Administration (3 Credit Hours)

Advanced course on configuration and management of network servers. Topics include: user and storage management, ACLs, group policy, configuring security, backups and disaster recovery, and server management.

Prerequisites: A grade of C or better in IT 315 and a declared major in the university or permission of the Strome College of Business Dean's Office

IT 417 Management of Information Security (3 Credit Hours)

This course emphasizes the need for management and technology to successfully implement an information security program in an organization. Threats, attacks, legal and ethical issues, risk assessment and control strategies; planning, development, and maintenance of security policies; contingency planning; firewalls, intrusion detection systems and security tools; and management of information security are some of the topics covered in this course.

Prerequisites: A grade of C or better in IT 315 or IT 360T and a declared major in the university or permission of the Strome College of Business Dean's Office

IT 418 Enterprise Information Assurance (3 Credit Hours)

Assure information and manage risks related to the use, processing, storage, and transmission of information. Topics include assurance of integrity, availability, authenticity, non-repudiation and confidentiality. Students will gain a firm understanding of information-related risk management in cyber and physical systems. Hands-on exercises and practice opportunities will be provided to students.

Prerequisites: A grade of C or better in IT 315 and a declared major in the university or permission of the Dean's Office

IT 419 Enterprise Cyber Defense (3 Credit Hours)

Provide students with an awareness of the options available to mitigate security threats in enterprise information systems. Topics include network mapping, network security techniques and components, applications of cryptography, malicious activity detection, countermeasures, and vulnerability scanning. Students will learn how to describe potential attacks, defense tools and methods, and measures to be taken when compromises occur.

Prerequisites: A grade of C or better in IT 315 and a declared major in the university or permission of the Dean's Office

IT 420 Object-Oriented Application Development Using Visual Basic (3 Credit Hours)

Advanced design and implementation strategies are utilized to create dynamic client/server applications that solve complex problems in a secure and robust manner. Key concepts include: abstractions, encapsulation, inheritance, polymorphism, persistence, and dynamic binding.

Prerequisites: IT 205 and a declared major in the university or permission of the Strome College of Business Dean's Office

IT 425 Information Systems for International Business (3 Credit Hours)

The international business organization and its relationship to information systems architecture with emphasis on the role of connectivity technology as a driver of globalization. An introduction to the economics and structure of the international information technology marketplace.

Prerequisites: The general education impact of technology requirement, a declared major in the university or permission of the department

IT 430 Object-Oriented Application Development with JAVA (3 Credit Hours)

Using JAVA as an object-oriented language to write business applications that solve complex problems in a secure and robust manner. Business examples incorporating multimedia, multithreading, networking, and advanced graphical interfaces are used to reinforce the object-oriented concepts of abstraction, encapsulation, inheritance, polymorphism, persistence, and dynamic binding.

Prerequisites: IT 205 and a declared major in the university or waiver approved through the Strome College of Business Undergraduate Advising

IT 440 Secure Programming (3 Credit Hours)

An introduction to methods of secure software design and development. Key topics include principles and practices of secure programming, input validation, type checking, parameter validation, buffer overflow prevention, error handling, web application issues (SQL injection, Cross site scripting, Cross site request forgery, etc.), static analysis tools and black box testing tools.

Prerequisites: IT 205

IT 450 Database Concepts (3 Credit Hours)

Introduction to database concepts. Historical development, data models, database analysis, design and implementation, query languages, data security, and introduction to business transaction systems.

Prerequisites: IT 201 with a C or better or IT 360T for non-IT major students and a declared major in the university or waiver approved through the Strome College of Business Undergraduate Advising; permission of the instructor is required for non-IT major students

IT 451 Database Administration (3 Credit Hours)

An introduction to the theory and practice for performing the standard database administrative tasks. Course could serve as a basis in preparation to OCA Exams 1Z0-051 and 1Z0-052 for Oracle Administrator Certified Associate. Topics to be covered include: advance SQL statements, creating schema objects, database installation and configuration, database architecture, performance monitoring and tuning, storage management, database security, user management, database connectivity, backup/recovery techniques and usage analysis. Oracle will be the primary DBMS software used in the course; other software may be used as well. Hands-on exercises and practice opportunities will be provided to students.

Prerequisites: IT 450, and a declared major in the university or permission of the instructor

IT 452 Cloud Database (3 Credit Hours)

An introduction to the principles, techniques, and systems of cloud database. Topics include: cloud service models, cloud database design, cloud database management, cloud database development, cloud security, and cloud database services.

Prerequisites: IT 450 or instructor approval

IT 453 Advanced Database Concepts (3 Credit Hours)

This course examines the theoretical and practical foundations of advanced database concepts. It also covers techniques and methodologies that are used to perform the advanced database management tasks and to insure the deployment of efficient, secure, and high-performance database applications. Topics include: advanced database and application design, database performance tuning and query optimization, data movement and distribution, distributed DBMS, Business Intelligence and Data Warehouses, Big Data Analytics and NoSQL, databases and the Internet, and other advanced database concepts. This course also examines the material included in OCA Exams 1Z0-051 and 1Z0-052 for Oracle Administrator Certified Associate.

Prerequisites: IT 450 and a declared major in the university or permission of the instructor

IT 454 Web-based Database Administration (3 Credit Hours)

An introduction to key concepts and techniques related to web-based database administration. Students will gain hands-on experience with a variety of web-based database technologies. Topics to be covered include: MySQL, EasyPHP, phpMyAdmin, XML database technologies such as XQuery, XPath, and XML Schemas, performance tuning, trouble shooting, and web log analysis tools.

Prerequisites: IT 450, or permission of the instructor

IT 455 SAP Applications (3 Credit Hours)

This course introduces students to the concept of enterprise resource planning. Students will learn SAP (Systems, Applications and Products in Data Processing) enterprise software to manage business operations and customer relations by analyzing and presenting data stats in an engaging way, and producing meaningful and insightful business solutions.

Prerequisites: IT 201, or IT 360T, or OPMT 303, or instructor's permission

IT 461 Implementing Internet Applications (3 Credit Hours)

Advanced design and implementation strategies are utilized to create dynamic e-commerce applications that solve complex problems in a secure and robust manner. Key concepts include: Internet architecture, structured data languages, scripting languages, programming languages, database connectivity, and Internet security.

Prerequisites: IT 205 and IT 363, or instructor's permission

IT 464/564 Essentials of Project Management (3 Credit Hours)

This course focuses on project management concepts and methodologies. Topics include project management framework, knowledge areas, and techniques.

Prerequisites: IT 317 with a C or better, IT 363, and a declared major in the university or waiver approved through the Strome College of Business Undergraduate Advising

IT 474 Strategic IT Administration (3 Credit Hours)

Focuses on improving business use of existing IT and achieving competitive advantage. All students gain a strategic perspective on an important organizational resource--information. Prepares IT students for managerial positions and effective communication with executives.

Prerequisites: IT 317 with a C or better, IT 363, and a declared major in the university or waiver approved through the Strome College of Business Undergraduate Advising

IT 494 Entrepreneurship in Information Technology (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through real-world entrepreneurial innovation guided by faculty members and professionals. This course allows students to integrate disciplinary knowledge by developing innovative processes, products, businesses, or other innovations utilizing information technology. The real-world entrepreneurial experience will help students understand how academic knowledge leads to innovation and problem solving.

Prerequisites: six credit hours of any IT 300 or 400 level courses

IT 495/595 Selected Topics in Information Systems (1-3 Credit Hours)

Taught on an occasional basis. See the course schedule for the particular topic being taught each semester.

Prerequisites: permission of the department

IT 497 Independent Study in Information Systems (1-3 Credit Hours)

Affords students the opportunity to undertake independent study under the direction of a faculty member.

Prerequisites: permission of the department

ITAL - Italian

ITAL 101F Beginning Italian I (3 Credit Hours)

Aural comprehension, oral drills and discussion of grammar principles; written exercises, and reading assignments.

ITAL 102F Beginning Italian II (3 Credit Hours)

Aural comprehension, oral drill and discussion of grammar principles; written exercises, and reading assignments.

Prerequisites: ITAL 101F

ITAL 201 Intermediate Italian I (3 Credit Hours)

Aural comprehension, oral drills and discussion of grammar principles; written exercises, and readings assignments.

Prerequisites: ITAL 102F or satisfactory score on the placement test

ITAL 202 Intermediate Italian II (3 Credit Hours)

Aural comprehension, oral drills and discussion of grammar principles; written exercises, and reading assignments.

Prerequisites: ITAL 201

ITAL 295 Topics (1-3 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

ITAL 296 Topics (1-3 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

ITAL 395 Topics in Italian (1-3 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule.

Prerequisites: ITAL 202 or equivalent

ITAL 396 Topics in Italian (1-3 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule.

Prerequisites: ITAL 202 or equivalent

JAPN - Japanese

JAPN 111F Beginning Japanese (6 Credit Hours)

This course introduces basic speaking, listening, reading, and writing skills, including the three forms of written Japanese: Hiragana, Katakana, and Kanji. Students will have the opportunity to interact with Japanese students on campus through the coursework. The course enhances speaking and listening skills and provides awareness of the Japanese style of communication. Analyzing Japanese sentence structures and grammar leads students to be aware of the different value systems of a high context culture.

JAPN 195 Topics in Japanese (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule and will be more fully described by academic advisors.

JAPN 196 Topics in Japanese (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule and will be more fully described by academic advisors.

JAPN 212 Intermediate Japanese (6 Credit Hours)

The main focus of this course is to build communication skills, developing the basic language skills acquired in JAPN 111F. Students may have an opportunity to exchange emails with a Japanese speaker in addition to direct or online conversation. Through this interaction, skills to negotiate meaning are gained. Use of authentic TV materials introduces pragmatic features that are unique to Japanese. Through systematic explicit instruction of the skills using pragmatic elements, skills for a Japanese style of communication are enhanced.

Prerequisites: JAPN 111F

JAPN 295 Topics in Japanese (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: 6 hours at the 100 level

JAPN 296 Topics in Japanese (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: 6 hours at the 100 level

JAPN 301 Intermediate to Advanced Japanese I (3 Credit Hours)

This course aims to develop the oral and written communicative proficiency gained up until the JAPN 212 course. Students learn vocabulary, sentence structures, kanji, communication skills, and various aspects of Japanese culture. Throughout the course, students evaluate and monitor their own progress and utilize feedback from others for further progress.

Prerequisites: A grade of C or better in JAPN 212 or advanced placement

JAPN 302 Intermediate to Advanced Japanese II (3 Credit Hours)

This course aims to develop the oral and written communicative proficiency gained up until the JAPN301 course. Students learn vocabulary, sentence structures, kanji, communication skills, and various aspects of Japanese culture. Throughout the course, students evaluate and monitor their own progress and utilize feedback from others for further progress.

Prerequisites: JAPN 301

JAPN 305 Speaking and Writing Workshop (3 Credit Hours)

In this course, each student will work with a Japanese speaker as a mentor to learn natural communication skills in both speaking and writing. Keeping a journal in the blog style and having the entries revised by their mentor, students will utilize a variety of learned sentence structures and expand their vocabulary.

Prerequisites: JAPN 212 or advanced placement

JAPN 309 Kanji Skills for Reading Japanese (3 Credit Hours)

This course introduces the basic structure of kanji, which is one of the forms of written Japanese, and the history behind its creation as well as cultural aspects of kanji usage in Japanese society. Identifying radicals or parts of kanji, and understanding the system of Kanji compounds, makes it possible to easily guess the meaning of kanji characters. Advanced reading skills are efficiently developed by guessing the meaning of kanji. Daily journal writing on authentic novels or newspaper articles builds vocabulary and enhances flexibility with reference materials.

Prerequisites: JAPN 212

JAPN 310 Japan: A Cultural Odyssey (3 Credit Hours)

Exploration of Japanese culture and society from local and global perspectives. Topics may include language, arts, literature, music, food, traditional and contemporary culture, entertainment, media, religion, gender, education and work. The course aims to foster in-depth cultural understanding beyond stereotypes and to develop critical thinking and analytical skills to reflect on one's own experiences and assumptions about cultural similarities and differences. All readings, discussions, and lectures in English. No knowledge of Japanese is necessary. Cross-listed with WCS 310.

Prerequisites: ENGL 110C and junior standing or permission of the instructor

JAPN 311 Global Conversations (3 Credit Hours)

This is primarily a conversation course to develop linguistic and cultural proficiency in verbal communication. Task-oriented communication strategies in cross-cultural training will be practiced by presenting students with models that demonstrate appropriate linguistic and cultural competencies. Students will practice these skills by role-playing, giving presentations, enriching self-awareness with practiced in-group discussions on various topics (such as, prejudice, racism, values, and customs) that dispel stereotypes and foster more in-depth social-cultural understanding, and with participation in guided cultural encounters. Students will improve their listening and comprehension skills and deepen cultural proficiency by learning how to communicate and collaborate with other people and cultures in a global age.

Prerequisites: JAPN 302 with a grade of C or above or a satisfactory score on the placement test

JAPN 312W Writing Around the World (3 Credit Hours)

This is a writing intensive course designed with writing assignments that examine various cultural contexts that enable students to understand cultural content, style, audience and organization. The main objective of the course is increased awareness of and sensitivity to appropriate word choice and syntax in the language. Students will engage in writing for different cultural audiences and in varied contexts such as literary, artistic and media expressions around the world. Special emphasis is placed on the methodology of close reading as students hone the analytics skills and vocabulary necessary to interpret idioms, regionalism, cultural expressions and overall intercultural skills observed in various genres and cultures. Students will analyze compelling global issues and the diverse cultural perspectives that inform them.

Prerequisites: a grade of C or better in ENGL 211C or ENGL 231C and JAPN 302 with a grade of C or above or a satisfactory score on the placement test

JAPN 323 World Cultures and Contexts (3 Credit Hours)

This course explores Japanese culture and society from traditional to current perspectives. Through readings, discussions, interviews, and reflections, the course aims to foster deeper understanding of current Japanese culture where lifestyles, customs, and value systems are rapidly changing. Students have an opportunity to develop their critical thinking, especially by analyzing what they learn from their interviews with Japanese people and comparing this to information they gained from their readings. Major topics this semester include group consciousness and social relationships, food and society, history of Japanese language.

Prerequisites: JAPN 302 with a grade of C or better or Advanced Placement

JAPN 335 Japanese Society and Language (3 Credit Hours)

This course explores the social and cultural aspects of the Japanese language. It examines actual language use in various social settings and contexts by different people, including the use of regional dialects, gendered language, speech levels, and fictional role languages.

Prerequisites: JAPN 212 or permission of the instructor

JAPN 395 Topics in Japanese (1-3 Credit Hours)

This course provides a study of selected topics in Japanese. Topics vary with the semester and the instructor. Expectations for materials covered and produced for the class vary with the level (higher-level classes will have higher expectations). Contact the Japanese Program Coordinator for details about specific topics covered in a given semester.

Prerequisites: JAPN 212 or the equivalent

JAPN 396 Topics in Japanese (1-3 Credit Hours)

A study of selected topics in Japanese. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: JAPN 212 or the equivalent

JAPN 422/522 Analyzing Japanese Conversation (3 Credit Hours)

This course examines Japanese conversation from a comparative perspective using the framework of Conversation Analysis. It explores the basic mechanisms of social interaction in English and Japanese spoken discourse with a particular focus on everyday talk.

Prerequisites: JAPN 312W or permission of the instructor

JAPN 435 Japanese Food Culture (3 Credit Hours)

This course explores Japanese food culture from a variety of aspects. Major topics this semester include (1) 'Washoku' as a UNESCO Intangible Cultural Heritage, (2) food and health, (3) food and education, and (4) food and regions. Through readings, discussions, hands-on activities, and reflections, the course aims to foster in-depth cultural understanding and develop critical thinking and analytical skills to reflect on your own experiences and what you hear and see about Japanese food.

Prerequisites: JAPN 311 and JAPN 312W or permission of instructor

JAPN 445 Japanese Language Acquisition and Teaching (3 Credit Hours)

This course introduces students to fundamental principles of second language acquisition (SLA) and teaches them practical skills to develop course materials and class activities informed by SLA principles. The course covers world language learning and teaching in general but focuses on Japanese as a second or world language when working on course material and activity development.

Prerequisites: JAPN 312W or permission of the instructor

JAPN 495/595 Topics in Japanese (1-3 Credit Hours)

This course provides a study of selected topics in Japanese. Topics vary with the semester and the instructor. Expectations for materials covered and produced for the class vary with the level (higher-level classes will have higher expectations). Contact the Japanese Program Coordinator for details about specific topics covered in a given semester.

Prerequisites: JAPN 311 and JAPN 312W or permission of the instructor

JAPN 496/596 Topics in Japanese (1-3 Credit Hours)

A study of selected topics in Japanese. These courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: JAPN 311 and JAPN 312W or permission of the instructor

JAPN 497 Tutorial Work in Japanese (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: JAPN 311 and JAPN 312W or permission of the instructor

JAPN 498 Tutorial Work in Japanese (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: JAPN 311 and JAPN 312W or permission of the instructor

JST - Jewish Studies

JST 300 Holocaust and Genocide Studies (3 Credit Hours)

After the atrocities of the Holocaust, 'Never again!' has been repeated throughout the world. However, the reality is that genocide did not begin or end with the Holocaust. This course uses the Holocaust as a case study in genocide, tracing the history of anti-Judaism and anti-Semitism in Europe through its reappropriation by Adolf Hitler. Through an interdisciplinary approach to the Holocaust where history, literature, film, and oral narratives are considered, students establish a basis for critiquing and understanding other genocides. The course will culminate with an analysis of contemporary genocide, taking into consideration how the genocides and the Holocaust inform our worldview of hatred and impact societies and cultures.

Prerequisites: Grade of C or better in ENGL 110C

JST 350 Judaism (3 Credit Hours)

This course is a basic introduction to Judaism. We will explore the fundamental tenets of Jewish belief, examine primary expressions of Jewish ritual and practice, discuss the historical development of Judaism, and explore sacred texts, secular Yiddish texts, and contemporary issues confronting Jews and Judaism.

Prerequisites: ENGL 110C

JST 395 Topics in Jewish Studies (3 Credit Hours)

This course addresses various topics in Jewish Studies.

Prerequisites: junior standing or permission of instructor

JST 495/595 Topics in Jewish Studies (3 Credit Hours)

This course addresses various topics in Jewish Studies.

Prerequisites: Junior standing or instructor approval

JST 497 Research Project in Jewish Studies (3 Credit Hours)

Independent reading and study of a topic to be selected in consultation with the director. Research proposal conference, research meetings and research project are required.

Prerequisites: junior standing, 6 hours of course work in Jewish studies, and approval of the director of Jewish Studies

LAS - Latin American Studies

LAS 320 Latin American Studies: Overview of Field (3 Credit Hours)

The objective of this course is to enhance students' understanding of the region of Latin America. It will seek to engage more closely with the culture, politics, social and human landscape of the region through the concepts of land, peoples, exchange and creativity. Readings, lectures, film viewings, and discussions will constitute integral components of the course and draw upon the work of various academic disciplines and artistic traditions. The course insists on the inter-disciplinary nature of Latin American Studies and the different insights offered by its different constituent disciplines. All readings and lectures are in English.

Prerequisites: A grade of C or better in ENGL 110C or permission of instructor

LAS 321 Comparative Caribbean and Latin American Culture and Civilization (3 Credit Hours)

An introductory, panoramic course that covers a wide, but representative array of eras in Latin American history (colonial, post-colonial, present-day) and problems (indigenous groups, exploitation of the land and natural resources, political tendencies, and U.S. sphere of influence). Literary and historical readings will be paired with other media in order to discuss issues of colonialism, wars of independence, revolutions, exile, migration, race, class, and gender. All readings and lectures are in English.

Prerequisites: A grade of C or better in ENGL 110C or permission of instructor

LAS 330 Afro-Latinx Narratives (3 Credit Hours)

This course will explore through poetry, songs, music, stories, (auto)biographical accounts and novels the importance, creativity, and meaning produced by people of African descent living in or from Latin America. It will focus on the Afro- Latinx narrative forms coming out of Ecuador, Brazil, Colombia, Cuba, Dominican Republic, Mexico, Puerto Rico and the United states. Through examining the narrative expressions of Blackness throughout regions of Latin America students can consider the relationship that social historical processes such as colonialism, nation-making and continued racism have on narrative production. Key to this course will be examining the ways race and gender/sexuality intersect within the multiple forms of expression of the Afro-Latinx community. Readings and lectures in English.

Prerequisites: A grade of C or better in ENGL 110C or permission of instructor

LAS 331 Brazilian Cultural History (3 Credit Hours)

This course provides a comprehensive introduction to Brazil's regions and cultural history, to Brazil's unique place in the Americas, and to its place in the world of Portuguese language. It presents major topics in the panorama of Brazilian cultural history and civilization from 1500 to the present through readings on regions, cultures, peoples, and arts, including the architects of Brazil's national cultural identity, its chronological development, and modern self-description. Topics include discovery and rediscovery of Brazil, baroque architecture, romanticism and empire, regionalism, immigration, urbanization, and modernization. The main texts draw on a cultural history of Brazil through selected writings by major authors and scholars. All lectures and readings in English.

Prerequisites: A grade of C or better in ENGL 110C

LAS 332 Latinx Literature (3 Credit Hours)

Course focuses particularly on works produced by the three major groups of U.S. Latinx (Mexican Americans or Chicanos, Puerto Ricans or Nuyoricans, and Cuban Americans) during the 20th and 21st centuries but will also include some pieces representative of other Latinx identities. Students will analyze works from a range of genres and cultural expressions including poetry, fiction, memoirs, film, and performance, along with recent literary and cultural theory works. Topics to be discussed include identity formation and negotiation in terms of language, race, gender, sexuality, and class; the colonial subject; diaspora and emigration; the marketing of the Latinx identity; and activism through art. Lectures and readings are in English.

Prerequisites: A grade of C or better in ENGL 110C

LAS 395 Topics in Latin American Area Studies (3 Credit Hours)

Investigation of special topics on Latin America. All readings and lectures are in English.

Prerequisites: A grade of C or better in ENGL 110C

LAS 421/521 Human Rights in Latin America (3 Credit Hours)

This course evaluates human rights movements, mechanisms, and their impacts in Latin America. Students will examine different human rights crises to understand how these events have shaped the region and what the response to them has been. The class is less a study of the specific legal mechanisms used in human rights practice and more a study of how human rights have evolved as a discourse and political strategy in struggles for justice. It adopts a more anthropological and geographic approach to understanding human rights theory and practice. All readings and lectures in English.

Prerequisites: A grade of C or better in ENGL 110C

LAS 430/530 Latin American Thinkers Changing Culture and Politics (3 Credit Hours)

In this course students will study the ideas of some important Latin American thinkers whose work has helped to shape Latin American history and society from Independence in the early 19th Century to the present. Even though special attention will be paid to some writers, works by a larger number of intellectuals will be analyzed as a way of understanding some of the central ideas in Latin American culture: "mestizaje," nationalism and popular culture, among others. All readings and lectures in English.

Prerequisites: A grade of C or better in ENGL 110C

LAS 431/531 Race and Culture in Brazil (3 Credit Hours)

This course will explore some of the unique contradictions shaping Brazilian reality as related to notions of race and culture by tracing the history of race relations in the ongoing transformation of Brazilian culture, examining such key examples and events as slavery and the plantation economy, popular music, Carnival, populism, racial democracy, affirmative action, and urban and rural violence. All readings and lectures in English.

Prerequisites: A grade of C or better in ENGL 110C

LAS 495/595 Topics in Latin American Area Studies (3 Credit Hours)

Investigation of special topics on Latin America. All readings and lectures are in English.

Prerequisites: A grade of C or better in ENGL 110C

LATN - Latin

LATN 101F Beginning Latin I (3 Credit Hours)

Introduction to Latin literature and Roman civilization.

LATN 102F Beginning Latin II (3 Credit Hours)

Latin is immortal! Roman mythology, the destruction of Pompeii, and the rise of the Colosseum are some of the topics. Reading Latin and building your vocabulary are reinforced with interactive student activities and videos.

Prerequisites: LATN 101F

LATN 201 Intermediate Latin I (3 Credit Hours)

Latin Lives! Roman mythology, gladiator fights, and comedy in the theater are some of the topics. Advanced Latin readings and grammar are reinforced with interactive student activities and videos.

Prerequisites: LATN 102F or satisfactory score on the placement test

LATN 202 Intermediate Latin II (3 Credit Hours)

Carpe diem! The poetry of Catullus and Horace is funny, nasty and philosophical. Translate analyze, and compare their poetry to our culture today. Also read parts of Ovid's Metamorphoses the mythology book which kept Latin alive through the Dark Ages until its resurgence in the Renaissance.

Prerequisites: LATN 201

LATN 395 Topics in Latin (1-3 Credit Hours)

A study of selected topics for elective credit. Study Roman literature, culture, and its influence. Translate, analyze, discuss relevance to today's world.

Prerequisites: LATN 202 or equivalent

LATN 396 Topics in Latin (1-3 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule booklet and will be more fully described in a booklet distributed to all academic advisors.

Prerequisites: LATN 202 or equivalent

LIBS - Library Science

LIBS 110G Information Literacy for the Digital Age (3 Credit Hours)

Students require a comprehensive understanding of information literacy so they can become effective users of ideas and information and guide others in activities of knowledge use and creation. This course will provide an introduction to the process and methods of retrieving information using digital literacies. Students will learn to identify an information need, then locate, evaluate, and use appropriate resources while embedding the dispositions of academic integrity and ethical use. Topics include use of collaborative tools for development of information, including social media. The content focuses on implementing effective digital information literacy strategies situated in various content areas with the intent that these strategies can be incorporated into future professional and instructional practices.

MAE - Mechanical and Aerospace Engineering

MAE 195 Topics (1-3 Credit Hours)

Permission of the chair required.

MAE 201 Materials Science (3 Credit Hours)

Principles of materials science with emphasis on the relationship between structure and properties and their control through composition and processing. Metals, polymers, ceramics, and composite materials are considered.

Prerequisites: MATH 211 with a grade of C or better

MAE 203 Mechanical Engineering Laboratory I - Materials Science (1 Credit Hour)

This laboratory involves experiments demonstrating lecture material covered in the MAE 201 course.

Pre- or corequisite: MAE 201 and CS 150 or ENGN 150

MAE 204 Engineering Mechanics I - Statics (3 Credit Hours)

Introduction to mechanical engineering problems and their solutions through the study of statics of particles and rigid bodies. Emphasis will be placed on the relationship of the static loads with the mechanical properties of the materials being considered. Introduction to the concepts of stress and strain and internal forces as applied to static bodies.

Prerequisites: MATH 211 with a grade of C or better

Pre- or corequisite: PHYS 231N

MAE 205 Dynamics (3 Credit Hours)

Introduction to engineering problems and their solutions through a study of the dynamics of particles and rigid bodies. General force systems are studied including friction.

Prerequisites: A grade of C or better in MAE 204 or CEE 204

Pre- or corequisite: MATH 212

MAE 220 Engineering Mechanics II - Solid Mechanics (3 Credit Hours)

Introduction to concepts of stress, strain and their relation to each other. Stress and strain in axially loaded members and circular rods and tubes subjected to torsion. Normal and shear stress in beams under bending loads. Additional topics include bending deflection, transformation of stress and strain, Mohr's circles, statically indeterminate problems, combined stress and thin walled pressure vessels.

Prerequisites: A grade of C or better in MAE 204 or CEE 204

MAE 225 Mechanical Engineering Laboratory II - Solid Mechanics (1 Credit Hour)

Experimental study of the mechanical behavior of materials under axial, bending and torsional loads. Measurements of elastic properties and strengths. Statistical treatment of data. Use of strain gauges. Experiments with composite materials and piezo-electric transducers. Use of data acquisition system. Experiments parallel lectures in MAE 220.

Prerequisites: ENGN 122 or ENGN 150 or CS 150

Pre- or corequisite: MAE 220

MAE 230 Engineering Graphics and Computer Solid Modeling (2 Credit Hours)

Graphical communication for engineers by means of 3D parametric modeling and its applications in industry. Fundamentals of sketching, basics of surface design, assembly modeling, and dynamic modeling of mechanisms using industry standard parametric modeling software. Emphasis on developing the skills needed for engineering design, including use of engineering standards.

MAE 303 Mechanics of Fluids (3 Credit Hours)

Fundamental concepts, fluid statics, basic equations in integral form, open-channel flow, Bernoulli's equation, dimensional analysis and similitude, incompressible viscous flow, pipe friction, boundary layers, introduction to differential analysis.

Prerequisites: MATH 307, MATH 312, and a grade of C or better in MAE 205

MAE 305 Mechanical Engineering Laboratory III - Thermo/Fluids (1 Credit Hour)

An introduction to thermo-fluid experimentation and measurement; basic flow phenomena demonstrated; measurement techniques for flow temperature, pressure and properties; report writing and data reduction methods, including statistical treatment of data; formal oral reports.

Prerequisites: Junior standing

Pre- or corequisite: MAE 303 and MAE 311

MAE 311 Thermodynamics I (3 Credit Hours)

Essential definitions of thermodynamics, first law, physical properties, ideal and real gases, second law, reversibility, irreversibility and consequences of thermodynamic cycles.

Prerequisites: MATH 312, and a grade of C or better in CHEM 121N

MAE 312 Thermodynamics II (3 Credit Hours)

Concepts and principles dealing with thermodynamic cycles, relations and generalized charts, mixtures of fluids, chemical reactions, chemical and phase equilibrium, thermodynamic aspects of fluid flow; introduction to compressible flow, isentropic and normal shock wave relations.

Prerequisites: MATH 307, and a grade of C or better in MAE 303, and a grade of C or better in MAE 311

MAE 315 Heat and Mass Transfer (3 Credit Hours)

Fundamental laws of heat transfer by conduction, convection, and radiation; boundary-layer concepts; simultaneous heat, mass, and momentum transfer.

Prerequisites: A grade of C or better in MAE 303, and a grade of C or better in MAE 311

MAE 332 Mechanical Engineering Design I (3 Credit Hours)

Introduction to machine design including review of stress and deflection analysis. Statistical considerations in design, strength of mechanical elements with emphasis on theories of failure and fatigue design.

Prerequisites: MAE 201, a grade of C or better in MAE 205, a grade of C or better in MAE 220, and MAE 230

Pre- or corequisite: MAE 225

MAE 336 Electromechanical Systems (3 Credit Hours)

Introduction to analog and digital circuits; sensors, actuators and signals; laboratory instrumentation (oscilloscope, function generator, etc.); data acquisition; and embedded microcontroller systems. Students will perform electronics experiments as homework assignments.

Prerequisites: ENGN 122 or ENGN 150 or CS 150, and PHYS 232N

MAE 340 Computational Methods in Mechanical Engineering (3 Credit Hours)

A survey of modern computing techniques for mechanical engineers. Numerical algorithms are presented to solve practical problems in mechanical engineering as found in solid mechanics, fluid mechanics, dynamics, and heat transfer. Emphasis is on providing computational experience in applied numerical methods using computers. Topics include roots of equations, simultaneous equations, differentiation, integration, regression analysis, interpolation and differential equations. Analysis, understanding, and quantification of computational errors are included in all topics and applications.

Prerequisites: ENGN 122 or ENGN 150 or CS 150; MATH 307 and MATH 312

MAE 367 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place.

Prerequisites: Approval by department in accordance with the policy for granting credit for Cooperative Education programs

MAE 368 Internship (1-3 Credit Hours)

Available for pass/fail grading only. Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students to gain short duration career-related experience.

Prerequisites: Approval by department is required; additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

MAE 369 Practicum (1-3 Credit Hours)

Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career-related experience.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

MAE 403/503 Flight Mechanics (3 Credit Hours)

Aircraft concepts including performance prediction and optimization, flight and maneuver envelopes, and steady flight performance. Additional topics: longitudinal static stability and trim; aircraft dynamics; development, separation and solution of aircraft equations of motion; natural modes; dynamic stability; sensors and actuators; and design of stability augmentation and autopilot systems.

Prerequisites: MAE 303 with a grade of C or better and MAE 340

Pre- or corequisite: MAE 436

MAE 404/504 Vibrations (3 Credit Hours)

Free and forced vibrations of undamped and damped, single-degree of freedom, multi-degree of freedom, and continuous systems. Exact and approximate methods to find natural frequencies.

Prerequisites: A grade of C or better in MAE 205, a grade of C or better in MAE 220; MAE 340 and MATH 312

MAE 406/506 Flight Vehicle Aerodynamics (3 Credit Hours)

Inviscid flow concepts including: Euler equations, stream function, velocity potential, singularities, vorticity and circulation laws. Viscous flow topics including boundary layers, separation, and turbulent flow. In addition, external flows, lift and drag, thin airfoil theory, finite wing theory and airfoil design will be discussed.

Prerequisites: A grade of C or better in MAE 303; MAE 340

MAE 411/511 Mechanical Engineering Power Systems Theory and Design (3 Credit Hours)

Thermodynamic properties of gases and vapors relating to power generating devices, work-energy relations, combustion, and heat exchangers. Performance analyses and design concepts of gas turbines, internal combustion engines, steam power plants and heat exchanger equipment from theoretical and applied viewpoints.

Prerequisites: MAE 312 and MAE 315

MAE 412/512 Environmental Control (3 Credit Hours)

Engineering principles as applied to the analysis and design of systems for automatically controlling man or machine environments. Course encompasses fundamentals of heating, ventilating, air conditioning, refrigeration, cryogenics, and design of building energy systems.

Prerequisites: MAE 312 and MAE 315

MAE 413/513 Energy Conversion (3 Credit Hours)

Introduction of relevant kinetic theory, solid state, and thermodynamic principles; operation and analysis of thermoelectric, photovoltaic, thermionic, magnetohydrodynamic devices, fuel cell, isotopic, and solar power generators. Course seeks to define engineering limits of converter efficiency and other performance criteria.

Prerequisites: MAE 312

MAE 414/514 Introduction to Gas Dynamics (3 Credit Hours)

One-dimensional compressible flow considering isentropic flow, normal shocks, flow in constant area ducts with friction, flow in ducts with heating and cooling, oblique shocks, Prandtl-Meyer expansions, shock-expansion theory, flow around diamond shaped airfoils, and wind tunnel mechanics.

Prerequisites: MAE 312 and a grade of C or better in MAE 303

MAE 417/517 Propulsion Systems (3 Credit Hours)

Basic principles of design, operation and performance of propulsion systems - including turbojet, turboprop, turbofan, and ramjet engines. Introduction to chemical rockets, ion and plasma thrusters.

Prerequisites: A grade of C or better in both MAE 303 and MAE 311

MAE 420/520 Aerospace Structures (3 Credit Hours)

Analysis of aircraft and space vehicle structural components. Effects of bending, torsion and shear on typical aerospace structural components, statically indeterminate beams, shear center and shear flow. Introduction to typical aerospace structures. Introduction to composite structures.

Prerequisites: MAE 332 with a grade of C or better

MAE 422/522 Modern Engineering Materials (3 Credit Hours)

Limitations of conventional materials; inter-relationship among materials, design and processing, material selection criteria and procedures; strengthening mechanisms in metals; superelasticity; shape memory effect, amorphous metals; structure-property relationship in polymers; polymers crystallinity; thermoplastic and thermosets; high-temperature restraint polymers; ceramics; toughening mechanisms in ceramics.

Prerequisites: MAE 201, MAE 203, and a grade of C or better in MAE 220; MAE 332

MAE 431/531 Mechanisms Analysis and Design (3 Credit Hours)

Basic relations necessary for analysis of plane motion mechanisms, numerical and analytical solutions for some of the basic mechanisms, methods of calculating rolling and sliding velocities and accelerations of contacting bodies, cams, and gears.

Prerequisites: A grade of C or better in MAE 205, a grade of C or better in MAE 332, and MATH 312 or MATH 285

MAE 433 Mechanical Engineering Design II (3 Credit Hours)

Statistical considerations in design, strength of mechanical elements with emphasis on theories of failure and fatigue design in mechanical elements such as screws, fasteners, connections, welded joints, and flexible mechanical elements. Kinematic analysis, force analysis, and design of spur, helical, worm, and bevel gears. Antifriction bearings, lubrication and journal bearings, shaft design, mechanical spring design, design of clutches, brakes and couplings.

Prerequisites: A grade of C or better in MAE 332 and senior standing

MAE 434W Project Design and Management I (3 Credit Hours)

This course prepares students to complete their design projects in MAE 435. Lecture topics include engineering economics; project planning; costing and risk analysis; and product realization techniques. Course involves written and oral presentations for students to improve communication and teamwork skills. This is a writing intensive course.

Prerequisites: A grade of C or better in MAE 332, ENGL 211C or ENGL 221C or ENGL 231C

Pre- or corequisite: MAE 433

MAE 435 Project Design and Management II (3 Credit Hours)

Conceptual design ideas are expanded into detailed design ideas. Product realization is applied to complete hardware. Course covers Gantt charts, preliminary design, evaluation and trading matrices, detailed design and analysis, oral and technical reporting including cost analysis. Ethics and patent issues are also included.

Prerequisites: MAE 433 and MAE 434W

MAE 436 Dynamic Systems and Control (3 Credit Hours)

Analysis and synthesis of feedback systems; functional description of dynamic systems; basic controllers; sensitivity, stability and error analysis; transient and steady-state response using computational techniques, root locus and frequency response methods; state-space analysis of control systems.

Prerequisites: A grade of C or better in MAE 205; MAE 336, MATH 307 and MATH 312

MAE 438/538 Applied Analog and Digital Control (3 Credit Hours)

Computer-aided analysis and design of practical control systems. Introduction to state-space, digital signal processing and digital control. Laboratory sessions on aliasing, analog, system identification, and real-time control.

Prerequisites: a grade of C or better in MAE 436

MAE 440/540 Introduction to Finite Element Analysis (3 Credit Hours)

Basic concepts of finite-element method, method of weighted residuals, interpolation functions, numerical implementation of finite-element method, applications to engineering problems such as beam deflection, heat conduction, and plane elastic problems.

Prerequisites: MAE 340

MAE 441 Computer-Aided Design of Mechanical Systems (3 Credit Hours)

Case studies are used to introduce students to CAD software; design processes involving modeling, analysis and design, and verification. Typical case studies are beam and plate designs, turbine blade design, and pipe networks. Advanced topics include: thermal stress analysis and plates and shells.

Prerequisites: ENGN 122 or ENGN 150 or CS 150, MATH 312, and a grade of C or better in MAE 220

Pre- or corequisite: MAE 332

MAE 450/550 Principles of Naval Architecture (3 Credit Hours)

Basic principles of naval architecture related to ship geometry, stability, strength, resistance, propulsion, vibration and motions in waves and controllability.

Prerequisites: MATH 212 with a grade of C or better

MAE 460/560 Introduction to Space Systems Engineering (3 Credit Hours)

Introduction to spacecraft systems starting from mission design and space environment considerations and proceeding through propulsion, altitude control, spacecraft structural design, thermal control, power and communications for spacecraft.

Prerequisites: MATH 307 and PHYS 232N

MAE 495/595 Topics in Mechanical and Aerospace Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in mechanical and aerospace engineering or engineering mechanics. (offered fall, spring, summer)

Prerequisites: Senior standing; Permission of the chair is required

MAE 496 Topics in Mechanical and Aerospace Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in mechanical engineering or engineering mechanics. (offered fall, spring, summer)

Prerequisites: senior standing; permission of the chair is required

MAE 497/597 Independent Study in Mechanical and Aerospace Engineering (1-3 Credit Hours)

Individual analytical, computational, and/or experimental study in an area selected by student. Supervised and approved by the advisor.

Prerequisites: Senior standing; Permission of the chair is required

MATH - Mathematical Sciences

MATH 100 The Math Cooperative (1 Credit Hour)

This course is to prepare students who did not meet the prerequisites for MATH 102M or MATH 103M. This course is not open to students with prior credit for or who qualify for College Algebra or a higher-level math course.

MATH 101M An Introduction to Mathematics for Critical Thinking (3 Credit Hours)

This course fulfills the math general education requirement for some majors in the College of Arts and Letters and the College of Education and Professional Studies. It can also be used as a preparation for STAT 130M. An introduction to the ways in which modern mathematics can be used to analyze the modern world and make logical decisions. Topics include problem solving, sets, logic, consumer mathematics (loans, mortgages, annuities), probability, and elementary statistics.

MATH 102M College Algebra (3 Credit Hours)

A basic course in algebra that emphasizes applications and problem-solving skills. Topics include finding solutions, graphing of linear equations and inequalities, graphs and functions, combining polynomials and polynomial functions, factoring polynomials, simplifying and combining rational expressions and equations, simplifying roots and radicals, solving radical equations, and an introduction to quadratic functions and equations. This course fulfills the math general education requirement and can be used as a preparation for MATH 162M. MATH 101M is not a prerequisite for MATH 102M. Not open to students with credit for MATH 162M.

Prerequisites: SAT score of 540 or above, or ACT score of 22 or above, or qualifying score on the ALEKS placement exam

MATH 103M College Algebra with Supplemental Instruction (3 Credit Hours)

This course covers the same content as MATH 102M. It is designed for students who must complete MATH 102M as part of their degree program, but who do not meet the prerequisites for MATH 102M. MATH 103M may be used interchangeably with MATH 102M and may be used as a prerequisite requirement for any course that requires MATH 102M as a prerequisite. MATH 103M will require registration for a supplemental instruction session each week.

Prerequisites: High school GPA of 3.4 or above, or qualifying score on the ALEKS placement exam, or MATH 100

MATH 162M Precalculus I (3 Credit Hours)

The first course in a two-course sequence designed to provide a strong preparation for calculus. Topics include algebraic operations, equations and inequalities, graphs and functions, polynomial functions, theory of equations, systems of equations, exponential functions, and logarithmic functions.

Prerequisites: qualifying score on SAT or ACT, or qualifying score on a placement test administered by the University Testing Center or a grade of C or better in MATH 102M or MATH 103M

MATH 163 Precalculus II (3 Credit Hours)

The second course in a two-course sequence designed to provide strong preparation for calculus. Topics include exponential and logarithmic functions/equations, trigonometric functions/equations, trigonometric identities, laws of sines and cosines, vectors, polar representation of complex numbers, binomial theorem, and conic sections.

Prerequisites: A grade of C or better in MATH 162M

MATH 166 Precalculus I and II (4 Credit Hours)

A one-semester precalculus course covering the topics of MATH 162M and MATH 163 at an accelerated pace. Not available to students with credit in MATH 163.

Prerequisites: A grade of C or better in MATH 102M or MATH 103M

MATH 197 Undergraduate Research Experience in Mathematics (0 Credit Hours)

Student participation in a supervised, undergraduate research experience for which credit will not apply to the degree. Experience must be related to the student's major, minor or career area of interest.

Prerequisites: permission of the instructor

MATH 200 Calculus for Business and Economics (3 Credit Hours)

A Calculus course intended for those studying business and economics. Topics include applications of linear, quadratic, rational, exponential, and logarithmic business functions, solving applied linear systems using matrices, limits and continuity, derivatives with applications, and integration with applications.

Prerequisites: A grade of C or better in MATH 162M

MATH 205 Calculus for Life Sciences (3 Credit Hours)

This course covers the standard topics of first semester calculus including limits, derivatives and integrals. All examples for this course are drawn from biological sciences with specific applications to topics covered in the core courses of the undergraduate Biology major.

Prerequisites: A grade of C or better in MATH 162M

MATH 211 Calculus I (4 Credit Hours)

A first course in calculus and analytic geometry. Topics include differentiation and integration of algebraic and transcendental functions of one variable and applications.

Prerequisites: A grade of C or better in MATH 163 or MATH 166

MATH 212 Calculus II (4 Credit Hours)

A second course in calculus and analytic geometry. Topics include techniques of integration, polar coordinates, infinite series, solid geometry, vectors, lines and planes.

Prerequisites: A grade of C or better in MATH 211

MATH 280 Transfer Credit for Ordinary Differential Equations (3 Credit Hours)

This course is a VCCS transfer credit vehicle. Students who have earned transferable credit in MATH 279 or 291 at any member institution of the VCCS will be granted credit for MATH 280. The course will not be offered for credit by Old Dominion University. Cannot be used to substitute for MATH 307 for MATH majors or minors.

MATH 285 Transfer Credit for Calculus III (4 Credit Hours)

This course is a VCCS transfer credit vehicle. Students who have earned transferable credit for MATH 275 or 277 at any member institution of the VCCS will be granted credit for MATH 285. The course will not be offered for credit by Old Dominion University. Cannot be used to substitute for MATH 312 for MATH majors or minors.

MATH 295 Topics in Mathematics (1-5 Credit Hours)

Study of selected topics.

Prerequisites: departmental permission

MATH 302 Geometry (3 Credit Hours)

Elementary plane and solid Euclidean geometry with proofs and applications. Topics include angles, triangles, congruence, quadrilaterals, circles, similarity, perimeter, area, volume, polygons, plane and solid constructions. A dynamic geometry visualization software is used to discover geometric properties. (May not be used to satisfy the upper-division elective requirement of the math majors program.)

Prerequisites: A grade of C or better in MATH 102M or MATH 103M or MATH 162M

MATH 307 Ordinary Differential Equations (3 Credit Hours)

Topics include first order differential equations and systems, second and higher order linear equations, solution by series and Laplace transform, and applications.

Prerequisites: A grade of C or better in MATH 212

MATH 311W Abstract Algebra (3 Credit Hours)

Topics include introduction to logic and methods of proof; sets, relations, and functions; elementary group and ring theory. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; MATH 212 or departmental permission

MATH 312 Calculus III (4 Credit Hours)

A third course in calculus and analytic geometry. Topics include vector functions, partial derivatives, multiple integrals and an introduction to vector calculus.

Prerequisites: A grade of C or better in MATH 212

MATH 316 Introductory Linear Algebra (3 Credit Hours)

An introduction to linear algebra. Topics include matrices, vectors, vector spaces, linear transformations, eigenvalues and eigenvectors.

Prerequisites: A grade of C or better in MATH 212

MATH 317 Calculus IV: Introductory Analysis (3 Credit Hours)

An introduction to real analysis. Topics covered include completeness and topological properties of the real line, theory of sequences, limits of functions, the derivative, the Riemann integral, and the Fundamental Theorem of Calculus.

Prerequisites: A grade of C or better in MATH 212

MATH 335 Number Systems and Discrete Mathematics (3 Credit Hours)

Estimation and other applications to real world problems, using elementary principles of algebra, geometry, number theory, number systems, and discrete mathematics. (May not be used to satisfy the upper-division elective requirement of the math majors program.)

Prerequisites: A grade of C or better in MATH 102M or MATH 103M or MATH 162M

MATH 367 Cooperative Education (1-3 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place. Available for pass/fail grading only. May be repeated for credit.

Prerequisites: Permission of the departmental chair in accordance with departmental Cooperative Education policies; Student participation in a professional work experience; Approval for enrollment and allowable credits are determined by the department; Additional support may be provided by the Monarch Internship and Co-Op Office in at least one semester prior to enrollment

MATH 375 Advanced Concepts for Secondary Educators: Function and Modeling (3 Credit Hours)

This course engages students in explorations and laboratory activities designed to strengthen and expand their knowledge of the topics found in college mathematics, and in particular, students will delve into and illuminate the connections between secondary and college mathematics by exploring and highlighting the basic secondary school topics that need to be mastered in order to solve problems in college mathematics. Through this process, students will achieve mastery of topics they will be teaching in secondary mathematics and understand the connection between the high school curriculum and their students' success in college and in the workplace.

Prerequisites: MATH 307

MATH 395 Topics in Mathematics (1-3 Credit Hours)

Study of selected topics.

Prerequisites: departmental permission

MATH 399 Putnam Exam Problems and Related Topics (1 Credit Hour)

This course is designed to help students prepare for the Putnam Exam - an annual national mathematical competition. Problems from previous Putnam Exams and materials related to the solution of such problems will be considered.

Prerequisites: A grade of C or better in MATH 212

MATH 400/500 History of Mathematics (3 Credit Hours)

Seminal ideas in geometry, arithmetic, algebra, analysis and applied mathematics (along with their mathematical representations) from antiquity, the age of exploration, the Promethean age to the present day.

Prerequisites: MATH 311W or MATH 316 or MATH 317

MATH 401/501 Partial Differential Equations (3 Credit Hours)

Not available to students with credit in MATH 691. Separation of variable techniques, Sturm-Liouville systems, generalized Fourier series, orthogonal functions of the trigonometric, Legendre and Bessel type boundary value problems associated with the wave equation and the heat conduction equation in various coordinate systems, applications to physics and engineering.

Prerequisites: A grade of C or better in MATH 307 and MATH 312

MATH 404/504 Fundamental Concepts of Geometry (3 Credit Hours)

Fundamentals of Euclidean and non-Euclidean geometry. Alternatives to Euclidean geometry are examined using a variety of mathematical techniques. Special topics such as 'Taxicab' geometry, the hyperbolic plane, the art of M.C. Escher, and the mathematics of maps may be included.

Prerequisites: MATH 311W

MATH 406/506 Number Theory and Discrete Mathematics (3 Credit Hours)

A survey course. Topics include the prime number theorem, congruences, Diophantine equations, continued fractions, quadratic reciprocity, combinatorics, logic, graphs, trees, algorithms, coding and linear programming.

Prerequisites: A grade of C or better in MATH 311W and MATH 316

MATH 408/508 Applied Numerical Methods I (3 Credit Hours)

An introduction to the numerical methods commonly used by scientists and engineers. Topics include solutions of equations of one variable, direct methods for solving linear systems, matrix factorization, stability analysis, iterative techniques, polynomial interpolation, numerical differentiation and integration, approximation theory, and initial and boundary value problems for ordinary differential equations.

Prerequisites: A grade of C or better in MATH 316; CS 150 or equivalent programming ability also required

MATH 409/509 Applied Numerical Methods II (3 Credit Hours)

Topics include least squares problems, the QR factorization, the conjugate gradient method, Householder transformation and the QR method for approximating eigenvalues and singular values of a matrix. For applications, the finite difference method and the finite element method for solving partial differential equations, trigonometric interpolation and FFT as well as introductory study of optimization are discussed.

Prerequisites: A grade of C or better in MATH 408/MATH 508

MATH 417/517 Intermediate Real Analysis I (3 Credit Hours)

A rigorous course in classical real analysis. Topics include the topology of Euclidean n -space, properties of vector valued functions of several variables such as limits, continuity, differentiability and integrability, pointwise and uniform convergence of sequences and series of functions; Fourier series.

Prerequisites: a grade of C or better in MATH 317

MATH 418/518 Intermediate Real Analysis II (3 Credit Hours)

A rigorous course in classical real analysis. Topics include the topology of Euclidean n -space, properties of vector valued functions of several variables such as limits, continuity, differentiability and integrability, pointwise and uniform convergence of sequences and series of functions; Fourier series.

Prerequisites: A grade of C or better in MATH 417

MATH 420/520 Applied Mathematics I: Biomathematics (3 Credit Hours)

Exploring mathematical models in various biological contexts using both difference and differential equations: single and multiple species population growth, predator-prey and competing species (using phase plane analysis), epidemiological models of epidemics and pandemics, tumor growth, pattern formation in animals and insects.

Prerequisites: A grade of C or better in MATH 307

MATH 421/521 Applied Mathematics II: Mathematical Modeling (3 Credit Hours)

The philosophy and methodology of mathematical modeling, its successes and limitations. Topics include models of climate change and atmospheric and ocean dynamics, models in other physical and biological contexts, and an introduction to deterministic chaos.

Prerequisites: A grade of C or better in MATH 307, MATH 312, MATH 316, and MATH 317

MATH 422/522 Applied Complex Variables (3 Credit Hours)

Not available to students with credit in MATH 692. Topics include complex numbers, analytical functions and their properties, derivatives, integrals, series representations, residues and conformal mappings. Applications of the calculus of residues and mapping techniques to the solution of boundary value problems in physics and engineering.

Prerequisites: A grade of C or better in MATH 312

MATH 427/527 Applied Mathematics III: Elasticity (3 Credit Hours)

An introduction to the mathematical theory of linear and non-linear elastic continua. Topics include vectors, tensors, deformation, stress, nonlinear constitutive theory, exact solutions, infinitesimal theory, antiplane strain, plane strain, plane stress, extension, torsion, bending and elastic wave propagation.

Prerequisites: A grade of C or better in MATH 307 and MATH 312

MATH 428/528 Applied Mathematics IV: Fluid Mechanics (3 Credit Hours)

A mathematical investigation of the differential equations governing fluid flow with an emphasis on steady state incompressible flows.

The Navier-Stokes equations are derived and some exact solutions are presented including the potential flow solutions. Topics therefore include classical ideal fluid flow and its complex variable representation, various approximations to the Navier-Stokes equations, boundary layer theory, and also surface and internal gravity wave motion, aspects of hydrodynamic stability theory and convection. Other topics may be introduced by the instructor.

Prerequisites: A grade of C or better in MATH 307 and MATH 312

Corequisites: MATH 401

MATH 457/557 Mathematics in Nature (3 Credit Hours)

A calculus and differential equations based description of many patterns observable in the natural world including wave motion in the air, oceans, rivers, and puddles; rainbows, halos and other meteorological phenomena; arrangement of leaves, petals and branches; height of trees; river meanders; animal and insect markings; mudcracks; spider webs; and others. Partial differential equations will be discussed as needed but a knowledge of ordinary differential equations will be assumed.

Prerequisites: A grade of C or better in MATH 307

MATH 461 Preparation for Praxis Certification (3 Credit Hours)

This course will equip students to pass the Praxis 5161 Mathematics: Content Knowledge Exam. This exam is required for teaching licensure at the secondary Level in Virginia. Only open to students in the Secondary School Teaching Option in the Math B.S. program who have NOT yet passed the Praxis 5161 Exam.

Prerequisites: Instructor approval

MATH 494 Entrepreneurship in Mathematics (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to apply their knowledge of mathematics to the development of a new product, business, nonprofit program, or other initiative. The real world experiences that entrepreneurship provide will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems. This course is administered as an independent project for individual students, or as group projects.

Prerequisites: 3.0 GPA and approval of course instructor(s)

MATH 496/596 Topics in Mathematics (1-3 Credit Hours)

Study of selected topics.

Prerequisites: permission of the instructor

MATH 498/598 Tutorial Work in Special Topics in Mathematics (1-3 Credit Hours)

Independent study under the direction of an instructor including library research and reports.

Prerequisites: permission of the instructor

MBA - Master of Business Administration

MBA 420/520 Spreadsheet Modeling (1 Credit Hour)

This course introduces students to the use of spreadsheet modeling to analyze and make business decisions. Course topics include spreadsheet design, data analysis for modeling, and Monte Carlo simulation. The course is web-based providing tremendous flexibility for the students. Students will need some proficiency with Excel.

Prerequisites: Instructor permission

MDTS - Medical Diagnostic and Translational Sciences

MDTS 400/500 Principles of Molecular Diagnostics (3 Credit Hours)

Course will cover basic concepts of molecular biology including nucleic acids, chromosomes, DNA replication, transcription, and translation and the role of inherited and acquired mutations in disease. The role of clinical molecular diagnostics in detection, prognosis, theranostics, and monitoring and management of patients with inherited and infectious diseases will be explored.

Prerequisites: BIOL 240 or BIOL 250, BIOL 241 or BIOL 251; CHEM 211, CHEM 212 and permission of instructor

MDTS 401/501 Molecular Diagnostics Laboratory (3 Credit Hours)

Course will cover basic molecular biology laboratory techniques including nucleic acid isolation, restriction enzyme digestion, polymerase chain reaction (PCR), quantitative reverse-transcription PCR, DNA sequencing, western blot, ELISA, and PCR-RFLP. This includes both hands on experience and lecture-based explanation of the science behind the techniques.

Prerequisites: Restricted to students in the Medical Laboratory Science, Pre-Clinical Studies, or Cytology major, or Cytology certificate program, or permission of the instructor

MET - Mechanical Engineering Technology

MET 200 Materials and Manufacturing Processes (3 Credit Hours)

Application and characteristics, both physical and chemical, of the materials most commonly used in industry as well as procedures and processes used in converting raw materials into a finished product.

MET 225 Strength of Materials Laboratory (1 Credit Hour)

A laboratory course dealing with the standard methods of inspecting and testing materials used in engineering applications with emphasis on laboratory reports, including presentation and interpretation of experimental data.

Pre- or corequisite: ENGT 220

MET 295 Topics (1-3 Credit Hours)

Study of selected topics.

MET 300 Thermodynamics (3 Credit Hours)

The basic laws of thermodynamics, properties of fluids, heat, and work and their applications in processes and cycles and an introduction to conduction heat transfer.

Prerequisites: CHEM 121N, MATH 211, and PHYS 111N or PHYS 231N

MET 310 Dynamics (3 Credit Hours)

A fundamental treatment of coplanar and three-dimensional kinematics and kinetics of particles and rigid bodies, including relative motion, mass moment of inertia, Newton's laws, work and energy and impulse and momentum.

Prerequisites: A grade of C or better in MATH 211, and MET 210 or CET 200 or ENGT 200

MET 320 Design of Machine Elements (3 Credit Hours)

The course provides a comprehensive overview of mechanical design principles and stress analysis in design of mechanical drive systems (such as belts, chains, and gears), shaft design, bearings, and fasteners, as well as the integration of electric motors and motion control elements like clutches and brakes. The course emphasizes practical design applications in design of machine elements.

Prerequisites: A grade of C or better in MATH 211 and ENGT 220

MET 330 Fluid Mechanics (3 Credit Hours)

The study of fluid statics and dynamics, including momentum, energy, Bernoulli's equation, laminar and turbulent fluid flow and friction in pipes, fluid machinery, and open-channel flow.

Prerequisites: MATH 211, and MET 210 or CET 200 or ENGT 200

MET 331 Fluid Mechanics Laboratory (1 Credit Hour)

Experimental study of applied fluid mechanics, its fundamental concepts including fluid statics, Bernoulli's equation, pipe friction, flow measuring devices, and fluid machinery. Includes report writing, presentation and interpretation of experimental data.

Prerequisites: MATH 211

Pre- or corequisite: MET 330

MET 340 Heat Transfer (3 Credit Hours)

A study of conduction, convection, and radiation heat transfer, and heat exchangers. Emphasis is on applications and problem solving using current techniques, and modern numerical tools.

Prerequisites: A grade of C or better in MATH 211, and MET 300

MET 350 Thermal Applications (3 Credit Hours)

A study of the applications of thermodynamics. Topics include the basic steam and gas turbine power cycles, internal combustion engines, introduction to refrigeration systems, gas mixtures, and psychrometrics applied to air conditioning processes.

Prerequisites: MET 300 with a grade of C or better

MET 351 Thermal Applications Laboratory (1 Credit Hour)

Experimental study of applied thermodynamics and energy conversion efficiencies; power cycles, refrigeration cycles, compressible flow, and heat transfer. Includes teamwork and collaborative laboratory report writing, along with presentation and interpretation of experimental data.

Prerequisites: MET 331

Pre- or corequisite: MET 350

MET 367 Cooperative Education (1-3 Credit Hours)

May be repeated for credit. Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place. (offered fall, spring, summer)

Prerequisites: Permission of the departmental chair in accordance with departmental Cooperative Education policies; Student participation in a professional work experience; Approval for enrollment and allowable credits are determined by the department; Additional support may be provided by the Monarch Internship and Co-Op Office in at least one semester prior to enrollment

MET 368 Internship (1-3 Credit Hours)

Available for pass/fail grading only. Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students to gain short duration career-related experience.

Prerequisites: Approval by department is required; additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

MET 369 Practicum (1-3 Credit Hours)

Available for pass/fail grading only.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

MET 395 Topics (1-3 Credit Hours)

Study of selected topics.

Prerequisites: permission of the instructor

MET 396 Topics (1-3 Credit Hours)

Study of selected topics.

Prerequisites: permission of the instructor

MET 427 Mechatronic System Design (3 Credit Hours)

A study of the integrated modeling and optimal design of a physical system, which includes sensors, actuators, electronic components, and its embedded digital control system. Includes simultaneous optimal design practice with respect to the realization of the design specifications related to different engineering domains.

Prerequisites: MATH 211

MET 431 Modeling and Simulation of Mechatronic Systems (3 Credit Hours)

The course provides foundations, principles, methods, and tools for modeling and simulation of electro-mechanical components and systems using appropriate modeling techniques. The course is focused on the multi-body dynamics systems, fluid, hydraulic, and electrical systems.

Prerequisites: ENGT 305

MET 435 Advanced Fluid Mechanics and Turbomachinery (3 Credit Hours)

Foundations, principles, methods, and tools for solving a variety of industrial fluid problems, computing pipe friction losses in complex systems, understanding fluid-machinery operation, pump selection process, understanding turbine and dam mechanics, and designing gas/air flow in ducts.

Prerequisites: MET 330

MET 460 Refrigeration and Air Conditioning (3 Credit Hours)

The design and application of refrigeration and air conditioning systems. Studies are made of compressors, condensers, evaporators, psychometric processes, load calculations and air distribution systems. High performance vapor compression systems, absorption systems and other cycles are analyzed.

Prerequisites: MET 330 and MET 350

MET 471 Nuclear Systems I (3 Credit Hours)

Reactor physics principles as applied to the design and operation of various types of commercial nuclear power reactors. Topics include sources of radiation and interaction with matter, neutron interactions, diffusion theory, and reactor kinetics.

Prerequisites: MATH 211

MET 472 Nuclear Systems II (3 Credit Hours)

Complete study of the nuclear fuel cycle, from mining through fabrication, fuel management in an operating commercial power reactor, spent fuel management, and fuel reprocessing, with emphasis on chemical engineering considerations.

Prerequisites: MET 471

MET 475 Marine Engineering I (3 Credit Hours)

This course includes: fundamental principles of naval architecture including nomenclature, geometry, stability, hydrostatics, structures, and motions; ship design processes; and a basic introduction to shipboard systems such as HVAC, refrigeration, power generation, propulsion, hydraulics, electronics, cargo handling systems, seawater systems, freshwater systems, and fuel, lube and other oil systems.

Prerequisites: MET 330 and MET 350

MET 476 Marine Engineering II (3 Credit Hours)

This course provides an in-depth look at shipboard systems and introduces topics such as basic shipboard specifications, design requirements, systems, and operations. Concepts related to digital threads and digital twin in shipbuilding are covered.

Prerequisites: MET 330 and MET 350

MET 485 Maintenance Engineering (3 Credit Hours)

This course looks at maintenance systems: predictive, preventative and corrective; large scale maintenance systems, principles of reliability engineering, logistics: planning for maintenance and repair, using and ordering spare parts, technical manuals, system specifications, and operations. Modern tools such as AI are included.

Prerequisites: MATH 211

MET 495 Topics in Mechanical Engineering Technology (1-3 Credit Hours)

Study of selected topics.

Prerequisites: permission of the instructor

MET 496 Topics in Mechanical Engineering Technology (1-3 Credit Hours)

Study of selected topics.

Prerequisites: permission of the instructor

MFET - Manufacturing Engineering Technology

MFET 235 Introduction to Robotics (3 Credit Hours)

An introductory course in robotics dealing with the history and development of robots, mechanical components and control systems, actuators, robot programming and utilization. Included are laboratory experiments in robot motion and programming.

Prerequisites: MATH 211

MFET 310 Design for Manufacturing (3 Credit Hours)

Principles of design for manufacturing, materials and process selection for design, design for assembly, design for production and case studies. Also includes impact of product design, design for maintenance, recyclability, disassembly, quality and robustness. Semester project requires redesign of an existing product for manufacturing.

Prerequisites: MATH 211

MFET 320 Introduction to Mechatronics (3 Credit Hours)

A study of the mechatronics concepts and their application on actual problems encountered in engineering practice. Includes the basics of electromechanical systems, electrical circuits, solid-state devices, digital circuits and motors, all of which are fundamental to understanding mechatronic systems.

