SERVICES

Your project, our expertise

Our team

We have been working **together for over 2 years** on Unreal Engine 5, and have already produced several interactive experiences.

Our **complementary skill sets** allow us to handle **every stage of your project's production**, from concept and development to marketing and communication.

We support your project from start to finish to ensure coherent execution and optimal visibility.

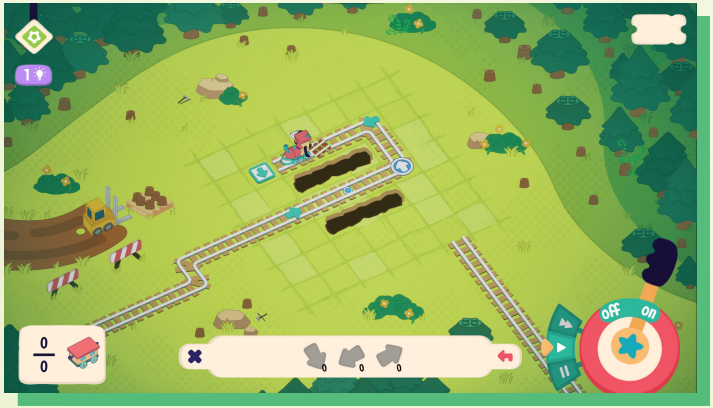
Conceptualization | **Development** | **Marketing** | **Communication**

OUR SERVICES

Serious games

Serious games are **video games** designed **for learning purposes**. According to numerous studies, games are an **excellent learning method**, as they stimulate motivation, concentration, and information retention.

Whether you are aiming for a realistic or a fantastical experience, we are able to bring your project to life. Our team is primarily composed of **video game industry professionals**.



Interactive Experiences

A video that reacts to touch?
A character that responds to your customers?

Whether it is to bring an exhibition topic to life or to interact directly with visitors, interactive experiences amaze both young and old and create **lasting memories**.

VR / AR

Virtual Reality (VR) allows your clients to enter a fully **immersive world** using a VR headset.

Augmented Reality (AR), on the other hand, brings **digital elements into the real world** through the camera of a smartphone or tablet.

Simulation

Whether it is to learn how to drive certain vehicles or to react correctly in specific situations, simulation is the **most immersive learning method**, placing users right in the heart of the action.

Architectural Visualizations

Creation of images, videos, or 3D scenes; whether before physical construction or representing an existing building.

We have the expertise to showcase your architectural projects through **elegant and modern visual renderings**.

Co-production

Our team is trained in game design, concept art, 3D modeling, animation, technical art, programming (C++, C#, etc.), multiplayer development, and marketing.

Whatever your project needs, **Kinoko Studio is here to support you!**

In Belgium, the **Tax Shelter for Video Games** also allows for significant **reductions** in production **costs** through a favorable tax mechanism, making ambitious projects more financially accessible.

Considered the world's **most advanced real-time creation tool**, Unreal Engine allows both highly realistic experiences and the freedom to pursue the most abstract artistic approaches.

Everything is possible with UE5: multiplayer experiences, simulations, and much more; **This engine has no limits.**

OUR PREVIOUS PROJECTS

Trackastrophe!

An intelligent **puzzle game** set in a **colorful**, **cartoon**-style universe. The game is available on Steam and is published by the Finnish company **Black Smoke Studios**.

Bigrok and Taila

A **cooperative adventure game** in which you play as a stone giant and a young warrior, discovering the **mysteries** of an unknown world.
