Remembering to Take Your Medication

Network Health’s mission is to create healthy and strong Wisconsin communities. Following your treatment plan can help you stay healthy and symptom-free and taking your medications is particularly important. When you don’t take your medications as directed, your condition could flare up or lead to the development of other complications over time.

Here are a few helpful tips to help you remember to take your medications.

	Create a routine and take your medications with an activity you do at the same time every day.
	Keep it visible and leave medications in a safe place that is easy to spot.
	Set an alarm on your phone or watch , especially when you’re busier or if timing of taking medications is important.
	Post a reminder note in a place it will be seen every day.
	Use a weekly pillbox with compartments for each day and visible dosing times to help prevent taking more than you need.
	Flip your pill bottle over each time you take your medicine so you know it’s been taken.
	Carry extra doses in a location, bag or purse you use often so you can take your medicine if you are away from home.
	Record each dose using a calendar or journal. Check off when you take each dose to help you avoid missing or taking too many doses.
	Keep medicines with each caregiver you stay with.
	Take advantage of pharmacy services like setting up automatic refills or home delivery.