Prerequisites: MATH 211

MFET 330 Quality Systems in Manufacturing (3 Credit Hours)

This course provides a comprehensive exploration of quality systems within the realm of manufacturing. Students will delve into the principles, methodologies, and tools essential for ensuring and enhancing product quality throughout the manufacturing lifecycle. Topics covered include quality management systems, statistical process control, Six Sigma methodologies, root cause analysis, quality assurance practices, and the integration of quality systems within various manufacturing processes. Through case studies and practical applications, students will gain a deep understanding of how quality systems contribute to operational excellence and competitive advantage in modern manufacturing environments.

Prerequisites: ENGT 365

MFET 340 Computer Integrated Manufacturing (3 Credit Hours)

This course offers an in-depth examination of material handling technologies, automatic identification, and data capture techniques. Students will grasp the concepts underlying manufacturing support systems, delve into the realm of digital manufacturing, and gain proficiency in manufacturing process simulation. Through practical applications and theoretical frameworks, this course equips learners with a comprehensive understanding of how technology intersects with modern manufacturing processes.

Prerequisites: MATH 211

MFET 410 Computer Numerical Control in Production (3 Credit Hours)

Principles of computer numerical control consistent with most recently developed standards, industry practices, and CAD/CAM systems including such topics as types of CNC machines, CNC milling, CNC turning and CNC electro-discharge machinery. A significant portion of the course includes programming in multiple axes.

Prerequisites: ENGT 365

MFET 420 Introduction To Welding Technologies (3 Credit Hours)

An introduction to conventional and non-conventional welding processes. This course is intended to provide the student with a basic understanding of the various welding processes, welding terminology, joints, symbols, welding defects, equipment. Topics covered include welding processes, heat and fluid flow, structure of metals, solidification phenomena, phase transformations, residual stresses, and nondestructive examination techniques. Real life examples will be used to illustrate the fundamental concepts of the course. The student will also be introduced to career opportunities in the welding field. Lab time will be used to enforce lecture topics when needed.

Prerequisites: ENGT 365

MFET 430 Additive Manufacturing (3 Credit Hours)

This course provides an overview of various additive manufacturing (AM) processes. Topics include fundamentals of polymer, composite, and metal AM processes, process parameters, AM software, AM cost, and AM's industrial potential such as prototyping, tooling, production customization, spare parts, art, design, architecture and construction.

Prerequisites: ENGT 365

MFET 440 Advanced Manufacturing Processes (3 Credit Hours)

This course explores the intricate methods and technologies revolutionizing manufacturing, encompassing additive manufacturing, precision machining, sustainable and green processes and technologies, custom manufacturing, intelligent production systems, digital manufacturing, and digital twin.

Through case studies and practical applications, learners develop a comprehensive understanding of innovative manufacturing processes driving efficiency, precision, and competitiveness in industry.

Prerequisites: ENGT 365

MFET 450 Lean Engineering (3 Credit Hours)

This course looks at the history of lean and six sigma philosophies, their principles and implementation methodologies for creating a world class enterprise. Topics in Lean include 5s, value stream mapping, cellular manufacturing, pull system, performance metrics, Lean supplier network, Lean product development and Lean implementation models. Through theory and practical applications, students gain a foundational grasp of Lean Manufacturing and its real-world applications.

Prerequisites: ENGT 365

MFET 460 Facilities Planning and Material Handling (3 Credit Hours)

This course takes a systematic approach to design of facilities and material handling systems for effective and lean production of goods and services. An array of qualitative and quantitative tools and techniques are introduced and utilized, emphasizing lean principles, waste reduction, and overall efficiency of operations. Flow analysis and optimization tools, including computer simulation, are introduced. Strong emphasis is placed on a comprehensive semester-long team project as an integral component of this course.

Prerequisites: ENGT 365

MGMT - Management

MGMT 325 Contemporary Organizations and Management (3 Credit Hours)

The fundamentals of the managerial process (planning, organizing, leading and controlling) are considered in the context of 21st century organizations. Topics are almost evenly split between macro and micro perspectives

Prerequisites: A declared major in the University or an intended major in the Strome College of Business or permission of the Dean's Office of the Strome College, AND Junior Standing

MGMT 327 Business Communication (3 Credit Hours)

This course is an introduction to the importance and centrality of communication in business. Students will learn the application of business communication principles by working both individually and collaboratively on communicating through effective business documents, presentations, professional written and oral correspondence, and use of digital media. Attention will be given to both interpersonal and group audiences, as well as formal and informal delivery.

Prerequisites: MGMT 325

MGMT 330 Organizational Behavior (3 Credit Hours)

This class examines theories and concepts pertaining to people at work. Topics include personality differences, motivation principles, high-performing work teams, and leadership development.

Prerequisites: Junior standing

Pre- or corequisite: MGMT 325

MGMT 336 International Entrepreneurship (3 Credit Hours)

This course provides students knowledge of fundamental issues and opportunities facing entrepreneurial ventures on the global stage. Students are exposed to core theories, contemporary trends, and cutting-edge research in international entrepreneurship. Students will examine what motivates entrepreneurs to seek foreign markets, and how to leverage cultural differences. The course discusses frameworks to analyze key factors and risks involved with venturing abroad, and assessing the strategies and resources needed for international success.

Prerequisites: MGMT 325

MGMT 340 Human Resource Management (3 Credit Hours)

This class examines all issues pertaining to managing people in an organization. Topics include strategic planning for Human Resources, recruitment and selection systems, performance evaluation and development programs, Equal Employment Opportunity, and diversity management.

Prerequisites: MGMT 325

Pre- or corequisite: MGMT 330

MGMT 350 Employee Relations Problems and Practices (3 Credit Hours)

Examines personnel topics such as absenteeism, substance abuse, theft, gambling and counseling problem employees. Policies and practices used by organizations to anticipate and resolve these problems are explored and evaluated.

Prerequisites: junior standing, and a declared major in the University or permission of the Dean's Office

MGMT 360 Labor Management Relations (3 Credit Hours)

A contextual study of the trade union movement and its development, structure and processes. Emphasizes the impact of union organization on management practice and effectiveness in both private and public sector organizations.

Prerequisites: MGMT 340, and a declared major in the University or permission of the Dean's Office

MGMT 361 International Business Operations (3 Credit Hours)

An examination of the environment of multinational business, foreign trade, and the operation of multinational enterprises. Management, marketing, accounting, and financial problems unique to enterprises operating in varying economic, cultural, and political legal environments are investigated. This course includes a CAP experience. International business majors may not take MGMT 361 for credit.

Prerequisites: FIN 323, MKTG 311 and MGMT 325, and a declared major in the University or permission of the Dean's Office

MGMT 367 Cooperative Education (1-6 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place. May be repeated for credit. Available for pass/fail grading only.

Prerequisites: MGMT 325, approval by the department, and a declared major in the University or permission of the Dean's Office

MGMT 368 Management Internship (1-3 Credit Hours)

Approval for enrollment and allowable credits is determined by the department in the semester prior to enrollment. Available for pass/fail grading only. (qualifies as a CAP experience)

Prerequisites: MGMT 325, and a declared major in the University or permission of the Dean's Office

MGMT 369 Management Practicum (1-3 Credit Hours)

Approval for enrollment is determined by the Management advisor in the semester prior to enrollment. Student will participate in a relevant work setting.

Prerequisites: MGMT 325, and a declared major in the University or permission of the Dean's Office; transfer students must have completed one semester at Old Dominion University

MGMT 400/500 Managing Organizations (3 Credit Hours)

This course introduces students to understanding employee attitudes and behaviors as well as human resource management. Topics include job performance, performance management, organizational commitment, employee retention, motivation, compensation, and employee well-being.

Prerequisites: Instructor permission

MGMT 410 Leadership in Organizations (3 Credit Hours)

This course is designed to provide students with a comprehensive understanding of leadership as a phenomenon impacting individuals, organizations, and the larger society. Major leadership theories are examined along with processes through which leadership influences various internal and external organizational factors. Leadership traits, behaviors, styles, communication, and the dynamic nature of leader-follower developments will be addressed. Methods of instruction include case studies, experiential exercises, and simulations.

Prerequisites: MGMT 325 or permission of the Dean's office

MGMT 417/517 Employment Law (3 Credit Hours)

An analysis of how the federal and state governments may regulate the employer-employee relationship. Topics include labor relations law, equal employment opportunity law, other current statutory employment law and common law employment issues.

Prerequisites: junior standing and MGMT 325 or MGMT 602, and a declared major in the University or permission of the Dean's Office

MGMT 418 Advanced Human Resource Management: Contemporary Issues (3 Credit Hours)

An in-depth analysis of current issues and concerns within human resources management. The course will focus on specific issues and problems associated with the law and equal employment opportunity, employee selection, training and development, performance management/appraisal, and compensation. Methods of instruction include cases, exercises and PC applications.

Prerequisites: junior standing and MGMT 325 and MGMT 340, and a declared major in the University or permission of the Dean's Office

MGMT 420 Business Development (3 Credit Hours)

Course focuses on assessing the strategies, tactics, dilemmas, processes and solutions associated with developing a new business. Emphasis is devoted to how new ventures should raise rates (sales, prices, productivity), decrease costs, promote and execute while pursuing innovation. The course explores a wide variety of actual small business case studies to illuminate the critical strategic, operational and behavioral considerations necessary to build a successful enterprise, including rollouts (duplicating a business model in multiple locations), rollups (acquiring similar businesses to accelerate growth), and franchises.

Prerequisites: MGMT 325 and ACCT 201

MGMT 424 Technology and Innovation Management (3 Credit Hours)

This course focuses on three core elements of managing innovation and technology in small and large organizations. First, it teaches in-depth analysis of how innovations can transform companies and industries, including who gains and loses from such developments. Second, it explains how organizations can organize to create innovations internally and externally, and how they can take advantage of opportunities while mitigating threats in technology and innovation development. Third, it discusses how firms benefit and prosper by using various methods of commercialization and protecting new technologies and innovation.

Prerequisites: MGMT 325 or instructor approval

MGMT 426 Entrepreneurship: New Ventures Creation (3 Credit Hours)

A study of the essential elements leading to entrepreneurial and intrapreneurial success with emphasis on the creation, structure and management of new ventures. A recommended elective for business students.

Prerequisites: ENTR 301 OR ACCT 201, MKTG 311, MGMT 325, and must have senior standing

MGMT 427 Business and Society (3 Credit Hours)

An examination of the relationship between business (usually the individual firm, but occasionally a group of firms in an industry or a set of headline-makers in different industries) and society (an individual, group of people, the general public, or government entity representing the interests of this individual or group or the public). Emphasizes stakeholders and ethics. The course material is both philosophical and practical for executives and informative and practical for citizens.

Prerequisites: MGMT 325, 3 hours of ACCT and 3 hours of ECON, and a declared major in the University or permission of the Dean's Office

MGMT 430 Compensation Management (3 Credit Hours)

This class examines issues pertaining to developing, evaluating, and re-designing an organization's direct and indirect compensation systems. Topics include pay structure, incentive plans, benefit programs, and special cases such as executive compensation.

Prerequisites: Senior standing, MGMT 325, a C- or higher in MGMT 340, and a declared major in the University or permission of the Dean's Office

MGMT 440 Human Resource Staffing Strategies (3 Credit Hours)

This course examines both research and practice regarding the strategic recruitment, selection, and development of top talent in organizations. Discussion topics include understanding and planning for talent needs, use of current recruitment methods and selection techniques, development of both internal and external talent pools, and the influences of external and internal changes due to competitive business environments and job design/redesign initiatives. The strategic and legal context of employment decision making is emphasized.

Prerequisites: MGMT 325, MGMT 330, and MGMT 340

MGMT 450 Performance Measurement and Management (3 Credit Hours)

The role of performance management (PM) systems (performance measurement, appraisal, and development) is critical to organizational and workers success. This course focuses on how an effective PM system created in alignment with an organization's strategy, mission, values, and product or services, can attract, develop, and retain top-performers. We will discuss how PM systems are tied to reward systems and will examine the legal regulations to which an organization must adhere. Topics include performance appraisals, coaching, feedback, reward systems, and related management activities.

Prerequisites: MGMT 325, MGMT 330, and MGMT 340

MGMT 452/552 Negotiations and Change Management (3 Credit Hours)

This course focuses on negotiations and change. Students will develop analytical, interpersonal, and communication skills, with an emphasis placed on experiential learning through case studies, role playing, and simulations.

Prerequisites: MGMT 325 or permission of the Dean's Office

MGMT 460 Human Resource Analytics (3 Credit Hours)

This course provides an introduction to the use of people analytics to optimize HR processes. Students will learn about human resource analytics tools, technologies, and tasks. Topics include: modeling employee turnover, optimizing training and development, evaluating recruitment strategies, and identifying sources of pay inequity. Students will also receive training on ADP's Workforce Now cloud-based Human Resource information system.

Prerequisites: Senior standing and MGMT 325, MGMT 330, and MGMT 340

MGMT 462 Comparative International Management (3 Credit Hours)

The course examines organizational structure and functioning from cross-cultural and cross-national perspectives. Compares how management practices differ from one society to another. Comparisons are made between the U.S., Western Europe, Japan, the USSR, China, and the Third World nations.

Prerequisites: senior standing and MGMT 325, and a declared major in the University or permission of the Dean's Office

MGMT 463/563 Management Seminar Abroad (3 Credit Hours)

A study tour abroad under the direction of a faculty member including on-site visits and management lectures designed to provide insight into differences in management practices in foreign countries. Offered summers only and when available.

Prerequisites: permission of the chief departmental advisor, and a declared major in the University or permission of the Dean's Office

MGMT 465/565 SHRM Learning System (3 Credit Hours)

This is a course based on the SHRM (Society for Human Resource Management) Learning System® for SHRM-CP/SHRM-SCP. Comprised of comprehensive learning modules teaching the SHRM Body of Applied Skills and Knowledge™ (SHRM BASK™), and advanced online multimedia resources, these study materials streamline study time, accelerate learning and build confidence for passing the SHRM-CP/SHRM-SCP exam. The course tuition includes all books, including one year access to the SHRM online learning resources, but does not include registration for the SHRM-CP/SHRM-SCP examinations.

Prerequisites: MGMT 325, MGMT 330, and MGMT 340

MGMT 485W Business Policy and Strategy (3 Credit Hours)

Strategic management addresses the concerns of the high level executive or general manager, who must use a perspective that is qualitatively different from that of the lower-level functional manager or operations manager. Strategic decisions cut across functional lines. Whereas other courses focus on competency at a functional level (Are we doing things right?), this course deals with the overall effectiveness of the total organization (Are we doing the right things?). This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; senior standing, FIN 323, MGMT 325, MKTG 311, and a declared major in the University or permission of the Dean's Office

MGMT 490 Management Consulting (3 Credit Hours)

An exploration of the consulting industry and its role in driving improvements across various types of organizations. Students will learn problem-solving frameworks used to direct decision making as well as real-world communication and project management skills.

Prerequisites: MGMT 325

Pre- or corequisite: MGMT 485W

MGMT 495/595 Selected Topics in Management (3 Credit Hours)

Designed to provide advanced students in management an opportunity to study administration in highly specialized areas under the guidance of a faculty member.

Prerequisites: permission of the chief departmental advisor/graduate program director

MGMT 497 Independent Study in Management (3 Credit Hours)

Designed to provide advanced students in management an opportunity for independent study of selected areas under the guidance of a faculty member.

Prerequisites: permission of the chief departmental advisor, and a declared major in the University or permission of the Dean's Office

MIDE - Middle Eastern Studies

MIDE 395 Topics in Middle Eastern Studies (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on topics of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: junior standing or permission of instructor

MIDE 405 Communication and Culture in the Middle East (3 Credit Hours)

The course examines the tensions between modernity and tradition in the context of Middle East culture. Cultural variables to be studied include myths, religion, family structures, and the use of science and technology.

Prerequisites: three hours of lower level social science

MIDE 495 Topics in Middle Eastern Studies (3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on topics of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: junior standing or permission of instructor

MKTG - Marketing

MKTG 200R Professional Interactions and Negotiations (3 Credit Hours)

This class introduces and develops fundamental communication skills used in formal career settings. Students will learn and practice giving persuasive speeches, networking at formal career events, interviewing for jobs, and negotiating.

MKTG 311 Marketing Principles and Problems (3 Credit Hours)

The design, distribution, pricing, and promotion of goods, services, people, places, and causes. Course examines both national and international markets and includes an introduction to the legal and ethical constraints on marketing.

Prerequisites: A declared major in the University or an intended major in the Strome College of Business or permission of the Dean's Office of the Strome College, AND Junior Standing

MKTG 316 Professional Selling (3 Credit Hours)

This course examines professional selling as the link between the firm and the customer. The sales force has a key role in relationship management. As such, this class will emphasize selling skills that help to maintain positive long-term customer relationships. Topics will include prospecting for new clients, adaptive communication skills, addressing customer concerns, closing sales, following up with customers, understanding different types of sales positions and skills, and ethics in professional selling.

Prerequisites: C or better in ENGL 110C or ENGL 126C

MKTG 317 New Product Planning and Commercialization (3 Credit Hours)

This course addresses the complex, cross-disciplinary nature of product planning and commercialization, which encompasses product development and product management. Course content covers strategic issues that emerge during the product life cycle, beginning with idea conception to technical development to launch to eventual product dismissal, and includes understanding customer needs, translating customer needs into technical specifications, business and market analyses, coordination of marketing mix variables, testing, launch, and postlaunch management. While the term 'product' is employed, the course treats service planning alongside product planning. At the conclusion of this course, one should realize and understand good managerial practices for successful product planning and commercialization.

Prerequisites: Junior standing or instructor permission

MKTG 318 AI in Business: Foundations and Applications (3 Credit Hours)

This course provides a dynamic exploration of artificial intelligence and its transformative impact on business. Students gain a foundational understanding of key AI concepts and hands-on experience with popular AI tools like ChatGPT (among many other AI tools). Students analyze the strategic implications of AI for innovation, competitive advantage, and the changing landscape of work. This course also explores ethical considerations, responsible AI governance, and future trends to equip students with the knowledge and skills to leverage AI for business.

Prerequisites: Junior standing and/or instructor permission

MKTG 319 Artificial Intelligence (AI) in Digital Marketing Management (3 Credit Hours)

This course provides a comprehensive exploration of how artificial intelligence is transforming digital marketing. It equips students with the knowledge and skills to leverage AI tools and technologies across various aspects of marketing strategy and management. Students will build a strong foundation of AI concepts and technologies relevant to marketing and will learn to leverage AI to better understand and engage customers, plan and execute marketing plans, and increase operational efficiency. The course also highlights unique ethical considerations related to AI in marketing and examines emerging trends in AI-powered marketing, preparing students for a successful future in the field.

Prerequisites: Permission of Instructor

MKTG 367 Cooperative Education (1-3 Credit Hours)

May be repeated for credit. Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place.

Prerequisites: C or better in MKTG 311 (or equivalent) and approval by the instructor in accordance with the policy for granting credit for Cooperative Education programs

MKTG 368 Marketing Internship (1-3 Credit Hours)

Student completes a relevant marketing experience in the marketplace after submitting a job description, learning objectives, and task accomplishments.

Prerequisites: C or better in MKTG 311 (or equivalent) and approval of instructor

MKTG 369 Practicum (1-3 Credit Hours)

Practicum experience in marketing.

Prerequisites: C or better in MKTG 311 (or equivalent) and approval of instructor

MKTG 402 Consumer Behavior (3 Credit Hours)

The effects of personality, motivation, perception, learning, attitudes, cultural and social influence and lifestyle on buying situations and how knowledge of these factors enables the marketer to better meet the needs of the marketplace.

Prerequisites: C or better in MKTG 311 (or equivalent), and a declared major in the University or permission of the Dean's Office

MKTG 403 Advertising Strategy (3 Credit Hours)

An examination of those advertising and promotional strategies directed toward the consumers of goods and services with emphasis on planning and executing an effective campaign to achieve meaningful goals.

Prerequisites: C or better in MKTG 311 (or equivalent), and a declared major in the University or permission of the Dean's Office

MKTG 404 Sales Management (3 Credit Hours)

Material focuses on quantitative and qualitative goal setting; management, control and evaluation of the sales program; selecting, training, motivating, and evaluating the sales force.

Prerequisites: C or better in MKTG 311 (or equivalent) and a declared major in the University or permission of the Dean's Office in the Strome College of Business

MKTG 405 The Art of Influence and Persuasion (3 Credit Hours)

This course is an introductory course on techniques and concepts on how to influence in a variety of business settings. Influence and persuasion is used daily in businesses throughout the world. Effective influence and persuasion can be the determining factor in successful business engagements. This course will develop students' influence and persuasion skills through oral and written communications. It will cover the underlying psychological mechanism of persuasion, the entire influence and persuasion process, influencing and persuading individuals as well as organizations in a business setting, and the ethical issues in influence and persuasion.

Prerequisites: C or better in MKTG 311 (or equivalent), and a declared major in the University or permission of the Dean's Office of the Strome College of Business or permission of the instructor

MKTG 406 Public Relations (3 Credit Hours)

For non-business as well as business majors. Development and application of a philosophy of business expressed in governmental, corporate, social or educational institutions in furthering their public image.

Prerequisites: C or better in MKTG 311 (or equivalent), and a declared major in the University or permission of the Dean's Office

MKTG 407 Marketing Research (3 Credit Hours)

Emphasis is given to the development of a strong theoretical base in the systematic selection, collection, and interpretation of marketing information leading to sound policies and strategies. Students are required to carry out a group project involving a marketing problem (or opportunity) for a company or involving a real market situation. The project will satisfy the practicum experience requirement of the College (CAP). (qualifies as a CAP experience)

Prerequisites: BNAL 306 and MKTG 402, a grade of C or better in MKTG 311 and a declared major in the University or permission of the Dean's Office

MKTG 411 Multi-National Marketing (3 Credit Hours)

An examination of the operational and cross-cultural aspects of international marketing, including the nature of competition, developmental marketing structures and channels, price and credit policies, promotional methods, trade barriers, and international arrangements.

Prerequisites: C or better in MKTG 311 (or equivalent), and a declared major in the University or permission of the Dean's Office

MKTG 412 Retail Marketing (3 Credit Hours)

This course will introduce students to a broad range of topics within the field of retailing: retailing strategy, targeting of customers, gathering of information, identifying and understanding customers, choosing a store location, managing a retail business, merchandise management and planning, and communication with the customer. The approach will combine both theory and practical application.

Prerequisites: C or better in MKTG 311 (or equivalent), and a declared major in the University or permission of the Dean's Office

MKTG 414 Ethics and Social Issues in Administration (3 Credit Hours)

An examination of the ethical and social problems confronting administrators and personnel in dealing with discrimination in employment practices, credit and financing, advertising, warranties and guarantees, packaging and labeling, and environmental problems.

Prerequisites: C or better in MKTG 311 (or equivalent), and a declared major in the University or permission of the Dean's Office

MKTG 417 Advanced Professional Selling (3 Credit Hours)

This course will reinforce and strengthen the sales skills learned in MKTG 316. Personal selling is a key skill for orchestrating the exchange of goods, services, ideas, and resources between organizations (business-to-business, B2B) and consumers (B2C). This course is not just for 'salespeople' — individuals involved in personal selling who operate under a variety of job titles (e.g., business development manager, sales representative, market development manager, account executive, relationship manager, and key account manager). This course will focus on skills and knowledge applicable to complex selling situations.

Prerequisites: C or better in MKTG 311 (or equivalent) and a declared major in the University or permission of the Dean's Office in the Strome College of Business

MKTG 428 Marketing of Services (3 Credit Hours)

This course examines the applications of the conceptual framework of marketing within the service business context. The course will focus on the characteristics of the service environment as well as important considerations in the service marketing mix.

Prerequisites: C or better in MKTG 311 (or equivalent), and a declared major in the University or permission of the Dean's Office

MKTG 450 Marketing on the Internet (3 Credit Hours)

This course examines the use of the Internet as a unique channel for marketing to consumers and businesses. It focuses on Internet marketing strategies, online strategic implementation, and the integration between companies' online and offline marketing efforts.

Prerequisites: C or better in MKTG 311 (or equivalent), and a declared major in the University or permission of the Dean's Office

MKTG 455 Social Media Marketing (3 Credit Hours)

This course will introduce students to the significance of today's social media marketing tools, and how to implement and evaluate these tools for a business. The students will learn how to create a social media plan with multiple creative social media strategies. The course will also highlight best practices in social media marketing by forward thinking and innovative companies and organizations.

Prerequisites: C or better in MKTG 311 (or equivalent), and a declared major in the University, or permission of the instructor

MKTG 460 Web Analytics (3 Credit Hours)

This course will introduce students to web analytic tools and methods and demonstrate how businesses can use web analytics to derive customer insight and improve marketing strategy. It will cover topics such as web traffic analysis, social media data mining, search and keyword analysis, social network analysis, and proactive analytics using testing and experimentation.

Prerequisites: A grade of C or better in MKTG 311, and a declared major in the University, or permission of the instructor

MKTG 475 Marketing Analytics (3 Credit Hours)

Marketing analytics comprises the processes and technologies that enable managers to have a better understanding of the market, i.e., the performance of marketing programs, the need of the customers, and the forecast of sales. In other words, it supports managers' decision making using evidence and insights from available data. This course will give students the tools and techniques to effectively use data to evaluate past marketing programs, boost the present marketing initiatives, and predict future business and customer performance.

Prerequisites: C or better in MKTG 311 and C or better in BNAL 306, a declared major in the University or permission of the Dean's Office of the Strome College of Business, or permission of the instructor

MKTG 490 Marketing Policy and Strategy (3 Credit Hours)

A capstone course covering the marketing function and its relationship to the total business organization and its environment. Emphasis is placed upon the design of total marketing systems, strategies, and the design and production of new products and services.

Prerequisites: marketing major, senior standing, MKTG 402, MKTG 407, plus two additional marketing courses or permission of instructor

MKTG 496 Selected Topics in Marketing (1-3 Credit Hours)

Designed to provide advanced students in marketing an opportunity to study, independently or in small groups, selected areas of marketing under the guidance of a faculty member.

Prerequisites: senior standing and permission of instructor

MLS - Medical Laboratory Science

MLS 210 Orientation to Medical Laboratory Science (1 Credit Hour)

An introduction to the profession of medical laboratory science (previously called medical technology). Professional, ethical and operational issues will be discussed.

MLS 307 Clinical Methods in Microbiology (1 Credit Hour)

Laboratory techniques in the diagnosis of clinically relevant microorganisms.

Prerequisites: Admission to the major or minor in medical laboratory science

Pre- or corequisite: MLS 308

MLS 308 Clinical Microbiology (2 Credit Hours)

A fundamental course in microbiology that includes bacterial growth, synthesis, differentiation, microbial nutrition and metabolism.

Prerequisites: A grade of C or better in BIOL 121N, and BIOL 122N or permission of the instructor

Pre- or corequisite: MLS 307

MLS 309 Medical Bacteriology (3 Credit Hours)

A comprehensive survey of bacteria, including colonial morphology, cultural characteristics, biochemical identification, pathogenicity, epidemiology, and treatment.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor, or the Medical Laboratory Science Degree Completion major; must be fully declared in degree program

Pre- or corequisite: C or better in MLS 307 and MLS 308 or an approved equivalent

MLS 310 Urinalysis and Body Fluids (1 Credit Hour)

A study of the chemical, physical and microscopic analysis of human urine and other body fluids, with abnormal results interpreted and correlated to disease processes and cancer cytology of the urinary tract.

Prerequisites: Restricted to students with a major or minor in Cytology, Medical Lab Science, Medical Lab Science Degree Completion, or Pre-Clinical Studies, or permission of the instructor; C or better in BIOL 250 and BIOL 251 or an approved equivalent (BIOL 240/241 respectively)

MLS 311 Hematology (3 Credit Hours)

The study of the principles of the formation and development of blood, including the interpretation of normal and abnormal blood morphology and diagnostic procedures in the investigation of hematological disorders.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor; must be fully declared into degree program; C or better in BIOL 250 and 251 or an approved equivalent (BIOL 240/241 respectively)

Pre- or corequisite: MLS 312

MLS 312 Hematology Laboratory (1 Credit Hour)

Laboratory methods utilizing microscopy and other analytical procedures in the diagnosis and investigation of hematological disorders.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor; must be fully declared into degree program; C or better in BIOL 250 and 251 or an approved equivalent (BIOL 240/241 respectively)

Pre- or corequisite: MLS 311

MLS 313 Diagnostic Methods in Urinalysis (1 Credit Hour)

Laboratory experience in the chemical, physical, and microscopic examination of the urine and body fluids with emphasis on quality control, osmometry, and disease correlates.

Prerequisites: Restricted to students with a major or minor in Medical Lab Science or Medical Lab Science Degree Completion, or permission of the instructor; C or better in BIOL 250 and BIOL 251 or an approved equivalent (BIOL 240/241 respectively)

Corequisites: MLS 310

MLS 319 Medical Bacteriology Methods (2 Credit Hours)

Laboratory methods emphasizing isolation, identification and media requirements for pathogenic microorganisms.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor; must be fully declared in degree program

Pre- or corequisite: MLS 309

MLS 324 Clinical Chemistry I (3 Credit Hours)

This course covers the theory of operation of instrumentation used in the clinical chemistry laboratory. Methodologies discussed include (but not limited to): atomic absorption spectrometry, automation, blood gas instrumentation, chromatography, electrochemistry, electrophoresis, fluorometry, immunochemistry, luminometry, mass spectrometry, nephelometry, osmometry, POCT, spectrophotometry, and turbidimetry. Clinical chemistry principles of proteins, enzymes, therapeutic drug monitoring, and electrolytes are discussed. Basic laboratory mathematics applicable to serial and compound dilutions, conversion between metric units, and determination of analyte concentration are presented. Statistical applications for quality control data analysis are introduced.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor, the Medical Laboratory Science Degree Completion major, or Biomedical Engineering minor; must be fully declared into degree program; C or better in CHEM 211 or CHEM 321 and C or better in MATH 102M, or permission of the instructor

Pre- or corequisite: MLS 325

MLS 325 Clinical Chemistry I Methods (1 Credit Hour)

A laboratory course designed for students entering the clinical laboratory field. The course includes the instrumental and data processing techniques required for the clinical analysis of body fluids, as well as statistical techniques applied to the interpretation of laboratory data, method comparison studies, quality control, calibration, maintenance, and troubleshooting of clinical chemistry analytics.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor, the Medical Laboratory Science Degree Completion major, or the Biomedical Engineering minor; must be fully declared in degree program; grades of C or better in MATH 102M, CHEM 121N, CHEM 122N, CHEM 123N, CHEM 124N, and CHEM 211

Pre- or corequisite: MLS 324

MLS 326 Immunohematology (3 Credit Hours)

The study of the identification of blood group antigens and antibodies, standard testing procedures, decision criteria for component selection, and regulations of blood banks and transfusion services.

Prerequisites: Limited to Medical Laboratory Science majors or minors, or Medical Laboratory Science Degree Completion majors; must be declared in degree program; C or better in MLS 330 and MLS 331 or permission of the instructor

Pre- or corequisite: MLS 311, MLS 312, and MLS 336

MLS 328 Advanced Hematology and Hemostasis (2 Credit Hours)

The microscopic study of blood cells in blood and body fluids, emphasizing morphologic identification and correlation of laboratory data in order to identify specific disease states. Fundamentals of hemostasis, emphasizing principles, evaluation techniques, and diagnostic applications.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor, or the Medical Laboratory Science Degree Completion major; must be fully declared in degree program

Pre- or corequisite: MLS 311 and MLS 312

MLS 330 Clinical Immunology/Serology (2 Credit Hours)

The study of the body's immune response, its cellular and non-cellular components, in-vitro manifestations, diagnostic techniques and interpretations related to the investigation and diagnosis of infectious and non-infectious disease states.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor, or the Medical Laboratory Science Degree Completion major; must be fully declared in degree program

Pre- or corequisite: MLS 331

MLS 331 Clinical Immunology/Serology Laboratory (1 Credit Hour)

Laboratory methods emphasizing in-vitro antigen and antibody reactions used to aid in the diagnosis of infectious and non-infectious disorders.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor; must be fully declared in a degree program

Pre- or corequisite: MLS 330

MLS 336 Immunohematology Laboratory (1 Credit Hour)

Laboratory methods emphasizing procedures that lead to the identification of blood group antigens and antibodies and the selection of therapeutic components necessary for making transfusion-related decisions.

Prerequisites: Admission to the major or minor in Medical Laboratory Science; must be fully declared in a degree program

Pre- or corequisite: MLS 326

MLS 339 Medical Parasitology and Mycology Laboratory (1 Credit Hour)

Laboratory methods emphasizing the identification of medically relevant parasites and fungi.

Prerequisites: Admission to the major or minor in Medical Laboratory Science (intended or declared)

Pre- or corequisite: MLS 340

MLS 340 Medical Parasitology, Mycology, and Virology (1 Credit Hour)

A study of the medically important parasites, fungi, and viruses, and their medical significance.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor, or the Medical Laboratory Science Degree Completion major (intended or declared)

Pre- or corequisite: MLS 307 and MLS 308

MLS 351 Clinical Chemistry II (3 Credit Hours)

An introduction to the applications of biochemistry and clinical testing in the diagnosis of human disease. Practice is given in the interpretation of laboratory data in the areas of carbohydrates, lipids, genetic disorders, liver, renal, pancreatic, G.I., cardiac testing, acid-base physiology, tumor markers, endocrinology, pharmacokinetics, and molecular diagnostics. Special emphasis on specimen collecting, pre- and post-analytical variables, and case studies.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor, or the Medical Laboratory Science Degree Completion major; must be fully declared in degree program; grades of C or better in BIOL 250, BIOL 251, CHEM 211, CHEM 212, and MLS 324 or permission of the instructor

Pre- or corequisite: MLS 325

MLS 401 General Pathology (3 Credit Hours)

This course is an overview of general disease processes and causes in the human. All body systems will be covered including respiratory, gastrointestinal, circulatory, nervous, reproductive, and urinary. Aging, dietary, and stress factors will be discussed in the disease process. Bacteria, fungi, and viruses will be discussed in general and for each body system. Neoplasms will be covered for each body site. This course will be of benefit to anyone interested in diseases of the human body or entering the medical field. (cross listed with CYTO 404) Pre- or

Prerequisites: junior standing

Corequisites: BIOL 250 and BIOL 251 or equivalent

MLS 402 Survey of Clinical Molecular Techniques (2 Credit Hours)

A brief review of nucleic acid chemistry, followed by discussion of clinical applications of FDA approved assays used to detect pathogens for which testing algorithms include molecular based testing.

Prerequisites: Limited to Medical Laboratory Science Degree Completion majors (intended or declared)

MLS 403W/503 Management in the Clinical Setting (3 Credit Hours)

A course concerned with organization and management in the clinical setting including personnel supervision, planning, equipment justification, quality assurance, data processing, budgeting, fiscal techniques, marketing, regulatory agencies, educational methodologies, current issues, as well as legal and ethical considerations. This is a writing intensive course.

Prerequisites: Junior standing and a grade of C or better in ENGL 110C and ENGL 211C or ENGL 231C; Restricted to Cytology, Medical Lab Science, Medical Lab Science Degree Completion, and Pre-Clinical Studies majors, Administrative Leadership and Ethics for Professional Roles Interdisciplinary minor or permission of the instructor

MLS 404 Clinical Hematology Practicum (4 Credit Hours)

Direct clinical experience offered in automated and manual hematology procedures used in distinguishing blood dyscrasias and coagulation abnormalities. Qualifies as a CAP experience. MLS 311, MLS 312, and MLS 328, or permission of the program director.

Prerequisites: Limited to declared Medical Laboratory Science majors

MLS 406 Clinical Microbiology Practicum (5 Credit Hours)

Direct clinical experience offered in isolating and identifying human pathogens such as bacteria, fungi, and parasites from various clinical specimens.

Prerequisites: Limited to declared Medical Laboratory Science majors; grades of C or better in MLS 307, MLS 308, MLS 309, MLS 319, MLS 339, and MLS 340

MLS 420/520 Blood Collection Techniques (2 Credit Hours)

Laboratory methods in the procurement of blood by capillary, venipuncture and arterial draws, analytical variables, special phlebotomy tests, isolation techniques, safety, forensic, molecular, legal and ethical implications, pediatric, geriatric, and compromised patient concerns. All students must submit to venipuncture by fellow students.

Prerequisites: Limited to students in the Medical Laboratory Science major or minor (must be fully declared into degree program); C or better in BIOL 250 and BIOL 251 or equivalent (BIOL 240 and 241) or permission of the instructor

MLS 440/540 Statistical Applications and Data Analysis in the Clinical Laboratory (3 Credit Hours)

Topics include review of basic statistics used in the laboratory; use of statistics for quality control, reference range determination, method comparisons, test utility assessment, techniques for searching the literature and assessing quality and applicability of published studies; and data organization and retrieval via queries. Students will perform projects, preferably using actual laboratory data, that relate to lecture topics.

Prerequisites: Limited to Medical Laboratory Science or Medical Laboratory Science Degree Completion majors (may be intended or declared) or permission of instructor; C or better in STAT 130M

MLS 441 Clinical Hematology Competencies (1 Credit Hour)

Demonstration of stated clinical laboratory competencies within the discipline of hematology.

Prerequisites: Limited to declared Medical Laboratory Science Degree Completion majors

Pre- or corequisite: MLS 328

MLS 442 Clinical Microbiology Competencies (1 Credit Hour)

Demonstration of stated clinical laboratory competencies within the discipline of clinical microbiology.

Prerequisites: Limited to declared Medical Laboratory Science Degree Completion majors; grades of C or better in MLS 309 and MLS 340 or permission of the instructor

MLS 443 Clinical Chemistry Competencies (1 Credit Hour)

Demonstration of stated clinical laboratory competencies within the discipline of clinical chemistry.

Prerequisites: Limited to declared Medical Laboratory Science Degree Completion majors; grades of C or better in MLS 324 and MLS 351 or permission of the instructor

MLS 444 Clinical Blood Bank Competencies (1 Credit Hour)

Demonstration of stated clinical laboratory competencies in the discipline of blood banking.

Prerequisites: Limited to declared Medical Laboratory Science Degree Completion majors; grades of C or better in MLS 326 and MLS 330 or permission of the instructor

MLS 452 Clinical Biochemistry Practicum (5 Credit Hours)

Direct clinical experience offered in automated and manual clinical chemistry determinations with emphasis on the principles, instrumentation, interpretation, and diagnostic significance. MLS 324, MLS 325, and MLS 351, or permission of the program director.

Prerequisites: Limited to declared Medical Laboratory Science majors

MLS 454 Clinical Blood Bank Practicum (4 Credit Hours)

Direct clinical experience offered in the theories and principles of blood banking with emphasis on the instruction of technical procedures used in an AABB approved blood bank. MLS 311, MLS 312, MLS 326, and MLS 336, or permission of the program director.

Prerequisites: Limited to declared Medical Laboratory Science majors

MLS 457 Medical Laboratory Science Seminar (1 Credit Hour)

In-depth review for Medical Laboratory Scientist (MLS) certification exam.

Prerequisites: Limited to declared Medical Laboratory Science or Medical Laboratory Science Degree Completion majors

MLS 468/568 Phlebotomy Internship (2 Credit Hours)

A 120-hour clinical internship for those desiring to qualify for the ASCP certification exam in phlebotomy.

Prerequisites: C or better in MLS 420

MLS 495/595 Special Topics in Medical Laboratory Science (1-3 Credit Hours)

The advanced study of selected topics within the medical field.

Prerequisites: Limited to Medical Laboratory Science or Medical Laboratory Science Degree Completion majors (intended or declared) or permission of the program director

MLS 497/597 Directed Study in Medical Laboratory Science (1-3 Credit Hours)

Supervised experience in medical laboratory science specialties, allowing students to pursue areas of interest under faculty direction.

Prerequisites: Limited to Medical Laboratory Science or Medical Laboratory Science Degree Completion majors (intended or declared) or permission of the program director

MLS 498 Directed Research in Medical Laboratory Science (1-6 Credit Hours)

Supervised research on a specific problem in Medical Laboratory Science. Regular meetings with faculty and a written/oral report are required.

Prerequisites: Limited to MLS or MLS degree completion majors or permission of the instructor or program director

MSCM - Maritime and Supply Chain Management

MSCM 368 Maritime and Supply Chain Internship (1-3 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures. Available for pass/fail grading only. May be repeated for credit. Approval for enrollment and allowable credit is determined by the department in the semester prior to enrollment.

Prerequisites: MSCM 370 and MSCM 441, and a declared major in the University or permission of the Dean's Office

MSCM 370 International Shipping (3 Credit Hours)

The course examines international freight transportation and terms for movement of international trade. It discusses processes and concepts involved in international ocean and intermodal transportation. It shows how shipping companies enter into foreign markets and participate in international trade. It also covers operational issues such as payment, commercial documents, insurance; customs and clearance; shipping organizations and societies, and shipping law.

Prerequisites: junior standing or permission of the instructor

MSCM 415 Maritime Security and Risk Analysis (3 Credit Hours)

An overview of international and U.S. initiatives to ensure the security of vessels, cargo, people, and infrastructure within the maritime domain. In addition to the impacts of regulatory requirements on maritime commerce, the course also addresses maritime threats to the international economy (including maritime piracy and maritime terrorism), maritime coalitions, and state-of-the-art techniques and tools for safeguarding ocean-borne commerce.

Prerequisites: MSCM 370

MSCM 430/530 Strategic Sourcing and Purchasing Management (3 Credit Hours)

An overview of the strategic sourcing of materials and services in the organization and its role in the supply chain. Topics include sourcing decisions, price/cost analysis, quality issues, purchasing, supplier selection, legal and ethical issues, third party logistics, freight forwarding, and acquisition of services and capital assets.

Prerequisites: ACCT 202, BNAL 206, OPMT 303, and a declared major in the University or permission of the Dean's Office

MSCM 439 Quality Management (3 Credit Hours)

This course examines the application of quality principles to the management of manufacturing and service organizations. Topics include fundamentals of quality management, Six Sigma, statistical process control, process capability and reliability.

Prerequisites: OPMT 303 and a declared major in the University or permission of the Strome College of Business Dean's Office

MSCM 441 Supply Chain Management and Logistics (3 Credit Hours)

Supply chain management integrates all activities associated with the flow of materials and information from product start to customers. Examples include order processing, warehousing, inventory management, transportation and logistics, and the costs and information systems supporting these activities. Particular application is made to global logistics systems supporting port and maritime activities. Supply chain relationships can be improved through effective integration of management and via such technologies as the World Wide Web, electronic data exchange, and enterprise resource planning (ERP). (cross-listed with BNAL 441)

Prerequisites: OPMT 303, and a declared major in the University or permission of the Dean's Office

MSCM 445 Marine Insurance (3 Credit Hours)

An introduction to the fundamentals of cargo, hull, protection and indemnity insurance. Topics include insurance markets, agents, underwriters, forms of policies, valuation, Total Loss, Particular Average, General Average, insured perils, war risks, subrogation, reinsurance and insurers of pollution liabilities.

Prerequisites: MSCM 370

MSCM 468/568 Distribution Center and Material Handling Management (3 Credit Hours)

This course is designed to investigate the strategic role of distribution center and material management in the supply chain. Course content includes the analysis of distribution center operations through the study of design, system selection, and layout configuration as well as the evaluation of material handling and inventory management options.

Prerequisites: OPMT 303

MSCM 471 Shipping Management (3 Credit Hours)

Examines the management of freight shipping organizations involved in the transport of cargo by ship. Key topics are managing ships and ship space; shipping markets, operations, costs, investment, insurance, claims, and regulation; and ship types, cargoes, safety, flagging, pollution, and chartering and purchase.

Prerequisites: For MSCM majors, the prerequisite is MSCM 370; for other business majors, the prerequisites are ECON 201S and ECON 202S; for nonbusiness majors, the prerequisites are ECON 201S and ECON 202S or permission of the instructor; all students must have a declared major or permission of the College of Business dean's office

MSCM 472 Port Management (3 Credit Hours)

Examines the management of seaports in the movement of cargo throughput. It presents concepts related to design, organization, administration, and operation of ports. It discusses issues involved in planning, investment, communication systems, congestion, pollution, safety, security; intermodal transportation; water and land accessibility; and port competition and cooperation to improve customer service.

Prerequisites: For MSCM majors, the prerequisite is MSCM 370; for other business majors, the prerequisites are ECON 201S and ECON 202S; for nonbusiness majors, the prerequisites are ECON 201S and ECON 202S or permission of the instructor; all students must have a declared major or permission of the College of Business dean's office

MSCM 473 Inland Waterway and Intermodal Transportation (3 Credit Hours)

This course is designed to explore and analyze the current condition of inland waterways both throughout the United States and around the globe with an emphasis on the creation of intermodal transportation networks. It will include an overview of existing infrastructure as well as financing mechanisms, national and international competitive strategies, risk management (public safety and emergency preparedness), and the environmental benefits as well as consider current legislation.

Prerequisites: MSCM 370

MSCM 494 Entrepreneurship in Maritime and Supply Chain Management (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. The course offers students an opportunity to integrate disciplinary theory and knowledge through developing a supply chain process, product, business, or other initiative. The real-world experiences that entrepreneurship provide will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems.

Prerequisites: MSCM 370 and OPMT 303

MSCM 495/595 Topics in Maritime and Supply Chain Management (3 Credit Hours)

A study of selected topics within Maritime and Supply Chain Management designed to provide an in-depth exploration of current issues.

Prerequisites: permission of the instructor, and a declared major in the University or permission of the College of Business Dean's Office

MSCM 497 Independent Study (3 Credit Hours)

Affords students the opportunity to undertake independent study under the direction of a faculty member.

Prerequisites: permission of the department, and a declared major in the University or permission of the College of Business Dean's Office

MSIM - Modeling and Simulation

MSIM 406/506 Introduction to Distributed Simulation (3 Credit Hours)

An introduction to distributed simulation. Topics include motivation for using distributed simulation, distributed simulation architectures, time management issues, and distributed simulation approaches. Current standards for distributed simulation are presented.

Prerequisites: MSIM 331 or ECE 348

MSIM 408/508 Introduction to Game Development (3 Credit Hours)

An introductory course focused on game development theory and modern practices with emphasis on educational game development. Topics include game architecture, computer graphics theory, user interaction, audio, high level shading language, animation, physics, and artificial intelligence. The developed games can run on a variety of computer, mobile, and gaming platforms.

Prerequisites: CS 361 or MSIM 331 or ECE 348

MSIM 410/510 Model Engineering (3 Credit Hours)

The goal of this course is to develop understanding of the various modeling paradigms appropriate for capturing system behavior and conducting digital computer simulation of many types of systems. The techniques and concepts discussed typically include UML, concept graphs, Bayesian nets, Markov models, Petri nets, system dynamics, Bond graphs, etc. Students will report on a particular technique and team to implement a chosen system model.

Prerequisites: MSIM 205 or ECE 306

Pre- or corequisite: MSIM 320 or ECE 320

MSIM 416/516 Cyber Defense Fundamentals (3 Credit Hours)

This course focuses on cybersecurity theory, information protection and assurance, and computer systems and networks security. The objectives are to understand the basic security models and concepts, learn fundamental knowledge and tools for building, analyzing, and attacking modern security systems, and gain hands-on experience in cryptographic algorithms, security fundamental principles, and Internet security protocol and standards.

Prerequisites: ECE 355 or MSIM 470

MSIM 419/519 Cyber Physical Systems Security (3 Credit Hours)

Cyber Physical Systems (CPS) integrate computing, networking, and physical processes. The objectives of this course are to learn the basic concepts, technologies and applications of CPS, understand the fundamental CPS security challenges and national security impact, and gain hands-on experience in CPS infrastructures, critical vulnerabilities, and practical countermeasures. Cross-listed with ECE 419/CYSE 419.

Prerequisites: CS 150 or ENGN 150

MSIM 441/541 Computer Graphics and Visualization (3 Credit Hours)

The course provides a practical treatment of computer graphics and visualization with emphasis on modeling and simulation applications. It covers digital image and signal processing basics such as sampling and discrete Fourier transform, computer graphics fundamentals, visualization principles, and software architecture for visualization in modeling and simulation. Written communication and information literacy skills are stressed in this course. (Offered fall).

Prerequisites: a grade C or better in CS 361, ECE 348, or MSIM 331

MSIM 451/551 Analysis for Modeling and Simulation (3 Credit Hours)

An introduction to analysis techniques appropriate to the conduct of modeling and simulation studies. Topics include input modeling, random number generation, output analysis, variance reduction techniques, and experimental design. In addition, techniques for verification & validation are introduced. Course concepts are applied to real systems and data.

Prerequisites: MSIM 205 or ECE 306 and STAT 330 or ECE 304

MSIM 462/562 Introduction to Medical Image Analysis (3 Credit Hours)

Introduction to basic concepts in medical image analysis. Medical image registration, segmentation, feature extraction, and classification are discussed. Basic psychophysics, fundamental ROC analysis and FROC methodologies are covered. Cross-listed with ECE 462/ECE 562.

Prerequisites: Junior standing

MSIM 463/563 Design and Modeling of Autonomous Robotic Systems (3 Credit Hours)

This course focuses on autonomous robotics systems with emphasis on using modeling and simulation (M&S) for system level design and testing. Fundamental concepts associated with autonomous robotic systems are discussed. Course topics include: robotic control, architectures, and sensors as well as more advanced concepts such as error propagation, localization, mapping and autonomy. Design strategies that leverage M&S to accelerate the development and testing of sophisticated autonomous robotic algorithms for individual or teams of robots are covered.

Prerequisites: CS 150 or ENGN 150

MSIM 470/570 Foundations of Cyber Security (3 Credit Hours)

Course provides an overview of theory, tools and practice of cyber security and information assurance through prevention, detection and modeling of cyber attacks and recovery from such attacks. Techniques for security modeling, attack modeling, risk analysis and cost-benefit analysis are described to manage the security of cyber systems. Fundamental principles of cyber security and their applications for protecting software and information assets of individual computers and large networked systems are explored. Anatomy of some sample attacks designed to compromise confidentiality, integrity and availability of cyber systems are discussed.

Prerequisites: CS 150 or ENGN 150 and junior standing

MSIM 474/574 Transportation Data Analytics (3 Credit Hours)

This course presents the basic techniques for transportation data analytics. It will discuss statistical modeling, prominent algorithms, and visualization approaches to analyze both small- and large-scale data sets generated from transportation systems. Practices of using different data for various real-world traffic/transportation applications and decision making will also be discussed., (STAT 330 or ECE 304); any programming language such as C, Python or Java is beneficial but not required.

Prerequisites: Basic probability and statistics (e.g

MSIM 480/580 Introduction to Artificial Intelligence (3 Credit Hours)

Introduction to concepts, principles, challenges, and research in major areas of artificial intelligence. Areas of discussion include: natural language and vision processing, machine learning, machine logic and reasoning, robotics, expert and mundane systems. Laboratory work required.

Prerequisites: Instructor approval

MSIM 495/595 Topics in Modeling and Simulation Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on recent developments in modeling and simulation engineering.

Prerequisites: permission of the instructor

MSIM 496/596 Topics in Modeling and Simulation Engineering (1-3 Credit Hours)

Special topics of interest with emphasis placed on the recent developments in modeling and simulation engineering.

Prerequisites: permission of the instructor

MSIM 497/597 Independent Study in Modeling and Simulation Engineering (3 Credit Hours)

Individual analytical, computational, and/or experimental study in an area selected by the student. Supervised and approved by the advisor.

Prerequisites: Instructor approval

MSL - Military Science and Leadership

MSL 101+ Introduction to ROTC (1 Credit Hour)

Learn fundamental concepts of leadership in a profession in both classroom and outdoor laboratory environments. Examines organization, customs and courtesies of the Army and ROTC with emphasis on career opportunities for ROTC graduates. Studies the military profession, lifestyle, and historical growth development of the Army. Increase self-confidence through team study and activities in basic drill, physical fitness, rappelling, leadership reaction course, first aid, making presentations and basic marksmanship. Participation in physical fitness program highly encouraged; required if contracted. Participation in one overnight adventure training exercise is highly encouraged; required if contracted.

MSL 102+ Introduction to Leadership (1 Credit Hour)

Learn/apply principles of effective leadership. Reinforce self-confidence through participation in physically and mentally challenging exercises with upper-division ROTC students. Develop communication skills to improve individual performance and group interaction. Relate organizational ethical values to the effectiveness of a leader. Introduction to development of military tactical knowledge and technical skills. Students will gain a basic knowledge of land navigation, military geography and the use of maps and aerial photographs. Participation in physical fitness program highly encouraged; mandatory if contracted. Participation in one overnight adventure training exercise is highly encouraged; mandatory if contracted.

Prerequisites: MSL 101+ or MSL 195, or departmental approval

MSL 195 Independent Study of Selected Military Topics (1 Credit Hour)

A study of selected topics within military science designed to accommodate special cadet's educational and commissioning requirements. Participation in physical fitness program highly encouraged. Participation in one overnight adventure training exercise is highly encouraged.

Prerequisites: departmental approval

MSL 196 Independent Study of Selected Military Topics (1 Credit Hour)

A study of selected topics within military science designed to accommodate special cadet's educational and commissioning requirements. Participation in physical fitness program highly encouraged. Participation in one overnight adventure training exercise is highly encouraged.

Prerequisites: departmental approval

MSL 201+ Leadership Skills II (1 Credit Hour)

Course is designed to refine and continue to develop knowledge of basic military skills. Learn/apply ethics-based leadership skills that develop individual abilities and contribute to the building of effective teams of people. Develop skills in oral presentations, writing concisely, planning of events, coordination of group efforts, advanced first aid, land navigation and basic military tactics. Learn fundamentals of ROTC's Leadership Development Program. Participation in physical fitness program highly encouraged; required if contracted. Participation in one overnight adventure training exercise is highly encouraged; required if contracted.

Prerequisites: MSL 101+/MSL 102+ or MSL 195/MSL 196, or departmental approval

MSL 202+ Foundations of the Military Profession (1 Credit Hour)

Continued development of leadership ability through active participation as junior leaders at the small unit level. Students are given increased leadership opportunities, which sharpen interpersonal communication skills and expand capabilities for future advancement in a military career. Introduction to individual and team aspects of military tactics in small unit operations. Practical exercises with upper division ROTC students. Instruction will build on fundamentals of land navigation, individual soldier skill and rifle marksmanship. Participation in physical fitness program highly encouraged; required if contracted. Participation in one overnight adventure training exercise is highly encouraged; required if contracted.

Prerequisites: MSL 201+ or MSL 295, or departmental approval

MSL 250+ Alternate Summer Training Program: Leaders Training Course (LTC) (6 Credit Hours)

Course consists of five weeks of intensive and challenging military training at Fort Knox, Kentucky. Permits students to satisfy all requirements for entry into Advanced Course. Students are paid approximately \$650 (food, lodging, transportation provided).

Prerequisites: departmental approval

MSL 251+ Optional Summer Training Program: Airborne School (2 Credit Hours)

A three-week course conducted at Fort Benning, Georgia, which focuses on parachute operations, individual and group parachute jumps, equipment orientation, and physical training. Award of the Army Airborne Badge upon course completion. Travel, lodging and most meal costs are defrayed by the U.S. Army.

Prerequisites: departmental approval

MSL 252+ Optional Summer Training Program: Air Assault School (2 Credit Hours)

A two-week course conducted at various locations. Training in the techniques, skills and procedures used in air assault operations, including basic and advanced rappelling, helicopter rappelling, troop leader procedures, pathfinder techniques, and rigging and slingloading skills. Award of the Army Assault Badge upon course completion. Travel, lodging and most meal costs are defrayed by the U.S. Army.

Prerequisites: departmental approval

MSL 295 Independent Study of Selected Military Topics (1 Credit Hour)

A study of selected topics within military science designed to accommodate special successful progression through military cadet educational and commissioning requirements. Participation in physical fitness program required. Participation in one overnight adventure training exercise is required.

Prerequisites: departmental approval

MSL 296 Independent Study of Selected Military Topics (1 Credit Hour)

A study of selected topics within military science designed to accommodate special successful progression through military cadet educational and commissioning requirements. Participation in physical fitness program required. Participation in one overnight adventure training exercise is required.

Prerequisites: departmental approval

MSL 301 Advanced Leadership Skills (3 Credit Hours)

Course teaches decision making and problem solving skills. Students learn to plan, direct and coordinate individual and group efforts toward task accomplishment. Field exercises afford practical opportunities for the students to apply instruction. Cadets are evaluated against 16 leadership dimensions, including decisiveness, delegation, influence, problem analysis, planning, technical competence, and communication. Participation in physical fitness program required.

Prerequisites: MSL 201+/MSL 202+, or MSL 295/MSL 296, or MSL 250+ or departmental approval

Corequisites: MSL 311+

MSL 302 Applied Leadership (3 Credit Hours)

Course presents increasingly intense and complex situations in which students apply military skills and leadership to solve tactical problems. Students develop leadership proficiency in all basic military technical and tactical skills, including basic rifle marksmanship, day and night land navigation, physical training, and small/large unit tactics. Field training exercises afford opportunities to apply military leadership and management skills. Cadets are evaluated using 16 leadership dimensions. Participation in physical fitness program required.

Prerequisites: MSL 301 or MSL 395

Corequisites: MSL 312+

MSL 311+ Advanced Leadership Skills III Lab (1 Credit Hour)

Practical application of individual and leadership skills in simulated tactical environments of increasing complexity and intensity. Includes weekend training in basic rifle marksmanship, day and night land navigation, and small unit tactics. Affords students opportunities to apply leadership skills to plan, direct, and coordinate the activities of others to accomplish a mission. Mandatory physical fitness training 3 times a week to build stamina and physical condition to lead from the front. Participation in overnight adventure training exercises during semester is required.

Prerequisites: departmental approval

Corequisites: MSL 301

MSL 312+ Applied Leadership Lab (1 Credit Hour)

Practical application of individual and leadership skills in simulated tactical environments of increasing complexity and intensity. Includes weekend training in basic rifle marksmanship, day and night land navigation, and small unit tactics. Affords students opportunities to apply leadership skills to plan, direct, and coordinate the activities of others to accomplish a mission. Mandatory physical fitness training 3 times a week to build stamina and physical condition to lead from the front. Participation in overnight adventure training exercises during semester is required.

Prerequisites: departmental approval

Corequisites: MSL 302

MSL 315+ Summer Training Program - Cadet Summer Training (CST) (6 Credit Hours)

A five-week summer camp conducted at Fort Knox, Kentucky. The student will receive pay. Travel, lodging and most meal costs are defrayed by the U.S. Army. The camp environment is highly structured and demanding, stressing leadership at the small unit level under varying, challenging conditions. The leadership and skills evaluations at the camp weigh heavily in the subsequent selection process that determines the type of commission and career field assigned to the student upon graduation from ROTC and the University.

Prerequisites: MSL 301/MSL 302 or MSL 395/MSL 396

MSL 317+ Cadet Troop Leadership Training (3 Credit Hours)

A two- to four-week training program designed to introduce junior officers to responsibilities of commissioned lieutenants. Stateside or overseas programs are available. Travel, lodging and most meals are defrayed by the U.S. Army.

Prerequisites: departmental approval

MSL 395 Independent Study (3 Credit Hours)

A study of selected topics within military science designed to accommodate special cadet educational and commissioning requirements. Participation in a one-hour physical fitness session is mandatory.

Prerequisites: departmental approval

MSL 396 Independent Study (3 Credit Hours)

A study of selected topics within military science designed to accommodate special cadet educational and commissioning requirements. Participation in a one-hour physical fitness session is mandatory.

Prerequisites: departmental approval

MSL 401 Military Leadership and Management (3 Credit Hours)

Class teaches the Army's training management system, leadership theories, staff planning and coordination, and counseling skills. Simultaneously, students in the course will assume leadership responsibilities in the ROTC battalion, affording practical opportunities to apply skills learned in the classroom. At the end of the semester, students will possess the fundamental skills, attributes, and abilities to operate as competent leaders in the cadet battalion and confidently shoulder the responsibilities entrusted to them.

Prerequisites: MSL 301/MSL 302, MSL 395/MSL 396, or departmental approval

Corequisites: MSL 411+

MSL 402 Officership (3 Credit Hours)

Final preparation for commissioning as a Lieutenant. Course emphasizes effective communications skills gained through individual presentations and by leading and influencing groups within the Cadet Battalion. Students also examine topics in military law and explore practical and ethical challenges of military leadership as they relate to personnel management, logistics, training, and operations. Students are the primary instructors and leaders within the Cadet Battalion.

Prerequisites: MSL 401 or departmental approval

Corequisites: MSL 412+

MSL 411+ Senior Military Leadership and Management Laboratory (1 Credit Hour)

Practical application of individual and leadership skills in simulated tactical environments of increasing complexity and intensity. Includes weekend training in basic rifle marksmanship, day and night land navigation, and small unit tactics. Affords students opportunities to apply leadership skills to plan, direct, and coordinate the activities of others to accomplish a mission. Mandatory physical fitness training 3 times a week to build stamina and physical condition to lead from the front. Participation in an overnight adventure training exercise during the semester is required.

Prerequisites: departmental approval

Corequisites: MSL 401

MSL 412+ Senior Leadership Laboratory (1 Credit Hour)

Practical application of individual and leadership skills in simulated tactical environments of increasing complexity and intensity. Includes weekend training in basic rifle marksmanship, day and night land navigation, and small unit tactics. Affords students opportunities to apply leadership skills to plan, direct, and coordinate the activities of others to accomplish a mission. Mandatory physical fitness training 3 times a week to build stamina and physical condition to lead from the front. Participation in an overnight adventure training exercise during the semester is required.

Prerequisites: departmental approval

Corequisites: MSL 402

MSL 495 Independent Study (3 Credit Hours)

A study of selected topics within the military science program designed to accommodate special cadet education and commissioning requirements. Participation in a one-hour physical fitness session is mandatory.

Prerequisites: departmental approval

MSL 496 Independent Study (3 Credit Hours)

A study of selected topics within the military science program designed to accommodate special cadet education and commissioning requirements. Participation in a one-hour physical fitness session is mandatory.

Prerequisites: departmental approval

MUSA - Music, Applied

MUSA 130 Half-Hour Applied Secondary Instrument/Voice Lesson (1 Credit Hour)

This 30-minute applied lesson is for instrumentalists/vocalists interested in pursuing applied lessons on a secondary instrument/voice. Refer to the DSoM Student Handbook for additional information and requirements related to this course.

Prerequisites: Restricted to Music Majors/Minors AND Instructor Permission Only

MUSA 131 Half-Hour Applied Secondary Instrument/Voice Lesson (1 Credit Hour)

This 30-minute applied lesson is for instrumentalists/vocalists interested in pursuing applied lessons on a secondary instrument/voice. Refer to the DSoM Student Handbook for additional information and requirements related to this course.

Prerequisites: Restricted to Music Majors/Minors; MUSA 130; AND Instructor Permission Only

MUSA 139 Half-Hour Lesson (1 Credit Hour)

Applied lesson.

Prerequisites: permission of the faculty

MUSA 140 Half-Hour Lesson (1 Credit Hour)

Half-hour applied lesson.

Prerequisites: permission of the faculty and MUSA 139

MUSA 141 Hour Lesson (2 Credit Hours)

One hour applied lesson. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Permission of faculty

MUSA 142 Hour Lesson (2 Credit Hours)

One hour applied lesson. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Permission of faculty

MUSA 151 Hour Lesson - Performance Major (3 Credit Hours)

One hour performance level applied lesson. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Permission of faculty

MUSA 152 Hour Lesson - Performance Major (3 Credit Hours)

One hour performance level applied lesson. One or more lecture-performances in Area Studio Class or Student Performance Hours or equivalents thereof are required.

