

QP-Link: A game-changing leap in radiology workflow automation

Meet the bridge between your local PACS and the Quibim Cloud: QP-Link. A solution designed to streamline, secure, and enhance your radiology workflow.

Key Features & Applications

1. Automated workflow

QP-Link facilitates a seamless workflow without human intervention, ensuring efficiency and accuracy.

2. Unified interface

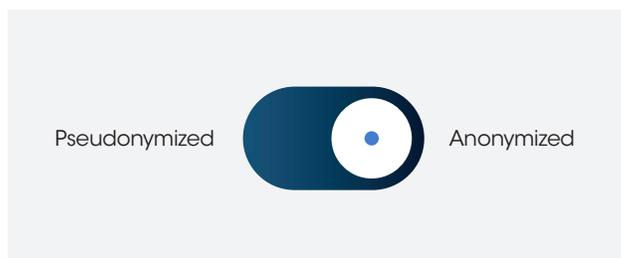

One shared interface for all our AI products, simplifying the user experience.

3. Data security

With QP-Link, no direct patient-identifiable data leaves your site. At the clinician's choice, it is either pseudonymized or fully anonymized. Your privacy is our utmost priority.

4. Azure cloud processing

Leverage the power of Azure Cloud for processing, managed by Quibim, ensuring rapid results without the need for local computational resources.

How QP-Link Works

5. Integration

QP-Link securely integrates with your PACS and imaging equipment, setting the stage for automated study analysis.

6. Unified data processing options in QP-Link

- **Pseudonymization:** Exams from PACS or imaging equipment are sent to QP-Link, where patient-identifiable data is pseudonymized using a unique encryption key.
- **Anonymization:** Ensures no patient-identifiable data is transmitted from PACS or imaging equipment to QP-Link.

7. Cloud processing

The de-identified data, either anonymized or pseudonymized based on the clinician's choice, is then sent to Quibim's Azure Cloud for advanced analysis.

8. Result retrieval

Once the analysis is complete, QP-Link retrieves the results, re-identifies the new series (only when it has been pseudonymized), and stores them back to your PACS.

9. Secure transmission

All data transfers to and from Quibim's Azure Cloud use DICOM Web tools over a secure HTTPS connection (TLS 1.2).

10. Full automation

By creating a push rule in your PACS, the entire process can be automated, saving time and reducing manual errors.

Uniting research, data, and technology in healthcare

Why QP-Link?

Scientific rigor

Our solution is backed by rigorous scientific research and development, ensuring you get the best in class.

Data - driven

We believe in a rational and data-driven approach, ensuring that your decisions are based on accurate and reliable information.

Seamless integration

QP-Link is designed to fit seamlessly into your existing infrastructure, ensuring minimal disruption and maximum efficiency.

Bridging the gap between radiology and advanced cloud analysis