Prerequisites: Permission of faculty

MUSA 161 Hour Lesson - SRT Major (2 Credit Hours)

One hour applied lesson for students in the Bachelor of Music with an Emphasis in Sound Recording Technology. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Restricted to Music Majors AND Instructor Permission Only

MUSA 162 Hour Lesson - SRT Major (2 Credit Hours)

One hour applied lesson for students in the Bachelor of Music with an Emphasis in Sound Recording Technology. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Restricted to Music Majors/Minors; MUSA 161; AND Instructor Permission Only

MUSA 210 Hour Lesson - Music Minor (2 Credit Hours)

One-hour applied lesson for music minors.

Prerequisites: Permission of instructor

MUSA 211 Hour Lesson - Music Minor (2 Credit Hours)

One-hour applied lesson for the music minor.

Prerequisites: Permission of instructor

MUSA 230 Half-Hour Applied Secondary Instrument/Voice Lesson (1 Credit Hour)

This 30-minute applied lesson is for instrumentalists/vocalists interested in pursuing applied lessons on a secondary instrument/voice. Refer to the DSoM Student Handbook for additional information and requirements related to this course.

Prerequisites: Restricted to Music Majors/Minors; MUSA 130 and/or MUSA 131; AND Instructor Permission Only

MUSA 232 Hour Lesson - Applied Composition (3 Credit Hours)

One hour lesson in composition.

Prerequisites: MUSC 222

MUSA 239 Half-Hour Lesson (1 Credit Hour)

One half-hour applied lesson.

Prerequisites: MUSA 140 and permission of the faculty

MUSA 240 Half-Hour Lesson (1 Credit Hour)

One half-hour applied lesson.

Prerequisites: MUSA 239 and permission of the faculty

MUSA 241 Hour Lesson (2 Credit Hours)

One hour applied lesson. One or more lecture-performances in Area Studio Class, Student Performance Hours, and/or equivalents thereof are required.

Prerequisites: Permission of faculty

MUSA 242 Hour Lesson (2 Credit Hours)

One hour applied lesson. One or more lecture-performances in Area Studio Class, Student Performance Hours, and/or equivalents thereof are required.

Prerequisites: Permission of faculty

MUSA 251 Hour Lesson - Performance Major (3 Credit Hours)

One hour performance level applied lesson. One or more lecture-performances in Area Studio Class, Student Performance Hours, and/or equivalents thereof are required.

Prerequisites: Permission of faculty

MUSA 252 Hour Lesson - Performance Major (3 Credit Hours)

One hour performance level applied lesson. One or more lecture-performances in Area Studio Class, Student Performance Hours, and/or equivalents thereof are required. Completion of this level requires a half hour public recital for instrumental area students.

Prerequisites: Permission of faculty

MUSA 261 Hour Lesson - SRT Major (2 Credit Hours)

One hour applied lesson for students in the Bachelor of Music with an Emphasis in Sound Recording Technology. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Restricted to Music Majors; MUSA 162; AND Instructor Permission Only

MUSA 262 Hour Lesson - SRT Major (2 Credit Hours)

One hour applied lesson for students in the Bachelor of Music with an Emphasis in Sound Recording Technology. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Restricted to Music Majors; MUSA 261; AND Instructor Permission Only

MUSA 310 Hour Lesson - Music Minor (2 Credit Hours)

One-hour applied lesson for the music minor.

Prerequisites: Permission of instructor

MUSA 311 Hour Lesson - Music Minor (2 Credit Hours)

One-hour applied lesson for the music minor.

Prerequisites: Permission of instructor

MUSA 331 Hour Lesson - Applied Composition (3 Credit Hours)

One hour composition lesson. Original work in composition starting with the smaller forms in both the vocal and the instrumental fields. At least one 10-minute lecture-performance at Student Performance Hours or an equivalent thereof is required.

Prerequisites: MUSA 232

MUSA 332 Hour Lesson - Applied Composition (3 Credit Hours)

One hour composition lesson. Original work in composition starting with the smaller forms in both the vocal and the instrumental fields. At least one 10-minute lecture-performance at Student Performance Hours or an equivalent thereof is required.

Prerequisites: MUSA 331

MUSA 339 Hour Lesson - Applied Composition (2 Credit Hours)

Hour lesson in composition for minors and non-majors.

Prerequisites: permission of instructor

MUSA 340 Hour Lesson - Applied Composition (2 Credit Hours)

Hour lesson in composition for minors and non-majors.

Prerequisites: MUSA 240 and permission of faculty

MUSA 341 Hour Lesson (2 Credit Hours)

One hour applied lesson. One or more lecture-performances in Area Studio Class, Student Performance Hours, and/or equivalents thereof are required.

Prerequisites: Permission of faculty

MUSA 342 Hour Lesson (2 Credit Hours)

One hour applied lesson. One or more lecture-performances in Area Studio Class, Student Performance Hours, and/or equivalents thereof are required.

Prerequisites: Permission of faculty

MUSA 351 Hour Lesson - Performance Major (3 Credit Hours)

One hour performance level applied lesson. One or more lecture-performances in Area Studio Class, Student Performance Hours, and/or equivalents thereof are required. Successful completion of a half hour recital is also required for vocal students only.

Prerequisites: Permission of faculty

MUSA 352 Hour Lesson - Performance Major (3 Credit Hours)

One hour performance level applied lesson.

Prerequisites: Permission of faculty

MUSA 361 Hour Lesson - SRT Major (2 Credit Hours)

One hour applied lesson for students in the Bachelor of Music with an Emphasis in Sound Recording Technology. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Restricted to Music Majors; MUSA 262; AND Instructor Permission Only

MUSA 362 Hour Lesson - SRT Major (2 Credit Hours)

One hour applied lesson for students in the Bachelor of Music with an Emphasis in Sound Recording Technology. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Restricted to Music Majors; MUSA 361; AND Instructor Permission Only

MUSA 410 Hour Lesson - Music Minor (2 Credit Hours)

One-hour applied lesson for the music minor.

Prerequisites: Permission of instructor

MUSA 411 Hour Lesson - Music Minor (2 Credit Hours)

One-hour applied lesson for the music minor.

Prerequisites: Permission of instructor

MUSA 431 Hour Lesson - Applied Composition (3 Credit Hours)

One hour composition lesson. Original composition in larger forms. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: MUSA 332

MUSA 432 Hour Lesson - Applied Composition (3 Credit Hours)

One hour composition lesson. Original composition in larger forms.

Prerequisites: MUSA 431

MUSA 439 Hour Lesson - Applied Composition (2 Credit Hours)

One hour composition lesson for minors and non-majors.

Prerequisites: MUSA 340 and permission of faculty

MUSA 440 Hour Lesson - Applied Composition (2 Credit Hours)

One hour composition lesson for minors and non-majors.

Prerequisites: MUSA 439 and permission of faculty

MUSA 441 Hour Lesson (2 Credit Hours)

One hour applied lesson. Satisfaction of a degree requirement on this level includes successful performance of a one-half hour private or, at faculty discretion, public recital.

Prerequisites: permission of faculty

MUSA 442 Hour Lesson (2 Credit Hours)

One hour applied lesson. Satisfaction of a degree requirement on this level includes successful performance of a one-half hour private or, at faculty discretion, public recital. Numbers may be repeated.

Prerequisites: permission of faculty

MUSA 445 Advanced Electronic Composition I (2 Credit Hours)

This course is designated only for music majors and/or minors. Music hardware and software to be studied includes, but is not limited to: K2500 Mackie 1604 VLZ 2 pro, Opcode MIDI 96 and Digital.

Prerequisites: MUSC 335T and MUSC 336 or equivalent experience

MUSA 446 Advanced Electronic Composition II (2 Credit Hours)

This course is designated for music majors and and/or minors. Music hardware and software to be studied includes, but is not limited to: K2500, Sound Designer, Oro Tools, and Finale. The participants are expected to compose a medium-length work (at least 4-5 minutes) using the above equipment. Grading is based on the knowledge of the electronic equipment and the quality of composing.

Prerequisites: MUSA 445

MUSA 451 Hour Lesson - Performance Major (3 Credit Hours)

One hour performance level lesson.

Prerequisites: Permission of faculty

MUSA 452 Hour Lesson - Performance Major (3 Credit Hours)

One hour performance level lesson. Completion of this level includes successful performance of a one-hour public, lecture-style recital.

Prerequisites: Permission of faculty

MUSA 460 Applied Sound Recording Technology Mentorship (2 Credit Hours)

Each student will receive personalized mentorship, career guidance, and detailed project feedback in an applied lesson studio setting. Emphasizing the creation of a professional portfolio serving as a culminating project or experience, these individualized lessons ensure students are prepared for success in this competitive industry. These advanced projects, developed with faculty advisors, include (but not limited to) producing new songs and film scores, mixing an album, entrepreneurship, and/or conducting original research.

Prerequisites: MUSC 415

MUSA 461 Hour Lesson - SRT Major (2 Credit Hours)

One hour applied lesson for students in the Bachelor of Music with an Emphasis in Sound Recording Technology. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Restricted to Music Majors; MUSA 362; AND Instructor Permission Only

MUSA 462 Hour Lesson - SRT Major (2 Credit Hours)

One hour applied lesson for students in the Bachelor of Music with an Emphasis in Sound Recording Technology. One or more lecture-performances at Student Performance Hours or equivalents thereof are required.

Prerequisites: Restricted to Music Majors; MUSA 461; AND Instructor Permission Only

MUSA 463 Hour Lesson - SRT Major - Secondary Instrument (2 Credit Hours)

One hour applied lesson on a secondary instrument/voice for students in the Bachelor of Music with an Emphasis in Sound Recording Technology. One or more lecture-performances at Student Performance Hours or equivalents thereof may be required.

Prerequisites: Restricted to Music Majors; MUSA 261; AND Instructor Permission Only

MUSA 464 Hour Lesson - SRT Major - Secondary Instrument (2 Credit Hours)

One hour applied lesson on a secondary instrument/voice for students in the Bachelor of Music with an Emphasis in Sound Recording Technology. One or more lecture-performances at Student Performance Hours or equivalents thereof may be required.

Prerequisites: Restricted to Music Majors; MUSA 261; AND Instructor Permission Only

MUSC - Music

MUSC 101 Beginning Piano Class (1 Credit Hour)

Introduction, practical training, and development of basic piano skills, including the playing of scales, arpeggios, chords, and simple songs; sight reading, transposition, harmonization of melodies, and improvisation. (For music majors only)

Prerequisites: Permission of instructor

MUSC 102 Beginning Piano Class (1 Credit Hour)

Introduction, practical training, and development of basic piano skills, including the playing of scales, arpeggios, chords, and simple songs; sight reading, transposition, harmonization of melodies, and improvisation. (For music majors only)

Prerequisites: MUSC 101

MUSC 103 Intermediate Piano Class (1 Credit Hour)

Continued practical training and development of basic piano skills. (For music majors only)

Prerequisites: MUSC 102 or permission of the instructor

MUSC 107 Beginning Voice Class (1 Credit Hour)

Introduction, practical training, and development of basic singing skills.

Prerequisites: Music major or permission of the instructor

MUSC 113 Live Audio Engineering (3 Credit Hours)

This course covers fundamentals of live audio engineering, rudimentary acoustics, auditory perception and psychoacoustical concepts. Students will learn to assemble sound reinforcement systems for small and large ensembles and examine how sound is perceived by the human ear. Topics such as signal flow, cabling, mixing, busing and monitoring will be addressed. Sound Recording Technology majors must earn a grade of C or better to progress to MUSC 115.

Prerequisites: Bachelor of Music, with emphasis in Sound Recording Technology major, or permission of the instructor

MUSC 120 The Fundamentals of Music Theory (3 Credit Hours)

This course is designed specifically for non-music majors and focuses on the fundamentals of music theory. It introduces the basics of music – such as rhythm, melody, and harmony – and may progress into intermediate topics such as chord progressions and aural skill development.

MUSC 121 Musicianship Fundamentals (3 Credit Hours)

This course provides the knowledge of and skills in music theory fundamentals necessary to prepare for upper levels of music theory. Non-music majors may take the course if there is room and with the permission of the instructor.

Prerequisites: Permission of the instructor

MUSC 126A Honors: Music in History and Culture (3 Credit Hours)

A survey of major composers and their works in the historical context of different style periods, including a discussion of the central philosophical and cultural issues of each period. Students will be required to attend at least three musical events and turn in written critiques.

Prerequisites: Honors college students only

MUSC 130 Functional Piano Skills (1 Credit Hour)

Practical training and development of piano skills needed in the elementary, secondary choral, and private vocal studio setting. Focus will be placed on preparing for the piano barrier exam for music education majors (including technical skills, rehearsal skills, and sight reading). (For Music Education vocal/guitar/keyboard majors only.)

Pre- or corequisite: MUSC 101, MUSC 102, or permission of instructor

MUSC 150 Freshman Seminar for Music Students (1 Credit Hour)

This course is designed to help students make the most out of their experience as a student at ODU, create a sense of community among music students, and prepare students for the expectations of being a college student in the Diehn School of Music. Musicians' health topics, among others, will be presented to enhance student rehearsal and performance practices.

MUSC 160 Music and Ideas (1 Credit Hour)

This course is designed to cultivate a nuanced comprehension of the intellectual dimensions of music, equipping students with the analytical skills essential for critical engagement with diverse musical genres and concepts. Through the development of critical thought and the utilization of scholarly tools, students will explore intriguing questions, laying a foundation upon which they will construct additional musical knowledge and expertise during their tenure at the Diehn School of Music.

Prerequisites: Music major, music minor, or permission of instructor

MUSC 221 Music Theory 1 (2 Credit Hours)

Music Theory 1 is a foundational course and topics within this course include the basics of music notation, clefs, simple and compound meters, major and minor scales and keys signatures, modes, intervals, triads, seventh chords, inversions, Roman numerals, and an introduction to species counterpoint. This course includes discussions of the pedagogy of music fundamentals.

Prerequisites: Only Music Majors/Minors are permitted to take this course, OR instructor permission

Corequisites: MUSC 223

MUSC 222 Music Theory 2 (2 Credit Hours)

Topics for this course include functionalizing two-part counterpoint, introduction to SATB part-writing, function theory, cadences, and connecting the tonic and dominant areas. Other topics include chordal harmonies, realizing figured bass, the submediant and mediant harmonies, motives and motivic analysis, twelve-bar blues, popular song forms/chord symbols/chord extensions/harmonic schemas, and an introduction to jazz theory.

Prerequisites: Music majors or music minors and completion of Music Theory placement test or MUSC 221 with a grade of C or higher

Corequisites: MUSC 224

MUSC 223 Aural Skills 1 (1 Credit Hour)

Aural Skills 1 introduces melodic, rhythmic, and harmonic dictation. Other topics and skills that are both introduced and developed throughout the course include sight-singing, solfege, aural recognition, and writing of various intervals and chords.

Corequisites: MUSC 221

MUSC 224 Aural Skills 2 (1 Credit Hour)

Aural Skills 2 continues to develop melodic, rhythmic, and harmonic dictation as well as sight-singing/solfege, aural recognition, and writing of various intervals and triads.

Prerequisites: MUSC 223 and music major or minor, or permission of instructor

Corequisites: MUSC 222

MUSC 230 Jazz Keyboard Techniques (2 Credit Hours)

This course introduces jazz piano technique and performance. The learning and application of chord voicings, chord progressions, accompanying style and the interpretation of lead sheets is presented and developed.

Prerequisites: MUSC 101 and MUSC 102 or permission of the instructor

MUSC 264A Music in History and Culture (3 Credit Hours)

This course is designed to be an introduction to the appreciation and understanding of music through music listening activities and a survey of music history. Basic principles and elements of music are discussed in relation to contexts within a variety of musical styles including classical, jazz, popular, and world music. Regular and repeated listening is an important part of the course in addition to required concert attendance.

MUSC 266 Music in World Cultures (1 Credit Hour)

Required for music majors. Available to qualified non-majors. Exploration of music and cultures of the world in terms of function, style, genre, instruments, performers, and individual works. This course offers an exploration of the global mosaic of musical expressions.

Prerequisites: Music major, music minor, or permission of instructor

MUSC 295 Topics (1-3 Credit Hours)

Special topics.

Prerequisites: Permission of instructor

MUSC 300 Foundations of Music Education (3 Credit Hours)

This course will introduce the historical, philosophical, and sociological foundations and contemporary issues of American public education. Also included is an introduction to music education methods and learning theories as they relate to PreK-12 music education, the study of the Virginia Standards of Learning, the National Core Arts Standards for Music and an investigation into teaching for musical understanding, designing musical problems, lesson planning and assessment. In addition, the course will include reading and writing assignments and discussion with teachers and young musicians. All students will complete a 30-hour observation experience in an appropriate PreK-12 setting specific to music education. In order to receive the required school observation placement, students must complete the ODU Teacher Education background check/clearance process prior to the beginning of this course and register for the observation placement on the Teacher Education web pages. See the advisor for more information. Students are expected independently to register for and take the Praxis Core examination or equivalent while enrolled in this course.

Prerequisites: Music majors only and sophomore standing; must successfully pass the background check process as outlined on the College of Education and Professional Studies' website

MUSC 301 Music Education: High Brass Class (1 Credit Hour)

Required of all instrumental music education students. Designed to develop basic skills of playing and teaching the trumpet and F horn. (offered fall semesters)

Prerequisites: students must display the ability to read music; open to music education majors only or with permission of the instructor

MUSC 302 Music Education: Low Brass Class (1 Credit Hour)

Required of all instrumental music education students. Designed to develop basic skills of playing and teaching trombone, euphonium, and tuba. (offered spring semesters)

Prerequisites: MUSC 301; open to music education majors only or with permission of the instructor

MUSC 303 Music Education: Clarinet and Oboe Class (1 Credit Hour)

Required of all instrumental music education students. Designed to develop basic skills of playing and teaching the clarinet and oboe, which serves as a foundation for the other woodwind instruments (offered fall semesters).

Prerequisites: Open to music education majors only or with permission of the instructor

MUSC 304 Music Education: Woodwind Class (1 Credit Hour)

Required of all instrumental music education students. Designed to develop basic skills of playing and teaching flute, bassoon, and saxophone (offered spring semesters).

Prerequisites: MUSC 303; open to music education majors only or with permission of the instructor

MUSC 305 Music Education: Upper Strings Class (1 Credit Hour)

Required of all instrumental music education students. Designed to develop basic skills of playing and teaching the violin and viola and to explore instructional materials used with these instruments. (offered fall semesters)

Prerequisites: Open to music education majors only or with permission of the instructor

MUSC 306 Music Education: Lower Strings Class (1 Credit Hour)

Required of all instrumental music education students. The course is designed to develop basic skills of playing and teaching cello and string bass and to evaluate instructional materials used with these instruments. Introduces heterogeneous teaching and rehearsal techniques using all four stringed instruments. (offered spring semesters)

Prerequisites: MUSC 305; open to music education majors only or with permission of the instructor

MUSC 307 Music Education: Percussion Class I (1 Credit Hour)

Required of all instrumental music education students. Class lessons on all percussion instruments and the study of teaching methods for these instruments. (offered spring semesters)

Prerequisites: Open to music education majors only or with permission of the instructor

MUSC 308 Music Education: Music for the Elementary Classroom Teacher (3 Credit Hours)

Students gain skills and experience related to the use of music in elementary school.

Prerequisites: junior standing

MUSC 309 Principles of Conducting (1 Credit Hour)

The development of basic skills and techniques necessary for conducting choral and instrumental ensembles.

Prerequisites: MUSC 224, MUSC 322, or permission of the instructor

MUSC 310 Music Education: Percussion Class II (1 Credit Hour)

Required of all instrumental music education students. Class lessons on all percussion instruments and the study of teaching methods for these instruments. (offered fall semesters)

Prerequisites: MUSC 307; open to music education majors only or with permission of the instructor

MUSC 311+ Recital Attendance (0 Credit Hours)

This course is required of all music majors and music minors for six semesters of their enrollment as a music major or a music minor. The successful completion of the course requires attendance at a specified number of approved recitals, concerts, and events each semester.

Prerequisites: Music major, music minor or permission of instructor

MUSC 315 Digital Audio Workstation Essentials (3 Credit Hours)

This course covers the fundamentals of Digital Audio Workstations (DAWs) with a focus on Pro Tools. Students will learn basic editing techniques and gain proficiency in creating, arranging and comping tracks, workflow optimization through shortcuts, and basic mixing techniques. Additionally, the course delves into the fundamentals of microphone choices and placement. This course emphasizes basic signal flow, the recording process, and troubleshooting skills necessary for a successful audio recording session.

Prerequisites: MUSC 335T

MUSC 316 Popular Songwriting Techniques (3 Credit Hours)

This course focuses on the craft of songwriting. Covering contemporary song forms, techniques of lyric and melody writing as well as popular harmony and analysis, the course prepares students to write hit songs. Students will learn how to effectively demo their own songs, successfully collaborate, write jingles and copyright their own material.

Prerequisites: MUSC 221

MUSC 320 Studio Recording Principles (3 Credit Hours)

Expanding on the digital audio workstation skills gained in MUSC 315, this course introduces the student to modern multitrack recording techniques. Topics include microphone choice and placement, recording studio signal flow, the use of a large-format console, precise and creative audio editing, file structure and organization, and the basics of signal processing. Students apply this knowledge through guided in-class activities and practical group studio sessions designed to enhance their problem-solving, communication, and critical listening skills. This course is for Bachelor of Music with Emphasis in Sound Recording Technology majors only.

Prerequisites: MUSC 315; Bachelor of Music with Emphasis in Sound Recording Technology majors only

MUSC 321 Music Theory 3 (2 Credit Hours)

Music Theory 3 further develops skills learned previously in the theory sequence and introduces new topics including: writing and identifying diatonic sequences, spelling and resolving secondary dominants and leading-tone chords of V and scale degrees other than V, modulatory techniques (sequences, pivot chord, direct, common-tone), common-tone chords, NS chromatic modulations. Musical forms including binary, ternary, variation, Baroque forms, Sonata Form, etc. will be introduced and identification skills developed.

Prerequisites: MUSC 222 or placement test

Corequisites: MUSC 323

MUSC 322 Advanced Music Theory and Post-Tonal Compositional Techniques (2 Credit Hours)

Topics explored in this course include: part-writing advanced chromatic harmonies and modulations, altered and extended chords, twentieth-century rhythmic techniques, pitch-class sets, analyzing with modes, scales, collections, and set theory, primitivism, basics of twelve-tone theory, and composing with twelve tones. Other topics explored include theoretical elements of composing after 1945, such as graphic and text notation, chance and indeterminacy, minimalism, post-modern music, and more recent trends.

Prerequisites: MUSC 321 or completion of music theory placement test or permission of instructor

MUSC 323 Aural Skills 3 (1 Credit Hour)

A continuation of MUSC 224 and in close connection with topics covered in MUSC 321. Topics covered include chordal and chromatic harmony as well as written and keyboard work emphasizing skill development in harmonic modulation.

Prerequisites: MUSC 224 or permission of instructor

Corequisites: MUSC 321

MUSC 324 Advanced Aural Skills - Tonal and Beyond (1 Credit Hour)

A continuation of MUSC 323; recommended in conjunction with MUSC 322. Further development of skills learned in MUSC 323 with an additional focus on post-tonal techniques.

Prerequisites: MUSC 323 or permission of the instructor

MUSC 326 Jazz Theory and Aural Skills (3 Credit Hours)

This course introduces melody, rhythm, and harmony in the context of jazz music. Students will analyze music and develop music theory and aural skills with specific focus on the jazz genre.

Prerequisites: MUSC 321, MUSC 323, or permission of the instructor

MUSC 333 Music Business and Entrepreneurship (3 Credit Hours)

Musicians in the twenty-first century must be equipped to meet the ever-changing demands of the contemporary music industry through the development of an entrepreneurial mindset and the utilization of both musical and extra-musical skills, which will allow them to create and build sustainable careers. This course offers a foundation upon which students can develop the musical careers they seek and provides first-hand experience with some of the basic tools modern musicians need to succeed.

Prerequisites: Music majors or minors or permission of the instructor

MUSC 335T Music Technology Survey (3 Credit Hours)

This introductory course will explore the impact of technology on music performance, composition, and education through in-class lecture, hands-on demonstration, and lab projects. Topics covered include but are not limited to: basic acoustics, basic audio signal flow for live performance and recording, microphone basics for live performance and recording, an introduction to sequencing and recording software and Digital Audio Workstations, MIDI and synthesis, basics of mixing, editing, an introduction to music notation software and uses, creation of 'music minus one' projects for pedagogical purposes, and an exploration of common file formats for distribution and publication.

Prerequisites: Music major or minor or permission of the instructor; Sound Recording Technology majors must earn a grade of C or better to progress to MUSC 113

MUSC 336 Electronic Music (3 Credit Hours)

This introductory course is designed to give students a historical overview of mechanical and electronic music through topical study and listening examples. Additionally, students will create their own electronic music compositions using analog, digital and virtual hardware/software.

Prerequisites: Music major or permission of the instructor

MUSC 337 Jazz Improvisation I (2 Credit Hours)

This course will introduce students to the basic concepts of Jazz improvisation, including harmonic and melodic implications.

Prerequisites: MUSC 221 or permission of the instructor

MUSC 338 Jazz Improvisation II (2 Credit Hours)

This course is a continuation of MUSC 337, and will delve further into more advanced techniques used in Jazz improvisation.

Prerequisites: MUSC 337 or permission of the instructor

MUSC 340 Synthesis and Sound Design Techniques for Music Production (3 Credit Hours)

An introduction to the fascinating world of sound synthesis and sound design through practical hands-on assignments using industry-standard techniques and by exploring the technology and historical evolution. The course will focus on subtractive synthesis; a core knowledge for creating one's own sounds to use in music.

Prerequisites: MUSC 335T or permission of the instructor

MUSC 344 Introduction to Film Music (3 Credit Hours)

This course is designed for music and non-music majors interested in the fascinating world of film scoring. Through a combination of historical exploration and in-depth analysis of musical and narrative elements, students will gain a comprehensive understanding of how music enhances storytelling in the world of film and television.

Prerequisites: ENGL 110C

MUSC 345 Diction for Singers (1 Credit Hour)

An introductory course dealing with correct principles of effective diction essential to the singing of English and Italian songs. (offered every fall)

Prerequisites: vocal music major, vocal music minor, or permission of the instructor

MUSC 346 Diction for Singers (1 Credit Hour)

An introductory course dealing with correct principles of effective diction essential to the singing of German and French songs. (offered every spring)

Prerequisites: MUSC 345

MUSC 350 Music Notation (3 Credit Hours)

This course is designed to introduce students to the art of music notation through exploring the history of music engraving practices, hands-on experience writing music manuscript (hand-written) and the use of modern notation software (Finale, Sibelius, etc.) with MIDI implementation.

Prerequisites: MUSC 221

MUSC 352 Critical Listening in Audio Production (3 Credit Hours)

Students develop critical listening skills through aural analysis, ear training, drill and practice, and comparative analyses. Topics covered include spectral balance and equalization, spatial attributes and reverberation, dynamic range control, distortion and noise, audio clip edit points, analysis of sound, frequencies, effects and processing, delays and decays, and master frequencies. Students are expected to identify frequency ranges, specific audio signatures, distortion, edits, and digit manipulation through aural examinations.

Prerequisites: MUSC 335T

MUSC 355 Music Production I (3 Credit Hours)

This course is designed to give students hands-on experience working with both hardware and software in the modern MIDI Production studio. Topics covered include MIDI recording, sequencing, editing, and playback techniques, virtual instruments and hardware synthesizers, tracking and mixing in a DAW, and file formats and distribution.

Prerequisites: MUSC 335T

MUSC 361 History of Western Art Music from Ancient through Baroque (3 Credit Hours)

A survey of the development of western art music, from Ancient Greece through the Baroque, highlighting the influence of historical events upon musical developments.

Prerequisites: MUSC 264A, or MUSC 160 and MUSC 266, and MUSC 222, or permission of instructor

MUSC 362W History of Western Art Music from Classical through Modern (3 Credit Hours)

A survey of the development of western art music, from Classical through Modern, showing the influence of historical events upon musical development. This is a writing intensive course.

Prerequisites: grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; MUSC 261 and MUSC 262 or MUSC 264A or MUSC 126A, and MUSC 222 or permission of instructor

MUSC 368 Music Industry Internship (3 Credit Hours)

An opportunity to integrate service and applied learning experience with music industry perspectives.

Prerequisites: Permission of instructor

MUSC 370 Jazz Combo (1 Credit Hour)

This ensemble will explore Jazz literature, focusing primarily on the small group format. Previous experience with improvisation is necessary for all participants.

Prerequisites: Permission of the instructor

MUSC 371+ Ensemble (1 Credit Hour)

One to three rehearsal periods per week, depending on the ensemble.

Students will participate in rehearsals and public performances.

Prerequisites: by audition only, or permission of instructor; must have a significant background in performing

MUSC 372+ Ensemble (1 Credit Hour)

Studio class ensemble for strings. Meets once a week.

Prerequisites: By audition only, or permission of instructor; must have a significant background in performing

MUSC 375+ Opera and Musical Theater Production and Performance (1 Credit Hour)

This course is designed to produce operas and musical theatre shows.

Students will not only be a part of the cast and/or crew, but they will also learn other applicable skills including but not limited to how to prepare for a role, effective practice techniques, acting and movement for musical theatre/opera, and production etiquette.

Prerequisites: Permission of instructor

MUSC 376+ F. Ludwig Diehn Chorale (0 Credit Hours)

This is a performance-based course. It is designed to train music majors and non-majors in small ensemble choral techniques. This choral ensemble is an audition-only group.

Prerequisites: Audition or permission of instructor

MUSC 377 Extracurricular Studies (1-6 Credit Hours)

Extracurricular activities may be approved for credit based on objectives, criteria, and evaluative procedures as formally determined by the department and the student prior to the semester in which the activity is to take place. Credit is subject to review by the provost.

Prerequisites: Approval by the department chair in accordance with the policy on granting credit for extracurricular activities

MUSC 378 Extracurricular Studies (1-6 Credit Hours)

Extracurricular activities may be approved for credit based on objectives, criteria, and evaluative procedures as formally determined by the department and the student prior to the semester in which the activity is to take place. Credit is subject to review by the Provost.

Prerequisites: Approval by the department chair in accordance with the policy on granting credit for extracurricular activities

MUSC 380 Symphonic Band (1 Credit Hour)

Symphonic Band is a large ensemble for woodwind, brass and percussion players open to all university students with an audition for ensemble seating. Students will participate in rehearsals and concerts.

Prerequisites: Students must successfully perform on a standard concert band instrument or concert percussion, be able to read music, and permission of the instructor

MUSC 381+ Concert Choir (1 Credit Hour)

Participation in rehearsals and public performances of the Concert Choir.

Prerequisites: Ability to read music; audition required

MUSC 382+ Wind Ensemble (1 Credit Hour)

Participation in rehearsals and public performances of the band. Three rehearsal periods per week.

Prerequisites: ability to read music and/or permission of the instructor

MUSC 383+ Symphony Orchestra (1 Credit Hour)

Participation in rehearsals and public performances of the University Symphony Orchestra. Rehearsals two days per week and dress rehearsals TBA.

Prerequisites: by audition or permission of the instructor

MUSC 384+ Jazz Orchestra (1 Credit Hour)

This instrumental group will explore and perform standard jazz literature for the Jazz Ensemble and the contemporary Jazz Orchestra.

Prerequisites: Audition for the instructor required at the beginning of each semester

MUSC 385+ Monarch Basketball Band (1 Credit Hour)

Basketball band performs at all home Men's and Women's basketball games and selected tournament performances.

Prerequisites: Ability to read music, play an applicable instrument at the requisite level, and/or permission of the instructor

MUSC 386+ Jazz Choir (1 Credit Hour)

Vocal jazz ensemble, performing standard jazz choir literature.

Prerequisites: ability to read music and permission of the instructor

MUSC 387+ Collegium Musicum (1 Credit Hour)

Early music instrumental ensemble.

Prerequisites: permission of the instructor

MUSC 388+ Madrigal Singers (1 Credit Hour)

Small vocal ensemble focusing on a cappella classical music.

Prerequisites: permission of the instructor

MUSC 389+ Brass Choir (1 Credit Hour)

Brass Ensemble consisting of trumpets, horns, trombones, euphoniums, and tubas. Performing works written for brass as well as arrangements of choral, orchestral, jazz, pop, and show music.

Prerequisites: ability to read music and/or permission of the instructor; audition required

MUSC 390 Monarch Marching Band (1 Credit Hour)

The Monarch Marching Band will meet only during the fall semester and perform at all home and some away football games and other selected events. Students will participate in rehearsals and performances.

Prerequisites: Successful playing audition, the ability to read music and permission of the instructor; students accepted to participate must attend summer training camp prior to classes beginning in the fall

MUSC 391+ Commercial Music Ensemble (1 Credit Hour)

An ensemble comprised of a rhythm section and a few vocalists. Students will play musical covers and original songs in weekly rehearsals, and performs a live concert and/or records in the studio. Can be taken a maximum of 2 times for credit.

Prerequisites: Auditions required

MUSC 395 Topics in Music (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for credit within a major. These courses will appear in the course schedule. Course descriptions and prerequisites for each course may be found in information distributed to all academic advisors.

Prerequisites: junior standing or permission of the instructor

MUSC 396 Topics in Music (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for credit within a major. These courses will appear in the course schedule. Course descriptions and prerequisites for each course may be found in information distributed to all academic advisors.

Prerequisites: junior standing or permission of the instructor

MUSC 397 Tutorial Work in Special Topics in Music (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: junior standing and approval of the department chair

MUSC 398 Tutorial Work in Special Topics in Music (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: junior standing and approval of the department chair

MUSC 401 Music Education: Elementary Vocal and General Methods (2 Credit Hours)

Required prior to student teaching for all students in music education. Focuses on materials and methods of vocal and general instruction for elementary music classrooms. (offered fall semesters)

Prerequisites: MUSC 300

Pre- or corequisite: MUSC 402

MUSC 402 Music Education: Practicum (Elementary Vocal and General) (1 Credit Hour)

Required prior to the Teacher Candidate Internship (student teaching) for all students in music education. Enables students to observe master classroom teachers and to test accumulated teaching practices in elementary school vocal and general classroom settings. 20 hours of music classroom observation required. Also, in order to receive the required school practicum placement, students must have completed the ODU Office of Clinical Experiences background check/clearance process prior to the beginning of this course. The clearance process takes eight weeks. Students must register for the practicum placement on the Office of Clinical Experiences web pages prior to the course drop/add deadline. Students should contact their advisor for more information. (offered fall and spring semesters)

Prerequisites: MUSC 300; admission to the Teacher Education program, including meeting minimum Virginia Board of Education testing requirements and minimum GPA of 2.75 overall, in the Music Education major, and Professional Education courses required

Pre- or corequisite: MUSC 401

MUSC 403 Music Education: Secondary Vocal Methods (2 Credit Hours)

Required prior to the Teacher Candidate Internship (student teaching) for all students in music education with voice, keyboard or guitar concentration. Focuses on methods of vocal instruction, materials and rehearsal methods for secondary vocal classroom settings. (offered spring semesters)

Prerequisites: MUSC 300 (or TLED 301 completed prior to fall 2015)

Pre- or corequisite: MUSC 404

MUSC 404 Music Education: Practicum (Secondary Vocal) (1 Credit Hour)

Required prior to student teaching for all students in music education with voice, keyboard or guitar concentration. Enables students to observe master teachers and to test accumulated teaching practices in secondary school vocal classroom settings. 20 hours of observation required. Passing score of 160 on the Praxis Subject assessment, music content knowledge examination (formerly Praxis II) and passing scores on the VCLA are requirements of this course. Also, in order to receive the required school practicum placement, students must have completed the ODU Office of Clinical Experiences background check/clearance process prior to the beginning of this course. The clearance process takes eight weeks. Students must register for the practicum placement on the Office of Clinical Experiences web pages prior to the course drop/add deadline. Students should contact their advisor for more information. (offered fall and spring semesters).

Prerequisites: MUSC 300; admission to the Teacher Education program, including meeting minimum Virginia Board of Education testing requirements and minimum GPA of 2.75 overall, in the Music Education major, and Professional Education courses required

Pre- or corequisite: MUSC 403

MUSC 407 Music Education: Secondary Instrumental Methods (2 Credit Hours)

Required prior to the Teacher Candidate Internship (student teaching) for all students in music education with an instrumental music concentration. Focuses on methods of instruction, materials and rehearsal methods for secondary instrumental classrooms. (offered spring semesters)

Prerequisites: MUSC 300

Pre- or corequisite: MUSC 408

MUSC 408 Music Education: Practicum (Secondary Instrumental) (1 Credit Hour)

Required prior to the Teacher Candidate Internship (student teaching) for all students in music education with instrumental music concentration. Enables students to observe master teachers and to test accumulated teaching practices in secondary school instrumental classrooms. Passing score of 160 on the Praxis Subject assessment, music content knowledge examination (formerly Praxis II) and passing scores on the VCLA are requirements of this course. Also, in order to receive the required school practicum placement, students must have completed the ODU Office of Clinical Experiences background check/clearance process prior to the beginning of this course. The clearance process takes eight weeks. Students must register for the practicum placement on the Office of Clinical Experiences web pages prior to the course drop/add deadline. Students should contact their advisor for more information. Offered fall and spring semesters.

Prerequisites: MUSC 300; admission to the Teacher Education program, including meeting minimum Virginia Board of Education testing requirements and minimum GPA of 2.75 overall, in the Music Education major, and Professional Education courses required

Pre- or corequisite: MUSC 407

MUSC 409 Music Education: Instrumental Techniques (1 Credit Hour)

Required prior to the Teacher Candidate Internship (student teaching) for all students in music education with the vocal, keyboard and guitar concentration. Focuses on development of vocal majors' ability to read instrumental scores; provides vocal majors an understanding of families of instruments.

Prerequisites: vocal music education majors or permission of the instructor

MUSC 410/510 Psychology of Music (3 Credit Hours)

This course is designed to assist students in enhancing their understanding of the aesthetic response to music in various settings. Students will learn to integrate their understanding of musical aptitude as it relates to human growth and development. In addition, students will study the psychological implication of personality types as they develop, implement, and assess their pedagogical approach.

Prerequisites: Junior standing or permission of instructor

MUSC 413 Advanced Choral Conducting (2 Credit Hours)

Course deals with the analysis, interpretation, and conducting of varied choral literature.

Prerequisites: MUSC 309 or permission of instructor

MUSC 414 Advanced Instrumental Conducting (2 Credit Hours)

Course deals with the analysis, interpretation, and conducting of varied instrumental literature.

Prerequisites: MUSC 309 or permission of instructor

MUSC 415 The Art and Craft of Mixing (3 Credit Hours)

In this course, students learn how to mix music that supports the emotion of the song and engages listeners. Topics include effective session preparation, advanced editing techniques, musical balancing, creative use of audio effects, and automation techniques. Students will work with pre-recorded multitracks, completing numerous mixes using plug-ins and outboard signal processors, and will receive in-depth critical feedback from their instructor and peers. Through this process, students will develop the critical listening and technical skills to confidently creatively shape sound. This course is for Bachelor of Music with Emphasis in Sound Recording Technology majors only.

Prerequisites: MUSC 320; Bachelor of Music with Emphasis in Sound Recording Technology majors only

MUSC 416 Arranging for the Contemporary Musician and Producer (3 Credit Hours)

Students learn how to arrange music for rhythm sections, vocals, and diverse ensembles, including brass, woodwinds and strings. This course uniquely addresses the evolving landscape of modern music production, bridging the gap between virtual instruments and recording musicians in the studio. As the recording process evolves, so do the demands on musical arrangement and orchestration. This course provides students with the essential tools and techniques to adapt their arrangements to meet the needs of contemporary recording processes.

Prerequisites: MUSC 461 and MUSC 316

MUSC 417 Jazz Pedagogy and Conducting (2 Credit Hours)

This course will present rehearsal and conducting techniques, and methods for directing instrumental and vocal jazz ensembles. A focus on ensemble set-up, style, articulation, intonation, phrasing, balance, blend, and ensemble literature will be presented. The relationship between jazz history, jazz music, and jazz performance practice will be emphasized. Effective ensemble rehearsal and communication techniques will be modeled.

Prerequisites: MUSC 326 or permission of the instructor

MUSC 418 Jazz Arranging (2 Credit Hours)

This course will facilitate the learning and application of music arranging techniques for instrumental and vocal jazz ensembles. Past and present arranging practices will be reviewed and applied to student arrangements.

Prerequisites: MUSC 326 or permission of the instructor

MUSC 419 Jazz Performance Practice Workshop (2 Credit Hours)

This course will introduce the elements of various jazz, Afro-Cuban, Brazilian, and other world musical styles as applied to jazz performance practice. Multiple styles and rhythmic elements will be demonstrated; students will learn how to incorporate the styles in their own performances.

Prerequisites: MUSC 337 or permission of the instructor

MUSC 420 Music Production Techniques (3 Credit Hours)

This course provides a comprehensive exploration of record production, focusing on creative and technical aspects. Topics include pre-production, song arrangement choices, collaboration with artists, and advanced mixing skills. The final project involves planning, producing, and presenting a complete music production project, with peer feedback and analysis. Students in this course will develop essential skills for successful music careers, emphasizing creativity and technical proficiency.

Prerequisites: MUSC 415; Bachelor of Music with Emphasis in Sound Recording Technology majors only

MUSC 421 Counterpoint (2 Credit Hours)

A study of the contrapuntal techniques of sixteenth century composers and their influence upon composers of the eighteenth through twentieth centuries. (offered fall, even years)

Prerequisites: MUSC 221 or permission of instructor

MUSC 422/522 Form and Analysis (2 Credit Hours)

Aural analysis study and analysis of the principal traditional musical forms. Stylistic and harmonic analysis as it related to score study will be discussed. (offered spring, even years)

Prerequisites: MUSC 322 and MUSC 324 or permission of the instructor

MUSC 424 Orchestration (2 Credit Hours)

A study of the range, musical functions, and technical characteristics of the instruments and their color possibilities in various combinations. Practical experience in scoring for small and large ensembles. (offered fall, odd years)

Prerequisites: MUSC 321 or permission of instructor

MUSC 425 Vocal Arranging (2 Credit Hours)

This course covers basic arranging techniques for traditional vocal ensembles. Students will develop the ability to reshape pre-existing melodies and chord progressions into successful arrangements for various groups.

Prerequisites: MUSC 222 or permission of instructor

MUSC 426/526 Marching Band Techniques and Arranging (2 Credit Hours)

Students will learn how to chart and arrange music for the marching band. In addition, basic vocal arranging techniques will be discussed. Students will be required to observe different styles of school marching bands.

Prerequisites: Music Education major or permission of instructor

MUSC 435 Music Production II (3 Credit Hours)

This course builds upon the fundamentals experienced in the introductory MIDI course. Topics include: advanced sequencing techniques, looping, editing, data manipulation, patch and control changes through real-time recording, patch editing, storage and retrieval, incorporation of external hardware, sampling, and an introduction to the incorporation of digital audio.

Prerequisites: MUSC 335T

MUSC 440/540 Scoring for Film (3 Credit Hours)

This is a hands-on course in the art of film composition. Students will analyze iconic film scores from Bernard Herrmann to John Powell, exploring music's narrative impact, gain insight into the modern composer's workflow and diverse skill sets, and apply the techniques learned in practical projects, transitioning from sketch to demo using a DAW. The course culminates in a recording session for the final project. This projects allows students to practice film spotting, thematic writing, sketch to demo production, arranging and music preparation for a live recording experience. Students elevate their skills in writing music that uniquely supports and enhances visual storytelling.

Prerequisites: MUSC 335T, MUSC 221, or permission of the instructor

MUSC 445/545 Applied Music Pedagogy (1 Credit Hour)

Teaching techniques, literature in the performing area. Seminar deals with resource materials. Laboratory: observation and teaching under supervision.

Prerequisites: music major senior standing or permission of the department

MUSC 446 Applied Music Literature (1 Credit Hour)

Teaching techniques, literature in the performing area. Seminar portion of the course deals with resource materials. Laboratory portion of the course includes observation and teaching under supervision.

Prerequisites: music major senior standing or permission of the department

MUSC 460/560 History of Jazz (3 Credit Hours)

This course will study the historical development of jazz as an American art form. The emotion and meaning of this style will be investigated as well as the historical and contemporary aesthetic response. Emphasis will include the defining role of African American artists. The influence of jazz on the development of contemporary American music will be discussed. Written critiques of live performances will be required.

Prerequisites: junior standing or permission of the instructor

MUSC 461/561 History of Recorded Music (3 Credit Hours)

The course covers how music has co-evolved with technology, the entertainment business, and cultural trends. The main theme is how recording technology has evolved, and with it, the music making and music listening experiences. Students will expand their musical vocabulary through the study of numerous musical genres, listening to and discussing the essential elements of impactful records, and learning about key artists, composers, producers, engineers, and other music professionals (both past and present). Students will gain a better understanding of the role music plays in the entertainment industry, including with film, TV, games, social media, live events, and more.

Prerequisites: ENGL 110C

MUSC 462/562 Hip-Hop Music and Culture (3 Credit Hours)

Hip-hop, from local roots to global dominance, has sparked extensive journalistic and academic exploration primarily focused on its social and cultural impacts. This course delves into the historical factors shaping hip-hop's origin and evolution, examines its global success and translation both musically and linguistically, and engages in contemplation regarding the essence and direction of hip-hop. No prior musical experience or knowledge of music notation is required, but students will develop a basic set of skills for discussing the structure and function of hip-hop songs.

Prerequisites: MUSC 221, MUSC 222, MUSC 361, and MUSC 362W, or permission of instructor

MUSC 466/566 Music of the 20th Century to the Present (3 Credit Hours)

A study of the techniques and styles in music in the twentieth and twenty-first century (offered spring).

Prerequisites: MUSC 222, MUSC 361, and MUSC 362W, or permission of the instructor

MUSC 471/571 Musicians' Health: Music and Medicine (3 Credit Hours)

This course is designed to assist music students to enhance their understanding of musicians' health issues in order to prepare them to achieve their desired performance potential.

Prerequisites: Junior standing or permission of Instructor

MUSC 491/591 Music History from the Ancient to Baroque Era (3 Credit Hours)

Study of music history (specific topics vary) including historical perspective in relation to style and development of music, and the function of music in society and culture. Topics will be from the Ancient through the Baroque era (offered fall semester).

Prerequisites: MUSC 221, MUSC 222, MUSC 361 and MUSC 362W, or permission of instructor

MUSC 492/592 Music History from the Classical through Modern Era (3 Credit Hours)

Study of music history (specific topics vary) including historical perspective in relation to style and development of music, and the function of music in society and culture. Topics will be from the Classical through Modern era.

Prerequisites: MUSC 221, MUSC 222, MUSC 361 and MUSC 362W, or permission of instructor

MUSC 494/594 Music in the Romantic Era (3 Credit Hours)

A study of music history from the late works of Beethoven to Mahler and Strauss. A discussion of musical style within the context of cultural history. (spring semesters, even years)

Prerequisites: MUSC 221, MUSC 222, MUSC 361, and MUSC 362W, or permission of instructor

MUSC 495/595 Topics in Music (1-3 Credit Hours)

These courses will appear in the course schedule. Course descriptions and prerequisites for each course may be found in information distributed to all academic advisors.

Prerequisites: junior standing or permission of the instructor

MUSC 496/596 Topics in Music (1-3 Credit Hours)

These courses will appear in the course schedule. Course descriptions and prerequisites for each course may be found in information distributed to all academic advisors.

Prerequisites: junior standing or permission of the instructor

MUSC 497 Tutorial Work in Special Topics in Music (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: senior standing and approval of the department chair

MUSC 498 Tutorial Work in Special Topics in Music (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: senior standing and approval of the department chair

MUSE - Music Education

MUSE 141 Music Education Applied Piano Lesson (2 Credit Hours)

This course is designed to support the continued training and development of piano skills needed in the elementary, secondary choral, and private vocal studio setting. This course is only for Bachelor of Music, Music Education majors in the Vocal, Guitar, or Keyboard concentration.

Prerequisites: MUSC 130

MUSE 150 Freshman Seminar 1 for Music Education Students (1 Credit Hour)

This course is designed to help students make the most out of their experience as a student at ODU, create a sense of community among music education majors, and prepare students for the expectations of being a college student in the Diehn School of Music.

MUSE 151 Freshman Seminar II for Music Education Students (1 Credit Hour)

This course provides a professional community for emerging music educators. Discussion and fieldwork will focus on the application of instructional and learning strategies for guiding critical and creative music thinking, teaching and learning in a variety of music educational contexts.

Prerequisites: MUSE 150 or MUSC 150

NAVS - Naval Science

NAVS 101 Introduction to Naval Science (2 Credit Hours)

General introduction to the naval service. Particular emphasis placed on the mission, organization, regulations and broad warfare components of the Navy and Marine Corps. Includes customs, discipline, courtesies, leadership, core values and shipboard nomenclatures.

NAVS 102 Naval Sea Power and Maritime Affairs (3 Credit Hours)

The study of the evolution of the major world naval and maritime nations. The role of American naval and maritime affairs in the rivalries of the great world powers during the colonial period, the spread of revolutionary movements, and the era of civil and international conflicts in the 19th and 20th centuries.

NAVS 111+ Naval Laboratory I (1 Credit Hour)

Covers basic military formations, drill movements, commands, customs, courtesies, honors and inspection. Lecture and discussion topics include security, equal opportunity and military justice. First year Naval Science students only.

Prerequisites: departmental permission

NAVS 112+ Naval Laboratory I (1 Credit Hour)

Continues basic military formations, drill movements, commands, customs, courtesies, honors and inspections. Lecture and discussion topics include cruise preparation, safety education, administration, security, equal opportunity and military justice. First year Naval Science students only.

Prerequisites: departmental permission

NAVS 201 Naval Ships Systems I (3 Credit Hours)

Familiarizes students with types, structure and purpose of naval engineering systems, propulsion systems, auxiliary power systems, electrical systems and ship control. Ship design and stability characteristics are examined.

NAVS 202 Naval Ships Systems II (3 Credit Hours)

Introduction to theory and principles of operation of naval weapons systems. Covers types of weapons and fire control systems, capabilities/limitations, theory of target acquisition, identification and tracking, trajectory principles and basics of naval ordnance.

Pre- or corequisite: NAVS 201

NAVS 211+ Naval Laboratory II (1 Credit Hour)

Covers military formations, drill movements, commands, customs, courtesies, honors and inspections. Lecture/discussion topics include cruise preparation/evaluation, security, administration and military justice. Second year Naval Science students only.

Prerequisites: departmental permission

NAVS 212+ Naval Laboratory II (1 Credit Hour)

Military formations, drill movements, commands, customs, courtesies, honors and inspections. Lecture and discussion topics include cruise preparation and evaluation, safety, administration, security, equal opportunity and military justice. Second year Naval Science students only.

Prerequisites: departmental permission

NAVS 301 Navigation and Naval Operations I (3 Credit Hours)

In-depth study of piloting including theory, principles and procedures. Includes use of charts, visual and electronic aids, and theory and operation of compasses. Other topics include tides, currents, effects of wind and weather, and nautical rules of the road.

Prerequisites: departmental permission

NAVS 302 Navigation and Naval Operations II (3 Credit Hours)

Relative motion vector-analysis theory, relative motion problems, formation tactics, and ship employment. Also includes an introduction to naval operations and operations analysis, ship behavior and characteristics in maneuvering, applied aspects of ship handling, and afloat communications. Concepts in naval leadership and naval operations reinforced through case studies.

Prerequisites: departmental permission

Pre- or corequisite: NAVS 301

NAVS 310 Evolution of Warfare (3 Credit Hours)

Explores the basic concepts for understanding the operational art of warfare from the beginning of recorded history to the present.

Prerequisites: departmental permission

NAVS 311+ Naval Laboratory III (1 Credit Hour)

Military formations, drill movements, commands, customs, courtesies, honors and inspections. Lecture/discussion topics include cruise preparation and evaluation, security and military justice. Third year Naval Science students only.

Prerequisites: departmental permission

NAVS 312+ Naval Laboratory III (1 Credit Hour)

Military formations, drill movements, commands, customs, courtesies, honors and inspections. Lecture and discussion topics include cruise preparation and evaluation, safety, administration, security, equal opportunity and military justice. Third year Naval Science students only.

Prerequisites: departmental permission

NAVS 395 Topics (3 Credit Hours)

Study of selected topics.

Prerequisites: departmental permission

NAVS 401 Leadership and Management I (3 Credit Hours)

The fundamentals of the managerial process (planning, organization, directing, and controlling) are considered in their relationship to the effectiveness of naval organization and readiness. Coverage includes human resources management, naval personnel management, material management and administration of division discipline.

Prerequisites: NROTC Sophomore Midshipman or STA-21/MECEP; departmental permission required for non-ROTC students

NAVS 402 Leadership and Ethics (3 Credit Hours)

Capstone course, designed to equip the student with the critical thinking skills to address moral and ethical dilemmas frequently faced by naval officers.

Prerequisites: completion of all previous NAVS courses

NAVS 410 Fundamentals of Maneuver Warfare (3 Credit Hours)

Broad aspects of warfare and their interactions with maneuver warfare doctrine. Focus on the United States Marine Corps as the premier maneuver warfare fighting institution. Historical influences on current tactical, operational, and strategic implications of maneuver warfare practices. Case studies. Enrollment preference to NROTC students.

Prerequisites: departmental permission

NAVS 411+ Naval Laboratory IV (1 Credit Hour)

Covers military formations, drills, commands, customs, courtesies, honors and inspections. Lecture/discussion topics include precommissioning preparation, administration, equal opportunity, safety and military justice. Fourth year Naval Science students only.

Prerequisites: departmental permission

NAVS 412+ Naval Laboratory IV (1 Credit Hour)

Military formations, drill movements, commands, customs, courtesies, honors and inspections. Lecture and discussion topics include precommissioning preparation, safety, administration, security, equal opportunity and military justice. Fourth year Naval Science students only.

Prerequisites: departmental permission

NMED - Nuclear Medicine Technology

NMED 300 Medical Terminology (3 Credit Hours)

A course designed to cover the terminology and abbreviations used in the clinical sciences.

Prerequisites: ENGL 110C or equivalent

NMED 331 Fundamental Concepts in Nuclear Medicine Technology (4 Credit Hours)

A course designed to cover the physical principles related to nuclear medicine technology. The methods and mathematics of radioactive decay, types of radiation, radiation interactions, origins of radionuclides, including SPECT and PET/CT radionuclides also presented.

Prerequisites: PHYS 101N and PHYS 102N or equivalent

NMED 332 Nuclear Instrumentation (4 Credit Hours)

This course is designed to familiarize the student with the theory, operation and quality assurance associated with the instrumentation found in a typical nuclear medicine department. The course also covers the instrumentation of PET/CT scanners as well as the common radiopharmaceuticals, imaging protocols, and radiation safety currently employed in diagnostic PET/CT imaging practice.

Prerequisites: NMED 331 or permission of program director

NMED 335 Radiation Health (3 Credit Hours)

Discussions of radiation effects on cellular systems as well as guidelines for radiation protection and safe handling of radioactive materials in the nuclear medicine clinical setting.

Prerequisites: NMED 331 or permission of the instructor

NMED 401 Nuclear Medicine Technology I (4 Credit Hours)

A course designed to cover the nuclear medicine procedures and protocols of the gastrointestinal, genitourinary, central nervous, skeletal systems. Other current or emerging clinical nuclear medicine procedures are also covered.

Prerequisites: BIOL 240 or BIOL 250 and BIOL 241 or BIOL 251 and admission to the nuclear medicine program

NMED 402 Nuclear Medicine Technology II (4 Credit Hours)

A course designed to cover the nuclear medicine protocols and procedures of the respiratory, cardiovascular, endocrine, infection/inflammation and lymphatic systems. Other current and emerging clinical nuclear medicine procedures and protocols are also presented.

Prerequisites: NMED 401 or permission of the program director

NMED 403 Radiopharmacy (3 Credit Hours)

This course is designed to cover the concepts and techniques related to the field of radiopharmacy for nuclear medicine technology practice. The production, preparation, uses and quality assurance of radiopharmaceuticals are presented. Interventional and adjunctive pharmaceutical agents used in nuclear medicine will be covered.

Prerequisites: NMED 331, CHEM 105N-CHEM 106N and CHEM 107N-CHEM 108N or higher or permission of the program director

NMED 410 Nuclear Medicine and Molecular Imaging (3 Credit Hours)

This course covers the concepts, instrumentation and procedures pertaining to molecular imaging as related to nuclear medicine. Topics include: advanced Positron Emission Tomography (PET), Computed Tomography (CT), PET/CT, Magnetic Resonance Imaging (MRI), nuclear cardiology, theranostics, and other emerging technologies. Cross-sectional anatomy and radionuclide therapy, including monoclonal antibodies are also discussed. Review of all content for board examinations.

Prerequisites: NMED 401 and NMED 402

NMED 440 Clinical Nuclear Medicine Technology I (3-8 Credit Hours)

Clinical instruction in patient care, radiation safety, radiopharmaceutical administration, imaging and non-imaging techniques and quality assurance procedures, including PET/CT.

Prerequisites: admission to the program and permission of the program director

NMED 450 Clinical Nuclear Medicine Technology II (8 Credit Hours)

Continued clinical instruction in diagnostic and therapeutic nuclear medicine procedures. The correlation of nuclear medicine procedures is also presented. Clinical experiences include patient care, radiation safety, radiopharmaceutical administration, imaging and non-imaging techniques and quality assurance procedures.

Prerequisites: NMED 440 and permission of the program director

NMED 460 Clinical Nuclear Medicine Technology III (8 Credit Hours)

Advanced clinical instruction in diagnostic and therapeutic nuclear medicine procedures, including PET/CT. The correlation of nuclear medicine procedures is also presented.

Prerequisites: NMED 450 and permission of the program director

NMED 475W Administration and Management in Nuclear Medicine Technology (3 Credit Hours)

This writing intensive, capstone course is designed to provide a review of the administration, management, policies, and practices relevant to nuclear medicine technology. The leadership, legal, ethical and planning aspects of operating a nuclear medicine department are covered.

Prerequisites: Admission to the NMED program and a grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

NMED 495 Special Topics in Nuclear Medicine Technology (1-3 Credit Hours)

A study of selected current topics in nuclear medicine technology.

Prerequisites: permission of the program director

NMED 497 Directed Study in Nuclear Medicine Technology (1-3 Credit Hours)

Directed study in a topic relevant to nuclear medicine technology.

Prerequisites: Permission of the program director

NMED 498 Directed Research in Nuclear Medicine Technology (1-6 Credit Hours)

Supervised research on a specific problem in Nuclear Medicine Technology. Regular meetings with faculty and a written/oral report are required.

Prerequisites: instructor permission required

NURS - Nursing

NURS 304 Principles of Practice: Foundations of Health Assessment (3 Credit Hours)

This didactic and laboratory course emphasizes the assessment phase of the nursing process. Supervised practice, faculty demonstration, and self-paced learning in the audio-visual laboratory, simulation laboratory and selected clinical sites facilitate skill acquisition in health assessment and health history interviewing. Pre- or

Prerequisites: Admission to the BSN program

Corequisites: NURS 316 and NURS 317

NURS 305 Health Assessment (3 Credit Hours)

This course emphasizes the physical assessment phase of the nursing process. For registered nurse students only.

Prerequisites: Admission to the BSN program

NURS 306 Theoretical Foundation of Professional Nursing Practice (3 Credit Hours)

This course focuses on selected nursing models, concepts, and theories as supporting frameworks for professional nursing practice. Emphasis is placed on the utilization of nursing theory as a methodology for improving nursing practice in various client situations and practice settings. For registered nurse students only.

Prerequisites: Admission to the BSN program

Pre- or corequisite: NURS 401

NURS 310 Principles of Practice: Introduction to Nutrition/Normal Nutrition (1 Credit Hour)

This course focuses on concepts of normal nutrition. Emphasis is placed on understanding the impact of various nutrients on the body.

Prerequisites: Admission to the BSN program

NURS 311 Principles of Practice: Nutrition of Nursing Practice (1 Credit Hour)

This course builds upon NURS 310 and introduces the student to selected therapeutic diets. Emphasis is placed on specific diets associated with selected alterations in adaptation and the adult with behavioral issues.

Prerequisites: NURS 310

NURS 314 Principles of Practice: Foundational Concepts (3 Credit Hours)

Emphasis is on concepts and theories that are fundamental to professional nursing practice, the nursing process, and therapeutic nurse-patient communication.

Prerequisites: Admission to the BSN program

NURS 316 Principles of Practice: Foundations of Practice (3 Credit Hours)

This course focuses on concepts and theories underlying professional clinical nursing practice. This course also includes laboratory application of health assessment skills, the nursing process, and clinical nursing techniques.

Prerequisites: Admission to the BSN program

Pre- or corequisite: NURS 304

NURS 317 Principles of Practice: Clinical Foundations of Practice (1 Credit Hour)

This clinical course focuses on the assessment and basic care of the hospitalized adult client. Application of the nursing process, health assessment, and clinical nursing techniques are implemented using concepts and theories that underlie professional nursing practice.

Prerequisites: admission to the BSN program

Pre- or corequisite: NURS 304 and NURS 316

NURS 322 Health Continuum: Adult Health I (4 Credit Hours)

This lecture course focuses on the adult who is experiencing selected alterations and/or adaptations in organ system function such as elimination, immune system/cellular regulation, hematological system, fluid balance, temperature regulation and nutritional balances. Focus is also on the adult experiencing pain, inflammation and other selected system alterations. Emphasis is on the use of the nursing process to assist adult patients to adapt to alterations/adaptations in function of systems.

Prerequisites: NURS 304, NURS 316 and NURS 317

Pre- or corequisite: NURS 323 and NURS 373

NURS 323 Health Continuum: Clinical Management Adult Health I (2 Credit Hours)

This clinical course focuses on the nursing process with adult clients experiencing alterations/adaptations in bodily defense mechanisms. The concepts inclusive in the didactic component will be actualized in general medical surgical units and oncology units.

Prerequisites: NURS 304, NURS 316, and NURS 317

Pre- or corequisite: NURS 322 and NURS 373

NURS 332 Health Continuum: The Growing Family (2 Credit Hours)

This lecture course focuses on the theoretical and applied concepts related to the care of families experiencing pregnancy and childbirth. Emphasis is on the dynamic familial, societal, psychological and physiological changes that occur in this stage of family and personal development. The assistive role of the nurse and as a family-centered provider of care is a major focus.

Prerequisites: NURS 322 and NURS 323

Pre- or corequisite: NURS 333

NURS 333 Health Continuum: Clinical Management of the Growing Family (1 Credit Hour)

This clinical course provides the opportunity for planning and provision of nursing care to the childbearing family. Emphasis is on the use of the nursing process to plan, provide and coordinate quality care. Students are expected to demonstrate responsibility and accountability for personal actions as well as a respect for families and clients.

Prerequisites: NURS 322 and NURS 323

Pre- or corequisite: NURS 332

NURS 352 Health Continuum: Behavioral Issues, Altered Cognition and Coping (2 Credit Hours)

This lecture course focuses on psychotherapeutic processes across the lifespan. Building on foundations from the social and behavioral sciences, emphasis is on the use of the nursing process in providing care to clients with acute and chronic illness in a variety of psychiatric settings.

Prerequisites: NURS 304, NURS 316 and NURS 317

Pre- or corequisite: NURS 353

NURS 353 Clinical Management of Patients with Behavioral Issues, Altered Cognition and Coping (1 Credit Hour)

This clinical course provides a mechanism for students to perform mental health assessments, plan nursing care, practice therapeutic communication techniques and observe group processes in both inpatient and outpatient settings.

Prerequisites: NURS 304, NURS 316 and NURS 317

Pre- or corequisite: NURS 352

NURS 355 Genetics in Nursing (2 Credit Hours)

Emphasis is placed on current information and research findings about the role of genetics in health. Students completing this course will be better prepared to incorporate genetic information and technology when providing care to clients. A student receiving credit for NURS 355 cannot receive credit for NURS 455.

Prerequisites: Admission to the prelicensure BSN program

NURS 356 Global Health Perspectives (2 Credit Hours)

This introductory course to global health emphasizes the major underlying determinants of poor health and the relationship between health and political, social, and economic development. Students will be introduced to global effects on the health of populations worldwide, current and future challenges to global health and the role of primary health care providers in meeting that challenge. (A student receiving credit for NURS 356 cannot receive credit for NURS 456.)

Prerequisites: admission to the prelicensure BSN program

NURS 357 Palliative Care in Nursing (2 Credit Hours)

This course provides an overview of the need to improve end of life care and the role of nursing as a member of the interdisciplinary team in providing quality care. Basic principals of palliative care are presented within a quality of life (QOL) framework. Palliative care nursing care combines caring, communication, knowledge, and skill. Clinical issues to include expert assessment skills and aggressive pain and symptom management as well as the psychological, social, and spiritual care of patients and families experiencing a life threatening progressive illness will be discussed. Caring for the dying means not only "doing for" but also "being with". Students will be provided the opportunity to use introspection to clarify their own feelings related to the dying process. A student receiving credit for NURS 357 cannot receive credit for NURS 457.

Prerequisites: Admission to the prelicensure BSN program

NURS 358 Studies in Professional Nursing (2 Credit Hours)

The study of selected topics in professional nursing practice; designed to provide an in-depth exploration of current nursing issues.

Prerequisites: Admission to BSN program

NURS 363 Principles of Practice: Research as Foundation for Practice (3 Credit Hours)

This course focuses on the theories and concepts utilized in the scientific investigation of nursing practice. Content emphasizes the development of skills necessary to be a consumer of nursing research.

Prerequisites: Admission to BSN program

Pre- or corequisite: STAT 130M

NURS 369 Practicum: Studies in Clinical Nursing Practice (1-3 Credit Hours)

The study of selected clinical practice applications in professional nursing practice; designed to provide an in-depth practicum in selected nursing practice areas. Students must have specific practicum arrangements (ex: externship) prior to registration.

Prerequisites: admission to BSN program and permission of undergraduate program director or chief departmental advisor

NURS 373 Principles of Practice: Pharmacology for Nursing Practice I (2 Credit Hours)

This course is designed to involve the student in the application of the nursing process to clinical situations involving drug therapy.

Prerequisites: NURS 304, NURS 316 and NURS 317

Pre- or corequisite: NURS 322 and NURS 323

NURS 376 Principles of Practice: Pharmacology Across the Continuum (1 Credit Hour)

This course is designed to involve nursing students in the practical application of the nursing process in clinical pharmaco-therapeutics related to selected concepts.

Prerequisites: NURS 373

NURS 380 Clinical Nursing Concepts 1 (9 Credit Hours)

This is an advanced placement course for nursing students concurrently enrolled in level 1 nursing coursework with an approved partner nursing program. After successful completion of the didactic coursework and clinical requirements at the partner institution, the student will be awarded experiential learning credits.

Prerequisites: Admission to the BSN program

NURS 381 Clinical Nursing Concepts 2 (9 Credit Hours)

This is an advanced placement course for nursing students concurrently enrolled in level 2 nursing coursework with an approved partner nursing program. After successful completion of the didactic coursework and clinical requirements at the partner institution, the student will be awarded experiential learning credits.

Prerequisites: Admission to the BSN program

NURS 382 Clinical Nursing Concepts 3 (9 Credit Hours)

This is an advanced placement course for nursing students concurrently enrolled in level 3 nursing coursework with an approved partner nursing program. After successful completion of the didactic coursework and clinical requirements at the partner institution, the student will be awarded experiential learning credits.

Prerequisites: Admission to the BSN program

NURS 383 Clinical Nursing Concepts 4 (9 Credit Hours)

This is an advanced placement course for nursing students concurrently enrolled in level 4 nursing coursework with an approved partner nursing program. After successful completion of the didactic coursework and clinical requirements at the partner institution, the student will be awarded experiential learning credits. Proof of licensure as a registered nurse is required prior to awarding the level 4 experiential learning credits.

Prerequisites: Admission to the BSN program

NURS 387 Principles of Practice: Research as Foundation for Practice (3 Credit Hours)

This course focuses on the theories and concepts utilized in the scientific investigation of nursing practice. Content emphasizes the development of skills necessary to be a consumer of nursing research. Open to Honors Program students only.

Prerequisites: Admission to the BSN program

Pre- or corequisite: STAT 130M

NURS 393 Clinical Skills for Nonnursing Majors (2 Credit Hours)

Focuses on basic hygiene, comfort and safety skills required of health professionals providing diagnostic and/or supportive therapies to clients in a health care facility. May not be taken as required elective by nursing majors. Open to nuclear medicine technology students only.

Prerequisites: junior standing and permission of the instructor

NURS 395 Topics (1-3 Credit Hours)

Selected health-related topics of interest. Course descriptions and prerequisites are available from the chief academic advisor.

Prerequisites: permission of the School of Nursing

NURS 396 Independent Study (1-3 Credit Hours)

Nursing majors only. Selected health-related topics of interest to nursing majors. Course descriptions and prerequisites are available from the chief academic advisor.

Prerequisites: Permission of the School of Nursing

NURS 397 Independent Study (1-3 Credit Hours)

Independent study of selected topics.

Prerequisites: permission of the School of Nursing

NURS 398 Clinical Nursing Concepts I (17 Credit Hours)

This advanced placement credit is awarded to the registered nurse who has demonstrated knowledge of selected basic clinical nursing concepts for the provision of nursing care to individuals experiencing health deviations. Awarded upon completion of 14 credits in major. Registered nurse students only.

Prerequisites: Admission to the BSN program

NURS 401 Introduction to Professional Development for Baccalaureate Nursing Practice (4 Credit Hours)

This course focuses on basic skills required for success in the post-licensure baccalaureate nursing program. Emphasis is placed on professional development for baccalaureate nursing practice. Selected skills to be acquired include introduction to the development of a professional portfolio, APA professional writing format, information literacy in nursing literature and professional communication strategies. For registered nurse students only.

Prerequisites: Admission to the BSN program

NURS 402 Role Development for the Baccalaureate Nurse as Educator (3 Credit Hours)

This course focuses on further development of the baccalaureate nursing student with an emphasis on expanding critical thinking skills, teaching-learning theories and application, professional resume development and exploration of nursing specialties and practice roles. For registered nursing students only.

Prerequisites: NURS 401

NURS 403 Transition to Baccalaureate Nursing Practice (4 Credit Hours)

This course facilitates the completion of a professional portfolio for the post-licensure baccalaureate nursing student. Emphasis is on advanced professional communication strategies and reflective processes for professional role expansion and development. For registered nurse students only. NURS 403 may only be taken in the final semester of the nursing curriculum.

Prerequisites: NURS 402

Pre- or corequisite: NURS 305, NURS 306, NURS 363, NURS 401, NURS 412, NURS 417, NURS 490W, and NURS 492

NURS 405 Interprofessional Study Abroad on Global Health (1-3 Credit Hours)

This study abroad service learning course will introduce the student to the political, social, cultural, and ethical issues involved in prevention and health promotion globally. Students will travel to another country and learn the incidence/prevalence, morbidity/mortality, and identified public health problems in specific regions and countries.

Prerequisites: ENGL 110C

NURS 410 Health Continuum: Adult Health II (4 Credit Hours)

This lecture course focuses on the adult experiencing multisystem alterations/adaptations. Emphasis is on the use of the nursing process to assist adult clients to adapt to multisystem alterations/adaptations related insults.

Prerequisites: NURS 322 and NURS 323

Pre- or corequisite: NURS 453 and NURS 474

NURS 412 Ethics, Law, Economics & Health Policy: Application to Quality Nursing Practice (2 Credit Hours)

This course examines ethics, law, economics and health policy that influence nursing practice, the health care system, and quality patient care.

Prerequisites: Admission to the BSN program

NURS 417 Nursing Informatics (2 Credit Hours)

This course focuses on information management and the utilization of patient care technologies to improve the patient experience of care (quality, satisfaction, safety), improve the health of populations, and reduce cost. Students will develop knowledge, skills and attitudes related to nursing informatics through readings, online discussions, case studies and exploration and use of electronic modalities.

Prerequisites: Admission to the BSN program

NURS 421 Health Continuum: Clinical Management of Children of the Family (2 Credit Hours)

This clinical course emphasizes the provision of nursing care to infants and children suffering from acute and chronic illnesses. Through the use of the nursing process, students provide and coordinate care, serving as client advocates. Students are expected to demonstrate responsibility for personal actions related to the practice of nursing.

Prerequisites: NURS 322 and NURS 323

Pre- or corequisite: NURS 422

NURS 422 Health Continuum: Children of the Family (2 Credit Hours)

This lecture course provides a basis for understanding the nursing care of children of various ages. Emphasis is on the use of the nursing process to assist children as they encounter acute and chronic illnesses. The nurse's communication with and education of the family and child as individuals or as part of a group are discussed as a means of achieving the goal of comprehensive individualized child care in the home and health care settings.

Prerequisites: NURS 322 and NURS 323

Pre- or corequisite: NURS 421

NURS 430/530 Principles of Practice: Contemporary Issues in Nursing Care of the Older Adult (2 Credit Hours)

This course focuses on the nursing needs of the well gerontological client. Emphasis is on the multi-complex needs of the older adult.

Prerequisites: Admission to the BSN program

NURS 440 Health Continuum Recovery (2 Credit Hours)

This course introduces the theoretical and applied concepts necessary to assist individuals with potential or actual disabilities prevent further functional dependence or restore maximum levels of function.

Prerequisites: NURS 322, NURS 323, and NURS 373

Pre- or corequisite: NURS 441

NURS 441 Health Continuum: Clinical Management of Recovery (2 Credit Hours)

This clinical course focuses on using the nursing process to assist the recovery of individuals with disabilities prevent further functional dependence or restore maximum levels of function. Collaborative team approaches are stressed.

Prerequisites: NURS 322, NURS 323 and NURS 373

Pre- or corequisite: NURS 440

NURS 453 Health Continuum: Clinical Management Adult Health Nursing II (2 Credit Hours)

This clinical course emphasizes the provision of nursing care to clients who are experiencing alterations/adaptations in organ system functions. Through the use of the nursing process, students will provide and coordinate care and serve as client advocates in a variety of settings.

Prerequisites: NURS 322 and NURS 323

Pre- or corequisite: NURS 410 and NURS 474

NURS 454 Critical Care Nursing (2 Credit Hours)

This elective clinical and didactic course is designed for final semester prelicensure students who are requesting adult critical care (CC) or emergency department (ED) Role Transition preceptorship placement.

Prerequisites: NURS 410 and NURS 453 and permission of the instructor

NURS 455 Genetics in Nursing (3 Credit Hours)

Emphasis is placed on current information & research findings about the role of genetics in health. Students completing this course will be better prepared to incorporate genetic information and technology when providing care to clients. A student receiving credit for NURS 355 cannot receive credit for NURS 455.

Prerequisites: Admission to the postlicensure BSN program

NURS 456 Global Health Perspectives (3 Credit Hours)

This introductory course to global health emphasizes the major underlying determinants of poor health and the relationship between health and political, social, and economic development. Students will be introduced to global effects on the health of populations worldwide, current and future challenges to global health and the role of primary health care providers in meeting that challenge. (A student receiving credit for NURS 456 cannot receive credit for NURS 356.)

Prerequisites: permission of the instructor

NURS 457 Palliative Care (3 Credit Hours)

This course provides an overview of the need to improve end of life care and the role of nursing as a member of the interdisciplinary team in providing quality care. Basic principles of palliative care are presented within a quality of life (QOL) framework. Palliative care nursing care combines caring, communication, knowledge, and skill. Clinical issues to include expert assessment skills and aggressive pain and symptom management as well as the psychological, social, and spiritual care of patients and families experiencing a life threatening progressive illness will be discussed. Caring for the dying means not only "doing for" but also "being with". Students will be provided the opportunity to use introspection to clarify their own feelings related to the dying process. A student receiving credit for NURS 357 cannot receive credit for NURS 457.

Prerequisites: Admission to the postlicensure BSN program

NURS 458 Studies in Professional Nursing (3 Credit Hours)

The study of selected topics in professional nursing practice; designed to provide an in-depth exploration of current nursing issues.

Prerequisites: admission to B.S.N. program or permission of instructor

NURS 459 Concepts in Primary Care (3 Credit Hours)

In this course, students learn to improve the health of individuals, families, and communities in primary care settings. Emphasis is on health education, health promotion and disease prevention, and management of chronic illnesses, especially for underserved populations and veterans.

Prerequisites: Junior standing or permission of the instructor

NURS 462 Nursing in the Health Care System Community I (1 Credit Hour)

This course focuses on family and community health nursing. Content emphasizes concepts and themes of families and communities and the use of the nursing process to assist in promoting and maintaining health. Application of course concepts through experience and interactions with health care coalition groups is emphasized.

Prerequisites: NURS 322 and NURS 323

Pre- or corequisite: NURS 463

NURS 463 Nursing in the Health Care System: Community Interactions I (1 Credit Hour)

This clinical course provides opportunity for application of concepts and themes of families and communities through experience and interactions with health care coalition groups.

Prerequisites: NURS 322 and NURS 323

Pre- or corequisite: NURS 462

NURS 472 Nursing in the Health Care System: Community II (1 Credit Hour)

This course focuses on the continued development of concepts related to family and community health nursing. Content emphasizes development of strategies to facilitate application of concepts and themes of families and communities. The nursing process is used to assist in promoting and maintaining health.

Prerequisites: NURS 462 and NURS 463

Pre- or corequisite: NURS 473

NURS 473 Nursing in the Health Care System: Community Interactions II (1 Credit Hour)

Application of course concepts through experience and interactions with healthcare coalition groups are emphasized.

Prerequisites: NURS 462 and NURS 463

Pre- or corequisite: NURS 472

NURS 474 Principles of Practice: Pharmacology for Nursing Practice II (2 Credit Hours)

This course is designed to involve nursing students in the practical application of the nursing process in clinical pharmacotherapeutics related to selected concepts.

Prerequisites: NURS 376

Pre- or corequisite: NURS 410 and NURS 453

NURS 480W Nursing in the Health Care System: Leadership (3 Credit Hours)

This course focuses on utilization of strategies from leadership, management systems and change theories to facilitate professional nursing practice. Emphasis is placed on the professional nurse as a leader in the health care system. The influence of organizational behavior, professional image and case management on nursing practice is examined. This is a writing intensive course.

Prerequisites: Completion of ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better

NURS 481 Principles of Practice: Role Transition (5 Credit Hours)

This capstone course is a practicum experience in which students apply theoretical, conceptual and psychomotor learning in a structured clinical environment under the supervision of a staff preceptor. The experience is designed to assist the student to facilitate the transition to the role of the baccalaureate generalist nurse.

Prerequisites: NURS 317, NURS 323, NURS 333, NURS 353, NURS 421, NURS 441, and NURS 453

Pre- or corequisite: Senior standing in the curriculum

NURS 490W Nursing Leadership (3 Credit Hours)

This course focuses on utilization of strategies from leadership, management, systems and change theories to facilitate professional nursing practice. Emphasis is placed on the professional nurse as a leader in the health care system. The influence of organizational behavior, proactive political action, professional image and case management on nursing practice is examined. For registered nurse students only. This is a writing intensive course.

Prerequisites: Admission to the BSN program and completion of ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better

Pre- or corequisite: NURS 401

NURS 491 Principles of Practice: Role Transition (5 Credit Hours)

This capstone course is a practicum experience in which students apply theoretical, conceptual and psychomotor learning in a structured clinical environment under the supervision of a staff preceptor. The experience is designed to assist the student to facilitate the transition to the role of the baccalaureate generalist nurse.

Prerequisites: NURS 317, NURS 323, NURS 333, NURS 353, NURS 421, NURS 441, and NURS 453

Pre- or corequisite: Senior standing in the program

NURS 492 Community Health Nursing (3 Credit Hours)

This course focuses on professional nursing practice with families and communities as clients. Emphasis is on community wellness, interaction with political influences and epidemiological principles. For registered nurse students only.

Prerequisites: Admission to the BSN program

Pre- or corequisite: NURS 401

NURS 495/595 Topics in Nursing (1-3 Credit Hours)

The study of selected topics that may not be offered regularly. Special topics will appear in the schedule of classes each semester.

Prerequisites: Permission of the instructor

NURS 498 Clinical Nursing Concepts II (16 Credit Hours)

This advanced placement credit is awarded to the registered nurse who has demonstrated knowledge of selected complex nursing concepts for the provision of nursing care to individuals and families experiencing health deviations. Awarded upon completion of 26 credits in the major. For registered nurse students only.

Prerequisites: Admission to the BSN program

NURS 499 Clinical Nursing Concepts III (33 Credit Hours)

This is an advanced placement course for registered nurse students. After verification of registered nurse licensure, the student will be awarded 33 experiential learning credits.

Prerequisites: Admission to the BSN program

OEAS - Ocean and Earth Sciences

OEAS 106N Introductory Oceanography (4 Credit Hours)

Introductory course emphasizing the geology, chemistry, physics and biology of the oceans. Laboratory emphasizes practice of basic scientific methods. Knowledge of the metric system, scientific notation, ratio and proportion, and graphing is required. Field trip required.

OEAS 108N Understanding Global Climate Change (4 Credit Hours)

What is the science behind global climate change? How reliable are forecasts of future global warming? This course examines these questions to evaluate the likelihood and potential severity of anthropogenic climate change in the coming centuries. It includes an overview of the physics of the greenhouse effect, an overview of the global carbon cycle and its role as a global thermostat; an examination of predictions and reliability of model forecasts of future climate change; and examination of local impacts of global climate change (e.g., sea level rise in the Tidewater area).

OEAS 110N Earth Science (4 Credit Hours)

This is an introductory course in geological sciences. The course relates the principles of natural science to Earth as a planet, its resources, and its environment. The effects of geologic processes on the environment are stressed. A student receiving credit for OEAS 110N cannot receive credit for OEAS 111N.

OEAS 111N Physical Geology (4 Credit Hours)

This course introduces the student to the study of the materials, structures, and processes of the Earth. Present terrestrial resources are interpreted in terms of the internal and surface processes that formed them. A student receiving credit for OEAS 111N cannot receive credit for OEAS 110N.

OEAS 112N Historical Geology (4 Credit Hours)

The evolution of the continents, ocean basins, mountain chains, and the major life forms throughout Earth's history are studied chronologically and are related to the physical and biological changes that have caused them.

Prerequisites: OEAS 110N or OEAS 111N

OEAS 126N Honors: Introductory Oceanography (4 Credit Hours)

Open only to students in the Honors College. Special honors section of OEAS 106N. In addition to broad coverage of the geology, chemistry, physics and biology of the ocean, students will read scientific papers with current environmental problems. There will be several field trips to nearby ecosystems.

OEAS 130G Research Skills and Information Literacy for the Natural Sciences (3 Credit Hours)

This course is designed to introduce students to a range of research and information literacy skills necessary for natural scientists. The course will introduce students to the wide range of research being undertaken in the natural sciences (e.g., oceanography, geology, physics, biology, and chemistry). The course involves directed reading, exercises in information retrieval, and the synthesis of information from a range of sources into scientific essays and oral presentations.

OEAS 195 Topics (1-4 Credit Hours)

Special topics in physical, geological, chemical or biological oceanography.

OEAS 197 Undergraduate Research Experience in Ocean and Earth Sciences (0 Credit Hours)

Student participation in a supervised, undergraduate research experience for which credit will not apply to the degree. Experience must be related to the student's major, minor or career area of interest.

Prerequisites: permission of the instructor

OEAS 220T Introduction to Meteorology (3 Credit Hours)

This course is an introduction to the basic principles governing both day-to-day weather and the average of weather, or climate. Specific focus will be given to the tools used to measure weather and the ways in which these tools have impacted our understanding of weather in the past and present. Links will be made between the technology-based improvements of our understanding of weather and the impact on the lives of humans throughout recent history. Students will learn about how weather forecasts are made, and how the quality of these forecasts affects our lives.

OEAS 250N Natural Hazards and Disasters (4 Credit Hours)

This course introduces the science behind some of Earth's natural phenomena that can, and often do, result in major loss of life or catastrophic damage to property. It includes an overview, with relevant case studies, of earthquakes, tsunamis, landslides, volcanic eruptions, tropical cyclones (hurricanes), tornadoes, floods, droughts, and space weather. The impact of global climate change and sea level rise on vulnerable populations is examined and current risk assessment and mitigation practices are discussed.

OEAS 295 Special Topics (3 Credit Hours)

An investigation of a selected problem in physical, geological, chemical, or biological oceanography.

Prerequisites: sophomore standing or permission of the instructor

OEAS 302 Environmental Geology (3 Credit Hours)

Geologic resources and processes that limit human activities and pose significant hazards. Does not satisfy OEAS major degree or minor requirements.

Prerequisites: Junior standing and an 8-hour sequence in a General Education science course

OEAS 303 Paleontology (3 Credit Hours)

This course introduces the concepts of paleontology, focusing on the relationship between the evolution of life (particularly invertebrates) and the development of Earth. Field work will also include studies in paleoecology and sedimentary facies. Two field trips are recommended.

Prerequisites: OEAS 111N and OEAS 112N

OEAS 306 Oceanography (3 Credit Hours)

General survey of physical, geological, chemical and biological oceanography. The application of skills from mathematics, geology, physics, biology and chemistry for the solution of oceanographic problems.

Prerequisites: MATH 211 or MATH 205, BIOL 121N or BIOL 136N and BIOL 122N or BIOL 137N, CHEM 121N-CHEM 122N, OEAS 111N, and PHYS 111N or PHYS 231N

OEAS 307 Research Experience in Oceanography (3 Credit Hours)

In this course-based undergraduate research experience, students perform field and laboratory experiments designed to complement topics presented in the Oceanography lecture course, OEAS 306. Students taking OEAS 306 are strongly encouraged to take this laboratory class concurrently with OEAS 306. Ocean and Earth Science majors are required to take this class.

Prerequisites: BIOL 122N or BIOL 137N, BIOL 124N, CHEM 122N, CHEM 124N, and OEAS 111N

Pre- or corequisite: OEAS 306

OEAS 310 Global Earth Systems (4 Credit Hours)

Core course for ocean and earth sciences majors that examines the processes linking the Earth's atmosphere, lithosphere, and hydrosphere into an interactive system.

Prerequisites: BIOL 121N or BIOL 136N, BIOL 122N or BIOL 137N, CHEM 121N, CHEM 122N, MATH 205 or MATH 211, and OEAS 111N, all with a grade of C or better

OEAS 315 Minerals and Rocks (4 Credit Hours)

The course introduces the main igneous, sedimentary and metamorphic rocks and their mineral composition. Laboratory exercises include mineral identification by physical and microscopic optical properties, the identification of rocks in hand samples, and basic training with the Brunton compass. Field work includes training in introductory facies analysis, and the analysis of sedimentary rock structures, unconformities, volcanic, plutonic, and metamorphic rock units, clastics and carbonates.

Prerequisites: OEAS 111N, OEAS 112N, CHEM 121N, and CHEM 122N

OEAS 320 Sedimentology and Stratigraphy (4 Credit Hours)

The origin, transport, and deposition of sediments with emphasis on interpretation of sediment sequences, principles and methods of correlation. Laboratory exercises involve field sampling, textural analyses, and sedimentary structures. Field trip required.

Prerequisites: OEAS 110N or OEAS 111N

OEAS 344W Geomorphology (3 Credit Hours)

Geologic processes that shape the earth's surface. Laboratory studies involve interpretation of topographic maps, soil maps, and aerial photographs. Field trip required. This is a writing intensive course.

Prerequisites: OEAS 320 AND either ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better; or permission of instructor

OEAS 350 Where Rivers Meet the Sea: Ecology and Climate (3 Credit Hours)

This course is designed to introduce students to the highly productive ecosystems of estuaries that result from the interactions of fresh and oceanic waters. The course includes exploration, evaluation, and analysis of the factors that allow construction of realistic conceptual models of an important Earth system.

Prerequisites: ENGL 110C

OEAS 367 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and the Career Management program prior to the semester in which the experience is to take place.

Prerequisites: junior standing and permission of the department

OEAS 368 Internship in Ocean and Earth Sciences (1-3 Credit Hours)

Available for pass/fail grading only. Students gain on the job work experience related to their undergraduate curriculum.

Prerequisites: junior standing, permission of department and a 3.00 grade point average

OEAS 369 Practicum (1-3 Credit Hours)

Field experience in ocean, earth and atmospheric sciences. (qualifies as a CAP experience)

Prerequisites: junior standing, permission of department and must have declared ocean and earth sciences major or minor

OEAS 395 Special Topics (1-4 Credit Hours)

Lectures, field and laboratory studies. An investigation of a selected problem in physical, geological, chemical, or biological oceanography.

Prerequisites: permission of the instructor

OEAS 402/502 Field Experiences in Oceanography for Teachers (3 Credit Hours)

Field and laboratory experiences in oceanography including hands-on experience using equipment and methods suitable for middle and secondary education professionals. Course will provide understanding of oceanic processes using simple field and laboratory experiments. Not available for credit for OES majors and minors.

Prerequisites: background in K-12 Education

OEAS 403W/503 Aquatic Pollution (3 Credit Hours)

This course will present basic ecological principles relevant to water pollution and ecotoxicology. Topics will include runoff, eutrophication, water and sewage treatment, industrial waste, oil pollution, pesticides, and plastics in the sea. Case studies provide focal points for consideration of issues in making decisions and setting policy. This is a writing intensive course. Pre- or

Prerequisites: grade of C or better in ENGL 211C, ENGL 221C, or ENGL 231C

Corequisites: a grade of C or better in OEAS 306

OEAS 405/505 Physical Oceanography (3 Credit Hours)

Physics of the ocean: properties of seawater and their distribution; water mass formation; mass and energy flows; waves; tides; models; estuarine and coastal processes. An elective for science and engineering majors.

Prerequisites: C or better in MATH 211 and either PHYS 232N or two semesters of hydraulics

OEAS 406/506 Matlab (1 Credit Hour)

This course is designed to introduce students to Matlab programming and to develop skills utilizing this program for data analysis

Prerequisites: Junior standing or permission of instructor

OEAS 410/510 Chemical Oceanography (3 Credit Hours)

Chemical composition of the ocean and the chemical, biological, geological and physical processes controlling it.

Prerequisites: CHEM 121N-CHEM 122N and CHEM 123N-CHEM 124N, OEAS 306 or consent of instructor

OEAS 412/512 Global Environmental Change (3 Credit Hours)

An examination of the development of the earth as a habitable planet, from its origin to human impacts on global biogeochemical cycles on land, and in the oceans and atmosphere.

Prerequisites: OEAS 306 and OEAS 310

OEAS 413/513 Environmental Geochemistry (3 Credit Hours)

This course examines geochemical processes at and near the Earth's surface, focusing on the concentration, speciation and reactivity of elements in soils, waters, sediments and the atmosphere. The course examines both the thermodynamic and kinetic controls on these processes, and the role of biology as a mediator (or facilitator) of these processes. Anthropogenic impacts on natural geochemical processes are also examined.

Prerequisites: CHEM 121N-CHEM 122N and CHEM 123N-CHEM 124N, OEAS 111N and OEAS 310

OEAS 415/515 Waves and Tides (3 Credit Hours)

Causes, nature, measurement and analysis of water waves and tides.

Mathematical and graphical application to wave and tide problems.

Prerequisites: C or better in MATH 212 and PHYS 232N or permission of the instructor

OEAS 416/516 Electronics and Oceanographic Instrumentation (3 Credit Hours)

The course will consist of brief lectures and hands-on laboratory exercises, in which students will learn to build, use, and debug electronic devices relevant to ocean and earth science applications. Topics covered will include circuit theory, power supplies and budgets, transducers and amplifiers, computerized data acquisition, instrument control, signal conditioning and resolution.

Prerequisites: PHYS 232N or 112N, OEAS 306, OEAS 310, STAT 310 or STAT 330

OEAS 418/518 Limnology: Biogeochemistry of Lakes (3 Credit Hours)

Chemical cycling in lakes and reservoirs, and interactions with biological and physical processes; quantitative modeling of lake geochemistry.

Prerequisites: OEAS 306

OEAS 419/519 Spatial Analysis of Coastal Environments (3 Credit Hours)

The course integrates remotely sensed and field techniques for scientific investigation and practical management of coastal environmental systems. Spatial modeling of coastal processes and management tools using geographic information system (GIS).

Prerequisites: GEOG 300, GEOG 402 or GEOG 502, or permission of instructor

OEAS 420/520 Hydrogeology (3 Credit Hours)

Topics covered will include the occurrence and movement of surface and subsurface water, the nature and distribution of permeable rocks and strata, field techniques used in ground-water studies, and the flow of ground-water to wells.

Prerequisites: OEAS 320 or OEAS 344W and MATH 205 or MATH 211; or permission of the instructor

OEAS 425 Marine Geology (3 Credit Hours)

Survey of marine geology and geophysics; plate tectonics and basin formation; seafloor volcanic activity; marine sediments and sediment dynamics; coastal processes; geologic time in the marine record.

Prerequisites: OEAS 306 or OEAS 310 or permission of instructor

OEAS 426/526 Concepts in Oceanography for Teachers (3 Credit Hours)

This web-based course will provide a practical introduction to oceanography for earth science teachers. It is particularly aimed at current science teachers attempting to become certified in earth science education. Topics will include discussions of geological, biological, physical and chemical oceanography. Not available for credit for OEAS majors and minors.

Prerequisites: junior standing or permission of the instructor

OEAS 430/530 Introduction to Geophysics (3 Credit Hours)

Introduction to the physics of the earth, including plate tectonics, volcanism, earthquakes and seismology, gravity, the Earth's magnetic field, geophysical remote sensing, and mantle convection.

Prerequisites: OEAS 111N, MATH 211, and PHYS 111N-PHYS 112N or PHYS 231N-PHYS 232N

OEAS 434/534 Geodynamics (3 Credit Hours)

A qualitative and quantitative description of physical processes in the Earth and environmental sciences. Topics include stress and strain, plate elasticity and flexure, heat flow, fluid mechanics, material rheology, and groundwater flow. Emphasis will be placed on developing an understanding of Earth dynamics using real-world examples, including numerical exercises.

Prerequisites: OEAS 111N, MATH 211, MATH 212, and PHYS 231N

Corequisites: PHYS 232N

OEAS 435 Introduction to Ocean Modeling and Prediction (3 Credit Hours)

Introduction to concepts and theories of numerical ocean circulation models and their applications in physical oceanography, computational fluid dynamics, environmental problems and ocean forecast systems.

Prerequisites: OEAS 405 or OEAS 306; permission of instructor or CEE 330

OEAS 440/540 Biological Oceanography (4 Credit Hours)

Marine organisms and their relationship to physical and chemical processes in the ocean. Laboratory study of local marine organisms, marine ecosystem and sampling techniques. Includes identification, data analysis and field trips.

Prerequisites: OEAS 306 and STAT 130M or STAT 310

OEAS 441 Ocean and Earth Sciences Field Study I (3 Credit Hours)

Interdisciplinary investigation of selected sites in Southeast Virginia that includes field sampling, sample analyses, data interpretation and integration, and group report preparation and presentations. Focuses on development of research questions and site selection, field sampling, sample analyses and interpretation. Oral presentations of results will be made by each student.

Prerequisites: OEAS 306 and OEAS 310; CHEM 123N and CHEM 124N, BIOL 123N or OEAS 303; PHYS 112N or PHYS 232N; MATH 212; STAT 310; all prerequisite courses must be passed with a grade of C or better

OEAS 442W Ocean and Earth Sciences Field Study II (3 Credit Hours)

Interdisciplinary investigation of selected sites in Southeast Virginia that includes field sampling, sample analyses, data interpretation and integration, and group report preparation and presentations. Focuses on site selection and evaluation mapping, sampling, and sample analyses. Oral presentations of results will be made by each student. This is a writing intensive course.

Prerequisites: a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; OEAS 441

OEAS 444 Communicating Ocean Science to Informal Audiences (3 Credit Hours)

Communicating Science to Informal Audiences (CoSIA) is designed for students interested in improving their ability to communicate scientific knowledge by presenting information and activities in an informal learning environment. The course combines instruction in inquiry-based science teaching with practical experience presenting to guests of all ages at the Virginia Aquarium. Students will practice communicating knowledge and receive mentoring on how to improve their presentations. CoSIA provides future scientists and educators with a background in current learning theory and applies it through practical experiences to empower them to meet communication challenges they will encounter in their careers.

Prerequisites: OEAS 306 or OEAS 310

OEAS 445 Communicating Ocean Science to Informal Audiences (3 Credit Hours)

This course provides Earth Science Education students with instruction on presenting scientific information to informal audiences (K through adult). Students will develop more in-depth presentations and extended practice presenting their materials on the Virginia Aquarium floor. For Earth Science Education track students, OEAS 444 and OEAS 445 can replace OEAS 441/OEAS 442W. It is available as an elective for all other students.

Prerequisites: OEAS 444

OEAS 451W/551 Data Collection and Analysis in Oceanography (4 Credit Hours)

This course introduces students to the basic numerical tools used to obtain and analyze information in the ocean and earth sciences. The students will use various oceanographic instruments to obtain data at different locations of the Chesapeake Bay. Data obtained with those instruments will be processed and analyzed using data analysis techniques discussed in class. The data will then be used to answer a particular question related to the temporal and spatial variability in a natural system. This is a writing intensive class.

Prerequisites: STAT 310 and MATH 211 or MATH 205

Pre- or corequisite: OEAS 306

OEAS 452 Microbial Ecology of the Oceans (3 Credit Hours)

Marine microbes thrive in all oceanic habitats including what would be considered extreme environmental conditions. This course studies the role that these microbes play in biogeochemical cycling and food web dynamics in the oceans (the microbial loop). Throughout the course, students will learn about different microbial functional groups and the processes they mediate in marine systems, which include virtually all geochemical reactions occurring in the oceans. Students will learn through lectures, readings written by experts in the field, and class discussions.

Prerequisites: OEAS 306 or OEAS 310 or permission of the instructor

OEAS 453W/553 Marine Molecular Ecology (4 Credit Hours)

This course will explore the ecology of marine organisms using molecular techniques and data. Molecular ecology covers a wide variety of sub-disciplines, including genetics, physiology, ecology, and evolution. The course will explore basic theory in population genetics, ecology, and evolution and cover nucleic acid techniques and their applications. This is a writing intensive course.

Prerequisites: BIOL 291 or BIOL 292 or BIOL 293 or BIOL 294 or BIOL 331 or OEAS 306

OEAS 466W/566 Introduction to Mitigation and Adaptation Studies (3 Credit Hours)

Students will be introduced to the science underpinning mitigation of human-induced changes in the Earth system, including but not limited to climate change and sea level rise, and adaptation to the impacts of these changes. The course will cover the environmental hazards and the opportunities and limitations for conservation, mitigation and adaptation. This is a writing intensive course. Cross listed with BIOL 466W and IDS 466W.

Prerequisites: BIOL 291 or permission of instructor

OEAS 467/567 Sustainability Leadership (3 Credit Hours)

In this class, students will discover what makes a leader for sustainability. They will consider a range of global and local crises from a leadership point of view in the context of sustainability science, which addresses the development of communities in a rapidly changing social, economic, and environmental system-of-systems environment. The course will be based on taking a problem-motivated and solution-focused approach to the challenges considered. The course includes a service learning project focusing on a leadership experience in solving a real-world environmental problem.

Prerequisites: BIOL 466W or OEAS 466W or IDS 466W

OEAS 468W Research Methods in Math and Sciences (3 Credit Hours)

Emphasizes the tools and techniques used to solve scientific problems. Topics include use and design of experiments, use of statistics to interpret experimental results, mathematical modeling of scientific phenomena, and oral and written presentation of results. Students will perform four independent inquiries, combining skills from mathematics and science to solve research problems. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C and OEAS 306 or OEAS 310 and STEM 201

OEAS 470/570 Proxy Reconstruction of Late Cenozoic Climate: Calibrations and Applications (3 Credit Hours)

This course will examine recent developments in paleo-proxy calibration and their application in reconstructing Late Cenozoic climate history. Students will read several papers covering the theoretical basis and empirical evidence supporting some of the most common proxies used in paleoclimatology/paleoceanography each week. Each week will begin with a lecture on the topic, followed by an in-depth discussion. Students will be required to present one of the weekly topics and lead the class discussion.

Prerequisites: CHEM 121N, CHEM 122N, CHEM 123N and CHEM 124N

OEAS 487 Honors Research in Ocean and Earth Sciences (1-3 Credit Hours)

Supervised study in a field of individual interest. Research results are reported in a public oral presentation and a thesis.

Prerequisites: senior standing and admission to the Academic Honors Program

OEAS 490 Paleocceanography (3 Credit Hours)

This course will provide an overview of how marine sediments are used to reconstruct Earth's climate history over the past 600 million years. Students will discuss the factors that control modern climate and explore how these variables led to cycles of Greenhouse and Icehouse worlds in the past. Finally, students will discuss how past and modern climate records can be used to predict future climate change.

Prerequisites: general chemistry, OEAS 111N and OEAS 112N

OEAS 495/595 Special Topics (1-4 Credit Hours)

Lectures, field and laboratory studies. An investigation of a selected problem in physical, geological, chemical, or biological oceanography.

Prerequisites: junior standing and permission of the instructor

OEAS 497 Special Problems and Research (1-3 Credit Hours)

Independent reading and study on a topic to be selected with the direction of an instructor.

Prerequisites: junior standing

OPMT - Operations Management

OPMT 303 Operations Management (3 Credit Hours)

Examines strategic, tactical and operational issues in the planning and control of manufacturing and service delivery systems. This course examines such topics as process design, capacity and materials planning and control, inventory management, facility layout, quality and work management.

Prerequisites: BNAL 206 or STAT 130M; AND a declared major in the University or an intended major in the Strome College of Business or permission of the Dean's Office of the Strome College; AND Junior Standing

OPMT 367 Cooperative Education (1-3 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures. Available for pass/fail grading only. May be repeated for credit.

Prerequisites: junior standing and a declared major in the university or permission of the Dean's Office

OPMT 368 Student Internship (1-3 Credit Hours)

Approval for enrollment and allowable credits is determined by the department in the semester prior to enrollment. Available for pass/fail grading only. (qualifies as a CAP experience)

Prerequisites: junior standing and a declared major in the university or permission of the Dean's Office

OPMT 369 Practicum (1-3 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures. Available for pass/fail grading only. May be repeated for credit.

Prerequisites: OPMT 303 and a declared major in the university or permission of the Dean's Office

OPMT 455 SAP Applications (3 Credit Hours)

This course introduces students to the concept of enterprise resource planning. Students will learn SAP (Systems, Applications and Products in Data Processing) enterprise software to manage business operations and customer relations by analyzing and presenting data stats in an engaging way, and producing meaningful and insightful business solutions.

Prerequisites: OPMT 303, or IT 201, or IT 360T, or instructor's permission

OPMT 495 Selected Topics in Operations Management (3 Credit Hours)

Selected advanced topics in operations management. Taught on an occasional basis. See the course schedule for the particular topic being taught each semester.

Prerequisites: Senior standing and a declared major in the university or permission of the Dean's Office

OPMT 497 Independent Study in Operations Management (1-3 Credit Hours)

Affords students the opportunity to undertake independent study under the direction of a faculty member.

Prerequisites: permission of the department

PAS - Public Affairs and Service

PAS 300 Foundations of Public Service (3 Credit Hours)

An introduction to the study of public service. Emphasis is placed on the history and framework of public service and the study and practice of public administration.

Prerequisites: A declared major in the University or permission of the Dean's Office of the College of Business

PAS 301 Ethics, Governance and Accountability in Public Service (3 Credit Hours)

This course provides an overview of ethics, governance and accountability in public service, with particular emphasis on the linkages between these three concepts. The focus is on the ethical context and implications of public management, governance structures, and public sector accountability, particularly in relation to critical social, political, and economic issues.

Prerequisites: A declared major in the University or permission of the Dean's Office of the College of Business

PAS 368 Internship in Public Service (1-3 Credit Hours)

Student participates in a relevant public service-related work experience. Approval for enrollment and allowable credits is determined by the department in the semester prior to enrollment.

Prerequisites: Departmental approval

PAS 395 Selected Topics in Public Administration (3 Credit Hours)

Designed for the study of selected topics in public administration.

Prerequisites: A declared major in the University or permission of the Dean's Office of the College of Business

PAS 408 Public Service Films (3 Credit Hours)

From the invention of the first simple 'moving pictures' more than 130 years ago to the latest multi-million dollar, high-tech blockbuster, films have served as a vehicle for both political messages and societal critiques. As a unifying theme, we will focus our analysis on the films' implications for the study and practice of public service.

Prerequisites: Junior standing and declared major in the University or permission of College of Business Dean's Office

PAS 409 Leadership and Cultural Competence (3 Credit Hours)

This course focuses on the study of contemporary leadership theory and practice, with particular emphasis on public and non-profit sectors. The critical themes of ethics and cultural competence are woven throughout the course.

Prerequisites: Junior standing and declared major in the University or permission of College of Business Dean's Office

PAS 410 Public and Non-profit Organization (3 Credit Hours)

An introduction to the study and practice of public and non-profit agencies. The course is designed to explore fundamental issues of organizational structure, management, and operations of public and non-profit organizations in modern American society.

Prerequisites: PAS 300 or PAS 301 or permission of the instructor, and a declared major in the University or permission of the Dean's Office of the College of Business

PAS 411 Multi-Sector Partnerships for Public Service (3 Credit Hours)

This course examines the interplay between the public, private, and non-profit sectors. Particular emphasis is placed on the structure and operation of intersectoral partnerships to achieve public goals.

Prerequisites: PAS 300 or PAS 301 or permission of the instructor, and a declared major in the University or permission of the Dean's Office of the College of Business

PAS 412 Public Service Practice (3 Credit Hours)

This course is designed to provide an overview of the essential elements of learning and serving. The course will focus on how to provide meaningful service to a community agency or organization while simultaneously gaining new skills, knowledge, and understanding as an integrated aspect of the student's academic program.

Prerequisites: PAS 300

PAS 413 Public Service Entrepreneurship (3 Credit Hours)

Public service entrepreneurship supports the development of socially aware and responsive students through service and learning. Students will participate in service projects with community partners to recognize and reflect on the social needs of their community. This course will integrate classroom learning with community participation to provide practical experience for students to recognize the rewards of serving.

Prerequisites: PAS 300

PAS 495 Topics in Public Affairs and Service (3 Credit Hours)

This course is designed for the study of selected topics in public affairs and service.

Prerequisites: A declared major in the University or permission of the Dean's Office of the College of Business

PAS 497 Independent Study in Public Service (3 Credit Hours)

Provides students the opportunity to undertake independent study of selected topics/issues in public service under the guidance of a faculty member.

Student and faculty member must complete and agree on a learning contract before study begins. Pass/Fail grading only.

Prerequisites: Departmental approval

PE - Physical Education

PE 101+ Swim Conditioning (1 Credit Hour)

Students will discuss and learn the training process including advantages and benefits of swimming, principles of training, training procedures, evaluation and motivation, and minor annoyances. Stroke mechanics and improvement and information for triathletes.

PE 102+ Beginning Swimming (1 Credit Hour)

Development of the basic water safety skills and knowledge to make one reasonably safe in the water.

PE 103+ Intermediate Swimming (1 Credit Hour)

Instruction in all strokes will be covered.

Prerequisites: must be comfortable in deep water

PE 104+ Lifeguard Training (2 Credit Hours)

Development of the skills and knowledge designed to save the life of another in the event of an emergency in the water. Red Cross certification.

PE 105+ Water Safety Instruction (3 Credit Hours)

This course is designed to provide the student with knowledge and skills in water safety and teaching techniques for certification to teach swimming, lifesaving, rescue and water safety courses. Red Cross Water Safety Instructor Certificate upon successful completion.

Prerequisites: must be at least 17, in sound physical condition, and have the ability to perform skills in the level VI ARC swim course

PE 112+ Yoga (1-2 Credit Hours)

The 1-credit option of this course focuses on yoga postures and breathing exercises. The 2-credit option provides a foundation for the understanding and practice of Hatha yoga in its complete form. Course covers yoga postures, breathing exercises, philosophy, and meditation.

PE 115+ Introduction to Rock Climbing (1 Credit Hour)

This course is designed to guide students through several processes in rock climbing. Students will be able to properly fit a harness, tie in to the system, use passive and active belay devices, and perform basic rescues. The class will also focus on proper climbing technique and injury prevention. Additionally, rock climbing facility administration will be discussed.

PE 117+ Accessible Fitness and Wellness (1-2 Credit Hours)

Designed for students who self-identify as having social, cognitive, emotional, psychological, or physical limitations who would benefit from a small group and/or individualized fitness/nutritional training program. Students will learn the basic principles about cardiovascular/aerobic training and resistance/weight training to increase flexibility, balance and overall fitness. Upon completion, students should be able to plan and implement a personal, lifelong fitness program based on their individual needs, abilities, goals and interests. Course will also include classes on nutrition to increase overall wellness.

PE 118+ Weight Training (1 Credit Hour)

Designed to allow students an individualized weight training program. The program will include use of free weights, universal, and other appropriate tools for the variety of weight training differences.

PE 134+ Beginning Golf (1 Credit Hour)

The fundamentals of golf, stance, grip, swing, rules, and etiquette are presented. Driving range and golf course may be used. Students pay all fees.

PE 140+ Beginning Self-Defense (1 Credit Hour)

The student is introduced to the various practical skills and methods of self-defense. Judo, Aikido, Jujutsu, and Karate are combined to explore the most effective means to defend oneself.

PE 141+ Intermediate Self-Defense (1 Credit Hour)

This course is designed to give the student further instruction and practice in the various practical skills and methods of self-defense.

Prerequisites: PE 140+

PE 142+ Beginning Karate (1 Credit Hour)

This course is designed to give the traditional Karate training ('Art of Empty Hand') to the beginning student. It emphasizes the traditional mode of training with mental and physical discipline. Formal Kata, defensive skills, punches, kicks, and blocking techniques are introduced.

PE 143+ Intermediate Karate (1 Credit Hour)

This course is designed to give the student further instruction and practice in traditional Karate.

Prerequisites: PE 142+

PE 144+ Advanced Karate (1 Credit Hour)

This course is designed to introduce further instruction and practice in traditional martial art aspects of Karate-doh. Philosophical understanding and high level of skill proficiency are emphasized.

Prerequisites: PE 143+

PE 145+ Theory of Advanced Karatedo (1 Credit Hour)

This course is designed to provide the theoretical framework of Karatedo that embodies the higher principle of physical and mental dynamics and aims to achieve the advanced skills in Karatedo.

Prerequisites: PE 142+, PE 143+, PE 144+ and/or equivalent proficiency level

PE 146+ Beginning Aikido (1 Credit Hour)

Course is designed to introduce the fundamental dynamics of Aikido principle. It contains the fundamental skills in body dynamics, body movements, safety landing, defensive pattern drills, and overall understanding of Aikido as a classical art form. Course provide comprehensive information on the philosophical and aesthetic aspects of Aikido.

PE 147+ Intermediate Aikido (1 Credit Hour)

Course is designed to introduce the intermediate level of Aikido dynamics. It contains the basics of fundamental skills in body dynamics, body movements, safety landing, intermediate level of defensive pattern drills, and overall understanding of Aikido as a classical art form.

Prerequisites: PE 146+

PE 148+ Advanced Aikido (1 Credit Hour)

Course is designed to introduce the advanced level of Aikido dynamics. It contains training in advanced skills in body dynamics, body movements, defensive pattern drills, and overall understanding of Aikido theory and application as a classical art form.

Prerequisites: PE 147+

PE 149+ Theory of Advanced Aikido (1 Credit Hour)

This course is designed to provide the theoretical framework of Aikido that embodies the mental and physical dynamics of the martial arts discipline of Aikido.

Prerequisites: PE 146+, PE 147+, and PE 148+

PE 150+ Beginning Judo (1 Credit Hour)

An introduction to Judo including the techniques of throws, holdings, lockings, and pinnings. Philosophy and cultural aspects of Sport Judo are also covered.

PE 151+ Intermediate Judo (1 Credit Hour)

An intermediate course in Sport Judo covering intermediate skills and strategies.

Prerequisites: PE 150+

PE 171+ Physical Conditioning (1 Credit Hour)

This course addresses the basic principles of progressive weight training. Objectives of the course include knowledge of various weight-training systems, proper use of weight-training equipment, and effective record-keeping to monitor individual progress.

PE 174+ Cardio Fitness (1-2 Credit Hours)

This course is designed to introduce the student to a complete physical fitness program that strengthens the heart and lungs, and tones up the muscles.

PE 175+ Zumba (1 Credit Hour)

Zumba is a Latin inspired, dance-fitness class that incorporates Latin and International music with dance movements. It is a high calorie-burning fitness class that features fast and slow rhythms. The student will participate in instructor led routines. This class will include discussion of Zumba's history and basic four rhythms. No dance experience necessary.

PE 176+ Pilates (1 Credit Hour)

Students will understand the basic principles of Pilates and will be able to demonstrate the ability of performing beginning and intermediate Pilates exercises with correct form and technique.

PE 196+ Topics in Health and Physical Education (1-3 Credit Hours)

A variety of new and innovative courses in lifetime physical activities are offered such as advanced theory class in martial arts, advanced Iaido, self defense seminar, yoga, cross country skiing, yacht racing, racquetball, nautilus, swim conditioning, water safety instructor, scuba and aerobic dance.

PE 295 Topics in Physical Education (1-3 Credit Hours)

This course provides an opportunity for in-depth study of selected topics in physical education.

Prerequisites: sophomore standing and approval of program advisor

PE 497/597 Topics in Health and Physical Education (1-3 Credit Hours)

This course provides an opportunity for in-depth study of selected topics in health and physical education.

Prerequisites: junior standing and approval of program advisor

PHIL - Philosophy

PHIL 110P Introduction to Philosophy (3 Credit Hours)

An introduction to basic concepts, methods and issues in philosophy, and a consideration of representative types of philosophical thought concerning human nature, the world, knowledge, and value.

PHIL 120P Logic and Philosophy (3 Credit Hours)

A study of the principles of correct reasoning and the types of fallacious reasoning. Includes an examination of the philosophical and historical context of logic, and the application of logical methods to philosophical questions.

PHIL 126P Honors: Introduction to Philosophy (3 Credit Hours)

Open only to students in the Honors College. A special honors section of PHIL 110P.

PHIL 127P Honors: Life, Death, and Meaning (3 Credit Hours)

Open only to students in the Honors College. An Honors version of PHIL 150P.

PHIL 150P Life, Death, and Meaning (3 Credit Hours)

What is the meaning of life, and what role might the end of life play in living meaningfully? This course provides an introduction to philosophy and religious studies through an investigation of different views on death and the meaning of life from diverse cultures and identities. (Cross-listed with REL 150P)

PHIL 155E Human Nature (3 Credit Hours)

What ways of thinking, feeling, and acting are essentially human? This course focuses on some of the most influential and fascinating philosophical and religious accounts of human nature from diverse cultural perspectives. Topics may include the nature of human beings in relation to God, society, ethics, politics, knowledge, the environment, freedom, evolution, the mind, language, race, gender, and technology. (Cross-listed with REL 155E)

PHIL 160R Raising Moral Issues in STEM (3 Credit Hours)

This course provides training in how to speak up in defense of moral concerns in a STEM organizational context, and how to do so in an effective and productive way.

PHIL 195 Study Abroad: Introduction to Philosophy (3 Credit Hours)

This course is the study abroad equivalent of PHIL 110P, an introduction to basic concepts, methods and issues in philosophy, and a consideration of representative types of philosophical thought concerning human nature, the world, knowledge, and value.

PHIL 202G Information Literacy for Cybersecurity (3 Credit Hours)

This course provides an in-depth introduction to information literacy from library and information science, information ethics, and computer science perspectives along with applications to cybersecurity research and professional activity. This course is aligned with Old Dominion University's general education learning outcomes for information literacy.

Prerequisites: ENGL 110C

PHIL 226E Honors: Love, Sex, and Desire (3 Credit Hours)

Is love universal or culturally bound? Is sexual desire biologically driven or learned? This course provides an introduction to Philosophy and Religious Studies through an investigation of love, sex, and desire vis-a-vis ethical values and societal norms. An Honors version of PHIL 235E/REL 235E.

PHIL 227E Honors: World Religions: Beliefs and Values (3 Credit Hours)

Open only to students in the Honors College. A special Honors section of PHIL 250E.

PHIL 228E Honors: Introduction to Ethics (3 Credit Hours)

Open only to students in the Honors College. A special Honors section of PHIL 230E.

PHIL 230E Introduction to Ethics (3 Credit Hours)

An introduction to the study of ethics through philosophical reflection on a variety of moral issues of contemporary significance. Topics covered will vary by semester and instructor, and may include issues drawn from professional fields such as business, medicine, and information technology, plus matters of public concern like the environment, the treatment of animals, the use of military force, social justice, and civil and human rights.

PHIL 235E Love, Sex, and Desire (3 Credit Hours)

Is love universal or culturally bound? Is sexual desire biologically driven or learned? This course provides an introduction to Philosophy and Religious Studies through an investigation of love, sex, and desire vis-a-vis ethical values and societal norms. (Cross-listed with REL 235E)

PHIL 240 Introduction to the Philosophy of Science (3 Credit Hours)

A survey of philosophical problems common to the sciences, including an analysis of key concepts and an examination of science in its historical and cultural context.

PHIL 250E World Religions: Beliefs and Values (3 Credit Hours)

A comparative and philosophical study of major world religions in the Eastern and Western traditions with particular attention being paid to their views about the basis of right action and the nature of good and evil. Other points of comparison include the foundations of religious knowledge and belief, the meaning of human life, divinity, and death and immortality.

PHIL 270P Truth and Perception (3 Credit Hours)

What is truth? How do we know when something is real or fake? Are you certain that other people perceive the world in the same way you do? In this course we'll try to answer questions like these and more through an exploration of the relationship between our minds, our bodies, and the world around us.

PHIL 290G Philosophy of Digital Culture (3 Credit Hours)

This course provides practical training in information access, critical information assessment, and ethical information use in a theoretically-oriented research context, as well as a theoretical exploration of issues in information literacy, the ethics and politics of online informational spaces, and the philosophy of digital culture.

PHIL 295 Topics in Philosophy (3 Credit Hours)

A study of selected topics designed for non-majors. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

PHIL 300 Knowledge and Reality (3 Credit Hours)

Metaphysics is the study of the ultimate nature of reality and epistemology is the study of what we can know about reality. This introduction to metaphysics and epistemology will engage with views of what exists and how we can know about it from a diverse collection of traditions and figures.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of the instructor

PHIL 301 Ethics and Metaethics (3 Credit Hours)

An examination of the philosophical foundations of ethical inquiry from a diverse collection of traditions and figures, including historically marginalized voices. Various ethical systems are considered, and different views of metaethics and moral psychology may be as well.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of the instructor

PHIL 303E Business Ethics (3 Credit Hours)

A philosophical examination of ethical issues that arise in business and commerce. Topics discussed will vary by semester and instructor, but may include affirmative action, ethical versus unethical sales and marketing techniques, the obligations of business to society (if any), and the moral foundations of capitalism.

Prerequisites: ENGL 110C

PHIL 313 Philosophy of Religion (3 Credit Hours)

An analytical and critical consideration of the philosophical foundations of religion. Such topics as the existence of God, the problem of evil, theism and atheism, prayer, and immortality are discussed.

Prerequisites: Junior standing and three semester hours in philosophy, or permission of the instructor

PHIL 324 Philosophy of Art (3 Credit Hours)

A study of the various theories of art and human creativity in the context of historical and cultural backgrounds.

Prerequisites: Junior standing and three semester hours in philosophy or permission of the instructor

PHIL 330 Ancient Greek Philosophy (3 Credit Hours)

This course is a study of the thought of the classical Greek philosophers from the sixth century B.C.E. to the fifth century C.E.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of the instructor

PHIL 331 Early Modern European Philosophy (3 Credit Hours)

This course is a survey of the rise of modern philosophy in the 17th and early 18th centuries in Europe.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of the instructor

PHIL 332 Medieval Philosophy (3 Credit Hours)

This course examines the significant contributions of medieval philosophers to the development of philosophy of religion as well as other fields, including philosophy of language, logic, and ethics. Students examine the writings of medieval philosophers from Jewish, Christian, and Islamic traditions.

Prerequisites: Junior standing and three semester hours in philosophy, or permission of the instructor

PHIL 334 Late Modern European Philosophy (3 Credit Hours)

This course is a survey of modern philosophy in the 18th and 19th centuries in Europe, addressing figures such as Kant, Hegel, Schopenhauer, Marx, Kierkegaard, and Nietzsche.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of the instructor

PHIL 340 Logic (3 Credit Hours)

A study of the basic concepts and methods of logic as they occur in ordinary language, formal logical arguments, and an elementary logical system. Traditional Logic is emphasized, but some elements of Modern Logic are also introduced.

Prerequisites: junior standing and three semester hours in philosophy, or permission of the instructor

PHIL 344E Environmental Ethics (3 Credit Hours)

An examination of the nature and basis of human obligations for the welfare of the environment with special attention to the foundations of ethical decision making.

Prerequisites: ENGL 110C

PHIL 345E Bioethics (3 Credit Hours)

An examination of the philosophical foundations of ethical decision making in biology, medicine, and the life sciences.

Prerequisites: ENGL 110C

PHIL 353 Asian Religions (3 Credit Hours)

This course introduces students to several key religious traditions originating in Asia, such as Hindu traditions in India; Confucianism, Daoism, and popular religion in China, Buddhism and Shinto in Japan; and Buddhist traditions of China, Tibet, and Mongolia. Students will read and analyze primary sources in English translation. By examining artifacts from literature, art, and poetry, students will also learn about cultural history. Throughout the course, students will employ hermeneutical methods in the field of religious studies, such as methods of comparisons.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

PHIL 355E Cybersecurity Ethics (3 Credit Hours)

This course examines ethical issues relevant to computing and information technology, including: privacy; freedom of speech and content control on the Internet; individual and social responsibility; cybersecurity; cybercrimes; social impact of computers and other digital technologies; and ethical obligations of IT professionals. Students will gain a broad understanding of central issues in cyberethics and the ways that fundamental ethical theories relate to these core issues.

Prerequisites: ENGL 110C

PHIL 357E Ethics and Data (3 Credit Hours)

This course explores, from a philosophical perspective, ethical questions arising from collecting, drawing inferences from, and acting on data, especially when these activities are automated and on a large scale. This course will provide students a framework for considering the ethical implications of data usage. Emphasis will be placed on discussing how historic and contemporary examples of potentially unethical practice could be altered to reduce harm and increase equity. Topics to be covered may include, but are not limited to, systematic approaches to assessing ethical issues; privacy and confidentiality; defining research and the responsibilities associated with conducting ethical research; implicit and structural biases in data collection and analysis; freedom of speech; and consent to data collection.

Prerequisites: ENGL 110C

PHIL 364 African-American Philosophy (3 Credit Hours)

This course is a survey introduction to major African-American philosophical thinkers and will address themes such as: What is the nature of race, and what is the nature of racism? What is the nature of the good? What does the good life look like, how should we make sense of beauty, and are those values different for each of us? And how should we make sense of social and civil life and of social and civic obligations in the context of deep and persisting injustice?

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

PHIL 365 Race & Power (3 Credit Hours)

This course will draw on historical and contemporary scholarship to explore the evolution of the concept of race in relation to different theories of power. Topics may include how to define race, how people are racialized, genocide and social death, the use of racial epithets, cultural appropriation, ally-ship, and the role of activism.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

PHIL 368 Internship (1-3 Credit Hours)

A structured work experience using analytical, research, and communication training from philosophy in a relevant industry, such as law, tech, finance, libraries, or in the public or nonprofit sectors. May be paid or unpaid. Criteria for evaluation will be determined by work supervisor and cooperating faculty advisor. May be repeated for credit. Available for pass/fail grading only.

Prerequisites: Available to philosophy majors only; approval of the department chair required

PHIL 369 Practicum (3 Credit Hours)

The course offers three forms of practical experience for philosophy majors: Professional (for students anticipating careers in relevant professions, including philosophy); Classroom (for students anticipating graduate study and a teaching career); Civic/Social Affairs (for students interested in grassroots activism). Consult the department for details and certain specific prerequisites.

Prerequisites: junior standing; minimum of 15 credit hours in philosophy

PHIL 380 Hinduism (3 Credit Hours)

An intensive study of the basic teachings of Hinduism as manifested in its sacred writings.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

PHIL 381 Buddhist Traditions (3 Credit Hours)

A study of the origin, historical development, and contemporary status of Buddhism, in terms of its religious and philosophical elements and its influence in Asian cultures.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

PHIL 383T Philosophy of Technology (3 Credit Hours)

This course engages in a critical exploration of what technology is as a human practice and how it develops over time in ways that influence and are influenced by society, culture, and human values.

Prerequisites: ENGL 110C

PHIL 395 Topics in Philosophy (3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: Junior standing or approval of the department chair

PHIL 396 Topics in Philosophy (3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: Junior standing or approval of the department chair

PHIL 400/500 Philosophy and Video Games (3 Credit Hours)

An examination of the metaphysical, aesthetic, and ethical philosophical issues that accompany the creation, play, and critique of video games. Students will learn and analyze theories about what games are. They will think about and discuss the aesthetic qualities of video games and critically engage with attempts to fit video games into the larger art world. Students will engage with moral issues that arise from creating and consuming video games with morally problematic content. Finally, students will learn how to think critically about and interpret larger philosophical problems raised by video games and their themes.

Prerequisites: Junior standing and a grade of C or better in PHIL 110P or ENMA 480, or instructor permission

PHIL 401/501 Responsible Innovation and Inclusive Design (3 Credit Hours)

Provides training in inclusive and social-critical technology development and product design methodologies intended to directly transfer to use in industrial and organizational settings. The course's work-based learning is grounded in foundational work in philosophy of technology. Topics covered include SCOT (social construction of technology), ANT (actor-network theory), VSD (value-sensitive design), CBPR (community-based participatory research), and postphenomenological methodologies.

Prerequisites: ENGL 211C, ENGL 221C, or ENGL 231C and 3 credit-hours in PHIL or REL

PHIL 402/502 Gender and Philosophy (3 Credit Hours)

A philosophical survey of approaches to understanding gender and gender differences. The course will also serve as an introduction to feminist philosophy, with a particular emphasis on feminist ethics.

Prerequisites: Junior standing and three semester hours in philosophy, or permission of the instructor

PHIL 404/504 Existentialism and Phenomenology (3 Credit Hours)

This course is an examination of the writings of some of the major philosophers in the Existentialist and Phenomenology movements of the 19th and 20th centuries.

Prerequisites: ENGL 211C and six credit hours in PHIL or REL, or permission of the instructor

PHIL 405/505 American Pragmatist Philosophy (3 Credit Hours)

This course is an examination of the writings of some of the major American philosophers in the Pragmatist tradition.

Prerequisites: ENGL 211C and six credit hours in PHIL or REL, or permission of the instructor

PHIL 406/506 Language and Thought: History of Analytic Philosophy (3 Credit Hours)

This course is a study of the history of the Analytic tradition in philosophy up through the 20th century.

Prerequisites: ENGL 211C and six credit hours in PHIL or REL, or permission of the instructor

PHIL 408/508 20th Century and Contemporary French Philosophy (3 Credit Hours)

This course explores French philosophy from the 20th century to today, examining how geopolitical events, technological change, and social movements have shaped and been shaped by key currents in French philosophical thought. Themes could include technology, biopolitics, deconstruction, feminism, May 1968, secularism, existentialism, postmodernism, and psychoanalysis, with a focus on whether there is a distinct 'French' approach to these topics.

Prerequisites: ENGL 211C/ENGL 221C/ENGL 231C and six credit hours in PHIL or REL or related subjects, or permission of the instructor

PHIL 410/510 Social and Political Philosophy (3 Credit Hours)

A philosophical analysis of the relation between man, society, and the state, studying about a dozen philosophers since Plato on such topics as justice, authority, law, freedom, and civil rights.

Prerequisites: ENGL 211C, ENGL 221C, or ENGL 231C and 6 credit hours in PHIL or REL, or permission of instructor

PHIL 411/511 Post-Modernism and Post-Structuralism (3 Credit Hours)

This course is an examination of intellectual currents in postmodernism and post-structuralism as they pertain to central questions in social and political thought.

Prerequisites: ENGL 211C, ENGL 221C, or ENGL 231C and 6 credit hours in PHIL or REL, or permission of instructor

PHIL 412/512 Philosophy of Law (3 Credit Hours)

An examination of the nature of law and philosophical issues concerning the law.

Prerequisites: ENGL 211C, ENGL 221C, or ENGL 231C and 6 credit hours in PHIL or REL, or permission of instructor

PHIL 414/514 Feminist Philosophy (3 Credit Hours)

This course addresses feminist philosophy as a distinctive field of philosophy, offering a pluralist survey of both analytic and Continental approaches to feminist epistemology, ontology, phenomenology, ethics, and politics. Importantly, students will develop an intersectional lens of analysis to consider the lived reality and politics of gender, race, sexuality, disability, and other entwining marginalized identities.

Prerequisites: ENGL 211C or equivalent

PHIL 425/525 Kant and Hume (3 Credit Hours)

This course is an examination of the philosophical writings of Hume and Kant and their influence.

Prerequisites: ENGL 211C, ENGL 221C, or ENGL 231C, and six credit hours in PHIL or REL, or permission of the instructor

PHIL 430/530 Marx and Hegel (3 Credit Hours)

This course is an examination of the philosophical writings of Hegel and Marx and their influence.

Prerequisites: ENGL 211C and six credit hours in PHIL or REL, or permission of the instructor

PHIL 432/532 Nietzsche and Life Affirmation (3 Credit Hours)

This course is an examination of Nietzsche's attempt to provide a life-affirming philosophy after laying waste to many traditional Western efforts to find life meaningful.

Prerequisites: ENGL 211C/ENGL 221C/ENGL 231C and six credit hours in PHIL or REL, or permission of the instructor

PHIL 434/534 Contemporary Theory of Knowledge (3 Credit Hours)

This course provides students with a problem-oriented, critical, and comparative understanding of problems in contemporary epistemology. Topics include skepticism and responses thereto, analyses of knowledge, the externalist versus internalist debate, foundationalism and coherentism, and social approaches to knowledge including contextualism and feminism.

Prerequisites: Junior standing and three semester hours in philosophy, or permission of the instructor

PHIL 435/535 Philosophy of Psychology (3 Credit Hours)

An examination of various ways in which the mind has been understood in philosophy and in psychology and of the methods that have been used in the study of the mind.

Prerequisites: Junior standing and three semester hours in philosophy, or permission of the instructor

PHIL 440/540 Philosophy of Science (3 Credit Hours)

A study of the concepts and philosophical problems in the sciences: scientific reasoning, confirmation, explanation, laws, meaning, theories, revolutions, progress, and values.

Prerequisites: ENGL 211C, ENGL 221C, or ENGL 231C and 6 credit hours in PHIL or REL, or permission of instructor

PHIL 442E/542 Studies in Applied Ethics (3 Credit Hours)

An intensive examination of ethical issues in a particular field or profession; an emphasis on ethical theory underlying practical decisions.

Prerequisites: ENGL 110C and Junior standing

PHIL 446/546 Artificial Intelligence (AI) Ethics and Policy (3 Credit Hours)

This course explores whether and how ethical AI is possible by examining moral standards as they apply to the various dimensions of AI development and use. It reviews the major ethical theories and discusses how principles such as transparency, privacy, safety, non-discrimination, and sustainability should govern the creation and use of AI technologies. Moreover, it considers how these principles could serve as the ethical framework for the social and policy structures that regulate and shape the future development of these technologies.

Prerequisites: ENGL 211C or equivalent

PHIL 447/547 Philosophy of Information (3 Credit Hours)

An in-depth study of the core topics of philosophy of information, including the nature of information across its primary forms (e.g. semantic, physical, biological, economic), personal and social impacts of information and information transfers, formulation of information as data, theory-ladenness of data, problematics of data analytics, and inferential validity of prior data. Project-based assessment is structured to provide individualized work-based learning.

Prerequisites: ENGL 211C, ENGL 221C, or ENGL 231C and 3 credit-hours in PHIL or REL

PHIL 451/551 Native American Philosophies (3 Credit Hours)

This course will provide students with an introduction to Native American philosophies with a focus on issues of identity, genocide, personhood, gender, sovereignty, and decolonization. Topics will be approached through a consideration of Native American philosophical methodologies and Native views regarding metaphysics, epistemology, and ethics. (Cross-listed with REL 451)

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

PHIL 482/582 Chinese Religion and Philosophy (3 Credit Hours)

A study of Chinese thought emphasizing Early and Classical Confucianism and Taoism, Chinese Buddhism, and NeoConfucianism. Modern currents of Chinese thought is also discussed.

Prerequisites: Junior standing and three semester hours in philosophy, or permission of the instructor

PHIL 485/585 Japanese Religion and Philosophy (3 Credit Hours)

A study of the religious and philosophical traditions of Japan. Emphasis will be given to Shintoism, Buddhism, and Neo-Confucianism and their contemporary status and influence in Japanese culture.

Prerequisites: junior standing and three semester hours in philosophy or permission of the instructor

PHIL 491W/591 Seminar in Philosophy (3 Credit Hours)

Intensive examination of the thought of one major philosopher or philosophical movement. This is a writing intensive course.

Prerequisites: ENGL 211C/ENGL 221C/ENGL 231C and 6 credit hours in PHIL or REL, or permission of the instructor

PHIL 495/595 Topics in Philosophy (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: appropriate survey course or permission of the instructor

PHIL 496/596 Topics in Philosophy (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: appropriate survey course or permission of the instructor

PHIL 497/597 Tutorial Work in Special Topics in Philosophy (1-3 Credit Hours)

Independent reading and study of a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: senior standing and approval of the department chair

PHIL 498/598 Tutorial Work in Special Topics in Philosophy (1-3 Credit Hours)

Independent reading and study of a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: senior standing and approval of the department chair

PHYS - Physics

PHYS 101N Conceptual Physics (4 Credit Hours)

An introductory descriptive course which develops and illustrates the concepts of physics in terms of phenomena encountered in daily life. Topics include mechanics, electricity and magnetism. (offered fall, summer)

PHYS 102N Conceptual Physics (4 Credit Hours)

An introductory descriptive course which develops and illustrates the concepts of physics in terms of phenomena encountered in daily life. Topics include sound, light, fluids and heat. (offered spring)

Prerequisites: PHYS 101N

PHYS 111N Introductory General Physics (4 Credit Hours)

Emphasizes mechanics, wave motion and heat and will also cover the needed elements of trigonometry and vectors. Students receiving credit for PHYS 111N cannot receive credit for PHYS 102N either simultaneously or subsequently. (offered fall, spring, summer)

Prerequisites: MATH 102M or MATH 103M or MATH 162M or MATH 166

PHYS 112N Introductory General Physics (4 Credit Hours)

Emphasizes electricity, light, and introduction to modern physics. (offered fall, spring, summer)

Prerequisites: PHYS 111N and MATH 102M (or MATH 103M) or MATH 162M or MATH 166

PHYS 113 Physics Laboratory (1 Credit Hour)

Available for pass/fail grading only. An introductory laboratory covering experiments from mechanics, wave motion, heat and sound.

Prerequisites: written permission of the chief departmental advisor of the Physics Department

PHYS 114 Physics Laboratory (1 Credit Hour)

Available for pass/fail grading only. An introductory laboratory covering experiments from electricity, magnetism, and optics.

Prerequisites: written permission of the chief departmental advisor of the Physics Department

PHYS 120 Physics in the 21st Century (1 Credit Hour)

This seminar will provide students with a broad introduction to the cutting edge of physics research and its applications in diverse areas of contemporary physics. Recommended for incoming students interested in physics and the natural sciences.

PHYS 137T Introduction to Quantum Science and Technology (3 Credit Hours)

Quantum mechanics has had an enormous impact on society since its discovery nearly a century ago and has been instrumental in developing technology such as transistors and lasers. This course will explore the potential benefits of emerging quantum technologies, how they will impact present and future society, and the technical challenges posed in implementing them. Students will develop a conceptual understanding of these technologies and their fundamental underlying principles of superposition, interference, and entanglement. Topics include quantum computing, quantum communications, and quantum sensing. These ideas will be explored quantitatively using basic algebra. It is strongly recommended that students have passed a college-level math class.

PHYS 197 Undergraduate Research Experience in Physics (0 Credit Hours)

Student participation in a supervised, undergraduate research experience for which credit will not apply to the degree. Experience must be related to the student's major, minor or career area of interest.

Prerequisites: permission of the instructor

PHYS 226N Honors: University Physics I (4 Credit Hours)

Open only to students in the Honors College. A special honors version of PHYS 231N. This course also includes a Recitation Section for more in-depth discussion of advanced problems.

Prerequisites: MATH 211 with a grade of C or better

Pre- or corequisite: MATH 212

PHYS 227N Honors: University Physics II (4 Credit Hours)

Open only to students in the Honors College. A special honors version of PHYS 232N, including a recitation section for discussion of advanced problems.

Prerequisites: PHYS 231N or PHYS 226N or PHYS 261N with a grade of C or better, and both MATH 211 and MATH 212 each with a grade of C or better

PHYS 231N University Physics I (4 Credit Hours)

A general introduction to physics in which the principles of classical and modern physics are applied to the solution of physical problems. The reasoning through which solutions are obtained is stressed. Topics include mechanics, fluids, and thermodynamics. This course is designed for majors in the physical sciences, engineering, mathematics, and computational sciences. Students receiving credit for PHYS 231N and PHYS 232N cannot simultaneously or subsequently receive credit for PHYS 101N and PHYS 102N or PHYS 111N and PHYS 112N. (offered fall, spring, summer)

Prerequisites: MATH 211 with a grade of C or better

Pre- or corequisite: MATH 212 or permission of instructor

PHYS 232N University Physics II (4 Credit Hours)

A general introduction to physics in which the principles of classical and modern physics are applied to the solution of physical problems. The reasoning through which solutions are obtained is stressed. This course is designed for majors in the physical sciences, engineering, mathematics, and computational sciences. Topics include electricity and magnetism, and optics. Students receiving credit for PHYS 231N and PHYS 232N cannot simultaneously or subsequently receive credit for PHYS 101N and PHYS 102N or PHYS 111N and PHYS 112N. (offered fall, spring, summer)

Prerequisites: PHYS 231N or PHYS 226N or PHYS 261N with a grade of C or better, and both MATH 211 and MATH 212 with each a grade of C or better

PHYS 261N Advanced University Physics I (4 Credit Hours)

This calculus-based course is the required introductory course for Physics majors. In addition to the physics curriculum of PHYS 231N, this course has a recitation section for advanced problems and additional mathematical preparation for advanced courses in physics.

Prerequisites: MATH 211, with a grade of C or better

Pre- or corequisite: MATH 212

PHYS 262N Advanced University Physics II (4 Credit Hours)

This calculus-based course is the required introductory course for Physics majors. In addition to the physics curriculum of PHYS 232N, this course has a recitation section for advanced problems and additional mathematical preparation for advanced courses in physics.

Prerequisites: PHYS 261N with a grade of C or better; MATH 211 and MATH 212, each with a grade of C or better

PHYS 297 Undergraduate Research I (1-3 Credit Hours)

This course offers students at the Freshman and Sophomore levels their first opportunity to work one-on-one with a research mentor to acquire and develop skills in research techniques, information literacy, research planning, proposal preparation and report writing. Research experiences may include but are not limited to hands-on instrument control to collect and analyze data, including graphical, statistical and error analysis of their data. Students will also be instructed on accepted methods for dissemination of data, including written, oral and poster presentation, as well as procedures for research proposal preparation and submission. Students will be required to deliver to their peers and department faculty at the end of semester an oral and written presentation of their research, as well as a poster presentation at an annual department or university event including the ODU Undergraduate Research Symposium.

Prerequisites: Permission of the instructor

Pre- or corequisite: PHYS 226N or PHYS 231N or PHYS 261N

PHYS 303 Intermediate Experimental Physics (3 Credit Hours)

A laboratory-oriented course designed to provide students with a broad introduction to instrumentation and techniques used in modern physics laboratories. Topics to be covered include: basic electronics with an introduction to diode, transistor and op-amp circuitry, and an introduction to physical computing using LabView and Arduino micro controllers.

Prerequisites: PHYS 232N or PHYS 227N or PHYS 262N

PHYS 309 Physics on the Back of an Envelope (1 Credit Hour)

Physicists should be able to estimate the order-of-magnitude of anything. How many atoms of Julius Caesar do you eat every day? How much waste does a nuclear power plant generate? Will develop concepts, relations and numbers useful for estimation. Will cover little new material, emphasizing already acquired knowledge. Will help students apply physics to real-life questions and understand which physical effects are appropriate on which scales. Seminar course.

Prerequisites: PHYS 102N or PHYS 112N or PHYS 232N or PHYS 227N or PHYS 262N

PHYS 319 Analytical Mechanics (3 Credit Hours)

Fundamentals of Newtonian mechanics. Topics include kinematics, dynamics, energy and momentum, central forces and planetary motion, and resonance phenomena. (Offered Spring)

Prerequisites: PHYS 232N or PHYS 227N or PHYS 262N

Pre- or corequisite: MATH 307 or MATH 280

PHYS 323 Modern Physics (3 Credit Hours)

Introduction to the wave nature of matter, with applications in materials science, atomic, and nuclear physics. Introduction to relativity, including applications in mechanics and electrodynamics. (Offered Fall)

Prerequisites: PHYS 232N or PHYS 227N or PHYS 262N and MATH 212

PHYS 355 Mathematical Methods of Physics (3 Credit Hours)

This course will provide a strong foundation in the mathematical methods and applications necessary for undergraduate study of physics beyond the introductory level. The course contains a mandatory recitation section. (Offered Fall)

Prerequisites: PHYS 232N or PHYS 227N or PHYS 262N and MATH 212

Pre- or corequisite: MATH 312 or MATH 285

PHYS 367 Cooperative Education (1-3 Credit Hours)

May be repeated for credit. Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

PHYS 368 Internship (1-3 Credit Hours)

Available for pass/fail grading only. Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students to gain short duration career-related experience.

Prerequisites: Approval by department is required; additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

PHYS 397 Undergraduate Research II (1-3 Credit Hours)

This course offers students at the Sophomore and Junior levels an opportunity to work one-on-one with a research mentor on a self-designed research project of mutual interest, and typically within the research field of their mentor. The student will demonstrate their knowledge of the research skills covered in PHYS 297 by formulating their own research plan and then collecting and analyzing their data. Students will also be instructed in research publication skills as well as conference standard presentation techniques. Students will be required to attend at least two conferences, within and outside the university.

Prerequisites: PHYS 297, and PHYS 226N or PHYS 231N or PHYS 261N, and permission of instructor

PHYS 411 Introduction to Atomic Physics (3 Credit Hours)

The hydrogen atom, radiative transitions, two-electron systems, many-electron atoms, interaction with external fields, theory of atomic spectra.

Prerequisites: PHYS 452 and MATH 307

PHYS 413/513 Methods of Experimental Physics (3 Credit Hours)

Experiments in classical and modern physics, designed to develop skills in the collection, analysis, and interpretation of experimental data. (Offered Spring)

Prerequisites: PHYS 303 or ECE 287, and PHYS 323

PHYS 415/515 Introduction to Nuclear and Particle Physics (3 Credit Hours)

An introduction to the structure of the atomic nucleus, natural and artificial radioactivity, nuclear decay processes and stability of nuclei, nuclear reactions, properties of nuclear forces, and nuclear models. Also, particle phenomenology, experimental techniques and the standard model. Topics include the spectra of leptons, mesons, and baryons; strong, weak, and electromagnetic interactions.

Prerequisites: PHYS 452

Pre- or corequisite: MATH 307

PHYS 416/516 Introduction to Solid State Physics (3 Credit Hours)

Introduction to solid state physics and materials science, with emphasis placed on the applications of each topic to experimental and analytical techniques. Topics include crystallography, thermal and vibrational properties of crystals and semiconductors, metals and the band theory of solids, superconductivity and the magnetic properties of materials.

Prerequisites: PHYS 452 and MATH 307

PHYS 417/517 Introduction to Particle Accelerator Physics (3 Credit Hours)

Fundamentals of relativistic particle dynamics including particle acceleration; weak and strong focusing; linear beam optics and particle transfer matrices; linear and non-linear synchrotron motion; introduction to the statistical descriptions of particle beams; and radiation production by accelerated relativistic particles. Examples relevant to betatrons, cyclotrons, synchrotrons, and linear accelerators will be given.

Prerequisites: PHYS 319 or MAE 205, and PHYS 425 or ECE 323

PHYS 420/520 Introductory Computational Physics (3 Credit Hours)

Introduction to computationally based problem solving in physics with an emphasis on understanding and applying various numerical algorithms to different types of physics problems. Topics will include numerical integration (quadrature), numerical solution of ordinary differential equations, Runge-Kutta and Numerov methods, polynomial approximations, numerical linear algebra, and Monte-Carlo methods. These computational methods will be applied to problems in classical and quantum mechanics, as well as electromagnetic theory.

Prerequisites: CS 150, CS 151 or CS 153; PHYS 319; PHYS 323; and MATH 212

PHYS 425/525 Electromagnetism I (3 Credit Hours)

A study of the classical theory and phenomena of electricity and magnetism. Topics include the calculation of electric and magnetic fields, magnetic and dielectric properties of matter, and an introduction to Maxwell's equations. The course contains a mandatory recitation section.

Prerequisites: PHYS 232N or PHYS 227N or PHYS 262N and MATH 312 or MATH 285

Pre- or corequisite: PHYS 355

PHYS 451/551 Theoretical Mechanics (3 Credit Hours)

A mathematical study of the concepts of mechanics. Vector calculus methods are used. Topics include mechanics of a system of particles, Lagrangian mechanics, Hamilton's canonical equations, and motion of a rigid body.

Prerequisites: PHYS 319, PHYS 355 and MATH 312

PHYS 452/552 Introduction to Quantum Mechanics (3 Credit Hours)

Introduction to the physical and mathematical structure of quantum theory. Dirac notation, Spin systems, EPR paradox and Bell's inequality. The Schrödinger equation is introduced for simple systems. Quantization of bound states, scattering, and tunneling are introduced for the 1-dimensional square-wave potential. In three dimensions, angular momentum and the harmonic oscillator are developed. The course contains a mandatory recitation section.

Prerequisites: PHYS 319, PHYS 323, and PHYS 355

PHYS 453/553 Electromagnetism II (3 Credit Hours)

A course in electrodynamics developed from Maxwell's Equations. Topics include Maxwell's Equations, Conservation Laws, Electromagnetic Waves, Potentials and Fields, Radiation, and the interplay of electrodynamics and special relativity. The course contains a mandatory recitation section.

Prerequisites: PHYS 425 or ECE 323 and MATH 312

PHYS 454/554 Thermal and Statistical Physics (3 Credit Hours)

A study of the fundamental concepts of thermodynamics, kinetic theory, and statistical mechanics. Topics include the thermodynamics of simple systems, kinetic theory of gases, statistical mechanics of gases and an introduction to quantum statistics.

Prerequisites: PHYS 319 and PHYS 323

PHYS 456/556 Intermediate Quantum Mechanics (3 Credit Hours)

Techniques for solving the Schrödinger equation in one, two, and three dimensions. Solution of the Hydrogen atom, variational techniques, perturbation theory and scattering. The Pauli exclusion principle. Optional topics include atoms in an electromagnetic field (Stark effect, Zeeman effect), spontaneous and stimulated emission, hydrogen molecular ion and helium ground states, Bloch waves and elementary theory of solids.

Prerequisites: PHYS 323 and PHYS 452 or permission of the instructor

PHYS 460 Fundamentals of Accelerator Physics and Technology with Simulations and Measurements Lab (3 Credit Hours)

Explores the historical development of accelerators and their past and present applications. Principles of acceleration, including the physics of linear accelerators, synchrotrons, and storage rings. Magnet design; machine lattice design and particle beam optics. Longitudinal and transverse beam dynamics, including synchrotron and betatron particle motion. Special topics will be reviewed, including synchrotron radiation, injection techniques, and collective effects and beam instabilities.

Prerequisites: PHYS 319 and PHYS 425

PHYS 467 Preparing for the Physics GRE (1 Credit Hour)

This course will review the style and scope of problems likely to be found on the Physics Graduate Record Exam (GRE). Emphasis is on quick solving of problems based on foundational knowledge and intuition. This course is particularly intended for students preparing to apply for graduate school, but may be of interest to all students.

Prerequisites: PHYS 323 and PHYS 319

PHYS 468W Research Methods in Mathematics and Sciences (3 Credit Hours)

Emphasizes the tools and techniques used to solve scientific problems. Topics include use and design of experiments, use of statistics to interpret experimental results, mathematical modeling of scientific phenomena, and oral and written presentation of scientific results. Students will perform four independent inquiries, combining skills from mathematics and science to solve research problems. Required for Physics teaching licensure track; not available as upper-division elective in content area. This is a writing intensive course.

Prerequisites: Admission to the Monarch Teach Program; PHYS 232N or MATH 212; and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

PHYS 489W Senior Thesis I (1 Credit Hour)

Part one of a two-semester option for completing the Senior Thesis. This is a writing intensive course. PHYS 489W plus PHYS 490W is equivalent to PHYS 499W.

Prerequisites: permission of the instructor and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

PHYS 490W Senior Thesis II (2 Credit Hours)

Part two of a two-semester option for completing the Senior Thesis. PHYS 489W plus PHYS 490W is equivalent to PHYS 499W. This is a writing intensive course.

Prerequisites: PHYS 489W

PHYS 495/595 Special Topics in Physics (1-3 Credit Hours)

In-depth study of a selected topic in physics at the advanced undergraduate level. May include a laboratory or computational component.

Prerequisites: permission of the instructor

PHYS 497/597 Special Problems and Research (1-3 Credit Hours)

These courses afford the student an opportunity to pursue individual study and research.

Prerequisites: senior standing or permission of the instructor

PHYS 499W Senior Thesis (3 Credit Hours)

Each student will undertake a research experience under the supervision of a department faculty member. The experience can be of an experimental, theoretical, or calculational type. A final oral and written report are required. The research may be completed on campus or at one of the department affiliated research organizations. This is a writing intensive course.(offered fall, spring, summer)

Prerequisites: grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C and permission of the instructor

POLS - Political Science

POLS 100S Introduction to International Politics (3 Credit Hours)

This course provides a basic introduction to the study of international politics. It considers some of the more prominent theoretical perspectives in the discipline and examines the major political, economic, social and environmental issues presently facing the global community. The course prepares students for advanced study in international politics.

POLS 101S Introduction to American Politics (3 Credit Hours)

This course introduces students to the political processes and the institutions of American politics. The course examines American political culture, gender and minority rights, citizen participation, national institutions, public policy, and foreign and defense policy.

POLS 102S Introduction to Comparative Government and Politics (3 Credit Hours)

This course introduces basic concepts and methods for the study of comparative politics. It also surveys and compares the political/socioeconomic development, political cultures/ideologies, political institutions, decision-making processes, and public policies of various countries in the world.

POLS 126S Honors: Introduction to American Politics (3 Credit Hours)

Open only to students in the Honors College. A special honors section of POLS 101S.

POLS 127S Honors: Introduction to International Politics (3 Credit Hours)

Open only to students in the Honors College. Special honors section of POLS 100S.

POLS 300 Introduction to Public Policy (3 Credit Hours)

An introduction to various approaches to policy making followed by a detailed study of several of the most important domestic contemporary issues (housing, transportation, education, welfare, etc.).

Prerequisites: Six credits in human behavior

POLS 301W Introduction to Public Law (3 Credit Hours)

Introduces the student to the United States legal system through an examination of its institutions, practitioners, and processes. Assignments explore (1) the anatomy of a law suit, (2) legal education in the United States, (3) basic methods of legal reasoning, writing, and argumentation, and (4) the function of judicial precedent within United States courts. This is a writing intensive course.

Prerequisites: POLS 101S and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

POLS 306 Judicial Process and Behavior (3 Credit Hours)

In-depth analysis of the American court system with an emphasis on the political behavior of the system's participants and the procedural dimensions of the court system.

Prerequisites: POLS 101S

POLS 307 Constitutional Criminal Procedure (3 Credit Hours)

Development of criminal procedure under the United States Constitution, with particular emphasis on the Fourth, Fifth, Sixth, Eighth, and Fourteenth Amendments as interpreted by the U.S. Supreme Court.

Prerequisites: POLS 101S

POLS 308 Research Design (3 Credit Hours)

Covers the design and implementation of quantitative and qualitative methods of inquiry in social sciences.

Prerequisites: POLS 100S, POLS 101S and POLS 102S or permission of instructor

POLS 309 Race, Culture and Public Policy (3 Credit Hours)

This course examines the public policy problems of various racial groups in America. It analyzes the extent to which the American political system protects and promotes the concerns of African Americans, Hispanics, Native Americans and Asians.

Prerequisites: Six hours in human behavior

POLS 310 Political Theory (3 Credit Hours)

The study of political theory delves into the central concepts that shape humanity's capacity to think about and practice politics, including justice, liberty, equality, human nature, rights, power, democracy, and the various potential goals of political community. Students will study influential political thinkers such as Plato, Aristotle, Cicero, Augustine of Hippo, Thomas Aquinas, Machiavelli, Hobbes, Locke, Mill, Marx and Rawls.

Prerequisites: POLS 100S or POLS 101S or permission of the instructor

POLS 311 Virginia Politics and Government (3 Credit Hours)

This course is a survey of Virginia state and local government institutions, functions, processes, and behavior of political actors.

Prerequisites: POLS 101S

POLS 312 American Political Thought (3 Credit Hours)

The course considers the origins, evolution, purposes, and relevancy of American political thought. It includes studies in democracy versus elitism; civil disobedience versus revolution; liberalism versus conservatism.

Prerequisites: POLS 101S or permission of the instructor

POLS 313 United Nations Seminar (1 Credit Hour)

An examination of the United Nations and key issues facing the international community. Includes a three-day visit to United Nations headquarters in New York.

Prerequisites: Junior standing or permission of the instructor

POLS 314 European Politics (3 Credit Hours)

Analyzes and compares the major political functions and the social, economic, and cultural bases of European states. Also examines the contemporary movement for European economic, military, and political unity.

Prerequisites: POLS 100S or POLS 102S or permission of the instructor

POLS 316 Politics of Africa (3 Credit Hours)

This course is intended to familiarize students with the struggles, advances, and setbacks of African peoples for state-building and socioeconomic development during the colonial and post-independence eras.

Prerequisites: Junior standing or permission of the instructor

POLS 319 Lobbies and Interest Groups (3 Credit Hours)

A survey of the lobby movement in America, its history and present status, with particular attention to current lobbies and interest groups and their impact on the national government.

Prerequisites: POLS 101S

POLS 320 United Nations (3 Credit Hours)

Since it was established in 1945 the UN has inspired humanity, undertaken many of the world's most difficult jobs, and provided great achievements and disappointments. This course examines the functioning of the UN, what it does best and worst, and the prospects for UN reform.

Prerequisites: POLS 100S or GEOG 100S or permission of the instructor

POLS 321W International Organizations (3 Credit Hours)

What are the roles and capabilities of the international organizations? This course examines the principles behind the world's 300 IOs, including specialized, technical, and regional organizations, as well as alliances and non-governmental organizations. When do they replace states and other actors? When are they essential, when are they helpful adjuncts, and when are they irrelevant? This is a writing intensive course.

Prerequisites: POLS 100S or GEOG 100S and a C or better in English 211C, ENGL 221C or ENGL 231C

POLS 323 International Political Economy (3 Credit Hours)

Introduces students to the primary mechanisms of the global political economy in allocating goods, income, wealth and the means to produce them, with emphasis on the international division of labor.

Prerequisites: Six hours of human behavior

POLS 324 International Relations Theory (3 Credit Hours)

Comparative study of the various theories that attempt to explain the patterns of interactions among the different members of the global community. Draws on historical and modern cases to explain traditional and alternative theories.

Prerequisites: POLS 100S and an additional three hours of human behavior

POLS 325W World Politics (3 Credit Hours)

This course is designed for intermediate students who are interested in the theoretical and systematic study of world politics. The course first introduces students to several major theoretical approaches to the study of world politics, and then applies these approaches to a number of major issues--ranging from conflict and cooperation, arms control, the protection of human rights, international trade, economic development, and environmental preservation. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, six hours of human behavior and junior standing

POLS 326W American Foreign Policy (3 Credit Hours)

This course presents those factors that go into the making and analyzing of American foreign policy, explores their application in decision making, and seeks to test their utilization against contemporary problems. This is a writing intensive course.

Prerequisites: POLS 100S and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, or permission of the instructor

POLS 327W Politics of National Security (3 Credit Hours)

Examination of issues facing America as it debates the use of international force, including the range of national security choices, defense reform, and the tensions between American resort to warfare and global trends transforming the ability to use violence effectively. This is a writing intensive course.

Prerequisites: POLS 100S or permission of the instructor and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

POLS 328 Russian Politics (3 Credit Hours)

Starting with the Soviet communist system, explores Russia's efforts to establish democracy and the rule of law, to fashion a productive, beneficial market economy, to establish viable relationships with the other former republics of the USSR and to craft advantageous foreign and military policies toward the West, Asia, and the developing countries.

Prerequisites: POLS 100S or POLS 102S or GEOG 100S or permission of the instructor

POLS 331 State and Local Government (3 Credit Hours)

This course is a survey of state and local government institutions, functions, processes, and behavior of political actors.

Prerequisites: POLS 101S

POLS 332W Europe in World Affairs (3 Credit Hours)

Analyzes European politics from World War II to the present. Emphasizes the foreign policies of major European states, including policies towards EU and NATO. This is a writing intensive course.

Prerequisites: POLS 100S and ENGL 211C or ENGL 221C or ENGL 231C

POLS 333 Media and Politics (3 Credit Hours)

An examination of the development of the news media and the role of political communication and information in American politics. Analysis of the newsmaking process; media coverage of political campaigns, the President and Congress; the impact of the news media on the American public; and the interaction between public officials and journalists.

Prerequisites: POLS 101S

POLS 334 Electoral Politics (3 Credit Hours)

A survey of electoral politics and behavior, including the structure of the electoral system, contemporary political campaigning, political partisanship, voting behavior, and role of interest groups in the electoral process.

Prerequisites: POLS 100S or POLS 101S or POLS 102S

POLS 335 Environmental Politics (3 Credit Hours)

This course examines the evolution of environmentalism in the United States, including the policy-making process, science and the role played by the public and political institutions.

Prerequisites: POLS 101S

POLS 336 South Asia Since Independence (3 Credit Hours)

This is a comparative study of the main political, economic and social developments in the major countries of South Asia. Themes will include democratization, problems of economic development, the role of caste and religion, the causes of intrastate conflict and interstate conflict and the influence of global forces on the region.

Prerequisites: POLS 100S or POLS 102S

POLS 337 Latin American Politics (3 Credit Hours)

Examines the evolution of Latin American politics, including early colonial and caudillo rule, populism and radicalism, the emergence of military regimes, and the reestablishment of constitutional democracies. Also considers contemporary economic, social, cultural, and environmental issues which condition state-society relations in the region.

Prerequisites: Six hours in human behavior

POLS 338W Politics of East Asia (3 Credit Hours)

This course examines political cultures/traditions, governmental institutions, decision-making processes, public policies, political organizations, and significant socio-political issues of such East Asian countries as China, Japan and Korea. In addition, it explores the collective impact of these countries on world politics and global economy. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C, six hours in human behavior, and junior standing or permission of the instructor

POLS 350T Technology and War (3 Credit Hours)

This course examines the fundamental changes and continuities that the evolution of technology has brought to armed conflict. It explores the historical development of technology and warfare, emphasizing the role of cultural, social and political choice shaping the development of new military technologies and affecting how they are used. What is the future of Western assumptions about technologically dominated warfare?

Prerequisites: POLS 100S or permission of the instructor

POLS 367 Cooperative Education (1-3 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department prior to the semester in which the work experience is to take place.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

POLS 368 Internship in Political Science (1-12 Credit Hours)

Individualized practical experience in public bureaucracies, political groups, administrative agencies or law firms. Group seminars are held periodically under the supervision of faculty. Credits are commensurate with the level of the student's involvement.

Prerequisites: Nine hours in political science, 3 of which must be in an upper-level course

POLS 395 Topics in Political Science (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses and any additional prerequisites will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Junior standing and permission of the instructor

POLS 396 Topics in Political Science (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses and any additional prerequisites will appear in the course schedule, and will be more fully described in information distributed to all academic advisors.

Prerequisites: Junior standing and permission of the instructor

POLS 400 Congress (3 Credit Hours)

This is a detailed study of the institutional and behavioral factors at work in legislative decision making, especially at the national level. Emphases are on the interrelationships among Congress, the Presidency, and the bureaucracy and on learning how to do research on specific legislation.

Prerequisites: POLS 101S or permission of the instructor

POLS 401/501 Global Environmental Policy (3 Credit Hours)

This course analyzes the causes, severity, potential consequences, and proposed solutions regarding global ecological issues with special attention to the scientific debate and the political and policy process. It examines environmental policies of national governments, regional/international organizations, and global conferences.

Prerequisites: GEOG 100S or GEOG 101S or GEOG 102T or POLS 100S or POLS 102S

POLS 402 Sex, Drugs, & Alcohol: The Politics & Policy of Sin (3 Credit Hours)

This course offers a broad overview of Morality Politics in the United States. Morality politics in the most basic definition is the legal sanctioning of right and wrong, or simply, the validation of a particular set of values. This course offers a broad overview of morality politics, as well as an examination of the historical foundations of legislating morality in the United States. Abortion, capital punishment, legalized gambling, same-sex rights, and drug policy are among the most controversial, polarizing, and widely discussed issues facing the public and policymakers in both contemporary and historical contexts. Although we will not examine each area that can be classified as a morality issue, we will focus on the prohibition of alcohol, the war on drugs, and the politics surround sex. We will examine both sides of each of these issues, with arguments being made both for and against each set of policies. Your task is to evaluate and discern between competing arguments based on the evidence presented on both sides.

Prerequisites: POLS 100S or POLS 101S or POLS 102S or junior standing

POLS 403/503 American Constitutional Law: First Amendment (3 Credit Hours)

The course explores the development of conflicting judicial and legal theories arising from Supreme Court enforcement of the First Amendment's protection of speech and religious freedoms. Supreme Court opinions, along with the underlying theories that inform its decisions and rationales, are the focus of the assignments and class discussion.

Prerequisites: POLS 101S or permission of the instructor

POLS 407 American Presidency (3 Credit Hours)

The course covers the development of presidential power and activity, the contemporary operations of the Presidency, and the problems which may confront the institution in the future.

Prerequisites: POLS 101S or permission of the instructor

POLS 408 American Constitutional Law: Individual Rights (3 Credit Hours)

An examination of the vexatious line between the rights of individuals and those of the state in the American democracy, focusing on such major issues as freedom of expression and worship; freedom of the press; separation of church and state; privacy; and racial and gender discrimination.

Prerequisites: POLS 101S

POLS 409 American Constitutional Law: Powers of Government (3 Credit Hours)

An examination of separation of powers, federalism and the democratic process as reflected by Supreme Court decisions. Also, the Supreme Court as a political institution.

Prerequisites: POLS 101S

POLS 410/510 African American Politics (3 Credit Hours)

This course examines the political development of Black people in the United States by focusing on the relationship and processes of the American political system. The political dynamics of Black political thought, the Civil Rights Movement, and Black protest politics are also analyzed.

Prerequisites: Six hours in human behavior and junior standing

POLS 412/512 Politics of the Civil Rights Movement (3 Credit Hours)

Examines the political activities which resulted in the passage of the nation's second Civil Rights policy, the 1960 and 1964 Civil Rights Acts, the 1965 Voting Rights Act and the 1968 Fair Housing Act. The course will analyze the underpinnings, leadership, and political strategies of the Civil Rights Movement.

Prerequisites: Six hours in human behavior and junior standing

POLS 414/514 Politics of Education (3 Credit Hours)

The question of power, often ignored by education policy analysts and researchers, is a principal focus of this seminar. Issues ranging from the role of education in political socialization and the politics of affirmative action and equal opportunity are examined.

Prerequisites: Junior standing or permission of the instructor

POLS 415/515 Women and Politics in America (3 Credit Hours)

Examines women's place in political theory and the practice of politics in the United States. A major focus is to trace the development of women's political rights, the impact of public policy on the lives of American women and to see how women influence and participate in the political process.

Prerequisites: POLS 101S or permission of the instructor

POLS 418 Quantitative Methods (3 Credit Hours)

A survey of and practicum in the basic techniques of quantitative research, including the logic of empirical research, the identification of data sources, and the use of appropriate statistical techniques.

Prerequisites: POLS 101S and a grade of C- or better in POLS 308

Pre- or corequisite: A grade of C- or better in STAT 130M

POLS 419 Jurisprudence: History of Legal Theory (3 Credit Hours)

An examination of the history of legal thought and developments of natural law, as well as an in-depth analysis of legal positivism and realism. Particular attention is paid to American legal philosophy.

Prerequisites: POLS 100S or POLS 101S or POLS 102S

POLS 420W/520 Southern Politics (3 Credit Hours)

This seminar focuses on the politics of the American South from the 1940s to the present. Emphasis is on introducing students to contrasting explanations and analysis about the politics of the American South. This is a writing intensive course.

Prerequisites: POLS 101S and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, or permission of the instructor

POLS 421/521 International Law (3 Credit Hours)

Surveys major areas of public international law (e.g., laws of warfare, law of the sea, conflict resolution, etc.). Emphasizes the relationship between international law and international politics.

Prerequisites: Six hours in political science or permission of the instructor; POLS 325W is recommended

POLS 424/524 International Organization (3 Credit Hours)

Course provides a basis for understanding the role and importance of international organizations in contemporary international relations. Focuses on development and history of global organizations, with particular emphasis on the United Nations, and regional and functional organizations.

Prerequisites: POLS 100S and POLS 325W and additional internationally-focused course or permission of the instructor

POLS 425W Cybersecurity Strategy and Policy (3 Credit Hours)

This writing intensive course explores cybersecurity policy and strategy and introduces students to the essentials of strategy development and policy making in cybersecurity. Topics considered include planning principles in cyber strategy; risk management and cybersecurity policy; the connections between cybersecurity policies, businesses, and governmental institutions; the knowledge, skills, and abilities needed to develop and implement cybersecurity policy; the social, political and ethical implications that arise in cybersecurity policies and strategies; strategies to assess cybersecurity policy; and the ties between national security and cybersecurity policy.

Prerequisites: ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better and CYSE 200T or IT 200T or POLS 101S

POLS 426 Cyber War (3 Credit Hours)

This course explores the national security dimensions of cybersecurity and examines cyber war in international relations. Exploration of cyber war begins with an examination of cybersecurity as a component of national security and investigates the topics of U.S National Cybersecurity and other national approaches to cyber war. The topics of cyber deterrence, cyber as a military domain, the roles of international organizations in cyber war, cyber terrorism, the role of social media, and information warfare will be discussed. The international dimension of cybersecurity is also discussed.

Prerequisites: CYSE 200T or POLS 101S or permission of the instructor

POLS 434/534 Political Behavior and Public Opinion in the United States (3 Credit Hours)

This course is designed to give students an in-depth understanding of the various dimensions of political participation in the United States. Central to this course is the act of voting, which is the cornerstone democratic institution. Students will gain an understanding of how individuals form political attitudes and how these attitudes manifest in the form of electoral behavior. Students will also be asked to think about some non-traditional forms of civic participation such as political protest and even violence. We will also spend some time discussing attitudes about democracy itself and the idea that support for American democracy has eroded. As part of this course, students will be asked to develop their analytical skills through the critical reading and discussion of scholarly works.

Prerequisites: POLS 100S or POLS 101S or POLS 102S

POLS 435/535 Chinese Politics (3 Credit Hours)

A study of origins of the Chinese revolution; development and functions of the Chinese Communist Party; government institutions; the defense establishment; evolution of foreign policy; and post-Mao political and economic reforms.

Prerequisites: POLS 100S and POLS 102S or permission of the instructor

POLS 436 Japanese Politics (3 Credit Hours)

A study of Japan's historical political development and social patterns; government institutions; problems of the constitution; and foreign and defense policy.

Prerequisites: POLS 100S and POLS 102S or permission of the instructor

POLS 437/537 International Relations in East Asia (3 Credit Hours)

A study of contemporary issues (political, economic, and strategic) in the East Asia area; the interactions of China, Japan, the United States, and the former Soviet republics in East Asia.

Prerequisites: POLS 100S

POLS 438/538 Law in Literature and Film (3 Credit Hours)

Students will study law as seen through the lens of fiction. Assignments draw heavily from classic and contemporary novels, short stories, plays, films, and perhaps television. As these artistic representations of law in action are explored, short theoretical readings help focus on questions of philosophy, politics, and justice. The course also explores the relationship between fiction and reality through appellate opinions and contemporary literature on the American legal system. The goal is to come to a better understanding of the potential blessings, dangers, and limitations of law.

Prerequisites: POLS 101S or permission of the instructor

POLS 439/539 International Relations of African States (3 Credit Hours)

This course aims to expose students to an examination of the workings of international politics from the viewpoint of Africans and African states. International relations have tended to look at the world from the viewpoint of its most powerful states. Yet, most of the world's states - notably in Africa - are weak but have great potential global impact.

Prerequisites: Junior standing or permission of the instructor

POLS 442/542 Twentieth Century Dictatorships (3 Credit Hours)

A study of the Fascist, Nazi, Stalin and Mao regimes and the forces that brought them to power and sustained them, including a study of the impact of their policies on their people and neighboring states.

Prerequisites: Six hours in human behavior and junior standing or permission of the instructor

POLS 445 Globalization: Dynamics and Implications (3 Credit Hours)

Explores the essential characteristics of globalization and its implications for social relations and existing institutions.

Prerequisites: Three hours in economics and 6 hours in political science

POLS 455/555 The Politics of Climate Change (3 Credit Hours)

An examination of the science of climate change and how United States political actors have responded to this global environmental challenge.

Prerequisites: Junior standing or permission of the instructor

POLS 458T Weapons of Mass Destruction in Global Security (3 Credit Hours)

Since the end of the Cold War, weapons of mass destruction have emerged as one of the most dangerous and contentious issues in international affairs. The course examines how these weapons are made, how they proliferate, and how they are controlled.

Prerequisites: POLS 100S

POLS 461 Seminar in European Politics (3 Credit Hours)

This course focuses on one specific European country such as France, Germany, the United Kingdom, etc. Examination of trends and events which most influenced the evolution of domestic politics and foreign relations from World War II to the present.

Prerequisites: POLS 100S or POLS 102S and POLS 314 or POLS 332W

POLS 462 Ethnic Conflict in the New Global Order (3 Credit Hours)

Ethnically based conflict is presently a pervasive worldwide phenomenon. This course examines internal and external factors causing ethnic conflicts and mechanisms for resolving or mitigating such conflicts.

Prerequisites: Six hours in human behavior

POLS 466/566 Politics of the Middle East (3 Credit Hours)

An analysis of the political processes throughout the region and in selected nations of the Middle East. Topics to be discussed include inter-Arab relations, the Arab-Israeli conflict, the Iran-Iraq rivalry and foreign power involvement in the Middle East.

Prerequisites: Junior standing or permission of the instructor

POLS 470 African Americans and Foreign Affairs (3 Credit Hours)

This course focuses on race, ethnicity, and the role and influence of African Americans in international affairs and American foreign policy making. It investigates the activities of African Americans in the international arena. The emphasis is on how African Americans have participated and the results of that participation from the era of slavery to Barack Obama.

Prerequisites: Junior standing or permission of the instructor

POLS 480W Senior Seminar in International Studies (3 Credit Hours)

Interdisciplinary research and preparation of a senior thesis in international studies This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, senior standing in the BAIS degree program or permission of the instructor

POLS 481 Seminar in American Politics (3 Credit Hours)

The advanced study of selected topics in American politics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: Junior standing in political science

POLS 493 Great Decisions (1 Credit Hour)

An examination and discussion of critical world issues based upon the Foreign Policy Association's Great Decision Series.

Prerequisites: POLS 100S or POLS 101S

POLS 495/595 Topics in Political Science (1-3 Credit Hours)

The advanced study of selected topics in political science which, due to their specialized nature, may not be offered regularly.

Prerequisites: Appropriate survey course or permission of the instructor

POLS 496/596 Topics in Political Science (1-3 Credit Hours)

The advanced study of selected topics which, due to their specialized nature, may not be offered regularly.

Prerequisites: Appropriate survey course or permission of the instructor

POLS 497/597 Independent Research in Political Science (1-3 Credit Hours)

Independent research in political science under the supervision of a faculty member.

Prerequisites: Senior standing or permission of the instructor

POLS 498 Tutorial Work-Special Topics (1-3 Credit Hours)

Independent research in political science under the supervision of a faculty member.

Prerequisites: Senior standing or permission of instructor

PRTG - Portuguese

PRTG 101F Beginning Portuguese I (3 Credit Hours)

Introduction to the four skills (listening, speaking, reading, writing) of elementary Portuguese.

PRTG 102F Beginning Portuguese II (3 Credit Hours)

This course will build and expand on the linguistic proficiency in the four skills areas (listening, speaking, reading, writing) of elementary Portuguese.

Prerequisites: PRTG 101F or permission of the instructor

PRTG 295 Topics in Portuguese (1-3 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule.

PRTS – Parks, Recreation and Tourism Studies

PRTS 210S Leisure and Human Behavior (3 Credit Hours)

This course will examine leisure and its relationship to human behavior from historical and contemporary perspectives. The course will explore fundamental principles, theories, and philosophies of recreation, play, and leisure and how they relate to health and wellness, quality of life, personal identity, work, the economy, and social institutions. The role of leisure in one's life will be examined in depth with a focus on positive and negative leisure behaviors, trends in world culture, and how societal factors influence leisure behavior.

PRTS 212 Program Planning and Development in Parks, Recreation, and Tourism (3 Credit Hours)

This course is designed to help students understand and develop their program planning and development skills. Theories and techniques in relation to programs in parks, recreation organizations, and hospitality and tourism businesses are explored. The course will examine the planning process, including needs assessment, risk assessment, staffing, marketing, budgeting, and implementation.

PRTS 251 Introduction to Park and Recreation Management (3 Credit Hours)

This course introduces students to the field of park and recreation management, including public, non-profit, and private/commercial service delivery organizations. Career opportunities in each of these sectors will also be explored.

PRTS 271 Introduction to Tourism & Hospitality Management (3 Credit Hours)

This course is designed to present an introduction to the tourism industry. Emphasis is placed on historical and technological development within tourism, the different components of the industry (transportation, accommodations, attractions, events), and career opportunities in tourism, events, and hospitality.

PRTS 302 Facilitating the Recreation Experience (3 Credit Hours)

This course is designed to help students develop recreation facilitation and leadership skills. The course will focus on leadership theories, recreation leadership techniques, and group dynamics. Students will practice group leadership techniques through in-class activities and community engaged learning.

Prerequisites: restricted to Park, Recreation, and Tourism Studies majors

PRTS 332 Recreation Administration (3 Credit Hours)

This course examines personnel, financial and organizational management principles, practices, and policies related to the recreation industry. The course explores general personnel management, organizational management, and the budget process. Students will learn about revenue sources, budget formats, and managing full-time, part-time, and seasonal personnel.

Prerequisites: Junior standing or permission of the instructor

PRTS 350 Lodging Operations (3 Credit Hours)

This course teaches the knowledge and skills needed to navigate lodging operations in the hospitality industry and provides students with a comprehensive understanding of the fundamental principles and practices associated with the successful operation of lodging facilities.

Prerequisites: PRTS 271

PRTS 366 Internship Seminar (1 Credit Hour)

Agency field placement is required of all students in Park, Recreation and Tourism Studies. Seminar will include resume and cover letter writing skills, internship requirements, agency placement referrals, and interviewing techniques.

Prerequisites: Senior standing and permission of the instructor; restricted to Parks, Recreation and Tourism Studies majors

PRTS 368 Internship (9 Credit Hours)

Supervised agency placement is required of all students in the Park, Recreation and Tourism Studies program. Placement must fulfill all professionally appropriate certification standards. Minimum of 400 clock hours. Students must have an overall GPA of 2.00 and a major GPA of 2.00 at the start of the internship.

Prerequisites: PRTS 366, senior standing, permission of the instructor, and completion of all coursework; restricted to Park, Recreation and Tourism Studies majors

PRTS 369 Practicum in Parks, Recreation and Tourism Studies (3 Credit Hours)

Selected field-based experiences in a park, recreation and tourism service setting. Minimum of 200 clock hours.

Prerequisites: Junior standing and permission of the instructor; restricted to Park, Recreation, and Tourism Studies majors only

PRTS 404 Recreation Resource Management (3 Credit Hours)

This course addresses outdoor recreation and natural management using a recreation ecology framework. Physical and social impacts resulting from outdoor recreation in parks and protected areas will be discussed, as well as visitor use management strategies to address those impacts.

Prerequisites: Junior standing

PRTS 405 Outdoor Recreation (3 Credit Hours)

This course is designed to increase knowledge, skills, techniques, policies and procedures related to outdoor recreation. Students are required to participate in outdoor recreation experiences through the Outdoor Adventure Program and on their own.

Prerequisites: junior standing or permission of the instructor

PRTS 433 Camp Administration (3 Credit Hours)

This course will cover organization and administration of camp programs and facilities including history, trends, staffing, client needs, finance, marketing, accreditation, research and legal issues. Primary emphasis will be on organized camp programs and their impact on youth and society.

Prerequisites: junior standing or permission of instructor

PRTS 441 Marketing of Hospitality Services (3 Credit Hours)

This course explores theories and concepts related to marketing and sales within successful service-oriented hospitality and tourism businesses. Course topics include marketing and sales planning, techniques, strategies, and management.

Prerequisites: Junior standing or permission of instructor

PRTS 461 Hospitality Leadership and Management (3 Credit Hours)

This course explores the meaning and practice of leadership and management in the hospitality and tourism industry. The course links theoretical concepts to the application of best practice in various aspects of administration. Students will also learn about current trends, research, and national and international case studies

Prerequisites: PRTS 271 and Junior standing or permission of instructor

PRTS 465 Hospitality Revenue Management (3 Credit Hours)

This course is designed to equip students with a practical understanding of the principles involved in the revenue management of hospitality businesses. By blending theoretical concepts with real-world applications, students will learn how to ethically apply these techniques to enhance business outcomes in a dynamic industry. The Certification in Hotel Industry Analytics (CHIA), which is the only hotel-related certification that recognizes the skill and knowledge that these professionals have, is embedded in this course to boost the career prospects of students.

Prerequisites: junior standing or permission of the instructor

PRTS 475 Sustainable Management in Parks, Recreation, and Tourism (3 Credit Hours)

This course examines the principles and practices of sustainable management within park, recreation, and tourism settings. The course explores the complexities of sustainable management and best practices for achieving economic, environmental, social, and cultural sustainability.

Prerequisites: Junior standing or permission of the instructor

PRTS 482W Evaluation in Parks, Recreation, and Tourism (3 Credit Hours)

The purpose of this course is to provide students with basic knowledge in research and evaluation within the park, recreation and tourism field. Specific focus is placed on applying research and evaluation concepts through a research or evaluation project within the field. Topics include evaluation criteria development, quantitative and qualitative research methods, and utilizing study results to make practical recommendations for park, recreation, and tourism organizations. This is a writing intensive course.

Prerequisites: a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, and junior standing

Pre- or corequisite: PRTS 212

PRTS 491 Festival, Meeting, and Event Management (3 Credit Hours)

This course advances students' knowledge of the marketing, planning, and management of festivals, meetings and conventions, and special events in tourism destinations. Students will learn strategies for successfully planning, marketing, organizing, and implementing a variety of events.

Prerequisites: Junior standing or permission of the instructor

PRTS 495 Topics (1-3 Credit Hours)

This course provides an opportunity for in-depth study of selected topics in the variety of areas comprising parks, recreation and tourism studies.

Prerequisites: junior standing

PRTS 497 Independent Study (1-3 Credit Hours)

Individualized instruction to include research, specialized studies, or other scholarly writing.

Prerequisites: junior standing or permission of the instructor

PSYC - Psychology

PSYC 197 Undergraduate Research Experience in Psychology (0 Credit Hours)

Student participation in a supervised, undergraduate research experience for which credit will not apply to the degree. Experience must be related to the student's major, minor or career area of interest.

Prerequisites: permission of the instructor

PSYC 201S Introduction to Psychology (3 Credit Hours)

Introduction to the scientific study of psychology, including the methods used to gather and interpret data. The student is introduced to fundamental terms, theories, and concepts dealing with the biological bases of behavior; learning; perception; cognition and intelligence; personality; psychological disorders; human development; and social processes. An emphasis is placed on application of concepts and critical thinking.

PSYC 203S Lifespan Development (3 Credit Hours)

A broad contemporary view of the processes of development. The influences of biological and environmental factors in the development of personality and cognitive functioning are explored.

PSYC 300 Careers in Psychology (3 Credit Hours)

Exploration of available careers in psychology with a bachelor's degree as well as career options for individuals after graduate school (e.g., master's degree, PhD, PsyD, etc.). All assignments will be aimed at helping students learn more about available opportunities and develop skills needed to find a job and/or get into graduate school. This course is recommended during the sophomore or junior year.

Prerequisites: Open to declared PSYC majors only, or with instructor approval; completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 303 Industrial/Organizational Psychology (3 Credit Hours)

An application of psychological principles and research to human behavior in work settings. Among the topics covered are personnel selection, training, and evaluation; employee motivation and job satisfaction; and organizational leadership and theory.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 304 Social Psychology (3 Credit Hours)

The behavior of the individual as affected by other people and groups. Interpersonal attraction, attitude change, group dynamics, and the application of psychology to social problems are among the topics covered.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 305 Introduction to Clinical Psychology (3 Credit Hours)

This course surveys the evolution and future of clinical psychology, covering research, assessment and intervention, and subspecialties.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 306 Health Psychology (3 Credit Hours)

Course examines how psychological states (e.g., anxiety, stress) influence physical health. The course also examines how physical states (e.g., illness, pain, injury) influence psychological health. Topics include the impact of stress on health and proneness to illness; coping with illness, injury and trauma; and the role of health-enhancing behaviors in maintaining physical health.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher or permission of the instructor

PSYC 307 Institutionalization of Human-Centered Computing (3 Credit Hours)

This course introduces students to the fundamental principles of human-computer interaction. Emphasis is placed on leadership knowledge needed to implement human-centered design practices into an organization's culture.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 308 Positive Psychology (3 Credit Hours)

This course examines and discusses psychological theories and research that focus on human strengths and potential. Factors that contribute to happiness and a fulfilling life are emphasized. Lectures, self-assessments and experiential exercises are used to understand how to cultivate a meaningful life.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 311 Psychology of Criminal Behavior (3 Credit Hours)

The study of crime from a psychological perspective. Topics include theories of criminal behavior, violent and non-violent crime, sexual offenses, insanity, addiction, white collar crime, and other criminal behaviors.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 317 Quantitative Methods (4 Credit Hours)

The application of inferential statistical principles to psychological research problems.

Prerequisites: Completion of PSYC 201S and MATH 102M or higher, both with a grade of C (2.0) or higher

PSYC 318W Research Methods in Psychology (4 Credit Hours)

An examination of research principles and techniques in psychology. Experimental design and interpretation is stressed. Students learn to locate and read technical articles and to report on research projects in the style of the American Psychological Association. This is a writing intensive course.

Prerequisites: Completion of ENGL 211C or ENGL 221C or ENGL 226C or ENGL 231C and PSYC 317, both with a grade of C (2.0) or higher

PSYC 321 Psychology of the Exceptional Child (3 Credit Hours)

A study of the psychological development of the child with physical, emotional, social, intellectual, and educational disabilities.

Prerequisites: Completion of PSYC 201S or PSYC 203S with a grade of C (2.0) or higher

PSYC 322 The Psychology of Adolescence (3 Credit Hours)

A survey of the processes of development during adolescence. Covers topics such as the influences of biological, emotional, social, and cognitive factors on personality development and adjustment of the adolescent.

Prerequisites: Completion of PSYC 201S or PSYC 203S with a grade of C (2.0) or higher

PSYC 324 Psychology of Gender (3 Credit Hours)

Concepts and theories of sex and gender, including models of how gender roles are developed and maintained, will be examined. Major research findings regarding gender will be reviewed.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 325 Drugs and Behavior (3 Credit Hours)

An examination of the effects of psychoactive drugs on behavior and the factors involved in drug use. Current research literature is discussed.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 343 Personnel Psychology (3 Credit Hours)

The application of psychological principles and research to the development and improvement of personnel subsystems in business and industry. Emphasis is placed on the assessment, selection and training of workers and manager.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 344 Human Factors (3 Credit Hours)

The application and evaluation of psychological principles and research relating human behavior to the design of tools, technology, and the work environment.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 345 Organizational Psychology (3 Credit Hours)

This course emphasizes the study of human behavior in organizations. Topics include leadership, motivation, group behavior, communications, power and politics, and organization change.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 351 Child Psychology (3 Credit Hours)

The development of children within their diverse environments is examined. A focus is on the methods used to understand how children experience their world.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher or PSYC 203S with a grade of C (2.0) or higher

PSYC 353 The Psychology of Adulthood and Aging (3 Credit Hours)

The study of adults with emphasis on aging. Current theories and research as well as the characteristics, lifestyles, and activities of adulthood and aging will be discussed.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher or PSYC 203S with a grade of C (2.0) or higher

PSYC 363 Psychology of Sex (3 Credit Hours)

A study of critical issues in human sexuality; gender and sexual identity, sexual arousal and erotic behavior, relationship development, and sexual dysfunction and deviation disorders.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher or permission of the instructor

PSYC 365 Undergraduate Teaching Assistant I (1-3 Credit Hours)

This course affords students the opportunity to earn course credit for their work in supporting instructors and engaging with their peers in an undergraduate level course. It is designed for motivated and academically inclined students who wish to contribute to the educational environment and gain valuable, practical experience. Students work with instructors to identify appropriate tasks to be completed. 1-3 credits may be earned based on the number of hours involved in direct activities for the assigned class (3 credits = 9 hours per week; 2 credits = 6 hours per week; 1 credit = 3 hours per week). Students must be selected by the instructor. Positions are not guaranteed. Maximum of 6 credit hours allowed between PSYC 365 and PSYC 366.

Prerequisites: Completion of PSYC 201S with a grade of C or better, grade of B or higher in the course in which student serves as an undergraduate teaching assistant, and permission of instructor

PSYC 366 Undergraduate Teaching Assistant II (1-3 Credit Hours)

This course affords students the opportunity to earn course credit for their work in supporting instructors and engaging with their peers in an undergraduate level course. It is designed for motivated and academically inclined students who wish to contribute to the educational environment and gain valuable, practical experience. Students work with instructors to identify appropriate tasks to be completed. 1-3 credits may be earned based on the number of hours involved in direct activities for the assigned class (3 credits = 9 hours per week; 2 credits = 6 hours per week; 1 credit = 3 hours per week). Students must be selected by the instructor. Positions are not guaranteed. Maximum of 6 credit hours allowed between PSYC 365 and PSYC 366.

Prerequisites: Completion of PSYC 201S with a grade of C or better, grade of B or higher in the course in which student serves as an undergraduate teaching assistant, PSYC 365, and permission of instructor

PSYC 368 General Internship in Psychology (3 Credit Hours)

For ODU psychology majors only. Students engage in academically relevant work-related activities in non-clinical settings. Available for pass/fail grading only. Students should work with the Instructor to identify their placement in the semester prior to enrollment. A maximum of 6 credits of PSYC 368 and/or PSYC 369 can be counted towards the major in Psychology.

Prerequisites: Junior standing and permission of the instructor

PSYC 369 Clinical Internship in Psychology (3 Credit Hours)

For ODU psychology majors only. Students engage in academically relevant work activities in clinical settings. Available for pass/fail grading only. Students should work with the Instructor to identify their placement in the semester prior to enrollment. Instructor approval is required prior to registration. A maximum of 6 credits of PSYC 368 and/or PSYC 369 can be counted towards the major in Psychology.

Prerequisites: Junior standing and permission of the instructor

Corequisites: PSYC 371

PSYC 371 Clinical Supervision in Psychology (1 Credit Hour)

Students doing clinical internships at designated clinical placements must also enroll in this course taught by a faculty member. This seminar addresses the special issues in the areas of safety, confidentiality, and professionalism that arise in clinical settings. Students doing general (non-clinical) internships may also enroll in the course with permission of the Instructor. A maximum of 2 credits of PSYC 371 can be counted towards the major in psychology.

Prerequisites: Permission of the instructor

Corequisites: PSYC 369

PSYC 395 Topics in Psychology (1-3 Credit Hours)

The department offers selected topics that may not be offered on a regular basis.

Prerequisites: permission of the instructor

PSYC 396 Topics in Psychology (1-3 Credit Hours)

The department offers selected topics that may not be offered on a regular basis.

Prerequisites: permission of the instructor

PSYC 403 History of Psychology (3 Credit Hours)

A survey of the historical development of modern psychology. The major systems and their influences on contemporary American psychology are studied.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 405 Psychopathology (3 Credit Hours)

A study of psychopathology, covering various behavior disorders, their descriptions, characteristics, and causation. Methods of therapeutic technique are reviewed.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 408 Theories of Personality (3 Credit Hours)

A study of the structure of personality and the dimensions along which individuals differ. The contributions of major personality theorists and the implications of current research are considered.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 410 Human Cognition (3 Credit Hours)

An investigation of the ways in which people learn and think. Current models of human memory and cognition are considered in relation to the evidence on human thinking capabilities. The role of language in thought and knowledge acquisition is also explored.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 412 Psychological Tests (3 Credit Hours)

An examination of the history, theory and applications of psychological testing.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 413 Sensation and Perception (3 Credit Hours)

An analysis of the processes by which humans obtain information about the environment through the eyes, ears, and other sensory systems.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 414 Principles of Learning (3 Credit Hours)

Course focuses on basic learning principles and processes; classical conditioning, instrumental conditioning, discrimination, attention, appetitive and aversive conditioning.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 417 Advanced Statistics and Computer Applications (3 Credit Hours)

The course covers advanced statistical methods and computer applications that build on knowledge and skills acquired in PSYC 317.

Prerequisites: Completion of PSYC 317 with a grade of C (2.0) or higher

PSYC 420 Cross-Cultural Psychology (3 Credit Hours)

A wide variety of psychological research and theory relevant to human behavior in different cultures is examined and the impact of culture on human behavior is discussed. The course examines cross-cultural research conducted by scholars around the world. In addition to factual knowledge, emphasis is placed on critical thinking and problem solving.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 424 Physiological Psychology (3 Credit Hours)

An investigation of the biological bases of behavior including mental illness, motivation, learning, memory and language.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher

PSYC 460 Psychology of African Americans (3 Credit Hours)

This course examines the issues and perspectives related to the psychological evolution of African Americans in the United States. Particular emphasis is placed on exploring the discipline of psychology from an Afrocentric focus.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher or permission of the instructor

PSYC 487 Honors Program in Psychology (3 Credit Hours)

For ODU psychology majors only. With psychology faculty supervision, student develops an honors thesis proposal for approval by the Psychology Honors Program committee. See section on Honors Program in Psychology in this Catalog.

Prerequisites: PSYC 497; cumulative GPA of 3.25 or higher and psychology GPA of 3.50 or higher; permission of the departmental Honors Program chair

PSYC 488 Honors Program in Psychology (3 Credit Hours)

For ODU psychology majors only. With psychology faculty supervision, student conducts the supervised honors research and documents it in a thesis for approval by the Psychology Honors Program committee. Student also participates in a required seminar to discuss and present the research. See section on Honors Program in Psychology in this Catalog.

Prerequisites: PSYC 497; cumulative GPA of 3.25 or higher and psychology GPA of 3.50 or higher; permission of the departmental Honors Program chair

PSYC 489 Readings in Psychology (3 Credit Hours)

The course may be taken only once. An individualized course in which the student does library research and writes a paper.

Prerequisites: approval by supervisory faculty member and department

PSYC 490 Readings in Psychology (3 Credit Hours)

The course may be taken only once. An individualized course in which the student does library research and writes a paper.

Prerequisites: approval by supervisory faculty member and department

PSYC 494 Entrepreneurship in Psychology (3 Credit Hours)

The entrepreneurship is a course designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to integrate disciplinary theory and knowledge through developing a nonprofit program, product, business, or other initiative. The real-world experiences that entrepreneurs provide will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems.

Prerequisites: Junior standing

PSYC 495 Topics in Psychology (1-3 Credit Hours)

The department offers selected topics that may not be offered regularly. These special topics will appear in the course listing each semester.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher or permission of the instructor

PSYC 496 Topics (1-3 Credit Hours)

The department offers selected topics that may not be offered regularly. These special topics will appear in the course listing each semester.

Prerequisites: Completion of PSYC 201S with a grade of C (2.0) or higher or permission of the instructor

PSYC 497 Supervised Research (3 Credit Hours)

For ODU psychology majors only. Student and faculty supervisor develop and approve a contract of required research activities for the semester, such as attending research lab meetings, data collection, coding and/or analysis, library research, etc.

Prerequisites: GPA of 2.5 and pre-approval by psychology faculty supervisor

PSYC 498 Supervised Research (3 Credit Hours)

For ODU psychology majors only. Student and faculty supervisor develop and approve a contract of required research activities for the semester, such as attending research lab meetings, data collection, coding and/or analysis, library research, etc.

Prerequisites: GPA of 2.5 and pre-approval by psychology faculty supervisor

PUBH - Public Health

PUBH 200 Principles of Public Health (3 Credit Hours)

Overview of the principles, practices, and science of public health in the world. This course focuses on origins, evolution, structure and administration of public health science. Exploration and discussion of the core functions of public health - biostatistics, environmental sciences, epidemiology, health policy and management sciences, and social and behavioral sciences - will be instructed.

PUBH 318 Principles of Nutrition (3 Credit Hours)

Course designed especially for those entering the health education or health care field, covering the physiology of each of the major body systems as a basis for understanding those aspects of its function that reflect the importance of various nutrients.

Prerequisites: CHEM 105N-CHEM 106N or CHEM 121N-CHEM 122N and CHEM 123N-CHEM 124N; BIOL 240, BIOL 241, BIOL 250 or BIOL 251, or permission of the instructor

PUBH 320 Health Equity and Disability Culture (3 Credit Hours)

This course will explore the history of health equity and disability and how prejudice and discrimination against people with disabilities impact health. Students will learn how to apply health equity frameworks, theories, and research to address disability-specific models of health disparities and to achieve health equity in populations with disabilities.

Prerequisites: PUBH 200 with a grade of C or higher or permission of the instructor

PUBH 335 Population Health (3 Credit Hours)

This course provides a population-based approach to professional work in disease management, chronic care management and politics, in addition to students studying public health, health policy, quality and patient safety, health care administration, medicine, nursing, pharmacy, social work and other related clinical professions. The course will focus on social determinants of health to discuss approaches to improving clinical health outcomes for a range of social groups and communities.

Prerequisites: PUBH 200 with a grade of C or higher

PUBH 360 Introduction to Global Health (3 Credit Hours)

This course introduces students to health-care delivery systems of non-Western countries, specifically developing countries. The various factors that influence health-care planning and delivery of health services are addressed.

Prerequisites: PUBH 200

PUBH 390 The U.S. Healthcare Delivery System (3 Credit Hours)

The uniqueness of the U.S. healthcare delivery system will be explored in terms of a systems framework and its complexity. The basic characteristics that differentiate the U.S. healthcare delivery system from that of other countries will be presented. An understanding of the U.S. health care system has specific implications for health services managers.

Prerequisites: PUBH 200 with a grade of C or higher

PUBH 395 Topics in Public Health (3 Credit Hours)

Study of selected topics in Public Health.

Prerequisites: A declared major in the University or approval of the program director

PUBH 403W Social and Behavioral Aspects of Public Health (3 Credit Hours)

The course will emphasize the importance of social context and cultural construction, social and behavioral foundations of public health and examine current issues in health from a social and behavioral sciences perspective. The course uses a social ecological framework to address multilevel influences on health and enlarge the dominant 'risk factor' approach to health behavior. This is a writing intensive course.

Prerequisites: ENGL 110C and ENGL 211C with a C or better, PUBH 200, and PUBH 335 or HLSC 335

PUBH 405 Interprofessional Study Abroad in Public Health (3 Credit Hours)

This study abroad service learning course will introduce the student to the political, social, cultural, ethical and administration issues involved in public health, prevention and health promotion globally. Students will travel to another country and learn the incidence/prevalence, morbidity/mortality, and identified public health problems in specific regions and countries.

Prerequisites: Permission of instructor

PUBH 415 One Health-One Medicine (3 Credit Hours)

This course will teach students the applications of multidisciplinary competencies towards solving human health challenges. The course will identify all areas of global health issues that require human, veterinary and environmental applications for solutions.

Prerequisites: Junior standing or permission of instructor

PUBH 421 Leadership in Public Health (3 Credit Hours)

The course will introduce students to the main theories of leadership in public health covering key concepts and strategies using the six levels of leadership framework. The course will explore how individual, team, organizational, community, professional and global leadership impact population and public health.

Prerequisites: Junior standing or permission of instructor

PUBH 422 Health, Culture and Diversity-Reducing Disparities in Public Health (3 Credit Hours)

The course will introduce students to the main theories of culture, health and diversity and examines what is meant by culture, the ways in which culture intersects with health issues, how public health efforts can benefit by understanding and working with cultural processes, and a brief selection of conceptual tools and research methods that are useful in identifying relationships between culture and health. The course will also include practical guidelines for incorporating cultural understanding in public health settings and examples of programs where that has occurred.

Prerequisites: Junior standing or permission of instructor

PUBH 425/525 Health Aspects of Aging (3 Credit Hours)

Identifies major issues and problems in meeting health care needs of the aged. Emphasis on role of social assets and supports in determining effects of life changes on the aging process.

Prerequisites: PUBH 320, PUBH 335, and PUBH 390 or permission of the instructor

PUBH 430W/530 Community Health Resources and Health Promotion (3 Credit Hours)

Designed to provide information about community health resources. This course will focus on health administration and public health applications and is a writing intensive course.

Prerequisites: ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better and a declared major in the University or approval of the program director

PUBH 440/540 Finance and Budgeting in Healthcare (3 Credit Hours)

This course covers financial management functions in healthcare organizations including operating and capital budgeting processes along with budgeting and financial controls.

Prerequisites: Junior standing and a declared major in the BSPH Public Health, Health Services Administration programs or permission of the instructor

PUBH 445/545 Health Services Research Methods (3 Credit Hours)

This course focuses on health services research and its assessment abilities and application in health care and public health. Topics include the use of EXCEL, SAS, and SPSS to analyze data. An exploration of the issues and challenges of health services research for health related organizations and other organizations. Statistical procedures and practices will also be conducted.

Prerequisites: STAT 130M

PUBH 450/550 Public and Community Health Administration (3 Credit Hours)

A review of the principles and practice of administering public and community health organizations and programs at federal, state, and local levels. Constitutional, statutory and administrative bases for organizing and conducting public/community health programs will be discussed.

Prerequisites: A declared major in Health Services Administration or Public Health major, minor in Community Health, or permission of the instructor

PUBH 461/561 Managerial Epidemiology (3 Credit Hours)

This course will blend theory and application of epidemiology. This course will also provide a comprehensive introduction to epidemiology and explain how to use epidemiological concepts and tools to improve decisions about the management of health services.

Prerequisites: PUBH 335, PUBH 390, and a declared major in the University or approval of the program director or instructor

PUBH 465/565 Policy and Politics of Health (3 Credit Hours)

This course will explore both health policy and the politics of health. Students will develop an understanding of the systematic and analytical framework for developing health and health care policy issues.

Prerequisites: A major in Health Services Administration or Public Health, minor in Health Equity and Social Justice, or permission of the instructor

PUBH 468 Internship (1-3 Credit Hours)

The internship will allow a student new to the health administration field or public health field to complete a capstone internship to gain entry skills for a beginning career pathway in the profession. The course is intended to provide field experience and assimilation of the theoretical aspects learned in the coursework in a practical/work setting. A minimum of 200 hours is required for the 3-credit internship.

Prerequisites: Major in BS in Public Health or BSHS in Health Services Administration and senior standing

PUBH 475/575 Healthcare Marketing (3 Credit Hours)

This course provides a basic understanding of marketing in a health care setting. It will cover the following: the history of marketing in a health care setting, health care markets, marketing techniques, and leadership skills in managing and supporting the marketing efforts.

Prerequisites: A declared major in the University or approval of the instructor or program director

PUBH 480/580 Health Ethics and the Law (3 Credit Hours)

This course provides the students with a basic knowledge of health law and examines legal issues confronting health services administrators in various health care environments.

Prerequisites: A declared major in the BSPH Public Health, Health Services Administration program or permission of the instructor

PUBH 485 Public Health Informatics (3 Credit Hours)

This course focuses on healthcare informatics (information systems) and applications in health care organizations. It provides an overview of health information system concepts, management, and integration of technology in healthcare organizations.

Prerequisites: For Public Health or Health Services Administration majors, or permission of the instructor

PUBH 495/595 Topics in Public Health (1-3 Credit Hours)

This course provides the opportunity for the study of selected topics in public/community health or health administration, including informatics, under the supervision of a faculty member.

Prerequisites: Permission of the instructor

PUBH 498 Directed Research in Public Health and Health Services Administration (1-6 Credit Hours)

Supervised research on a specific problem in health services administration or public health. Regular meetings with faculty and a written/oral report are required.

Prerequisites: Permission of the instructor

QUST - Queer Studies

QUST 302W Dimensions of Diversity: Intersectionality Among Women (3 Credit Hours)

This course explores the intersections of gender, race, class, and sexuality within society; it examines how identity has been a key site for generating knowledge and political action. Students will learn the histories and nuances of topics such as intersectionality, privilege, allyship, and cultural appropriation. Finally, the course will examine how concepts such as 'diversity' are mobilized in relation to different institutions, such as the law and education. This is a writing intensive course.

Prerequisites: WGS 201S, a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, and 6 semester hours in literature, history, social sciences, and/or performing arts courses

QUST 303 Queer Studies (3 Credit Hours)

This course is an interdisciplinary study of LGBTQ+ (lesbian, gay, bisexual, transgender, queer) experiences. It introduces students to personal, cultural, and political aspects of queer life while examining social forces such as heteronormativity, the social construction of gender, and homophobia and their impact on queer lives.

Prerequisites: WGS 201S or instructor approval

QUST 305 Queer Literature (3 Credit Hours)

This course provides a historical sampling of queer literary voices in the U.S. Students explore fiction, poetry, drama, and visual literary forms through the lens of queer theory. Students investigate the ways in which queer authors and subjects have been excluded from the traditional canon and how readers, academics, critics, and authors of anthologies have ignored or obscured queer possibilities and homoeroticism in literary works. Students also explore the benefits of thinking of queer literary works as queer literatures (in the plural sense rather than the singular Queer Literature) and attempt to answer the question, is there such a thing as Queer Literature?

Prerequisites: ENGL 112L, ENGL 114L, or WCS 100L

QUST 395 Topics in Queer Studies (1-3 Credit Hours)

A study of selected topics in Queer Studies. These courses are usually interdisciplinary and align with faculty teaching and research strengths.

Prerequisites: WGS 201S or instructor approval

QUST 402 Feminisms and Sexualities (3 Credit Hours)

This course will examine feminist approaches to the subject of sexuality in the twentieth and twenty-first centuries. The course examines theorizations of sexuality, such a radical, critical race, and transnational feminisms, queer theory, and trans studies. Key questions will be: how have feminists theorized sexualities? What does sexuality have to do with feminist studies or practices? How do other identities, such as race and class, inform sexuality?

Prerequisites: WGS 201S, WGS 390T or instructor approval

QUST 460W Feminist and Queer Theory (3 Credit Hours)

This course will examine feminist and queer theories, specifically intersectional, transnational, and radical perspectives. It explores how feminist and queer scholars approach research, writing, and knowledge production, and applies these insights to students' own interests. The course analyzes how feminist and queer scholars have written about storytelling, the body, and desire, and links these discussions to how to produce positive social change in our world. This course is fundamentally interdisciplinary; students are encouraged to make connections between the course materials, their research interests, and other fields of study. This is a writing intensive course.

Prerequisites: WGS 201S, QUST 302W or WGS 302W, and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

QUST 495 Topics in Queer Studies (3 Credit Hours)

Advanced seminars on selected topics. The subject matters is usually interdisciplinary and aligns with faculty teaching and research strengths.

Prerequisites: WGS 201S or instructor approval

QUST 497 Independent Study (1-6 Credit Hours)

Independent study of an interdisciplinary topic in Queer Studies, or a reading plus internship project to be selected under the direction of a faculty member. Conferences and papers as appropriate.

Prerequisites: QUST 303 or WGS 303 and approval of instructor and chair of department

QUST 498 Independent Study (1-6 Credit Hours)

Independent study of an interdisciplinary topic in Queer Studies, or a reading plus internship project to be selected under the direction of a faculty member. Conferences and papers as appropriate.

Prerequisites: QUST 303 or WGS 303 and approval of instructor and chair of department

REL - Religious Studies

REL 131 Introductory Greek for Reading the New Testament I (3 Credit Hours)

An introductory course in Koine Greek, the language of the New Testament, for those interested in preparing for academic or personal study of early Christianity or the New Testament in the language in which the documents were written. Does NOT satisfy any foreign language requirement at Old Dominion University.

REL 132 Introductory Greek for Reading the New Testament II (3 Credit Hours)

An intermediate course in Koine Greek, the language of the New Testament, for those interested in preparing for academic or personal study of early Christianity or the New Testament in the language in which the documents were written. Does NOT satisfy any foreign language requirement at Old Dominion University.

Prerequisites: REL 131 or permission of the instructor

REL 147G Cults and Conspiracies (3 Credit Hours)

This course will explore why people believe conspiracy theories and why people become dedicated to religious cults or new religious movements, and will provide training in tools and strategies for examining truth claims of various groups.

REL 150P Life, Death, and Meaning (3 Credit Hours)

What is the meaning of life, and what role might the end of life play in living meaningfully? This course provides an introduction to philosophy and religious studies through an investigation of different views on death and the meaning of life from diverse cultures and identities. (Cross-listed with PHIL 150P)

REL 155E Human Nature (3 Credit Hours)

What ways of thinking, feeling, and acting are essentially human? This course focuses on some of the most influential and fascinating philosophical and religious accounts of human nature from diverse cultural perspectives. Topics may include the nature of human beings in relation to God, society, ethics, politics, knowledge, the environment, freedom, evolution, the mind, language, race, gender, and technology. (Cross-listed with PHIL 155E)

REL 226G Honors: Muslims & Media (3 Credit Hours)

Open only to students in the Honors College. A special honors section of REL 260G.

REL 235E Love, Sex, and Desire (3 Credit Hours)

Is love universal or culturally bound? Is sexual desire biologically driven or learned? This course provides an introduction to Philosophy and Religious Studies through an investigation of love, sex, and desire vis-a-vis ethical values and societal norms. (Cross-listed with PHIL 235E)

REL 260G Muslims & Media (3 Credit Hours)

Television, film, and journalism play an influential role in introducing Muslim life to broad audiences. This course provides an introduction to the representation of Islam in news and popular culture over the past century. In examining the relationship between Muslims and media we will develop information literacy skills and learn how to critically evaluate and interpret these sources.

REL 311 Hebrew Bible/Old Testament (3 Credit Hours)

An investigation of the Hebrew Bible on the basis of Biblical criticism and research. Attention is given to the cultural and historical background of these writings.

Prerequisites: junior standing and three semester hours in philosophy, or permission of the instructor

REL 312 New Testament (3 Credit Hours)

An investigation of New Testament literature and thought on the basis of Biblical criticism and research. Attention is given to the religious and cultural background of early Christianity, particularly in late Judaism.

Prerequisites: junior standing and three semester hours in philosophy, or permission of the instructor

REL 315 Qur'an (3 Credit Hours)

The course will examine the Qur'an, the scripture of Islam, as well as other sacred texts such as the Hadith literature (sayings of Muhammad) and the Sira literature (accounts of Muhammad's life). This course will explore the role of these literatures in the faith, culture, and history of Islam. Our survey will include explorations of the history and reception of various texts, their literary and stylistic features, and various themes such as mystical, legal, modern, and feminist interpretations.

Prerequisites: ENGL 110C

REL 333 Historical Jesus (3 Credit Hours)

This course examines the several quests to uncover the historical reality behind Jesus of Nazareth in modern biblical-historical scholarship, including the work of scholars like Albert Schweitzer, Rudolph Bultmann, and the many contemporary inquirers. Students are expected to have some familiarity with the New Testament and/or early Christianity.

Prerequisites: Junior standing and three semester hours in REL or PHIL

REL 350 Judaism (3 Credit Hours)

This course is a basic introduction to Judaism. We will explore the fundamental tenets of Jewish belief, examine primary expressions of Jewish ritual and practice, discuss the historical development of Judaism, and explore sacred texts, secular Yiddish texts, and contemporary issues confronting Jews and Judaism.

Prerequisites: ENGL 110C

REL 351 Christianity (3 Credit Hours)

A study of the Christian tradition, including its primary texts, historical development, intellectual tenets, and contributions to human culture. Specific attention will be given to Christianity as a way of life.

Prerequisites: three semester hours in philosophy or permission of the instructor

REL 352 Islam (3 Credit Hours)

A study of the Islamic tradition, including its primary texts, historical development, intellectual tenets, and contributions to human culture. Specific attention will be given to Islam as a way of life.

Prerequisites: three semester hours in philosophy or permission of the instructor

REL 353 Asian Religions (3 Credit Hours)

This course introduces students to several key religious traditions originating in Asia, such as: Hindu traditions in India; Confucianism, Daoism, and popular religion in China, Buddhism and Shinto in Japan; and Buddhist traditions of China, Tibet, and Mongolia. Students will read and analyze primary sources in English translation. By examining artifacts from literature, art, and poetry, students will also learn about cultural history. Throughout the course, we will be employing hermeneutical methods in the field of religions studies, such as methods of comparisons.

Prerequisites: ENGL 110C and 3 credits of PHIL or REL, or permission of the instructor

REL 354 African and African American Religious Traditions (3 Credit Hours)

This course surveys key historic and contemporary religions and socio-religious ideas that help shape African and African American life, culture and practices. It also reflects on culture and practice to discover ways in which lived experience shapes religious thought and practice.

Prerequisites: ENGL 110C and 3 credits of PHIL or REL, or permission of the instructor

REL 380 Hinduism (3 Credit Hours)

An intensive study of the basic teachings of Hinduism as manifested in its sacred writings.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

REL 381 Buddhist Traditions (3 Credit Hours)

A study of the origin, historical development, and contemporary status of Buddhism, in terms of its religious and philosophical elements and its influence in Asian cultures.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

REL 395 Topics in Religious Studies (3 Credit Hours)

The advanced study of selected topics designed to permit qualified students to work on subjects that, because of their specialized nature, may not be taught regularly. These courses will appear in the course schedule booklet and will be more fully described in information distributed to all academic advisors.

Prerequisites: 3 hours in PHIL or permission of the instructor

REL 396 Topics in Religious Studies (3 Credit Hours)

The advanced study of selected topics designed to permit qualified students to work on subjects that, because of their specialized nature, may not be taught regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: three hours in PHIL or REL or permission of the instructor

REL 403/503 Gender and Sexuality in Islam (3 Credit Hours)

This course explores the shifting constructions of gender and sexuality in Muslim communities from the early period until the present, considering feminism, patriarchy, gender identity, masculinity, femininity, homosexuality, heteronormativity, and transgender people.

Prerequisites: ENGL 211C, ENGL 221C or ENGL 231C, and three credit hours in PHIL or REL, or permission of the instructor

REL 451/551 Native American Philosophies (3 Credit Hours)

This course will provide students with an introduction to Native American philosophies with a focus on issues of identity, genocide, personhood, gender, sovereignty, and decolonization. Topics will be approached through a consideration of Native American philosophical methodologies and Native views regarding metaphysics, epistemology, and ethics. (Cross-listed with PHIL 451)

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of instructor

REL 483/583 Tibet, Happiness, and this Precious Life (3 Credit Hours)

Throughout this course, students will examine Tibetan texts and artifacts that address the meaning of happiness and the human condition. The course covers the indigenous religion Bön; the four main Tibetan Buddhist traditions (Nyingma, Sakya, Kagyu, and Geluk), Islam in Tibet, and contemporary social issues, such as gender, identity politics, and the use of social media.

Prerequisites: ENGL 110C and 3 credit hours in PHIL or REL, or permission of the instructor

REL 495/595 Topics in Religious Studies (1-3 Credit Hours)

The advanced study of selected topics designed to permit qualified students to work on subjects that, because of their specialized nature, may not be taught regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: 3 hours in PHIL or REL or permission of the instructor

REL 496/596 Topics in Religious Studies (1-3 Credit Hours)

The advanced study of selected topics designed to permit qualified students to work on subjects that, because of their specialized nature, may not be taught regularly. These courses will appear in the course schedule and will be more fully described in information distributed to all academic advisors.

Prerequisites: three hours of PHIL or REL or permission of the instructor

REL 497/597 Tutorial Work in Religious Studies (1-3 Credit Hours)

Independent reading and study of a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: permission of the instructor

REL 498/598 Tutorial Work in Religious Studies (1-3 Credit Hours)

Independent reading and study of a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: permission of the instructor

REST - Real Estate

REST 319 Principles of Real Estate (3 Credit Hours)

The fundamentals of real estate productivity and value are developed. Legal elements of real estate transactions, physical aspects of real estate location and production, and economic factors pertinent to real estate.

Prerequisites: A declared major in the University or permission of the Dean's Office

REST 368 Real Estate Internship (1-3 Credit Hours)

A faculty supervised, professionally oriented project. Approval for enrollment and allowable credits is determined by the department chair.

A transfer student must have completed one semester at Old Dominion University.

Prerequisites: A declared major in the Strome College of Business or permission of the Dean's Office

REST 450 Real Estate Finance (3 Credit Hours)

This course explores the different financing and ownership arrangements used in real estate transactions.

Prerequisites: REST 319 or permission of the instructor

REST 451 Real Estate Appraisal (3 Credit Hours)

Economic theories of value applied to real estate as a guide to business decisions.

Prerequisites: REST 319 or permission of the instructor

REST 452 Real Estate Property Management (3 Credit Hours)

The course offers an introduction to the role that real estate property management plays, and also indirectly, to make students aware of the career opportunities available. The class emphasizes the role of property management on asset value. This is considered from a range of perspectives. Not only is the role of asset management in adding value to an investment considered but the corporate/occupiers viewpoint is also examined.

Prerequisites: REST 319

REST 454 Real Estate Investment Analysis (3 Credit Hours)

Examination of developments in real estate valuation and investment with use of computer terminal models.

Prerequisites: REST 319 or permission of the instructor

REST 495 Selected Topics in Real Estate (3 Credit Hours)

For advanced students in real estate.

Prerequisites: REST 319 or permission of the instructor

RMI - Risk Management and Insurance

RMI 317 Principles of Risk Management and Insurance (3 Credit Hours)

Recommended elective for non-business as well as business majors. The primary focus of this introductory course is on evaluating life, health, retirement, property, liability and personnel exposures to loss and analyzing the methods for managing these risks. Risk management and insurance techniques for dealing with potential losses to individuals and organizations will be emphasized. Classwork and a group project will also cover emerging risks, such as cyber risk, and technologies disrupting the industry. Students receiving a B or better in this course can have it count as the CPCU 500 course of the Chartered Property-Casualty Underwriter (CPCU) professional designation.

Prerequisites: A declared major in the University or permission of the Dean's Office of the Strome College of Business

RMI 367 Cooperative Education (1-6 Credit Hours)

Available for pass/fail grading only. May be repeated for credit up to a maximum of 6 credits. Approval for enrollment and allowable credits are determined by the risk management and insurance advisor in accordance with the policy for granting credit for Cooperative Education programs.

Prerequisites: A declared major in the University or permission of the Dean's Office

RMI 368 Insurance Internship (1-3 Credit Hours)

A faculty supervised, professionally oriented project. Approval for enrollment and allowable credits is determined by the Risk Management advisor. A transfer student must have completed one semester at Old Dominion University.

Prerequisites: A declared major in risk management and approval of the Risk Management advisor

RMI 410 Life and Health Insurance (3 Credit Hours)

This course uses a broad-based financial planning approach in considering the nature and importance of individual life and health risks and uses of individual life and health insurance in treating these risks. The implications of various legal, tax, and accounting considerations on businesses and individuals are discussed. The course also provides an overview of the operational aspects of life insurers, including organization, underwriting, actuarial, reinsurance, marketing, investment, taxation, and accounting functions. Cases are employed.

Prerequisites: RMI 317 or permission of the instructor

RMI 411 Employee Benefit Planning (3 Credit Hours)

This course considers the ability of group insurance and other private pooling mechanisms to alleviate the financial problems arising from death, disability, medical treatment and retirement. Primary emphasis on design, tax and administrative characteristics as they relate to employer-sponsored benefit programs. Cases are employed.

Prerequisites: RMI 317 or permission of the instructor

RMI 412 Property & Liability Insurance Company Operations (3 Credit Hours)

The course provides a broad overview of the operational activities and current problems of property and liability insurance companies, including organization, regulation, pricing, underwriting, claims, reinsurance, marketing, investment, and accounting functions. Classwork and a group project will also cover emerging risks, such as cyber risk, and technologies disrupting the industry. Students receiving a B or better in this course can have it count as the CPCU 520 course of the Chartered Property-Casualty Underwriter (CPCU) professional designation.

Prerequisites: RMI 317 or permission of the instructor

RMI 413 Risk Analysis and Control (3 Credit Hours)

Recommended elective for non-business as well as business majors. This course focuses on the risk analysis and control phases of the risk management process in business and governmental organizations. Particular attention is paid to the recognition, measurement, and treatment of traditional and emerging risks, risk financing options other than commercial insurance, and decision making under conditions of uncertainty. Classwork and a group project will also cover emerging risks, such as cyber risk, and technologies disrupting the industry.

Prerequisites: RMI 317 or equivalent or permission of the instructor

RMI 443 Enterprise Risk Management (3 Credit Hours)

This course is designed as a capstone course for students majoring or minoring in risk management and insurance. The class will be introduced to all aspects of enterprise risk management (ERM), which is the emerging paradigm in risk management. Classwork and a group project will also cover emerging risks, such as cyber risk, and technologies disrupting the industry.

Prerequisites: RMI 317 and either RMI 412 or RMI 413 or permission of instructor

RMI 495 Selected Topics in Risk Management and Insurance (3 Credit Hours)

For advanced students in risk management and insurance.

Prerequisites: Permission of the instructor

RT - Recreational Therapy

RT 210 Leisure, Health, and Wellness (3 Credit Hours)

This course focuses on the concept of leisure and its impact on health and wellness for individuals and groups. Fundamental principles, philosophies, and theories of leisure, health, and wellness are emphasized. Leisure's relationships with physical, cognitive, social, emotional, and spiritual growth, human satisfaction, and quality of life are explored. Leisure's influence on challenges to wellness experienced by diverse populations (e.g., individuals with disabilities, older adults, racial and ethnic groups, individuals identifying as LGBTQIA+) is examined. Strategies for protecting and promoting health through leisure are integrated throughout the course.

Pre- or corequisite: RT 261

RT 261 Foundations of Recreational Therapy Practice (3 Credit Hours)

This course is designed to be an introduction to the historical and conceptual roots of recreational therapy. Content includes recreational therapy service delivery models, legislation, professional organizations, places of practice, ethical conduct, and credentialing procedures.

RT 290 Professional Preparation in Recreational Therapy (3 Credit Hours)

This course is designed to facilitate personal exploration and professional preparation for careers in recreational therapy. Topics include professional ethics, professional involvement, professional behaviors & responsibilities, and career preparation. On-site observation of recreational therapists in practice settings is required.

Prerequisites: RT 261 with a minimum grade of C- and recreational therapy major

RT 366 Internship Preparation (1 Credit Hour)

This course is designed to provide students with the skills and knowledge required to successfully acquire an internship placement in recreational therapy. Emphasis will be placed on resume and cover letters, internship search strategies, interviewing skills, and internship documentation requirements. Students are required to become familiar with all documentation requirements in the Recreational Therapy Internship Manual, and successfully secure an internship for the following semester.

Prerequisites: RT 261 with a minimum grade of C-, senior standing, and a recreational therapy major

RT 368 Junior Internship (3 Credit Hours)

This course requires a 200-hour junior internship experience at an approved health and human service agency in which students are involved with ongoing recreational therapy programs. Students are expected to observe and assist recreational therapy staff during this field experience. Students must be supervised by a Certified Therapeutic Recreation Specialist (CTRS) working for the agency.

Prerequisites: Junior standing, RT 261 with a minimum grade of C-, RT 290, RT 420, RT 450, and a declared recreational therapy major

RT 420 Intervention Techniques in Recreational Therapy (4 Credit Hours)

This course is designed to introduce students to a wide variety of Recreational Therapy interventions. Students will explore physical, cognitive, and psychosocial interventions. Facilitation techniques, activity modification, and group facilitation will be explored. Students will connect diagnostic groups to specific Recreational Therapy interventions. Students will facilitate group recreational therapy interventions during lab.

Prerequisites: RT 261 with a minimum grade of C-, recreational therapy major or minor, junior or senior standing, and a declared major in the university

RT 430 Assessment, Documentation, and Evaluation in Recreational Therapy (3 Credit Hours)

This course will provide students with a detailed examination of assessment, documentation, and evaluation procedures used in the recreation therapy treatment process. Course focus includes the assessment and documentation process, including instrument design, selection, and implementation, and the reporting and use of data for treatment planning and program evaluation.

Prerequisites: RT 261 with a minimum grade of C-, recreational therapy major or minor, junior or senior standing, and a declared major in the university

RT 450 Diagnostic Groups in Recreational Therapy (3 Credit Hours)

This course is designed to introduce students to a variety of disabilities, illnesses, and health conditions recreational therapists may encounter in practice. The prevalence, etiology, diagnostic criteria, pathology, symptomatology, and prognosis of various conditions is presented, and the bio-psycho-social impact of the illness/disability on the individual and family is discussed. Emphasis is placed on the delivery of recreational therapy services for individuals with illnesses/disabilities and related populations.

Prerequisites: RT 261 with a minimum grade of C-, recreational therapy major or minor, junior or senior standing, and a declared major in the university

RT 460 Administration of Recreational Therapy Services (3 Credit Hours)

This course explores the basic principles of organizing and managing quality recreational therapy services. Content includes supervisory and administrative responsibilities, budgeting, managing personnel including student interns and volunteers, developing a clinical supervision program, marketing recreational therapy services, and developing a recreational therapy department based on professional standards of practice and recreational therapy models of service delivery.

Prerequisites: RT 261 with a minimum grade of C-, recreational therapy major or minor, junior or senior standing, and a declared major in the university

RT 468 Senior Internship (12 Credit Hours)

This capstone course requires a 560-hour and 14-week senior internship experience at an approved health and human service agency practicing recreational therapy. Students will apply academic learning and will demonstrate competencies associated with entry-level practice in recreational therapy. The student's academic and agency direct supervisors must be Certified Therapeutic Recreation Specialists.

Prerequisites: Senior standing and permission of instructor

RT 470 Recreational Therapy Program Design and Implementation (3 Credit Hours)

This skill-based course is designed to further students' practical understanding of client-centered recreational therapy program design and implementation using evidence-based strategies, techniques, and interventions. Emphasis is placed on the purpose, roles, and outcomes of recreational therapy service delivery in healthcare and community settings. Topics include assessment, recreational therapy practice models, specific program planning, task analysis, facilitation techniques, implementation of evidence-based interventions, documentation, and evaluation of services as well as interprofessional practice. Field-based application of course concepts is required.

Prerequisites: RT 261 with a minimum grade of C-, recreational therapy major or minor, junior or senior standing, and a declared major in the university

Pre- or corequisite: RT 420 and RT 450

Corequisites: RT 480W

RT 480W Evidence-Based Practice and Trends in Recreational Therapy (3 Credit Hours)

This course provides an overview of evidence-based practice and related disciplinary writing in recreational therapy contexts. Through exploration of current trends and issues in the field of therapeutic recreation and a writing intensive approach, students develop skills in evaluating and interpreting research and applying applicable findings through evidence-based practice, service to the field, and professional advocacy. This is a writing intensive course.

Prerequisites: ENGL 211C or ENGL 231C; RT 261 with a minimum grade of C-, recreational therapy major or minor, junior or senior standing, and a declared major in the university

Pre- or corequisite: RT 420 and RT 450

Corequisites: RT 470

RT 497 Independent Study (1-3 Credit Hours)

Individualized instruction to include research, specialized studies, or other scholarly writing.

Prerequisites: Declared recreational therapy major and permission of instructor

RT 498 Directed Research in Recreational Therapy (1-6 Credit Hours)

Supervised research on a specific problem in recreational therapy. Regular meetings with faculty and a written/oral report are required.

Prerequisites: Instructor approval required

RUS - Russian

RUS 101F Beginning Russian I (3 Credit Hours)

Aural comprehension, oral drill and discussion of grammar principles, written exercises, and reading assignments.

RUS 102F Beginning Russian II (3 Credit Hours)

Aural comprehension, oral drill and discussion of grammar principles, written exercises, and reading assignments.

Prerequisites: RUS 101F

RUS 195 Topics in Russian (1-3 Credit Hours)

A study of selected topics designed as electives. These courses will appear in the course schedule. Highly interactive.

RUS 196 Topics in Russian (1-3 Credit Hours)

A study of selected topics designed as electives. These courses will appear in the course schedule. Highly interactive.

RUS 201 Intermediate Russian I (3 Credit Hours)

Graded readings with grammar review followed in the second semester by an introduction to Russian literature.

RUS 202 Intermediate Russian II (3 Credit Hours)

Graded readings with grammar review followed in the second semester by an introduction to Russian literature.

Prerequisites: RUS 201

RUS 295 Topics in Russian (1-6 Credit Hours)

A study of selected topics designed as electives. These courses will appear in the course schedule.

RUS 296 Topics in Russian (1-3 Credit Hours)

A study of selected topics designed as electives. These courses will appear in the course schedule.

RUS 305 Contemporary Russian Conversation (3 Credit Hours)

A study of selected dialogues emphasizing the spoken language and designed to improve oral proficiency and aural comprehension.

Prerequisites: RUS 202 or advanced placement

RUS 395 Topics in Russian (1-3 Credit Hours)

A study of selected topics designed as electives. These courses will appear in the course schedule.

Prerequisites: RUS 202 or the equivalent

SCI - Sciences

SCI 101 Introduction to the College of Sciences (1 Credit Hour)

Presents the relationship between majors in the College of Sciences and the student's career goals for students planning to major in a science. Provides an orientation to the University emphasizing the learning skills needed for science majors.

SCI 195 Topics (3 Credit Hours)

Topics of study that are not offered regularly.

SCI 302T The Evolution of Modern Science (3 Credit Hours)

This course outlines the history of science from Aristotle to the present. Scientific progress has always been coupled with human progress and subject to the politics and culture of the times. Scientists, in most instances, have been in the mainstream of society. But, because of their curiosity and innovation, scientists have often clashed with the prevailing culture. (Cross-listed with HIST 386T).

Prerequisites: HIST 100H, HIST 101H, HIST 102H, HIST 103H, HIST 104H, or HIST 105H

SCI 347 Responsible Conduct of Research (1 Credit Hour)

Responsible conduct of research is essential to good science and promoting public confidence in scientific knowledge. This course will introduce students to responsible conduct of science and scientific research by exploring ethical and professional principles associated with the practice of research.

Prerequisites: Junior standing

SCI 395 Special Topics (1-3 Credit Hours)

Topics of study that are not offered regularly.

Prerequisites: permission of the instructor

SCI 468 Research Methods in Math and Sciences (3 Credit Hours)

Emphasizes the tools and techniques used to solve scientific problems. Topics include use and design of experiments, use of statistics to interpret experimental results, mathematical modeling of scientific phenomena, and oral and written presentation of results. Students will perform four independent inquiries, combining skills from mathematics and science to solve research problems.

Prerequisites: BIOL 307, BIOL 308 or BIOL 316/BIOL 317 OR CHEM 321 OR MATH 212 OR OEAS 306 or OEAS 310 OR PHYS 232N

SCI 495 Topics (1-3 Credit Hours)

Topics that are not offered regularly.

Prerequisites: permission of the instructor

SCLM - Supply Chain, Logistics, and Maritime Operations

SCLM 201 Introduction to Spreadsheet Applications (1 Credit Hour)

The spreadsheet has become one of the most widely used analytical tools in the modern world. This course introduces students to the use of spreadsheet (e.g., MS Excel). Topics include: formulas, functions, sorting and filtering, and pivot tables. Besides the spreadsheet capabilities, the course will cover spreadsheet applications in the supply chain, logistics and maritime industry.

SCLM 202 Data-Driven Decision Making in Supply Chain and Maritime Operations (3 Credit Hours)

An introductory study of analytics applications in supply chain, logistics and the maritime industry using MS Excel and Tableau. Generic topics include understanding the problem-solving process, data visualization, descriptive and predictive analytics applications in supply chains. Spreadsheet applications in maritime transportation/logistics, sourcing, and scheduling offer an introductory overview of forecasting and optimization techniques

SCLM 204 Fundamentals of Global Supply Chain Management (3 Credit Hours)

An introductory course in supply chain and logistics. Topics cover strategic, tactical and operational issues in planning, implementing, and controlling end-to-end fulfilment of globally produced goods and/or services using the SCOR model. The pedagogy also superimposes analytics with strategic outcomes to facilitate prudent, data-driven decision making across supply chains.

SCLM 301 Supply Chain Analytics (3 Credit Hours)

A survey of analytics applications in supply chain and logistics, emphasizing the use of data to inform business decision-making. Students work in teams to analyze data using the five broad areas of analytics, namely data mining, statistical inference, forecasting, simulation and optimization using a wide array of examples from scheduling, location modeling, transportation, transshipment, and process improvement. Students also gain experience with effective communication of results to decision-makers.

Prerequisites: SCLM 201

SCLM 303T Maritime Leadership, Technology, and Society (3 Credit Hours)

This course introduces students to the intersections between maritime leadership, technology, and society. It will explain the important elements of the marine transportation and technological systems, which consist of waterways and ports that allow for various modes of transportation to move people and goods to, from, and on the water. Specific topics include an introduction to different types of cargo, how cargo is moved, ship types, ship equipment, ship routes, basic navigation and ship stability, emerging industries including offshore wind and autonomous systems, maritime law, maritime safety, and leadership.

Prerequisites: ENGL 110C

SCLM 304 Operations in a Global Environment (3 Credit Hours)

This course examines strategic, tactical and operational issues in the planning and control of manufacturing and service delivery operations in an increasingly globalized world. This course examines such topics as process design, capacity, materials planning and control, inventory decisions, location and layout, quality and scheduling.

Prerequisites: STAT 130M

SCLM 311 Project Management in Supply Chain & Logistics Operations (3 Credit Hours)

This course will examine the intersection of project/program management and supply chain operations with an introduction to key project management concepts including scope, schedule, and budget. Students will gain a deeper understanding of how improving logistical processes can enhance products, processes and services while providing value to supply chain stakeholders. The course will emphasize team building, leadership and negotiation skills for successful project execution.

Prerequisites: SCLM 204

SCLM 368 Internship in Supply Chain, Logistics, and Maritime Operations (3 Credit Hours)

Practical field experience in a Supply Chain, Logistics and Maritime Operations related project through a supervised internship.

Prerequisites: Permission for enrollment and allowable credit by the School's Director in the semester prior to enrollment

SCLM 370 Global Logistics (3 Credit Hours)

The course examines international logistics and terms for movement of goods and analyzes how companies enter into foreign markets and participate in international trade. It discusses processes and concepts involved in domestic and international multimodal transportation. It also covers operational issues such as payment, commercial documents, insurance, and customs.

Prerequisites: Junior standing

SCLM 380 Multimodal Freight Transportation (3 Credit Hours)

The course includes an overview of the key elements of multimodal freight transportation. It examines modes of transportation, transportation economics, and transportation technology, as well as costing and pricing for transportation. The relationships between intermediaries (including third party-logistics companies), carriers, and shippers are discussed. It also provides an overview for transportation risk, transportation software as well as issues on global logistics.

Prerequisites: SCLM 370

SCLM 410 International Maritime and Transportation Law and Policy (3 Credit Hours)

The logistics activities are increasingly global and are influenced by a system of national and international laws. This complex industry requires an understanding of the regulations and legislation for freight transportation flows. This course will cover domestic and international supply contracts for freight cargo, Incoterms, international law of the sea, maritime jurisdiction, regulation of shipping, carriage of goods, cargo and marine insurance, salvage, marine environmental law, safety at sea, along with other relevant transportation laws.

Prerequisites: Junior standing

SCLM 414 Maritime Operations (3 Credit Hours)

This course covers the operation of assets related to maritime transportation, including seaports, vessels fleets in the movement of cargo domestic and international cargo. It presents concepts related to organization and operation of ports. It discusses issues involved in planning, investment, communication systems, congestion, pollution, safety, security; intermodal transportation; water and land accessibility; and port competition and cooperation. Examines freight shipping organizations operations. Topics include vessel fleet, shipping markets, operations, costs, insurance, and regulations; and ship types, safety, role of the flag state, pollution, chartering and purchase, and understanding of the shipbuilding and ship repair market.

Prerequisites: SCLM 370

SCLM 415/515 Maritime and Supply Chain Safety and Security (3 Credit Hours)

This course examines methods to anticipate threats and mitigation strategies for securing the supply chain and increasing its resilience. It provides an overview of international and U.S initiatives to ensure the security of logistics assets, cargo, people, and infrastructure within the maritime and supply chain domain. The course also addresses threats to the international trade (including maritime piracy, terrorism, cyber threats), and state-of-the-art techniques and tools for protecting the industry against cyberattacks, as well as roles and responsibilities of the supply chain actors.

Prerequisites: Junior standing

SCLM 419/519 Maritime and Supply Chain Risk and Insurance (3 Credit Hours)

This course examines the risks associated with supply chain operations, including aspects of identification, analysis, assessment, response, and control of the risks associated with the transportation and storage of goods. It covers risk assessment as a function of threats, vulnerabilities, and consequences for operational performance for all modes of transportation. Topics include Lloyd's and the London Insurance Market, principles of insurance and law, international liability conventions, institute clauses, exclusions, cargo policies, particular and general average, and salvage insurance.

Prerequisites: SCLM 370

SCLM 430 Global Sourcing and Supply Market Analysis (3 Credit Hours)

This course offers a strategic overview of sourcing materials and services within the supply chain, covering the evolution from purchasing to supply management. Topics include sourcing analytics, supplier evaluation, global risk, and ethical sourcing. Students will develop negotiation, analytical, and communication skills through experiential learning, including consulting projects, case studies and role-playing exercises, to master both conceptual and practical aspects of global sourcing.

Prerequisites: SCLM 204

SCLM 442/542 Supply Chain and Maritime Intelligence (3 Credit Hours)

This course examines the performance metrics of the supply chain, including item tracking and visibility of the whole chain, including control tower approaches. It covers the importance of supply chain information collection, real-time data sharing and basic analytics tools to evaluate and improve the degree of execution of the supply chain and generating insights. Topics include monitoring supply chain processes, end-to-end visibility, collaborative supply chain networks, data integration, and data visualization.

Prerequisites: SCLM 301

SCLM 443 Building Sustainable Supply Chains (3 Credit Hours)

This course examines the environmental impact of supply chain activities, including environmental measurements and strategies to achieve carbon neutrality. Topics include green network distribution, sustainable sourcing operations, and circular supply chains.

Prerequisites: Junior standing

SCLM 450/550 Supply Chain 4.0 Technologies and Innovations (3 Credit Hours)

This course examines the role of technology within the supply chain and how these technologies can be used to improve supply chain performance. Topics include AI, blockchain and smart contracts, IoT and digital twins, Large Language models (LLM), automation and robotics, digital supply chain transformation, machine learning in supply chain, anti-hacking technologies, autonomous vehicles, and additive manufacturing, among others.

Prerequisites: SCLM 202 and SCLM 204

SCLM 461/561 Warehousing, Distribution and Material Management (3 Credit Hours)

This course is designed to investigate the strategic role of warehouses, distribution centers and material management in domestic and global supply chains. Course content includes the analysis of distribution center operations through the study of warehouse design and layout, material handling systems and equipment, distribution network design, warehouse processes, order-picking strategies, inventory control, and safety.

Prerequisites: SCLM 370

SCLM 471 Port and Terminal Operations (3 Credit Hours)

Examines the role of seaports in the movement of cargo throughput. It presents concepts related to design, organization, administration, and operation of ports. It discusses issues involved in planning, investment, communication systems, congestion, pollution, safety, security, technology; intermodal transportation; water and land accessibility; and port competition and cooperation to improve customer service.

Prerequisites: SCLM 370

SCLM 472/572 Vessel Fleet Operations (3 Credit Hours)

Examines the operations of freight shipping organizations involved in the transport of cargo by ship. Key topics are vessel fleets and ship space; shipping markets, operations, costs, investment, insurance, claims, and regulation; and ship types, cargoes, safety, flagging, pollution, and chartering, purchase and scrapping.

Prerequisites: SCLM 370

SCLM 473/573 Inland Waterways and Dredging Operations (3 Credit Hours)

This course is designed to explore and analyze the current condition of inland waterways and the maintenance of the navigational channels. It will include topics such as: the importance of marine highways, current waterways infrastructure (dams, locks and canals), barge types, the environmental benefits as well as its current legislation and policy. Also, it will cover dredging processes, types of equipment and stages of dredging projects with emphasis on the maintenance of navigation channels, disposal sites, and beneficial use of dredge materials.

Prerequisites: SCLM 370

SCLM 474/574 Shipbuilding & Ship Repair Logistics (3 Credit Hours)

Examines the shipbuilding and ship repair industry from the perspective of industry economics, technology, project management and supply and procurement processes. It covers principal ship dimensions, typical types of ship repairs, the preparation for a routine docking period with emphasis on the materials logistics, and the shipbuilding logistics process.

Prerequisites: SCLM 370

SCLM 481/581 Freight Brokerage and 3PL Services (3 Credit Hours)

This course covers the basics of Freight Brokering including types of freight and the types of niche markets available, import/export compliance and regulations, Broker-Carrier and Broker-Shipper Agreements, determination of freight shipment rates, load tracking, and carrier relations. Also, it covers the role of the 3PLs in freight brokerage plus inventory management, consolidation, order fulfillment and warehousing.

Prerequisites: SCLM 370 or SCLM 204

SCLM 486/586 Cruise Ship Operations (3 Credit Hours)

Overview cruise ship markets and tourism, and cruise ship types and cruise ship lines. Basic cruise operations including sales, supplies, safety and security, itineraries and ports of call, terminal operations and personnel management. Detailed understanding of the relevant issues surrounding the cruise ship terminal operations and sustainability of cruise line services.

Prerequisites: SCLM 370

SCLM 495 Selected Topics in Supply Chain, Logistics and Maritime Operations (3 Credit Hours)

A study of selected topics within Supply Chain, Logistics and Maritime Operations designed to provide an in-depth exploration of current issues.

Prerequisites: SCLM 204 and permission of the instructor; or permission of the Director of the School of Supply Chain, Logistics and Maritime Operations

SCLM 497 Independent Study (3 Credit Hours)

Independent study in Supply Chain, Logistics and Maritime Operations under the direction of a faculty member.

Prerequisites: senior standing and permission of the instructor; or permission of the Director of the School of Supply Chain, Logistics and Maritime Operations

SEPS - STEM Education and Professional Studies

SEPS 100 Sales Techniques (3 Credit Hours)

This is an introductory course that emphasizes the concept of determining customer needs, wants, and desires and matching them to products and services for a long-term sales relationship.

SEPS 102 Advertising and Promotion (3 Credit Hours)

This is an introductory course designed to teach the fundamental product and service promotion processes of planning and producing advertising and promotion campaigns.

SEPS 195 Topics (1-3 Credit Hours)

Topics of current interest in the area of STEM Education and Professional Studies.

SEPS 203S Dress, Culture and Society (3 Credit Hours)

This course is an analysis of dress in cultures around the world while developing an understanding of its relationship to human beings as biological, aesthetic, and social animals. Human beings dress their bodies to communicate identity and to receive personal satisfaction. Students will discover how global fashion, age, gender, ethnicity, and income influence the fashion industry and our lives.

SEPS 208 Retail Merchandising and Buying (3 Credit Hours)

This course introduces students to the fundamentals of retail merchandising and explores retail buyers' skills and responsibilities including identifying customers and vendors, retail mathematics, buying plans, and merchandise control.

SEPS 220 The Fashion Industry (3 Credit Hours)

Course is designed for marketing education and fashion students. It covers fashion as a force which alters patterns of change and growth in the fashion industry to include designers, manufacturers, buyers, retailers, and customers. Students explore the latest trends in style and materials.

SEPS 223A Visual Merchandising and Display (3 Credit Hours)

This course is designed to introduce students to the best practices and effective strategies in visual merchandising. It will provide the basic framework with which prospective merchandisers plan and construct visual displays that enhance the selling of merchandise and ideas.

SEPS 234 Survey of Dress and Costume (3 Credit Hours)

Whether high fashion or low, glitz or grunge, from revolutionary politics to the new machine age, war and depression to growth and prosperity, fashion dress and costume goes hand-in-hand with history. This course examines the evolution of dress and costume and finds innovation at every turn.

SEPS 295 Topics (1 Credit Hour)

Topics of current interest in the area of STEM Education and Professional Studies.

SEPS 297 Observation and Participation (1 Credit Hour)

Students observe middle and/or high school classes for 30 clock hours. Assist teachers and students in practical settings. Relate principles and theories of education and specialty content to actual practice in the classrooms and schools. Attend seminars related to contemporary school practices.

Prerequisites: sophomore standing

SEPS 302 Workforce Supervision Management (3 Credit Hours)

Explores the skills and knowledge required of successful supervisors: leading, motivating, setting goals, delegating, budgeting, interviewing, negotiating, counseling, coaching, conducting meetings, and handling grievances.

Prerequisites: junior standing or permission of the instructor

SEPS 355 Fashion Consumer Behavior (3 Credit Hours)

This course is designed to enhance a student's understanding of what drives customers' wants and needs for fashion merchandise. Students examine the forces that affect consumer buying behavior and how they relate to the marketing of fashion.

Prerequisites: SEPS 208 and SEPS 220

SEPS 367 Cooperative Education (1-3 Credit Hours)

Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and the Cooperative Education program prior to the semester in which the work experience is to take place.

Prerequisites: approval by the department in accordance with the policy for granting credit for Cooperative Education programs

SEPS 389 Education and Training of Adults (3 Credit Hours)

An in-depth overview of education and training of adults. Attention is given to adult learning theory and strategies for facilitating the learning process. Aspects of the course will focus on helping students understand and visualize jobs and careers in adult education and training.

Prerequisites: junior standing or permission of the instructor

SEPS 395 Topics in Occupational Education (1-3 Credit Hours)

The department offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest.

Prerequisites: permission of the instructor

SEPS 400/500 Instructional Systems Development (3 Credit Hours)

Students learn how to design and develop classroom instructional materials including career and technical education and training curricula and programs for youths and adults. Skills in this area include the selection and use of materials, including media and computers and evaluation of pupil performance. Training specialist students learn to develop instructional materials using the instructional systems design process. Career and technical education students learn to plan instruction, to implement competency-based and standards-based education, and to modify and use the Virginia career and technical education curriculum guides.

Prerequisites: junior standing

SEPS 401/501 Foundations of Career and Technical Education (3 Credit Hours)

This course is designed to teach career and technical education majors to plan, develop, and administer a comprehensive program of career and technical education for high school students and adults. Students also develop an understanding of the historical and sociological foundations underlying the role, development and organization of public education in the United States.

Prerequisites: junior standing

SEPS 402/502 Instructional Methods in Occupational Studies (3 Credit Hours)

Designed to develop a student's ability to use basic instructional techniques and methods applicable to career and technical education, and adults in business, government, and industrial organizations. It involves videotaped micro-teaching demonstrations and presentations.

Prerequisites: SEPS 400

SEPS 405 Directed Work Experience (4 Credit Hours)

Student must be employed the summer prior to his/her senior year in an emphasis-related job approved by the instructor. The student work is supervised by a job supervisor and the course instructor in a cooperative effort. Must complete a job package that describes all aspects of the organization.

Prerequisites: junior standing

SEPS 408/508 Advanced Classroom Issues and Practices in Career and Technical Education (3 Credit Hours)

An overview of classroom issues and practices for prospective career and technical teachers. The course covers classroom management and safety, communication processes, reading in the content area and child abuse and neglect recognition and intervention. Students learn the legal requirements and alternative teaching strategies for serving students with special needs. Students visit schools for a 30-hour student observation. PRAXIS II and VCLA are course completion requirements.

Prerequisites: admission to an approved teacher education program

SEPS 409/509 Fashion Forecasting Market Trip (3 Credit Hours)

This is the study of planning and conducting a fashion buying trip to one of the major fashion markets in the United States like the Las Vegas Magic Trade Show. The students envision themselves as buyers in action and learn how trend forecasting and creative presentations help market fashion products and services to trade customers and consumers.

Prerequisites: SEPS 208

SEPS 410/510 The Foreign Fashion Market Trip (3 Credit Hours)

Students plan and conduct a fashion buying trip to a foreign market in Europe or Asia, and learn how to buy merchandise in the global marketplace. The course requires students to go on the trip as well as attend the pre- and post-trip classes.

Prerequisites: SEPS 208

SEPS 415 Advanced Merchandising (3 Credit Hours)

This course is designed for marketing education and fashion students. It includes advanced merchandising math concepts used in the merchandising industry. Topics include pricing and re-pricing merchandise, creating and analyzing six-month plans, maintaining inventory control, and solving problems that are typically experienced in the merchandising field.

Prerequisites: SEPS 208

SEPS 420 Fashion Research (3 Credit Hours)

This course is designed to apply diverse research methods to explore the complex dynamics in fashion. Utilizing an interdisciplinary approach, students will engage in diverse topics in fashion bridging the gap between theory and practice.

Prerequisites: SEPS 208 and SEPS 220

SEPS 422 Fashion Product Development (3 Credit Hours)

Students work step-by-step through the preproduction processes of apparel product development: planning, forecasting, fabricating, developing silhouettes and specifications, pricing, and sourcing. The course demonstrates how these processes must be coordinated to get the right product to retail when consumers want it and at a price they are willing to pay.

Prerequisites: SEPS 208 and SEPS 220

SEPS 424/524 Fashion, Textiles, and Construction Analysis (3 Credit Hours)

This course explores information related to new technological advances in the textile/apparel industry and determines consumer preferences and concepts of fashion product quality. It includes the development of standards for judging qualities of merchandise. Fabrics are examined to determine the value they provide to the apparel and accessories customer.

Prerequisites: junior standing or permission of the instructor

SEPS 427 Fashion Marketing (3 Credit Hours)

This course explains key concepts of fashion marketing and illustrates how they are applied within the fashion industry. Using examples and case studies, students will examine how marketers develop and apply strategies that meet consumer needs for fashion products.

Prerequisites: SEPS 208 and SEPS 220

SEPS 431/531 Web-Based Organization for Fashion (3 Credit Hours)

This course provides the basic communications foundations needed to conceive, plan, develop, implement, and maintain a Web-based organization for fashion. Upon completion, students will understand what is required to plan, launch and maintain a successful online venture, limited only by the willingness of the student to explore these technological advances.

Prerequisites: STEM 251G

SEPS 435/535 International Retailing (3 Credit Hours)

This course examines globalization and the development of an integrated global economy. Primary emphasis is placed on the strategies for successful global business expansion for retailers in international markets.

Prerequisites: SEPS 220 or SEPS 208

SEPS 440/540 Fashion Global Sourcing/Supply Chain Management (3 Credit Hours)

This course examines the role of global sourcing in the strategic positioning of retailers in the global economy. Emphasis is placed on economic, political, logistical, and ethical factors affecting world trade and global sourcing decisions.

Prerequisites: SEPS 220 or SEPS 208

SEPS 450/550 Assessment, Evaluation and Improvement (3 Credit Hours)

This course prepares training and educational professionals to plan for and conduct assessments to use in planning instructional programs, evaluate individual learning, monitor student progress, measure program effectiveness and efficiency, and evaluate the return on investments of training courses and programs.

Prerequisites: junior standing

SEPS 456 E-Commerce and Social Media in Fashion (3 Credit Hours)

This course is designed to understand the expanding fields of e-commerce and social media. It will focus on examining features available in social media and the web/mobile technologies and their ability to improve fashion marketing strategies.

Prerequisites: SEPS 208 and SEPS 220

SEPS 480 Senior Project: Merchandise Retailing (3 Credit Hours)

A senior capstone course in which fashion and business knowledge and skills are applied to plan and implement a merchandise retailing business. Students must submit a professional quality written report and present results to a panel of consultants. Course to be taken final semester before graduation.

Prerequisites: Instructor permission

SEPS 481 Career and Professional Development (3 Credit Hours)

To provide the senior-level student majoring in occupational and technical studies with the skills and techniques necessary to bridge the gap from college to career. Focus is on the generation of a professional portfolio and experiential learning that will transfer into today's job market. This course should be taken in the final semester before graduation.

Prerequisites: Junior standing

SEPS 484/584 Student Teaching Mentored (6-12 Credit Hours)

Classroom placement in school systems for students to apply content and methodologies. The student is mentored by a school mentor and university faculty. This course is for newly hired teachers on provisional contracts.

Prerequisites: completion of the approved teacher education program in the major area, departmental approval, and permission of the director of teacher education services; passing scores on PRAXIS I or State Board of Education-approved SAT or ACT scores and passing scores on the appropriate PRAXIS II content examination required

SEPS 485 Student Teaching (12 Credit Hours)

Five days per week, full semester. Available for pass/fail grading only.

Prerequisites: completion of the approved teacher education program in the major area, departmental approval, passing scores on PRAXIS I or State Board of Education-approved SAT or ACT scores, passing scores on the appropriate PRAXIS II content examination, and permission of the director of teacher education services

SEPS 486/586 Middle School Student Teaching for Technical Education (6 Credit Hours)

Classroom placement for student teaching in a middle school technology laboratory. Students apply content and methodology under the supervision of a cooperating teacher and university faculty member. Available for pass/fail grading only.

Prerequisites: SEPS 408, SPED 313, TLED 408 and SEPS 450; or SEPS 508, SEPS 596, STEM 730, SEPS 788, TLED 608, READ 680 for graduate students; passing scores on PRAXIS I or State Board of Education-approved SAT or ACT scores and passing scores on the appropriate PRAXIS II content examination are required

SEPS 495/595 Topics in Occupational Education (1-3 Credit Hours)

The department offers selected topics designed to permit small groups of qualified students to work in subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of the instructor

SEPS 496/596 Topics in Career and Technical Education (1-3 Credit Hours)

The department offers selected topics designed to permit small groups of qualified students to work in subjects of mutual interest which, due to their specialized nature, may not be offered regularly.

Prerequisites: permission of the instructor

SEPS 497/597 Independent Study in Occupational Education (1-6 Credit Hours)

Independent study.

Prerequisites: permission of the instructor

SEPS 498 Independent Study in Occupational Education (1-6 Credit Hours)

Independent study.

Prerequisites: permission of the instructor

SMGT - Sport Management

SMGT 214 Introduction to Sport Management (3 Credit Hours)

Course will introduce students to the basic foundational knowledge of the sport industry, plus a wide range of career opportunities involving sport, and the various impacts of sport.

Prerequisites: A passing grade in MATH 102M or MATH 103M or MATH 162M or STAT 130M

SMGT 305 Sport Administrative Theory (3 Credit Hours)

Principles of organization and administration as they apply to managing sport organizations. Issues related to working with and through individuals to achieve organizational goals and objectives are discussed.

Prerequisites: SMGT 214 with a grade of C- or better

SMGT 312 Sport Sales (3 Credit Hours)

This course will teach students to learn and navigate the sport sales process. The financial strength of a sport entity is determined by its sales ability, and through lecture, guest speakers, and applied 'real world' exercises, students will have the opportunity to obtain knowledge, skills, and experiences in sport sales that are essential for entry level positions.

Prerequisites: SMGT 214 with a grade of C- or better

SMGT 315 Sport Media and Public Relations (3 Credit Hours)

An introduction to sport media and public relations. Special emphasis will be placed on the communications process in sport and the various mediums that can be used to convey messages. The internal and external publics involved in sport public relations will be examined along with the steps involved in the process.

Prerequisites: SMGT 214 with a grade of C- or better, and a grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C

SMGT 331 Fiscal Planning and Management in Sport and Recreation (3 Credit Hours)

This course is designed to examine the principles and practices of financial management in diverse recreation and sport service settings. Course will explore the basic concepts of financial planning and analysis to effectively manage a successful operation.

Prerequisites: SMGT 214 with a grade of C- or better, ACCT 201, and MATH 102M or higher

SMGT 368 Sport Management Fieldwork Experience (3 Credit Hours)

Selected experiences in sport, leisure or athletics that will enable students to become more actively involved with sport industry professionals and develop specialized industry skills. There is a 200-clock hour requirement.

Prerequisites: SMGT 214 with a grade of C- or better, SMGT 369 with a grade of C- or better, restricted to sport management majors and minors and permission of the instructor

SMGT 369 Sport Management Pre-Internship (3 Credit Hours)

A practical experience allowing sport management pre-internship students to shadow and observe sport industry professionals in a field-based setting. Portfolio development, reflective assessment of management, observation techniques and internship requirements will be emphasized.

Prerequisites: SMGT 214 with a grade of C- or better, sophomore standing or higher, restricted to sport management majors or minors

SMGT 414 Sport Marketing (3 Credit Hours)

Course will examine competitive market strategies as they apply to the sport industry. Emphasis will be placed on the relationship between sport products and sport markets, the communication mix, market research, and the role of strategic planning for business sponsorship.

Prerequisites: SMGT 214 with a grade of C- or better and junior standing

SMGT 415/515 Principles of Coaching Management (3 Credit Hours)

This course is designed to provide students with a basic knowledge of the coaching profession. Special emphasis will be placed on establishing a sound coaching philosophy, selecting a coaching style, desirable qualities of a coach, ethics and the coach, roles of the head coach, planning and organizing for games and practices, coaching pedagogy, off-season planning, final preparations for the season, and issues and problems related to coaching and recruiting athletes.

Prerequisites: ENGL 110C

SMGT 421 Legal Aspects in Recreation and Sport Management (3 Credit Hours)

This course presents an overview of the increasing effect the law is having on amateur athletics, professional sports and recreation programs.

Prerequisites: SMGT 214 with a grade of C- or better and junior standing

SMGT 432 Sport Facility and Event Management (3 Credit Hours)

This course provides an examination of the principles and practices of sport facility and event management. Special emphasis will be placed on management functions related to facility planning and supervision, financing, site design, public relations, security, operations, maintenance, programming, box office operations and concessions. This course is designed to introduce students to principles and practices of planning, budgeting, operating, scheduling, managing, and evaluating events in the sport industry. Students will acquire an in-depth knowledge about the specialized field of event management and become familiar with management techniques and strategies required for successful promotion, implementation and evaluation of special events within a sport context.

Prerequisites: SMGT 214 with a grade of C- or better and junior standing

SMGT 450W Ethics and Morality in Sport (3 Credit Hours)

This writing intensive course offers an introduction to ethics and morality within the context of sports. It examines the values of sport and the basis for ethical decision making. Readings, case studies and class discussion are used to explore the moral significance of sport. This course is designed to foster critical thinking skills and to improve written and verbal communication skills through analysis of philosophical and ethical issues associated with sport.

Prerequisites: SMGT 214 with a grade of C- or better, a grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C and Junior standing

SMGT 455 Sport in Contemporary Society (3 Credit Hours)

Discusses the phenomenon of sport as it represents one of the most pervasive social institutions today. The major theme of this course is to demonstrate how sport reflects and enforces the beliefs, values, and ideologies of society. Emphasis is placed on changing attitudes and current trends in the world of sport. The course will be taught from sociological and philosophical perspectives.

Prerequisites: SMGT 214 with a grade of C- or better, and junior standing

SMGT 456/556 Sport Psychology (3 Credit Hours)

This course examines psychological theories and research related to sport and exercise behavior. The course is designed to introduce students to the field by providing a broad overview of topics associated with sport and exercise psychology.

Prerequisites: ENGL 110C

SMGT 460/560 Sport and Social Justice (3 Credit Hours)

The class is a comprehensive survey of the historical interrelationship between sports and civil rights movements in the United States, emphasizing the African American experience. Through popular and academic text and documentary films, students will examine the role that sport has played in raising consciousness about racial issues, and how participation and spectatorship influence attitudes about race.

Prerequisites: SMGT 214 or instructor permission

SMGT 468 Sport Management Internship (6-12 Credit Hours)

Culminating field-based experience required for all students with a major in sport management. Students will work with faculty in securing a placement with a sport-related organization to apply the knowledge from the classroom to real-world experiences. Internship site must be approved by the internship coordinator. 240-480 clock hours are required depending on the credit awarded.

Prerequisites: Completion of all coursework, a C- in SMGT 369, a GPA of 2.0 in the major, and instructor permission

SMGT 480/580 Introduction to Sport Analytics (3 Credit Hours)

This course will examine the theory, development, and application of analytics in sport. Students will learn about the application of analytics in sport for purposes of evaluating player performance, team management, market segmentation, pricing, and other areas in sport industry operations. Analytics includes the inclusive use of data, statistical and quantitative analysis, explanatory and predictive models, and fact-based decision making.

Prerequisites: SMGT 214 with a grade of C- or better, and junior standing

SMGT 495/595 Topics in Sport Management (3 Credit Hours)

This course provides an opportunity for in-depth study of selected topics in sport management.

Prerequisites: ENGL 110C

SMGT 497 Independent Study in Sport Management (1-3 Credit Hours)

Individualized instruction to include research, specialized studies, or other scholarly writing.

Prerequisites: Permission of the instructor

SOC - Sociology

SOC 100S Leadership and Society (3 Credit Hours)

This course addresses the social, political, psychological, economic, and international dimensions of leadership through a social science framework. A specific focus is given to the dynamic interactions between social structures and leadership behavior. Students explore how society shapes leaders and how leaders shape society. Using an introspective approach, students consider their role as current and future leaders in a diverse society.

SOC 201S Introduction to Sociology (3 Credit Hours)

An introduction to the discipline and methods of sociology. Major topics include socialization, social inequality, family, education, gender roles, ethnic and minority relations.

SOC 203S Diversity and Society (3 Credit Hours)

This course examines social diversity and inclusivity in American society and is designed to sensitize students to the roles that typology such as race, ethnicity, social class, religion, sex and gender, age, health, (dis)ability, sexual orientation, and language play in societal definitions of social diversity.

SOC 205S Data, Technology, Society (3 Credit Hours)

This course investigates how data science is transforming not only our sense of science and scientific knowledge, but our sense of ourselves and our communities and our commitments concerning human affairs and institutions generally. Social implications of the digital revolution, including ethical issues associated with algorithmic design and privacy will be examined. Students will use a sociological lens to explore how our increasingly digital lifestyle changes institutions and social relations.

SOC 226S Honors: Introduction to Sociology (3 Credit Hours)

Open only to students in the Honors College. A special honors section of SOC 201S.

SOC 300 Social Problems (3 Credit Hours)

An analysis of the major social problems confronting groups and individuals in a society marked by rapid change. Emphasis is given to the study of social phenomena including both historical and comparative perspectives.

Prerequisites: SOC 201S or permission of the instructor

SOC 303 Families and Society (3 Credit Hours)

This class explores both contemporary and historical aspects of singlehood, courtship, mate selection, cohabitation, marriage, sexuality, and family. Relationship quality, communication, conflict, and the termination of relationships is also examined. Emphasis is placed on examining the diversity of relationships and family structures as well as how our family experiences are shaped by gender, race/ethnicity, class, and sexual orientation.

Prerequisites: Any "S" (Human Behavior general education) course

SOC 306 Religion and Society (3 Credit Hours)

Sociological analysis of religion as a social institution, of the functions of religion and its relationship to other institutions and to social change, and of the religious behavior of individuals.

Prerequisites: SOC 201S or permission of the instructor

SOC 309 Population and Society (3 Credit Hours)

This course offers an introduction to the field of population and its interconnection to broader societal changes. It introduces students to the concepts, issues and concerns in population studies and examines the interaction between population processes and economic development, social changes and environment. Topics include theories, fertility, mortality, migration, distribution and composition, population and development, population and environment, and policy. Emphasis is given to a critical assessment of population processes as both causes and consequences of development and societal changes with a focus on comparative patterns between developing countries and the more developed countries.

Prerequisites: Six semester hours in human behavior or permission of the instructor

SOC 316 Juvenile Delinquency (3 Credit Hours)

A study of juvenile misbehavior in the contemporary community, its nature, extent, treatment, and control, including juvenile court procedure and philosophy.

Prerequisites: CRJS 215S or SOC 201S or permission of instructor

SOC 320 Social Inequality (3 Credit Hours)

An analysis of social differentiation, stratification, and social class. Emphasis is placed upon modern American society, with some comparison with historical and contemporary systems of other societies.

Prerequisites: SOC 201S or permission of the instructor

SOC 323 Sociology of Minority Families (3 Credit Hours)

Examination and explanation of minority families' lives in relationship to other societal institutions and historical developments. The course focuses on issues of minority families and places these issues in a sociological framework, e.g., stratification, poverty and gender.

Prerequisites: SOC 201S or permission of the instructor

SOC 325 Social Welfare (3 Credit Hours)

An introduction to the broad field of social welfare. The philosophy, values, purposes, goals, and functions of social welfare are examined.

Prerequisites: SOC 201S or permission of the instructor

SOC 326 LGBTQ People, Crime, and Justice (3 Credit Hours)

Objectives include: learning appropriate terminology to discuss LGBTQ individuals and reviewing the social issues facing these populations, such as criminalization and damaging cultural stereotypes; critically exploring the history of interactions between LGBTQ communities and agents of formal control, such as schools and the police; evaluating the experiences of LGBTQ youth and adults in the juvenile and criminal justice systems; and interrogating how changing political and social contexts affect policy regarding formal responses to LGBTQ communities.

Prerequisites: SOC 201S or CRJS 215S

SOC 330 Society and the Individual (3 Credit Hours)

Social psychological theory and research on current topics of interest on the relationship of the individual to society.

Prerequisites: SOC 201S or permission of the instructor

SOC 337 Social Research Methods (3 Credit Hours)

An overview of the scientific approach to the study of social phenomena through quantitative, qualitative and mixed methods approaches. Interviews/survey and experimental/quasi-experimental designs and other strategies of social inquiry are covered. The course includes the application of software to provide descriptive and inferential statistics to summarize data.

Prerequisites: CRJS 215S or SOC 201S, and STAT 130M

SOC 340 Sociology of Women (3 Credit Hours)

An exploration of the role and status of women in contemporary American society from a feminist sociological perspective.

Prerequisites: SOC 201S or six credits in human behavior or permission of the instructor

SOC 343 Sexualities in Society (3 Credit Hours)

This course offers an introduction to the sociological study of sexualities. This course focuses on the ways in which sexuality as a social institution and identity intersects with other hierarchies of privilege and inequality, such as race, social class, and gender. A range of topics will be covered including LGBTQ+ identities, the social construction of sexuality, historical accounts of sexual practices, and contemporary theories and research in sexualities studies.

Prerequisites: SOC 201S

SOC 344 Social Science and Crime Mapping (3 Credit Hours)

A critical exploration of applying geographic information system (GIS) to view, understand, question, interpret, and visualize social science and crime data that reveal relationships, patterns, and trends. Students will learn to 1) frame a research question or hypothesis from a location-based perspective; 2) collect, create and examine geographically referenced demographic, social, and criminological data; 3) learn to use GIS mapping software to visualize, manage and analyze this data in order to investigate the relationship between geographic, demographic, social and criminological variables; and 4) arrive upon decisions and conclusions and communicate these via the creation of publishable maps.

Prerequisites: SOC 201S or CRJS 215S or permission of the instructor

SOC 347 Sport Sociology (3 Credit Hours)

This course applies the sociological perspective to the world of sports. It provides the student with a better understanding of the social processes involved in sports. The course looks at how the media, community, tradition, and privilege play an integral role in the participation of sporting events. It also covers why sports exist, who plays sports, and what will become of sports in the future.

Prerequisites: SOC 201S OR CRJS 215S

SOC 348 Film and Society (3 Credit Hours)

Sociological examination of film as an art form, an industry, and a social institution. Major topics include socialization through film, how one's unique socialization affects the film experience, social inequality (racism/ethnocentrism/sexism/ageism) as exhibited in film, and as they occur within the film industry, film as an educational tool, gender roles as exhibited in film and perpetuated within the film industry, film and copycat crime, crime in the film industry, portrayal of crime in film, international cinema and globalization.

Prerequisites: SOC 201S or permission of the instructor

SOC 350 Disasters and Society (3 Credit Hours)

The purpose of this class is to examine and compare various sociological theories/models that pertain to the study of disasters in terms of their contribution to our understanding of disasters. In addition, the class explores how disasters are studied scientifically by sociologists in order to aid students in acquiring a better understanding of the causes and consequences of disasters and the challenges they pose for modern societies.

Prerequisites: SOC 201S or SOC 226S

SOC 355 Social Work and Society (3 Credit Hours)

This course is designed to introduce students to the profession of social work. Students will investigate what social work is and how it is different from other helping professions. Students will examine the theoretical and ethical underpinnings of social work, the different levels of intervention, and the major areas of practice. This course will also focus on the importance of cultural awareness as well as the role of social work in alleviating and at times maintaining systems of inequality and oppression.

Prerequisites: SOC 201S or permission of the instructor

SOC 368 Internship (1-6 Credit Hours)

This course allows students to volunteer in an agency related to their major for pass/fail credit. Students must volunteer for 50 hours per course credit. Internships for fewer than 3 credits require prior approval by the Internship Faculty Director.

Prerequisites: Permission of the department internship director

SOC 395 Topics in Sociology (3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: SOC 201S or permission of the instructor

SOC 396 Topics in Sociology (3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: SOC 201S or permission of the instructor

SOC 400/500 War and Gender (3 Credit Hours)

In this course students grapple with issues concerning war, gender roles, and gender inequality. The course addresses gender roles in war throughout history, globally and across cultures. However, the United States military and military involvement in the 20th and 21st century remain the primary focus areas. Discussions include how social norms and ideals of masculinity and femininity shape, and in turn are shaped by, images and realities of war, including gendered aspects of nationalism and just war theories. The military involvement of men, women (and children) in war and in peacetime, as participants and observers, perpetrators and victims, supporters and opponents of war is also discussed.

Prerequisites: SOC 201S and junior standing

SOC 402/502 Sociology of Child Welfare (3 Credit Hours)

A sociological analysis of the field of child welfare. Topics include social inequality as it applies to children as a group in the U.S. and globally; understanding violence against children within the global context of children's rights; examining data on the degree to which policies, programs and research in the field fail to protect children and why; prevalence, causes and consequences of child sexual, physical and emotional abuse and neglect; evaluation of programs like 'family preservation' and of placement in 'substitute' care, i.e., foster care, adoption, institutionalization; changes that would protect and advance the interests and rights of children at the parent-child, agency, and societal level.

Prerequisites: SOC 201S

SOC 403 Violence in the World of Children (3 Credit Hours)

This 'child-centered' course examines the interaction of adults in violent conflict with the world of children, children's experience of violence and its meaning in the lives of children. Topics include: valuing children, violence toward children in culture, families, and schools; child physical and sexual abuse and neglect; gangs, violent communities, and children and war. The effects of childhood experiences of violence, children's coping with violence, and alternatives to violence are also developed.

Prerequisites: Six hours in the human behavior perspective or SOC 201S or CRJS 215S or permission of the instructor

SOC 405/505 Social Change and Social Movements (3 Credit Hours)

Analysis of the nature and causes of social change, major social movements, and their impact upon contemporary society.

Prerequisites: SOC 201S or permission of the instructor

SOC 407 Violence Against Children Internationally (3 Credit Hours)

This course focuses on the research on child maltreatment abuse internationally, in particular on the most common types of child abuse and neglect—i.e., perpetrated by parents, family members. The negative effects of child abuse and neglect are associated subsequently with every social problem from poverty, teenage motherhood, substance abuse, violent crime, domestic violence, and mental health problems, to ill-health—from cancer to diabetes.

Prerequisites: SOC 201S or CRJS 215S

SOC 408 Children's Rights and the Law (3 Credit Hours)

A study of the law concerning children from a children's rights perspective. The rights of children in the US will be compared to other nations with special emphasis being placed on the UN Convention on the Rights of the Child.

Prerequisites: SOC 201S OR CRJS 215S or related human behavior Way of Knowing or permission of the instructor

SOC 409W Sociological Theory (3 Credit Hours)

The development of sociological thought during the nineteenth and twentieth centuries. Analysis of major contributions to the development of systematic thinking in contemporary sociology. This is a writing intensive course.

Prerequisites: SOC 201S and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

SOC 418 Crime, Society and the Media (3 Credit Hours)

A critical exploration of media portrayals of crime and criminal justice. News and entertainment genres are examined. Connections between the mass media and crime, culture, politics, society, and individual behavior receive special attention. (cross listed with CRJS 418)

Prerequisites: SOC 201S or CRJS 215S or permission of the instructor

SOC 419 Animals and Society (3 Credit Hours)

This is a class about the role of nonhuman animals in society. Animals are used to entertain, to do work, to provide companionship, to provide food, and more. In this class, we also discuss the causes and consequences of both individual and institutional animal abuse. Society's relation to wildlife is also an important component and includes poaching, sport and trophy hunting, and society's reaction to wolves, coyotes, and wild horses in the West. Cross-listed with CRJS 419.

Prerequisites: Any human behavior (S) course, such as SOC 201S, CRJS 215S, PSYC 201S, COMM 200S, or permission of instructor

SOC 420W African American Political and Social Thought (3 Credit Hours)

This course is designed to introduce students to the historical and contemporary experiences of 'Blackness' as it has been constructed, contested and affirmed in various historical, political and narrative contexts. Embracing the theme of duality, the course examines what it means for a culture and people to be both integral to and excluded from the American political and social community. This is a writing intensive course.

Prerequisites: Grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C and a General Education human behavior course

SOC 421/521 Deviant Behavior (3 Credit Hours)

A study of various definitions and forms of deviant behavior, theoretical explanations of causes of deviant behavior and the impact of deviant behavior on society and the individual.

Prerequisites: SOC 201S or CRJS 215S or permission of the instructor

SOC 423/523 Women, Health and Healing (3 Credit Hours)

An examination of women's experiences with health and illness and women's roles in the health-care system as patients and care providers from a feminist sociological perspective.

Prerequisites: Six hours of human behavior courses or permission of the instructor

SOC 426/526 Minority Group Relations (3 Credit Hours)

The study of the process of and responses to the oppression of racial, religious, ethnic, and national minorities in a variety of countries within a historical and comparative perspective. Special emphasis given to American minorities and especially African Americans.

Prerequisites: SOC 201S or permission of the instructor

SOC 427/527 Gender-Based Violence (3 Credit Hours)

This course takes an expansive and intersectional approach to studying various forms of gender-based violence, from the interpersonal to the systemic, institutional, and cultural. Prevalence, risk factors, theoretical explanations, and legal remedies related to topics such as intimate partner violence, sexual assault on college campuses, gender-based violence in the military, sexual violence against undocumented immigrants, commercial sexual exploitation, and racism and reproductive health will be examined.

Prerequisites: SOC 201S or CRJS 215S or permission of the instructor

SOC 436 Capstone Research Project (3 Credit Hours)

Students work in groups to plan, design, and carry out a research project. Final papers which report the results of the study are presented in a formal research seminar. The projects are to reflect knowledge gained from undergraduate work and training received in STAT 130M and SOC 337.

Prerequisites: SOC 337 and STAT 130M and senior status

SOC 438 Education and Society (3 Credit Hours)

Sociological theory and research investigating contemporary education as a social institution.

Prerequisites: SOC 201S or permission of the instructor

SOC 440/540 Health, Illness, and Society (3 Credit Hours)

The study of health, illness and society. After exploring how health is conceptualized by the prevailing allopathic medical model, an emergent alternative or "integrative" health perspective is examined with a focus on how wellbeing may be understood.

Prerequisites: SOC 201S or permission of the instructor

SOC 441/541 Drugs and Society (3 Credit Hours)

The study of sociological and social psychological explanations of drug-using behaviors and of legal and medical control of drugs. Topics include changes in the legal status of drugs, cross-cultural and historical variations in the control and use of drugs, and social epidemiology of drug use in contemporary society.

Prerequisites: SOC 201S or CRJS 215S or permission of the instructor

SOC 444 Community Justice (3 Credit Hours)

This is a service learning course designed to study how the emerging field of community justice, a neighborhood-based strategy, can reduce crime and improve public safety by investing in social, human and cultural capital.

Prerequisites: SOC 201S or CRJS 215S

SOC 445 Workplace Law and Society (3 Credit Hours)

This course examines the laws of the workplace from a sociological and issue-driven approach considering two perspectives – both employer and employee. Relevant laws are identified, explored and made relevant through examples of their application in real-world situations. Sometimes the wisdom of these laws will be challenged; students will be encouraged to raise questions about a law's utility, justice or fairness, whether in principle or in application.

Prerequisites: Junior standing

SOC 451 Race, Ethnicity, Crime and Justice (3 Credit Hours)

This course will examine the intersectionality of race, ethnicity, crime, justice and the operation of the criminal justice system and will critically assess controversial issues surrounding race, ethnicity, crime, and justice. Students will discuss contemporary social justice issues as they relate to race, ethnicity, crime, and justice. The theoretical frameworks that explain the intersection between race, ethnicity, crime and justice will be examined. The course will also investigate the broad range of policy issues and recommendations impacting communities of color and the administration of criminal and social justice.

Prerequisites: CRJS 215S or SOC 201S

SOC 452 Diversity in Criminal Justice Organizations (3 Credit Hours)

This course examines the impact of diversity, culture, and ethnic origin in criminal justice organizations. The course is designed to better prepare students to meet the challenge of diversity in criminal justice organizations.

Prerequisites: SOC 201S or CRJS 215S or permission of instructor

SOC 494 Entrepreneurship in Sociology/Criminal Justice (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to integrate disciplinary theory and knowledge through developing a nonprofit program, product, business, or other initiative. The real-world experiences that entrepreneurship provided will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems. The course can be delivered either as an independent project for individual students or as group projects similar to those sometimes offered in topics courses.

Prerequisites: junior standing

SOC 495/595 Topics in Sociology (3 Credit Hours)

The advanced study of selected topics designed to permit students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: SOC 201S or permission of the instructor

SOC 496/596 Topics in Sociology (3 Credit Hours)

The advanced study of selected topics designed to permit students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.

Prerequisites: SOC 201S or permission of the instructor

SOC 497/597 Independent Study (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the department chair

SOC 498/598 Tutorial Work in Special Topics in Sociology (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: Senior standing and approval of the department chair

SPAN - Spanish

SPAN 101F Beginning Spanish I (3 Credit Hours)

This course is the first of the beginning Spanish language sequence. The course takes a task-based, content-based, communicative approach to language learning and teaching. It develops beginning skills in reading, writing, speaking and listening. The course also builds communicative competence and enhances social and cultural awareness of the Spanish-speaking world.

SPAN 102F Beginning Spanish II (3 Credit Hours)

This course is the second of the beginning Spanish language sequence. The course takes a task-based, content-based, communicative approach to language learning and teaching. It develops beginning skills in reading, writing, speaking and listening. The course also builds communicative competence and enhances social and cultural awareness of the Spanish-speaking world.

Prerequisites: SPAN 101F

SPAN 121F Intensive Beginning Spanish (6 Credit Hours)

This is an accelerated introductory-level course that combines SPAN 101 and SPAN 102. This course is designed for students planning on minoring or majoring in Spanish, or receiving a teaching license in Spanish. However, ALL students are welcome with permission of the instructor. Class is conducted in Spanish.

Prerequisites: Minimum of three years of high school Spanish and interview with instructor (please email for appointment)

SPAN 195 Topics in Spanish (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule.

SPAN 196 Topics in Spanish (1-3 Credit Hours)

A study of selected topics designed as electives for non-majors. These courses will appear in the course schedule.

SPAN 201 Intermediate Spanish I (3 Credit Hours)

This first course of the intermediate language sequence is designed to improve the speaking, listening, reading, and writing skills of students and to provide insight into the language and culture of Spanish-speaking people. Meant to integrate and extend earlier learning, the course is intended to keep building communicative competence and social and cultural awareness of the Spanish-speaking world.

Prerequisites: SPAN 102F or SPAN 121F or advanced placement

SPAN 202 Intermediate Spanish II (3 Credit Hours)

This course is a continuation of SPAN 201 that further improves the speaking, listening, reading, and writing skills of students and provides insight into the language and culture of Spanish-speaking people. It is intended to keep building communicative competence and social and cultural awareness of the Spanish-speaking world.

Prerequisites: SPAN 201 or advanced placement

SPAN 221 Intensive Intermediate Spanish (6 Credit Hours)

This is an accelerated course that combines SPAN 201 and SPAN 202 and continues the focus of SPAN 121F. This course is designed for students planning on minoring or majoring in Spanish, or receiving a teaching license in Spanish. However, ALL students are welcome with permission of the instructor. Class is conducted in Spanish.

Prerequisites: A grade of C or better in SPAN 121F or SPAN 102F and interview with instructor (please email for appointment)

SPAN 266 Spanish for Health Professions (3 Credit Hours)

This course seeks to develop Spanish language abilities for students involved in the health professions, i.e., medical fields, dentistry, physical therapy, etc. Although this course develops all skill areas (reading, writing, speaking, listening), it will concentrate on the development of oral communication and the cultural issues facing professionals and Spanish-speaking patients.

Prerequisites: SPAN 101F and SPAN 102F or SPAN 121F or 3 years of Spanish at the secondary level

SPAN 295 Topics in Spanish (1-3 Credit Hours)

A study of selected topics designed as electives for nonmajors. These courses will appear in the course schedule.

SPAN 296 Topics in Spanish (1-3 Credit Hours)

A study of selected topics designed as electives for nonmajors. These courses will appear in the course schedule.

SPAN 310 Advanced Grammar Review (3 Credit Hours)

May be taken concurrently with SPAN 312W. The objective of the course is to improve the student's knowledge of Spanish grammar and syntax through the review of grammatical rules and their application. Emphasis is placed on how grammatical forms codify meaning and how grammar and meaning interact to construct the language and textual structure of different genres. This course is recommended for students who wish to major or minor in Spanish and need a grammar review. As this course is considered a review, it will not count toward the major or minor.

Prerequisites: SPAN 202 or SPAN 221 or placement through testing

SPAN 311 Global Conversations (3 Credit Hours)

This course is primarily a conversation course to develop linguistic and cultural proficiency in verbal communication. Task-oriented communication strategies in cross-cultural training will be practiced by presenting students with models that demonstrate appropriate linguistic and cultural competencies. Students will practice these skills by role-playing, giving presentations, enriching self-awareness with practiced in-group discussions on various topics (such as, prejudice, racism, values, and customs) that dispel stereotypes and foster more in-depth social-cultural understanding, and with participation in guided cultural encounters. Students will improve their listening and comprehension skills and deepen cultural proficiency by learning how to communicate and collaborate with other people and cultures in a global age. (This is an oral skills course.)

Prerequisites: a grade of C or better in SPAN 202 or SPAN 221 or advanced placement

SPAN 312W Writing Around the World (3 Credit Hours)

This is an intensive writing course designed with writing assignments that examine various cultural contexts that enable students to understand cultural content, style, audience and organization. The main objective of the course is increased awareness of and sensitivity to appropriate word choice, and syntax in the language. Students will engage in writing for different cultural audiences and in varied contexts such as literary, artistic and media expressions around the world. Special emphasis is placed on the methodology of close reading as students hone the analytics skills and vocabulary necessary to interpret idioms, regionalism, cultural expressions and overall intercultural skills observed in various genres and cultures. Students will analyze compelling global issues and the diverse cultural perspectives that inform them.

Prerequisites: A grade of C or better in ENGL 211C, ENGL 221C or ENGL 231C and a grade of C or better in SPAN 202 or SPAN 221 or advanced placement

SPAN 323 World Cultures and Contexts (3 Credit Hours)

This course examines historical and cultural identities in Spain and Latin America, beginning with a study of the historical constructs that helped create the basis of Spanish and Latin American identities. These include the concept of *Convivencia* (co-existence) of the three religions in Medieval Spain, pre-Columbian civilizations, the Spanish Conquest, the Colonial period, and the fight for Independence. The course also addresses more modern notions of culture and identity by focusing on themes such as globalization, immigration, economic crises, political leadership, and daily life. Along with these themes, popular culture will be discussed at length in order to understand the role it plays in generating identities.

Prerequisites: SPAN 311 and SPAN 312W with a grade of C or better

SPAN 330 Introduction to Hispanic Literature (3 Credit Hours)

This course introduces students to the basic theoretical and practical aspects and approaches to literary analysis, in order to learn how to read Hispanic literature from the Middle Ages to the present. Literary texts will be examined in terms of content, style, and form. The objectives of the course are to learn how to do a close reading of the texts – a poem, a short story, a novel, or a theater play – and interpret them as a literary scholar, while developing skills of critical thinking, speaking and writing in Spanish. Discussions will focus on literary themes and their relationship to current events rather than a chronological survey of literature.

Prerequisites: SPAN 311 and SPAN 312W

SPAN 366 Business Spanish: Language and Culture (3 Credit Hours)

This course aims to equip students for the eventuality of working with or for a Spanish company here or abroad. It is a language course, with a strong cultural component, for the intermediate learner. The emphasis of the course is on Spanish language usage in personal, business, and employment situations. The course provides a background for all students regardless of specific career goals. Students learn about cultural mores and social etiquette, engage in situational role playing, and prepare for job interviews. Students will combine their various practical assignments, involving realistic employment-seeking tasks, into an electronic portfolio of neatly-kept revisions.

Prerequisites: SPAN 311 and SPAN 312W or permission of instructor

SPAN 369 Practicum (1-3 Credit Hours)

Internships in private and public organizations that provide an opportunity for students to apply and enhance language skills or cultural knowledge in a workplace setting.

Prerequisites: nine credit hours at the 300 or 400 level

SPAN 395 Topics in Spanish (1-3 Credit Hours)

Selected topics, genres, authors and/or literary, cultural, sociopolitical, or historical movements in the Spanish-speaking world. May be repeated for credit if the topic is different.

Prerequisites: SPAN 311 and SPAN 312W

SPAN 396 Topics in Spanish (1-3 Credit Hours)

Seminars engage students in in-depth study of a specified topic through readings, research and oral and written student reports. Special attention is paid to theoretical and bibliographic issues. Topics vary according to the areas of expertise and professional interests of departmental faculty. May be repeated if topics are different.

Prerequisites: SPAN 311 and SPAN 312W

SPAN 407/507 Advanced Grammar and Syntax (3 Credit Hours)

This class is designed to solidify and refine students' working knowledge of written skills in the language, with an emphasis on increasing their written sophistication. Focus is on analysis of vocabulary, grammar, and cultural nuances in the syntax to examine how language reflects the ways of life and beliefs of its speakers, contrasted with the extent of language's influence on culture. Students will refine their skills in written inter-cultural communication, paying attention to idioms and the fine points of 'cultural grammar,' communicative competence and specialized discourse to develop excellent communication skills. This course is intended to prepare students for using their knowledge of language and culture in professional settings.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 410/510 Spanish Applied Linguistics (3 Credit Hours)

This course provides an introduction to Spanish linguistics and establishes the basis for the application of linguistic principles, including an introduction to the description and organization of data dealing with phonology (how sound patterns form words), discussion on topics in morphology (word formation and verbal inflection) and the description and organization of data dealing with syntax (how words combine to form phrases and sentences). In addition, the course analyzes the regional variations of Spanish (dialectology), and applying linguistics concepts, students contrast and compare the regional categories of Spanish use world-wide. It will provide students with a level of knowledge to make connections between the structure of Spanish and relevant issues in contemporary Hispanic linguistics, such as second language learning, language variation, bilingualism, and Spanish in the United States.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 415/515 Spanish Phonetics (3 Credit Hours)

This class is an introduction to the descriptive analysis of Spanish sounds and provides a comprehensive presentation of phonetics concepts as well as the comparisons drawn between the sounds of Spanish and those of English from a theoretical perspective. Students will gain a solid understanding of the sound system and strengthening of their pronunciation of Spanish from engaging, culturally driven activities taken from real-life modern Spanish sources, as well as enhancing awareness through aural comprehension of the nuances of the different dialects from speakers across the Spanish-speaking world.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 447/547 Drama of the Spanish Golden Age (3 Credit Hours)

A study of selected works of the major playwrights of the Golden Age: Lope de Vega, Calderon de la Barca, Tirso de Molina, Ruiz de Alarcón.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 448/548 Contemporary Spanish Drama (3 Credit Hours)

Through reading and analysis of the most representative texts of Spanish drama of the last decades, this course intends to introduce students to contemporary theater production in relation to the social, political and cultural trends that dominate in Spain today. Readings will allow students to gain a deeper understanding of the debates predominating within Spanish society and of possible correlations linking Spanish and European culture today.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 449/549 Contemporary Spanish-American Drama (3 Credit Hours)

In this course students will read at least thirteen Spanish-American plays from the twentieth and twenty-first centuries. Through class discussions and presentations, students will learn an appropriate vocabulary to converse about the plays as well as literary theory to enable them to analyze and interpret the plays. By the end of the course, students should be able to see literary trends and begin to form opinions about the direction that Spanish-American theater has taken and why.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 453/553 Border Culture and Literature (3 Credit Hours)

Students study a variety of current cultural texts from the U.S. and Mexico to explore the multiplicity of images that surround and define the highly contested and increasingly important area of the U.S.-Mexico border. Discussions are grounded in an ideological analysis with the goal of developing a description of the historical and social parameters and strategies that are utilized in the critical revision of the Borderlands. Specifically, this course focuses on questions dealing with subaltern identities, for example women, indigenous groups, immigrants, and the poor.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 469/569 Hispanic Film (3 Credit Hours)

A topical study of the major works of Spanish and Latin American film from Bunuel to the present. The course will explore many issues, including those related to gender, race, symbolism, and class struggle. (cross-listed with COMM 443/COMM 543)

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 471/571 Hispanic Women Authors (3 Credit Hours)

A study of fictional and non-fictional works by Spanish, Spanish-American, and U.S. Latina writers from the 16th to the 20th century. The course analyzes gender identity and roles and the interaction of gender, race, and class in literary representations of courtship and marriage, spirituality, nationalism, colonialism, and multiculturalism. (Cross-listed with WCS 471/WCS 571)

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 473/573 Contemporary Latina Literature: From Borders to Crossroads (3 Credit Hours)

The course focuses on poetry, prose fiction and theater written by Chicana, Puerto Rican, Cuban-American, and Dominican-American women authors in the last twenty years. Attention will also be paid to the very influential theoretical work written by Chicanas.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 475W Spanish Senior Research Seminar (3 Credit Hours)

The course is designed to provide Spanish majors with a small group setting that facilitates in-depth discussion of key concepts of critical theory, literary studies, and the discipline. The seminar will encourage students to research and explore relevant topics related to Hispanic literature and the arts and experiment with the application of the different concepts under discussion. This is a writing intensive course.

Prerequisites: Senior standing; SPAN 311, SPAN 312W, SPAN 323, and SPAN 330; and a grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C

SPAN 495/595 Topics in Spanish (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 496/596 Topics in Spanish (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 497 Tutorial Work in Special Topics in Spanish (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPAN 498 Tutorial Work in Special Topics in Spanish (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: SPAN 311, SPAN 312W, SPAN 323, and SPAN 330

SPED - Special Education

SPED 313 Fundamentals of Human Growth and Development: Birth through Adolescence (3 Credit Hours)

This course contributes to an understanding of the physical, social, emotional, speech and language, and intellectual development of infants, toddlers, children, and adolescents. Furthermore, it promotes the ability to use this understanding in guiding learning experiences and relating meaningfully to preK-12, special education, and secondary education students. The interaction of infants, toddlers, children, and adolescents with economic, social, racial, ethnic, religious, physical, and intellectual differences is explored, as well as developmental issues related to giftedness or disability and the impact of family disruptions, child abuse, and substance abuse.

Prerequisites: junior standing

SPED 400/500 Foundations of Special Education: Legal Aspects and Characteristics (3 Credit Hours)

The course provides an introduction and overview of the field of special education from the perspective that it is a subsection of general education and that the field is in transition by virtue of philosophical, legislative, and programmatic changes. Legal aspects, regulatory requirements, and critical analyses of research are addressed. The course includes a broad overview of the characteristics, identification, instructional needs, and accommodation necessary for creating appropriate educational and vocational environments for students with disabilities.

Prerequisites: junior standing

SPED 402/502 Instructional Design I: Learner Characteristics and Assessment (3 Credit Hours)

The intent of this course is to provide pre-service and in-service teachers with: (a) knowledge of the characteristics of K-12 students with learning differences who are accessing either the general curriculum or the adapted curriculum, and (b) the ability to develop knowledge and skill in the selection, administration, scoring and interpretation of standardized/norm-referenced and criterion-referenced assessments for exceptional learners. Administering formal and informal assessment tools for the development of an IEP are emphasized. The use of assessment data to improve evidence-based instruction and student performance is discussed.

Prerequisites: Junior standing

SPED 403 Directed Field Experience in Special Education (3 Credit Hours)

This course provides variable hours of direct participation in a community or educational setting with individuals with special needs. The course includes specific skills of program planning, implementation, evaluation and classroom management. Practicum of 45 hours required.

Prerequisites: Satisfactory entry into the undergraduate teacher education program (UTEP)

SPED 404/504 Characteristics and Medical Aspects of Disabling Conditions (3 Credit Hours)

This course reviews medical conditions present among individuals with disabilities and implications for classroom instruction.

Prerequisites: Junior standing

SPED 406/506 Students with Diverse Learning Needs in the General Education Classroom (3 Credit Hours)

This course introduces general education teachers to the legal aspects and educational needs of at-risk students and those with disabilities. Emphasis is on characteristics of children with special needs and procedures for effective academic, behavioral, and social integration of these children in the general education classroom.

Prerequisites: junior standing

SPED 411/511 Classroom and Behavioral Management Techniques for Students with Diverse Needs (3 Credit Hours)

This course addresses classroom management techniques and individual interventions based upon behavioral, cognitive, affective, social, and ecological theory and practice. The course focuses on the field of applied behavior analysis, including best practices in the areas of data collection, program selection, program implementation, and data analysis. Positive behavior management, supports, and functional behavioral assessment for students with diverse learning needs will be emphasized.

Prerequisites: Junior standing or permission of the instructor

SPED 415/515 Instructional Design II: Curricular Procedures and Individualized Education Planning (3 Credit Hours)

The intent of this course is to provide preservice and in-service teachers with: (a) knowledge of research-based instruction for PreK-12 students with disabilities and those who are gifted; (b) knowledge and skill in using data collection to make decisions about student progress, instruction, program, accommodations and teaching methodology for exceptional learners, and (c) knowledge and skill in planning, developing and implementing individual educational plans and group instruction for diverse exceptional learners who are accessing the general education curriculum and the standards of learning or the adapted education curriculum and the aligned or essentialized standards of learning.

Prerequisites: Passing scores on Praxis Core Academic Skills for Educator Tests or equivalent as prescribed by the Virginia Board of Education

SPED 417/517 Collaboration and Transitions (3 Credit Hours)

This course addresses the complex issues surrounding families and children with disabilities and transitions across the lifespan, as well as effective collaboration with families and professionals to support inclusion and/or effective early intervention services, educational services, and transition services for students at-risk and students with disabilities. Emphasis is on successful professional collaboration and effective relationships in educational, transition, and family settings.

Prerequisites: Junior standing

SPED 418/518 Instructional Strategies to Meet Diverse Learning Needs in Math (3 Credit Hours)

This course covers instructional strategies necessary to teach mathematics to students with diverse learning needs in elementary and secondary settings. Students will study and apply pedagogy-based research on how learning takes place and strategies for differentiating instruction for the unique needs of diverse learners. Students will address and apply effective research-based methodology and evaluation standards.

Prerequisites: Junior standing

SPED 428/528 Instructional Strategies for Students Accessing the Adapted Curriculum (3 Credit Hours)

This course addresses the characteristics and instructional strategies of students accessing the adapted curriculum. Emphasis is on assessment, program development, academic, and functional skills instruction. This course addresses the needs of individuals with severe and/or profound multiple disabilities. 45 Hour Practicum

Prerequisites: Junior standing

SPED 432/532 Characteristics of Students with Visual Impairments (3 Credit Hours)

This course provides an overview of the characteristics of and services to persons with visual impairments, including the impact of visual impairment on infants' and children's growth and development, child and adolescent emotional and social development, and family interaction patterns. It considers the educational, conceptual, psycho-social, and physical implications of a visual impairment.

Prerequisites: SPED 400/SPED 500

SPED 433/533 Braille Code (3 Credit Hours)

This course provides instruction in the development, use, and application of the Braille literary code and its implications for educational/literacy programs for students with visual disabilities. Students will develop the skills to read and write contracted and uncontracted Braille, while acquiring instructional methodologies for teaching children who are blind to read and write. Sources of Braille materials for educational purposes are identified.

Prerequisites: Junior standing

Pre- or corequisite: SPED 400/SPED 500 and SPED 432/SPED 532

SPED 434/534 Medical and Educational Implications of Visual Impairments (3 Credit Hours)

Provides an introduction to anatomy and physiology of the visual system and the educational implications of visual pathology. Topics include anatomy of the human eye, normal visual development, pathology of the eye, examination procedures for the identification of visual pathology, and the effects of pathology on visual learning and development. Practicum requires a minimum of 25 hours.

Prerequisites: SPED 400/SPED 500 and SPED 432/SPED 532

SPED 435/535 Orientation and Mobility (2 Credit Hours)

Provides the foundation for understanding the components and essence of orientation and mobility. Establishes how the need for independent travel in the blind population created the field of O&M. Explores the philosophy and history of orientation and mobility including cane instruction, dog guides and methods of travel. Addresses techniques in developing orientation skills and basic mobility instruction. Motor and concept skill development are emphasized. Practicum of 45 hours required.

Prerequisites: Junior standing

Pre- or corequisite: SPED 400/SPED 500 and SPED 432/SPED 532

SPED 436/536 Curriculum and Assessment of Students with Visual Impairments (3 Credit Hours)

Provides students with knowledge and understanding of the educational assessment of students with visual impairments and additional disabilities including deaf-blindness. Students will practice assessing and planning educational programs for students with visual impairments. Addresses assessment of technology for students with visual impairments. Examines determination of learning needs and appropriate learning media, relationship of assessment, IEP development, and placement. Practicum requires a minimum of 25 hours.

Prerequisites: Junior standing

Pre- or corequisite: SPED 400/SPED 500 and SPED 432/SPED 532

SPED 437/537 Assistive Technology for People with Sensory Impairments (3 Credit Hours)

This course is designed for professionals and/or students interested in serving the visually impaired/blind population or hearing impaired/deaf population. It is designed to heighten the awareness of participants to specific technology and resources available to enhance and improve the ability of individuals with visual and hearing impairments to succeed in school, daily living activities and employment. Knowledge and awareness components of this course will be delivered via distance education.

Prerequisites: Junior standing

Pre- or corequisite: SPED 400 or SPED 500 and SPED 432 or SPED 532

SPED 440/540 Assistive Technology for Diverse Students (3 Credit Hours)

This course provides lectures for pre-service and in-service teachers and related service providers of special populations in the use of assistive technology (AT) devices and services, and augmentative alternative communication (AAC) systems for instructional programs and computer applications. Study will involve compliance with federal and state laws, and national and state standards related to providing assistive technology to diverse students.

Prerequisites: Junior standing

SPED 441/541 Teaching Students with Severe Physical and Sensorimotor Disabilities (3 Credit Hours)

This course reviews techniques for working with students who have severe physical and sensorimotor disabilities. Course emphasis is on proper positioning and handling for students with atypical motor/muscle development who function at developmental levels between birth and five years. Practicum of 45 hours required.

Prerequisites: Junior standing

SPED 460/560 Teaching Preschoolers With Diverse Abilities (3 Credit Hours)

This course prepares students to create high quality learning environments for preschool children (ages 2-5 years) who have diverse strengths and needs. Students will learn how to access curricula and materials, plan for and provide evidence-based instruction, collect data for progress monitoring, and provide adaptations to the environment to support the development of children with and without disabilities. Programming that addresses multiple areas of development, such as social-emotional, communication, motor, and cognition, will be discussed, and students will complete a 10-hour preschool observation.

Prerequisites: Junior standing

SPED 461/561 Developmental Assessment of Young Children with Diverse Abilities (3 Credit Hours)

This course prepares students to use recommended practices for assessing the development of young children with diverse abilities, ages birth to 5 years, in home and inclusive/classroom-based settings. Course content and discussions address the knowledge and skills needed by early intervention, early childhood, and early childhood special educators when gathering developmental information to determine a child's eligibility, plan intervention and educational activities, and monitor progress across time. Practicum of 45 hours required.

Prerequisites: Junior standing

SPED 467/567 Family-Centered Practices in Early Childhood Intervention (3 Credit Hours)

This course prepares professionals to partner with families of infants and toddlers (ages birth-three) with developmental delays and disabilities in early intervention programs. Emphasis is placed on the use of family-centered practices that support caregiver and child learning during visits in homes and other community settings. Strategies for collaborating with team members (including the family), writing Individualized Family Service Plans (IFSPs), and providing effective services that facilitate child development during natural family routines and activities will be discussed.

Prerequisites: Junior standing

SPED 469/569 Communication/Language Development/Intervention for Students with Significant Disabilities (3 Credit Hours)

This course examines symbolic and non-symbolic communication/language development and acquisition. Emphasis is on routine-based communication training, communication/language facilitation strategies, augmentative communication systems, and informal/functional communication/language assessment procedures for students in early childhood special education, students with autism, and students with multiple disabilities.

Prerequisites: Junior standing

SPED 483/583 Field Experience Seminar in Special Education (1 Credit Hour)

Explores issues, problems, concerns and processes related to teaching and entering the profession of teaching. Passing scores on the Virginia Communication and Literacy Assessment (VCLA) and Virginia Reading Assessment (VRA)/ Reading for Virginia Educators (RVE) will be required by the end of the course.

Prerequisites: SPED 313, SPED 400/SPED 500, and SPED 402/SPED 502
Pre- or corequisite: SPED 403

SPED 486/586 Teacher Candidate Internship for Special Endorsement (12 Credit Hours)

Seven weeks will be completed at the elementary level and seven weeks will be completed at the middle/secondary level.

Prerequisites: admission to ODU Teacher Education Program; completion of the approved teacher education program in the specific endorsement area; departmental approval

SPED 495/595 Topics in Special Education (1-3 Credit Hours)

This course offers selected topics designed to permit small groups of qualified students to work on subjects of mutual interest in the special education field.

Prerequisites: SPED 400

SPED 497 Independent Study (3 Credit Hours)

Independent study of special topics in special education for undergraduate students.

Prerequisites: Permission of instructor

STAT - Statistics

STAT 130M Elementary Statistics (3 Credit Hours)

Topics include: data description, elementary probability, binomial and normal distributions, interval estimation, hypothesis testing, and correlation. The role of probability in inference is emphasized.

Prerequisites: A qualifying score on a placement test administered by the University Testing Center, a qualifying SAT or ACT score, a C or better in MATH 101M, or a C or better in a higher level math course

STAT 306 Introductory Statistics (3 Credit Hours)

A general probability and statistics course designed specifically to accommodate the needs of school teachers and health professionals. Topics include: descriptive statistics, basic probability, discrete random variables, continuous random variables, interval estimation, regression and correlation, hypothesis testing, and applications. (May not be used to satisfy the upper-division elective requirement of the math major program.)

Prerequisites: A grade of C or better in MATH 102M or MATH 162M

STAT 310 Introductory Data Analysis (3 Credit Hours)

Topics include measures of location, dispersion, and strength of relationship; parametric and nonparametric tests of location; one-way analysis of variance; complete block designs; simple and multiple regression; correlation; measures of association for categorical data. Microsoft EXCEL will be used extensively as an aid in data analysis. Written interpretation of results will be a routine component of daily assignments.

Prerequisites: A grade of C or better in STAT 130M or MATH 200 or MATH 205 or MATH 211

STAT 330 An Introduction to Probability and Statistics (3 Credit Hours)

Topics include: descriptive statistics, probability theory and probability distributions, mathematical expectation and its role in decision making, hypothesis testing, point and interval estimation, numerous applications. (Not open to students with credit in STAT 331.)

Prerequisites: A grade of C or better in MATH 211

STAT 331 Theory of Probability (3 Credit Hours)

An introduction to probability theory including probability functions, continuous and discrete random variables, combinatorics, special probability distributions, moment generating functions, and limit laws.

Prerequisites: A grade of C or better in MATH 211

STAT 405/505 Introduction to Data Handling (3 Credit Hours)

This course will introduce SAS and R, two of the most widely used statistical software packages. This course will cover the basic skills needed for using computer packages to perform a variety of statistical analyses. Topics include data import/export, manipulation, descriptive statistics and visualization, advanced data handling, and the use of statistical computer packages for categorical data analysis, regression analysis, hypothesis testing, and more.

Prerequisites: grade of C or better in STAT 130M or equivalent and a grade of C or better in MATH 316 or equivalent or permission of instructor

STAT 431/531 Theory of Statistics (3 Credit Hours)

Topics include point and interval estimation, tests of hypotheses, introduction to linear models, likelihood techniques, and regression and correlation analysis.

Prerequisites: A grade of C or better in STAT 331 or departmental permission

STAT 432/532 Sampling Theory (3 Credit Hours)

Sampling from finite populations is discussed. Topics such as simple random sampling, stratified random sampling and ratio and regression estimation are included. Also discussed are aspects of systematic sampling, cluster sampling, and multi-stage sampling.

Prerequisites: A grade of C or better in STAT 431/STAT 531

STAT 435/535 Design and Analysis of Experiments (3 Credit Hours)

Topics include introduction to design of experiments, analysis of variance with a single factor, power and OC curves, and two factors with interactions, random effects models, randomized blocks, Latin square and related designs, introduction to factorial and 2k factorial designs. Statistical software will be used to analyze real life data.

Prerequisites: STAT 431/STAT 531 or STAT 437/STAT 537

Pre- or corequisite: STAT 405/STAT 505

STAT 437/537 Applied Regression and Time Series Analysis (3 Credit Hours)

Topics include introduction to regression and model building, simple linear regression, multiple regression, logistic regression, and simple time series, residual analysis, selection of variables, model adequacy checking, regression on dummy variables, analysis of covariance, regression analysis of time series data, and applications of these techniques to real life data using statistical software. Pre- or

Prerequisites: A grade of C or better in STAT 330 or STAT 310 or STAT 431/STAT 531

Corequisites: STAT 405/STAT 505

STAT 440/540 Clinical Trials (3 Credit Hours)

This course will introduce basic statistical concepts and methods used in clinical trials. Topics include phase-I trial designs including 3+3 and CRM dose-finding designs; phase-II trial designs including Gehan's two-stage and Simon's two-stage designs; phase-III trial designs including parallel, group allocation, cross-over, and factorial designs; randomization; sample size and power calculation; adaptive trials; and monitoring of trials for safety and efficacy.

Prerequisites: A grade of C or better in STAT 431/STAT 531

STAT 442/542 Environmental Statistics (3 Credit Hours)

Topics include nonlinear and generalized linear models, quantitative risk assessment, analysis of stimulus-response and spatially correlated data, methods of combining data from several independent studies. Regression settings are emphasized where one or more predictor variables are used to make inferences on an outcome variable of interest. Applications include modeling growth inhibition of organisms exposed to environmental toxins, spatial associations of like species, risk estimation, and spatial prediction. SAS is used extensively in the course.

Prerequisites: A grade of C or better in STAT 431/STAT 531 or permission of the instructor; STAT 437 or STAT 537 recommended

STAT 447/547 Analysis of Longitudinal Data (3 Credit Hours)

This course introduces statistical methods for analyzing multivariate and longitudinal data. Topics include multivariate normal distribution, covariance modeling, multivariate linear models, principal components, analysis of continuous response repeated measures, and models for discrete longitudinal data. Emphasis will be on the applications to the biological and health sciences and the use of the statistical software.

Prerequisites: A grade of C or better in STAT 431/STAT 531

Pre- or corequisite: STAT 405/STAT 505

STAT 449/549 Nonparametric Statistics (3 Credit Hours)

Topics include statistical functionals, bootstrap and jackknife techniques, elements of U-statistics, nonparametric tests (including permutation and rank tests), time-to-event analysis, nonparametric density estimation, nonparametric smoothing, regression analysis, and inference. R and/or Python software will be used for computations.

Prerequisites: A grade of C or better in STAT 330 or STAT 331 or departmental permission

STAT 450/550 Categorical Data Analysis (3 Credit Hours)

Topics include types of categorical data, relative risk and odds ratio measures for 2 x 2 tables, the chi-square and Mantel-Haenszel tests, Fisher's exact test, analysis of sets of 2 x 2 tables using Cochran-Mantel-Haenszel methodology, analysis of I x J and sets of I x J tables for both nominal and ordinal data, logistic regression including the logit and probit models. Emphasis will be on the application of these statistical tools to data related to the health and social sciences. Interpretation of computer output will be stressed.

Prerequisites: A grade of C or better in STAT 431/STAT 531

Pre- or corequisite: STAT 405/STAT 505

STAT 494 Entrepreneurship in Statistics (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to apply their knowledge of statistics to the development of a new product, business, nonprofit program, or other initiative. The real world experiences that entrepreneurs provide will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems. This course is administered as an independent project for individual students, or as group projects.

Prerequisites: 3.0 GPA and permission of the chief departmental advisor

STAT 497/597 Topics in Statistics (1-3 Credit Hours)

The advanced study of selected topics.

Prerequisites: permission of the instructor

STEM - Science, Technology, Engineering, and Mathematics Education

STEM 103 Foundations of STEM Teaching: An Inquiry-Based Approach (2 Credit Hours)

In this introductory STEM teacher preparation course, students delve into the 5-E Model of inquiry-based lesson design within real classroom settings. Guided by mentors and experienced master teachers, students actively engage in authentic hands-on experiences in elementary and middle school classes. Throughout the course, they develop essential skills in effective lesson design, questioning strategies, and the integration of educational technologies. Students are also introduced to mathematics or science curricula, with a focus on developing pre- and post-assessment instruments, analyzing student work, and honing classroom management skills.

STEM 110T Technology and Your World (3 Credit Hours)

An overview of the resources and systems of technology. Emphasis is on impacts that technology has on individuals and their careers. Activities explore the evolution of technology, its major systems and their impact on individuals and their careers.

STEM 201 Knowing and Learning in STEM Education (3 Credit Hours)

This course is designed to expand the students' understanding of current theories of learning and conceptual development in STEM. Students will investigate theories of knowing and learning in STEM and implications for teaching secondary mathematics and science. Students will examine their own assumptions about learning as well as critically examine the needs of a diverse student population in the classroom. Students are expected to independently register for and take the Praxis I examination while enrolled in this course.

Pre- or corequisite: STEM 101 or STEM 102 or STEM 103

STEM 202 Classroom Interactions in STEM Education (3 Credit Hours)

This course provides students with an overview of principles for teaching middle and secondary school mathematics or science through an exploration of the role of content, pedagogy, curriculum and technology as they promote learning and impact equity. Students are introduced to ways in which curriculum and technology are used in the classroom to build interrelationships among teachers and students. Frameworks for teaching students of diverse backgrounds equitably are emphasized in the course. A field component that consists of observations and teaching in the high school classroom is included.

Prerequisites: grade of C or better in STEM 101 and STEM 102, or a C or better in STEM 103

Pre- or corequisite: STEM 201

STEM 221 Industrial Materials (3 Credit Hours)

A study of materials used by industry to produce products. Emphasis is on the study of ceramics, plastics, composites, and biotechnological materials. Students learn materials identification, use and processing.

STEM 231 Materials and Processes Technology (3 Credit Hours)

A study of the production processes used with metallic and forest product materials. Industrial resources, their location, extraction, and processing into standard stocks are also covered. Students learn properties, uses and processing of metal and wood materials.

STEM 241 Energy Systems: Basic Electricity (3 Credit Hours)

A study of direct and alternating current and its use in contemporary technology. Activities include experiments and projects to supplement the theory of electricity.

STEM 242 Technological Systems Control (3 Credit Hours)

Students will develop an understanding of systems control technology for application to energy and power, manufacturing, processing and transportation systems. Emphasis will be placed on research and development, creativity and experimentation, and trouble shooting in designing control systems.

STEM 251G Computer Literacy: Communication and Information (3 Credit Hours)

A guided review of communication technology and information sources to help students discern between reliable and unreliable sources and techniques. Students develop skills in computer applications, information retrieval, filtering and analyzing data, and formatting and presenting information.

STEM 320 Manufacturing and Construction Technology (3 Credit Hours)

A study of production processes used in manufacturing and construction systems. Students will research and design manufactured products for mass production and constructed products for building. The social, cultural, environmental and economic impacts of manufacturing and constructed products on society are discussed.

Prerequisites: STEM 221, STEM 231 or permission of instructor

STEM 321 Manufacturing Technology (3 Credit Hours)

A study of the production processes used in manufacturing systems. Emphasis is placed upon planning, organizing and principles of manufacturing. Students research and design enterprise systems for mass production. Emphasis is on manufacturing design requirements and the social, cultural, and economic impacts of manufactured products on society and the environment.

Prerequisites: STEM 221, STEM 231 or permission of instructor

STEM 330 Medical, Agricultural, and Biological Technologies (3 Credit Hours)

A course for technology education majors that studies technological systems related to medical and food processing technologies. Students learn the basis of these technologies and complete activities that integrate the content with processes and products found in our technological world.

Prerequisites: junior standing or permission of department

STEM 350 Communication Technology Processes (3 Credit Hours)

The study of communication design principles and techniques for technology education. Emphasis is placed on the skills and equipment used in design, production, and distribution of communications. Print and electronic media are explored through technical illustration, video, audio, and other specialty processes of communications.

Prerequisites: STEM 251G

STEM 351 Communication Technology (3 Credit Hours)

A study of the development and impact of communication technology. Emphasis is placed on the integration of technical skills to produce information-based products such as print and telecommunications media.

Prerequisites: junior standing or permission of the instructor

STEM 360 Energy, Power, and Transportation Technologies (3 Credit Hours)

Study of the development of energy, power, and transportation systems and the movement of energy, power, people, and cargo. Areas of concern include vehicle systems design and support systems.

Prerequisites: junior standing or permission of the instructor

STEM 365 Safety and OSHA Certification (3 Credit Hours)

This course introduces safety programs used in the workplace and to increase the safety environment at work. The course covers four key topics: preliminary hazard analysis, failure modes and effects analysis, and OSHA hazard analysis and safety review requirements, which leads to an OSHA 10 Certificate.

Prerequisites: Junior status

STEM 367 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and the Cooperative Education program prior to the semester in which the work experience is to take place.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

STEM 370T Technology and Society (3 Credit Hours)

A multidisciplinary course designed to provide insight into the fundamental, historical, and contemporary nature of technology as an area of human knowledge. Attention is given to the positive and negative aspects of technology and how they affect society. (This is a writing intensive course.)

Prerequisites: grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C; junior standing or permission of the instructor

STEM 382 Industrial Design (3 Credit Hours)

Students will analyze and design products representative of today's industrial technological society. Emphasis will be placed upon design methodology, aesthetic value, and design thinking.

Prerequisites: junior standing

STEM 401 Project Based Instruction in STEM Education (3 Credit Hours)

Through a dynamic process of investigation and collaboration, students aim to master techniques for project-based investigations in STEM classrooms, and teach project-based lessons in the secondary classroom. Students work in teams to formulate questions, make predictions, design investigations, collect and analyze data, make products and share ideas. The use of assessments to improve student learning is emphasized in the course. This course includes a field component that consists of two observation days and three teaching days in a secondary classroom.

Prerequisites: STEM 201 and STEM 202

STEM 402 Perspectives on STEM (3 Credit Hours)

This course explores the historical, social, and philosophical implications of mathematics and science through investigations of significant episodes in their history. Students are brought to understand that science and mathematics are not merely body of facts, theories, and techniques but involve diverse processes by which they are continually generated and reformulated.

Prerequisites: Junior standing, admission to the MonarchTeach program plus 12 credit hours of science or math courses, and STEM 401

Pre- or corequisite: STEM 485

STEM 433/533 Developing Instructional Strategies PreK-6: Mathematics (3 Credit Hours)

Following a theory into practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote children's development of attitudes, behaviors, and concepts in mathematics in grades PreK-6 in support of NCTM national instructional standards and the Virginia Standards of Learning.

Prerequisites: MATH 102M, TLED 326, and Junior standing

Corequisites: STEM 434

STEM 434/534 Developing Instructional Strategies PreK-6: Science (3 Credit Hours)

Following a theory into practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote children's development of attitudes, behaviors, and concepts in science in grades PreK-6 in support of AAAS national instructional standards and the Virginia Standards of Learning.

Prerequisites: TLED 326 and Junior standing

STEM 485 Apprentice Teaching (9 Credit Hours)

Internship in school. Available for pass/fail grading only. Offers prospective teacher candidates a culminating experience that provides them with the tools needed for their first teaching jobs. Students are immersed in a local secondary school for 10 consecutive weeks and experience the expectations, processes, and rewards of teaching. As part of their Apprentice Teaching experience, candidates will be required to attend a one hour weekly seminar that will bring them together with master teachers to share experiences and to explore issues, problems, concerns, and processes related to their teaching experiences and to entering the profession of teaching.

Prerequisites: Completion of all course work in the MonarchTeach professional development sequence program and BIOL 468W or CHEM 468 or OEAS 468W or PHYS 468W or SCI 468, passing scores on PRAXIS I or equivalent SAT or ACT scores as established by VA Board of Education, passing scores on the appropriate PRAXIS II content examination and the Virginia Communication and Literacy Assessment, departmental approval, minimum major and overall GPA of at least 2.75 and a criminal background check

Corequisites: STEM 402

STEM 495/595 Topics (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: permission of the instructor

THEA - Theatre

THEA 152R Acting One (3 Credit Hours)

An introduction to the physical and vocal principles of performance coupled with an opportunity to increase awareness of the constructed nature of social interactions. Students will explore confident self-expression through the physical, vocal, emotional and technical aspects of acting, as an art form and a daily experience, in a format that encourages freedom of imagination and personal growth. Emphasis is on the fundamental communication skills of presence, body language, imagination, and social communication.

THEA 173+ Theatre Activities (1 Credit Hour)

This course is an activity course in which the students participate in University Theatre Activities such as set building, costume construction or running crew for season productions.

THEA 174+ Theatre Activities (1 Credit Hour)

This is an activity course in which the students participate in University Theatre Activities such as set building, costume construction or running crew for season productions.

THEA 195 Topics in Theatre (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in a booklet distributed to academic advisors.

THEA 196 Topics in Theatre (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in a booklet distributed to academic advisors.

THEA 225 Introduction to Production Technology (3 Credit Hours)

Fundamentals of construction, lighting, and production techniques in contemporary theatre and film. Students will apply acquired skills to active productions for ODU Theatre and Film productions.

THEA 227A Honors: Film Appreciation (3 Credit Hours)

This class will focus on both contextual and close text analysis of masterworks as they have influenced film art and industry. Students in this course are expected to develop basic research, communication, viewing and critical thinking skills as they apply their knowledge to the analysis of the film experience. Open to students in the Honors Program only.

THEA 230 Drama for Production (3 Credit Hours)

A practitioner-oriented examination of drama from its origins to the present. Particular emphasis is placed on plays from around the world that are associated with changes in theatre practice.

THEA 241A The Theatre Experience (3 Credit Hours)

An introductory audience-oriented examination of the elements of theatre and their historical development through study of plays and performances; emphasis will be directed to actually experiencing live theatre. Attendance at performances is required.

THEA 243H Theatre Histories (3 Credit Hours)

This course offers students a critical approach to interpreting theatre practices in history. As a fast-paced survey, it affords students a grounding in the histories of global theatre. Focusing on major political, cultural, economic, and social shifts, the course explores how those changes affected the development of theatre, drama, and performance.

THEA 244 Introduction to Production Design (3 Credit Hours)

An introduction to principles, methods, and materials used in designing stage and film productions.

THEA 248 Introduction to Stage Makeup (3 Credit Hours)

Develops skills and techniques for design and application of stage makeup.

THEA 252 Acting Two (3 Credit Hours)

Basic introduction to principles of acting which may be applied to stage and media and application of various techniques through exercises, improvisations, and performances of short scenes.

Prerequisites: THEA 152R

THEA 270A Film Appreciation (3 Credit Hours)

This class will focus on both contextual and close text analysis of masterworks as they have influenced film art and industry. Students in this course are expected to develop basic research, communication, viewing and critical thinking skills as they apply their knowledge to the analysis of the film experience.

THEA 271 Introduction to Filmmaking (3 Credit Hours)

This course will introduce the beginning student to making movies. Students will learn the basics of working with cameras, lights, sound recording, video editing and post production. This is a hands-on production course. Cross-listed with COMM 271/DANC 271.

THEA 280T Entertainment Technologies (3 Credit Hours)

This course is an introduction to the entertainment industry including working methods, processes, and equipment for live, recorded, and interactive entertainment. The exploration will include theatre, opera, dance, concert productions, theme parks, themed-retail, film production, immersive, interactive and virtual environments, and gaming technology. Attention is given to the positive and negative aspects of entertainment technologies and how they impact culture and society.

THEA 295 Topics in Theatre (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in a booklet distributed to all academic advisors.

THEA 320 Auditioning Technique (3 Credit Hours)

Course will examine practical audition skills and provide an orientation to the tools of procuring professional auditions, including head shots and resumes. Emphasis will be placed on effectively selecting and preparing auditions for stage, film and television.

Prerequisites: THEA 152R and THEA 252

THEA 321 Production Management for Television and Stage (3 Credit Hours)

This course will assist students in understanding the elements of production management both in television and on stage. The course emphasizes organizational and communication skills; technical production knowledge; professional rehearsal and performance protocol according to the rules of AEA, AFTRA and SAG as well as basic production budgeting and scheduling.

Prerequisites: THEA 225 or COMM 225 or permission of the instructor

THEA 325 Sound Design for Stage and Camera (3 Credit Hours)

This class will introduce the concepts and techniques of sound design and sound effects for the stage and camera. Students will learn design of sound elements in both a live and recorded environment as well as learn the current equipment and software in digital sound reproduction.

Prerequisites: Junior standing or permission of instructor

THEA 330 The Short Script (3 Credit Hours)

This course builds upon the principles taught in Screenwriting 1 (or equivalent) using the short script as a basis for the exploration. Utilizing concepts of characterization, plot, dialogue and narrative style, students should complete the course with several production-ready short scripts.

Prerequisites: COMM 346 or THEA 346

THEA 332 Making African-American Cinema (3 Credit Hours)

This introductory course on African-American cinema will focus on a variety of contemporary films, media clips, and video presentations concerning issues and topics that reflect the diversity within the African-American community of young adults between the ages of 18 to 25. The main goal of the class is to review historical films produced for African-Americans and utilize that data to conduct research and develop projects that represent the cultural diaspora of this audience, which is often not reflected in mainstream media, in Hollywood or major independent media outlets such as HBO or Showtime. Cross-listed with COMM 332.

Prerequisites: Junior standing or permission of the instructor

THEA 334 Narrative Adaptation (3 Credit Hours)

This screenwriting course explores the ways teleplays, stage plays, and screenplays can be crafted using a variety of primary source materials. Through multiple screenings, writing exercises, and deep reading, it examines what constitutes an adaptable piece of prose and how that material can be transformed. Primary weight is given to the movement from novel to film.

Prerequisites: COMM 346 or THEA 346

THEA 341 Lighting Design for Stage and Film (3 Credit Hours)

A production course introducing students to the world of light and shadow, mood and composition by surveying lighting design, its technologies for stage and camera, and such principles as basic electrical theory and stage/studio/location design aesthetics.

Prerequisites: THEA 225/COMM 225 or THEA 271/COMM 271 or permission of instructor

THEA 342 Post-Production 1 (3 Credit Hours)

This course serves as an introduction to the art of video post-production. Students explore the theory and practice of various editing styles in order to gain a better understanding of how stories are constructed in the editing room. The course covers principles of post-production of narrative, documentary, and experimental films. Through demonstrations and hands-on experience, students learn editing techniques with an in-depth examination of tools and approaches in a non-linear editing system.

Prerequisites: COMM 271 or THEA 271 or DANC 271

THEA 345 Advanced Production Design (3 Credit Hours)

This course will explore advanced principles of design for the stage in the areas of scenery. The process will include the application of various artistic styles to stage production.

Prerequisites: THEA 225 or COMM 225 or THEA 244

THEA 346 Screenwriting I (3 Credit Hours)

This course is an introduction to narrative screenwriting focusing on the traditional feature film. Students will study screenwriting principles through text reading, film viewing, script analysis and substantial writing assignments. Focus is on story structure, character development, action, dialogue, and proper screenplay format.

Prerequisites: ENGL 110C with a grade of C or better and ENGL 211C with a grade of C or better

THEA 347 Movement for the Actor (3 Credit Hours)

An examination through exercises and assignments of principles for developing a disciplined, flexible body for character creation.

Prerequisites: THEA 152R or permission of the instructor

THEA 348 Acting for the Camera (3 Credit Hours)

Course will examine the process of building characters for the camera, and the ways in which the conventions of the stage are adapted for the film or video audience.

Prerequisites: THEA 152R

THEA 349 Costume Design for Stage and Camera (3 Credit Hours)

This course explores the design aesthetic, historical context, and contemporary impact on performance of the costume garment and its accessories. Students will explore the application of design principles in a practical experience.

Prerequisites: THEA 225 or COMM 225

THEA 352 Acting Three (3 Credit Hours)

Study of and experimentation with various theories concerning the preparation of roles and special performance characteristics of different styles and types of drama. Considerable attention is directed toward scene study.

Prerequisites: THEA 152R and THEA 252

THEA 353 Animation (3 Credit Hours)

This is a project oriented, studio class that will focus on the art of animated storytelling from the traditional perspective of stop motion animation combined with digital post production. Students will engage in individual research, writing, storyboarding, editing, and sound creation to produce original short animations. Crosslisted with COMM 353.

Prerequisites: COMM 271 or DANC 271 or THEA 271

THEA 355 Costume Crafts (3 Credit Hours)

This course will develop design principles and craft techniques to create a wide variety of costume crafts. The course will focus on individual research, design elements and technical challenges. Projects will encourage students to explore textile modification, various applications for clothing design, costume crafts and art materials. Cross-listed with COMM 359.

Prerequisites: Junior standing or permission of instructor

THEA 356 3D Animation 1 (3 Credit Hours)

This is a project-oriented studio class that will focus on the art of animated storytelling through the use of computer-based 3D animation.

Prerequisites: COMM 271 or THEA 271 or DANC 271

THEA 357 3D Animation 2 (3 Credit Hours)

This is a project-oriented studio class that will focus on the art of animated storytelling from the perspective of computer-based 3D animation, building on the skills developed in 3D Animation 1. Students will engage in individual research, writing, storyboarding, editing, and sound creation to produce original short animations.

Prerequisites: COMM 356 or THEA 356

THEA 358 Color for Digital Cinema & TV (3 Credit Hours)

This course will introduce students to color workflow in the digital cinema environment. The focus will be on working with color beginning with the camera, through color correction to delivery, mixing software-specific techniques with a deepening understanding of the underlying theories of color theory and practice. Students will learn and apply industry standard best practices in the field of visual post-production. This is a hands-on workshop style post-production course.

Prerequisites: COMM 271 or DANC 271 or THEA 271

THEA 360 Voice for the Stage I (3 Credit Hours)

This course will explore facets of vocal production, speech and expression necessary for an engaging performance on stage. Through exercises and text work, the student will learn healthy vocal production, elements of clear speech and techniques for improving vocal range and expressiveness.

Prerequisites: THEA 152R

THEA 365 Internship in Film (3-6 Credit Hours)

Practicum/field experience in professional settings for students in all areas of Film. Pass/Fail only.

Prerequisites: Approval of the Director of Film and major advisor

THEA 367 Cooperative Education (1-3 Credit Hours)

Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria and evaluative procedures as formally determined by the department and the Cooperative Education program prior to the semester in which the work experience takes place.

Prerequisites: Approval by department is required; Additional support may be provided by the Monarch Internship and Co-Op Office in the semester prior to enrollment

THEA 368 Internship (3 Credit Hours)

A structured work experience with or without remuneration, in an appropriately related disciplinary field. An ePortfolio, 150 hours of site work, plus satisfactory evaluations by supervisor and cooperating faculty member are required. Available for pass/fail grading only. Available To Communication, Theatre, and Dance majors and minors only. Cross-listed with COMM 368 and DANC 368.

Prerequisites: Approval of departmental internship director prior to registration

THEA 369 Internship at the Virginia Stage Company (3 Credit Hours)

A structured work experience with or without remuneration; a paper, a log and portfolio of work time plus satisfactory evaluations by supervisor and cooperating faculty member are required. Pass/Fail only.

Prerequisites: Approval of Director of Theatre and VSC representative

THEA 371 History of Animation (3 Credit Hours)

This course traces the evolution of the animated film worldwide, from the silent to the modern era. The purpose of the course is to provide students with a broad chronological and international overview of animated film masterworks.

Prerequisites: Junior standing or permission of the instructor

THEA 373 Production/Performance Lab (1 Credit Hour)

This course provides students opportunities to participate in productions in Theatre, Dance or Film. These positions provide hands-on experience in the discipline. Cross-listed with DANC 373.

Prerequisites: Junior standing or permission of the instructor

THEA 374 Production/Performance Lab (1 Credit Hour)

This course provides students opportunities to participate in productions in Theatre, Dance or Film. These positions provide hands-on experience in the discipline. Cross-listed with DANC 374.

Prerequisites: Junior standing or permission of the instructor

THEA 375 Television Production (3 Credit Hours)

This course explores the basic process of producing television from script to presentation.

Prerequisites: THEA 271 or COMM 271 or permission of the instructor

THEA 380 Documentary Production I (3 Credit Hours)

This course offers the student an opportunity to explore the world of documentary filmmaking. Students will perform research to develop evidence in support of a thesis, then utilize the camera to capture a narrative story based on the thesis. Through this process, the student is better able to understand documentary filmmaking. Students will develop and deliver short documentary films by the end of the semester.

Prerequisites: THEA 271 or COMM 271 or DANC 271 with grade of C or higher

THEA 383 Directing the Actor (3 Credit Hours)

This course is designed as a practical guide for directors to elicit strong performances from the actors who tell their stories. The class will establish vocabulary and practice techniques that are equally applicable to work in film or theatre. Ideally, the course will encourage students to think beyond genre as they create work that is both dramatically and humanly compelling.

Prerequisites: THEA 271 or COMM 271 or DANC 271 or THEA 152R

THEA 385 Cinematography (3 Credit Hours)

Introduces students to cinematography. The course explores camera technique, blocking actors, lighting, and cinematography fundamentals. The concepts of the course are applied to fiction and nonfiction cinema. This is a production class.

Prerequisites: THEA 271 or COMM 271 or DANC 271 with grade of C or higher

THEA 386 Post-Production 2 (3 Credit Hours)

This course builds on the fundamentals learned in Post-Production I, exploring advanced post-production techniques in picture editing, color correction and grading, sound editing and mixing, VFX editing, title and graphics editing, chroma key and compositing. The focus will be on mixing software-specific techniques with deepening understanding of the underlying theories of editing, color theory and principles of sound post-production. The students will learn and apply industry standard best practices in the field of audiovisual post-production. This is a hands-on workshop style post-production course.

Prerequisites: COMM 342 OR THEA 342

THEA 387 TV News Production (3 Credit Hours)

This course is designed to provide students with an introduction to the reporting, writing, and production aspects of a television news program. Students will learn how to create 15- and 30-minute news broadcasts by developing story ideas and news gathering. Students will also learn the intricacies of shooting and editing video along with the production process involved in recording a live news broadcast. Each student will spend time both in front of and behind the television studio cameras. The goal of this course is to produce weekly news programs worthy of broadcast on local television. Students will assume the roles of reporter, writer, producer, floor director, photojournalist, videographer, technician, and more.

Prerequisites: COMM 271 or THEA 271 or DANC 271

Pre- or corequisite: COMM 382 or ENGL 382

THEA 388 Motion Picture Aesthetics (3 Credit Hours)

This course is designed to develop within students a heightened and multifaceted awareness and appreciation for aesthetics of a particular type - motion picture aesthetics. Aesthetic considerations impact us intellectually, emotionally, psychologically, and viscerally. Professionals most definitely employ a language to filmmaking. One must learn the language of motion picture production and aesthetic design in order to convey concepts to their audiences.

Prerequisites: COMM 270A or THEA 270A

THEA 389 Sound Recording and Mixing for Film (3 Credit Hours)

This course will explore the best concepts in recording, editing and mixing audio for film and post-production. Students will be using Pro Tools hands-on to sync and mix audio to picture. Topics will include location audio, sound design, ADR, mixing, and more.

Prerequisites: THEA 271 or COMM 271 or DANC 271

THEA 390 Improvisation (3 Credit Hours)

An exploration of creativity through structured exercises, games and problems. Students participate in experiential studies that explore improvisational approaches, devices and elements to gain skills in the art of improvisation. This course also includes group discussions of reading assignments and feedback sessions following the improvisations performed in class. Through readings, journal writings, and in-class exercises, students develop the skills to articulate what they see, feel and respond to as performers and observers. Cross-listed with DANC 390.

Prerequisites: Junior standing or permission of the instructor

THEA 395 Topics in Theatre (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described to all academic advisors.

Prerequisites: Junior standing and permission of the instructor

THEA 396 Topics in Theatre (1-3 Credit Hours)

A study of selected topics designed for nonmajors, or for elective credit within a major. These courses will appear in the course schedule, and will be more fully described in a booklet distributed to all academic advisors.

Prerequisites: junior standing and permission of the instructor

THEA 430 TV Screenwriting (3 Credit Hours)

This course concentrates on the development and delivery of industry standard one-hour long TV scripts and the associated script 'bible.' Students will study sample scripts from broadcast TV programs and develop their own spec scripts. Cross-listed with COMM 430.

Prerequisites: COMM 346 or THEA 346

THEA 439 WHRO Production (3 Credit Hours)

This is an experiential style course in the art and business of documentary production in the hands-on, professional environment of WHRO, which operates Hampton Roads' PBS affiliate TV station as well as two public radio stations. Students will be guided through the production of content for WHRO by an ODU faculty member and the WHRO staff. Cross-listed with COMM 439.

Prerequisites: COMM 271 or THEA 271 or DANC 271

THEA 440 Documentary Filmmaking Study Abroad (3 Credit Hours)

This is an in-the-field study abroad course where students will, in small groups, produce a short documentary film about a local NGO (Non-Governmental Organization) creating positive change in the local community.

Prerequisites: THEA 271 or COMM 271 or DANC 271 with a grade of C or higher

THEA 442/542 Principles of Directing (3 Credit Hours)

An examination and practical application of principles of stage direction as influenced by play script, acting talent, set and lighting design, and the technical facilities of production organizations.

Prerequisites: THEA 152R and THEA 230, and THEA 244 or permission of the instructor

THEA 446 Directing for the Camera (3 Credit Hours)

This course seeks to provide students with fundamental principles and practical techniques of directing the narrative fiction film: script development and analysis, production planning, shot composition and framing, and working with actors and crew.

Prerequisites: THEA 383 or COMM 383 with a grade of C or higher

THEA 449W/549 Script and Performance Analysis (3 Credit Hours)

Approaches script analysis from a directorial perspective through the written examination of action, character, language, music, and spectacle, as well as the play's production history and historical context, to discover how plays might be staged for the contemporary audience. Plays in production will be examined from a critical perspective with attention to artistic interpretation in the areas of direction, design, and performance. This is a writing intensive course.

Prerequisites: THEA 152R, THEA 230, THEA 244, and a grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C, or permission of the instructor

THEA 451 Costume Design for Opera and Musical Theatre (3 Credit Hours)

This course will provide opportunities for hands-on training for all stages of the design process. Students will learn sewing techniques, create hand-dyed fabric, construction techniques, period costume research, character analysis, wig construction, and assist with the design. Project designs will be used in a main stage production presented by the Communication & Theatre Arts and Music departments at Old Dominion University. Students will also have the opportunity to run a live performance and assist with garment care, make-up, hair design and costume props.

Prerequisites: Junior standing or permission of instructor

THEA 452/552 Acting Four (3 Credit Hours)

An advanced scene study class exploring issues of style and period pertinent to portraying characters on stage.

Prerequisites: THEA 152R, THEA 252 and THEA 352

THEA 453 Voice Over (3 Credit Hours)

This course is for students who are interested in the field of voice over for commercials, narration, industrials, animation, Internet, and gaming. Students will practice voicing copy using acting techniques, vocal techniques, building characters, and analyzing copy. Students will learn to select, edit and prepare copy for a future demo and learn to perform cold voice over auditions. This is a performance-oriented course that is a workout session each day. Crosslisted with COMM 453.

Prerequisites: Junior standing or permission of instructor

THEA 460 Voice for the Stage II (3 Credit Hours)

Course will continue the study of vocal production, speech and expression necessary for on stage performance of both classical and modern text.

Techniques for producing effective dialects will be introduced as well as the application of dialect towards character development.

Prerequisites: THEA 152R

THEA 471W/571 International Film History (3 Credit Hours)

An examination of world cinema as a technology, a business, an institution, and an art form from its inception to the present. Emphasis is on the narrative fiction film, its technological and aesthetic development, economic organization, and socio-cultural context. Representative classic and contemporary works will be screened and analyzed. This is a writing intensive course.

Prerequisites: COMM 270A or THEA 270A, a grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C, and junior standing or permission of the instructor

THEA 472 Acting Five (3 Credit Hours)

An examination and advanced study of techniques relevant to specialized theatre performance. This course will allow advanced students the opportunity to explore a variety of work including experimental theatre, avant garde works, mediated performance and visual based theatre.

Prerequisites: THEA 152R and THEA 252 or permission of instructor

THEA 473 Production/Performance Lab (1 Credit Hour)

This course provides students opportunities to participate in productions in Theatre, Dance or Film. These experiences provide hands-on experience in the discipline. Cross-listed with DANC 473.

Prerequisites: Junior standing or permission of the instructor

THEA 474 Production/Performance Lab (1 Credit Hour)

This course provides students opportunities to participate in productions in Theatre, Dance or Film. These experiences provide hands-on experience in the discipline. Cross-listed with DANC 474.

Prerequisites: Junior standing or permission of the instructor

THEA 479W/579 American Film History (3 Credit Hours)

An examination of American motion pictures as an art form, a business and an institution from its inception to the present. Primary attention is accorded to the narrative fiction film, its aesthetic and technological development, economic organization and social impact. This course highlights the many connections between film history and American culture. This is a writing intensive course.

Prerequisites: A grade of C or better in ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C; THEA 270A or COMM 270A; and junior standing or permission of the instructor

THEA 480/580 Documentary Production II (3 Credit Hours)

Students will continue the work performed in THEA 380 with more advanced proposals, research, and production work.

Prerequisites: THEA 380 or COMM 380

THEA 482 Screenwriting II (3 Credit Hours)

Students will explore storytelling for cinema through screenplay analysis, scene study, character development, narrative structure, and story development. This upper-level, hands-on course applies a range of screenwriting principles to writing exercises, critique, and construction of the first half of a feature-length screenplay.

Prerequisites: COMM 346 or THEA 346 with a grade of C or better

THEA 483 Advanced Cinema Projects (3 Credit Hours)

This is an intensive capstone course in film production. Students experience pre-production, production, and post-production phases while creating a product to be entered in regional and national competitions.

Prerequisites: COMM 383 or THEA 383

THEA 485 Film and Television Genres (3 Credit Hours)

This course is designed to examine the conventions and meanings of various film and television genres within their broader aesthetic, socio-historical, cultural, and political contexts. Each time the class is offered it will focus in depth on a different genre, such as the gangster, the Western, the musical, the comedy, science fiction, among others. Class may be repeated for credit as long as the genres are different.

Prerequisites: COMM 270A or THEA 270A

THEA 486/586 Advanced Filmmaking (3 Credit Hours)

This course offers students an opportunity to collaborate on a faculty led project beyond the scope of typical classroom projects. Students will execute an assigned duty for the duration of the semester.

Prerequisites: permission of the instructor

THEA 487 Advanced TV News Production (3 Credit Hours)

This course is designed to provide students with advanced instruction in reporting, writing, and production for a television news program. Students will take on important roles in 15- and 30-minute news broadcasts and refine their skills in shooting and editing video. The goal of this course is to produce weekly news programs worthy of broadcast on local television. Students will receive significant experience in front of the camera as news, sports, and entertainment anchors/reporters as well as leadership positions in the television studio during the live broadcasts.

Prerequisites: COMM 387, THEA 387 or ENGL 387

THEA 489 Methods of Teaching Theatre (3 Credit Hours)

Focuses on conceptual foundations of theatre education including its history, and on methods and materials for classroom instruction and theatrical rehearsals and performances.

Prerequisites: Junior standing

THEA 490 Theatre Education Practicum (1 Credit Hour)

This course provides students with an opportunity to further develop their understanding of theatre instruction by personal observation and participation in the classroom setting.

Prerequisites: Junior standing and permission of the College of Education

THEA 492 Cinematography 2 (3 Credit Hours)

This course builds on the fundamentals learned in Cinematography 1, exploring advanced camera and lighting techniques primarily used in narrative cinema. Advanced cameras, grip, electric, and lighting equipment will be covered, exposing students to gear and practices beyond the scope of a standard student production. This is a production class.

Prerequisites: COMM 385 or THEA 385

THEA 493 Feature Film Production (6 Credit Hours)

This intensive course will bring students onto the set of a feature film production, working crew positions as the film is shot. Cross-listed with COMM 493.

Prerequisites: COMM 271/THEA 271/DANC 271 and two of the following: COMM 380/ THEA 380, COMM 383/THEA 383, COMM 385/ THEA 385, COMM 386/THEA 386, COMM 389/THEA 389, COMM 483/ THEA 483, COMM 486/THEA 486, COMM 492/THEA 492 with a grade of C or better

THEA 495/595 Topics in Theatre (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: Appropriate survey course or permission of the instructor

THEA 496/596 Topics in Theatre (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: appropriate survey course or permission of the instructor

THEA 497/597 Tutorial Work in Special Topics in Theatre (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor.

Prerequisites: Senior standing

THEA 498/598 Tutorial Work in Special Topics in Theatre (1-3 Credit Hours)

Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.

Prerequisites: senior standing

THEA 499 Senior Project (1 Credit Hour)

Completion of a creative project leading to a written work and a presentation during a student's senior year related to student's interest area. Topic to be selected under the direction of an instructor with conferences as appropriate.

Prerequisites: Senior standing as theatre major and approval of major advisor

TLED - Teaching & Learning-Education

TLED 195 Topics in Education (1-3 Credit Hours)

Explores contemporary problems and trends in education. Emphasis is placed upon topics related to curriculum, instructional strategies, and evaluation.

TLED 301 Foundations and Introduction to Assessment of Education (3 Credit Hours)

Introduces the historical, philosophical, and sociological foundations and contemporary issues of American public education. Includes the use and analysis of assessment data and the construction and interpretation of assessments. Students are expected independently to register for and take the Praxis Core examination while enrolled in this course. Students in PreK-6 programs will complete a 15 hour observation/participation experience in a primary setting (preK-3) and a 15 hour observation/participation experience in an upper elementary (4-6) setting; students in 6-12 or 6-8 programs will complete a 30 hour observation/participation experience in an appropriate 6-12 setting.

Prerequisites: sophomore standing

TLED 320 Perspectives on the Young Child and the Family (3 Credit Hours)

This course examines the familial lives of young children (Birth through Grade 3) and supports understandings of working with parents and families in early childhood settings. Family systems theory provides the basis for study and guides understandings of contemporary family structures. The stages of the family life cycle are explored; principles of healthy family functioning are emphasized to promote healthy growth for children.

Prerequisites: FOUN 301 and TLED 301

TLED 326 Socio-Cultural Perspectives in Education (3 Credit Hours)

This course will utilize a framework of sociocultural theory situated within culturally sustaining pedagogical practices to explore issues related to race, ethnicity, class, gender, sexuality, religion, and language use. Students will learn to create an educational environment that values diversity and employs research-based strategies. The course also examines and evaluates multicultural and global literature that explores issues of diversity.

Prerequisites: ENGL 110C

TLED 328 Observation and Assessment in Early Childhood (3 Credit Hours)

This course examines the observation/assessment techniques used in early childhood classrooms as part of a coordinated approach to implement a reflective, high quality early childhood classroom. The purpose of this course is to introduce and support students' development of skills related to the observation and interpretation of children's daily activities and behaviors. This course includes a 20-hour practicum.

Prerequisites: TLED 320

TLED 330 The Arts in Early Childhood and Elementary Education (3 Credit Hours)

An exploration of principles, methods, and materials for teaching the arts to young children. Emphasis is on making, interpreting, and designing meaningful art experiences for young children pre-K-grade 3. Students will be asked to participate in activities associated with making and viewing art, as well as design comprehensive learning experiences that encourage children to make and respond to art through conversation, storytelling, play, dramatics, movement, music, and art making.

Prerequisites: TLED 301

TLED 333 Measurement and Geometry for Teachers (3 Credit Hours)

Math content for educators including pre-algebra, geometry, counting techniques and probability as needed for future teachers. The course will emphasize problem-solving processes and their application to the learning of the appropriate math content.

Prerequisites: MATH 102M

Pre- or corequisite: TLED 326

TLED 337 Literature for Young Children (3 Credit Hours)

This course is designed to provide students with approaches for introducing young children to literature and reading. The course will examine a variety of children's literature genres and explore relationships between language, theory, politics, ideology and print material. Students will design activities that extend children's literacy experiences, reading enjoyment, writing capabilities, and incorporate cultural and linguistic diversity in social studies, math, science, and the arts.

Prerequisites: TLED 301

TLED 338 Integrated Methods & Curriculum in Early Childhood Ed: Birth-Pre-K (4 Credit Hours)

This course examines the development of curriculum and instructional practices for children in infant, toddler, and preschool settings. The course will focus on the principles and methods of understanding and working with the young child across the content areas of early mathematics, science, literacy, social studies, and the arts. Course includes a 40 hour practicum placement in an early care classroom.

Prerequisites: TLED 330

TLED 360 Classroom Management and Discipline (2 Credit Hours)

Examines theories, research, and practices involved in classroom management, motivation, and discipline. Explores techniques for organizing and arranging classroom environments that are most conducive to learning.

Prerequisites: TLED 301 or MUSC 300 with a C- or higher

TLED 395 Topics in Education (1-3 Credit Hours)

Explores contemporary problems and trends in education. Emphasis is placed upon topics related to curriculum, instructional strategies, and evaluation.

Prerequisites: junior standing

TLED 408 Reading and Writing in Content Areas (3 Credit Hours)

This course examines and promotes literacy development in all content areas, including the development and use of disciplinary comprehension and writing/production skills. Students will explore and consider a repertoire of questioning strategies, and strategies in literal, interpretive, critical, analytical, and evaluative comprehension across the curriculum, grades 6-12.

Prerequisites: a grade of C- or higher in TLED 430W and SPED 313 or a grade of C- or higher in one of the following: SEPS 297, MUSC 300, TLED 301, STEM 351, MUSC 335T, ARTS 279, HPE 200, HPE 317, SPED 400, and TLED 474

TLED 426 Introduction to Literacy, Linguistics and Practice in the Classroom (3 Credit Hours)

This course will provide students with an overview of the foundations of theory and best practices in literacy instruction. Emphasis is placed on Science of Reading (SOR), including phonemic awareness, phonics, developing decoding foundational skills, vocabulary, fluency, and comprehension. This course adopts an approach rooted in culturally sustaining pedagogy, aiming to create a learning environment that promotes equity and engagement for all learners. The course will support student's professional preparation as a teacher who promotes the success of all students through the implementation of excellent literacy instruction.

Prerequisites: FOUN 301

TLED 430W PK-12 Instructional Technology (3 Credit Hours)

Classroom technology and learning strategies are explored through authentic technology and writing activities. This writing intensive (W) course uses contemporary productivity tools and Internet resources to develop and evaluate progressive instructional techniques and K-12 standards-based curriculum materials, which have changed as a result of the development and integration of technology in the classroom.

Prerequisites: ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better and TLED 301 or HPE 200 or TLED 474 or SPED 400

TLED 432/532 Developing Instructional Strategies PreK-6: Language Arts (3 Credit Hours)

Following a theory into practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote children's development of attitudes, behaviors, and concepts in language arts in grades PreK-6 in support of NCTE national instructional standards and the Virginia Standards of Learning.

Prerequisites: ENGL 110C, ENGL 211C or ENGL 221C or ENGL 231C, TLED 326, and Junior standing

Pre- or corequisite: TLED 426

TLED 435/535 Developing Instructional Strategies PreK-6: Social Studies (3 Credit Hours)

Following a theory into practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote children's development of attitudes, behaviors, and concepts in social studies in grades PreK-6 in support of NCSS national instructional standards and the Virginia Standards of Learning.

Prerequisites: GEOG 100S, TLED 326, and Junior standing

Corequisites: TLED 432

TLED 451/551 Developing Instructional Strategies for Teaching in the Middle/High School: English (3 Credit Hours)

Following a theory/research-into-practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote the development of attitudes, behaviors, and concepts in English, grades 6-12, informed by national instructional standards and the Virginia Standards of Learning; 35 hours of teaching practicum required.

Prerequisites: TLED 301 or TLED 430W or SPED 313, a criminal background check, acceptance into teacher education, no grade less than C- in content area and professional education core, minimum major and overall GPA of at least 2.75

Corequisites: TLED 483

TLED 452/552 Developing Instructional Strategies for Teaching in Middle/High School: Math and Science (3 Credit Hours)

This science and mathematics course will provide methods for teaching diverse learners through culturally sustaining pedagogy, inquiry-oriented, and problem solving strategies using technology and engineering design principles. Students in this course take a required practicum (35 hours) in a secondary science or mathematics classroom to complete assigned content-focused activities.

Prerequisites: TLED 301, TLED 430W and SPED 313

Corequisites: TLED 483

TLED 455/555 Developing Instructional Strategies for Teaching in the Middle/High School: Social Studies (3 Credit Hours)

Following a theory/research-into-practice philosophy, students explore, develop, and use instructional strategies, materials, technologies, and activities to promote the development of attitudes, behaviors, and concepts in social studies, grades 6-12, informed by national instructional standards and the Virginia Standards of Learning; 35 hours of teaching practicum required.

Prerequisites: TLED 301, TLED 430W, SPED 313, a criminal background check, acceptance into teacher education, no grade less than C- in content area and professional education core, minimum major and overall GPA of at least 2.75

Corequisites: TLED 483

TLED 468/568 Language Acquisition and Reading for Students with Diverse Learning Needs (3 Credit Hours)

This course provides an overview of normal language development and language disorders which impact the acquisition of language based curriculum skills such as listening, speaking, reading, and written expression. Emphasis is on instructional techniques to assist students with diverse learning needs to achieve reading and comprehension skills. Effective reading strategies and curricula for individuals with disabilities will also be reviewed.

Prerequisites: junior standing

TLED 474/574 Foundations and Contemporary Issues in Early Childhood Education (3 Credit Hours)

This course addresses current issues related to children and families in early childhood settings. Contemporary research on pedagogical and formative assessment practices related to the education of young children will be discussed through critical exploration. This course will also have an associated 40 hour practicum (20 hours in an infant or toddler classroom and 20 hours in a preschool age classroom).

Prerequisites: Instructor approval required

TLED 478/578 Integrating Instruction Across the Curriculum PreK-6 (3 Credit Hours)

Following a theory into practice philosophy and building on the instructional strategies for specific disciplines, students explore, develop, and use advanced instructional materials, technologies, and activities to promote interdisciplinary and multidisciplinary instruction across the curriculum in grades PreK-6 in support of national standards and the Virginia Standards of Learning. The field experience component (40 hours) includes participation in preK-3 and 4th-6th grade classrooms in an accredited public or non-public school, per program requirement.

Prerequisites: Admission to an approved teacher education program and any two of the following courses: TLED 432, TLED 435, STEM 433, or STEM 434

TLED 479/579 Classroom Management and Practice PreK-3; PreK-6 (3 Credit Hours)

Course prepares prospective PreK-3 and PreK-6 teachers to provide instruction and management addressing the intellectual, physical, emotional and social needs of PreK-6 learners founded in empirically based practice. The field based component (70 hours) includes participation in PreK-3 and 4th-6th grade classrooms in an accredited public or non-public school. Students in the PreK-3 program are required to complete 35 hours in the Children's Learning and Research Center. Attendance at seminars and debriefing sessions is required.

Prerequisites: Admission to an approved teacher education program and any two of the following courses: TLED 432, TLED 435, STEM 433, or STEM 434

TLED 480/580 Multicultural Young Adult Literature in Schools (3 Credit Hours)

This course will explore the reading and teaching of diverse young adult literature. Topics addressed include ideas about adolescents and their learning practices; characteristics of young adult literature and literary criticism; analysis of texts from a range of young adult genres; methods for teaching young adult literature; and lesson and unit design.

Prerequisites: Junior standing

TLED 483/583 Seminar in Teacher Education (1 Credit Hour)

Explores issues, problems, concerns, and processes related to teaching and to entering the profession of teaching. Passing scores on Elementary Education Multiple Subjects Assessment in licensure content area, and where appropriate passing scores on Reading for Virginia Educators are required to pass this course.

Prerequisites: Admission to an approved teacher education program and Senior standing

TLED 485 Teacher Candidate Internship (12 Credit Hours)

Internship in school. Available for pass/fail grading only.

Prerequisites: completion of all program requirements and admission into an approved program in teacher education

TLED 486/586 Student Teaching for Special Endorsement (3-6 Credit Hours)

Internship in school. Available for pass/fail grading only.

Prerequisites: Collegiate Professional Certificate and/or completion of an approved program in teacher education, passing scores on Praxis Core examination or equivalent SAT or ACT scores as established by VA Board of Education, passing scores on the appropriate Praxis II content examination, passing score on the Virginia Communication and Literacy Assessment, departmental approval, permission of the director of teacher education services, meet grade requirement in the specific content area and professional education core, minimum major and overall GPA of at least 2.75, and a criminal background check

TLED 487 Teacher Candidate Internship for Early Childhood Education (12 Credit Hours)

Field-based 14-week experiences in the early childhood setting that include a minimum of 150 hours of direct instruction. The teacher candidate internship is the culminating experience of all teacher education programs. This experience is a crucial part of a teacher candidate's preparation to becoming a professional educator.

Prerequisites: TLED 493 and admission to an approved teacher education program

TLED 488 Teacher Candidate Internship - Elementary Education (12 Credit Hours)

Five days per week for 14 weeks. Available for pass/fail grading only. Provides practice in teaching in grades PK-6 and in analyzing teaching approaches and behaviors. Examines instructional problems and concerns.

Prerequisites: TLED 478 and TLED 479; completion of an approved program in teacher education PreK-6; passing scores on the appropriate PRAXIS multiple subject assessment content examination, Reading for Virginia Educators examination, and the Virginia Communication and Literacy Assessment; no grade less than C- in content area and professional education core; and minimum major and overall GPA of at least 2.75

TLED 490 The Child and the Family: PreK-3 (3 Credit Hours)

This course examines the familial lives of young children (Birth through Grade 3) and supports understandings of working with parents and families in early childhood. Family systems theory provides the basis for study and guides understandings of contemporary family structures. The stages of the family life cycle are explored; principles of healthy family functioning are emphasized to promote healthy growth for children.

Prerequisites: instructor approval required

TLED 492 Integrating Instruction: Mathematics and Science Across the Early Childhood Curriculum (3 Credit Hours)

This course emphasizes the development of young children's problem solving skills, strategies, and abilities and the promotion of active science and math explorations within early childhood classrooms. Multiple perspectives and approaches to planning, teaching, and assessing science and mathematics in the early childhood classroom are explored and practiced. This course includes a 40 hour practicum experience in an early childhood classroom.

Prerequisites: MATH 302, TLED 328, and admission to an approved teacher education program

TLED 493 Integrating Literacy and Social Studies Across the PreK - 3 Curriculum (3 Credit Hours)

This course emphasizes the development of young children's multiple literacies and the promotion of active literacy and social studies explorations within early childhood classrooms. Multiple perspectives and approaches to planning, teaching, and assessing literacy and social studies in the early childhood classroom are explored and practiced. This course includes a 40 hour practicum experience in an early childhood classroom.

Prerequisites: TLED 492, HIST 104H, GEOG 100S, TLED 337, and admission to Teacher Education

Pre- or corequisite: TLED 426

TLED 495/595 Topics in Education (1-4 Credit Hours)

Explores contemporary problems and trends in education. Emphasis is placed upon topics related to curriculum, instructional strategies, and evaluation.

Prerequisites: junior or graduate standing

TLED 496/596 Topics in Education (1-3 Credit Hours)

Cannot be applied to a Master of Science in Education degree in the Department of Teaching and Learning. Explores contemporary problems and trends in education. Emphasis is placed upon topics related to curriculum, instructional strategies, and evaluation.

Prerequisites: junior or graduate standing

TLED 497/597 Independent Study (1-3 Credit Hours)

Hours to be arranged. Allows the student to engage in independent study of issues and trends in education. Emphasis is placed upon topics related to curriculum, instructional strategies, and evaluation.

Prerequisites: junior standing

UNIV - University

UNIV 068 Internship (0 Credit Hours)

Student participation in a professional work experience for which credit will not apply to the degree. Approval for enrollment is determined by Monarch Internship and Co-Op Office. Experience must be related to the student's major or career area of interest, include adequate supervision by a professional, and include at least an average of 8 hours per week.

Prerequisites: good academic standing

UNIV 094 Entrepreneurship (0 Credit Hours)

Student participation in an entrepreneurial experience for which credit will not apply to the degree. Approval for enrollment is determined by the Center for High Impact Practices. Experience must be related to the student's major or career area of interest, include adequate supervision by faculty member or a professional, and include at least an average of eight hours per week.

Prerequisites: good academic standing

UNIV 100 University Orientation (1 Credit Hour)**UNIV 101 Introduction to the College of Sciences (1 Credit Hour)**

Presents the relationship between majors in the College of Sciences and the students' career goals for students planning to major in a science. Provides an orientation to the University emphasizing the learning skills needed for Science majors.

UNIV 110 Academic Success (0 Credit Hours)**UNIV 111 Sophomore Seminar (0 Credit Hours)**

This seminar provides resources and opportunities for students to build relationships with other sophomores and faculty and to explore individual strengths, values, skills, and interests.

UNIV 112 Transfer Seminar (0 Credit Hours)

This seminar provides resources and opportunities for students to build relationships with other transfer students and faculty and to explore individual strengths, values, skills, and interests.

UNIV 115 Learning Communities Seminar (0 Credit Hours)

This course serves as the common course for learning communities. Students will develop a sense of community as they attend, study, and participate in various activities and events with other students, peer mentors, faculty or advisors.

UNIV 120 Career Exploration (1 Credit Hour)

A systematic exploration of individual interests and skills and career resources. Emphasis is placed on defining goals and developing strategies to achieve goals. Career testing and individual conferences are included.

UNIV 130 Learn and Earn Advantage Program (1 Credit Hour)

The purpose of this course is to engage students in self-reflection and work place skill enhancement, applicable to experiences encountered as part of the LEAP, as well as in the world of work. The course will help students to develop and be able to apply skills in the areas of self-presentation, work ethic, team membership, professional communication, independence and initiative, and seeing the "Big Picture" in relation to everyday workplace issues.

UNIV 195 Topics in Career Management (1-3 Credit Hours)

A study of selected career-related topics. Titles for specific course offerings will appear in the course schedule.

UNIV 200 Career Implementation (1 Credit Hour)

A practical examination and application of resume and cover letter writing, job search strategies, including electronic job search and networking, interview skills, and evaluating employment offers. Designed to prepare students for internships or cooperative education experiences and/or for post graduation employment.

UNIV 295 Topics in Career Management (1 Credit Hour)

A study of selected career-related topics. Titles for specific course offerings will appear in the course schedule.

UNIV 300 Introduction to Entrepreneurship Across the Disciplines (3 Credit Hours)

This course is a survey of entrepreneurship and is designed to introduce upper-level undergraduate students (juniors and seniors) to a wide range of approaches designed to facilitate innovation, foster start-up businesses, enable growth and ensure the continued viability of emerging and mature technical enterprises. The course will focus on entrepreneurial thinking and action and will explore the attitudes and behaviors that most frequently result in entrepreneurial success. This course will address the theories that underlay successful venture creation as well as practices that have proven to be effective.

Prerequisites: ENGL 110C

UNIV 395 Topics in Career Management (1 Credit Hour)

A study of selected career-related topics. Titles for specific course offerings will appear in the course schedule.

Prerequisites: Sophomore standing

UNIV 396 Topics: Study Abroad (1-3 Credit Hours)

A study of selected topics examined in an international setting. These courses are designed to help students gain new perspectives on their fields of study, develop intercultural competencies and communication skills, and engage with situations and questions that challenge their own assumptions/values. The courses will appear in the course schedule and will be more fully described by academic advisors.

Prerequisites: Sophomore standing

UNIV 400 Career Engagement (1 Credit Hour)

A practical examination and application of resume and cover letter writing, job search strategies including the electronic job search, networking, interview skills, and negotiating a job offer. Topics will also include the transition to the world of work and professional development. Designed for students seeking post-graduation employment.

UNIV 407/507 Design Thinking (3 Credit Hours)

Design thinking is a human-centered approach to innovation that uses design methods and tools to integrate the needs of people and organizations, the opportunities of technology, and the requirements for personal, organizational, and business success. The design thinking course introduces students to a robust process for understanding problems, ideation, innovation, and entrepreneurship. This course is facilitated using workshops where students will work in project teams in a design thinking innovation challenge.

Prerequisites: ARTH 121A, ARTS 122A, COMM/THEA 270A, DANC 185A, MUSC 264A, or THEA 241A

UNIV 495 Topics in Career Management (1-3 Credit Hours)

A study of selected career-related topics. Titles for specific course offerings will appear in the course schedule.

Prerequisites: Junior standing

WCS - World Cultural Studies

WCS 100L Introduction to World Literatures and Cultures (3 Credit Hours)

This multicultural course introduces the student to the forms and meanings of cultural expressions from around the world, with an emphasis on world literature. It provides students with the skills necessary for the appreciation and comparative analysis of these works as representations of rich and diverse cultural values. A primary focus of the course will be the role of culture in the formation of national and individual identity, paying special attention to gender, sexuality, race, class, and struggles for social justice. All works will be read in English.

WCS 120L Honors: Introduction to World Literatures and Cultures (3 Credit Hours)

This multicultural course introduces the student to the forms and meanings of cultural expressions from around the world, with an emphasis on world literature. It provides students with the skills necessary for the appreciation and comparative analysis of these works as representations of rich and diverse cultural values. A primary focus of the course will be the role of culture in the formation of national and individual identity, paying special attention to gender, sexuality, race, class, and struggles for social justice. All works will be read in English. This course is reserved for students enrolled in the Honors College.

WCS 196 Topics in World Cultural Studies (1-3 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule.

WCS 307 Understanding European Culture through Film (3 Credit Hours)

This course provides students with an historic overview of films from a variety of European countries. Students will gain the vocabulary necessary to analyze individual films and for the comparative analysis of films from different cultural and historical contexts. The course will focus on issues such as national and individual identity, film as aesthetic form, gender and sexuality, and popular culture. (cross-listed with COMM 307)

Prerequisites: Junior standing or permission of instructor

WCS 310 Japan: A Cultural Odyssey (3 Credit Hours)

Exploration of Japanese culture and society from local and global perspectives. Topics may include language, arts, literature, music, food, traditional and contemporary culture, entertainment, media, religion, gender, education and work. The course aims to foster in-depth cultural understanding beyond stereotypes and to develop critical thinking and analytical skills to reflect on one's own experiences and assumptions about cultural similarities and differences. All readings, discussions, and lectures in English. No knowledge of Japanese is necessary. Cross-listed with JAPN 310.

Prerequisites: ENGL 110C and junior standing or permission of instructor

WCS 311 Global Conversations (3 Credit Hours)

This course is primarily a 'hands on' communicative course to develop cultural competence (verbal communication). Task-oriented communication strategies in cross-cultural training will be practiced by presenting students with models who demonstrate appropriate cultural skills. The course will include cognitive learning with lectures from experts (invited speakers), analysis of critical incidents and assigned readings, and application of sophisticated concepts from the behavioral and social sciences. Students will practice these skills by giving presentations, enriching self-awareness with group discussions on prejudice, racism, values and customs, and participation in guided cultural encounters (such as field trip assignments that demand new behaviors). Students will participate in role-playing and in simulations of real-life demands in extended experimental encounters with another culture or complex approximations of another culture. Effectively, students will learn how to communicate and collaborate with other people and cultures in a global age.

Prerequisites: ENGL 110C

WCS 312W Writing Around the World (3 Credit Hours)

This is an intensive writing course designed with writing assignments that examine various cultural contexts that enable students to understand cultural content, style, audience and organization. The main objective of the course is increased awareness of and sensitivity to appropriate word choice, and syntax in the targeted languages. Students will engage in writing for different cultural audiences and in varied contexts such as literary, artistic and media expressions around the world. Special emphasis is placed on the methodology of close reading as students hone the analytics skills and vocabulary necessary to interpret idioms, regionalism, cultural expressions and overall intercultural skills observed in various genres and cultures. Students will analyze compelling global issues and the diverse cultural perspectives that inform them.

Prerequisites: A grade of C or better in ENGL 110C

WCS 323 World Cultures and Contexts (3 Credit Hours)

Struggles for human rights and social justice often find their most evocative expression in creative works from around the world. In this course, students will work toward an understanding of different cultural perspectives that inform global concepts of human rights. The course will focus on literary texts, film, testimonies, visual art, and other cultural forms of bearing witness. Students will also consider the fundamental value of these artistic expressions as both spaces of empathy and agents of change in society. Overall, students will consider how these narratives, embedded within, and coded by, sociopolitical contexts, contribute to today's language of human rights and its application in struggles for social justice.

Prerequisites: A grade of C or better in ENGL 110C

WCS 330 Contemporary Cultures and Media (3 Credit Hours)

A study of film as a means of communication from an intercultural perspective. The course is designed to cultivate an ability to deal with film in a critical way, as well as broaden understanding of film and culture in a global context. A variety of cinematic traditions will be examined including film works from Europe, the Middle East, Asia, Africa, and North and South America.

Prerequisites: A grade of C or better in ENGL 110C

WCS 350 Global Communications for International Business (3 Credit Hours)

In this course, students learn to value diverse global perspectives, and to seek multiple approaches to defining and solving problems based on intercultural awareness. This course will focus on the ways that culture and language influence human behavior, and on the practical development of communicative strategies, from compelling writing to effective discussion and collaboration.

Prerequisites: ENGL 211C, ENGL 221C, or ENGL 231C

WCS 369 Practicum (1-3 Credit Hours)

Internships in private, public, non-profit and business organizations that deal with global communications and world cultures.

Prerequisites: nine credit hours at the 300 or 400 level

WCS 395 Topics in World Cultural Studies (3 Credit Hours)

This course invites students to discover approaches to global problems and concerns through an analysis of cultural expressions from around the world. Students will consider the ways in which literary and artistic expression (literature, film, visual art, music) draw from and impact broader social and political contexts.

Prerequisites: A grade of C or better in ENGL 110C

WCS 400 Global Cultural Studies (3 Credit Hours)

This course will examine selected cultural studies perspectives on mass communication. It will cover cultural studies philosophies, theories, and/or approaches to the study of cultural artifacts and practices that may include some of the following: postmodernism, deconstruction, feminism, and post-colonialism. The readings will include theoretical texts as well as artistic or cultural texts that will more clearly illustrate the theoretical positions.

Prerequisites: A grade of C or better in ENGL 110C

WCS 407 Global Communication in Practice (3 Credit Hours)

A study of communication styles and strategies around the world. Students will analyze how global concerns and national priorities are articulated across cultures and languages, and they will navigate techniques necessary for effective communication within intercultural contexts. This course, through interactive lectures, discussions, guest speaker presentations and case studies, is intended to prepare students to be fluent in intercultural understanding and global collaboration and to apply these skills in professional settings.

Prerequisites: A grade of C or better in ENGL 110C

WCS 410/510 Berlin-Paris: Crucibles of European Ideas (3 Credit Hours)

This course explores the cultural movements that have characterized the German-French commonalities and differences from the early 1900s through the 1990s in cross-disciplinary discourses such as film, literature, art, politics, and economics.

Prerequisites: A grade of C or better in ENGL 110C

WCS 421/521 The Question of Memory in World Cultures (3 Credit Hours)

This class explores how societies across the world choose to remember people and events through culture. Students will consider 'official' manifestations – government-sponsored or public memorials and art – as well as general and popular culture such as museums, literature, film, TV, music, etc. The class will interrogate not only what is chosen to be memorialized but how it is memorialized, and how public memory of events is shaped by such choices. Students will consider what decisions are made at the local and national level, how those decisions are made, and what consultations or processes are considered necessary or desirable when deciding public memorials and artwork.

Prerequisites: WCS 100L or ENGL 112L

WCS 445/545 German Cinema I (3 Credit Hours)

The first half of the 20th century was the most creative and destructive period in German and European history. Its rich cultural achievements included Viennese psychoanalytical theory of the turn of the century, Art Nouveau, German Expressionism, and the avant garde aesthetics of the Weimar Republic. Conversely, World War I and II exposed the cultural agony and human depravity of modern civilization. This course will trace these various aspects and developments in a variety of exemplary genres. Readings and discussions in German. (Cross-listed with GER 445/GER 545 and COMM 444/COMM 544)

Prerequisites: A grade of C or better in ENGL 110C

WCS 471/571 Hispanic Women Authors (3 Credit Hours)

A study of fictional and non-fictional works by Spanish, Spanish-American, and U.S. Latina writers from the 16th to the 20th century. The course analyzes gender identity and roles and the interaction of gender, race, and class in literary representations of courtship and marriage, spirituality, nationalism, colonialism, and multiculturalism.

Prerequisites: A grade of C or better in ENGL 110C

WCS 476/576 German-Jewish Literature and Culture (3 Credit Hours)

A survey of seminal texts by German-Jewish philosophers and writers from the Enlightenment to the present day, including Marx, Kafka, Freud, Schnitzler and Arendt.

Prerequisites: A grade of C or better in ENGL 110C

WCS 480W Senior Seminar in International Studies (3 Credit Hours)

Interdisciplinary research and the preparation of a senior thesis in international studies. This is a writing intensive course.

Prerequisites: Grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, senior standing in the BAIS degree program or permission of the instructor and the director of the BAIS program

WCS 494 Entrepreneurship in World Languages and Cultures (3 Credit Hours)

This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to integrate disciplinary theory and knowledge related to world languages and cultures through developing a nonprofit program, product, business, or other initiative with other students.

Prerequisites: Junior standing

WCS 495/595 Topics in World Cultural Studies (3 Credit Hours)

This course invites students to discover approaches to global problems and concerns through an analysis of cultural expressions from around the world. Students will consider the ways in which literary and artistic expression (literature, film, visual art, music) draw from and impact broader social and political contexts.

Prerequisites: A grade of C or better in ENGL 110C

WCS 496/596 Topics in World Cultural Studies (3 Credit Hours)

This course invites students to discover approaches to global problems and concerns through an analysis of cultural expressions from around the world. Students will consider the ways in which literary and artistic expression (literature, film, visual art, music) draw from and impact broader social and political contexts.

Prerequisites: A grade of C or better in ENGL 110C

WCS 497 Tutorial Work in Special Topics in World Cultural Studies (1-6 Credit Hours)

Independent readings and study on a topic to be selected under direction of professor.

Prerequisites: appropriate survey course or permission by the instructor

WCS 498 Tutorial Work in Special Topics in World Cultural Studies (1-6 Credit Hours)

Independent readings and study on a topic to be selected under direction of professor.

Prerequisites: Appropriate survey course or permission by the instructor

WGS - Women's and Gender Studies

WGS 201S Introduction to Women's, Gender, and Sexuality Studies (3 Credit Hours)

An introduction to the interdisciplinary field of Women's, Gender, and Sexuality Studies, drawing on materials from the humanities and social sciences. Topics include the social construction of gender, cross-cultural variations in women's lives, media representations, work, health, women's roles in politics and sexuality.

Prerequisites: Must qualify to enroll in ENGL 110C

WGS 226S Honors: Gender and Sexuality in a Changing World (3 Credit Hours)

A special honors version of WGS 201S open only to students in the Honors College.

Prerequisites: ENGL 110C

WGS 301 Feminist Foundations (3 Credit Hours)

This course is designed to develop students' skills in writing, critical reading, research, and argument while examining topics in Women's, Gender, and Sexuality Studies. The course also covers the history of Women's, Gender, and Sexuality Studies as a discipline and current opportunities for majors and minors.

Prerequisites: WGS 201S

WGS 302W Dimensions of Diversity: Intersectionality Among Women (3 Credit Hours)

This course explores the intersections of gender, race, class, and sexuality within society; it examines how identity has been a key site for generating knowledge and political action. Students will learn the histories and nuances of topics such as intersectionality, privilege, allyship, and cultural appropriation. Finally, the course will examine how concepts such as 'diversity' are mobilized in relation to different institutions, such as the law and education. This is a writing intensive course.

Prerequisites: WGS 201S, a grade of C or better in ENGL 211C or ENGL 231C, and 6 semester hours in literature, history, social sciences, or performing arts courses

WGS 303 Queer Studies (3 Credit Hours)

This course is an interdisciplinary study of LGBTQ+ (lesbian, gay, bisexual, transgender, queer) experiences. It introduces students to personal, cultural, and political aspects of queer life while examining social forces such as heteronormativity, the social construction of gender, and homophobia and their impact on queer lives.

Prerequisites: WGS 201S or instructor approval

WGS 304 Gender and Sexuality in Film (3 Credit Hours)

This course introduces students to feminist methods of analyzing media, with a focus on gender and sexuality in film. Key questions include: How do films influence and reflect our social locations? What are the points that they raise about the intersections of gender, race, and sexuality? Students will interrogate if, and in what ways, film can be a tool to effect social change.

Prerequisites: WGS 201S or instructor approval

WGS 305 Queer Literature (3 Credit Hours)

This course provides a historical sampling of queer literary voices in the U.S. Students explore fiction, poetry, drama, and visual literary forms through the lens of queer theory. Students investigate the ways in which queer authors and subjects have been excluded from the traditional canon and how readers, academics, critics, and authors of anthologies have ignored or obscured queer possibilities and homoeroticism in literary works. Students also explore the benefits of thinking of queer literary works as queer literatures (in the plural sense rather than the singular Queer Literature) and attempt to answer the question, is there such a thing as Queer Literature?

Prerequisites: ENGL 112L, ENGL 114L, or WCS 100L

WGS 306 Women, the Environment, and Climate Change (3 Credit Hours)

This course will examine ways that women have been actively involved in environmental issues from earliest history through today. Students will assess their own connection to place and examine and access ecofeminist theory and national and global environmental justice movements, along with briefly reviewing gender and farming practices. Finally, the course will examine how climate change issues are affecting lives around the globe, including ours, and question how gender-, race-, and class-sensitive responses to the environmental challenges facing our planet can be created.

Prerequisites: ENGL 110C

WGS 368 Internship (3-6 Credit Hours)

This course provides an opportunity to gain experience working in organizations and government agencies. Students' work should engage with women's issues at the local, regional, national, and/or global levels. Students must work for at least 50 hours per course credit.

Prerequisites: A minimum of one WGS course, junior standing and instructor approval

WGS 390T Women, Gender, and Technology Worldwide (3 Credit Hours)

An exploration of women as designers and users of technology and of the impact of technology on women's lives across the world. Variations in women's experiences by race, class, culture, and sexuality will be stressed, along with particular focus on global developments that shape the context of people's lives.

Prerequisites: Three semester hours in human behavior or history

WGS 395 Topics in Women's, Gender, and Sexuality Studies (1-3 Credit Hours)

A study of selected topics in Women's, Gender, and Sexuality Studies. These courses are usually interdisciplinary and align with faculty teaching and research strengths.

Prerequisites: WGS 201S or instructor approval

WGS 396 Topics in Women's, Gender, and Sexuality Studies (1-3 Credit Hours)

A study of selected topics in Women's, Gender, and Sexuality Studies. These courses are usually interdisciplinary and align with faculty teaching and research strengths.

Prerequisites: WGS 201S and sophomore standing or permission of the instructor

WGS 400/500 History of U.S. Women's Activism (3 Credit Hours)

This course historicizes U.S. women's social, political, and rhetorical activism over the last 200 years, tracing their entry into and shaping force upon public life. The course examines the development of women's activism in the nineteenth century, the twentieth century women's (or feminist) movement, and its current status, particularly in relation to postfeminism and a 'third' wave.

Prerequisites: WGS 201S

WGS 401W/501 Women: A Global Perspective (3 Credit Hours)

An analysis of the global forces that impact women's lives throughout the world. Particular emphasis is placed on the status of women in the developing world, international institutions that protect women's rights, and efforts to promote gender equality worldwide. This is a writing intensive course.

Prerequisites: WGS 201S and a grade of C or better in ENGL 211C or ENGL 231C

WGS 402/502 Feminisms and Sexualities (3 Credit Hours)

This course will examine feminist approaches to the subject of sexuality in the twentieth and twenty-first centuries. The course examines theorizations of sexuality, such as radical, critical race, and transnational feminisms, queer theory, and trans studies. Key questions will be: how have feminists theorized sexualities? What does sexuality have to do with feminist studies or practices? How do other identities, such as race and class, inform sexuality?

Prerequisites: WGS 201S, WGS 390T, or instructor approval

WGS 405/505 Gender and Media (3 Credit Hours)

This course examines media-based sites of knowledge production using a feminist approach, in order to imagine new and more complex ways to think about media rhetorics; celebrity culture; digital media; and the politics of representation. Key questions will be: What roles do media play in shaping social movements? What are the promises and pitfalls of activist interventions in the realm of commercial culture? In what ways might we complicate narratives of co-optation or selling out? The class explores these questions using an intersectional lens attentive to the complex interconnections of race, class, gender, and sexuality. Case studies will include national, international, and transnational media events.

Prerequisites: WGS 201S, WGS 390T, or instructor approval

WGS 406/506 Gender, Fashion & the Body (3 Credit Hours)

This interdisciplinary class explores the body as a canvas for both history and the future of our concept of individualism. Students will have the opportunity to reflect not only on their own understanding of the body but also that of the body across a variety of experiences. Students will complete auto-ethnographic essays and a course paper on the body relating to her/his/their academic research interests.

Prerequisites: WGS 201S

WGS 410/510 Sexing the Body (3 Credit Hours)

This course will explore the spectrum of what it means when we consider humans to exist in a gendered and sexed world. Students will critique their own preconceived notions of sex, probe issues of equality and social justice, and discuss what these questions mean both in the United States and globally. The course will culminate with a restructuring of how we understand the ways in which we define sex, sexuality, and sexual practice, taking into consideration how our own identities are impacted by culture and society.

Prerequisites: WGS 201S

WGS 415/515 Migration and Refugee Studies (3 Credit Hours)

This course explores the international context of refugees and migrants from a humanitarian perspective. Global conditions that lead to forced migration are analyzed to inform a larger understanding of human displacement. The course works directly with refugee resettlement organizations at the national and local levels.

Prerequisites: WGS 201S

WGS 460W/560 Feminist and Queer Theory (3 Credit Hours)

This course will examine feminist and queer theories, specifically intersectional, transnational, and radical perspectives. It explores how feminist and queer scholars approach research, writing, and knowledge production, and applies these insights to students' own interests. The course analyzes how feminist and queer scholars have written about storytelling, the body, and desire, and links these discussions to how to produce positive social change in our world. This course is fundamentally interdisciplinary; students are encouraged to make connections between the course materials, their research interests, and other fields of study. This is a writing intensive course.

Prerequisites: WGS 201S, WGS 302W or QUST 302W, and a grade of C or better in ENGL 211C or ENGL 231C

WGS 470/570 Feminist Research Methods (3 Credit Hours)

The course explores the ethics, practice, and multiple forms of conducting feminist research. Narrative research methods are practiced through hands-on oral history assignments. Throughout the course, the process of knowledge construction is interrogated from a feminist perspective.

Prerequisites: WGS 460W

WGS 495/595 Topics in Women's, Gender, and Sexuality Studies (3 Credit Hours)

Advanced seminars on selected topics. The subject matter is usually interdisciplinary and aligns with faculty teaching and research strengths.

Prerequisites: WGS 201S or instructor approval

WGS 496/596 Topics in Women's, Gender, and Sexuality Studies (3 Credit Hours)

Advanced seminars on selected topics. The subject matter is usually interdisciplinary and aligns with faculty teaching and research strengths.

Prerequisites: WGS 201S or instructor approval

WGS 497/597 Independent Study (1-6 Credit Hours)

Independent study of an interdisciplinary topic in Women's, Gender, and Sexuality Studies, or a reading plus internship project to be selected under the direction of a faculty member. Conferences and papers as appropriate.

Prerequisites: WGS 201S and approval of instructor and chair of department

WGS 498/598 Independent Study (1-6 Credit Hours)

Independent study of an interdisciplinary topic in Women's, Gender, and Sexuality Studies, or a reading plus internship project to be selected under the direction of a faculty member. Conferences and papers as appropriate.

Prerequisites: WGS 201S and approval of instructor and chair of department

WLC - World Languages Cultures

WLC 195 Topics in World Languages & Cultures (1-3 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule.

WLC 196 Topics in World Languages & Cultures (1-3 Credit Hours)

A study of selected topics for elective credit. These courses will appear in the course schedule.

WLC 210 Language in Motion (1 Credit Hour)

This course provides opportunities for world language students with study-abroad and international experience to expand their knowledge of language and culture-learning experiences, and to enrich local public school language classrooms. In addition to attending training workshops on topic section, methodology, and techniques, students will confer with the instructor and host teachers/community partners to develop individual projects for presentations in school classrooms. Particular activities will depend on the knowledge and interests of the students and the requests of the host teachers (International Education Week, National French Week, etc.).

Prerequisites: Undergraduate or graduate level world language study and study/sojourn abroad experience

WLC 369 Foreign Language Practicum (3 Credit Hours)

Internships in private, public and business organizations that deal with foreign nationals, foreign products or are involved in teaching a foreign language.

Prerequisites: Nine credit hours of upper-level language at ODU and junior standing

WLC 452 Methods for Teaching World Languages in Pre-K through Grade 12 (3 Credit Hours)

This course provides students with a foundation of major theoretical methods of teaching and learning a world language, focusing mainly on current theories; laws, regulations, and policies in Virginia; language advocacy; and a systematic approach to the practical tools of creating a positive learning environment, designing a pacing guide, syllabus, unit and lesson plans, rubric and assessment guides, formulating a personal teaching philosophy, teaching mini lessons, and creation of a professional e-Portfolio based on VDOE Performance Standards and Evaluation Criteria for Teachers. Offered in asynchronous format with a few meetings with the professor and classmates, this course precedes student teaching.

Prerequisites: Admission to the Teacher Preparation Program, a cumulative and major GPA of 2.75 with grades of C or higher, SAT or ACT scores, qualifying score of the VCLA; teachers with provisional licenses need only to provide a copy of the letter from VDOE listing a methods course requirement

Pre- or corequisite: ACTFL certification or oral proficiency assessments (OPI) at the Advanced low level or higher and certificates for dyslexia, first aid, and child abuse and neglect

WLC 456 Seminar in World Languages Teacher Education (1 Credit Hour)

Students complete 30-hours of observation and may practice teaching methods under supervision in a PreK-12 world language classroom. By the end of the semester, students must provide qualifying scores on the VCLA, PRAXIS II Subject Area Assessment of Spanish, French, or German, ACTFL Oral and Writing Proficiency Assessments, and certificates for Child Abuse and Neglect Recognition and Intervention Training, Emergency First Aid, CPR & AED Certification, Dyslexia Awareness Training, and Behavior Intervention and Support Training. Available for pass/fail grading only.

Prerequisites: Admission to the Teacher Preparation program, a cumulative and major GPA of 2.75 with grades of C or higher, SAT or ACT scores, and qualifying score of the VCLA

Pre- or corequisite: ACTFL certification or oral proficiency assessments (OPI) at the Advanced low level or higher and certificates for dyslexia, first aid, and child abuse and neglect

WLC 480W Senior Seminar in International Studies (3 Credit Hours)

Interdisciplinary research and the preparation of a senior thesis in international studies. This is a writing intensive course.

Prerequisites: Grade of C or better in ENGL 211C or ENGL 221C or ENGL 231C, senior standing in the BAIS degree program or permission of the instructor and the director of the BAIS program

WLC 495/595 Topics in World Languages & Cultures (1-3 Credit Hours)

The advanced study of selected topics designed to permit small groups of qualified students to work on subjects of mutual interest which, due to their specialized nature, may not be offered regularly. These courses will appear in the course schedule.

Prerequisites: Permission of the instructor

WLC 497 Tutorial Work in Special Topics in World Languages & Cultures (1-6 Credit Hours)

Independent readings and study on a topic to be selected under direction of professor.

Prerequisites: Appropriate survey course or permission by the instructor

WLC 498 Tutorial Work in Special Topics in World Languages & Cultures (1-6 Credit Hours)

Independent readings and study on a topic to be selected under direction of professor.

Prerequisites: Appropriate survey course or permission by the instructor
